As we silently glided along, a loon far up the lake caught sight of us and his wild querulous call ringing through the forest was answered by echo and sent wavering from cliff to cliff. Again and again the weird cry echoed and re-echoed from the mountain sides and was sent from shore to shore, and an eagle soaring high overhead answered with its screams. The reverberations ceased and the stillness was broken only by the song of a white-throated sparrow within the short range of his little voice. A mink came swimming alongside of us, his bright mischievous eyes trying to make out what we were. Suddenly an otter's head appeared above the water, and soon another, and another, and in the most amusing way they bobbed up and down and spit at us in their spiteful way. For two or three minutes the otters swam along ahead of us, diving and appearing again, and finally they dissapeared all at once, probably going to pursue their calling of catching the big trout which abounded in the lake.

Gradually we neared the little bay and as we rounded the rocky point Dick stopped paddling. The boat glided slowly along with its own motion as we carefully scanned every fallen hemlock for a sight of red hair, and in a moment I heard a low whisper, "See that buck on the right!" at the same instant catching sight of a pair of horns behind a stump that stood quite a way out in the water, and not more than ten rods from us. The old fellow had evidently been watching us just a little longer than we had been watching him and had taken good pains to keep his eyes over the stump and mighty little of the rest of his body in sight. I felt the tremor of the boat again as Dick cautiously plied the paddle, and we tried to move to a position where I could see enough to shoot at, but the buck knew what we were up to and kept backing around until he could go no further, when with five or six long bounds, with flag raised, he made for a windfall and stopped behind it for a minute, snorting and stamping, before taking his final leap into the underbrush. He stood tail toward me, with his head turned and looking over his shoulder, supposing that he was well protected by the branches, but there was where he made a miscalculation, for at least a square foot of the seat of his pants was in sight. Quickly I leveled the rifle, and as the echoes rang through the forest the buck made one grand leap and stumbled as he struck the ground, rolling clear over with feet kicking wildly in the air. In an instant he was up again and had disappeared. A few quick strokes with the paddle toward shore and Dick jumped out and started in the direction that the deer had taken, stopping long enough to motion to me that he found blood.

For several minutes I waited in suspense. It was fast

growing darker, and the minutes were getting twice as long as in a stopped watch, when I heard Dick call from a point along the shore above me. The paddle was no longer needed, so I pulled out the oars and getting them into the locks rowed as rapidly as possible toward Dick. He had tracked the buck to the water's edge and was just saying that we would find him mortally wounded along the shore somewhere, when, with a great snapping of branches and splashing of water, the old fellow sprang out of a windfall into the lake and started to swim for a little island near by. Dick jumped into the bow, and I pulled the oars with a vengeance, not daring to look around but guided by the hoarse breathing of the panting deer as he swam. Rapidly we neared him, and just as Dick called out "Right oar, quick!" the boat gave a lurch and I knew that he had our game by the tail. At that moment the handles of the oars came against my abdomen with a jerk and pressed so hard that I couldn't catch a breath for the life of me. "Hold up, Dick!" I gasped. "For H-e-a-v-e-n's s-a-k-e hold up!" The oars kept pressing so hard that I could not get out another word, until Dick, roaring with laughter, reached around and threw one of them out of the rowlock. In my excitement I had forgotten that Dick was not the motive power at the bow, and that the fast swimming buck was the cause of bringing into practice a very simple problem in levers.

We only had a few yards more to go before shallow water would be reached, and picking up the rifle, I intended to stop our locomotive, but the boat was unsteady and I fired the bullet somewhere into the heart of the Adirondack wilderness. Another bullet went on the same errandless mission and is going yet for all that I know. We were almost in the shallow water, and shutting my teeth together with a firm resolve to hold steady, I sent a bullet through the neck of the deer, and with a convulsive start he sent flying the spray in every direction, and then lay kicking upon the water

Towing the deer to the shore we got him into the boat, and as I took the bow again Dick took up the paddle and we started for camp.

How fine the old buck looked in the evening light with his white belly up and legs gracefully bent as his head lay between my knees and I stroked his smooth ears and opened the closed eyes and patted his neck.

As we neared camp the stars were sending silvery gleams over the ripples in our wake. A glimpse of the back log burning low showed us where to land, and the smell of the smoke hanging heavily over the water was a reminder of the comforts in store.

The boat grated on the pebbly bottom, and jumping out we rolled out our game and dragged him the short distance to camp. Lichen-covered sticks were soon snapping and roaring on the camp fire, and the forest around was all aglow as the sparks arose with the smoke and floated off among the branches of the trees overhead. The red embers settled in a ruddy heap and the last piece of venison from the deer which Dick had killed a few days previously and half a dozen big trout were pulled from the moss by the spring where we had stored them ready for use. As they broiled and browned before the birch logs the juice trickled out and fell sizzling among the coals, sending fragrant aromas in every direction. Our birch-bark plates were filled as only a millionaire could afford to fill them in the city. And then in a condition of supreme contentment I leaned my back against a giant pine, crossed my feet over the buck's glossy hank and lit my pipe. Dick stretched himself out at full length upon the moss near by, and as the blue puffs floated around our heads we told of former exploits with deer and bears until the pipes and the camp fire burned low.

MARK WEST.

Natural History.

THE NEW ZEALAND BIRD NUISANCE.

THE problem of how to check the ravages of the smaller imported birds among the crops and fruit has of late become an important one in some parts of this colony. Though the evil has not yet attained the alarming dimensions of the "rabbit pest," it has, nevertheless, at length become serious enough to necessitate legislation on the subject. Its weight has been principally felt in the fine agricultural district of South Canterbury, where, as well as in other parts of the Colony, "sparrow clubs" have been formed for the purpose of waging war with this enemy. The principal offender is the English house sparrow (*Passer domesticus*), which was introduced along with other small English birds by the acclimatization societies in years gone by, and has now attained to numbers which make it doubtful whether he will be ever again got under proper control. Local authorities assert that this prolific little bird produces annually in this Co.ony four broods of five birds each, and the results of a calculation on this basis are sufficiently startling; the "gross proceeds" at this rate of increase would be, from one pair, in round numbers 20 birds the first year, 200 the second, 2,000 the third, 20,000 the fourth, 200,000 the fifth, 2,000,000 the sixth, 20,000,000 the seventh, 200,000,000 the eighth year, and so on; so that, even allowing for deaths from various causes, the increase would be something enormous if unchecked. It has also been calculated that, admitting that these birds live on insects, caterpillars, seeds, etc., during the greater part of the year, and consume grain only at seed time and harvest (say a month altogether), and assuming, as may fairly be done, that each bird consumes 1oz. of grain a day, or a total of 2lbs. weight per bird during that period, the value of the grain consumed in the fifth year by the 200,000 birds sprung from one pair would be £1,333, or about $6,600 (400,000lbs. wheat, 6,666 bushels of 60lbs., value four shillings a bushel); while the amount consumed in the sixth year would be 66,666 bushels of the value of £13,333, or about $66,600.

Without asserting that these figures are actually reached, it may be safely assumed that the aggregate value of grain and other produce consumed by the various kinds of small birds is very considerable and that the damage they do far outweighs the good. It is but fair, however, to state what competent authorities have to say in their favor. During the greater part of the year they must live largely on insects and the seeds of weeds, etc., and it has been estimated that in Great Britain the small birds, among which the finches are in this respect prominent, consume on an average 100 seeds per day, and prevent the growth of 36,500 weeds a year per bird, reaching an estimated total of 3,650,000,000,000 weeds annually, and thus preserving about 600,000 acres, or more than one-seventieth of the total area of England and Wales from being overrun with weeds. How far our New Zealand small birds contribute in this direction has not been calculated; no doubt they do something; but direct evidence comes from various parts of the colony as to the damage done by them. In the Canterbury province many instances have occurred in which the crops were simply not worth cutting owing solely to this cause, and it is quite a common thing for the farmers to be obliged to sow now three bushels of seed where a few years ago two only were needed. The "sparrow clubs," to which reference has been made, have done good work in reducing the numbers of the birds. The report for last year published by one of these associations states that though thousands of birds had been poisoned during the year, as was estimated from the bodies seen lying about, yet in about six week during the spring 23,000 eggs and heads were brought in. Another club of the same character paid for 29,000 eggs and 2,500 heads during three months, while the farmers themselves in the neighborhood were estimated to have destroyed 15,000 birds in the same period, making a total of some 50,000 birds accounted for in one small district.

The object of all the efforts which are being made in this direction is not the extinction of the small birds, but merely their repression within certain limits. Poisoned wheat is the agent generally used; and it has, on the one hand, been objected to this method that it destroys a number of game birds, while on the other it is asserted that grain can be quite sufficiently poisoned to be fatal to little birds, while, at the same time, pheasants and other larger birds can eat it with impunity. This is a matter that has been as yet scarcely tested; but such a result as the former would be much to be regretted, as the increase of game birds in most parts of New Zealand is very slow.

A short act has been passed during the last session of Parliament with the object of making "provision for the abatement of the injury caused to crops by the undue increase of sparrows and other birds." It empowers the road boards, county councils, and other local governing bodies, either at their discretion, to appropriate a portion of their general funds, or, on petition by a majority of the ratepayers, to levy a special rate, limited in amount, "for the destruction of any kind or kinds of birds which by their excessive increase have become, or threaten to become, injurious to crops of any kind, for the purpose of reducing the number of such birds to such extent as may be necessary for the protection of such crops."

This legislation has been found necessary in order to compel all property-owners and occupiers to contribute, for many even of those most directly benefited by the operations of the clubs have habitually failed to render them pecuniary aid. The act defines "birds" to mean "any birds not for the time being coming within the operation of any act in force relating to the protection of animals." So that the destruction of game birds is not contemplated, though even they have, in a few favored places, increased to such an extent as to interfere somewhat with the farmers' interests.

It is to be hoped, and may be fairly anticipated, that the powers given by this act to the local municipal bodies will enable them to cope successfully with the small bird difficulty, which threatens to prove nearly as disastrous in the long run to the agricultural interests as the rabbit plague has been to those of our pastoral settlers. M.

WELLINGTON, New Zealand, Nov. 5, 1882.

A HAWKING EXCURSION.—San Antonio, Tex., Dec. 4, 1882.—About the 1st September, as I was gunning in this vicinity, shooting plover from an open wagon, I saw a plover fly across our course closely pursued by two Mexican eagles. They gained rapidly upon the small bird, which, at a distance of perhaps three hundred yards, made a sudden dart earthward, both eagles following suit, the trio disappearing among the thick chapparal. At this juncture we put our horse to a run, curious to see what became of "poor plover." When we came upon the eagles they were attending to business in an "eaglish" manner. At sight of us they backed away from their prey, loath to depart, and we rode within twenty-five feet of them before they took flight. We found the bird thoroughly disemboweled, minus head. We are all well aware of the great destruction of our favorite game birds in this way, but this is the first instance of the kind which has come under my personal observation, speaking for one. Plover have entirely disappeared. Quail ("Bob White") are unusually plentiful. Rabbits are a glut on the market—in fact, small game of every description may be found in abundance. Dead wild turkeys are brought to the city and sold at from six bits to one dollar.—A. D. TYTLER. [If, as is possible, our correspondent refers to the Caracara eagle, *Polyborus cheriway*, when he speaks of "Mexican eagles," the above observation is extremely interesting and entirely unexpected. If, on the other hand, he means, as seems most probable, the Lanier falcon (*Falco mexicanus*), the occurrence, while a pleasant bit of experience, is not at all remarkable.

MR. WILLIS'S QUAIL.—Westfield, N. J., Dec. 5.—I am greatly obliged for your exhaustive report of the autopsy of the quail, as it enabled me to save the lives of the last two of the brood. Both were attacked with the same symptoms from which the others died, *i. e.*, ruffled plumage, drooping wings and scant, watery excrement. Having once lost a pet canary, my family physician being at the house at the time, performed a regular post mortem examination, and declared the cause of death to have been the same as your report on the quail, and he said small doses of opium would have saved its life. As soon, though, as I read your autopsy in the FOREST AND STREAM, I emptied the drinking cup, and to about a teacup of fresh water added one teaspoonful of paregoric, and the effect was quickly perceptible. The sick bird seemed to know it was good for him, and had I not taken the cup away he would have had a regular opium drunk. Since then I have given them a little paregoric in the water, until to-day, when they seemed so much better that instead I mixed a little Spanish chamomile with the water. I hardly think it could have been my flowers that caused the trouble, for my conservatory does not contain half the flowers it did last winter, when the old pair thrived so finely. Neither have I used anything on the plants. I have come to the conclusion that there must have been something poisonous in some wheat screenings that I bought at a grocery store from an open barrel.—JOHN J. WILLIS.

SNOWY OR ARCTIC OWLS.—Lockport, Niagara County, N. Y., Dec. 8, 1882.—In your last issue, just received, "Homo" says "look out for them." That is just what we have been doing for the past two weeks, and have seen one every day since Nov. 24. A Mr. Hollenback, living about four miles south of the city, sold to Mr. J. Carl Jackson, for three dollars, a fine specimen, which he succeeded in shooting the day before, after following it about two miles. Mr. J. brought it to my son to put up. There was not a spot of blood on it, and measured four feet and eleven inches across the wings. It was the largest and best specimen I ever saw. We had our first snow Nov. 29, and the next day we saw the first snow buntings.—J. L. D.

BIRD MIGRATION IN THE MISSISSIPPI VALLEY.

JEFFERSON, Wis., Nov. 18, 1882

Editor Forest and Stream:

In collating the notes on migration which you published a short time ago, by some inexplicable mistake nearly all the notes contributed by Mr. H. A. Kline, of Vesta, Neb., were omitted. I send herewith a full copy of his observations. As in the former paper, all dates are first arrivals unless otherwise stated. Mr. Kline's present address is Polo, Ill. Yours respectfully,

W. W. COOKE.

Wood Thrush.—5, 6.

Robin.—W. R.; 3, 18, becoming more plentiful; 5, 13 nesting.

Catbird.—5, 6.

Brown Thrasher.—4, 21.

Bluebird.—Very rare W. R., began to increase in numbers 3, 4, by 3, 18 were numerous.

Tufted Titmouse.—R.; eggs 5, 5.

Black-Capped Chickadee.—R., very common; nest 4, 24.

Brown Creeper.—3, 23.

House Wren.—4, 20; nesting 5, 13.

Winter Wren.—W. 8.

Prothonotary Warbler.—5, 10.

Orange-Crowned Warbler.—5, 7.

Golden Warbler.—5, 1 numerous.

Yellow-Rumped Warbler.—5, 13.

Redstart.—5, 6.

Maryland Yellow Throat.—5, 9.

Scarlet Tanager.—5, 13.

Barn Swallow.—4, 26.

White-Bellied Swallow.—5, 13.

Purple Martin.—4, 9.

Cedar Waxwing.—Frequent winter visitant in large flocks; have seen three flocks the past winter.

Warbling Vireo.—5, 7.

Yellow-Throated Vireo.—5, 10.

White-Eyed Vireo.—5, 8.

Bell's Vireo.—5, 11.

Savannah Sparrow.—3, 18 abundant.

Oregon Snowbird—*J. oregonus.*—Has been an occasional winter visitant.

Chipping Sparrow.—W. R., numerous.

Harris's Sparrow.—4, 6 numerous.

Rose-Breasted Grosbeak.—4, 30.

Black-Headed Grosbeak.—5, 18.

Black-Throated Bunting.—4, 30.

Indigo Bunting.—5, 13.

Towhee Bunting.—R.

Canon Towhee.—A few remain here in the winter, and are found in the heavy underbrush along the streams. Have shot two.

Arctic Towhee.—5, 7.

Bobolink.—5, 13.

Cowbird.—3, 27.

Red-Shouldered Blackbird.—3, 20 a large flock; 3, 23 numerous.

Yellow-Headed Blackbird.—4, 2; 4, 25 numerous.

Meadow Lark.—3, 2; still arriving 3, 11; nest 4, 24.

Orchard Oriole.—5, 10.

Baltimore Oriole.—5, 2.

Rusty Grackle.—Four large flocks 3, 3.

Purple Grackle.—Nesting 5, 5.

Crow.—Common W. R.; 3, 27 nest with five eggs.

Ringbird.—4, 24.

Great-Crested Fly-Catcher.—5, 27.

Wippoorwill.—4, 22.

Nighthawk.—5, 10.

Chimney Swift.—5, 13.

Kingfisher.—4, 2.

Redheaded Woodpecker.—R.; first from south 3, 27.

Yellow-Shafted Flicker.—R.

Screech Owl.—R.; nest 4, 24.

Long-Eared Owl.—R.; nest 4, 24; eggs 5, 5.

Marsh Hawk.—R.

Swallowed-Tailed Kite.—A pair 4, 4.

Cooper's Hawk.—R.; 5, 11 nest with four fresh eggs.

Pigeon Hawk.—3, 28.

Sparrow Hawk.—3, 28.

Redtailed Hawk.—R.; nest 5, 5, with young, two weeks old.

Turkey Buzzard.—R.

Wild Pigeon.—Going north in large flocks 4, 21-25; two large flocks 5, 5.

Mourning Dove.—Rare, W. R.

Prairie Hen.—R.; common, nest 4, 24; eggs 5, 5.

Great Blue Heron.—4, 9; 4, 24 numerous.

Little Green Heron.—3, 19; 4, 24 numerous.

Night Heron.—4, 2.

Bittern.—4, 3.

Black-Bellied Plover.—Going north in large flocks 4, 24-25.

Killdeer Plover.—3, 2.

Bartram's Sandpiper.—4, 26 numerous; young 5, 23.

Wilson's Snipe.—3, 3.

Curlew.—[Which?—ED.] 4, 2.

Sandhill Crane.—Fifty passed north 3, 22; 3, 28 passing in large numbers, which continued to 4, 22, when they were still to be seen but rather scarce.

Canada Goose.—2, 22; increasing to 3, 28, then numerous until 4, 10; decreasing to 4, 22, when there were few left.

Mallard and Green-winged Teal, with some other ducks in less numbers, were seen all winter wherever the weather was warm.

Redhead Duck.—3, 23.

Wood Duck.—3, 28.

Coot.—3, 28.

Foster's Tern.—5, 7.

Black Tern.—5, 18.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—One whistling swan, *Cygnus americanus;* two chimpanzees, *Troglodytes niger* (both females); two marmosets, *Hapale jacchus;* and two seals *Phoca vitulina;* received by purchase. One prairie wolf, *Canis latrans* (female); seven red foxes, *Vulpes fulvus;* one gray squirrel, *Sciurus carolinensis;* one raccoon, *Procyon lotor;* one opossum, *Didelphys virginiana;* two indigo birds, *Cyanospiza cyanea;* one woodcock, *Philohela minor;* one alligator, *Alligator mississippiensis;* and one iguana, *Iguana tuberculata;* received by presentation. One pea fowl, *Pavo cristata;* one turtle dove, *Turtur risorius;* and thirty-five water snakes, *Tropidonotus sipedon;* bred in the garden.

Game Bag and Gun.

THE HUNTER AND TRAPPER.

IN the dusk and hush of the woods,
Far away from the haunts of men,
Now o'er the steep mountain slopes.
Now deep in some darkling glen
I rove, and I pitch my camp,
Alone in the wilderness,
Where ne'er human voices may curse,
Or human lips may bless.

My home is a wide, humble place
Without facade, or column or dome,
No sumptuous hall to invite,
No marble, palatial home,
No gilded and groin'd lofty roof,
No walls resplendent with art,
No sculptures, no paintings renown'd,
So dear to the proud human heart.

My home is at base of a rock,
With the wild vines and moss-es o'ergrown,
O'er which an imperial oak
Its shelter majestic hath thrown.
A pure, merry brook runneth by,
It prattles and talks to me long.
It gives me cool nectar to taste,
And it charms with perpetual song;
Sweet twigs of the cedar my couch,
My roof is of willow and reed,
And the bark of the birch tree my wall,
And no better protection I need.

I am free as the breezes of air,
I roam o'er the mountains at will,
In the depths of the forests I plunge
And scale the bald cliffs of the hill.
I follow the tracks of the deer,
The panther I seek in his lair,
And I dare in his cavernous haunt
The tusks and the claws of the bear.
My iron-tooth'd snap-traps I set
For the beaver, the otter and mink.
By the shore of the forest-fring'd lake
Or fast by the rivulet's brink.
I know not a sorrow or care,
Remorse, or regret or despair:
I rejoice in the vigor of health,
And pine not for honors or wealth.

ISAAC MCLELLAN.

THE INDIANA NON-EXPORT LAW.

CHICAGO, Dec. 5, 1882.

Editor Forest and Stream:

Since you have lately given prominence to certain prosecutions in the Circuit Court of Lake county, Indiana, of members of the Tolleston Club, of Chicago, for carrying out of the State game killed by them u; on the club grounds in indiana, and as the question involved is of interest to sportsmen generally, I send you a copy of the opinion lately rendered by Judge Field, in the case of Judge Knickerbocker, under which the informations have been quashed in all the cases and the defendants discharged.

I am not advised of any other decision upon the validity of this particular statute, but a similar law enacted by the Legislature of Kansas has been held by the Supreme Court of that State to be unconstitutional upon substantially the grounds stated in this opinion, and it need hardly be said—at least to the legal members of our sporting brotherhood—that this opinion is fully sustained by the various decisions of our Federal and State courts on the general subject of the regulation of inter-State commerce. N.

The following is the opinion as reported in the Lake county (Ind.) *Star:*

In this case the prosecution is based on Sec. 207 of the act concerning public offenses, which reads as follows:

"It shall be unlawful for any railroad company, or other common carrier, their officers, agents or servants, or any other person or persons, to transport, carry or take beyond the the limits of this State, or receive for the purpose of transporting, carrying or taking beyond the limits of this State any * * * wild duck * * * and any such railroad company, express company, or common carrier, their agents, officers or servants, or any other person or persons violating the provisions of this Section, shall be fined in any sum not more than one hundred dollars, nor less than ten dollars for each offense so committed.

It is charged that John C. Knickerbocker on the 25th of September, '82, unlawfully transported such game from this county to Chicago, Illinois.

The motion made by defendant to quash the information raises, among other questions, the constitutionality of the foregoing law It will be observed that another provision of the same act makes it unlawful to kill wild duck at any time "between the 15th of April and the first day of September in any year," thereby making it lawful for any person to kill and possess such game during the time not thus prohibited. The unlawful transportations charged being within the period in which the law permits the killing of such game, and there being no averment to the contrary, the presumption arises that the ducks were lawfully killed. Thus the question is raised, can the Legislature after empowering persons to lawfully kill and possess such game prescribe the disposition of it? In other words, after conferring absolute title and possession of such game, can the State then turn about and prohibit the transportation thereof?

It this provision of the law is to be upheld it must be on the theory that it was enacted to protect this class of game within the State. But how does the shipment or transportation of "dead ducks" (lawfully killed) protect this class of game? The question itself suggests the fallacy of protecting living ducks within our borders by prohibiting the shipment of dead ones. The only effect would be to confine the traffic in such property to this State. To absolutely prohibit the killing of such game at all times would as an incident thereof prohibit the transportation, and such legislation would doubtless be upheld. So too, legislation prohibiting the transportation of such game during the season made unlawful to kill it, for this would only indirectly and remotely interfere with inter-State commerce. It has been held by repeated decisions that no State can pass a law which will directly interfere with the free transportation from one State to another, or through a State, of anything which is or may be the subject of inter-State commerce.

In several cases this rule of law is laid down—"the legislation of a State, not directly against commerce, or any of its regulations, but relating to the rights, duties and liabilities of citizens, and only indirectly and remotely affecting the operations of commerce, is of obligatory force upon citizens within its territorial jurisdiction."

In this case, as has been seen, this law allows wild duck to be killed by everybody, within the season, and thereby allows such game to become the subject of traffic and commerce, and at the same time directly prohibits the transportation of the same to any other State. Is it not in violation of Sec. 8 of Article I of the Federal Constitution, which provides that "the Congress shall have power * * * to regulate commerce with foreign nations, among the several States, and with the Indian tribes?" From the considerations given herein I think it is in violation of such provision and is, therefore, unconstitutional and void.

DEER HUNTING IN VIRGINIA.

WITH a companion, I set out bright and early one morning in last November to drive from my home in Belvidere, N. C., ninety miles, to the hill country of Greenville county, Virginia, there to join my friend Mr. Wyche, in a projected deer hunt. Having come to the swamp bordering the Chowan River, at the Winton Ferry, we saw two beautiful deer cross the road at a bound. My gun was in its cover, and the shells were under the buggy seat; but with a spring I was in the road and had my gun out of cover, with shells in, ready for business. Bidding Steve N—, my companion, to hold the horses, I crept into the swamp, peering in every direction for a glimpse of the sleek hides After going about ninety yards from the road, I saw one of the deer with head a little to one side, watching me. Being some distance away I thought to get nearer, but the animal started, and I threw my gun to my face and fired. Immediately afterward, as the smoke cleared away, I saw a deer bounding through the wood at a break-neck pace. I followed on thinking I had probably wounded, and would get another shot, but vain hope. The deer, after which I was chasing, was "a goner;" and sadly I retraced my steps, wondering what Steve would say when I told him I had made a clear miss. When lo! at my very feet, as I passed through a dense "gallberry" thicket, lay the deer I had shot dead, with seven buckshot through the head. I had been chasing its mate, not seeing in the dense thicket that my shot had told. And just here I will say that the shell with which I shot the deer had been loaded for a squirrel, 2¾ drams powder, 1oz. No. 4 shot. I had taken out the No. 4 shot and put in No. 1 bucks, only nine of them, however. Thus it will be seen that at a distance of forty yards, I had killed a fine young buck with a charge of 2¾ drams of powder and nine No. 1 buckshot, the shot passing through his head entirely Calling to Steve, we soon had the deer strapped on behind the buggy and jogged on to Murfreesboro where we left our deer.

We arrived at our destination late Saturday evening, and Monday morning early were ready for business. Calling his dogs after an early breakfast Mr. Wyche took us to our stands, and, with a parting injunction to "be on our lookout," left us and went in the drive. Very soon the dogs had started, but the deer, a doe and fawn, ran directly away from us; so we missed getting a shot. The next day we drove down to Hicksford, where our host introduced us to several as whole-souled, jolly hunters as man ever met, and a grand hunt was at once organized. On this occasion I had the pleasure of taking a shot at a flying deer—a fine doe. She came "full tilt" across an old field with the dogs in full view, and you know how a deer can run. She was doing her level best. I had but a few seconds in which to "do my thinking;" my gun went up, and as she passed at thirty yards I pulled the trigger, killing her instantly. Twelve of the buckshot out of the fifteen in the gun passed entirely through from one shoulder to the other. Charge, three drams powder, fifteen No. 1 buckshot. Two other very fine deer were killed that day by some of the Hicksford parties. But the grand hunt of the week was reserved for the next day. When after going about three miles out from the village we were placed on our stands and the great Nimrod, Jim Powell, went into the drive with the hounds. Through the courtesy of our entertainers we were given the choice stands; the noted Willow Oak fell to my lot.

We had been waiting but a short time when the "music of the hounds" broke upon our ears, bearing directly down upon us. My gun is at full cock, and I am listening for the "thump and bound of the antlered buck," when, whang, goes a gun to my left. Still the hounds continue in full cry until out of hearing; but, hark! hounds are coming again and my "heart is in my throat," when, bang, bang, bang, go three guns to my left, and soon all is quiet except the toot-toot-toot of the driver's horn. This means, come in, so I sadly shoulder my gun and retrace my steps up the road, where the shooting has taken place. Getting my horse I am riding rapidly along when a sharp, hello! from a little distance in the woods, calls me to a halt, and I turn aside a few rods into the woods where, congregated around some object, stand the gentlemen who were placed upon the uncertain stands. Walking up to them, they make way for me, and there, prone on the ground, lies truly a monarch of the Virginia forest, as noble a buck as I ever beheld, full antlered, and as sleek and fat as a stall-fed calf.

"Well!" I exclaim, "who did that?"

"Capt. Briggs shot him first," was the reply, "but Mr. Atwill and Mr. Cato both shot afterward."

"Yes," replied Jim Powell, "so they did, but they shot him running by them, giving them his side, while Capt. Briggs shot square at his breast, and if you can find a shot hole anywhere except in the breast, I'll treat."

And so it was; there was no sign of his being hurt except in the front, and the shot was awarded to Capt. Briggs.

"But who fired the first gun? The one, I mean, when the first pack passed."

"Oh, that was Briggs too, he's had all the luck this morning."

"Did he kill?"

"Don't know," replied the Captain; "I fired full at his broadside as he passed me, and think he was hard hit, but he went away like the wind with the dogs in full cry, but I think they hushed up rather suddenly."

"Oh! you didn't touch him," from several.

"Don't know, but think I did," said the Captain. "This old muzzle-loader don't fool me often."

"Hello! who are those fellows coming down the road, and what have they got in their buggy?"

"Why, that's young Cook who has a farm over in the direction the dogs went, and that's a deer, by George," cries some one, and a moment later a young man drove up and stopped, and lying across the foot of his buggy was a 200-pound buck with a hole through his heart, made by a No. 1 buckshot, and yet he had gone three-fourths of a mile, and the young man who brought back the carcass said he fought like a demon after the dogs caught him. This was glory enough for one day, but we were not satisfied. So bending down two saplings we hamstrung the brace of bucks and hung them high. Leaving them we made another drive which, however, turned out nothing, but we felt that it was good enough as it was, and so took the deer up to a darkey's cabin, where there was a good, clear spring of water, and there dressed and divided them, each hunter receiving fully as much venison as he cared to take home with him.

The next morning was appointed for us to start on our return homeward. But before leaving, our kind friend and host, Mr. Walter Wyche, insisted on our taking stands on some runways back of his farm, where he would try to give us another shot, as Steve had not "burnt powder" since leaving home. So, going out to the place designated, he put the dogs in, and away they went in an opposite direction; and after remaining on the stand for several hours, a young man called me and remarked that the "dogs had come back," and "we'd as well go home." Standing talking to him, I paid no further attention to the chance of getting a shot, as I was about to retrace my steps when an exclamation from the young man, who had just come up, caused me to turn, and "splash" went a fine doe in the swampy branch, and was gone before I could get my gun down. The meat was gone and so was my last chance to shoot a deer on that trip.

"Well," said Steve when I told him "how near" I had come to bagging another deer, "I'm glad of it; you've done well enough now, taking my luck into consideration." While on this stand I saw a drove of wild turkeys, but feared to shoot, as a deer might thereby be frightened in an opposite direction.

Having no chance for anything more that day, we started for home. It has never been my lot to meet a set of more hospitable, clever, whole-souled hunters than those with whom I associated while in Greenville county, Va., and if fortune favors me, I shall be found wending my way thitherward again in 1883, when the trees put on their livery of brown and gold; and to any who may wish to have an "old-fashioned" hunt with hounds and the much decried shot-gun, I would recommend Greenville county, Va., as the place, and should he desire congenial companionship and experienced aid, I would advise him by all means to "scrape acquaintance" with Messrs. Walter Wyche, Ben Wyche, "Jim" Powell, "Billy" Powell and several other gentlemen of the village of Hicksford and vicinity. He will find them first-class gentlemen in every respect, full of fun, and "ready to hunt at any time."

I find that deer are becoming more abundant in this part of North Carolina than they have been for a long while. Since returning from Virginia, seven fine deer and four bears have been killed within a few miles of Belvidere. A fine doe was seen to cross the road about a mile from this place a week ago. Upon being notified of this, I immediately went in pursuit, but having none but young hounds, failed to start her, and on my way home, I had the misfortune to break my gun stock by merely tapping it lightly against my horse, proving conclusively that the makers of guns are not careful always to put good wood in the stocks of their wares. This was a beautiful stock, but made directly across grain, and broke as short off as a "pipe stem," with not much more jar than would have been required to break a slate pencil.

I find quail still quite plenty, but getting wild, as they are being hunted considerably.

Several men from the North are in this section, breaking dogs for other parties at so much per head, and "pot-hunting" for pleasure and profit. I object to "posting" land for the purpose of keeping hunters off, but I think we will be compelled to do so in self-defense, as it is said the aforesaid "potters" do not leave a covey so long as a bird lives. The end and outcome of such hunting is apparent to all, and we intend taking steps to put a stop thereto.

Wildfowl on the Currituck Sound are said to be unusually numerous, and many are being killed. I want to take "a whole day's hunt" soon after quail, and will give you some account of the outcome. A. F. R.

BELVIDERE, Perquimans county, North Carolina, Dec. 4, 1882.

EXPERIENCE WITH WILD RICE.

IN the fall of 1880 I sowed one half bushel of wild rice in two places in one of the ponds of this town (Plymouth, Me.). It came up thick, but only a few stalks bore seed. The water rats destroyed one bed. In 1881 I sowed five bushels, part in each of the ponds. In one pond it came up late, and all except a few stalks disappeared before reaching the surface. In another pond there is quite a sprinkling of seed stalks. I sowed some in a small mud hole on the farm, in six inches of water; it grew splendidly. It seems to grow best in shoal water. It is growing wild on the Sebastacook, between Newport and Detroit, and some distance up the outlet of the ponds where I sowed it. I have no doubt but that it is growing in many places in Maine in its native state, as but few persons about here know what it is when they see it.—H. S. T. (Plymouth, Me., Dec. 4).

About four years ago our club procured some wild rice and sowed it in the lakes and marshes on our shooting grounds on the Charlton River. The first year it came up tolerably well, second year a very little came up, and the third year none at all. It seems to be a failure here Blackbirds are very numerous here, and I think had something to do with annihilating it. Let us hear from others.—BORDER RUFFIAN (Macon, Mo., Dec. 5).

The Ontario government has appropriated $250, at the request of the Fish and Game Protection Club, of Montreal, for the sowing of wild rice in the duck-feeding grounds throughout the province. The club adds $100 from its own funds, and will superintend the sowing of the rice.

WHO KNEW JOE CALL.—I notice that a contributor mentions Joe Call, the athlete of Northern New York. I had never seen his name before, but remember well how our old neighborhood cooper used to entertain us youngsters with the exploits of Joe Call, whom he knew in his youth If there is any one living who knows much of this noted strong man, a "gret John Ridd" of his day, it would be well worth telling in FOREST AND STREAM.—AWAHSOOSE.

"GAME PROTECTION FOR THE PEOPLE."

Editor Forest and Stream:

Congratulating you and the public upon the active and growing interest, in so many quarters, in the protection of the game and fish of the State, let me submit for consideration, in the framing of provisions either amendatory or in lieu of the present game law, the following.

"Hounding and Still-Hunting."

In February, last year, you formulated, under the above caption, certain questions intended to elucidate the comparative merits of those methods of hunting in their relation to game preservation, and solicited "concise statements" in response.

The first four inquiries propounded contined attention to hounding and still-hunting, their respective methods and effects:

"1. What is the character of the country referred to?
"2. What is the prevailing method of hunting deer?
"3. Describe hounding deer as practiced in the section referred to, and it effects. Does it drive deer out of the country?
"4. Describe, in like manner, still-hunting and its effects."

It is regretted that what has been written in reply has not been responsive to your inquiries. Very general expression of opinion upon the comparative merits, or rather demerits, of the different methods by several writers, without statements of the facts claimed to justify them, has contributed little or nothing satisfactory. If the dispute were to be settled by the "greater poll," a decision might, no doubt, be so facilitated, but not a correct judgment. Opinions, to be authoritative at all, must necessarily be based upon large experience, and would very likely be aggressive and biased by strong partiality for a favorite pastime.

One of the methods of hunting is concededly more destructive than the other. Their advocates impliedly admit this, eagerly assert it in their mutual criminations. Can we rely upon this mere badinage for a correct conclusion? If not, what better can be done? The answer is, give us the facts, and appeal to a candid public for judgment. For the facts, then—soliciting always criticism and correction:

1. The character of the country referred to. It is broken, mountainous, covered with forest; contains innumerable lakes and ponds which discharge their surplus waters through creeks and rivers traversing it, into principal outlets to the ocean. This is the Adirondack region, in Northern New York.

2. The prevailing methods of hunting deer. The methods are still-hunting, floating, and hounding, each prevailing as season and chances are most favorable to it, floating being most practiced in warm weather where deer are abundant; still-hunting in fall and winter, and hounding at all times where it promises most destruction, and as a supplement to other methods when their resources fail.

"3. Describe hounding deer as practiced in the section referred to, and its effects. Does it drive deer out of the country?" Answer: Two or more persons confederate under the captaincy of a "guide" or knowing huntsman. He distributes the shooters about on points on islands, or in boats, where the "runways" are and deer will be likely to be driven to water, and with one to a half dozen dogs—as many as he has and can manage—he takes to the woods to look for fresh signs. He pursues the search until, if possible, he has successively started all the dogs, and then makes his way back. Deer that may be started are driven before the dogs until, from precipitate necessity, or after having exhausted their strength in unsuccessful efforts to escape pursuit, they instinctively take to the water as a last chance for their lives, and such of them as are there intercepted by the watchers are slaughtered.

In explanation it should be told that the professional "guide," or proficient in this business, despises the hound pure and simple. He has no purpose such blooded thing can serve. From natural stolidity or long familiarity he is insensible to romance of situation and surroundings, and the poetry of the chase. The butting crag, the towering mountain, the blazing splendors of autumnal verdure robed in frost, duplicate in the nether sky of stilly waters, the answering echo, and the charm that cloud and sunshine give to scenic grandeur are no more to him than incitement to dog the mother and her nestling kids, no more to the appreciative Oscars lingering on the watches than opportunity to bravely rush on helplessness in the water and beat a skull in. And so, in abomination of all long-eared dogs, the necessities of this method with thoughtful foresight have bred a hybrid, with just nose enough to take fresh spoor, and legs enough to run the game "straight to water."

The "effect" is apparent. Deer, not able to elude the dogs by flight to remote parts or unguarded waters, are destroyed. Such as escape for the nonce, driven perhaps miles from favorite haunts, materially, often fatally injured by the terrors and casualties of the chase; are the victims, to-morrow, of a fate escaped to-day.

The effect of this method upon suckling does—and the fawns are not weaned until late in the season—may be conceived. It beggars description.

(In parenthesis let me state as germane to the subject something that came under my personal observation: Late in July, in the vicinity of the headwaters of the Raquette River, a large doe, driven by dogs across a beaver-meadow, staggered and fell several times after stopping to turn and listen. Where she entered the cover over rock and lichen her dugs dripped bloody milk.)

In narrating the effects of this method of hunting one must use general terms. Happily, however, general statement may be qualified. Manygentlemen attracted to the Adirondacks by legitimate tastes, and for legitimate sport, yielding from inadequate appreciation of its infamy to participation in such "sport," are its witnesses and its denouncers. In point of numbers it may be estimated that hounding is as destructive as any other method.

"Does it drive deer out of the country?" you ask. No, forsooth they have not that alternative. One of your correspondents affirms as his opinion that hounding does not drive the deer out of the territory. He evidently bases his opinion on the fact that no diminution is observed in their numbers, without considering that a question of identity is involved, that no one will pretend to determine, and that other and contiguous territory is also hounded, so that habitat of to-day is refuge on the morrow, this alternation ensuing until exterminaton. And this distribution constantly equalized, fatally exposes the game in all quarters to multiplied efforts at destruction.

"4. Describe in like manner still-hunting and its effects." Answer: Still-hunting is the pitting against the instinctive wariness and cunning of the deer, the intelligent and practiced artifice of man. It is practiced by stalking on the leaves or bottom, and on the snow, when the moccasin presses silently and conditions of weather are favorable. The effects of this method on the game is most rapid destruction and as extensive as that of any other method, but unattended by romp and dispersion that unsettles conditions of thrift and procreation. This method is the favorite of the market hunter, and its abuses the result of his cupidity. So much directly upon the subjects propounded. Something more just here upon the comparative merits or demerits of the two methods.

Still-hunting, by common consent and acquiescence, is as a sport eminently legitimate. It calls into service faculties, qualities, habits, essentially structural to mind and body. It offers no inducements in its uses to depravity of any kind. Nature, in the interest of game preservation, sets effectual limits to its exercise in the character and qualities of its devotees, whose numbers are comparatively limited, as she does in conditions of season and weather, for it is only in maturity and then only occasionally that she exposes her game products to its capture. If not in its method, in its extent it may be practically and effectually limited by legislation.

Hounding supplements every other method of destruction. It is the multiple of all the evils and abuses threatening game extermination. Nature puts no restraints upon its method, save by an appeal to sensibilities it has depraved in the gentility of its devotees as in the "guide" whose home has become a shanty where he kennels with his dogs. There is no season, no hour of day or night, no bottom soft or hard, snow or crust, no condition of weather when the dog may not scour the most secluded game haunts; and there is no quality or condition of humanity, on its legs, that may not share the degradation of this pastime.

LEGISLATION.

As you suggest, "the laws are well enough so far as they go, but of themselves they amount to nothing." This suggests the remedy. Let the laws go further, and let officers be provided and charged with their execution.

Ten additional State game protectors are required.

It should be provided that no person, other than a defendant in an action, shall be exempt from testifying before a grand jury, in any action or proceeding under the game laws, on the ground that solicited testimony would charge, or tend to charge, or inculpate, or tend to inculpate, the witness in any such action or proceeding, provided, that such testimony shall not be used against such witness in any action or proceeding whatever. This provision will provide detectives whenever there shall be confederation, and supply a defect that has rendered the proper execution of the law impossible.

Thus much generally. Some of the specific provisions and amendments required are:

1. One making the possession of all protected fish, in the close season, an offense. A similar provision in the present statutes applies only to trout.

2. One providing that placing nets in waters where any protected fish may enter them be prohibited, and providing that they may be taken and destroyed.

The present law prescribes the ridiculous farce of their exposure to sale, to be purchased by a combination of lawbreakers, for a nominal sum and replaced in prohibited places.

3. One prohibiting spring shooting. The sportsmen of New York can afford to take the initiative and effect this salutary reform by the influence of their example.

4. One prohibiting hounding or pursuing deer with dogs in any part of the State.

St. Lawrence county enjoys the advantages of such a prohibition, and her energetic game club enforces its observance.

5. One providing that one State game protector shall be appointed for each county in the Adirondack region; and that the several game protectors of the State shall file, quarterly, with the county clerk of the county for which he may have been appointed, a statement verified by his oath, giving a detailed account of the number of days spent in the discharge of his duty, and where spent, and of the service rendered, and an itemized account of his expenses therein.

It especially concerns the success of game and fish protection, that game protectors should be located in most exposed parts, that their only recommendation to office shall be capacity and efficiency, and that they shall hold their places by no other tenure.

Cannot the sportsmen of the State of New York set an example of civil service reform, and lift the appointment of State game protectors out of partisan politics?

WHY NOT?

THE ADIRONDACKS, Dec. 2, 1882.

Editor Forest and Stream:

Your editorial in the issue of your most excellent journal of Nov. 23 in regard to game law amendments is timely, but will it be heeded?

For years I have been advocating just what you now recommend, and I think I first originated the thought in regard to appropriation and the appointment of at least fifteen fish commissioners or fish protectors for the dear old woods comprising the Adirondack section. But can we with so much red tape around game law papers effect anything? The curse of politics seems to stand in the way. When too late politicians and sportsmen will wake up and see the deer and trout extinguished. As you say, "Now no one will say that our game laws, as they at present stand in the various sections of our country, are at all what they should be; but if they were properly and sternly enforced they would do a vast amount of good, instead of, as is now too often the case, accomplishing nothing at all."

No words of more truth ever uttered. This past year, when in the woods, a certain game constable was reminded of certain parties who were operating with set lines, and he took no more notice of it than to a passing cloud. We want men who are not afraid to act when called upon. The commissioner or constable alluded to will be watched during 1883. Game in the Adirondacks is fast decreasing instead of increasing. My thirty years there, in every summer remaining for months, enables me to make this painful charge. OBSERVER.

Editor Forest and Stream:

Your valuable editorial in issue of Nov. 23, and the communication from the Utica Protective Association, open the campaign in fine style, and St. Lawrence county would like to speak a word in season. We have in this region also a society incorporated and organized for the same beneficent purposes as the Utica association, which society is more or less alive in spots, and upon the members of which your encouraging voice will, let us hope, be as the sound of Gabriel's trump. It is an up-hill business for private individuals to enforce the laws of the State at their own cost, and however zealous they may be for a time their efforts are sure to languish if the strain is too long continued. It may do for a short spurt, for instance, to help the poor State over a financial difficulty, but for a steady thing you can't rely on it.

Your editorial opens with the remark that "it is almost time for the tinkering to begin." Let me ask, most respectfully, if it is not rather almost time the tinkering was all done? Some time in the past summer the State association sent out a circular letter accompanied by a list of questions, to which it solicited replies, asking at the same time for suggestions in reference to a new game law, to the end that information and expressions on the subject might be gathered from all parts of the State, and a bill framed which should be simple, effective and likely to receive general support. It was stated that such a bill would be prepared and copies distributed or printed so that we could all have a chance to see it, the idea being to get a bill that all interested could unite upon and support. The plan was a good one, but what has become of it? Our society responded promptly, but nothing has since been heard from it. Perhaps the committee appointed by the State association for the purpose have prepared their bill, if so, it is very desirable that copies should be sent without loss of time to at least all the protective societies in the State in order to secure their approval and active co-operation. If an effort is to be made this coming winter to secure an amended game law there is no time to be lost. It is very important, if not absolutely essential, to its passage that the bill be agreed upon and ready to present to the Legislature immediately upon its organization.

Of course we have our opinions, and very decided ones as to some things which such a law ought to contain, but whether renewed effort to improve the law shall be made or not, the St. Lawrence Game Club desires in the loudest and most emphatic language to second your efforts towards securing an efficient and sufficient body of officers, well paid, to enforce such laws as we now have, until we do get better ones. The number of game and fish protectors now authorized by law (eight) is entirely inadequate to do the work required. In the distribution of those few officers we have especial reason to complain, as all that part of the State lying north and west of the Adirondack Mountains, say the counties of Franklin, St. Lawrence, Lewis and Jefferson, was left wholly unprovided for, and there is certainly no portion of the State of equal area which has so many streams, or greater forests, or more game and fish, or which stands more in need of protection. How much longer we shall have either game or fish to protect if left to our individual efforts, remains to be seen; not very long, it is safe to predict. Our efforts, however, during the two years of our organized existence have not been altogether fruitless, for we have awakened a good degree of interest in the subject, brought a number of offenders to justice, and created a wholesome apprehension in the minds of other evil-disposed persons, that it is not altogether safe to violate the game law in some parts of the territory above mentioned, at least, and for all of which we have had the privilege of paying. I was about to say enjoyed the privilege, but that would not be a perfectly accurate expression. We shall, as you express the hope that all such societies will do, continue to work and pay a little while longer in the hope that the State will do its duty and come to the rescue, but we are getting tired and need relief, and that speedily. It is scandalous for the State to pass laws and leave their enforcement to private individuals. You have struck the key note of the whole chorus, and let us keep harping upon it until we have secured a sufficient corps of reliable and well paid officers to enforce the laws we now have, and get better ones whenever we can. Let the war cry be: "The State must enforce its game laws or go out of the business."

L. D. HOARD,
President St. Lawrence Game Club.

VIRGINIA QUAIL GROUNDS.

Editor Forest and Stream:

I have just returned from a most enjoyable trip down to Virginia, where quail do most abound

I went down on the Old Dominion line and cannot say too much in praise of the comfort and kind attention I received on their steamers, both going and coming—clean, light and well-ventilated staterooms, warm and comfortable quarters for my dogs, and first-class table. Last season I went by rail, but while the outside trip takes a trifle longer, the absence of many changes and the general comfort more than compensates for the loss of time.

I arrived at my destination in due time, and found the old, cozy homestead among the pines as comfortable as ever, a big wood fire burning in the open fire-place, and all hands, dogs included, glad to see me. My traps were soon unpacked, shooting suit and blue flannel shirt took the place of store clothes, and at last we were off.

Owing to its being the first cold snap the birds had taken to the woods, but still my friend showed me enough to satisfy my modest desires, and though many easy shots were missed, there were also some killed, and at night, when we strung them in pairs before the cheerful open fire, while the "toddies" smoked on the table by us, they made a "goodlie show."

I devoted my week's trip—with the exception of one day when we went on a turkey hunt and got none—to quail. The wildfowl were not yet there, only just putting in an appearance when I left. I also killed a few English snipe and woodcock. When my time was up my birds made a handsome bunch, and owing to the cool weather were as fresh and sweet as if shot that morning. When the last day arrived I left with regret, but have many pleasant incidents to look back to through the long winter evenings now at hand, to say nothing of the store of good health laid up to carry one through the hard indoor work of the coming season. Would that more of our business men would take a couple of weeks of hard walking in the cold, crisp, November days. Game is reasonably plenty all through that section. There is hardly a station from one end to the other of the Chesapeake & Ohio Railway, which connects with the Old Dominion line, that does not offer good sport, and the Old Dominion line takes you to some of the best shooting grounds on the Atlantic coast.

My thanks are also due to Mr. Harry W. Fuller, General Passenger Agent of the Chesapeake and Ohio Railway for his great kindness while on my trip. W. HOLBERTON.

HACKENSACK, N. J., Dec. 4.

MANUFACTURERS of fire arms will do well to consult the advertisement of Mr. Wm. B. Hall, Lancaster, Pa.—*Adv.*

OUR CHICAGO LETTER.

[From a regular Chicago Correspondent.]

THE marshes, lakes and streams are solidly frozen and the teal, blue bill, mallard, canvas-back and such ilk have winged southward. It is nearly certain that none have stopped north of the Ohio River. A few hunters followed them into the Tennessee sunken lands. The last place in this section where there was any duck shooting was on the Illinois River, near Delavan. The Senachwine was deserted last week by the Kleinmans, Coleman, Whipple and the rest of the boys. With the exception of one rather thrilling incident, given below, your readers must content themselves this week with a little personal chat. On the return from the North of Fred. Taylor, the veteran sportsman of this section, your correspondent will furnish you with the article promised on the hunting haunts of the vicinity, as was promised. The sportsmen are all awaiting its publication, even though they know, or think they know, every spot in the neighborhood. Of our hunters Frank Mercer is in Canada, trying to get a bag of something near Quebec. Harry Kenyon and Dave Jewett are over in Michigan slaughtering quail and rabbits. Most of our hunters, however, declare that there is too little sport about shooting the latter to pay for the trouble. Several of our boys have gone over to Detroit to attend a sweepstake clay pigeon shoot. Will send you returns as concerns local shots upon their return. Ed. Hudson, one of our best young shots, has just returned from Alpena, where he got away with a plentiful supply of the regular season's game. There have been no returns from our deer stalking party as yet. They return some time this week.

One of our boys received a letter from the well-known shot and sportsman Al. Meaders, who figures in nearly every pigeon tourney held in this country, yesterday. Meaders is at his home near Memphis, Tenn., and sends word here that there will be the greatest kind of shooting at Reelfoot Lake, about fifty miles north of Memphis, should the weather continue good here. As this is a noted spot for hunters, though little known East, your correspondent sought Abe. Kleinman and asked him about the lake.

"You want to know about Reelfoot Lake? Well, you can just say that it's the greatest hunting resort that I ever saw. You must know that the lake is really sunken lands flooded with water. You can row over the tops of stately forest trees, and looking down can see the bottom, like a forest glade, some sixty to seventy feet, at places, below. At other times you are scraping in the tops of the trees and brush. The ducks are thick there when cold North and have great feeding grounds. They catch a fish like our black bass, only they call it a "trout." I can't explain why, for it is not like a trout at all. When I was there a few years ago, there were no boats, no house to stop at or anything. I understand there is a house with boats there now. As the hunting season lasts fully two months, it pays any sportsman to pay a visit to that section of the country. You can also say that there are any quantity of geese, brants, etc., there."

There will be plenty of sportsmen's festivities here Christmas week. The Pullman Club gives a pigeon shoot, the English Lake and Lake George Clubs turkey shoots, and the rest will hold some kind of a tournament, if it is nothing but glass ball matches, etc.

John Gillespie and several more of the English Lakers who returned from their club house last week report an event that came near proving tragical in its results. It seems they were all at the club house at English Lake, Ind., Thursday morning last, when two pitiful-looking, half-frozen and half-starved hunters, hailing from Richmond, Ind., came staggering into the club house. They had been caught out on the marshes the Wednesday night before, which, your readers will remember, was the night of the fearful cold snap. They had been closed in by the fast-freezing ice of the river, and could not get away. They broke up their boat and burned it, finally being compelled to sit in the cold for hours without a spark of fire. They had their faces, hands, feet, and other parts of their bodies frozen, and were as near dead as any one could ask for. They said they had never passed such a terrible time in all their lives. Both were wealthy gentlemen of Richmond. They walked over the lake on the solidly frozen ice the next day.

OREGON GAME LAW.

WE have just received the following text of the new Oregon game law, which was approved by the Governor last October:

SEC. 1. Every person who shall within the State of Oregon, between the first day of November in each year and the first day of July of the following year, hunt, pursue, take, kill or destroy any male deer or buck, shall be guilty of a misdemeanor. Every person who shall for the period of four years from and after the passage of this act pursue, hunt, take kill or destroy any female deer or doe, shall be guilty of a misdemeanor. Every person who, after the passage of this act, shall kill any spotted fawn, shall be guilty of a misdemeanor. Every person who, after the passage of this act, shall take, kill or destroy any male or female deer or buck at any time, unless the carcass of such animal is used or preserved by the person slaying it, or is sold for food, is guilty of a misdemeanor.

SEC. 2. Every person who buys, sells or has in possession, any of the deer enumerated in the preceding section, within the time the taking or killing thereof is prohibited, except such as are tamed or kept for show or curiosity, is guilty of a misdemeanor.

SEC. 3. Every person who shall, within the State of Oregon, between the first day of January and the first day of August of each year, hunt, pursue, take, kill or destroy any elk, moose, or mountain sheep, shall be guilty of a misdemeanor. Every person who takes, kills, injures or destroys, or pursues with intent to take, kill, injure or destroy any elk, moose, or mountain sheep, at any time for the sole purpose of obtaining the skin, hide or hams of any such animal, shall be guilty of a misdemeanor.

SEC. 4. Every person who shall within the State of Oregon, between the first day of April and the first day of September of each year, take, kill, injure, or destroy, or have in possession, sell or offer for sale any wild swan, mallard duck, wood duck, widgeon, teal, spoonbill, gray, black or sprigtail duck, shall be guilty of a misdemeanor, provided, that any person may at any time kill ducks to protect his growing crops.

SEC. 5. Every person who shall within the State of Oregon, between the first day of April and the fifteenth day of June of each year, for any purpose, take, kill, injure or destroy or have in possession, sell or offer for sale any prairie chicken or sage hen shall be guilty of a misdemeanor.

SEC. 6. Every person who shall within the State of Oregon, between the first day of January and the 15th day of July of each year, take, kill, injure, or destroy, or have in possession, sell or offer for sale, any grouse, pheasant, quail or partridge, shall be guilty of a misdemeanor.

SEC. 7. Every person who shall within the State of Oregon, during the months of November, December, January, February and March, of any year, catch, kill, or have in possession, sell or offer for sale, any mountain or brook trout, shall be guilty of a misdemeanor. Every person who shall within the State of Oregon take or attempt to take, or catch, with any seine, net or weir, or other device other than hook and line, any mountain or brook trout, at any time after the passage of this act, shall be guilty of a misdemeanor.

SEC. 8. Every person, who shall within the State of Oregon, and after the passage of this act, trap, net or ensnare, or attempt to trap, net or ensnare, any quail or Bob White, prairie chicken, grouse or pheasant, or have in possession any live quail or Bob White, prairie chicken, grouse or pheasant, shall be guilty of a misdemeanor.

SEC. 9. Every person, who shall within the State of Oregon, at any time after the passage of this act, destroy or remove from the nest of any mallard duck, widgeon, wood duck, teal, spoonbill, gray, black or sprigtail duck, prairie chicken or sage hen, grouse, pheasant, quail or partridge, or other wild fowls, any egg or eggs of such fowls or birds, or have in possession, sell or offer for sale, any such egg or eggs, or wilfully destroy the nest of an any such fowls or birds, shall be guilty of a misdemeanor.

SEC. 10. Every person who shall have any male deer or buck, or any female deer or doe, or spotted fawn, elk, moose or mountain sheep, swan, mallard duck, wood duck, widgeon, teal, spoonbill, gray, black, or sprigtail duck, prairie chicken or sage hen, grouse, pheasant, quail, Bob White or partridge, mountain or brook trout, at any time when it is unlawful to take or kill the same, as provided in this act, shall be guilty of a misdemeanor, and a proof of the possession of any of the aforesaid animals, fowls, birds or fish at a time when it is unlawful to take or kill the same, in the county where the same is found, shall be *prima facie* evidence in any prosecution for a violation of any of the provisions of this act, that the person or persons in whose possession the same is found, took, killed or destroyed the same in the county wherein the same is found during the period when it was unlawful to take, kill or destroy the same.

SEC. 11. Every person convicted of a violation of any of the provisions of this act shall be punished by a fine of not less than ten dollars nor more than three hundred dollars, or imprisonment in the county jail of the county where the offense was committed for not less than five days nor more than three months, or both such imprisonment and fine. One-half of all moneys collected for fines for violation of the provisions of this act shall be paid to informers and one-half to the district attorney in the county in which the case is prosecuted.

SEC. 12. All acts and parts of acts in conflict herewith are hereby repealed.

MINNESOTA.—The St. Paul *Pioneer-Press* is wide awake; it proposes: "Now that the new Legislature is elected, let the members-elect give due consideration to the matter of game protection. Let the game law be simplified to the fewest possible words and clauses. Prairie chickens, ducks, geese, woodcock, sharp-tailed grouse, snipe, plover of all kinds, squirrels, deer, moose and caribou should become shootable Aug. 15; quail Oct. 1. All shooting should cease Dec. 1. Let Minnesota lead the way in the abolition of spring shooting. Her entire territory is a breeding ground for wildfowl. When they reach our State from the South they are ready to settle down to family duties, and are perhaps already mated. If the endless banging of spring was prohibited these birds would at once go to housekeeping, and on every pond, lake or slough through our State the ducks, snipe, plover and geese would locate and raise their young. In the fall, instead of a few days' flight shooting at migratory bands, we should have three or three and a half months of fine shooting of juicy young birds. Then in the spring, along through April and the early part of May, our prairie chickens and grouse are mating, and a duck shooter is not likely to spare these if he flushes them on his travels from slough to slough. By preserving our wildfowl we add to the attractions of our State as a summer resort; we add to the commercial value of our products and to the food supply. Woodcock shooting in the summer should, anyhow, be abolished, and even if the spring shooting of ducks is continued, this abomination should be done away with. There are many true and good sportsmen in the present Minnesota Legislature, especially in the Senate. They all know that they would not go cock shooting on a hot July day for $20. What sport is there, with the thermometer eighty-five in the shade, down in a willowy bottom, without a breeze stirring to cool the fevered brow, the noble army of mosquitoes buzzing around and thirsting for blood, and twigs switching you in the fall, every now and then, as a stimulant. Only the pot-hunter—the market man who cares not whether it be woodcock or wood-duck, quail or grouse, that falls to his gun, will risk these discomforts, for to him it is dollars and cents. Why, then, for the sake of nobody should this be allowed to continue? Let this be done, and to make the law no dead letter, let them appropriate some $3,000 or $4,000 to enforce the law thoroughly. All sheriffs of counties should be obliged to arrest on complaint. A penalty of not less than $15 for each and every bird or beast killed should be enforced, with one-third to the complainant, one-third to the county school fund and one-third to the State. A game warden should be appointed, whose special duty must be the enforcement of the laws, and a thorough scouring of the country to see that sheriffs of counties are doing their duty. Game is State property, and the State should see to it, even as they are seeing to the preservation of fish, that this valuable property be not squandered by the reckless few."

HELP THE QUAIL.—It is quite probable we are to have, this winter, a counterpart of that of 1880, and a succession of snowstorms will follow the fall of the one just past. December set in ominously, the snow now on the ground has thawed and then became crusted by a low temperature. Even now, this early in the season, the quail find it difficult to gather their necessary food, and the outlook is not a promising one for the safety of our favorite bird, whose ranks were terribly decimated by the severe winter of year before last. The clubs must take the matter in hand at once. Let every one who is able keep over until spring a number—some more and some less. It will pay.—HOMO.

ONTARIO PROPOSED NON-EXPORT LAW.—The following petition is being circulated by the London (Ont.) District Fish and Game Protection Society: "*To the Honorable the Legislative Assembly of Ontario, in Parliament Assembled:*—We, the undersigned inhabitants of the province of Ontario, most respectfully beg to bring to your especial notice a grievance which we labor under, and which is yearly becoming a greater evil. It is a well-known fact that we are subject to the inroads of a large number of "market shooters" from the United States year after year, who make Ontario the basis of their trade, and, as soon as the shooting season opens, kill, destroy, and clear off nearly all our game birds and food-producing animals, and ship and export them to the various markets in the Eastern States, to the detriment of this province and the sportsmen resident therein. Of these facts we are cognizant, and are prepared to prove them before any committee which your honorable House may choose to appoint to take into consideration this, our petition, for relief in the matter. As a remedy for this great evil, we beg most respectfully to suggest to your honorable House the insertion of the following clause as an addition to the present game law:—No person not being a permanent resident of Ontario shall at any time hunt, take or kill any deer, elk, moose, reindeer, caribou, grouse, pheasant, prairie fowl, partridge, wild turkey, quail, woodcock, snipe, plover, wild duck, swan, goose, hare, rabbit, or squirrel, for the purpose of exporting the same out of Ontario, and in all cases the onus of proving that any said deer, elk, moose, reindeer, caribou, grouse, pheasant, prairie fowl, partridge, wild turkey, quail, woodcock, snipe, plover, wild duck, swan, hare, rabbit, or squirrel so hunted, taken, or killed is not intended to be exported as aforesaid, shall be upon the person hunting, killing, or taking the same. Offenses against this section shall be punished by a fine not exceeding twenty-five dollars, nor less than five dollars, for each animal or bird. No railway, express company, or other common carrier, or any other of their agents or servants, shall knowingly receive any of the above-mentioned animals or birds for transportation out of Ontario. Offenses against this section shall be punished by a fine not exceeding twenty-five dollars nor less than five dollars, for each animal or bird. And your petitioners will ever pray, etc."

SAGADAHOC ASSOCIATION.—The Sagadahoc Association for the Protection of Fish and Game held their annual meeting for the choice of officers at Bath, Me., Dec. 6, at the office of Dr. C. A. Packhard. The following officers were elected: Dr. C. A. Packard, Bath, President; A. Q. Goud, Topsham; J. H. Millay, Bowdoinham, Vice-Presidents; Geo. E. Newman, Bath, Secretary and Treasurer. Executive Committee—S. W. Carr, Bowdoinham; A. Q. Goud, Topsham; Geo. H. Nichols, Bath; Dr. E. W. Johnson, Brunswick; A. S. Alexander, Richmond. A resolution was unanimously adopted, expressing as the sentiment of the association, that suitable laws should be enacted prohibiting the exportation of game from the State, and requesting our Senator and representatives to use their influence to procure the passage of such a law. It was stated at the meeting that Sewall's Pond in Arrowsic, Nequasset Pond, Woolwich, and Campbell's Pond, West Bath, have been stocked with black bass during the year. The association enters upon the fourth year of its life with a membership of one hundred or more, and has become a factor of benefit to the community far beyond any idea of the unthinking. Hereafter, with the exception of the annual meeting, the only meetings of the association will be at the call of the Executive Committee.—G. E. N.

MICHIGAN DEER SHOOTING.—Detroit, Mich., Dec. 1.—Sportsmen who have returned from their deer shooting excursions report excellent sport and plenty of game. The markets being practically closed the pot-hunter has not been found haunting every runway with his mangy hound of doubtful antecedents. The enjoyment, therefore, to those who hunt for pleasure rather than profit has been greater than in previous seasons. E. H. Gillman and two friends have just returned from a six weeks' sojourn in the North Woods, during which time they have killed nearly fifty deer and several good bags of ruffed grouse and quail. Ducks are still here in good numbers and the market is filled with them. Nearly everbody who goes to the St. Clair Flats or down to Point Mouiller gets a fair return for his time and expense. Shep. Maisonville, of Windsor, bagged sixty-two in one day, which is the best report I have heard this week.—W.

DEER NEAR LAKE GEORGE.—In a private letter from a correspondent at Glens Falls, N. Y., he says: "Visitors to Lake George do not all know that the hills that border that beautiful sheet of water still contain deer. Capt. Leo Harris, Aleck Taylor and Oscar Tinkle returned from a hunt on Black Mountain, just below the Narrows, with seven deer. They are all old and good hunters, and nearly every year kill a few deer around Black Mountain, Mr. Colvin's headquarters in 1881. Burr Phelps, pilot of the Ganouskie, was really the man that killed the bear in Lake George in 1881, by roping him from the deck of the steamer, although credit was given to another. I was fishing in the lake that day and remarked the lateness of the boat; later Burr told me the facts, which were different from the newspaper account. Burr killed one buck that he says was the largest he ever saw. My younger brother and Burr killed a deer on Utawanna Lake, between Blue Mountain and Raquette lakes, in 1880, by running it down with a little steamer."

HE OUGHT TO HAVE A MEDAL.—Ashland, Mass., Dec. 4, 1882.—*Editor Forest and Stream:* Mr. G. G. Tidsbury, of this place, while out hunting with Dr. Redfearn's Gordon setter, last Saturday, bagged nine quail at one shot. They were sitting about twenty-five yards away. The shell was loaded with four and one-half drams powder and one and one-quarter ounces shot. The most remarkable feature of this exploit is the fact that he killed every bird in the flock. Have any of your readers equaled this very successful shot this season?—O. [We feel no hesitation in venturing the opinion that the shot has not been excelled, although our Arkansas duck-shooting friend, John, whose exploit was heralded by "Byrne," in a recent issue, may come in for second honors. Mr. Tidsbury ought to have a medal, perhaps something like the Trout-Hog Medal, of which the design was published in our issue of July 7, 1881.]

FLORIDA.—Jacksonville, Dec., 1882.—Dingue (break-bone fever) has taken flight from East Florida, and yellow fever from Pensacola in the western portion of the State. Ducks are arriving and so are visitors and sportsmen.—AL. FRESCO.

THE "AIR SPACE" MATTER.—Philadelphia, Dec. 8.—The dissenting voices in your issue of December 7, as to my denial of the danger of the "air space" in rifles does not surprise me. Much fatigued with the experimental firing which I have done during the last three weeks, I choose now merely to refer to my assertions hereon, in FOREST AND STREAM of November 23 and 30, and to defer, for a week or so, further answer. Of course, with a well-posted ordnance officer, no defense of my position would be necessary. The subject is one of peculiar interest, and I shall have somewhat to say on it hereafter.—W. McK. KEATH.

PETERSBURG, Va., Nov. 29.—Here is an item from the *Index-Appeal*, alas, only too true. "We understand that large numbers of wild ducks are being caught in the James River below City Point—most of which are sent to the Northern markets. The waters of the James River are the resort of myriads of wild fowls, which find feeding grounds there during the winter." Partridge shooting has been poor so far, the birds ranging in the woods on account of the dryness of the fields. Hope for better sport when this storm is over. Deer are reported plentiful; hares in abundance.—K.

SPORTSMEN IN THE INDIAN TERRITORY this winter are having more excitement than they looked for. Instead of engaging in the chase as soon as they cross the border, they find themselves chased by Indian policemen. One party of five hunters was run down last week and taken into custody. Their horses, wagons, guns and supplies were confiscated according to law, and they may be fined $500 each. The Indian policemen are patrolling the border in force to keep out other intruders. Incredible as it may seem in New York, they haven't clubbed anybody yet.—*New York Sun.*

THE ONEIDA CLUB.—This club, just organized, has acquired the exclusive privilege of fishing on about eight miles of Fish Creek (Oneida River, Lewis county, N. Y.) and its tributaries. This is said to be one of the finest fish preserves in the State of New York. The members of the club are gentlemen living in different parts of the country and are especially interested in preserving the fish in the waters over which they have control.

THE BARBED WIRE FENCE.—I am glad to see you calling attention to the danger of that abominable nuisance, the barbed wire fence. A party of four of us visited Cape Cod for a three weeks' shoot, and had a fine hound nearly ruined by running against one of the barbs, and used him up so we could not use him for the whole time we were there.—J. U. U.

NEBRASKA.—Falls City, Dec. 3.—Five of our local sports men spent four days on the Platte River, some time ago, bringing home 282 geese as the result of their prowess. Ducks and geese are not very plentiful here just at this time. The cold weather has not fairly set in yet. There are plenty of quail, chickens, rabbits and squirrels here, though.—D. B.

ROCHESTER, N. Y., Nov. 23.—Mr. Wm. J. Babcock, of this city, has just returned from a duck-shooting excursion to the St. Clair Flats, where he reports the that sport was good.

MICHIGAN SPORTSMEN'S ASSOCIATION.—The next annual session of the Michigan Sportsmen's Association will be held at Detroit, commencing on the 9th of January, 1883.

FOREST AND STREAM SCHEDULE "B."

EXCEPTIONS, LOCAL LAWS, ETC

Alabama.—Law applies to counties of Mobile, Monroe, Baldwin, Marengo, Lowndes, Hale, Dallas, Montgomery, Green, Wilcox, Talladega, Pickens, Bibb, Autauga. Wildfowl law applies only to Mobile and Baldwin counties; night shooting, float, sneak boat, box and battery forbidden.

Arizona and **Arkansas**—Have no game laws.

California.—In Lassen, Plumas, Sierra counties: quail, grouse, mallard, wood, teal, spoonbill, or any broadbill duck, Aug 15 to March 15. Deer law applies to males; forbidden to kill females.

Colorado.—Game may be killed only for immediate use as food. Exportation for speculative purposes forbidden.

Connecticut.—Game exportation forbidden. Wildfowl may be shot only with gun "such as is commonly raised at arm's length;" shooting from sailing or steam vessel, or sink-box, on feeding ground forbidden. Unlawful to net pike, pickerel, black bass, mascelonge. Local fish laws govern certain waters.

Dakota. Hunting on lands without first obtaining owner's consent forbidden. Deer law applies Union, Clay and Lincoln counties only. Unlawful "to kill anything lying on the prairies any par or parts of buffalo, elk, deer, antelope, mountain sheep." Traffic in game birds forbidden, except that prairie chicken, grouse, snipe, plover, curlew can be sold, Aug. 15 to Dec. 31, for consumption as food, within Territory.

Delaware.—Tufted grouse, quail, rabbit in New Castle county, Nov. 15 to Jan. 1. Birds and rabbits may be killed by person on his own land at any time. Entrance upon land for shooting without owner's consent forbidden. Non-residents must become member of the Delaware Game Protective Association, fee $3 first year, $2 per year thereafter. Secretary, Geo. Churchman, Wilmington, Del.

District of Columbia.—Unlawful to kill wildfowl at night, or with "any other than such gun as is habitually raised at arm's length and fired from the shoulder."

Florida.—No game law.

Georgia.—No general law; local statutes in about thirty counties. Law quoted applies to Thomas county and most of the others.

Idaho.—Wildfowl and prairie chicken laws apply to Ada county only.

Illinois.—Unlawful to shoot wildfowl at night.

Indiana.—Exportation of deer, "quail, pheasant, wild duck, grouse, prairie chicken or woodcock," forbidden.

Iowa.—Unlawful to trap prairie chicken, woodcock, quail, ruffed grouse, pheasant; or for one person to kill in one day more than twenty-five of either kind of birds named. Exportation of game forbidden. Game birds (twelve of any one kind) may be shipped to persons within the State, provided shipper make affidavit that said birds have been lawfully killed and are not shipped for sale or profit. Wildfowl may be killed only with gun, "such as is commonly shot from the shoulder."

Kentucky.—Law applies to certain counties only.

Maine.—Moose, deer, caribou, may not be hunted with dogs. Wildfowl law does not apply to seacoast shooting. Taxidermists may kill birds for scientific purposes if so commissioned by the Governor. Artificial salmon within one hundred yards of fishway, dam or mill race, forbidden. Season for black bass, speckled trout, togue, in St. Croix River and tributaries, and all waters in Kennebec county, May 1 to Sept. 15. During months of Feb., March and April it is lawful for citizen to take land-locked salmon, trout, togue, "and convey the same to their homes, but not otherwise." The Commissioner of Game and Fisheries is Henry O. Stanley, Dixfield, Me.

Maryland.—Seasons given are those of State law. Local open seasons in several counties are as follows. Allegheny: deer Aug. 1 to Jan. 1, pheasant (ruffed grouse) Sept. 1 to Jan. 1, partridge (quail) Oct. 15 to Jan. 1, woodcock June 15 to Feb. 1, robin March 1 to April 1, wild turkey and rabbit Oct. 15 to Jan 1. Anne Arundel: rabbit Oct. 1 to Feb. 1, pheasant Oct. 15 to Jan. 1, partridge Oct. 19 to Dec. 30, orchan sora, rail bird Sept. 3 to Nov. 5. Baltimore: deer Sept. 1 to Jan. 1, partridge Nov. 1 to Jan. 1, woodcock June 15 to Feb. 1, pheasant Sept. 1 to Jan. 1, rabbit Nov. 1 to Jan. 1. Caroline: partridge Nov. 10 to Feb. 15. Cecil: partridges and rabbits Nov. 1 to Dec. 29, woodcock June 10 to Jan. 1, rail and pheasant Sept. 10 to Jan. 1. Frederick: pheasant, partridge Oct. 15 to Jan. 1, rabbit Oct. 1 to Feb. 1. Garrett: deer Oct. 1, to Dec. 1 (use of dogs forbidden), wild turkey Sep. 15 to Jan. 1, pheasant Aug. 15 to Jan. 1, partridge Nov. 1 to Jan. 1, trout April 1 to Aug. 1. Harford: partridge and rabbit Oct. 15 to Dec. 26, woodcock June 10 to Jan. 1, rail and pheasant Sept. 10 to Jan. 10. Kent: partridge Nov. 1, to Jan. 15, rabbit Oct. 1 to Jan. 15. Montgomery: partridge Oct. 15 to Dec. 15, woodcock June 10 to Jan. 1, pheasant Sept. 1 to Feb. 1, robin Sept. 1 to May 1. Prince George: rabbits Oct. 15 to Feb. 1, robin Sept. 1 to May 1, partridge Oct. 19 to Dec. 20, ortolan, sora, rail bird Sept. 5 to Nov. 1, "trout, bass or salmon fish" Aug. 15 to May 15. Queen Anne: partridge Nov. 1 to Jan. 1, rabbits Oct. 1 to Jan. 1. Somerset: partridge Nov. 1 to Feb. 1. St. Mary's: robin Oct. 1 to March 1. Talbot: robin Sept. 1 to May 1, rabbit and partridge Oct. 15 to Jan. 1, woodcock June 15 to Jan. 1. Washington: woodcock June 10 to Dec. 31, pheasant, bullbat, night hawk, dove Aug. 12 to Dec. 31, wild turkey Nov. 1 to March 1, partridge Oct. 20 to Jan. 1. Wicomico: woodcock Sept. 1 to Jan. 1, partridge Nov. 1 to Feb. 1, rabbit, Nov. 1 to Jan. 1, wood, summer duck Sept. 10 to Jan. 1. Worcester: partridge, Nov. 1 to March 1 (night shooting forbidden). Foxes.—Unlawful in Somerset, Washington, Wicomico and Worcester counties to shoot a fox pursued by dogs. Wildfowl season given applies to Chesapeake Bay waters north of line drawn from Turkey Point Light west to Harford county, at or near Oakington; also south of line drawn from Point Concord light east to New Point Comfort. Northward of first line shooting permitted only on Monday, Wednesday and Friday of each week to Jan. 1, and Monday, Wednesday, Friday and Saturday of each week remainder of season. The local laws governing wildfowl shooting are very complex. The laws are published in full by the Maryland Association for the Protection and Preservation of Game and Fish, Edwin Schenck, Secretary, 2/3 St. Paul street, Baltimore, Md.

Massachusetts.—Tern, sea swallow, mackerel gull, Aug. 1 to May 1. Wild pigeon protected on nesting ground. Quail and prairie chicken may be had in possession (if lawfully killed) Jan. 1 to May 1. Wildfowl specified are wood (summer) duck, teal, rail, coot, gallinule. Use of swivel guns, night lights, or "jucks" forbidden. The State society is the Massachusetts Fish and Game Protective Association, 608 Washington street, Boston.

Michigan.—Deer season applies to Lower Peninsula; Upper Peninsula, Aug. 15 to Nov. 15. Forbidden to kill deer in red coat or fawn in spotted coat, to kill in water, by pit, pit fall or trap. Wood, teal, mallard and gray ducks, Sept. 1 to Jan. 1. Swivel or punt gun and night-shooting wildfowl forbidden. Wild pigeons protected in vicinity (five miles) of nesting. Exportation of deer, ruffed grouse, quail, prairie chicken, wildfowl forbidden. Forbidden to take brook trout from stream within three years after it has been stocked, to catch grayling or brook trout of less than 7in. length, to take California trout prior to June, 1885. Special laws govern certain waters. The State society is the Michigan Sportsmen's Association, Secretary, W. B. Mershon, East Saginaw

Minnesota.—Exportation of game birds (except pheasants) forbidden. Deer in Morrison and Stearns counties, Nov. 15 to Dec. 15. Pigeons protected on nesting grounds in Olmstead and Dodge counties. The secretary of the Minnesota State Sportsmen's Association is W. S. Timberlake, St. Paul.

Missouri.—Unlawful for non-residents to kill game for exportation from State.

Montana.—Unlawful at all times to kill buffalo, moose, elk, deer, mountain sheep, goat, antelope for hides only.

Nebraska.—Chasing deer with dogs forbidden in Burt, Washington, Douglas, Sarpy, Cass, Saunders and Dodge counties. Unlawful for common carriers to transport game at any time. Use of punt gun unlawful.

Nevada.—Sand-hill crane, plover, yellow hammer, bittern, Sept. 1 to April 1. Prairie chicken and sharp-tailed grouse seasons apply to Humboldt, Elko, Eureka and Lander; same has been season in same counties Aug. 10 to Mar. 15. Prairie chicken and sharp-tailed grouse in Esmeralda, Douglas, Ormsby, Lyon, Storey, Churchill and Washoe protected to Sept. 1, 18?3.

New Brunswick.—For non-resident law see Nova Scotia.

New Hampshire.—Yellow-legs, sandpipers, Aug. 1 to Feb. 1, raccoon or 'coon, Sept. 1 to Jan. 1. Lake trout may be taken "with single hook and line only," Jan. 1 to April 1. Fish introduced by Commissioners protected for 5 years. Fish and Game Commissioner: Ed. Spalding, Nashua; Luther Hayes, Milton; A. H. Powers, Grantham.

New Jersey.—Marsh hen Aug. 25 to Dec. 1, summer duck Sept. 1 to Jan. 1. Non-residents must take out license. New Jersey Fish and Game Protective Society has jurisdiction over entire State. Fee, $2. Secretary, Wm. L. Force, Plainfield, N. J. Or, non-residents to shoot or fish in Camden, Gloucester, Atlantic, Salem, Cumberland and Cape May counties, may obtain membership certificate of West Jersey Game Protective Association. Fee, $5 first year, $3 annually thereafter. Secretary, Wm. T. Miller, 100 Market street, Camden, N. J.

New Mexico.—"Trout," "speckled trout," May 1 to Dec. 1. Provisions respecting large game shall not be applicable to persons in camp "whom necessity may compel to kill one or two animals for their subsistence."

New York.—Unlawful at all times to hunt deer with dogs in St. Lawrence county; season elsewhere Aug. 15-Nov. 1; unlawful to kill fawn in spotted coat, or deer by trap, spring-gun, or crusting. Use of ferrets forbidden. Wildfowl: Season in Long Island waters Oct. 1 to May 1; use of guns, except such as are habitually fired from the shoulder, shooting from sailing or steam vessels (excepted localities), use of battery or machine, decoys or bough houses at greater distances than ninety rods from shore (excepted localities) forbidden. Use of snare or trap, unlawful. Black bass in Lake Mahopac, Dutchess county, Schroon lake and river, Paradox Lake, July 16 to Jan 1; Lake George, July 20 to Jan 1. Unlawful to kill striped bass of less than 3½ pounds weight. Unlawful to catch any fish within eighty rods of fishway. Sunday shooting forbidden. Unlawful to export game from State in close season. Salmon or lake trout in Lake George, May 1 to Oct 1.

North Carolina.—Seasons for birds apply to counties of Davison, Randolph, Anson, Rowan, Warren, Guilford, Rockingham, Orange, Caswell, Edgecombe, Mekleburg, Cabarrus. Unlawful to export quail or ptarmigan, dead or alive, from counties of Catawba, Rowan, Cabarrus, Alamance, Rockingham, Orange, Iredell, Davie, Gaston, Columbus, Davidson, Anson and Forsythe. Deer law applies to counties of Clay, Cherokee, Mason, Jackson, Haywood, Transylvania, Randolph, Stokes, Forsythe, Surry, Yadkin, Rockingham, Craven, Greene, Lenoir. Trout law applies to counties west of the Blue Ridge, except Yancey, Mitchell, Transylvania, Henderson and Macon. Wildfowl shooting on Sabbath, or between sunset and sunrise of any day of week, use of other "than such gun as can be fired from the shoulder;" unlawful in Currituck and Dare counties; restriction as to shooting applies also to Albemarle Sound and its tributaries. Fire hunting forbidden in the three counties named, also Craven, Hyde, Tyrrell, Onslow, Moore. Non-residents: "It shall not be lawful for any non-resident of this State to use or hold any blind, batteau, battery or other craft, or any wood chopper's fence, or live ducks or geese, for decoys, in any of the waters of said counties, for the purpose of killing or taking wildfowl; Provided, That this section shall not apply to such non-residents who resort to the waters of Currituck Sound for the purpose of shooting game as sportsmen, and not for the purpose of selling, and who own or lease by them, and who do not kill game for a foreign market; And provided further, It shall not be construed to limit, abridge, or impair the rights or privileges of any bona fide owner or lessee of shooting or fishing privileges of Currituck or Dare, or of such persons as shall obtain the consent or permission of such owners or lessees to occupy their grounds for gaming purposes, whether actual residents of the State, or otherwise.

Nova Scotia.—Unlawful for person to kill in one season more than two moose and four caribou. Flesh of moose must be carried out of the woods within ten days after killing; none later than Feb. 5. Pheasants protected at all times. Non-residents must take out license, fee $5. Secretary of the Nova Scotia Sportsmen and Fishery Protective Society is A. E. Harrington, Esq., Halifax, N. S.

Ohio.—Wildfowl shooting unlawful with "any other than a common shoulder gun." Swan protected at all times. Season for wood duck Sept. 1 to April 1, wild turkey and teal Sept. 15 to Jan 1.

Ontario.—Mallard, gray, black, wood, summer and teal ducks, Aug. 15 to Jan. 1. Battery, punt gun, sunken punt, night light, forbidden in wildfowl shooting. Imported game may not be killed without consent of land owner. It is forbidden to kill for exportation "deer, elk, moose, reindeer or caribou."

Pennsylvania.—Chasing deer with dogs unlawful. Use of ferrets unlawful. Wildfowl shooting unlawful with "other than such guns as habitually are raised at arm's length and fired from the shoulder;" use of punt gun unlawful. Brant, wood duck, rail, coot, gallinule, wild pigeons protected on nesting ground. Sunday shooting and fishing unlawful. Season for "green bass, yellow bass, willow bass, rock bass, Lake Erie or grass bass, pike or pickerel, or well-eyed pike, commonly called Susquehanna salmon," June 1 to June 30. Laws apply to Lake Erie waters, save ponds on Erie Harbor peninsula. Speckled or California trout may not be taken less than 5in. in length, nor black, yellow, green bass less than 6in. in length. Pike county: Quail Oct. 15 to Dec. 1, cannot be killed in water, exported. Sept. 15 to Dec. 15, rabbit Oct. 15 to Dec. 15, wood or summer duck Oct. 1 to Jan. 1, woodcock July 4 to Dec. 15, quail Oct. 15 to Dec. 1, ruffed grouse Sept. 15 to Dec. 15, salmon, speckled trout May 1 to Aug. 1, pike, pickerel June 15 to Feb. 15.

Quebec.—Moose (after Sept. 1, 1883) Sept. 1 to Feb. 1; insectivorous birds, Sept. 1 to March 1, non-residents required to pay $20 gun license. Night shooting wildfowl unlawful.

Rhode Island.—"Grouse or heath hen," Nov. 1 to Jan. 1; "swallow or box martin" Oct. 1 to May 1; Bartram's sandpiper or grass plover, Aug. 1 to April 1; wood, summer, black, dusky, duck, blue or green-winged teal, Sept. 1 to March 1. Use of ferret or weasel unlawful. Sneach Pond in Cumberland excepted from black bass law.

Tennessee.—Law quoted applies to counties of Henry, Dyer, Giles, Maury, Davidson, Madison, Hamilton, Bedford, Wilson, in Montgomery and Cheatham counties, quail, grouse, lark, Oct. 15 to March 1; woodcock, dove, turkey, Aug. 1 to March 1; snipe, plover, duck, Sept. 1 to May 1. In Robertson, Davidson, Maury, Lincoln counties, turkey, quail, grouse, woodcock, snipe, lark, Sept. 1 to Feb. 1. In Shelby county, deer, squirrels, turkey, woodcock, snipe, lark, Sept. 1 to Feb. 1; quail, Oct. 1 to April 1. Resident hunters, non-residents of Obion and Lake counties forbidden to kill wildfowl for profit; citizens of State may kill for own use. Similar restriction (all game) applies to non-residents in Cumberland, Fentress, Morgan, Scott, Campbell, Overton, Putnam, White, Roane, Rhea, Bledsoe, Van Buren counties. In Fayette, Rutherford and Tipton counties, quail season Oct. 1 to April 1.

Texas.—Law applies certain counties only. Deer law applies females only.

Utah.—Imported quail protected to 1885. The society is the Utah Game and Fish Protective Society. Secretary, L. S. Hill, Salt Lake City, Utah.

Vermont.—In Lake Champlain and tributaries, within ten miles of mouth of stream, fish may be caught with hook and line at any time. Use of dog in hunting ruffed grouse unlawful.

Washington.—Law of Oregon applies to Walla Walla and Columbia counties. Fish law does not apply to Columbia River. One person may not kill more than twenty blue, ruffed or pinnated grouse in one day. Elk may not be killed for traffic in hides and horns.

West Virginia.—Wildfowl shooting forbidden with "other than the common shoulder gun."

Wisconsin.—Woodduck, mallard and teal, Aug. 15 to Jan. 1. Chasing deer with dogs unlawful; also wildfowl shooting with "other than a gun habitually raised at arm's length and discharged from the shoulder," or by float, sneak boat, sail or steamboat. Unlawful to kill deer in Door county for export, or for hide. Grouse, quail in St. Croix county Oct. 1 to Nov. 15. Unlawful to export trout from Monroe county.

Wyoming.—Greenshank, lattler, godwit, avocet, Aug. 15 to Apr. 1. Traffic in hides of game forbidden. Unlawful to kill any grouse save for use as food. One person may not kill more than 50 of any one species of gamebirds in one day.

Any person sending their address to R. H. Pooler, Serena, La Salle Co., Ill., will receive in return free a fine colored lithograph representing pinnated grouse shooting on the prairies, also a catalogue of cartridge holders, belts, vests, &c.—*Ado.*

Sea and River Fishing.

Allow me to add, next to spiritual aid, nothing has kept up my heart and vigor more than my ardent love for nature, and my frequent communing with her in her wildest forms. The mountain, the laughing stream, the deep wooded valley, the forest-bordered lake, are my friends, eloquent of God and always my delight.—*Dr. Bethune.*

WINTER TALKS ON SUMMER PASTIMES.

V.—REMINISCENCES.

I have written for lovers of the gentle art, and if this which I have written falls into other hands, let him who reads understand it is not for him.—*W. C. Prime.*

THESE "Talks" are written on the presumption that they will only be read by the "simple wise men" who can sympathize with their theme and who are in accord with their sentiments. To those who know nothing of the art or of its delightful possibilities, they will be "as sounding brass or tinkling cymbals." But to the mild-mannered and merry hearted brotherhood they may have something of the music of forest birds and the melody of running waters.

Not only has every pastime its special attractions, but its votaries have their special reasons for the high estimate in which they hold it. Others may, but they never weary of talking about it. What is true of other pastimes is preeminently true of angling. No other affords so many incidents that it is a pleasure to remember and a greater pleasure to recount to appreciative and sympathizing listeners. The "memory" which formed the theme of my last "Talk" was followed by other reminiscences, one of which is subjoined.

Several years ago I found that I had not time to make my usual August trip to the North Woods; but I knew very well if I allowed the month to pass without enjoying a "cast" somewhere I would find my mental machinery sadly out of joint. I had tried it once and remembered the result. I cannot say that I suffered any real physical detriment, but I evinced neither good temper nor good manners (and they always hunt in couples) until the fever subsided with the close of the season.

And this is the experience of all anglers who have had a taste of the invigorating and exhilarating delights that come to those who have even passable skill with rod and reel. Perhaps something of this feeling may pass into the experience of those who have only felt the excitement incident to the capture of fish with the rougher implements of the craft. "Still-fishing" with bait, or trolling with "spoon" or minnow is better than no fishing, as "'tis better to have loved and lost than never to have loved at all." But that sort of fishing never reaches to the dignity of a passion. The outing necessary to engage in it may be missed, but no great disappointment will be felt if circumstances compel a resort to some other mode of diversion. But with those who have long enjoyed the ecstasy of fly-casting it is not so. To be satisfying, their "vacation" must carry them to trout, bass, grayling or salmon waters. No other harmless or healthful recreation takes so strong a hold upon one's spirit or imagination, because there is no other which meets so fully the mental, physical and æsthetic demands of mind and heart. In following the brooks and rivers which wend their way through forest and mountain and valley, where solitude has her abode and where rustling leaves and singing birds and the rippling music of running waters fill the air with perpetual melody, the appreciative angler, "born so," as good old Izaak has it, finds mental repose, physical invigoration, "beauty for ashes, the oil of joy for mourning, and the garment of praise for the spirit of heaviness." It is because these qualities inhere in the pastime—are identical with and inseparable from it—that it is so irresistibly fascinating to its votaries. They can be proffered no substitute, because, like matchless beauty, "only itself can be its parallel."

On the occasion to which I have referred, my usual two weeks' visit to the "spring holes" between Ray Brook and Setting Pole Rapids, where I have had such sport as lifted me into the seventh heaven of delectation, was reduced to a three-days' sojourn where the whistle of the locomotive could be heard, and where, if need be, a telegraph message could reach me. It was, I thought, a pitiful substitute for my old-time free and easy swing in the grand old woods, where, for so many years, a score of good fellows constituted the sum total of intruders upon its then unbroken solitude. Ah, those were days to be remembered—when trout were plenty and anglers few, when you could float from Martin's to Raquette Falls, and from Blue Mountain Lake to

the Old Forge, in midsummer, as undisturbed by human companionship as if you were a-straddle of the highest peak of the Rocky Mountains, when there wasn't so much as a log shanty on the whole line of the Fulton range or (with one exception) from Bartlett's away down to Downie's Landing. Most of the good fellows whom I was wont to meet in those far-back summer rambles have made their last "cast," and are now, I trust, enjoying infinitely higher felicity on the banks of that "pure river of water, clear as crystal," so graphically portrayed by the lonely seer upon the Isle of Patmos Some of them—alas! how few—still remain to illustrate the beneficent influence of the gentle art upon the mind and heart and physique of its happy brotherhood. Here is a note just received from one of them. Although to him the grasshopper may have become a burden, the golden bowl is not yet broken, nor has his good right arm yet lost its cunning. His heart still pulsates with good will to all men, especially to those who "deal justly, walk humbly," and love to go a-fishing. He has the gentle spirit of the dear old masters, and whether, hereafter, his annual visits shall be many or few to the pleasant places where he has for thirty years found retirement, recreation, repose, and a higher conception of the munificence and loving kindness of the Heavenly Father, the recollection of his friendly courtesies and quiet ways will ever be a pleasant memory to those who have often met him in the woods and enjoyed his kindly hospitality:

"KERSEVILLE, Essex Co., N. Y., November 27, 1882.

"*My dear D.:*

"I desire to express to you the satisfaction and pleasure already received from reading the two articles from your pen published in FOREST AND STREAM. I trust they will be continued through all the bleak months of our weary winter. May I ask you, before you 'reel up,' to give us a 'Talk' on the dear old North Woods of the Saranac region and thereabouts? I very often recall the many times we have met there, and they are hallowed in memory. Last spring's trip made my thirtieth annual pilgrimage to those blessed haunts, but not with my usual enthusiasm. I miss old friends like yourself. As you can readily imagine, many changes have occurred in thirty years, and of many who were once our forest companions, 'there only remains to us,' as you have said elsewhere, 'the recollection of their pleasant ways and joyous companionship.' It makes me sad to remember how many have passed away with whom I have taken 'sweet counsel' in the dear old woods, but whom I will see no more this side the dark river. Yours, very truly, J. R. R."

With but three days at my certain disposal, Manchester and its adjacent waters seemed the most available. I had heard of the pleasant valley through which clear streams meandered, and I found it all it was claimed to be, "beautiful for situation," and a very paradise in itself and in its surroundings. If I had had no other purpose than to fish, I need not have left the valley. I filled my creel as quickly as I desired. The weather was superb, the water was in prime condition, the responses were prompt, and the weight of the fish and their gamey qualities even more inspiriting than their numbers. But I wished to explore as well as to angle; to fill my lungs with the pure ozone of the mountains, as well as to fill my creel with the speckled denizens of the pearly brooks; to camp out, if but for a night, as well as to fish. I had heard of a tiny lake perched upon the summit of an adjacent mountain many hundreds of feet above the valley, difficult of access, as retired as any peak in the Coloradoes, and well stocked with large trout always available to those who had the skill to catch them. I was prompt to avail myself of the proffer of an escort thither, and in the early gloaming I found myself casting in vain for a rise. At the end of a half hour the full moon came up over the tree tops. As the unclouded rays fell upon the fair bosom of the ruffled waters, I realized something of what Tennyson meant when he wrote of "the shimmering glimpses of a stream." The tiny waves looked like rippling rolls of molten silver, and when the moon had reached an elevation where her beams could flash full upon the face of the forest-bordered lakelet, it made up a picture which has remained with me through all these intervening years. It was for this and such as this, equally as for the delight afforded by the pastime itself, that I had always made my semi-annual visits to the quiet places where trout and contemplative anglers are pleased to forgather.

But this beautiful picture, gorgeous and fascinating as it was, did not fill full the measure of my desire and expectation. While I had been casting and watching the silent march of "the silver empress of the night," the fire had been kindled, the pork had been sliced, and the frying pan stood ready to do its office, but no trout had been taken. The idea of going supperless to bed was not pleasant. The long tramp and keen mountain air had given me an appetite more biting than the chilly atmosphere with which we were environed. I had resolved to retire discomfited after another cast when I bethought me that what the scarlet ibis and brown hackle had failed to accomplish, might, under the favorable conditions of the hour, be effected by a well-poised dusty miller; and I was not mistaken. The first cast was followed by a rise. In five minutes a two-pound trout was ready for dissection, and in twenty minutes, eight others, aggregating nine pounds, had been taken in out of the wet, wherewith I was content and reeled up for the night.

The repast that followed was fragrant, luscious and abundant—such a feast as always comes to an honest angler when "good digestion waits on appetite." I cannot, however, say as much for my night's repose. A hastily constructed brush canopy sufficiently protected us from the fast-falling dew, and a thick layer of hemlock boughs—emitting an aroma as fragrant as the fabled nectar of the gods—was such a couch as kings might envy. When thus disposed sleep always comes to me without wooing, and it would have done so on this occasion but that my inexperienced companion, who had never before camped out, chattered so incessantly that I sought revenge by reciting every blood-curdling story I had ever heard or could invent about the mortal peril that beasts whoever has the temerity to invade the haunts of venomous reptiles or ravenous beasts. The brief intervals of silence were broken by mysterious sounds, which I knew to be caused by the flight of prowling night birds, the gnawing and scratching of hungry grubs, or the stealthy tread of fox or rabbit, but which he, in his nervous excitability, magnified into the unpleasant proximity of bear or wild cat. His frequently repeated "Hist!" "What's that!" had become monotonous, and I was passing off into peaceful slumber when I was startled by a yell from my timid friend which could only have been born of genuine fright induced by actual contact with some tangible object. If his alarm was not justified it was excusable, for our couch had been invaded by a prowling woodchuck, who had been attracted by the fragrance of the discarded fragments of our evening feast. This intrusion (when the intruder took flight, for he stood not upon the order of his going, but went at once) was followed by profound silence on the part of my friend and by blissful unconsciousness on my own part, until a full chorus of forest minstrels and the slanting rays of the morning sun admonished me that it was time to try the virtue of a morning cast.

And I cast, but nothing came of it. There was not a ripple on the surface of the water, and as far as I could reach it seemed like casting upon a floor of glass. Every moment the sun glare was extending, and before I had become entirely hopeless of a rise, the whole lake shone like a great mass of burnished silver. I was soon encouraged, however, by a "break" some hundred feet beyond my cast. As there was neither boat nor raft available, the "break" might as well have been a hundred miles away as where it was. I did my best to entice the sportive brutes shoreward, but it was like "calling spirits from the vasty deep,"—they wouldn't come. The more I cast the more they jumped, but always at an unapproachable distance. Of course it was provoking, and of course I looked about for some mode by which I could circumvent and turn the tables upon my sportive tantalizers. I discovered near by two dry logs—barely two—which, if properly joined together, would suffice to bear me up if carefully manipulated. Withes were procured, hastily twisted and used in the conventional way known to all old woodsmen. A few minutes sufficed to finish the work after a fashion, and while the fish were still "making the water boil" with their sportive antics, my fly dropped in the very center of their circle, and was taken before it had fairly touched the water. The movement of fisher and fish was spontaneous. But the fish had the advantage. The lake gave him "scope and verge enough" to do his best, while I stood poised upon a structure so frail that its dislocation and engulfment was threatened by the slightest motion. To play the fish was not so difficult, but how to land him without toppling over was a problem whose solution troubled me not a little. But it was accomplished—not once, but many times in quick succession. If conscience makes cowards of us all, impunity often makes us inexcusably presumptuous. My good luck had this effect upon myself, and while playing what afterward proved to be a two-pound trout, I found the two sticks which formed my raft slowly diverging. Here was a dilemma. It wouldn't do to drop my rod and risk the loss of my fish; nor would it do to allow either log to take its departure without an effort to prevent it. I soon discovered that one of the withes had broken, and my only hope was to use my feet to hold the raft together until I could finish my fight and paddle ashore. But my efforts in this direction rather tended to widen the breach than close it, and while my fish was at his best I found myself in the attitude of the Colossus of Rhodes or the American eagle, who stood with one foot on the Pacific and the other on the Atlantic while he dipped his beak in the majestic Mississippi. My straddle was simply prodigious, and it continued to broaden with ever-increasing momentum until my feet seemed as remote from each other as the Hebrides from the Rocky Mountains. There was, in short, a great gulf between them, and I was rather pleased than otherwise when I found them once more brought into close proximity and rendering me useful service in my efforts to swim ashore—which, in this instance, I found to be even more easy than "rolling off a log." But during all these novel experiences and unexpected mishaps the "ruling passion" did not forsake me. I may not have been able all the time to keep a "taut line" upon my fish, but I held my rod, and so soon as I could touch bottom I resumed the fight and landed my two-pound trout as coolly as if nothing out of the ordinary had happened since he rose to my fly.

A rousing fire and a luscious breakfast soon put everything to rights; and with a better constructed raft and a keener zest for the sport, I resumed my fishing, and in an hour or two had a full creel with which to replenish the larder of friends in waiting at the foot of the mountain.

G. D.

THE BLUE-BACK TROUT.

Salvelinus oquassa.

IN the FOREST AND STREAM for November 30 occurs the following sentence quoted from Mr. Livingston Stone, and which is properly queried in a foot-note by the editor:

"Brook trout were thought to attain the weight of nine or ten pounds until the famous ten-pound trout caught by Mr. George Shepard Page in the Rangeley Lakes was declared to be *Salmo oquassa*."

As at present advised, I do not believe that any "ten-pound trout" is a *Salmo oquassa*. This leads me to ask the angling constituency of FOREST AND STREAM for information concerning this latter species.

The National Museum has received from the Rangeley Lakes two species of *Salvelinus*—charr or "brook trout." One of these is the common brook trout—*Salvelinus fontinalis*—and to this species all the large trout which I have seen from the lakes belong. Possibly the great lake trout (*Salvelinus aumayoush*) lives there also, but I have seen no specimens.

The other species is the so-called "blue-back trout" (*Salvelinus oquassa* Grd.). So far as we know this is the smallest American trout. I have seen none that would weigh half a pound. No specimens are on record from any waters in the United States other than the Rangeley Lakes. It has, however, been recently discovered and described as a new species by Dr. Günther as *Salmo naresi* (Proc. Zool. Soc., London, 1877, page 476) in lakes of Arctic America, about Discovery Bay. Dr. Bean has also found it in Kumlien's collection from Cumberland Gulf. It is probably an Arctic fish, which for some reason keeps a hold in the Rangeley chain, but has become extinct in the other lakes of Northern Maine, if it ever lived in them.

As to the habits of the blue-back trout, nothing seems to be known beyond the following from the original description by Girard: (Proc. Boston Soc. Nat. Hist., IV., 1854, 262.)

"The abode of the blue-back is the Moosemegantic Lake, in which it is concealed during the greater part of the year, but about the 10th of October it comes near shore and ascends in shoals the Kenebago for the purpose of spawning. Half a mile above its mouth the Kenebago receives the outlet of Lake Oquassa, the trout then leaves the Kenebago to the left and runs towards Oquassa Lake, where its voyage comes to a close. After the middle of November it goes back into Moosemegantic Lake and is seen no more until October of the next year."

Let us hear from the anglers about it. Specimens are still needed.

I give here a list of the North American *Salmonidæ* as at present known:

NORTH AMERICAN SALMONIDÆ.

1. *Salvelinus oquassa* (Grd.) Gill and Jor —The Blue-Back Trout,—Rangeley Lakes to Arctic Circle,

2. *Salvelinus arcturus* (Günther) Gill and Jor —The Arctic Trout,—Victoria Lake and Floeberg Beach.

3. *Salvelinus stagnalis* (Fabricius) Gill and Jor.—The Greenland Trout.—Greenland and Arctic America.

4. *Salvelinus malma* (Walbaum) Jor. and Gill—The Dolly Varden Trout.—Northern California to Kamtschatka.

5. *Salvelinus fontinalis* (Mitchill) Gill and Jor.—The Brook Trout.—Georgia to the Arctic Circle.

6. *Salvelinus aumayoush* (Walbaum) Goode—The Great Lake Trout or Mackinaw Trout.—Great Lake Region to New Brunswick and northward.

6. (b) *Salvelinus aumayoush siscowet* (Agassiz) J. and G.—The Siscowet.—Lake Superior.

7. *Salmo purpuratus* Pallas—Clarke's Trout.—Monterey to Utah, Montana and Kamtschatka.

7. (b) *Salmo purpuratus henshawi* Gill and Jor.—Lake Tahoe Trout.—Lake Tahoe and its tributaries.

7. (c) *Salmo purpuratus stomias* (Cope) J. and G.—Kansas River to Montana.

7. (d) *Salmo purpuratus beneiri* Bendire—Waha Lake Trout.—Waha Lake, Washington Territory.

8. *Salmo spilurus* Cope—Rio Grande Trout.—Rio Grande and Utah Basin.

8. (b) *Salmo spilurus pleuriticus* (Cope) Jor.—Rio Grande, etc.

9. *Salmo gairdneri* Richardson—Steelhead.—San Francisco to Alaska.

10. *Salmo iridens* Gibbons—Rainbow Trout.—Rio San Luis Rey to Oregon, and perhaps northward west of the Cascade Range.

11. *Salmo salar L.*—Common Salmon.—Atlantic coasts of Northern America and Europe.

11. (b) *Salmo salar sebago* (Grd.) Gill and Jor.—Land-Locked Salmon.—Lakes of Maine, etc.

12. *Oncorhynchus nerka* (Wal.) Gill. and Jor.—The Blue-Black Salmon or Redfish.—Oregon to Kamtschatka.

13. *Oncorhynchus kisutch* (Walb.) Jor. and Gilb.—The Silver Salmon.—San Francisco to Alaska.

14. *Oncorhynchus tchawytcha* (Walb.) Jor. and Gilb.—The Quinnat Salmon.—San Buenaventura to Alaska and Northern China.

15. *Oncorhynchus keta* (Walb.) Gill and Jor.—The Dog Salmon.—San Francisco to Kamtschatka.

16. *Oncorhynchus gorbuscha* (Walb.) Gill and Jor.—The Humpback Salmon.—San Francisco to Kamtschatka.

17. *Stenodus mackenzii* Richardson—The Inconnu.—Mackenzie's River.

18. *Thymallus signifer* Rich—The Grayling.—British America and Alaska.

18. (b) *Thymallus signifer tricolor* (Cope) J. and G.—The Michigan Grayling.—Michigan to Montana.

19. *Coregonus tullibee* Rich—The Tullibee.—Great Lakes and northward.

20. *Coregonus nigripinnis* (Gill) Jor.—The Blue Fin.—Lake Michigan.

21. *Coregonus artedi* Le Sueur—The Lake Herring.—Great Lakes and northward.

21. (b) *Coregonus artedi sisco* Jor.—The Sisco.—Lakes of Indiana and Wisconsin.

22. *Coregonus laurettæ* Bean.—Alaska.

23. *Coregonus merki* Gthr.—Alaska and Siberia.

24. *Coregonus hoyi* (Gill) Jor.—Cisco of Lake Michigan.—Great Lakes.

25. *Coregonus labradoricus* Rich—The Musquaw River Whitefish.—Great Lakes to New Brunswick and northward.

26. *Coregonus clupeiformis* (Mitch.) Milner—The Whitefish. Great Lake region.

27. *Coregonus kennicottii* Milner—Artic America.

28. *Coregonus quadrilateralis* Rich—The Menominee Whitefish.—Great Lake region northward.

29. *Coregonus williamsoni* Grd—The Rocky Mountain Whitefish.—Utah to British Columbia.

DAVID S. JORDAN.

INDIANA UNIVERSITY, Bloomington, Dec. 5, 1882.

A NEPIGON TROUT.

[From our Regular Chicago Correspondent.]

IT was the good fortune of your correspondent to chance upon Dr. Hamilton, of Monmouth, Ill., one of our Congressmen and enthusiastic sportsmen and anglers. I say "good fortune" because he gave me some charming material for a "fish story," only it was a true one and vouched for by the most honorable and prominent gentlemen of the good little State of Iowa. It concerns the Nepigon River of the Lake Superior region, and a five-pound brook trout. Now, reports are bad many times of these moaster beauties, but never was the sketch of a five-pounder seen about this section before. Mr. George Thurston, the gentleman who captured it, is a member of the faculty of the State University of Iowa, and a surgeon-major of the U. S. A. He tells the story very prettily in the following letter. All parties are famous here in Chicago, and the boys will look for the cut of the fish:

"I believe I wrote you just on the eve of our departure from Prince Arthur's Landing for the Nepigon, per steam tug. The point was reached after a pleasant run of ninety miles, landing at Red Rock, where we went into camp, as our arrival was the first of the season, to await the coming of other parties. My first fishing expeditions were made in this vicinity, where the fish are not very plenty, but large. The first one caught by me weighed five pounds. I send you the sketch made at the time by Mrs. Thurston and sent with a letter to the *State Press*, a newspaper published here (letter cut out and inclosed).

Other parties having arrived, we hired a couple of Indian guides and proceeded twelve miles up the river in a birch-bark canoe, which Mrs. Thurston enjoyed very much, to a point at the foot of the second rapids called Camp Alexander, which is simply a tongue of land formed by an abrupt turn in the river upon which tents are sometimes pitched. It is, however, a glorious place, and the fishing, although not as good as further up, is everything that any reasonable man can ask for. We caught about forty here, averaging fully two pounds, quite a number four, four and one-half and five pounds. The fish are taken with the fly, to which they rise most beautifully, sometimes leaping several feet out of the water.

The character of the country is exceedingly rocky, and whether you "whip" the water from your canoe, or from the huge boulders along the stream, is a matter of choice. There are no entanglements like those met with on the south shore, causing one to make constant references to one of the Ten Commandments.

Hallock has given a very correct and not over-drawn account of Nepigon. It is unquestionably one of the grandest

trout streams in America. The scenery is wild, but beautiful, and the higher you ascend, the more beautiful it becomes, and the better the fishing. The water is clear and cold, and the fish hard and solid as the rocky bed upon which they lie. They are so abundant that one feels it a duty to "play" them as long as possible, in order to secure as much sport as can be obtained without accumulating more fish than you know what to do with.

Having had our "fill" of fishing, we returned to Red Rock, where we joined some Canadian friends whose acquaintance it was our good fortune to make.

Perhaps the remainder of our doings on the north shore can be better told by some newspaper clippings herewith indorsed. The one headed "The North Shore," was written by the Thunder Bay (P. A. Landing) *Herald* man. The one headed "Treasures of the North Shore," was written by me for the *Sentinel*, Thunder Bay. We were not having very good coffee at the Queen's, where we were stopping.

GEORGE A. THURSTON.

LARGE BLACK BASS.

WE have received photographs of two black bass from our correspondent, Mr. A. N. Cheney, of Glens Falls, N. Y. Mr. Cheney writes of them as follows: "I caught these Aug. 1, 1877, in a pond four miles from here. One weighed 7 lbs. 14 ozs., the other 6¾ lbs. You may have seen the picture, as I sent my old friend, Hallock, one, and it was in the office of FOREST AND STREAM while he was there. Dr. Henshall quotes from a letter of mine in his book that calls them large-mouths. I said so not thinking he would print the letter in his book. Many persons said they must be large-mouths, and I called them so for the Doctor to express himself. He did, after the book was printed, and pronounced them small-mouths. The big one only opened his mouth vertically three inches. You can see the scales on gill-covers and cheeks, and although hung badly you can see that the smaller one has more than eight rows of scales between the lateral line and dorsal fin. Their species have been doubted, and I presume the weight, although that part never came to me. When I came off the pond the large fish was weighed on steelyards and weighed 8¼ lbs., but when I reached home the news of the catch had preceded me and I found quite a delegation in the club room. I was then president of the "Hallock Sportsmen's Association for the Protection of Game." The fish were weighed in four different stores and I presume that more than fifty men saw the weight 7 lbs., 14 ozs. I then invited half a dozen gentlemen to see them opened. My friend, the editor of the Glens Falls *Republican*, says they are the only fish he knows of that were weighed honestly and then opened to look for a lead mine, and he has belonged to the same fishing club that I did. Mr. H. H. Thompson, of New York, writes me recently that he is nearly convinced that they are small-mouths."

ADIRONDACK FISHES.

A CARD

IN order to obtain a complete knowledge of the distribution of different species of fishes inhabiting Adirondack waters, I would feel under obligations to persons having knowledge of the subject if they would give me the benefit of it for my forthcoming paper, to be published in the next report of Mr. Verplanck Colvin, Supt. of the Adirondack Survey, to the Legislature of New York. In order to facilitate answering I have formulated the following questions, which may be referred to by the number alone:

1. What waters in the Adirondacks do not contain brook trout?
2. What lakes do not contain the lake trout, commonly called "salmon trout," or "salmon?"
3. What waters contain eels?
4. Where have you found the fish known by the names of bullhead, catfish or bullpout?
5. Where do you find black bass?
6. What waters contain pike or pickerel?
7. In what lakes do you find a fish called frostfish, whitefish or shad?
8. Do you know of any lakes that do not contain the little fish called sunfish, pumpkin-seed, etc.?
9. Where is the "miller's thumb" found?
10. What waters have been stocked with land-locked salmon?
11. Where have the rainbow or California trout been placed?
12. Are there any lakes which do not contain suckers of any species; if so, which ones do not?
13. Have you found more than one species of sunfish in any waters; if so, what are they?
14. Give any other facts that may be of interest.

It is my intention to illustrate the distribution of the fishes by different colored lines on one of Stoddard's maps of the Adirondacks and to exhibit it at the London Fishery Exhibition, as showing the ichthyic fauna of the great angling region of the State of New York, and in order to make it as complete as possible take this method of asking for help. FRED MATHER,

Fishery Editor FOREST AND STREAM, and Ichthyologist Adirondack Survey.

In connection with the above card we print the following on this subject from the New York *Herald:*

Mr. Fred Mather, Assistant to the United States Fish Commission, who has been employed by the Adirondack survey in making practical researches in the wilderness of this State, has just returned from the waters of the North with a complete collection of specimens of fish obtained in the lakes, rivers and ponds of the Adirondack region. For this purpose Mr. Mather has made two visits to the North Woods this season. The first, which occupied a month's time during the summer, was to the southern section of the wilderness. He entered the woods on the east side of Blue Mountain Pond, proceeding down the Raquette River into the Fulton chain, where he camped. From there he made excursions to Big Moose Lake and the neighboring ponds. The second visit was to the northward, known as the Saranac region, and Meacham Lake, where Mr. A. R. Fuller conducts his fish hatching, was made the headquarters of the scientist. Mr. Mather reports that the largest brook trout were found in Meacham Lake and Clear Pond, several having been taken there which weighed five pounds each. This great size has occasioned much surprise among the few anglers who have heard of the catch, as heretofore four-pounders in this State were supposed to be the extreme limit. He also says that the Adirondack region is not rich in species. The collection contains five kinds of suckers, two of them, he believes, have never been described before. Some fine specimens of brook and lake trout were secured, and a species of whitefish, called "frost fish," which averages one pound in weight. Mr. Mather met with some black bass of the small-mouth variety, which have been artificially planted in several of the lakes, and a goodly quantity of pike or pickerel, which weighed up to ten pounds. Besides sunfish, bullheads (catfish) and the *cyprinoids*, which are known as minnows, chub, dace, etc., Mr. Mather was surprised in discovering the presence of eels in Bixby, Woodhull and Meacham lakes, although, as far as could be ascertained, the Fulton chain are free from this great pest to all waters inhabited by the trout. Mr. Mather's report is full of interesting facts. It will be included in the report to be made by Mr. Colvin, superintendent of the Adirondack survey. At present Mr. Mather's collection of specimens are reposing in large alcoholic tanks. It will, however, be at once properly classified, and Professor Baird intends sending it as part of the American exhibit at the great International Fisheries Exhibition at London next year.

A STRANGE STREAM.—There is a stream running through the town of Bennington, Vt., that derives its source from two branches which unite not far from the town. It is said and vouched for by citizens of the place that the water of one of these branches is soft and the other is hard and full of limestone. The waters, as they join the main stream, do not intermingle, but each keeps its own side of the creek, and any person standing on the town bridge can distinctly observe the dividing line of the waters as the stream flows below him. How true this is I will not state. I confess I am skeptical. I am told also that trout are never taken from the limestone water, but are caught in the soft water side. Only suckers will be found on the creek where it is said only limestone water runs. I was told this by a resident of Bennington with as much earnestness, and with such desire to have me believe it and write of it, I determined to ask the readers of FOREST AND STREAM if they had ever heard of the like. My friend, in support of his story, told me likewise that people living on the banks of the creek never thought of using the limestone water for household purposes, but always crossed over on the other side for soft water. The two branches of the stream flow from different mountains.—HOMO.

Fisheulture.

PENNING WHITEFISH UNTIL THEY SPAWN.—Toledo, O., Dec. 8.—We have just completed the work of filling our hatching houses with whitefish spawn and estimate that we have in our Toledo and Sandusky houses a hundred millions of eggs. They are looking well and we expect a large proportion of them will hatch. I have at last hit upon a plan by which the taking of spawn becomes a certain and sure thing, and that is by putting a pound net crib in a good sheltered place and selecting fine spawners, both male and female, and keeping them until they are ready to spawn. They can be handled daily and spawned and re-spawned without any injury to the fish. This we did this fall and used about five hundred fish to make the experiment, and it is a success. I would suggest this to all whose business it is to take spawn, especially where they are liable to be interfered with by cold and bad weather. This method makes the securing of spawn sure and comparatively easy.—D. Y. HOWELL, Supt. Ohio State Hatcheries.

FISHCULTURE IN MICHIGAN.—The work is progressing and a correspondent tells us that the State commission expects to place fifty million eggs of different species upon the trays this winter.

IMPORTATION OF CARP.—A few carp for Prof. Baird, U. S. Commissioner of Fisheries, arrived on the North German Lloyd steamship Elbe last week. They are fine specimens of three varieties, the scale, mirror and leather carp. There was considerable mortality on the passage, and only half a dozen specimens arrived alive.

FIXTURES.

BENCH SHOWS.

March, 1883.—Dominion of Canada Kennel Club Bench Show, at Ottawa, Canada. Charles Lincoln, Superintendent, Detroit, Mich.

January 9, 10, and 11, 1883.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden Conn.

April 3, 4, 5 and 6, 1883. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters whelped on or after March 1, 1882, close December 1, 1882. Chas. Lincoln, Superintendent. C. B. Elbin, Secretary Western Pennsylvania Poultry Society, Allegheny City, Pa.

December 14-16, 1883.—First Bench Show of Dogs, Southern Massachusetts Poultry Association, New Bedford. Wm. Penn Shepard, Secretary, Fall River, Mass.

FIELD TRIALS.

December 11—New Orleans Gun Club Field Trials on Quail, Opelousas, La. Entries close December 11. J. K. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

THE NATIONAL FIELD TRIALS.

THE fourth annual meeting of the National American Kennel Club, which commenced on Monday, December 4, at Grand Junction, Tenn., was quite successful in bringing out a grand lot of dogs. There were not so many entries as last year, but the average quality of work done was superior to that of any previous trial. The attendance was not so large as that of last year, although a fair number were present. The weather, excepting the last day, was perhaps as good as we could expect at this season of the year. Birds were plenty, but the rank growth of grass and weeds rendered it difficult at times to find them. It was also difficult to see the dogs, and much of the enjoyment of the spectators was curtailed from this cause. There were eighteen entries for the All-Aged Stakes, and twelve starters in the Derby. Below will be found an account of

THE DOGS AND THEIR WORK.

AMERICAN DAN AND DON were the first brace to run. Dan is a very handsome dog of good size. He displays lots of style and is a very graceful moving animal, with fair speed and range. We saw him at the chicken trials and were quite favorably impressed with him, although he was then sick and did not show at his best. He appears to be all right now, and gave us a taste of his quality by beating his competitor in a well contested heat. He was handled by his owner, Mr. Jos. H. Dew, of Columbus, Tenn. Don, handled by Mr. W. T. Mitchell, of Lynch's Station, Va., is the winner of the Members' Cup at the late meeting of the Eastern Field Trials Club. He ran in good form and did some excellent work. They were cast off in some woods at half past nine and worked through into a cornfield, which was drawn blank, until we reached a thick patch of weeds which bordered the edge. Here a single bird flushed a little wild just ahead of Don, and the rest of the bevy then got up and settled in and near a plum thicket. Swinging round to get the wind Don made a nice point to a hare. We then went round the thicket and Dan partly dropped on point, just as four birds flushed in front of him. Don then got a good point on a single bird. Dan also half pointed the same bird, which was flushed to order. Don soon had another point on a running bird which Dan rounded very well. The bird was seen running and Dew flushed it to order. The dogs were then swung round in some sedge, where Dan made an elegant point on a running bird, which he roaded out and located in first-class style. Don backing him nicely. Dew flushed the bird to order and killed it, and Dan retrieved it well. We then turned back and Don challenged and drew a short distance, but got too close and flushed the bird. He then made a cast back to the lower end of the plum thicket, where he found one which he pointed in good style, Dan backing him fairly well. Mitchell, to order, killed the bird, which Don retrieved in good form. Working through a stubble field into a strip of sedge Don pointed a hare. We then turned down along the railroad into a large stubble field. Both dogs showed sign of game to the lower end, and Don swung round in front and took the trail close to the handlers, rounding it out nicely and locating them in a workmanlike manner. The birds were seen running in front of him and flushed to order. Following them up Dan ran into one and flushed it, and Don, who was a little to one side of him, stopped to wing, but soon moved on, and after going a short distance he made a very pretty point, but nothing was found and he was scored a false point. He soon after ran into one, but it was down wind and he was not to blame. Dan had better luck, for he ran by his bird and whirled on a beautiful point to a single, which Dew flushed to order. Dan then swung into some weeds and got a point on a bird which was running down wind. Dew was ordered to flush, and, as he walked ahead, Dan roaded a short distance and the bird flushed. The judges then compared notes and ordered them up, awarding the heat to American Dan. Down fifty-three minutes.

KING DASH AND GLADSOME.—King Dash is a large, rangy dog with fair speed and a capital nose. He ran here last year, doing some very creditable work. Gladsome divided third with Lalla Rookh in the All-Aged Stake at High Point. Although he ran a very good heat, he was sick and entirely unfit for work. They were put down where Dan and Don were taken up, and worked back nearly to where the first bevy was found. We then turned back through a cornfield which we beat without result, except that Dash pointed a lark and Gladsome backed him. Dash then made a grand point which Glad at once honored. Dash then moved on and roaded out a bevy in fine style and again pointed them, but they were running and he drew on toward them very carefully, with Glad backing him in good style, but they were wild and one flushed ahead of him before he had established his point, then several more got up and the rest of the bevy followed them. Both dogs were steady to wing and shot. Hendricks got in a capital double and at once followed it up with a very pretty single, but as he is a true son of the old Quaker State, and an ardent supporter of the doctrine of the immortal Penn, it gives us pleasure to record that notwithstanding the great temptation he departed not from the "traditions of the fathers," but with commendable forbearance abstained from the shedding of blood. The dogs were then worked toward the birds which had settled on both sides of the run. Glad was the first to get a point, but as nothing was found we scored it as false, although it was evident that he pointed at the scent left by a bird which had brushed the top of the grass, but he should have discovered this and moved on. A little further on Mitchell flushed one and cut loose at it but no harm was done. Dash then made a nice point, but as he was not quite sure of his bird, he moved on a step and flushed it. It was now Glad's turn, and he got in a good point to a single bird which flushed as his handler went toward him. The next effort of Dash was either a point or a stalk, but so near together were they that we did not undertake to decide the matter, especially as Glad at once followed suit and made it even, but as he moved on he scored an unmistakable flush. Both dogs were now very cautious and stepped gingerly over the ground, but nothing more was found here, and we swung back a short distance where Glad struck a single bird and pointed it, but it flushed as Mitchell came up. Glad then went on and another one got up near him. We then swung round to the other side of the run where Dash got a good point on a single bird, which was flushed to order. He then took a few steps and straightened out on a capital point which he held while Glad was called up to back, but the bird had run, and as Glad came up Dash moved on and both roaded for some time in first rate style, but Glad was a little the fastest and got there first, locating the bird very nicely. Mitchell flushed it to order and killed it and Glad was sent to retrieve, but Dash thought that the bird belonged to him, and he also went for it and brought it in good form. It was then thrown for Glad to retrieve, which he did very well. A little further on Glad half pointed a bird just as it rose. The judges then consulted and awarded the heat to Gladsome. Down forty-five minutes.

CAVALIER AND RESS.—Cavalier was the only pointer that run in either stake. He ran at the Chicken Trials in Minnesota, where his many fine field qualities caused us to form a very high opinion of him, and we confidently looked for him to make a good showing here. He has greatly improved in looks since we saw him, and was under better control, but his nose was dry, and he could not smell them. Although he has always shown himself to be one of the best of dogs to back, he utterly refused to honor the points of his competitor. We attributed this partly to her color, which is a solid black, and partly to the fact that she was not rigid on her first point, but kept her tail slightly moving until he had passed her. He was handled by B. Waters, of Canterbury, Conn. Ress, who was handled by her owner, J. E. Mask, of Hickory Valley, Tenn., is a very well formed animal of medium size. She is a fast and very graceful mover and appears to have a good nose. They were put down in sedge grass at 11:15. Scent was very poor, and we worked over considerable ground where birds were known to use, but with the exception of an occasional challenge from the dogs nothing was done until after we crossed the railroad, where, in a cornfield, Ress swung ahead and half pointed to the scent from a large bevy. Cavalier was brought up to back, but he refused and would not drop to order, but went ahead of her, when the birds undoubtedly moved a little, as Ress evidently got a better hold of them, and at once became rigid; but Cavalier did not appear to smell them at all well, and kept on and put their up. Mask grassed one of them, which Ress retrieved very well. Swinging round to get the wind, a bird was put up by Mask and three or four others then flushed wild, Cavalier making a capital point where they got up. Then in some tall grass two or three birds rose and were flushed by the dogs and handlers. We then turned up a run, where Ress made a beautiful point, which Cavalier refused to honor, but came up and half pointed instead. When the judges came up, four birds flushed in front of the dogs, and then a large bevy rose and settled in a cornfield. Following those that first got up, Ress dropped nicely on point to a single bird. Cavalier again refused to back and went ahead and nosed up the bird. They were then ordered up and the heat was awarded to Ress, and we then went to lunch. Down one hour and a half.

SUE AND BADEN BADEN.—Sue and Carrie J. were drawn to run together, but as both were handled by Short, Baden Baden was substituted for Carrie J. Sue was the runner up at the Chicken Trials and was beaten only by Don, the winner of first. She has improved since then and showed as some excellent work. She is a fine upstanding animal of great speed

MR. E. S. WANMAKER'S BLACK BITCH "DARKNESS."
Winner of First Prize in the E. F. T. C. Derby.

and range, with a capital nose, and has rare good judgment in getting on her birds. She moves light and easy, and shows off well when on game. Baden Baden is a large dog with considerable speed and range, and we have no doubt is a very good fielder, but he had no chance while running with Sue to show us much of his quality. They were put down after lunch in a cornfield and worked toward the last bevy, which Baden found first, but he got a trifle close to them, and as he challenged for better scent they flushed ahead of him and made for the woods. Following them up Sue made a capital point to a single bird which short flushed to order and missed. It now commenced to rain, destroying the scent, and Sue flushed a bird, and some distance further on she put up two more, for which we did not consider her to blame. Soon after the judges put up the remainder of the bevy, and we then worked toward some woods near a cornfield, where Sue turned up missing, but was soon found staunchly pointing a large bevy. Baden was brought up to back, but pointed instead, although we believe that he only got credit for a back. Short flushed them to order and scored a clean miss. Both dogs then swung down into some sedge and half pointed, when Sue took a step forward and located the bird in capital style. Short somehow managed to kill this one, and Sue was sent to retrieve it, when she again pointed, and Short flushed it and scored another miss. Baden then got in a very good point on a single bird, and Sue backed him in good style. Dr. Young, probably disgusted with the poor shooting, now took the gun, and flushing the bird, he succeeded in making as neat a miss as any of the handlers could have done. The dogs were then ordered up, and the heat was awarded to Sue. Down fifty-one minutes.

CARRIE J. AND GILDEROY.—Peep-o'-Day was the next dog in order, but as she was also handled by Short, Gilderoy was ordered up instead. Carrie is a very handsome animal of medium size with lots of quality. She is all style and a very graceful and easy mover, with fair speed. She is only eighteen months old, and if nothing befals her she will be heard from again. Gilderoy ran a capital race at the Chicken Trials, although he was then suffering from a severe attack of dysentery. He was all right here and showed that our estimate of his field qualities was none too high. They were put down in some sedge grass at two o'clock among some scattered birds, which were flushed by the handlers and judges before the dogs had a chance at them. We then beat through some woods to where a bevy had been flushed by the spectators. While standing here another bevy rose close to the judges, and as we moved on still another bevy flushed wild a short distance to our left. This was quite a bonanza, reminding us of the first morning on Robbin's Island two years ago. The birds settled in the woods which were thickly grown up with underbrush. Carrie found them first and made a very stylish point. Gilderoy was called up, but he could not see her. He winded the birds, however, and also pointed in a very gamy manner. Short flushed the birds to order and killed one, which Carrie retrieved in good style. She then cast ahead of us down wind, and after a stride or two she caught the scent of a bird and whirled around facing us and dropped as if shot, holding her bird until it was flushed to order. A little further on Gilderoy dropped on point and a second later a bird got up near him, but this was not his bird and he staunchly held his point. Carrie was called up, and before she could see him she also dropped very prettily on point and a bird was flushed just in front of each. This work was simply perfection and mere words cannot describe it. Only those who were fortunate enough to witness it can justly estimate the excellence of the performance. We then worked up a ravine, when a bird flushed near Carrie, but it was so thick that we could not see whether she was to blame or not. A little further on Carrie dropped on point close by a stump, from under which, after some little time, a crippled bird was flushed. The judges then consulted and awarded the heat to Carrie J., stating that the combined score of this brace was the best that had been run. Down thirty minutes.

PEEP-O'-DAY AND PHYLIS II.—Peep-o'-Day won first in the All-Aged Stake here last year. She has improved since then, and ran in much better form. She was handled by H. M. Short. Phylis II. is a gamy looking animal, of medium size; she somewhat resembles her sire, and with plenty of work will undoubtedly make a good one. She was handled by W. B. Stafford. They were put down in the woods and worked down the ravine to a branch; we then crossed a gully, when Phylis scored a flush, and Peep-o'-Day got a good point. Short flushed to order and killed, both dogs retrieving nicely. Moving on, Peep again pointed a single bird, which flushed as Short came up. A little further on a nice bevy flushed near the judges and flew up a ravine. Following them up, Phylis ran into one going down wind, Peep was more fortunate, as she nailed one in the sedge in good style, and Phylis backed her nicely. Short flushed the bird and killed it and Peep retrieved it in good style. We then turned back and the handlers flushed one or two, when Phylis took a hand and put up one, which she chased a short distance. They were then ordered up, and the heat was awarded to Peep-o'-Day. Down half an hour.

STARTLE AND GROUSE.—Startle is a well formed, handsome dog of medium size. He is very graceful in his motions and has a gamy way of jumping into his points that is very taking. He has quite a turn of speed and is very stylish. He is too nervous and excitable for a public trial, but is undoubtedly a capital dog for ordinary shooting. He was handled by Wallace, Grouse is a light-weight Gordon and a capital worker. He is fairly fast and ranges and quarters his ground very nicely. He has not so much style as Startle, but makes a gamy point and does his work in a manner that shows him to be a killing dog. He was handled by Will. Davidson. They were put down at 3:15 and worked toward the railroad, which we crossed, and beat through a cornfield to some woods, when we swung to the left. Startle went down near a gully and dropped very prettily to a large bevy. Grouse was brought up to back and dropped to order. Wallace flushed the birds and killed one which Startle, after a while, found and pointed and then retrieved it in good form. Following the birds into the woods both dogs dropped on point at nearly the same instant. Davidson flushed the bird and missed it. Startle then dropped flat, with his nose high in the air, on a beautiful point to a bird which Wallace flushed and killed. The bird was but a short distance from Startle, and he could not withstand the temptation but broke in and gathered it, but dropped it to order. We then worked through the woods and turned back through the cornfield into the road, which we followed a short distance, and then turned into some sedge, when Startle whirled round and made a beautiful point to a single bird which flushed behind Wallace as he came up. A little further on the judges compared notes and awarded the heat to Startle. Down forty-three minutes.

SHOT AND BESSIE LEE.—Shot is a large white dog with lemon ears. He is fairly fast and moves very well. He has a good nose and showed good hunting sense. He was handled by his owner, J. M. Avant. Bessie Lee is a small but very well built animal of good speed. She moves well, and ranges and quarters her ground in good form. They were put down in some stubble and weeds, and worked through this and a cotton and cornfield and some weeds along the railroad, to another cornfield, when Shot made a capital point to a large bevy, which was flushed to order, and both handlers cut loose at them, but nothing dropped, except Bessie, who dropped to wing. Following up the birds, Shot got a good point in some brush on a single bird, which Avant flushed to order, and as it went by Stafford, he killed it and it lodged in a bush. Bessie, sent to retrieve it, caught the scent but could not find it for some time. She finally found it and brought it very well. The handlers then flushed two or three birds and we moved on a short distance, when Bessie pointed and Shot backed her. Stafford was ordered to put up the bird, and went in ahead and flushed a hare, and claimed that this was what she was pointing. He then ordered Bessie on, and as she moved the bird got up in front of her, and another one flushed close by. Shot then pointed where a bird had flushed from, and would not leave it when ordered, but stuck to it, and finally a bird was flushed in front of him. This confirmed our belief that a dog knows more than his master sometimes. A little further on Bessie dropped on a nice point in some weeds. Shot, who could not see her, swung ahead and pointed evidently the same birds, for Bessie moved on, and catching sight of him, backed him in good style. Two birds were flushed in front of Shot and missed by Avant. Stafford then flushed a single and missed it, fully equal to Avant's attempt. Bessie then swung down to a plum thicket, and pointed a crippled bird, which was picked up in front of her. The bird was thrown and a gun fired, and Shot was sent to retrieve, which he did very well. The judges then consulted and awarded the heat to Shot. Down fifty-three minutes. This ended the running for the day.

BIZ AND COUNT NOBLE.—It was a singular coincidence that these two dogs, who were drawn to run together last year, should again fall together this year, and, in both instances, they were the ninth brace drawn. They were also worked over nearly the same ground on each occasion. The result, however, was not the same as last year, and Biz was counted out. Tuesday morning the weather was threatening, with a very dry, strong south wind. We left the hotel about half past seven, and the dogs were put down just north of the old fort at 7:50. Both appeared to be in capital form and expectation was on tip toe, as a grand race was anticipated. Biz was the first to find, but he was going down wind and flushed them. Following them up, Count dropped on point, but soon moved on and pointed what proved to be a hare, Biz backing him nicely. Count then half pointed several times, but found nothing until we turned back and went down a run, where he got a good point on a single bird in some tall grass. Waters flushed the bird and killed it, and Count was sent to retrieve, which he did fairly well, after some time spent in looking for it, during which he put up two more. He then pointed nicely, but soon moved on and roaded a long distance, but he could make nothing of it and gave it up. A little further on he again half pointed and challenged two or three times, but found nothing. We then crossed the road to the ground worked by them last year and took a long tramp down wind to some woods where Biz made a cast inside, and struck the scent of a large bevy, and at once pointed, but soon moved on and drew on them in capital style a long distance. Count, coming up, made a cast between Biz and the birds, and swinging round toward them he scored a flush. Following them, Count dropped on point and Biz backed him. They were then sent over the fence into some sedge, where Biz crouched on a capital point, Count could not see him in the thick grass, and was racing past just in front of him when he flushed the bird and dropped to wing as if shot. He then raised his head, and catching the scent of another one, he instantly froze and held his bird, which flushed as the handlers came up. Count now gave us a taste of his quality by doing some of the most rapid and wonderful work that has ever been seen at a public trial. He gathered himself together, and like the swoop of an eagle he came down on his birds, scoring point after point in quick succession and matchless style. As each bird was flushed to his point and the order was given him to go on, with the bound of a thoroughbred he would sweep through the tall grass like a very ghost, and as he caught the scent, out would go his legs from under him, and with every hair upon him pointing, he would hold his bird until it was kicked out of the grass, when the bewildering performance would be repeated. Four points were thus scored in less time than it has taken us to write this. Biz meantime had got in but one point on a bird, which flushed almost as soon as he stopped. They were then ordered up and the heat was awarded to Count Noble. Down one hour and twenty-two minutes. Biz was handled by Jos. H. Dew and Count by B. Waters. This ended the first series. Following is the summary:

American Dan beat Don.
Gladsome beat King Dash.
Ress beat Cavalier.
Sue beat Baden Baden.
Carrie J. beat Gilderoy.
Peep-o'-Day beat Phylis II.
Startle beat Grouse.
Shot beat Bessie Lee.
Count Noble beat Biz.

Second Series.

AMERICAN DAN AND GLADSOME.—This brace were put down in some sedge. Gladsome had been sick during the night and was unfit to work, and after a short run Mitchell very properly withdrew him, and the heat was given to American Dan.

RESS AND SUE.—Just before this brace were ordered down Sue, bound to get a good send off, made a grand point on a hare and was handsomely backed by Ress, Count Noble and several other dogs who were near, making a very pretty picture. They were then cast off and worked through the sedge and a cornfield into some woods, when the spectators flushed a bevy, which was followed. Sue found first and got a good point on a single bird which Short flushed to order and killed, Sue retrieving it nicely. Ress was making game beyond her and was not called up to back. Sue then went straight to another bird, which she pinned in fine style. Short put up the bird to order and missed it. Ress then took a hand and made a capital point to single bird, which Mask flushed and missed. Both dogs then went into a patch of tall weeds and were found pointing. Sue went on but Ress held her point, and when we came up a bird was flushed near her. We then beat through a cotton field and some corn, and worked up a ravine to some woods, where Sue got wind of a bevy and pointed. Ress also struck it and roaded across Sue's point, when she turned and pointed in good style. Sue then drew a few steps and located them very nicely. As we came up they flushed. The judges compared notes and ordered them up and awarded the heat to Sue. Down fifty minutes.

CARRIE J. AND STARTLE were at once put down and worked toward the birds. Startle struck the trail of a running bird, and after pointing a moment in good style he roaded a short distance very nicely, but soon lost it, and it was flushed by the spectators when they came up. Carrie then made an elegant point, which Startle honored in equal style, and a little further on Carrie again pointed, and the bird flushed when Short came up. Startle was also pointing this bird or backing; we could not see him well enough to determine. We then beat through a cornfield to some weeds, and turned back when Startle dropped very prettily, but as Wallace went in to flush the bird he moved on and the bird got up wild ahead of him. He then swung into some bushes and again dropped on point to a single bird, which Wallace killed, and Startle was sent to retrieve, but not finding it readily, Carrie

MR. WILLIAM MAHONE JR.'S RED IRISH SETTER DOG "BYRON."
Divided Third Prize with Lalla Rookh in E. F. T. C. Derby.

went on and pointed it nicely and Startle backed her. Carrie then retrieved it in faultless style. She then challenged where a bird had run, and reading it out she located it very nicely, and Short flushed it to order. Meantime Startle was pointing, but nothing was found and he scored a false point. He then made a cast ahead and pointed in grand style, and Carrie backed him. Wallace flushed a single bird in front of Startle, when a large bevy got up. Following them up, Carrie half pointed, but soon moved on. Startle then pointed where a bird had been seen to rise. The judges now consulted and awarded the heat to Carrie J. Down thirty-five minutes.

PEEP O'-DAY AND SHOT were then put down and worked toward the last bevy. As Peep swung down a hill two birds flushed close to her. Shot, who was below her, then turned up the hill, and two or three more got up near him. Both then pointed in capital style, and three more were flushed in front of them. Peep then crossed a gully and made a grand point on the opposite bank, and Shot came up behind and backed her. Peep then played a very cute trick on the judges. She discovered that there was no bird to her point, and as she knew that the race would be a close one, she wished to escape the penalty for a false point, so she deliberately turned her head and backed Shot. The ruse succeeded admirably, and with a sly wink to her handler she moved on. Shot then made a good point, and Peep, with her last exploit fresh in mind, backed him, but getting scent of the bird, she also pointed. Avant flushed the bird and killed it, and Shot retrieved it in good form. We then worked through a cornfield along a deep gully, into which Shot jumped, and a large bevy flushed from the bottom of the gully and settled in the sedge. Along the bank, Peep came up and pointed where they had been, but soon moved on a short distance and dropped on point, and Shot backed her. Then both went on, but swung the wrong way, and the birds were flushed by the judges behind the dogs. Following them across the gully, Peep ran into one in the cornfield, but as she was out of sight of the judges, it was not scored against her. Shot made a cast to the right and pointed, and then roaded, and as Peep came up, one flushed close to her and Short. Peep then dropped on point and roaded out her birds in capital style and located them well. Meantime, Shot was following his bird out very nicely, but left it when Short fired at the birds which he had flushed to Peep's point. The judges then consulted, and the heat was awarded to Peep-o'-Day. Down thirty-five minutes. This finished the second series, as Count Noble had a bye, and we then went to lunch. Following is the summary:

American Dan beat Gladsome (withdrawn).
Sue beat Ress.
Carrie J. beat Startle.
Peep-o'-Day beat Shot.
Count Noble a bye.

Third Series.

COUNT NOBLE AND AMERICAN DAN.—This brace were put down after lunch in a cornfield. Both started off at a tremendous pace. Dan appeared to fully realize the importance of the occasion, and letting out a link, he threw his head in air and beat out his ground at a much better rate of speed than he had yet shown, fairly rivaling his competitor. At the south edge of the field Count ran into a bevy and flushed them. Following them up, he made a stylish point to a bird which flushed as Waters came up, and a moment later one or two more got up near them, but the sedge was so rank that we could not see how it was done. We then swung into some woods where Count, who was coming toward us, suddenly dropped as if shot to the sneeze of our horse, which he mistook for the rise of a bird. We then worked up a ravine, and swung round to the east and crossed the railroad and beat out a cornfield to some woods, where Count ran into a large bevy, and four or five of them flushed and flew a few yards and settled along the fence. Count dropped to wing, and the rest of the birds laid until the judges came up, when they also rose and went into the woods, followed by those that had first got up. Following them up, Count half pointed and drew a short distance, but nothing was found, and we swung round to get the wind, when Count got a good point near the fence and Dan was dropped to order. Waters flushed the bird to order and killed it, and Count retrieved it well. We then swung into a cotton field, where Dan made an elegant point to a single bird, which flushed when Count came up, and a few seconds later another one got up close to him. Dan then nailed one in capital style, but it flushed in a second or two. We then turned toward the fence, where Dan dropped on point, and as Count came up, one got up close to him. He then made a grand point, and three birds were flushed, which flew but a short distance. Dan went straight to them and made a beautiful point, evidently to scent left by a bird which had brushed against the weeds, as he soon left it and went on. Dew called him back, and one got up close by him, and two more near Dew, and as the judges came up, another one was flushed. We then went to a pond and the dogs were given water. The judges then consulted a long time and awarded the heat to American Dan. Down one hour and thirty-five minutes. While the judges were comparing notes, Dan, just to show them what he could do, swung into the woods a short distance from them and made a magnificent point to a single bird that was under a fallen tree top. Shot, thinking that he was still in the race, improved the opportunity by backing him in grand style. After the spectators had sufficiently admired the beautiful picture, Dew flushed the bird and killed it, and Dan retrieved it in good style.

SUE AND CARRIE J.—All of the dogs except American Dan that were now in the race were handled by Short, and the running of two of his dogs against each other was unavoidable. They were put down in a cornfield beside the railroad, and worked through this into a cotton field, when we swung to the right toward some woods near which Sue made an elegant point. As we came up she drew on a few steps and located a fine bevy in grand style. Carrie was called up to back and dropped flat the instant she caught sight of her. Short then flushed the birds and killed one. This was as pretty a bit of work as we had seen. Following up the birds which settled in the woods, Sue made a point, which Carrie at once honored. Sue then moved on and again pointed, and Carrie again backed her nicely. Sue went on a little further and a bird flushed near her, but the undergrowth was so thick that we could not see whether she was to blame or not. Carrie then made a beautiful point to a single bird, which flushed when the judges came. She then went on, and catching the scent of another one, she sat down by it very gracefully. Sue did not see her, and worked ahead, and the bird flushed a little wild in front of her. Carrie soon had another one fast, which Short flushed and missed, and soon after another one got up near Short, and the dogs and he missed this one also. Sue then made a very stylish point and Carrie was called up to back, but she could not see Sue, and was coming down wind directly toward her, when Short cautioned her, and she at once stopped. Short then went in to flush the bird, but it had run, and the dogs were ordered on. Both roaded a short distance and then swung for it. Carrie struck it first and made a nice point; Short flushed the bird and missed it. The judges then consulted, and awarded the heat to Sue. Down thirty-five minutes, Peep-o'-Day having a bye. This ended the third series. Following is the summary:

American Dan beat Count Noble.
Peep-o'-Day a bye.

Fourth Series.

PEEP-O'-DAY AND AMERICAN DAN were at once put down in some woods, which we worked through and then turned south. Dan swung out and struck a bevy, which he pointed in grand style. Den flushed them to order, and we followed them up. Dan soon had one which he pointed very nicely a moment, and then roading it out in a workmanlike manner he located it in capital style. Peep came up and dropped as if shot as soon as she caught sight of him. Den flushed the bird to order but did not shoot. This was a very good piece of work. The judges soon after flushed a bird which settled near the dogs, and Peep ran into it, for which she was not to blame, as the grass was very thick and tall. Then another bird was put up by the judges, which also went into the same place, and the dogs were worked toward it. Dan struck it first and a second later Peep also got the scent, and both half pointed, but the bird had run, and the handlers went to the dogs, and among them it was flushed. We then beat through a cornfield along the railroad, and crossing a branch we turned north toward some woods. when Dan pointed but moved on as Peep came up and flushed the bird. We then took a long turn without finding birds. Finally Dan found one and pointed it in good style and Dew flushed it to order. It went but a short distance, and Dan, who saw it alight, drew toward it, but did not find it in the tall grass. We then worked back and Peep pointed a hare, and soon after she dropped very prettily to another one. We then crossed the railroad and turned toward home, beating out the fields, but nothing was done for a long time, except that Peep dropped on a nice point in a cornfield, but it proved to be false. It was now nearly four o'clock and both dogs were tired. The judges suggested that fresh dogs should be turned down to one side of us and some birds found. This was done and several were cast off in a stubble field, which they beat out in great style, and just as we received word that birds were found Peep challenged and Dan backed her, but they soon moved on and one or two birds flushed ahead of them, and a large bevy flushed by the spectators settled beyond us. Dan then half pointed and three more got up near him. He then pointed, and as we came up one flushed partly behind him. Meantime Peep pointed down by a ditch, and Short flushed the bird, which he missed. Both then pointed very nicely and a bird was flushed in front of each. Peep then made a false point, and Dan pointed one nicely, which Dew flushed. This was very lively work and the grass was tall and quite thick, making it difficult to clearly see all that was done. The judges then consulted and we thought that Dan had it sure, but they were ordered on again and we turned back into the tall grass where a bird flushed wild ahead of Dan and Peep pointed, but nothing was found and she moved on. Dan then flushed one down wind and Peep soon followed suit. Dan then made a cast to the edge of a thicket and got a beautiful point to a single bird, which Dew flushed to order. Dan then took a few steps and made another point just a second or two before the bird got up. The dogs were then ordered up. but Short, who had marked some birds on the opposite side of the thicket, kept on and Peep soon had one, which he flushed and killed, but as the dogs were not under judgment, of course this did not count. While going to retrieve his bird Short flushed another one, which he also grassed very neatly. They were then ordered on, when Peep made a point in the tall grass, and Short put it up and scored another kill, and Peep retrieved the bird in good form. A little further on Peep flushed one and they were then ordered up, and we started for the hotel. At supper the judges announced that they had awarded the heat to Peep-o'-Day. Down one hour and fifty-two minutes. Sue having a bye this finished the fourth series. Following is the summary:

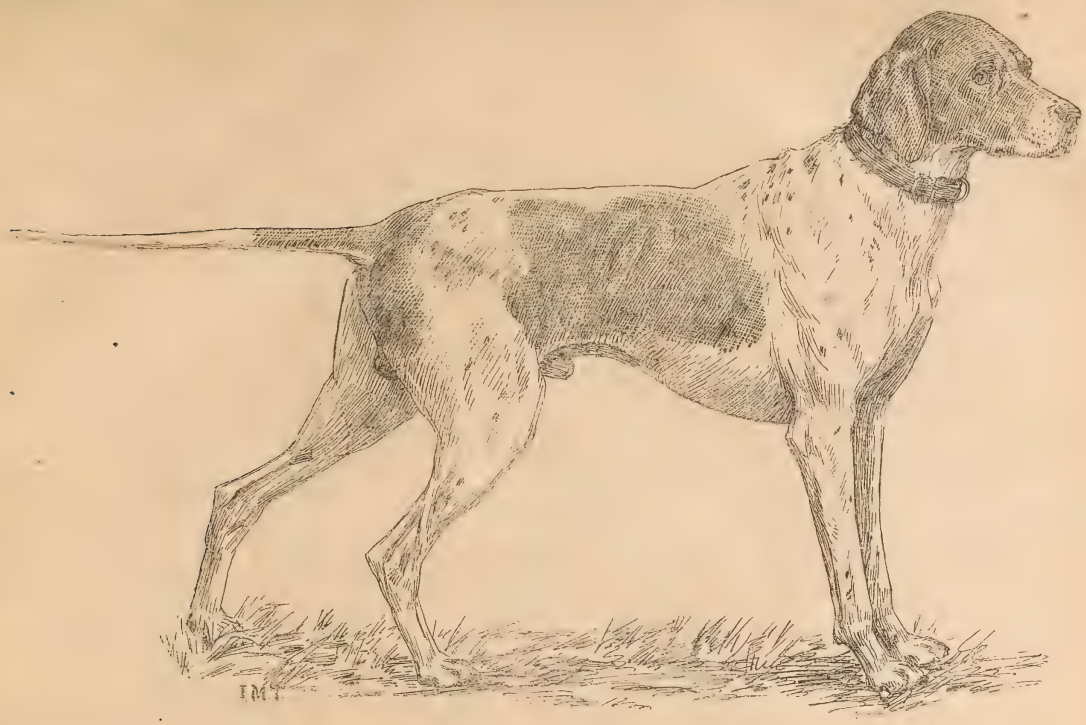
Fourth Series.

Peep-o-Day beat American Dan.
Sue a bye.

Fifth Series.

SUE AND PEEP-O-DAY.—This was the deciding heat for first place, and contrary to expectations, one of the shortest of the whole meeting. Both dogs were handled by Short and they were put down on Tuesday morning at half-past eight in some woods and worked through into a field of sedge, when Sue at once pointed a bevy in grand style, and Peep backed her. Short flushed them and missed. Sue again got there first and nailed one in capital form, Peep dropping the instant that she saw her. Short again scored a miss, and Sue then made a point where a bird had been flushed. We then swung back toward the woods when Sus struck the scent of one which was close to the judges and made an elegant point, but we were too near and the bird got up. After going a short distance further, the judges consulted and awarded the heat to Sue, and announced her as the winner of the first prize. Down thirteen minutes.

This ended the fifth series, with the following summary:
Sue beat Peep-o'-Day and won first prize.



Sixth Series.

PEEP-O'-DAY AND CARRIE J.—Carrie J. having been selected by the judges as the best of the dogs previously beaten by Sue, she was called up to compete with Peep for second place, and they were put down in some sedge and worked down to some tall weeds, where Dr. Young flushed a bird, which flew but a few yards, and both dogs were sent for it, and it flushed between them. Peep then made a capital point to a single bird, and was handsomely backed by Carrie. Short flushed the bird to order and killed it, and Carrie retrieved it in good form. Peep then swung into a cornfield and dropped very nicely on point to some doves, and Carrie backed her in good style. We then worked down a run and crossed the road into a cornfield, when Peep pointed a hare and Carrie backed her very gracefully. A little further on, Peep dropped on point to a large bevy, and Carrie also dropped as soon as she caught sight of her, Peep then moved a step or two, and Carrie was ordered on, and as she came up, both caught the scent and pointed side by side. Short flushed the birds, and got in a capital double, but somehow he managed to miss them. They were then ordered up, and the heat was awarded to Peep-o'-Day, and the judges announced her the winner of second prize. Down eighteen minutes. This ended the sixth series. Following is the summary:

Peep-o-Day beat Carrie J., and wins second prize.

Seventh Series.

AMERICAN DAN AND SHOT.—Both of these dogs had shown remarkable field qualities, and the judges decided to run them

MR. A. E. GODEFFROY'S LIVER AND WHITE POINTER DOG "SEFTON."

Winner of the Heckscher Cup at E. F. Trials for the dog showing the most natural ability.

together in order to determine which was entitled to the honor of competing with Carrie J. for third place. They were at once put down in the cornfield and worked toward the last bevy. Dan at once swung back where they had been flushed and half pointed, and then roaded where the birds had been running. He was called back and we then went round to get the wind, and, casting off the dogs, Dan at once made a very stylish point to a single bird, which Dew flushed to order. Dan then half pointed a hare, but soon went on and evidently struck the scent of birds, as he challenged and then roaded, but he was called back, and we crossed a gully, and, after making two or three casts, we found the birds; one was flushed by the judges, and then Dan pointed, but the bird flushed itself some distance ahead of him. Shot then flushed one going down wind. Dan then made a cast up to the head of the gully, and made a magnificent point, which he held for a moment, and then he carefully drew on a step or two and located his bird in capital style. Dew flushed it to order, and the judges ordered up the dogs and awarded the heat to American Dan. Down seventeen minutes. Shot had done nothing in this heat, and we found, upon examination, that his nose was dry and hot. He was evidently suffering from a severe cold and was not fit to run. The contest for third place was now between CARRIE J. AND AMERICAN Dan, and they were at once put down, but after a short spin, during which nothing was found, SLort and Dew announced to the judges that they had agreed to divide. This was undoubtedly the best possible arrangement that could be made, as both had done capital work and were worthy the place. This ended the All-Aged Stake. Following is a complete summary of the running:

First Series.

American Dan beat Don.
Gladsome beat King Dash.
Ross beat Cavalier.
Sue beat Baden-Baden.
Carrie J. beat Gilderoy.
Peep-o'-Day beat Phyllis II.
Startle beat Grouse.
Shot beat Bessie Lee.
Count Noble bat Biz.

Second Series.

American Dan beat Gladsome (withdrawn).
Sue beat Ross.
Carrie J. beat Startle.
Peep-o'-Day beat Shot.
Count Noble a bye.

Third Series.

American Dan beat Count Noble.
Sue beat Carrie J.
Peep-o'-Day a bye.

Fourth Series.

Peep-o'-Day beat American Dan.
Sue a bye.

Fifth Series.

Sue beat Peep-o'-Day and wins first prize, $250.

Sixth Series.

Peep-o'-Day beat Carrie J. and wins second prize, $150.

Seventh Series.

American Dan beat Shot.
Carrie J. a bye.

Eighth Series.

Carrie J. and American Dan divide third prize, $100.

EASTERN FIELD TRIALS CLUB.

THERE was a regular meeting of the Eastern Field Trials Club on Tuesday evening, Dec. 12, at Delmonico's. The Treasurer's report shows a handsome balance on the right side of the books. President J. Otto Donner, Mr. J. E. I. Grainger and Mr. W. A. Coster, were appointed a committee to report at the next meeting what changes, if any, should be made in the running rules. Mr. Donner for the committee on the selection of grounds for the trials reported in favor of securing those at High Point for another, and, if thought advisable, for a series of years. Mr. A. E. Godeffroy read a paper upon the same subject, and also suggesting important matters for the consideration of this club, which were laid upon the table for discussion at the next meeting, which will be held on Tuesday evening Dec. 19, at Delmonico's. It is hoped that every member will be present, as subjects of vital importance to the future welfare of the club will come before the meeting. An unanimous and hearty vote of thanks was tendered to Messrs. Donner and Coster for the very acceptable manner in which they have discharged their arduous duties in connection with the recent trials. Mr. Donner informed the meeting that Mr. J. Palmer O'Neil, of Pittsburgh, Pa., had generously offered the club as a prize for the trials of next year a Westley Richard's hammerless gun valued at $400, and $100 in cash to be used in defraying the expenses incurred by the club in stocking and preserving grounds for the trials.

OTTAWA BENCH SHOW.

Editor Forest and Stream:

I am just in receipt of a communication from Mr. Vicars, the secretary of this show, saying that arrangements will be made by the club to receive and care for dogs in advance of the opening of the show. They will have their medical adviser, attend the dogs every day, and also have competent attendants to care for the dogs, and put on the bench in proper shape, at a small expense to their owners. This should be satisfactory to the American exhibitors, whose presence the club earnestly desire.

The show is fixed to be held on the 26th, 27th and 28th of March, leaving five clear days to get to the Pittsburg show.

Major J. M. Taylor, of Lexington, Ky., has accepted the club's invitation to judge the setters and pointers. His acceptance should give satisfaction to all intending exhibitors, as his decisions have been received with universal satisfaction.

Mr. J. F. Kirk, of Toronto, who judged so satisfactorily at Cleveland, has accepted to judge the non-sporting classes. You commended very favorably his style and manner of judging.

The exhibition of sporting materials will be made a very prominent feature in the show, as the arrangements now being made will prove satisfactory to all American and English manufacturers. It will no doubt prove to be the best opportunity for the sale of goods that was ever offered, and I hope the club will open up this department a week before the dog show, so that intending purchasers will have a chance to thoroughly examine all the goods.

The entries for the show will close early in March, the prize list will be published in pamphlet form early in January. A copy of it will be sent you as soon as the directors approve of it.

CHAS. LINCOLN, Supt.

DETROIT, Mich., Dec. 1.

DON.—The pedigree of Mr. J. Heron Crosman's dog Don, who won the Members' Stake of the Eastern Field Trials Club, at High Point, last month, is as follows: He is by Rodewald's Tramp out of B. W. Jenkins's Fan. She out of the first Gordon bitch imported by Mr. Jenkins, of Baltimore, by his imported Gordon Hero.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal*:

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

Bennie. By Dr. W. B. Griffith, Baltimore, Md., for white and black setter dog puppy by American Belton—Breeze (Belton—Blonde) (Lord Downe's Duke—Belle), whelped Aug. 5, 1882; also

Birdie. For white and black setter bitch puppy by Buckeye Boy—Buckeye Queen (Belton—Belmore) (Blue Dick—Buckeye Belle), whelped May 5, 1882.

Romp. By Mr G. Noble, Savannah, Ga., for liver, white and ticked cocker spaniel dog puppy, whelped Sept. 13, 1882 (Col. Stubbs's Flirt—Pansy B.).

Bret Harte. By Mr. E. C Alden, Dedham, Mass., for Gordon setter dog puppy, 10mos. old, by Bailey's Tom (Stockton's Dash—Horace Smith's Fly) out of Geo. Colman's Flora (Bailey's Tom—Doane's Chloe).

Troubadour, Senator, Clifford. By Mr. C. M. Munhall, Cleveland O., for liver and white dog pups, whelped Aug. 7, 1882, by champion Donald out of his Devonshire Lass.

Brownie W. By Mr. J. P. Wiley, Salmon Falls, N. H., for brown spaniel bitch by Brush II. out of Clio (Snip—Feather), whelped Sept. 16, 1882.

Boz. By Mr. W. Johnson, Boston, for black with white spot on chest cocker spaniel dog; also

Miss Louise. For black cocker bitch, both whelped Oct. 5, by Mr. J. P. Barnard's Phil (Brew—Kittie) out of his bitch Florence (Snipe—Cute).

Royal Charm. By Mr. P. M. Mora, New York, for orange and white English setter bitch, whelped May 27, 1882 (Dr. Aten's Ned—Easty's Nellie).

Rosabelle. By Mr. Wm. A. Johnson, Clinton, N. C., for white, with liver spot on left ear, setter bitch puppy, whelped Oct. 1, 1882, by Duke of Montclair (Bolus's old Belton—Rogers's Snow) out of Prairie Rose (Burgenthal's Rake—Whitman's Pearl).

General Pride. By Mr. J. M. Godinez, Poughkeepsie, N. Y., for blue belton English setter pup (Adams's Dash—E. S. Bird's Sparkle), whelped July 29, 1882.

Elcho VI., Noreen III. By Mr. A. Blair Kelsey, Belvidere, N. J., for red Irish setter puppies, whelped June 29, 1882 (Elcho—champion Noreen).

Don. By Mr. N. Hatheway, Fall River, Mass., for white, black and ticked English setter dog puppy (champion Dash III.—Opal), whelped Nov. 4, 1882; also

Dimple. For white, black and ticked English setter bitch puppy, same litter.

Brinyea II. By Mr. Stephen Hatheway, Freetown, Mass., for white, black and ticked English setter bitch puppy (champion Dash III.—Opal), whelped Nov. 4, 1882.

Opal III. By Rev. Robert Sullivan, Providence, R. I., for white, black and ticked English setter bitch puppy (champion Dash III.—Opal), whelped Nov. 4, 1882.

Fenus. By Mr. George Delano, New Bedford, Mass., for white, black and ticked English setter bitch puppy (champion Dash III.—Opal), whelped Nov. 4, 1882.

Adonis. By Mr. George Delano, for white, black and ticked English setter dog puppy (champion Dash III.—Opal), whelped Nov. 4, 1882.

BRED.

O. de Luze; a bitch pup, same litter, to Gen. Alex. S. Webb; a bitch pup (Sensation—Belle), whelped Oct. 4, to Mr. A. B. Alley.

Tempest—Flirt whelps. By Mr. Andrew J. Ward, Boston, Mass., setter puppies, whelped Sept. 9, 1882, by his Laverack dog Tempest (Pontiac—Fairy II.) out of his Llewellin bitch Flirt (Rock—Starlight), a black and tan dog pup to Mr. Edward S. Hornit—M. Ball's line, Mass.; a black and white ticked dog pup to Mr. Benj. H. Sanborn, Wellesley, Mass.; a black, white and tan dog pup, a black, white and tan bitch pup, also a white ticked with liver dog pup to Mr. E. W. Jester, St. George's, Del.

IMPORTATION.

☞ *See instructions at head of this column.*

Tel-el-Kebir. Mr. R. R. Hamilton, New York city, has received from Dr. Gordon's stables, Twyeford, Eng., the smooth-haired St. Bernard dog puppy Tel-el-Kebir, by Wilde's Hermit—M. Ball's Donna Sanes, old brindled fawn and black; blaize feet and tail end white marked; double dew claws; weighs, 60 lbs.

PRESENTATIONS.

☞ *See instructions at head of this column.*

Duke of Montclair—Prairie Rose pup. By Mr. A. G. Smith, Montclair, N. J., to Mr. Wm. A. Johnson, Clinton, N. C., a bitch puppy, whelped Oct. 1, 1882, by Duke of Montclair out of Prairie Rose.

DEATHS.

☞ *See instructions at head of this column.*

Pet. White and orange Laverack setter bitch, owned by Mr. E. F. Merciliott, New York, died Nov. 26, 1882.

Tell. Brown and white pointer dog, died at the summer residence of his owner, Sept. 30, at the age of nine year of his age. Bred at the royal kennels, Sigmaringen, Germany; imported in 1871 by the Rev. Herman C. Berg. All that a dog could be. Tell had no quality that a friend, loving and true, could be without.

Rifle and Trap Shooting.

SIR HENRY HALFORD TALKS OF THE MATCH.

THE captain of the late victorious British team was given a banquet on Nov. 16 at the County Assembly Rooms, Leicester, by a number of gentlemen of the County. On a table in the Dining Hall was exhibited the trophy won by the British team, which consists of a bronze figure of "Fortunata," about four feet high, one arm extended, and holding in the hand made in the form of a wreath. The toastmaster complimented the guest of the evening on the successful result of his American trip, and referred to his long connection with the Volunteer movement in England, giving some interesting facts upon the long career as a successful rifleshot which Sir Henry had enjoyed.

Sir Henry Halford, on rising to respond, was again heartily cheered. He said that to see his friends gather in that way to give him the hearty welcome he had received was a thing of which any man might well be proud. (Hear, hear.) The last compliment Mr. Hargate paid him—that of being a true and hearty English gentleman—was one which his education and his natural feelings rendered more valuable to him than any other that could be paid him. He would not detain them with any personal matter to himself, but would give them a few particulars as to how the recent match had come about, what the English team did, why they won, and how they came home. (Hear, hear.) The match originated in a letter received by him from Major Farr of the 13th Battalion of the New York National Guard, stationed at Brooklyn. He suggested that as the old style of matches between England and America had died out, partly because of the expense and partly in consequence of the rifles used being so troublesome that people gave it up, it would be a happy idea if the Volunteers of this country and the National Guard of the United States to come together in friendly contest.

The idea was first that the match should take place at Wimbledon in July last. The duty of arranging the terms was delegated to himself, and those he originally suggested were practically those adopted. The Americans, however, attached one addition, and that was that the English should guarantee to send over a team to America for a return match in 1883. He (Sir Henry) had had some experience in carrying out rifle matches, and in getting teams to various places, and he knew it would be impossible for them to guarantee a return match in 1883. He therefore proposed, with the sanction of the National Rifle Association, that the English team should go to America this year, and the Americans come here in 1881. The bait took. (Laughter.) He thought they had a good chance of beating them on their own ground this year, and of doing the same in England next year, while he knew that if the Americans came to England this year they would be beaten, and it would be sufficient to make it a matter of much difficulty in the return match. (Cheers.) After a little negotiation the terms were accepted. The choice of the team was not by competition, but by selection on the known records of men for some years past, and the team under his command was a very strong one.

They had some difficulty with regard to allowing the Volunteers in uniform and carrying arms to land on a foreign shore. The Secretary of State for War at first said that it was impossible, but it was pointed out that the men would be under military discipline, and that he (Sir Henry) was going to take the command of them, and that there was no fear that they would disgrace the uniform out of the country. Leave was accordingly given, and they started early in September, and had a very good quick passage. They were met at the entrance to New York Harbor by the president and directors of the National Rifle Association of America, many of whom were old friends whom he had met in contests years before. Their greeting was most cordial, and they were treated in all, as he knew before, that everything had been done to make their stay agreeable and the match an honest one, and that it should be fought out as between men and soldiers. Having given in detail some of the preliminary proceedings, Sir Henry said that the first day he (as Englishmen) went to the long ranges the Americans would stick to the shorter ones, and race *versa* (laughter). There was hardly a day but the visitors beat them by 80 or 100 points. But they took it uncommonly well (hear, hear), and many of them said what was perfectly true, that it was a very good thing that they were beaten. They had had such a succession of victories that many of them thought they were invincible in the matter, and that if they had scored another victory the interest in rifle shooting would have died out among them, while the English would have been so disheartened that they would not care to enter on a contest again.

The result of the match was everything they could wish. The English game been a downright good beating (cheers) and he was very glad the majority was not a small one, as it left no room for excuses to be made. The weather was fine and enjoyable, and the affair caused him much anxiety, but after it was over there was much hospitality shown him. Sir Henry then described the armoury of the Seventh Regiment of the National Guard at New York, which he had the honor of being invited to inspect, and said there was nothing like it in this country. He was also invited to inspect the regiment at Brooklyn, which he did, and that would show the spirit with which they were entertained. It seem to him that the match had a far wider significance than that which appertained to anything of the kind in rowing or other sports. It was the bringing together of two armies which defended their own countries, and making friends of those gentlemen whose duty it would be, should any great countries which completed the Anglo-Saxon race. (Applause).

His opinion was endorsed in America—that as long as those two nations—who were relations in blood—stuck together, they need not fear the whole world. Mr. Ward Beecher had put in magnificent language the sentiments he now expressed, and the feeling was growing in the United States. In 1877 they met cordially, in 1882 their meeting was more than cordial. He could see that there was a strong feeling in the heart of almost every intelligent American that these

BABYLON, L. I., Dec. 6.—The members of the Westminster Kennel Club left Hunter's Point on a special train at nine o'clock this morning for the second day of the annual reception, where the most important event of the meeting was to be decided. This was a shoot for the Club Cup, by teams of four, each man to shoot at twenty birds; entrance $25 per team. Five teams entered for the trophy, these being the Westminster Kennel Club, the Orange Club, the Riverton Club, the Staten Island Club and the Rockaway Club. When the club reached the grounds they found many of the gentlemen of different clubs who had stopped at Babylon the previous night, busily engaged at the traps shooting sweepstakes. The wind was blowing a strong gale from the northeast at the time, and those who were not engaged at the traps were taking refuge in the capacious shooting box. This kind of shooting, however, was quickly discontinued on the arrival of the train by train, and preparations immediately made for the event of the day—the shoot for the Club Cup. Four hundred pigeons were required, and these were quickly brought on the grounds by Mr. Gilbert and placed near the traps. When the names of the gentlemen to represent the different clubs we announced and lots were drawn for the order in which they would shoot. It was agreed that the men selected from the five clubs should shoot in teams of four, commencing with the Westminster, followed by the Riverton, then the Orange, next the Staten Island, and last the Rockaway Club. The Riverton Club was thought to be invincible, for since its inauguration and first appearance at Long Branch, in 1878, it never had been beaten, and the club had decided that the old team should be disbanded after the match, and a new team would be formed from younger members of the club. The Rivertons were the favorites over the field before the shooting commenced, the Westminsters the second in favor, the Orange, Staten Island and Rockaway clubs being, as it were, "in the field." The Riverton quartet were Messrs. Sprague, Meredith, Arnold and Macalister; the Westminsters, Messrs. Coleman, Travers, Thompson and Hopkins; the Orange, Messrs. Crawford, Kellogg, Parker and Watson; the Staten Islands, Messrs. Thomas, Brown, De Forest Grant and Vyse, and the Rockaways were M. Lawson, Lennox, St. George and J. Lawson. After fine shooting at 400 birds, for five hours and a quarter, the affair terminated for the day in a tie between the Westminster Kennel Club and the Orange Club, each having killed fifty-seven birds out of the eighty shot at. The birds were retrieved, as on the first day, by Mr. Lambreyer's dogs. The shooting was done at 30yds. from the traps

The following are the scores of the shooting:

Westminster Kennel Club.	
Mr Thompson	1111011011111111—16
Mr Coleman	1111011110111101111—15

MALDEN GUN CLUB.—The Malden Gun Club met at their rooms on Monday evening, Dec. 4, to elect officers for the ensuing year, and also to participate in the anniversary supper. The full board of officers unanimously elected are: Frank T. Noble, President; Robert H. Walker, Vice-President; T. W. Fielding, Secretary; M. Hanford, Treasurer; Frank S. Barnes, additional executive. The fourth annual election of officers was successfully carried out in the true spirit of that *armor unver* which ought at all times to distinguish men in every walk of life. Our noble President was re-elected as he is a most efficient worker in everything that appertains to a gun club's practical manipulation. After the very enjoyable and harmonious meeting, the members at the club adjourned to partake of the good cheer so bountifully set before them. Not the least interesting feature of the occasion were the inimitable clay pigeon on glass ball, the former in an inverted position covering the latter holding a fragrant weed. The clay pigeon was also made serviceable as a receptacle for edibles most agreeable to the palate. The toastmaster of the evening was ex-treasurer Jones, who acquitted himself faithfully and gracefully, although called upon at a moment's notice. The speech-making was of that nature which always has a tendency to warm the heart and elevate the mind, as well as to bring into closer relationship that spirit of brotherly love and fraternizing influence so necessary to every club's social and financial welfare. *Esto perpetua!*—T. C. F.

PHILADELPHIA, Nov. 30.—The University of Pennsylvania Gun Club has had three practice matches so far. The first match was as follows, Bogardus rules and trap:

Taylor	1111111111 10 Dallett 0000001000—1
Second Match.	
Finletter	1110111101—8 Dallett 0010110011—5
Taylor	1101011111—8 Croasdale 0010001000—2
Small	1101011111—8

In shooting off the tie Finletter beat Taylor.

Third Match, Between the Class of '84, '85 and '86.

'84—Taylor	1 1 1 1 1 1 1 1 1 1—10
Small	1 1 1 1 1 1 1 1 1 0—10—20
'85—Finletter	1 1 1 0 1 1 1 0 1 1—8
Fischer	0 0 0 1 0 0 0 0 1 0—2— 9
'86—Patterson	0 1 0 1 0 0 0 1 1 1—5
Cuney	0 1 0 0 1 0 0 1 0 0—3—8

The club has elected the following officers to serve until next September: President, C. W. Taylor, '84; Vice-President, C. N. Small, '84; Secretary, P. Thompson, '85; Treasurer, L. Finletter, '85. The President has appointed the following Executive Committee: J. P. Croasdale, Chairman, C. Clayton, D. Benners, H. Patterson, C. Cuthbert—'Cotz.

WILLINGTON, Mass., Dec. 8.—The winter quarters of the Malden Club were well filled with marksmen this afternoon, yet the cold weather chilled the ardor of some of the sportsmen. The more enthusiastic, however, faced the traps and made the following scores:

First event, club shoot at 20 birds—F. T. Noble, 14; J. R. Souther, 18; A. F. Whitman, 12; F. Loring, 12; G. R. Durand, 12; M. Hanford, 11; J. Boston, 10.

Second event, match at five birds—Won by F.T.Noble, J.R.Souther and F. Loring in order.

Third event, at same trap—J. R. Souther and F. T. Noble divided first honors; A. G. Whitman secured second, and the third fell to G. R. Durand.

The fourth event, at trap No. 1, showed first man to be A. G. Whitman, with M. Hanford and F. T. Noble even at second, while the third position was divided by J. Boston and F. Loring.

The fifth event, same conditions, was disposed of by Messrs. Noble, Whitman and Hanford in the order named.

REMOVAL.—We call attention to the removal advertisement of the well-known firm of William Read & Sons, Boston, and it offers certainly a good opportunity for the purchase of fine goods at a nominal price. This firm, so well known all over the country for their specialties in fine guns, have occupied their present location over fifty years. But few houses in the land have been so long in one place. Besides being agents for W. & C. Scott & Son (of which make they have always made a specialty, supplying Bogardus, Miles, Johnson, and other leading shots), and other makers, they do a large business in military contracts and supplies. In January they will occupy a larger and more commodius building on Washington street.—*Adv.*

POSTAGE STAMPS IN DEMAND.

BALTIMORE, Dec. 7, 1882.

Editor Forest and Stream:

Please give inclosed ad. two insertions in FOREST AND STREAM and send bill to me. The only objection I have to advertising with you is the expense of the thing. *Your* charge is cheap enough, but the postage connected with the ad. is something fearful. I offered a buffalo overcoat for sale a few weeks ago through FOREST AND STREAM. The ad. sold the coat the next day, and since then I have been kept busy answering inquiries from nineteen States, Canada and Mexico. As there are still a few States to hear from, and as it is about time to expect responses from the Old World, I shall have a busy time until after Christmas. Our stamp clerk says there has been a marked increase of business in his department this fall, which fact, he says, denotes an increased trade. He does not know of the overcoat ad. J. L. T.

Yachting and Canoeing.

ROUGH NIGHT IN THE IRISH SEA.

Editor Forest and Stream;

On Sunday morning a four-tonner was lying in Rosslyn Harbor, with mainsail and jib stopped, bowsprit all ready to get under way for Kingstown, Ireland. The crew were below having in a square meal preparatory to starting. We are all amateurs and sail our own ship. The skipper, one of the best hands on this coast, is always equal to any emergency and can handle a tiller as well as most professionals. Friend Green was the less said about her the better. The last, and as regards size, the least, is the "bos'un," a smart hand, who generally knows what to do and how to it. So much for the little ship and her crew.

Breakfast over, we got the mudhook up and started with a fair wind. When we got well outside the harbor into the tide rip, which is very bad here, we thought it best to get the topmast on deck. This was soon successfully accomplished, and the little ship went much easier through the seas. I may as well explain that we have a brass tunnel with shoulders which, when we get the topmast on deck, carries all the topmast rigging and remains on the upper cap. To send the topmast up again you ship the head in the tunnel and hoist away. We had hardly got well clear of the tide race when the wind, which was on the quarter, began to head us off, and the mainsheet had to be gotin. It gradually knocked us off, till we had to pinch all we know to lay our course. To make matters worse, it got very puffy and blew much stronger; so we hauled the foresail to windward, trimmed sheets flat down two reefs, and before I knew it was wanted, as it piped up harder all the time. I was below looking at the barometer, which was falling considerably, when I heard the skipper shout, "Now, there, below there, tumble up and get that trysail beat, we'll want it directly." We had hardly got this done when it began to look so ugly to windward that we hove-to and hauled down from mainsail to double-reefed trysail. The squall was on us like a thunderclap, and as we had still No. 1 jib on the bowsprit we dared not heave to, as our bowsprit would have snapped like a carrot. There was nothing left for us to do or think of but scud before it. We could hardly see twenty yards ahead for the hail and rain, which luckily killed the seas to a great extent, so we had not much water on deck. We got out the storm jib, and the bos'un and I went forward and got it up and then down we went to the foresail, and in about half an hour the worst was over, and we brought the boat by the wind again. It was now a question whether we should run back or go on, but as crossing the South Stack "race" with the wind as it then was, and that not before nightfall, would be very dangerous work, we determined to face it out. The glass was falling and we thought the wind was softening. It came on to blow harder than ever, and the wind shifted dead ahead.

This last change of wind tumbled up a nasty cross-sea, and the boat was pitching about tremendously. This went on all afternoon and the weather seemed almost to get worse. Perhaps the seas appeared to us larger and fiercer as the darkness came on; but, at any rate, after a consultation, we decided that the best thing to do was to lower foresail altogether, haul the small jib to windward, and lay to for the night. As soon as this was done the boat rode easier and did not ship nearly so much water. It was an awful night; our lamps would not burn, but blew out continually, so we gave up relighting them and trusted entirely to keeping a good lookout and keeping a riding light in readiness to show should any craft be seen running us down. Daylight was a great relief, and the wind began to go down and let us carry on our course again. We managed to get a cup of coffee and some bread and butter, the first decent meal we had had since leaving Holyhead. Soon after noon we hauled the reefed mainsail and shifted jibs, as, although there was still a nasty sea running, we had to put canvas on her to get to windward against the tide. We arrived in Kingstown about two o'clock on Monday night, thoroughly played out and glad to get to safe harbor. Some of our friends met us and greeted us as if they had never expected to see us again. It appears that the mail steamer which passed us the evening before reported a small yacht in distress about thirty miles out, and people had made up their minds that we had gone to the bottom. The skipper of one of the clock 90-tonners told me next day that he did not understand how we lived through the gale. His cutter had been twice lifted off his deck, and finally he had to heave to for three hours. Two tons of lead, when it is outside a small boat, means a heavy sea. I am confident that had we been in a cutter the same size, with no great hold on the water, we would never have crossed to Kingstown that night. THE MATE.

BIRKENHEAD, England.

THE AMERICA CUP.

IT is to be hoped the New York Y. C. will see to it this winter that the strangely partial conditions surrounding a challenge for the America Cup are not allowed to rest upon a basis so unfair to foreign competitors. Mr. G. L. Watson, of Glasgow, has in hand a large cutter for a well-known racing gentleman, who intends to cross the Atlantic should the new vessel prove the flyer it is hoped. Are we to meet such a laudable enterprise with the cold shoulder, and the attempt at overreaching the stranger before the start which the present conditions imply? Must the foreign yachtsman agree to accept blows below the belt for his courage, or rest content with private matches with the New York Y. C. must be well aware of the doubtful fame the America Cup is unfortunately tainted with abroad, nor can it plead the clause permitting special arrangements for a match. The foreign yachtsmen must know his rights in the case, and cares not to trust himself upon generosity and long-winded correspondence. He must have fair terms and fair terms on both sides, upon which he can insist, and he naturally looks to the voluntary trustees for their promulgation. The terms, as they stand, are not likely to entice the new cutter into six months' notice. They serve as a barrier to free and friendly racing by unlimited centre-board craft. The public is anxious for a trial with a large cutter from abroad, and it depends very much upon the action of the New York Y. C. whether such an exhibition shall be vouchsafed us next season or not.

A CRUISE IN THE SNOW.

Editor Forest and Stream;

No genuine lover of yachting can begrudge thanks for the interesting efforts you have made to encourage single-handed cruising, but, while agreeing with the pith of your remarks on this subject, as found in *No.* 18 of FOREST AND STREAM, I beg to except, for variety, if for nothing else, all one or two of your suggestions concerning light draft, etc. It is true that most of our small cabin yachts are far too beamy and tubby, so to speak. It is also a truth that some of their beam lopped off and changed into length would render them more handy and manageable, particularly in a seaway. But I propose as an amendment to your motion concerning the increase of ther depth (under water) that we add to their freeboard and length, in lieu of draft and displacement. Great draft of water is the worst of all nuisances in a single-hander. Very small and deep boats rarely make fast sailers; small, deep, wide ones never are anything but slow, unwieldy tubs, but hundreds of shoal, narrow, high-sided little boats are not only very speedy, but they at the same time rank among the finest of seagoing craft in their class. You do not like figures? I hate to do so. Even if you could encourage me, there would be found a place for all that lead and all those dollars requisite to the turning out a full fledged single-hander of merry England?

Quantum suf. So let me detail a short single-hand story.

Last week, feeling restless, and a toothsome cruising on, I concluded that the best thing for me was to have a little sail all alone; so I boarded my sharpie, which lay anchored near the back door in two feet of water, hoisted sail and was off for anywhere. The wind blew pretty fresh and quite cold, and I should have known that it had scarcely embarked before it began to snow. Slowly, then gradually increasing until, the wind having veered to S. W., down came the goose feathers in real old-fashioned style, rendering everything about the boat and the gray sea around the grayer. Should you have done, in your deep single-hander, with more than enough lead stowed to sink her like a plummet in case she chanced on one of those boulders, indefinitely ahead? Why, my dear sir, you would have come, under cover, all and united for the sun, which would perhaps appear in the course of a day or two.

But my sharpie and I were off for a sail, and bound to have it. So we out with our compass, and laid our course due north, which we knew would bring us somewhere in the neighborhood of Rye, on the north shore of Long Island Sound. Well, the skipper kept a good lookout, in fact went forward, letting his sharpie sail herself. The wind increased to a cracking breeze, more snow coming with it, and in due time we made—about fifty feet ahead—a big black rock. Then both craft and skipper felt safe, for they knew that if we stayed that rock were many more like it, with old Connecticut to back them up. Would the keel, and the lead, and the deep skipper have been easy in their minds just then and there? Probably not. We could have run in behind the rocks, nearly anywhere, and have found snug anchorage, but we desired to keep going until dark, so skirted the invisible shore eastward, dodging to port of a rock here, to starboard of another there, until dusk added to the dimness, when we ran in behind Captain's Island, and found a snug harbor for the night in Cos Cob River. The skipper had, however, become careless, and when making port ran his craft squarely over a rock about ten inches under water. Luckily we had good headway on, and the sharpie simply mounted one side of the slight impediment, bowed gracefully, and slid off at the other. Now suppose this lively sharpie had carried what John Gilpin did, would his skipper have got damp? This is the question. Call it a conundrum, if agreeable, and guess it.

ROSLYN, L. I., Dec. 5. THOMAS CLAPHAM.

ANOTHER NEW SCHOONER.

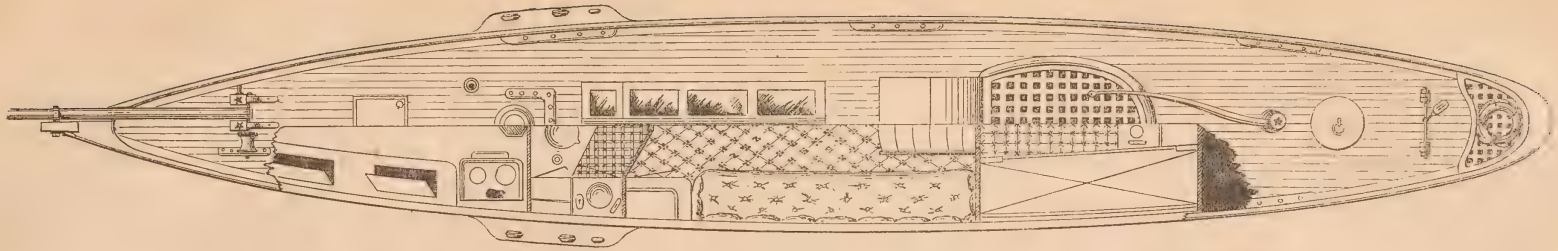
THE centerboard schooner yacht Grayling, now building at the yards of the Messrs. Poillon, Brooklyn, for ex-Commodore Latham A. Fish, Atlantic Yacht Club, is progressing satisfactorily. She is coiled and the wales are being put on. This vessel bids fair to be very powerful, and looks to have more displacement than is usual in fine vessels from the same modeler, Mr. Cary Haskell Ellsworth, of New York. The angle of dead rise is much less than that of the Montauk, but the prominent departure from the latter yacht is the pronounced "tumble home" of the sides. The following is a description of the Grayling: Length over all, 91ft.; length on load water line, 81ft. 6in.; extreme breadth, 23ft.; breadth on load water line, 22ft. 7in.; depth, 8ft. 3in.; draft three feet aft of stem, 2ft. 6in.; draft aft, 8ft. 9in.; draft with board, 14ft.; height of freeboard, 3ft. 8in.

The keel is of white oak, molded 16in. and sided 15in., and the keelson is 10in. by 12in. The frames are of white oak and hackmatack, 8in. by 10in. at the heel and 8in. by 8in. at the top. The plank-sheer is 8in. thick. The stanchions are of locust and extra heavy and the rail is 6in. thick of oak. The ceiling is of white oak. The deck frames 6in. by 8in., with lodge, bosom and hanging knees throughout. The wales and garboards are of 3in. oak, and the planking throughout will be of 2½in. white oak, freenailed and butt-bolted. The subjoined table of the comparative scantlings will show "Nothing is spared in weight that can make the vessel stronger and more substantial."

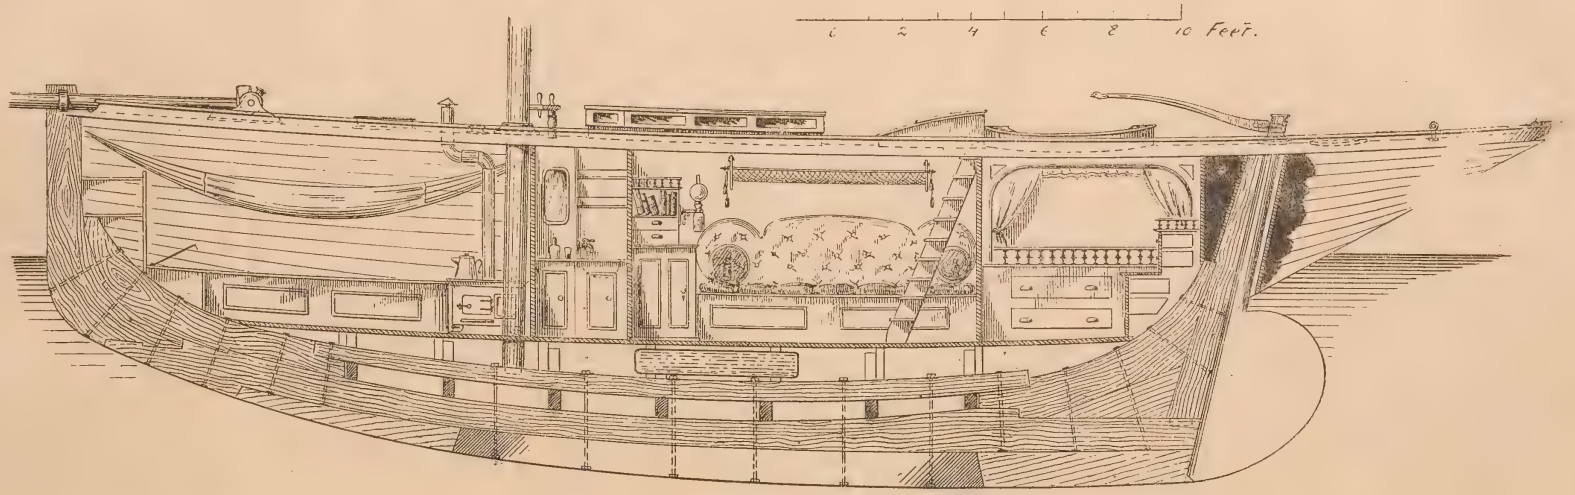
There will be on deck a house 35ft. long and 13ft. wide, conforming in plan with the contour of the deck. The saloon companionway and two skylights, with which she will be provided, will be of mahogany. Aft of the deckhouse access to the sailroom will be had by a deck plate. Aft of the foremast will be the galley companionway and skylights. Forward of the foremost will be the usual companionway for the crew, the windlass and deck appliances. The dimensions of the Grayling's spars will be as follows: Mainmast, above decks, 68ft.; foremost, above decks, 65ft.; doublings, 8ft. 6in. and 8ft.; maintopmast, 39ft.; foretopmast, 35ft.; bowsprit, outboard, 29ft. 6in.; mainboom, 58ft.; maingaff, 29ft.; foregaff, 26ft.; jibboom, 19ft. There will be about 25 tons of ballast molded inside of the vessel.

The saloon of the Grayling will be entered by a wide companionway, the saloon being 14ft. x15ft. and 8ft. high, and finished with mahogany, bamboo and other handsome woods, and upholstered with morocco plush. Just aft of the saloon doors will be two large wardrobes. Leaving the saloon, on the starboard side, when everything is finished below, the owner's stateroom will be found. This room will be 8ft. 6in. wide by 12ft. long, and will be fitted with a bedstead, dressing stand and wardrobe. Immediately aft of this stateroom and forward of it will be a toilet room, finished with cheerry, and yet further forward, on the same side, will be the captain's room. On the port side, forward of the saloon, are two roomy staterooms, with toilet room, and forward of these will be found the pantry. Between the forward and foremast hatches will be a large gallery, finished with the usual iceboxes and conveniences for cooking. The forecastle will be provided with bunks and lockers for a crew of six. The sails will be made by Sawyer. The cabin joiner work is being designed by Mr. John G. Prayne.—*N. Y. Herald.*

SWUNG AROUND THE CIRCLE.

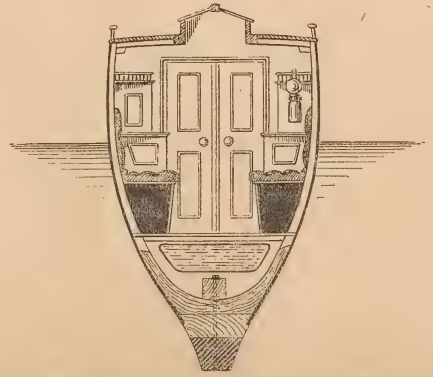


THE cure would seem to be radical. Here is a choice bit from the *Herald:* "When small displacement *was* the rage." Thanks; the conversion is then accomplished. We have not written in vain, nor have the cutters sailed for naught.



NEW SCHOONER.—Vice-Commodore Hovey's schooner yacht, building at Poillon's, Brooklyn, from designs by Mr. A. Cary Smith, is planked and the deck nearly laid. One can now see the lines of the vessel as they appear on the draught. For beauty of form this vessel is unsurpassed. No yacht built about New York so fills the eye from every point of view. She is very sharp forward, and yet does not look weak. The bilge is very gradual, and the greatest beam is above the water line. Instead of the deep hollow sonie time since so much the fashion, when small displacement was the rage, the body in this vessel is quite full, and at the load water line is within eighteen inches of the bottom of the keel and the keel is sided fifteen inches, she is much fuller than she looks to be. Aft, the bilge is carried out clear to the end of the overhang, and the top timbers are formed with the usual flare of the bilge and avoid the appearance that is found so common in the after part of yachts. The stern is made very narrow to give ease in a sea way. There is nothing that makes a boat steer so hard in a sea, and so generally uneasy as a wide stern. The lead keel of the yacht was run in and is a perfect job.

Climbing up the side of the yacht and looking down into the hold the size of the craft is appreciated. There is no keelson, the great size of the keel affording sufficient strength to do without it. To connect the floors of the keel 6,300 pounds of wrought iron floors are used, and certainly they have the appearance of being able to stand a tremendous strain. On the top of the keel a piece of locust will be bolted to take the step of the masts. This is the only thing that will interfere with the stowage of the ballast, which will be placed well fore and aft and very low, as 5,900 pounds will be put in the after part of frames, and extends only eighteen inches in a straight line from the side of the keel. The floor beams will be five by five inches, half yellow pine, and bolted to the frames at the ends, and at each cross bulkhead an iron stanchion will extend from the keel clamp, to which it will be screw bolted—to the floor. Under the floor beams there will be a similar connection to the keel. This construction, together with the hanging knees, will insure great strength. The shelf stands on the deck beams in the shape of a few inches, of yellow pine, tapered at each end to four inches, and is carried from the apron to the end of the overhang. The deck beams are bolted to the shelf strake and the plankscheer has a bolt at each deck beam, going through the plankscheer and outside beam to the shelf strake. This plan, together with the hanging knees, one on each beam, connects the side to the deck so securely that there was no need of lodge and bosom knees. The latter are a legacy from the coaster and freighter class, but are not found in a yacht, whose side has such a fair curve that the arch thus formed is strength sufficient without the addition of anything else.



The result of the careful construction thus noted is lightness and strength. The frames forward are of hackmatack and the overhang is of the same. The wales strakes near the bow are of oak, as are the wales and plank as far down as the chain plate bolts. The balance of the planking is of yellow pine, and even the oak planks below the wales have yellow pine forehoods and afterhoods. All the planks are fayed to the rabbet for about twenty-five feet down to two inches at the rabbet. The lines by this method can be carried out fair to the end of the cutwater, and no angle is perceptible anywhere. The deck will be of selected pine, three inches square, which gives the builder the advantage of all four sides in laying, and it will allow of planing off when it is needed. Decks are often made so light that the hard planing and annual planing off soon render a new deck necessary. This vessel must attract great attention when she comes out. That yachtsmen fully appreciate the work of Mr. A. Cary Smith it is only necessary to say that he has the designs for eight boats in hand, ranging from sixteen feet up to ninety-five feet on water line. These will be started so soon as the plans can be got ready. One will be built in Newport, one on the Delaware River and the rest in New York. Several yachts are to be designed by Mr. Smith for the season of 1884 so soon as the work for 1883 is cleared away.—*New York Herald.*

LEAD KEELS.—Boss Townsend made a fine job of the lead keel for Com. Hovey's new schooner and adopted a pan new in American practice for melting all the lead. Instead of melting the bars of the twelve tons were hung in the shape of pigs under the wooden keel, and a box mould built around it to the shape the lead keel was to take. The remaining third was then melted and poured in slowly, small ladles at a time, permitting the lead to set in part before making the next addition. In this way the great shrinkage was avoided which accompanies casting in bulk. Keels cast in this way in England have sometimes been cut up for other purposes and it has been found that the suspended pigs had thoroughly amalgamated with the rest. No more than two-thirds the casting amount should be suspended cold, else there is danger of insufficient heat to melt, and too light a casting of the surrounding cast metal. It is customary to insert cores or dummy bolts in the lead to save the trouble of boring after cool for the fastenings. Upon unreeving the bolts were first driven through the wood keel and the lead poured around their projections below the wood. Upon shrinking there was a crash, and it was found the wood had been seriously split in consequence. It is safer, therefore, not to bore the wood keel first, but to cast the lead underneath with dummies, which do not enter the wood. Then after cooling and withdrawing the dummies, bore through the wood. This insures fair holes clear through without endangering the wood keel.

CUTTER YACHTS IN AMERICA.

[From the Daily Graphic, Dec. 9.]

THE yachting season just closed must be counted one of the most important in the history of the sport, inasmuch as it has seen a new and safe type of yachts permanently introduced into our waters. The importation of the British idea in the shape of the modern cutter is more than a mere fashionable whim. It inaugurates a reform in old customs, which will not only greatly enhance the healthful pleasures and instruction to be derived from a pursuit of yacht sailing, but which will also remove from this manly pastime the dark cloud of danger which has hitherto hung like a pall upon the rapid increase in popularity the sport would otherwise have enjoyed. Safety in our yachts has always been the very last question builders have considered, and it has long been a reproach to our sloops and schooners that they were at only for fair weather driving, and altogether unsuitable for cruising up and down the coast or making passages involving a run at sea without imminent risk to those venturing beyond confined or sheltered waters. Moreover, they were unsatisfactory vessels in a sea, neither fast nor weatherly, and their large sails rendered them unbalanced in the bargain. In short, every pamook too much of the feature of the river sailboat or the toy to be seen in shop windows. Their faults, however, were condoned upon the plea that, being a fast nation, we loved a fast boat, and whatever might be said in favor of deep and safe yachts, they could never hope to match the light-draft sloop-rigged boat for speed; and as much of our sailing was done in smooth waters, the question of seagoing qualities was one of no great weight.

Perhaps this was all true enough some years ago. But nowadays, with the rapid strides made each year by society to the goal of wealth and leisure, the number of yacht owners undertaking long voyages, and knocking about beyond the limits of old-time ambition, is augmenting so fast that their necessities demand consideration in directions so generally neglected by those responsible for the models most in vogue, as the taste for amateur life at sea develops, so too, does the demand for hard weather qualities spread to the fleet of small yachts. It is not to be supposed that every candidate for ocean cruising either can or cares to invest in a schooner of huge proportions. On the contrary, most good sailors prefer yachts no larger than they can work or at least skipper themselves, and those who happen to go afloat on moderate tonnage are no longer content with being shunted on to smooth waters only through incapacity on the part of their boats; but they wish to be the proud possessors of smart, able and safe craft, capable of taking boldly to the sea quite as well as their big sisters. It is well known that in British waters small, cheap yachts abound, which knock about the stormy Channel and Irish sea with impunity, having no one but owner and friend or a hand or two aboard. They differ from our yachts in having more depth and less beam, with the ballast stowed very low—often bolted on the bottom of the keel. This renders them unexplosible, for when knocked down upon their beam ends by a heavy blow the ballast acts at the end of a long lever and brings the boat back to an upright position. They are noteworthy also for a better subdivision of sail, rendering the canvas more easily controlled and onerling a suitable variety for varying conditions of weather. Owing to the depths of these British boats they are supplied with flush decks, affording more actual room, though of narrower beam than sloop boats, whose decks are necessarily encumbered with a raised coach roof or house top, detracting from appearance and strength and reducing the practically useful room to narrow passageways on each side. Accommodation ike, of course, always sought after, and since all yachts are small vessels at best, the style or their build has much to do with the manner of berths and the privacy of the passengers. It is common in sloop American yachts to devote a large portion of their after body to an open cockpit, since that part of the yacht is too shoal on account of the rising floor to be serviceable in any other way. In the deep cutters, however, there is less need of a cockpit, as they are not as wet nor as hard and jerky in their behavior. The after portion of the run of deep boats is therefore utilized as a special stateroom and cockpit, usually to the horrors of the fair sex and denominated the ladies' cabin. Forward the crew is also much better accommodated than in small boats. Where the latter snow only a low, stuffy kennel, the small cutter even boasts of six or seven feet between decks, arranged so that Jack may enjoy shipboard life in some degree of comfort when the day or lying in harbor with a downpour from heaven. In some of the most advanced styles of very narrow cutters the floor is actually less inboard than outside of the boat, unlike American type. Then, on the other hand, the centerboard variety generally companies the small boat interferes in small yachts with the genuine wide floors we are claimed by some to possess. It splits the cabin floor in two at sea, and as one only can be used at a time, the voyager finds himself no better off, as he will be apt to find to his sorrow, owners of cutters. Be this as it may, which has, in fact, little to do with accommodations, and is gratification to one's fancy more than it is of valuable advantage. Broadly speaking, length and depth are the governing factors in useful room down below, and of these the outer can boast the maximum. Your regular tar will say he has no use for floor anyway; he does not propose to dine and wine an evening party about round tables, nor does he intend converting his little ship to the foreign uses of a hotel parlor for a light ramasaic. To him floor is a nuisance to passeway in and out, and mopping more. To insist upon a surplusage to the fair delusion that he has a roomier, larger coat, is to aim as unreasonable as to pull down a house front to reach the family circle when a four-foot door is all that is needed for the purpose. Nor is he far wrong in his objection when it is remembered that every bit added to beam means so much more resistance; so much more unwieldy a boat; so much more cost, and so much larger spars and sails and work and crew, with no compensating gain and possibly a loss in good qualities.

In respect to first cost, narrow boats like the cutter are, or ought to be, cheaper than those of greater beam. Less material and lighter material is used in their construction and equipment, and owing to their easy forms the time and labor involved is considerably curtailed. They strain less than hard bilged models, and for that reason are less expensive in wear and tear, and the small rigs they take make them snug to sail and within control of a less numerous crew. It is true that some cutters recently built in New York are said to have cost excessive amounts. Much of the money, however, must be charged to superfluities and furnishing inside, and a good percentage to the very superior method of construction employed. For this there is no more necessity in one style of boat than in another, and quality for quality the narrow boat can be built and fitted for sea for one-fifth less than her wider sister. In respect to ballast, the wide and deep boat will, of course, call for most. Examples in illustration can be seen in Eastern waters, where, for instance, a new yacht 31 feet long on the load line displaces some 14 tons, 8 of which are represented by ballast. In comparison the cutter Wasp, of which we give engravings in this issue of *The Graphic*, although 30 feet long on the load line displaces but 13 tons, 5 of which are accounted for in ballast. We here find a narrow yacht 5 feet longer than the Eastern boat, weighing actually one ton less in hull and equipment and weighted with no more ballast. Were we to increase the load line of the Wasp to the same length as the Wasp her displacement would swell to 22 tons, necessitating as much as 12½ tons of ballast to bring her down to her intended lines. Against this we need only 8 in the Wasp of the same length, and have a boat of only 18 tons displacement to work in accommodations both will be equal, barring a narrow door in the Wasp, a matter of no consequence in practice. The draft of the wide boat will reach 8 feet, while that of the cutter is 9½ feet. From this may be inferred the great economy for all purposes of narrow vessels.

In yacht of the cutter type we can accomplish, at a less cost, at less maintenance and less craft, all that is worth having in a wide boat costing half as much again to build, more to maintain, drawing more water and possessing no real advantages on any point of sailing or in any kind of weather. This comparison has been made, of course, between keel boats. A centerboard offers the option of securing great draft upon exceptional occasions, but has so many drawbacks in other respects, especially as regards the stowing of weighted low down and weatherliness at sea, that it is hardly to be accepted as a rival of the keel in any sense, though serviceable for shoal and smooth water. Perhaps a word should be added relative to the speed of narrow, deep boats. The racing of last season has removed much prejudice and punctured many old dogmas current among the sailing fraternity. Depth is for the time super lant it was, and is no longer entered as an insurmountable barrier to speed. The late notions that fast vessels must skim over the water is to-day a vagary of the past. And with it has disappeared the imaginary virtue for carrying sail attributed to beam, for upon many occasions in practice did the narrow cutters in our waters crack on to advantage long after beamy sloops had to snug down. Wide keels with outside weights cease to act the red rag upon the old school, and heavy masts have given such repeated evidence of their speed in light winds that they are no longer condemned as unsuited to our paltry weather.

BOSTON CUTTERS.—Geo. Lawley & Son, of South Boston, are busy with a lot of new cutters. They have laid the keel for a nobby 31ft vessel 24ft. on line and 8¾in. beam, flush deck and full cutter rig. They are also getting out the molds for another 42ft. long, and are about closing a contract for a third cutter some 60ft. load-line with narrow beam. No inquires are made any more for center-board yachts in the East. The Lawleys have about seventy yacht models out on the hand, and are so crowded with new work that they contemplate erecting shops on some new property. Keels and cutters are the cause of their prosperity. Mr. Geo. Lawley has recently been in New York inspecting work in progress here, and also the harvest of prizes. He will propose to accept some of the latest improvements in hulls, while Messrs. Lawley & Son will fit the yachts with loose foot mainsails and sails cut on the Lapthorn plan.

NEW SINGLE HAND YACHT.—The keel of the third single hand yacht will be laid this week by W. F. Stephens, of West Brighton, Staten Island. The yacht will be 22ft. on deck, 18ft. load line, 7ft. beam, 4ft. 6in. deep, 4ft. 3in. draft, 3.5 tons displacement; ballast on keel 2,000lbs. and 1,000lbs. on coaks, cast, keel to abound 6ft. on, pole 38ft., boom 19ft., gaff 13ft., bowsprit, outboard, 9ft. She is of the deep and beamy cutter type and will have about six feet room in cabin, and is to be built for a member of the Jersey City Y. C., who proposes to cut the yacht in sand on sandy beach. The same builder expects to make room for a cutter 21ft. on load line.

BATTEN REEFS.—The credit of first applying batten reefs to large yachts belongs to Mr. J. Clem Uhler, who about the year 1858 laced battens to the mainsail of the 49-ft. sloop Emerald in San Francisco. The idea was suggested by the "sampans" of the Chinamen on the Pacific coast. The battens were laced to the mainsail by having two horizontal rows of small eyelets worked in the canvas in the leech corner and receiving the lacing down through an eyelet of the upper row, then around the batten and back through an eyelet of the lower row and so on. The battens and lacing could thus be dispensed with when not wanted.

A VALUABLE SERVICE.—The number of disasters since the service has been in existence under its present system amount to 1,623; the value of property involved to $29,276,230; of property saved, $18,-054,962; of that lost, $11,213,347; number of persons involved, 14,700; saved, 14,253; lost, 407; ships wrecked persons recovered at stations, 3,060; number of days' succor afforded, 8,384.

VAYU.—The trials of this Boston cutter were made in smart northwesters last fall, and it was discovered that she could go along in comfort in weather which was found too severe for her owner's former sloop Valhalla, though the latter is well known as one of the ablest out of Boston. The sloop is 35ft. loadline, 14.2ft. beam, and the cutter 31ft. loadline but only with 10ft. beam. The reduction in beam was found to affect seagoing qualities most favorably.

WANTED.—A recipe for black paint which will retain its gloss on a yacht's side and not turn rusty to the weather or salt water. Some skippers know of a chemical which added to ordinary ship's paint will have the desired effect of preserving gloss.

SOMETHING NEW.—Shelton's monthly issue to sportsmen.—*Adv.*

Answers to Correspondents.

MILES JOHNSON.—Please send address to this office.

YORICK, Butler, Pa.—1. Do you advise breeding a setter bitch the first time she is in season? 2. If not bred the first time, how long a time will elapse before she goes in season again? 3. Is it advisable to work a bitch while carrying? Ans. 1, no. 2. Usually about six months, but the time varies somewhat. 3. Yes, by all means.

B. P. H., Prairie, Miss.—Inclosed I send you a bird that seems to be of the dove species. It is a new bird to this section, no one to whom I have shown it ever having seen anything like it before. Will you please tell us through FOREST AND STREAM what it is? Ans. The bird is the ground dove (*Chamæpelia passerina*,) a species which is common in the Southern States, and has occurred as far north as Washington and even New York.

ALEX, Seattle, W. T.—Is there any work devoted to fly-tying? Ans. There are several English works, but they are mainly out of print and can only be found in second-hand book stores. In Norris's "American Angler's Book" you will find a chapter on it. Price $5.50. We can supply it. Hotherton's "Standard Trout Flies" is a handsome plate of sixty-four flies, colored by hand, and has no description. It is intended to be merely what its name implies.

NORFOLK, Wellesly, Mass.—Will you give me information on this point? I have a setter pup three months old, but have no suitable place to keep him except his kennel. This is warm and filled with straw; he often pulls off the flap from his door, leaving it open to the weather. Is this too cold a place for him to stay in nights, and will it be safe to keep him out in all winter? His coat is fine and healthy; I want to keep him so. Ans.—If he has a good, tight house and plenty of bedding he will do very well in the kennel all through the winter. It should face the south.

BITTER ROOT BILL, Missoula, Montana Territory.—Will you please inform me where I can obtain a work on ornithology by which I can identify the different species of ducks and other birds of this country; a work illustrated. I am not able to purchase a costly work. I have looked carefully over your list of books, but not being familiar with any of them, I do not know whether any of them fills the bill or not. Ans. "Coues's Key to N. A. Birds" is the best work for your purposes, but it is not illustrated except by some few woodcuts. We know of no other work to recommend, unless it be Baird, Brown & Ridgway's "North American Birds," in three volumes, (land birds only,) a number of fine woodcuts of heads. Price, $30.

M., Hastings, Ia.—1. What do you think of the automatic reel; would it be desirable for black bass or a novice that never used a reel? 2. The best length and weight for bass rod for bait-fishing, also that would answer for fly-fishing? 3. What size hook is known as "Creedmoor," "Massachusetts?" Ans. 1. No. 2. For bait-fishing alone, 8ft. For both bait and fly-fishing use a stout trout rod of 9 or 9½ft., weighing 10 to 11 ounces. 3. The Creedmoor targets are as follows: Third, 5ds., to be used at all distances; 2d, 10yds., including 300yds.—Target, 4x4ft. Bullseye, circular, 8in. in diameter; center, circular, 26in. in diameter; inner, circular, 90in. in diameter; outer, square, 4x4ft. Second Class, to be used at all distances over 30yds. to and including 600yds.—Targets, 8x8ft. Bullseye, circular, 22in. in diameter; center, circular, 3.6in. in diameter; inner, circular, 54in. in diameter; outer, square, 6x6ft. First Class, to be used at all distances over 600yds.—Target, 6x12ft. Bullseye, circular, 33in. in diameter; center, circular, 5in. in diameter; inner, square, 6x6ft.; outer, square, 6x12ft. The Massachusetts target has ten rings, marking diameters of 3½, 5¾, 8, 10¼, 12¾, 16¼, 20½, 26, 33 and 41¾in.

An Extended Popularity. BROWN'S BRONCHIAL TROCHES have been before the public many years. They are pronounced superior to all other articles used for similar purposes. For relieving Coughs, Colds and Throat Diseases they have been *proved* reliable.—*Adv.*

A TOY PISTOL SUIT.—A decision of importance has just been rendered in the Supreme Court of Indiana in a suit brought by a father for damages against a dealer who sold his child a toy pistol with fatal result. The decision is that "a man who places in the hands of a child any article of a dangerous character, and one likely to cause injury to the child itself, or to others, is guilty of an actionable wrong."

Price $7.50.

MOOSEHEAD LAKE AND THE NORTH MAINE Wilderness Illustrated. The only complete and comprehensive guide book to Northern Maine and the head waters of the Kennebec, Penobscot, St. John's and Aroostook rivers, and the numerous lakes and ponds connected with them. 250 pages, 30 illustrations and large map. Tinted paper, illuminated covers. Price, by mail, post-paid, 50 cents. CHARLES A. J. FARRAR, Jamaica Plain, Mass.

THE GREAT SINGLE BREECH-LOADER.

"THE FIELD," 10 and 12-Gauge.

This gun, which from its wonderful adaptation to all kinds of field shooting, we have named "The Field," leaves nothing to be desired in the way of a single breech-loader. It is really the only single breech-loader worth having. It has Scott top lever, pistol grip, rebounding lock, and patent fore end, and is beautifully finished. For strength, convenience, penetration, and in fact for all practical purposes it is just as good as the best double-barrel gun. We have sold the bulk of all the single breech-loading guns used in this country for the past four years. The reason is that the top lever action as combined with other features in the "Field" gun is the only correct one, and other single guns are sucessfully sold only as they resemble ours. Persons with ordinary prudence will not hesitate long as to which to choose, particularly as the "Field" gun costs but a trifle any way, and no more than the imitations. Address

P. O. Box 1114. H. & D. FOLSOM, 15 Murray Street, New York.

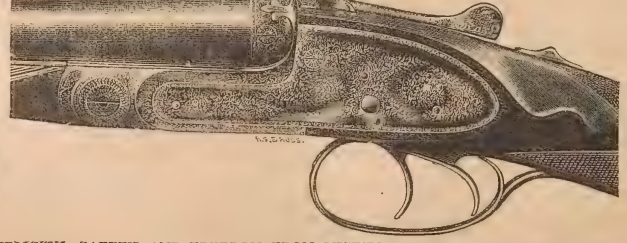
13 Faneuil Hall Square, Boston, Mass.

CUT THIS OUT.

NOTICE.

JAMES PURDEY & SONS,



OF 287 & 289 (late 314½) OXFORD ST., LONDON,

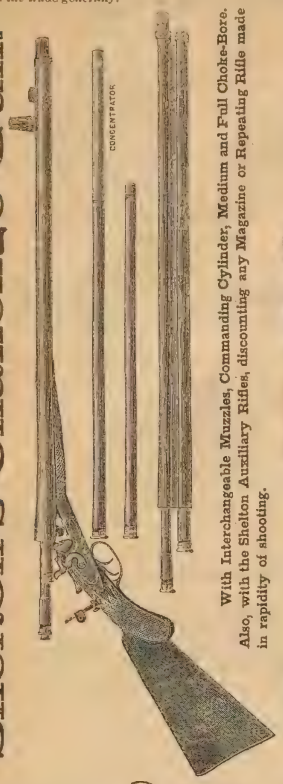
Gun manufacturers, by special appointments to Her Majesty the Queen, H. R. H., the Prince of Wales, and the most noted shots of Europe, give notice that on January 1st, 1883, they will remove to the new and large manufactory they are now building, and that after that date their address will be

Audley House, South Audley Street, London.

They take this opportunity to inform American sportsmen that they have patented **A NEW REBOUNDING HAMMERLESS GUN,** which, after the most careful practical trials and severe tests, they confidently recommend as by far

THE BEST AND HAMMERLESS

ONLY PERFECT GUN MADE.



Its advantages are STRENGTH, SIMPLICITY, SAFETY AND FREEDOM FROM MISFIRES. JAMES PURDEY & SONS will only make one quality of gun for the United States, viz.: THE BEST. Guns take about five months to make, and can be ordered direct from the makers, or through the agencies of SCHUYLER & DUANE, 189 Broadway, New York, and JOS. C. GRUBB & CO., 712 Market street, Philadelphia.

N. B.—Messrs. Purdey & Sons are prepared to sell the rights, or grant a license (subject to certain conditions) for the sole manufacture of this gun in the United States.

N. M. MUZZY
45 South Canal Street, Chicago, Ill.
Of the old firm of HITCHCOCK & MUZZY and MUZZY & CO. in 1852.—Having increased my facilities for the business of reaming out gun barrels, I beg to offer my services to those owning guns of unsatisfactory shooting qualities. My system is peculiarly my own. I leave no shoulders, and will guarantee my cylinder boring to shoot more even than by the old choking system; in every instance. I invite special attention to my method, and the most satisfactory testimonials will be furnished when desired. Guns can be sent, and will be delivered by express.

FOR TOWN AND COUNTRY.-1883.

FOREST AND STREAM

A JOURNAL OF THE ROD AND GUN.

The year now drawing to a close has been with the FOREST AND STREAM one of most gratifying progress. Early in the year by an important mechanical improvement, the typographical beauty of the paper was greatly enhanced; and in August, with the beginning of the tenth year of publication, it was

Permanently Enlarged to Twenty-eight Pages.

There has been an equal growth in other important respects. The patronage accorded to this journal by the intelligent reading public has never been more cordial than it is at the present time. Sustained thus heartily, the publishers are prepared to maintain in 1883 the FOREST AND STREAM prestige as the

Representative Field Journal

of this country, at once entertaining, useful and influential. As the exponent of the highest types of field-sportsmanship the paper will be adapted to the tastes of all men who use the rod and gun as means of pleasure and recreation. Broad in its sympathy with all that is legitimate in field sports, free from any entangling alliances with cliques, having no interests to serve save those of its constituents, and never hesitating in its criticisms of whatever may be inimical to these interests, the FOREST AND STREAM'S highest ambition will be to preserve in the future the approval won by its course in the past. It will persist in its efforts to awaken in the public mind a fuller appreciation of the importance of the proper protection of game in the breeding season, and of due moderation in the destruction of game at other times. This it considers a matter of prime importance, not so much to the man whose wealth and leisure enable him to make extended tours to favored game countries, as it is to that already very large and constantly increasing class of business and professional men, whose favorite relaxation from the routine of employment is found in brief vacation trips to the woods and fields and brooksides.

The enlarged form of the FOREST AND STREAM enables its editors to present each week in the several departments a large and varied supply of reading. In the columns of

The Sportsman Tourist

Will be found sketches of travel and sport. Coming from many different writers, and widely separate parts of the country, these sketches always have the charm of novelty, and they are sure to be read with interest by sportsmen, because their writers see things through sportsmen's eyes, and describe them from the sportsman's standpoint.

Natural History.

This department will not deal with fossils nor with the monsters of African jungles. Quite on the contrary, it will treat of the animal life of land and water in our own country, the habits and ways of American fur, fin and feather, in which American sportsmen are presumed to take an intelligent interest.

Game Bag and Gun.

In addition to the numerous accounts of hunting and shooting excursions, necessarily varied and interesting—as such accounts must need be—these columns will be found of special value to amateur and veteran alike, because of the frequent interchanges of experience in all matters pertaining to game and shooting.

Sea and River Fishing.

The angler will find in the pages of the FOREST AND STREAM the best angling literature of the day, in quantity more than is contained in all other publications put together. This journal has inaugurated a series of angling tournaments, the initial meeting having been held in the Central Park of this city; and it is believed that others of equal success will follow in other years. Meanwhile, the man who loves to go a-fishing may find in the FOREST AND STREAM all the year around a great deal that must be to his liking.

Fishculture.

The columns devoted to this important subject furnish a complete resumé of current achievements and progress in this important work.

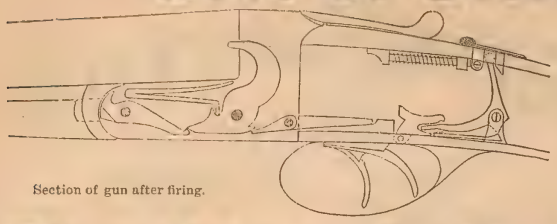
The Kennel.

This department has won the confidence of dog owners. Its reports of field trials, bench shows and other events are recognized as impartial, honest, and the most able published The recent series of papers by its editor, entitled "Training vs. Breaking," have been published in book form, and have had a very large sale. Other papers of equal importance will be published from time to time.

Yachting and Canoeing.

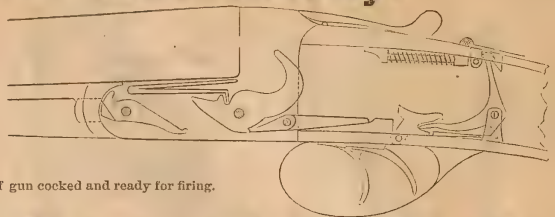
The editor of this department being a practical naval architect, and thoroughly familiar with every branch of the subject, will continue the same intelligent treatment of yachting and canoeing that have already won for the FOREST AND STREAM esteem and confidence.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.



We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each, and the files constitute a library of permanent worth. Eighteen such volumes have already been published. We furnish handsome file binders (price $1.25) which hold twenty-six numbers.



Subscriptions may begin at any time. Per year, $4; $2 for six months. Remit by post-office money order, draft or registered letter. Give name, town, county and State. Address

Forest and Stream Publishing Co., 39 Park Row, N. Y.

Don't Be Deceived or Led Astray.

Section of gun after firing.

Section of gun cocked and ready for firing.

The Anson & Deeley Hammerless Lock,

AS MANUFACTURED BY

Westley Richards & Co., London, Eng.,

HAS NO EQUAL!

And is the only hammerless gun in the market that is absolutely faultless, being simple, durable, and possessing those wonderful shooting powers, combined with that indescribable symmetry and beauty so characteristic of Westley Richards' product.

Every desirable feature is found in this gun. Superiority of Material and Workmanship. Absolute Safety in Handling. Without Comparison in Durability and Simplicity.

Shooting Qualities Unsurpassed.

The following letters from prominent sportsmen cover the ground exactly:

CLARKSVILLE, Tenn., March 20, 1882.

J. Palmer O'Neil, Esq.:

My Dear Sir—The Westley Richards Hammerless Gun I obtained from you has been the admiration of all my friends. I consider it much the best Hammerless gun, and recommend all sportsmen who can afford the luxury of a perfect gun, to buy a Westley Richards Hammerless.

Respectfully, PATRICK HENRY.

BURLINGTON, Iowa, Sept. 20, 1882.

J. Palmer O'Neil & Co., Pittsburgh, Pa.:

Dear Sirs—The Greener and Westley Richards guns arrived safely yesterday A. M., and in the evening I took them both out and targeted them. I like the Greener better for only one reason, and that is it fits me a trifle better. But the Westley Richards made by far the best target, so I have concluded to keep it and return the Greener. The Westley Richards is certainly a little beauty, and makes as fine a target as I ever saw. One of my friends who is a great sportsman went out with me, and before the trial made all manner of fun of the "pop gun," even while he admired its graceful shape and elegant workmanship. But the result of the trial rather surprised him. He shot against the Westley Richards, his 11lbs. Daly loaded with 5 drams of powder and 1¼oz. of No. 7 shot, while I used 3¼ drams of powder and 1¼oz. No. 7 shot: At 30, 40 and 50 yards I beat him badly in distribution and penetration. At 60, 65 and 70 yards fully equalled him. And the difference at 75 and 80 yards could hardly be noticed. I am much pleased with the gun, and as soon as I become a little more accustomed to it I have no doubt my shooting will be greatly improved. I shall take pleasure recommending the Westley Richards Hammerless Gun.

Yours truly, GEO. H. TOUSEY.

J. PALMER O'NEIL & CO., Pittsburgh, Pa.

Agents in the U. S. for Westley Richards' Hammerless Guns.

WHAT WILL THE WEATHER BE TO-MORROW

POOL'S SIGNAL SERVICE BAROMETER

OR STORM GLASS AND THERMOMETER COMBINED,

WILL TELL YOU!

It will detect and indicate correctly any change in the weather 12 to 48 hours in advance. It will tell what kind of storm is approaching, and from what direction—**invaluable to navigators. Farmers** can plan their work according to its predictions. **Saves 50 times its cost** in a single season. Has an accurate thermometer attached, which alone is worth the price of the combination. This great **WEATHER INDICATOR** is endorsed by the most eminent Physicians, Professors and Scientific men of the day to be the **BEST IN THE WORLD!** The Thermometer and Barometer are put in a nicely finished walnut frame, with silver plated trimmings, etc., making it a beautiful as well as useful ornament. We will send you a sample one, *delivered free*, to your place, in good order, on receipt of **$1**, or six for **$4. Agents** are making from $5 to $20 daily selling them. *A trial will convince you.* Order at once. **It sells at SIGHT!** Just the thing to sell to farmers, merchants, etc. Invaluable to everybody. U. S. Postage Stamps taken if in good order, but money preferred. **Agents wanted everywhere.** Send for circular and terms. Address all orders to **OSWEGO THERMOMETER WORKS,** (*Largest establishment of the kind in the World*) **Oswego, Oswego Co., N.Y.**

We refer to the Mayor, Postmaster, County Clerk, First and Second National Banks, or any Business House in Oswego, N. Y.

Write your Post Office, County and State plainly, and remit by money-order, draft on New York or registered letter, at our risk.

This will make a Beautiful and Very Useful Present.

READ WHAT THE PUBLIC SAY ABOUT IT.

I find Pool's Barometer works as well as one that cost fifty dollars. You can rely on it every time.
CAPT. CHAS. H. HOCKER, Ship "Twilight," San Francisco.

Barometer received in good order, and must say that the instrument gives perfect satisfaction in every respect. It is neatly made and wonderfully cheap at two dollars. GEO. B. PARSONS, M. C. R. R. Office, Detroit, Mich.

Pool's Barometer has already paid me many times its cost, in foretelling the weather. It is a wonderful curiosity and works to perfection. F. J. EDWARDS, Milwaukee, Wis.

BEWARE OF WORTHLESS IMITATIONS. None genuine without our Trade Mark, and Signature of J. A. POOL, on back of Instrument, as below:

J. A. Pool TRADE MARK.

Every instrument **warranted** *Perfect* and *Reliable*. Size, 6¼ inches long, 3⅛ wide. If not satisfied on receiving the instrument, return it at once and we will refund your money. Please state where you saw our advertisement.

NOTICE.—$2.00 each is the regular retail price for above instruments, but owing to the introducing them and securing good agents, we offer for a short time to deliver "a sample one" free to any address on receipt of only one dollar, or 6 for $4.00. Order at once. It's just the thing for a Christmas present.

[ESTABLISHED 1869.]

UNITED STATES CARTRIDGE COMPANY,

Also Bub, by the celebrated Brush, illustrated in Stonehenge, out of Champion Rhea. Price $60. We have several brood bitches and puppies of exceptional pedigree for sale. HORNELL SPANIEL CLUB, Hornellsville, N. Y.

FOR SALE.—A GORDON SETTER BITCH, color black and tan. She is handsome and will make a good field dog; she is broken to charge and obey. Also three Llewellin setter pups, whelped September; dog and two bitches. Will be sold cheap. Send stamp for pedigree. H. B. VONDERSMITH, Lancaster, Pa. nov30,3t

---

Champion Dash III.--Opal.

For Sale.—One black, white and ticked Llewellin setter bitch puppy, Dimple, by Champion Dash III. ex Opal (Rake-Fanny), whelped Nov. 4, 1882, sister to Dr. Hatheway's Blue Dan and Bow Bells, both 1st, 2d and 3d prize winners at Boston, 1882. Dimple is very beautifully marked, and is the only one unsold of a litter of six puppies. To be delivered when eight weeks old. Opal took 1st prize in imported class at Boston, 1882. For price address N. HATHEWAY, Fall River, Mass. dec7,2t

---

FOR SALE.—IMPORTED ENGLISH PUG DOG, taught to carry letters, papers, etc. A fine pet. Lock Box 237, Suspension Bridge, N. Y. dec14,1t

---

BROKEN DOGS.—FIVE WELL-BROKEN AND well-bred setter dogs for sale, all good rangers, thoroughly staunch and good retrievers. H. CLAY GLOVER, Tom's River, N. J. nov14,2t

---

"LUCILLE."

Winner 2d prize, puppy class, New York show, 1881; whelped July, 1880. Rory O'More ex Norah O'More. She is a fast and stylish mover, thoroughly staunch on point and back, has had hundreds of birds killed over her. It is guaranteed to have as good nose as any dog in existence, and is as handsome red Irish bitch as any shown at the New York show in 1882. Is sold on account of her sex. Address C. P. STOKES, Stokes Block, Richmond, Va. dec14,1t

---

FOR SALE.—ONE FULL BLOOD ENGLISH and Irish mixed bitch bird dog, well trained; one dog pup, eight months old, bird dog. Father received premium at N. Y. dog shows, breed, Gordon and English. Further particulars at sportsman's depot, FR. SPEEL, 41 North Second street, Philadelphia, Pa. dec14,1t

---

FOR SALE.—LEWELLIN SETTER KATYDID, by Guy Mannering ex Whirlwind, whelped May 19, 1881. Color, black and white. Entered in the Am. K. C. S. B., Vol. II. Address P. O. Box 294, Saratoga Spa., N. Y. dec14,1t

Sportsmen's Goods.

GENUINE

DOGSKIN JACKETS

Made to our special order from selected skins, and imported direct from Norway.

Every jacket is marked "G. W. Simmons & Son, Importers and Manufacturers."

We offer this year the handsomest lot of Dogskin Jackets we have ever been able to collect. Each of the jackets has been made to order, and nothing equal to them can be found in the United States! We do not import the skins and make up the Jackets in work-room! The jackets *complete* are brought through the Custom House, and we sell them for *thirty per cent less* than any other house can afford to!

NOTE OUR PRICES and compare goods with others advertised as the same or similar.

A No. 1 Quality, $12.

We keep only the *best quality* of the imported jackets, and offer *no second grade.*

We claim for these jackets that they are:

1st, Windproof.
2d, Waterproof.
3d, Soft and Pliable.
4th, Flannel-lined.
5th, Never Stiffening.
6th, } 30 per cent. less than others. } Ask for the same or similar goods.
7th, The Best Made.

We warrant every jacket, and will send on approval for examination on receipt of measure.

In addition to this superior line of *Imported* Dogskin Jackets, we keep constantly on hand for the use of all who are exposed to the weather our own domestic make of Oak Hall Leather Jackets. These imitations of the imported jackets are flannel-lined, and hardly to be distinguished from the imported. They are made in our own workrooms, and every one is warranted in every particular. The domestic jackets we sell for *ten dollars.*

Our sales of Leather Jackets, last season, amounted to nearly one thousand, and we are the largest dealers in this class of goods in the country.

G. W. SIMMONS & SON, Oak Hall, 32 North street, Boston, Mass., Importers of Leather Jackets, manufacturers of the celebrated "Boston Shooting Suits." Prize medal awarded at St. Louis.

Climax Gun Cleaner.

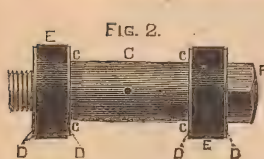

Fig. 1

Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

Fig. 2.

NOTE.—In those made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

In offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

1st. It is made in three joints, like a common cleaning rod, and therefore is portable.
2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.
3d. The ease with which it can be adjusted to fit the barrels, loose or tight.
4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

DESCRIPTIVE CIRCULARS AND DISCOUNTS TO DEALERS GIVEN ON APPLICATION.

For sale by Gun Dealers, or address

Hotels and Resorts for Sportsmen.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1. The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free owner's risk.

It is our aim to make sportsmen feel "at home on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 ne); burns slowly, strong and very clean; great enetration, with a close pattern; adapted for glass-all, pigeon, duck and other shooting; with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest Packed in 6¼ lb. kegs and 1 lb. canisters

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning trong and moist. Packed in ½ lb., 1 lb. and 5 lb. anisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

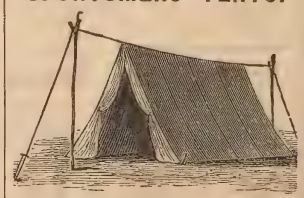
Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12½ and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ¼ lb. canisters. Burns strong and *moist.* The FFFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard *Rifle* Powder of the Country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city or wholesale at our office.

63 PINE STREET, NEW YORK.



SUPPLIES FOR
Naturalists and Taxidermists.

Price list sent on application.

THE BAKER GUNS.

OUR DOUBLE GUN.

The Best Gun made for DURABILITY —AND— SHOOTING QUALITIES.

PRICES, BEST ENGLISH TWIST BARRELS, - $45
DAMASCUS STEEL, - - - - $60 to $200

OUR NEW MODEL

THREE BARREL GUN.

PRICE, $75 TO $250.

We can now furnish extreme wide heavy breech 32in. bbls. 10-gauge double barrel guns, 10½ to 12lbs., without extra charge. Made especially for heavy shooting. We challenge the World on the shooting qualities of these guns.

This gun is light and compact, from 9 to 10lbs. weight. The ride is perfectly accurate.

L. C. SMITH, Maker, Syracuse, N. Y.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, DECEMBER 21, 1882.

VOL. XIX.—No. 21. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canadas. On sale by the American Exchange, 449 Strand, W. C., London, England. Subscription agents for Great Britain—Messrs. Samson Low, Marston, Searle and Rivington, 188 Fleet street, London.

ADVERTISEMENTS.

Advertisements of an approved character only inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices $1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Address all communications,

ANSWERS TO CORRESPONDENTS.

To its tens of thousands of friends the FOREST AND STREAM *wishes a very Merry Christmas; and herewith offers its substantial quota of seasonable entertainment.*

LEASING THE NATIONAL PARK.

THE Yellowstone National Park is, it appears, to be leased to private parties. An agreement was entered into on the first day of last September, between Acting Secretary Merritt L. Josslyn, of the Interior Department, and Carroll T. Hobart, of Fargo, and Henry T. Douglass, of Ft. Yates, Dakota, for the leasing for a period of ten years of portions of the reservation. Six different plots of ground are to be included, to be situated, of course, in the most attractive portions of the Park, and each plot is to cover about one section of land, 640 acres. A monopoly of hotel, stage and telegraph privileges is to be enjoyed by the lessees. The sum to be paid for these exclusive privileges does not appear to be known to any one outside of the ring, in which it is to be hoped Mr. Merritt L. Josslyn, Acting Secretary, is not to be included. The significant clause in the despatches to the public press reads as follows: "The sum paid for the privilege cannot be ascertained by the copies [of the agreement] sent to the Senate, the place where this important item should appear being left blank." Whether it was one dollar or one hundred thousand dollars per annum nobody knows.

This is certainly a very charming scheme to railroad through a temporary land grab, which will, if successful, put more money into the pockets of its projectors than any single set of individuals have lately made out of this government. People have growled at the Pacific Railroad land grants, but they, however much they may have advantaged individuals, did and are doing a marvellous work in developing the resources of the West, and are thus an unquestioned benefit to the country at large. But this neat little Yellowstone Park scheme, so far as it has been developed, benefits no one save its projectors. But for compactness, prospective profit, and, if the projectors will kindly allow us to use the word, for impudence, it is certainly unparalleled in the annals of land grabbing in this or any other country.

Here is a franchise which in itself is worth some millions of dollars, and which, in claims to be prosecuted against the United States Government at the expiration of the lease, may fairly be valued at several millions more, which is to be turned over to certain individuals for nothing or a mere song. The two residents of Dakota, whose names are put prominently forward, are not the leading parties in interest, for public report joins with them the names of Rufus Hatch and a distinguished ex-Senator from Minnesota, sometime Secretary of the National Treasury. Supposing this lease to be granted, on whatever terms, the taxpayers of the country will at its expiration, unless it is properly guarded, have a comfortable little bill to pay to the Yellowstone National Park Improvement Company. There will be claims for some hundreds of miles of wagon road at $10,000 per mile, say $3,000,000; claims for six or eight hotels, with outbuildings, stables, fences and general improvements, at fifty to one hundred thousand dollars each, $300,000 to $800,000; claims for perhaps 200 miles of telegraph line, with plant, instruments, buildings, etc., at $1,000 per mile, $200,000. Total, perhaps, four millions of dollars. Of course there will be other items, no doubt amounting to as much more. We mention only the obvious ones. The clean up of the company, supposing it goes out of business at the end of the ten years, will be rich enough to satisfy most men and will pay a very handsome final dividend.

In the meantime the projectors of this company mean to obtain their privileges at as low a rate as possible. No fault of course can be found with that—it is human nature; but we trust that Secretary Teller, who has hitherto kept in the background in the matter, and Senators Vest, Harrison and McDill will see that our unfortunate and much-preyed-upon government may at least have what is denominated in the vernacular of the Territories "a fair shake."

We must say that we fail to see why the Interior Department should give away a privilege of such great value. We should all be glad to know why this franchise was granted to these particular persons, and, above all, whether any general notice was given of the intention of the Department to lease the Park. Was the lease put up at auction and disposed of to the highest responsible bidder, or is there some secret reason why Messrs. Hobart and Douglass and their associates could induce the officials at the head of the Interior Department to turn over to them this very neat thing? Have Messrs. Hobart, Douglass, Windom and Hatch done anything to deserve so well of their country that the people's pleasure ground should be turned over to them, in order that they may make handsome fortunes out of the public? If so, we have failed to hear of it.

That there is an inner history to this scheme seems perfectly clear, and we hope most earnestly that it may be brought to light by the inquiries of the three Senators whose names we have mentioned.

It is true that the Department, with a great apparent show of care for the rights of the citizen, has stipulated that all tourists shall have free access to the grounds leased, by which we suppose is meant that the company shall not inclose the curiosities with a high board fence and charge an admission fee at the gate. Generous Interior Department! how tenderly you care for the rights of every citizen, and how zealous that all shall have the freest opportunity to enjoy the beauties of the Park. Did it never occur to you that this company has no need to charge twenty-five cents for seeing a geyser as a separate item. All that will go into the bill for board, lodging, transportation, and the dozen other charges, and it will be so skillfully distributed, that the traveler will pay it without a thought that he is being robbed.

If there had been nothing underhand in all this business, there would have been no need to conceal as carefully as has been done all information about it. The whole matter, if it was a fair business transaction, might have been carried on in an open, aboveboard fashion. But as things stand at present we must say that the transaction has a most unpleasant flavor of trickery. Mr. Merritt L. Josslyn may be able to explain the affair in a manner which shall be satisfactory to the public, who will await such explanation, and the results of the Senatorial inquiry, with a good deal of interest. It appears, however, that when he was before the Senate Committee on Territories on the morning of December 15, for the purpose of making such explanation, there was not much to be got out of him. At least the daily papers are entirely silent as to what he said.

There appears to be good reason to believe that this project is neither more nor less than a barefaced attempt to use this government reservation for the purpose of enriching a few speculators at the expense of the people at large. Those who are interested felt that to attempt to have the Park transferred bodily to them would be a little more than even such long-suffering creatures as the American people would endure. So they had to be contented with a long lease, which they hoped to be able to engineer in such a way that they would get it for nothing. There is some reason for believing that there is a strong lobby behind the Yellowstone National Park Improvement Company. Let us see whether it will be strong enough to carry the measure through; whether Congress will be so forgetful of its duties as to sacrifice the interests of the people to those of a handful of speculators.

In the meantime we trust that nothing will be done toward carrying into effect the agreement made by the Acting Secretary. The people will not enjoy seeing their only pleasure ground turned into a side show to fill the pockets of any set of individuals, unless at least the government shall receive some equivalent.

We are by no means prepared to say that certain portions of the Park should not be leased to private parties. There is certain work to be done there which cannot well be undertaken by the government. But if such lease or leases are to be entered into, the rights of the public, and the rights of the government must be protected in every possible way. There should be no opportunity for indemnifying claims to be made at the expiration of the lease, and a fair price should be paid for the very valuable privileges which may be granted to the lessees.

THE OLD BARN.

ESTHETICLY and bucolicly the barn has had some share of consideration, and more from the strictly agricultural points of view—both the practical and the "high farming" standpoints; but it has never been properly considered in its relations to the shooter. We have read often enough, perhaps too often, of the gray barn and its shingled roof, blotched and spotted with moss and lichens; of the kine sheep, poultry and sweet-smelling hay it shelters; of the sports of the children beneath its cobwebbed rafters—and of model barns, with their newfangled stables and cellars for manure, roots and what-not—huge, ugly wens they are upon the landscape, unbecoming it as the steam sawmill does the woods, or the steamboat the lakes that belong to the deer and the trout. But who has told us anything of barn shooting?

We hear it said of a bad shot that "he could not hit the outside of a barn;" of a worse one, "that he could not hit a barn if he was inside it with the door closed," and the wonder is how he could miss it in that case if the barn were not too wide or too long for the range of his gun, unless his charge went through some wide cranny or through the "swallow hole," which, urban reader, is not where the barn swallows, but where the swallows barn—being an apperture, heart or diamond shaped, sawed in the gable of the old-time barn by its builder, who had a soul for the fitness of things beyond the skill of his hand for the fitting of things—for the ingress and egress of the ever-beloved swallow.

Beyond this we hear nothing of barn shooting, and yet what country boy has not targeted his first gun, whether new or old, new to him and prized above all his worldly possessions, on the barn? And if his pot-metal or breech-burned piece has scattered widely and feebly, doing less execution on the boards than on his shoulder, has not he sought to bolster his faith in his gun by believing worm holes to be shot holes? Behold how the weather-beaten sides of the ancient barn, reeling and tottering, bigger than Jumbo even, and as dangerous as any elephant to approach in a high wind, for it might then fall on one, are peppered with shot of all sizes, from bullets, buckshot, and BBB, down to No. 1. (No smaller shot were used when Planco was consul, though only a chipmunk were the lonely victim.) Some are driven clean through, some embedded out of sight, some just stuck in the siding, dully staring at you through the oxidization of threescore years. What gun of bygone days, when quail and grouse and woodcock were swarming in copse and swamp, and deer were as plenty as trees are now, belched forth with mighty throes, and agony to its shooter, its flint-and-steel-ignited charge against these now long storm-beat boards, then new exhaling the odor of the woods yet lingering in them? Does the ancient long smooth bore or Queen's arm do occasional duty yet, as a sporting weapon when Reynard flees before the hounds, or against the thieving crow or the marauding hawk? Mayhap its stalwart engineer of those days tells with the garrulous tongue of age his youthful exploits to his gaping grandchildren; mayhap lies asleep under the sumacs and golden rods in the old graveyard.

To him who cherishes his beloved though out of date

muzzle-loader, the old barn is most convenient, for into it he may empty the charges of his gun as he passes homeward after a day's tramp through upland or lowland; and equally convenient is the barn to him who desires to test the qualities of his new breech-loader, for it will show both pattern and penetration. But it must be an old barn. It would be a crime hardly second to manslaughter to mar with the patter of leaden rain the painted beauty of a big new barn, with a gilded cock atop of it—the barn that is crowding out the good old gray barn of our childhood, which invited the child, the swallow, and the phœbe bird to come in and be at home.

Let the barn not too good to be shot at be preserved and protected by the sportsman, for it is likely not long hence to be the only thing left for us to shoot.

THE RIFLE FOR THE MATCH.

THE house of Remington & Sons bids fair to score another victory in the line of rifle making, and from word brought down from the Ilion armory, it looks very much as though the rifle for the American team of 1883 had been produced. Immediately after the fiasco of September last, the members of the firm decided to redeem their good name, and declared that should the return match be lost, it would not be the fault of the weapon. The rifles for the match of the present year had been hurriedly turned out to meet conditions which were unfamiliar to the experts at the Ilion armory, and when placed in the hands of the men, secured only indifferent results. Soft bullets in tight barrels with thin patching brought about leading. Too much powder was used and that of a dirty sort. These defects, due to a very laudable but hurried endeavor to supply a pressing demand, discouraged the men on the team; records were not kept up, and the natural sequence came in the overwhelming lead gained by the British team. The men were not without blame, and it was but poor encouragement for a rifle maker who had spent months in turning out a good weapon to see the foresight wavering about, while the team member was trying to hold steady on the bullseye.

Still the past has gone; the lessons of the defeat have not been disregarded, and to-day the old house of E. Remington & Sons declares its readiness to furnish the Committee of the National Rifle Association with a weapon which shall be in every way the equal of the Deely-Edge and other rifles used by the British team. Samples of the new arm have been tried for weeks past by the shooting corps of experts attached to the Ilion armory, and at 800 yards forty-eight in a possible fifty has been scored in ten shots, without cleaning. Such shooting should win any match, and if the gun will show such figures, we doubt not that the team can be secured for the work to use it effectively.

The new weapon is very much after the English pattern, but falling within all the conditions of the match as to weight and military arrangement of stock, etc. It has a loose barrel, with narrower bands and deeper grooves than the old Remington or the English weapon. The 550-grain bullet, of one part tin to eight of lead, is inserted in a two and six-tenths inch shell, with from seventy-five to eighty grains of powder. The Curtis & Harvey powder has been tried in comparison with the Hazard Ducking, No. 3, with very even results, so that it is likely the American powder will be used in preference. The hard bullet is patched with thick parchment paper, and the severe experiments made with the new arm show in it no tendency to lead. At Creedmoor Col. Bodine and Thomas J. Dolan, of the late team, have given the rifle a very thorough testing at all the ranges and declare themselves very much pleased with it, saying that, with such an arm, it only remains for the National Rifle Association to organize an effective team—one where the men have confidence, each in his own efforts, and system enough to make the skill of one the guide for all the rest.

The fact that this rifle for the coming match has been produced by the Remingtons only adds another to the many obligations under which they have placed the riflemen of America. It was the assurance from the Remingtons that a rifle could and would be prepared in time for the opening contest which led to the acceptance of the first Irish challenge in 1873, and from that time on, at considerable inconvenience and loss in a purely business point of view, the entire appliances of the Ilion armory have been at the disposal of American riflemen when trials on the range led them to think that certain changes in rifles and their fixings would bring about better scores. Full credit has not always been given for these efforts to second the men who give time and labor to practice before the butts. The whole record of American victories on the ranges here and abroad would have been a series of defeats but for the rifles sent out from the Ilion armory. Without going into the well-known story of these favorite rifles in the hands of a dozen foreign armies, the fact is now more than ever brought home to those who feel a patriotic pride in American successes that much of the credit of what has been done since 1873 properly belongs to this energetic American arm manufactory.

DEATH OF LIEUT-COL. SCHOFIELD.—We regret to learn of the death of Lieut.-Col. George W. Schofield, of the Sixth Cavalry, at Fort Apache, Arizona, December 17.

The Sportsman Tourist.

"ANY LETTERS FOR ME?"

BY H. P. UFFORD.

SOME one must make a detour to San Rafael to collect the mail for the party, as this was the first time for eleven weeks that we had been within reaching distance—that is, less than a hundred miles—of a post office. Ignotus, the only one to whom that section of the country was familiar, could not go, but he had given me such explicit directions that I felt sure I could not miss my way.

"All you've got to do," said he, "is to ride due south until you can see blue sky between the peaks of El Laté there on your left, then turn S. W., about fifteen miles, till you strike the Arroyo Veta, cross that and keep down along the bank till you come to San Rafael. 'Tisn't more than sixty miles, and you can make it, easy, before dark. You'll have to stay there, at the stage station, all night. Then in the morning you go right west to the foot-hills, and you'll strike an old Indian trail that'll lead you across to the head of Cañalo Creek. We'll camp right where the trail crosses the creek, so you can't miss us."

"Good enough! I'll be with you to-morrow noon," and chirruping to Rob, I started off after the mail. The morning air was cool and fine, and as Rob and I had for several days been accommodating our pace to the slow gait of the pack-mules, we were both glad of a chance for a day's scamper at our own sweet wills. After a few sportive curvetings and prancings, the first effervescence of his overflowing spirits, he settled down into his long, swinging, ten-mile-an-hour and twenty-hours-at-a-stretch lope. ("You don't believe any such thing?" Well, you'd better, for it's true. When Mexican Joe knifed Dick Stuart in Concjos, Ignotus rode that horse to Fort Craig and back between sun-up and sun-up, and on the homestretch forced the running so that the Surgeon's mare, brought from the States, dropped dead when he got off her in the Plaza; and you're a bolder man than I am if you dare tell Lieut. Stanhope, of the Topographical Engineers, that he made a mistake when he measured the distance between the places in his survey for the El Paso & Sundown Railroad, and made it just 102 miles.

"Hurt Rob any?" Not a bit. When the saddle was taken off he kicked up his heels, whinnied, and dashed off across the Piedra to the rest of the cavallada, as though he'd had only a morning breather.

"Got the papers for that story?"

Yes, sir; signed by the Rhymer, Ignotus, and Post Surgeon David McFarland, of the 1001th U. S. Cavalry, and attested by, and sealed in the presence of, Senor José Maria Farina Cavalcto Mugara del Alhama y Murena Salvatierra Sidonia, Intendente and Alcalde de la Ciudad del Nostra Senora del Conejos. Are you satisfied? All right, then; let us go back to our muttons.) By noon, El Laté had separated his twin peaks so distinctly that I could catch a clear view of the sky between them, and so turning to the S. W., another hour brought us to the Arroyo Veta. Here, for the first time, I was bothered. I struck the Arroyo at an angle represented by the lower limb of this >, and having crossed it, the question was, which was up and which down. I decided that down meant to the right, and accordingly turned that way. Hour after hour passed monotonously, but no San Rafael. The sun finally touched the edge of the plain, and I knew that I had ridden more than sixty miles, and strongly suspected that I was lost. Standing up on Rob's back, to enlarge my horizon, I descried, to my left, the only sign of human life which I had seen that day—a Mexican herder with his sheep. Leaving the Arroyo behind, I rode up and hailed him.

"Como le va Usted, amigo?"

"Bueno, señor, bueno."

"Unde 'sta San Rafael?"

"San Rafael? No sabe, señor."

"Whew! then I am lost, sure enough." Sabe unde 'sta Cañalo Rio?"

"No, señor, no sabe."

"Unde 'sta Usted casa?"

"Poco Sud; 'sta camino."

"Gracios y adios, amigo."

"Adios, señor."

Here was certainly, as the philosopher would say, "an unfortunitous concatenation of peripheral circumstances."

Lost I undoubtedly was, and I had wandered so far from San Rafael that this shepherd, who probably knew every sheep-path for twenty miles around, didn't even know of its existence. However, he had told me that his master's house was only a short distance south from us, and had pointed out the trail which led to it, so I concluded to seek shelter there for the night. A half hour's brisk lope brought me to the casa, a low-walled adobe hut, one story in height, surrounded by a cactus hedge, and with sheep corrals by the side and rear. A shout soon produced the master, and I doubt if all New Mexico contains the owner of a more villainous face than appeared in the low doorway, in answer to my call. Bestiality, craft, greed, and all evil passions had combined, for nearly three-score years, to carve from that countenance the mask of a mingled satyr and devil. However, any port in a storm, and therefore I requested in my choicest Mexican, hospitality for the night. With that grave civility and quiet courtesy which mark even these degenerate descendants of the old Hidalgoes, he placed his house and all it contained, himself, his family, and all his belongings, at my command.

"Todos a Ustedes dispocicion, señor."

"Everything at my disposal, is it? If it were, the first thing I would do, would be to have your servants hang you to your own roof-tree, you yellow thief and murderer." Such were my thoughts; my words were that I hoped the Lord would repay him according to his deserts. Not recognizing the double meaning in the courteous Spanish rejoinder, he called, in a shrill, cracked voice, for "Niñita, Niñita," which was answered by the appearance, from around the corner of the house, of a passable looking girl of eighteen or twenty, who took my bridle as I dismounted, and led Rob around to the corral. Following to see that he was taken care of for the night, I soon found through significant looks and gestures, that I should have to steer my bark for the next twelve hours between the Charybdis of man's greed, and the Scylla of woman's enticements. Having cased Rob of his trappings, rubbed him down well, measured him out a hat full of barley, and shaken down some straw for him to lie on, I returned to the house. Here Niñita prepared supper—tortillas, or corn cakes, tough as leather, and flavored with soap grease; stringy mutton, rank and coarse, cooked with frijoles, or black beans, and hotter than fire with chili colorado, or red pepper, and barley coffee, with a bottle of villainous aguardiente, or mezcal whisky as dessert. This delectable repast over, we drew up to the little triangular fireplace in the corner of the room, myself, with lighted pipe in the center, flanked on either side by the chaste Niñita and Señor Joaquin Ramon de Uznaga Coronado, each with their corn husk cigaritos. (The raggedest tatterdemalion of a Mexican sheep thief has a string of names as sonorous and rescnant as the Cid Campeador, or the Infanté himself. Perhaps it is the exertion of carrying through life such a weight of nomenclature, that so saps their energy and exhausts their strength that they have none left for the more commonplace use of making a decent living.) Drawing slowly and painfully on my limited stock of Mexican, I soon ascertained that Señor Joaquin Ramon, etc., etc., did have a hazy idea as to the whereabouts of San Rafael, opining that it was somewhere down the valley, up which I had ridden that day, and vaguely guessing the distance as from twenty to a hundred leagues. As a Mexican league is anywhere from one to five miles, I was not much the better off for this information, except as to the direction. Then the Señor courteously set in motion his piston-rod, and cautiously proceeded to pump me. "Had I ridden far that day? Was I on pleasure or business? If the latter, did I think of buying sheep? If so, he could sell me a fine lot for cash, with which, no doubt, so illustrious a Señor was well provided. Had I friends in the neighborhood? Would they not be uneasy at my absence? Were they to meet me here in the morning, or did they not know where I was? Were they all as well mounted and armed as I was? Finally, had they any dogs with them?"

May Heaven forgive me for the number and size of the lies that I poured into the old rascal's ear, but I felt that my best chance for safety was to impress him with the fact that I had no money about me, and that my disappearance would be followed by strict search and swift punishment. So I answered him categorically. "I had ridden about twenty miles. I was hunting, wanted no sheep, and had no money to pay for them, if I did. My friends were camped just below, and were to join me there in the morning. There were twenty of them, well mounted and armed, fierce and warlike—Americanos bravos. I was their captain, and they were sworn never to leave me. They had with them six blood-hounds—përos del Diablo—trained to follow my horse's trail wherever he went, and who could scent me out, if I were buried twenty feet under ground."

Having gently dribbled these astounding statements into the old fellow's consciousness, enfiladed meanwhile with a cross-fire of suspicious looks from his rattlesnake eyes, on the one side, and by ogles and sheeps-eyes from the "ojos verdes" of the fair Niñita on the other—I requested to be shown my sleeping place.

My hostess rose, and I followed, bearing my riding gear and blanket into a little side room, about ten feet square, and totally devoid of every kind of furniture, where she gave me to understand, I could pass the night.

She then delicately suggested that as I was a stranger in a strange land, and might feel lonely, if left to myself, that perhaps, etc., etc. Declining her kind offer, I politely bowed her out, and closing the door, proceeded to strike a match, and survey the strategic possibilities of my adobe fortress. The door was guiltless of latch or fastening of any kind, and the one window in the room was a mere hole in the wall, some two feet square, with neither sash nor shutter.

My first step was to secure the entrance. Both my hunting and pocket knives had stout blades, and these I drove firmly into the casing of the door, which was thus held fast. Then, taking out my pocket tool chest, and inserting in its clip the stoutest brad-awl which it contained, I drove it firmly into the side of the window-opening, and to it lashed one of my pocket Derringers, the muzzle raking the opening. Driving a couple of the brads, one on each side of the window, I stretched a buckskin "whang" from one to the other, and on it so balanced a dozen heavy rifle cartridges tied together, that the slightest shaking of the string would cause them to fall. To these I attached another string, the other end of which I tied to the trigger of the Derringer. Cocking the latter, my spring gun was set. In the darkness of the night the "whang" could not be seen. Anyone entering the window could not fail to jar it, which would cause the cartridges to fall, and the probability was, that the intruder would receive a half-inch conical ball somewhere in his anatomy. If he escaped that, at any rate, the report would alarm him and show him that I was on my guard. These defensive arrangements completed, I spread my blankets in one corner out of range of door or window, put my revolvers where they would be handy—not, by the way, under my pillow—lay down and was soon sleeping the sleep of the just. Somewhere toward morning the roar of my battery awoke me, but though I waited further developments, none came. I meant to remain awake till daylight, but the ride of the day before had tired me, and when I next became conscious the sunlight was streaming through the window. Rising and examining the latter, I saw that it was stained with blood, a pool of which was slowly drying away on the ground outside beneath the fatal opening. I felt assured, then, that "somebody had got hurt," and hardly knew whether to hope that it might be the lovely daughter or the stately father who had received my midnight compliments. Opening the door into the outer room, I cautiously reconnoitered, but the coast was clear, nor was there any sign of life anywhere around the house.

Going around beneath my window, I found a trail of blood which led to the corrals. Following it, I found them as empty as the house—Rob and a large "pinto" horse, which had been there the night before, both being gone. Things suddenly looked black. Without a horse I was like a ship-wrecked sailor stranded on a rock in mid-ocean, or like a belated wanderer in the jungle, face to face with a man-eater, and with his gun safely at home in the corner. How many thieving, cut-throat Greasers there were in the neighborhood I couldn't tell, nor how soon one of my late hosts might return with a force sufficient to avenge the death or wounding of the other. Even if I escaped this fate, a successful rejoining of the outfit was problematical, as I had no idea how far or in what direction they were. True, I might, by great good luck, reach San Rafael, and there procure another horse, but I wanted Rob. I never realized before how much a part of myself he had grown to be. Wanting him, only a half of me—*anima dimidium meæ*—was left, and that decidedly the worser half. But something must be done, and that quickly, and, manifestly, the first thing to be attended to was breakfast. Returning to the house, a scraggy neck of mutton and some tortillas were soon cooked, and, after satisfying my hunger, pockets were filled for future contingencies. Then, leaving my saddle, but throw-

ing the bridle and blanket over my shoulder, I started on my hopeless journey. Just as the cactus hedge in front of the casa was reached, I heard a joyful whinny behind me, and turning, there stood Rob on the other side of the corral, hot and dusty, and trailing behind him a broken riata knotted around his lower jaw with that peculiar hitch which betokened the hand of a Mexican vaquero.

Some day, when my tongue is tipped with inspirational fire, I may attempt to describe my joy at the sight, but at present my vocabulary is too limited to allow of the attempt. I know I threw my arms around his neck, and hugged him as a lover would his mistress, and I would not swear that I did not kiss the white star which shone in his forehead, again and again. Truly, "Richard was himself again," and when once more in the saddle, I snapped my fingers defiantly at Greaser brigands, unknown distances, lost San Rafaels, or any tricks which the old jade, Dame Fortune, might play me. Down the valley we rode, retracing our steps of the day before, past the place where we had first struck the Arroyo, until, about the middle of the day, we loped into San Rafael, a little dirty Mexican village, but as welcome to my eyes as the Kaaba stone in Mecca to the true child of the Prophet. Riding up to the station, which did duty as well for hotel, post office, store and saloon, I dismounted, attended to Rob's wants, called for the mail, and ordered a hasty dinner. While waiting for the latter, I made inquiries of the station keeper as to the trail to Cañalo Creek, and found I could reach there, by brisk riding, before sunset. By the time this information was obtained, dinner was ready, and I was ushered to the table. Through the middle of the house ran a hall, with two rooms on the left, and one long one on the right. The front room, on the left, where I had been sitting, was the stage station, and post office. Back of it was the eating room, while the long room across the hall was used as a store, with a bar in the rear, and was entered by two doors, one in the store end, and one in the bar end. Opposite to the dining-room door which opened into the hall, was another one which opened into the bar-room. Both of these doors were open, and as, with the caution which becomes instinctive in that country, I took my seat at the table facing these doors, I could look into the store room, and see the forward end of the bar, over which hung a cracked and tarnished mirror.

I had nearly finished my dinner when, just as I was raising a cup of coffee to my lips, I happened to glance into the mirror and saw reflected there the faces of two men, who themselves were hidden from sight by the half open door. Two men I said, and certainly one of them was the herder from whom I had inquired my way the night before, but the other—well, though the dress was that of a man, the face was certainly that of my whilom hostess, Niñita. They were talking together in low, earnest tones, but the clutch of their fingers upon the handles of their long knives, and the murderous scowl upon their swarthy visages, boded no good to some one—and who that might be was not very difficult for me to guess. I only heard a muttered "maladito Americano," and something about "Paso del Burro," before they turned and left the room by the rear entrance, and before I could reach the door they were mounted and riding down the street. Watching them I saw that they turned off toward the foothills in the direction of the trail that led to Cañalo Creek. They rode in a gallop, and in a steady, business-like way, that showed they were in a hurry to reach some given point. While still looking after them the station-keeper came up, and, following the direction of my eyes, asked abruptly:

"Know them durned Greasers?"

"Don't know; think I do."

"Got 'ny grudge agin you?"

"I suspect one of them has—perhaps both."

"Which un—the moharrie?"

"Then one of them is a woman?"

"Sartin; tell that by the way she walks."

Thereupon I told him of my night's adventure, and asked him what he knew of the two riders.

"Nothin', 'cept they rode up about five minutes after you came in, saw you onsaddling your roan out there at the corral, 'n' sez the man to the woman, 'That's him,' an' sez she, 'Yes, d—n him,' or words to that effect, an' then they rode off. By George, though them ain't the two horses they wuz ridin' when they came; one wuz a pinto and 'tother wuz a dun, and them are both bays or blacks."

I then told him of what had just passed in the barroom, and asked him if he knew anything of "Paso del Burro." "Yes, it's a durn nasty place on the trail about ten miles this side of Kunyalo Crick, jist where the road crosses the pint of the hill. Thur's a place thar, whar the trail crooks round the face o' the cliff, like yer elbow jint, 'n' 'taint more'n two feet wide at the turn. Ef thet roan o' yourn ain't mighty sure-footed, ye'd better get off 'n' walk when ye get there, fur ef he sh'd slip, 'n' the rock's mighty moist 'n' shelvin' there, ye'd drop about two hundred feet, 'n' 'twould kill ye both too dead to skin. So many burros goes over there, bringing down ore from the mines, is what's giv' it its name, I reckon. Jest 'tother side o' the elbow, and so ye can't see it 'till ye git right on it, 's a gouge in the rock about ten feet deep, 'n' I reckon thar's where they mean to lay for ye."

"Thanks; forewarned is forearmed. Is there any way around that pass?"

"No, they haint no trail, but—thet roan o' yourn a good climber?"

"Climbs like a cimarron."

"Will he foller?"

"Like a dog."

"Then I reckon you might give 'em the go by, by leavin' the trail jest where it strikes the hill, 'n' climbin' up through the bresh across the pint, 'n' comin' out again in the trail about a quarter beyond the turn."

"How's the road from there on?"

"Good gallopin'."

"All right. Thanks. If you'll bring Rob around I'll be starting."

"Are you heeled?"

"Yes, two bowers and an ace," showing my Colt .44's, and my Sharp's rifle.

"Good enough. Luck to you. So long."

"So long," and off I rode, and soon reached the point where the trail reached the foot of the hill, whence it swung round sharply to the left through the "Paso del Burro." Here I dismounted and throwing the bridle over the pommel of the saddle, began to climb the steep ascent. It was covered thickly with scrub oak, and for some two hundred yards seemed almost impassable. Rob followed bravely, plunging and crashing through the bushes, sometimes breaking his way through by main strength, sometimes by a series of rabbit-like jumps. The oaks safely passed, we came to a belt of piñon woods, where, though the slope was more precipitous, we made better headway. Arriving at the summit, at a point which I judged to be directly over the pass, I crawled cautiously to the edge and looked over. Sure enough, there they were, directly below me, and on a little shelf about thirty feet above the elbow. Their horses were standing in the little pocket above mentioned, while they themselves were crouched behind a couple of fragments of rocks, ready to hurl them down upon me as I passed. Their lassos were also unslung and coiled, so that if by any chance the rocks should miss me, the fatal thong would be at hand to do its deadly work. Looking beyond them I saw that the only point at which I could regain the trail was not more than five hundred yards from them, and in plain sight. Could I once reach that safely, I felt no fear of the result, as I was sure that Rob could show a clean pair of heels to any cayuse in the country. If they heard or saw me before I gained the trail, and the worst came to worst, why, there were only two of them, and my pistol hand had not yet lost its cunning. I could have killed them both from where I lay, and felt strongly tempted to do so, but an innate repugnance to such cold-blooded work restrained me.

Withdrawing quietly from my post of espial, I rejoined Rob, and stole softly down to the trail below. He followed, stepping as gingerly as a cat, evidently judging, from my own stealthy progress, that quiet was the order of the day. Halting within twenty yards of the trail, I mounted and rode quietly down. As we left the thick bed of piñon needles, where our footsteps had been muffled, as though we had been shod with wool, the ring of Rob's iron shoe on the black trachyte of the trail, attracted, as I expected it would, the attention of the crouching assassins. Looking back over my shoulder, I saw them, as the sound struck their ears, wheel suddenly, gaze a moment in sullen stupefaction, and then, with a shrill yell of hate, plunge downward to their horses, fling themselves into the saddles, and come clattering down the trail after us. A touch of the spur in Rob's side, a shake of the reins, and we were off, with a lead of a good four hundred yards. The swing of his long gallop scarce stirred me in my seat, and I knew, from the play of his mighty muscles, the throb of his great heart, and his powerful, easy breathing, that he had within him a reserve of fire and energy on which a rider might safely stake his life. At the end of the first mile our positions were relatively unchanged, at the end of the second the pursuers were evidently a little nearer, while at the end of the fourth they had narrowed the gap by a hundred yards. But their horses were on the dead run, under quirt and spur, while Rob was still swinging along in his easy gallop, untouched by thong or steel. Under my knee his heart kept up its even, rhythmic stroke, and the rise and fall of his heaving flank was as quiet and gentle as though he stood knee deep in the luscious gramma grass, cropping his fill. Not a taint of sweat marred the glossy sheen of his velvety coat, and each ringing hoof struck the ground with a firm, elastic "ping" that told of well-braced sinews and muscles yet untired.

Every few minutes the proud head is thrown impatiently upward, and the bells and chains of the gayly ornamented Mexican bridle ring out like silver castanets. He is just growing warm to his work, and his whole body lifts and writhes under me with a sense of repressed power that tingles in every drop of the generous ichor that fills his veins. He does not like those clattering hoof-beats in his rear—he who has always heretofore been the pursuer, not the pursued. Take a firm clutch of that flowing mane, lean forward, and whisper in his ear, in his beloved Navajo—a long, sibilant whisper—"Ississa, seata!" and lo! the red-roan whirlwind is set free. Ah! the glow and glory of that arrowy rush! Doubling his lithe legs beneath him, hugging the ground as though he loved it, small ears laid back, lissome head and lean neck stretched out as though he smells the way, onward he flies like the Lightning Express, gathering momentum at every leap. The piñons that line the road whirl by in a dizzy waltz; the little gullies which intersect the trail every few yards, and which he takes without pause in his long stride, twinkle athwart our pathway one moment, and the next are far behind; the pebbles struck by his twinkling feet spin out with a whiz like rifle balls, and the foam-flakes shaken off from his black muzzle flash past like the spume of the breaker flying before the hurricane. The air, cleft asunder in our swift flight, hums like the humming of the gale in the lee shrouds, and the plume in my sombrero streams backward like the flying hair of a comet. Here, on this stretch of gently sloping ground, the pace becomes terrific. The whirlwind becomes a hurricane; the express train has developed into a red-roan lightning bolt. The piñons can no longer be individualized; the pebbles fly like the belching of a Gatling gun, and the humming in the lee shrouds has swelled to the wild whistle of the norther or the "Skerry of Shricks." The breath is beaten back into the teeth in that dizzy swoop, and the baffled assassins are left hopelessly behind. As the trail begins to slope upward to Cañalo Creek, lean forward again, and coo softly into his ear "Eyah! eyah! itcha balglutlie!" The whirlwind drops to a gentle breeze, the express train slackens speed, and we gallop sedately into camp, breathing peacefully, with not a hair turned, and hardly an extra beat of the heart to show for that fierce burst of speed along a mountain trail.

WHITE EGRET IN MISSOURI.—Jefferson, Wis., Dec. 11, 1882.—*Editor Forest and Stream:* The following note was sent me by W. S. Baker, of Kahoka, Mo. Yours respectfully, W. W. COOKE: I obtained last July a fine specimen of the white egret or snowy heron (*Garzetta candidissima*). It had been shot by a farmer and a wing broken at the tip. He brought the bird to me and I kept it in a cage for about three weeks. It became very tame. I fed it on beefsteak, which it would take out of my hand. If let out of the cage when I was at the table, it would come to me to be fed, and if I did not feed it, it would try to take something out of my plate. I gave the bird to a little girl, living eight miles from here, who clipped the feathers on one wing and turned it loose in the yard. It would not leave the house for some time, and then not until she took it to a stock pond some three hundred yards from the house, after which it made a trip every day to the pond to catch crawfish, and returned at night to roost in a tree, into which it climbed on a ladder leaning against the tree. Whenever the weather turned cold it would start off in a southerly direction, wandering several miles, and then return to be fed. It was finally killed by a farmer who mistook it for a wild bird.

SNOWY OWLS.—Marietta, O., Dec. 11, 1882.—A very large snow owl was killed in Wood county, W. Va., Saturday, and brought over to me. Can you trace them any further south than this?—GEORGE K. JENVEY.

HOLLYWOOD MANOR.

A Reminiscence of the Devonshire Coast.

BY JOHN ALDERGROVE.

MANY years ago my friend Weston and I, having locked up our books and papers, determined to leave our London chambers with their more immovable appurtenances to the sole guardianship of Mrs. Miggles, and take a run into our native Devon for a winter vacation.

Mrs. Miggles reigned over some twelve or fourteen contiguous sets of apartments by the sway of the broom. Never, perhaps, had mild bewilderment lulled the brandishing of her sceptre and poised a wide area of chin on the end of its handle with more genuine effect than on this occasion. It had hitherto been the undeviating experience of Mrs. Miggles that young men take rather kindly to hibernating in London. A legion of instances occurred to her where a devoted pursuit of study had restrained its votaries from the solace of the country until Christmas poultry had graced the kitchen dressers, and the village churches were bedecked with evergreens, but to depart a fortnight in advance of Christmas Eve appeared to her to be evidence of new aspiration in the yearnings of metropolitan bachelordom.

There is no English county, however, more dear to her sons than Devonshire, and neither of us felt any spirit of sacrifice when we thought of realizing some of the memories inspired by her hills and valleys. Of course we were sportsmen; gorse and heather, pool and stream, echoes of the cover and glimpses of the marshes came trooping along beside visions of ivy-clad ruins, towers hoar with age and blythe with "merrie belfries" of broad good will, of grand old houses with halls of oak and breathing of mistletoe and Sir Roger de Coverley, of hearths and homes nestling in the quiet of the "coombes" and secure behind the beetling grandeur of the cliffs.

We were bound on a visit to an old friend of my family, Mr. Richard Bowman, commonly known as Squire Dick, and a good fellow. I had rarely met him, however, as Hollywood Manor is situated in a distant part of the county from my native town. My ideas concerning Squire Dick were indeed chiefly associated with a certain silver cup which he had bestowed on me through a proxy at my christening, a vessel peculiarly typical of the baptismal goblet, it being much too small for appreciable beer, and a little too large, were the bottom knocked out, for a napkin ring. I refer to this matter as possibly connected with my invitation to Hollywood, and certainly not as in any way reflecting on the taste or liberality of Squire Dick, who merely observed the cherished traditions of his country as a staunch Conservative should.

We reached Seaford, the nearest village to the Manor, a few days ahead, as we desired a little independent rest and observation; we were glad therefore to hear that Squire Dick and his family were from home, and that they were not expected until we were.

The time passed pleasantly enough in rabbit-shooting in the under cliffs, in quiet pipes with the coast guardsman, in lounging with the fishermen and hearing of their luck through the starry nights in the channel, and in yarn-spinning of an evening with battered old salts, whose gnarled and furrowed figure-heads would light up with enthusiasm as the charmed atmosphere of the "Golden Lion," loosened their tongues with records of local prowess in war, with legends of the press gang, and the tales of peril, of skilled adventure and lawless bravery, which haunt the annals of that audacious spirit of smuggling which had filled the neighborhood with its wild romance.

Although the palmy days of smuggling were over—for boats built and equipped for the trade, armed expeditions, conflicts with revenue cutters, and midnight encounters with riding officers on inland commons were things of the past—still there were vestiges enough remaining to satisfy any trustworthy gentleman as to the quality of white brandy, and to furnish food for reflection on ingenuity which often baffled the coastguard. It was by no means impossible then to meet men who, wearying of domestic industry, sought to vary existence by a contraband flirtation with Madame Cherbourg. There was old Ayers, for instance; now everybody knew that a few lobster-pots and a share in a scine and a boat or two could never have placed old Sam in possession of "Ayers's Terrace," and "Jasmine Villa," and "Honeysuckle Cottage," all of them baited with the newest paint and severest stucco, and awaiting the nibbles of fagged humanity when it should shun the cities for the healing air of Seaford. His own cottage, half way between the village and Hollywood, was a snuggery in its way, hiding in a nook by the road on the cliff, and facing a cleft down which a steep dangerous path zigzagged to the rocks on the beach.

Then there was Agnes, the old man's daughter, who had been sent to a boarding school and had inspired many a swain with aspirations to heroism. Beautiful Agnes, as they called her. I fully admit that Agnes was a comely girl; from personal observation I remember that billows of brown hair, tresses natural and exuberant, and free from shaggy whisps and rusty ends, formed the background to pleasing features lit up by the tints of health and flashes of vivacity which the surroundings of her home were likely to diffuse. Yet the beauty of this breezy nymph became irksome to me. Weston was enslaved, and not content with trying to outsigh the surf during prolonged and violent exercise in the hope of seeing his enchantress, he seized every opportunity for descanting on her charms; he had assured me that she was "a poem incarnate born of a goddess in a grotto," so it was unnecessary for him to be always tinkering the young woman's flesh and blood into the commonplace mosaics of shell-like ears and ruby lips, of teeth of pearl and coral tints.

Shortly, however, the return of Squire Dick brought us to Hollywood. The open approach to the house was through an avenue of fine old lingering trees, whose skeletons tapered into ancient characters written against the winter sky, as though describing weird title deeds, on which the ragged nests of rooks seemed set like ghostly seals. Carved figures, gray with moss, quadrupeds whose claws were clipped and features blurred with the wear of centuries were couchant on the sturdy pillars of the gateway, and seemed to be winking the remnants of their eyes at shadows down the corridors of Time. What an elysium for bats lurked about the crannies by the chimneys and the gables and the angles of the roofing—what a paradise for owls among the nooks and hollows of the ivy-hooded windows. The past charged the scene, and fancy forced the pavement to clatter with the hoofs of phantom palfreys and the covers to echo with the tongues of spectre hounds.

Now through an interval in the trees we had a view of the valley—a sight to charm the sportsman's soul. Down

at our feet were meadows, from whose hazel-capped hedges lusty hares are still seasonably dethroned by spaniels to skim the ground before contesting greyhounds. Here, too, were winding waters with tempting nooks and holes, where "partridge hackle" and "blue dun" yet levy heavily on April trout, and where not infrequently a kingly salmon succumbs to the gentle overtures of a subtle wrist. On these banks the ancient sport of otter hunting obtains to-day, and fine veterans live who know no pleasure like that afforded by a pack of black and tans—no triumph of the chase equal to the spearing of the "brigand of the stream." Away in the distance smoke curled up among the trees from a sturdy parsonage, whose genial master, at home alike in the pulpit and the pigskin, ministered to the spiritual health of his parishioners at the head of his loyal congregation, and to their bodily health at the head of a plucky pack of harriers. Patches of coppice everywhere. Further inland were furze-covered commons over which the deep-mouthed dogs from Bicton led the scarlet jackets and dark green habits of the fox hunt.

Our pulses quicken, our nerves tingle as memory lingers on the boundiug jubilee of "Full cry!" What magic strain can touch the sportsman's heart like the music of the hounds as it is borne over the heather—what orchestra or choir can breathe such numbers, when like mystic forest bells, it peals the glory of the chase through woodland in a valley! Further still, on the horizon, were hills which pointed far away toward the northern part of the county, where romantic solitudes insure the angler's paradise, and wild red deer yield noble sport on the weird wastes of Dartmoor.

But the clamped and studded door was opened to us, and we passed in through the hall, an armory of relics—impotent guns, fantastic swords, and ponderous spurs, pikes and spears, halberds and habergeons, casques and crossbows, and such engines, lined the walls of the library, where we found genial Squire Dick and his wife, who warmly welcomed us. The heartiness of the English country house was no more genuine when barons of beef and pond-like tankards were its massive tokens than it is to-day. Its spirit remains as indigenous and unimpeachable as the oak, and few more worthy exponents of it could be found at any time than were seen in the master and mistress of Hollywood, who, without chick or child of their own, were wont to especially contribute to the pleasure of young people. Three or four other visitors arrived within a day or two—Mrs. Bower, a Cornish lady, with a pretty black-eyed daughter, and Miss Jessel, a sprightly blonde; then there was Edwards, a Manchester man, who had been something or other in India and looked as if a good deal of him may have been something or other there then, and jovial Hardy, the barrister.

It was pleasant enough; the boom of the pheasant from the saplings in the copses, and the whirr of the woodcock among the hollies and alders of as likely ground as any ever worked by dogs, followed by the cheerful evenings, the cosy dinners, the songs and games, and occasional dances at home and abroad. I like to think of these things now—they were thrilling then. I doubt if poor Weston ever found his sheep station in New Zealand productive of more fun. Vestiges of circulation possibly never venture to traverse the desiccated remains of my good friend Edwards with more energy than when thoughts of Hollywood are propagated by the stoves and hot water pipes of his den in Bayswater. Hardy, the counsel learned in the law, who dropped his circuit long ago to settle into parochial dignity and shift his steady hand from the triggers of Joe Manton to the scales of local justice and the adjustment of poor law matters, must now and then think, as he surveys the tumuli which bound each gaiter or each hoof, of well walked days in marsh and cover, and of nights well tripped in manor and in hall. Perhaps many a man, on reviewing his felicities, may stumble on a distinction when days of flax and feather and nights of wax candles and white kids march past his memory's inspection. Enchanting times, truly, were these, when the music of the double-barrel awoke the echoes of the woods for them to melt into the whispers of bright eighteen coyly lingering on the arm of brave five and twenty.

Weston possessed the instincts of a sportsman, and as no sportsman would ever leave the covers for the sake of "a quiet shot at the rabbits in the cliffs," I knew, of course, that he was now and then merely prospecting for a chat with the buoyant Agnes. Time flew rapidly. The first days of Christmas were gone—Christmas with its glad festival, its greetings and carols, its boar's head and its mountains of beef, its lusty poultry and its suave punch, its midnight mummers and possets and mulled wine. We would soon have to return to London. One blustering evening toward the close of our visit, when some reverend port had by no means diminished the cosiness which is always diffused by a crackling hearth, judicious light and crimson curtains, the conversation drifted into observations on the supernatural.

"It is proverbial," said Edward, "that the seaside is prolific of the mysterious; the voices of the waves seem potent in conjuring spirits which find fitting quarters in the wild scenery of the coast."

"Dear me," laughed Bessie Jessel, "what a weird melody resounds through the caverns and chasms of that sentiment."

"Really," said Kate Bower, "the cliffs and rocks compose for Mr. Edwards a dreary opera of sighs and shadows, with a chorus of shrieks from ghostly gulls and a scenery of cerements in seaweed."

"Mr. Edwards is right in alluding to the prevalence of superstition on the coast," said Mrs. Bower.

"Yes," quoth the Squire, "it will be an interesting game when education checkmates superstition. I know spots it would be difficult to get volunteers from other ranks than those of the farmers, boatmen or coastguard, to visit at midnight."

"Still it sometimes occurs that the nearest neighbors are those who are the less exercised by alleged apparitions, and this always seemed to me to be a nut for the ghosts to crack," said Mrs. Bowman.

"Of course," Hardy chimed in, "it is monstrous that the sentimental cobwebs of a dark age should now leave a film behind them in the minds of sane people."

"My dear Hardy, I am delighted to hear you so express yourself," said the Squire, "for my wife tells me that some trouble with the fireplace in your room will oblige us to place the haunted chamber at your disposal to-night."

"Eh—? fireplace? O, you are very kind; but you are joking, you know," said Hardy, changing color a little and smiling in a feeble way; "it would be a privilege to challenge anything in carnal garb; but, I say—still of course I shall be delighted."

"All of which simply demonstrates," said the Squire, "that many of us who think ourselves proof to these influences or vapors are not quite so invulnerable as at times we imagine."

"How delightful!" chirped Bessie, "I knew this sweet, romantic old place must have something chilling—curdling—about it. Isn't it glorious, Kate, to feel near a real, ancient tragic gem set in a genuine haunted room, dear?"

"Charming," cried Kate, "and Mr. Hardy be sure and give us the particulars at breakfast; it may be nothing worse than a back view of a wailing lady, in dishevelled hair, wringing her hands at a rickety mirror, you know."

"Or a poor gentleman who, having lost his head in the flesh, secures it now by tucking it under his arm in lieu of a cocked hat," said Weston.

"But what is the legend of the haunted room; may we have it?" I asked;

"First of all, Hardy, rest contented," said the Squire; "we won't give you such dismal quarters to-night, for should you escape the antics of spectres, you would certainly be killed by cramps, for the room, detached as it is, has never been opened in my time. The locks are rusted and the windows are barred as they were at my advent, and I shall leave them so for whoever may come after me. If ghost there be I have never violated its taste by meddling with the cobwebs and the mildew of its bower. But some of you have heard of Dame Rosamond's Rock? No? Well, its history is shortly told, and if its character has been established by fiction the treacheries of the imagination have worked powerfully with the people, for I have seen men who well understood the handling of boarding-pike and cutlass, whose teeth have chattered all after a nocturnal view of it. It lies on the beach about half way between this place and Seaford. As you double the cliff and go along the path in the undercliffs, its size will distinguish it; you see a flat surface, about a quarter of an acre or more, easily accessible from either side between the crags and boulders on the beach; but with a sharp shelf toward the sea, which overhangs a deep hollow at its base kept full by the tide. It is a lonesome place, and the juttings of the cliffs cut off the view of any habitation from the coast; the solitary house of old Sam Ayers, in a sheltered dip on the cliffs, is of course invisible from the beach. Now the tragic end of poor Rosamond has shadowed the rock with her history, and the haunted room was her chamber. Giles Bowman was the grandson of that Humphrey who croaked with Cromwell; and inheriting fanaticism from Humphrey, Giles supplemented it with ferocity of his own. Cant and brutality are weeds which frequently thrive in the same soil, and their combined properties have often insured horrors to families, and ghosts of tradition. Rosamond, without a living relative, and poor and young and beautiful, married Giles shortly after he buried his first wife, who left a son. I am happy to say, or I don't see how I should be here to-night. All the brightness of life was destroyed for poor Rosamond by the morose and self-righteous ruffian to whom she was sacrificed. Her spirit was 'unseemly behavior,' her wit was 'profitless jargon,' her beauty was a 'satanic snare enmeshing her to earth.' If she smiled it was 'levity,' if she laughed she awoke the 'echoes of imps.' Groundless jealousies arose; hardship was increased and heaped upon her; injustice, the whole code in fact of supreme cruelty, which hypocrisy prescribes under the symbols of religious zeal, was visited on its victim. The old chamber up-stairs was her refuge and prison; in it she became a mother, and from it some months after she stole with her child into the starlight of a winter night. Some men who had been merrymaking and who were going home late were greatly terrified by a figure they saw hurrying toward the rocks, a female figure in light raiment, which pressed something closely to its bosom, and as it kept quickly on its course by the aid of a pendent lantern, a strange and mournful chant—a dirge poured from its lips in tones of heart-stirring sadness. The next day Dame Rosamond was missing; the story of the vision seen by the men reached Hollywood, the coast was scoured, and the bodies of the poor lady and her infant were found in the trough below the surface of the rock—the child in the strong grip of its mother with its hand entangled in her hair and hidden with it by shells and sand. Thus died poor Rosamond, and you will see that according to the generally accepted conditions of the supernatural there are some data for the stories of the villagers and the terrors of the servants' hall."

"I declare, Mr. Bowman," said Bessie, "this legend is plainly true and exasperating; for the justice of fiction would have contrived the undoing of the good Giles, have made him roam the beach in fits of remorse, and have tripped him into the sea by one of those juicy fronds of weed which play orange peel on the boulders."

"In order that his saintly shade may have risen and fallen with the tide for a few centuries," said Kate; "but I am glad that the room of his tortured wife is shut up; there was little to endear her to it in life, and therefore as an orthodox phantom she should be wildly attached to it now."

"Ah, it is all very well," Edwards exclaimed in a foggy way; "but how do you account for the numberless records, the universal impressions as to spirits? Of course though—that is, there is no knowing—I mean who knows, you know?"

The next morning the party broke up, all the visitors left except Weston and I, and we remained over the following day to dine with two or three young fellows, late pupils of jolly Dr. Hambiyn Hill of Seaford, who were down from the hospitals for the holidays, and were spending a day or two with their old tutor. The Doctor's hospitality and sterling humor drew us quickly through a long evening; it must have been near midnight when we left his door to walk back to Hollywood.

It was a sharp, moonless night, and the stars were blurred with halos of mist; still there was light enough for us to find our way, as we turned up our coat collars and followed the path in the undercliffs. Not a breath of wind was stirring, and the waves were only heard as they now and then flung themselves in flirts upon the pebbles. This dreary stillness was in no way relieved by the warbling of a distant owl, which came tooliooing down the valley from the ancient elms around Seaford church, until it was muffled by the rising cliff. Here the tackling of a flagstaff loomed against the sky like the mast of a spectre ship, and told us of the last house in the village; soon, too, we passed the murky fishing boats, which looked like monsters sleeping on the sand, and in a few minutes we found ourselves in the denser solitude of the rocks. I do not remember that we were conversing much; perhaps we were influenced somewhat by the hour and place, and were content with reflection and our cigars; we must have been half way back to Hollywood.

"Hark!" cried Weston, as he halted a little in advance of me.

A voice was floating about the coast, ahead of us, a voice faintly rising and falling in the distance as it trolled the numbers of some sad unearthly muse. We stood silently wondering at the strange sounds as they chimed clearer and clearer among nature's monuments on the beach, and influenced us by their weird and pensive melancholy. Still nearer; then the voice was hushed. Weston grasped my arm, and following the direction his grip indicated, I saw a pale light creep slowly round a boulder at an angle in the path about a gunshot in front of us. My friend's fingers buried themselves in my arm, and my breath came quick, as a female figure, fully illumined by the light, glided into view. Draped in a white cloak and hood with a small lantern hanging from the waist, with pallid countenance and eyes cast down, and pressing a bundle of something tightly to its breast, the figure steadily approached us. We stepped under partial cover; this unpleasant wanderer would pass us, it was close—not twenty paces from us, but no, the shiver that hovered over me melted into a glow; the apparition turned on its right, and sped toward the sea. It was eighty yards or more to high water mark and the sickly gleam of that sepulchral lamp kept flitting between the crags toward it. Now I have no wish to depict ourselves as bold and emotionless explorers in the premises, on the contrary, I believe that neither of us had ever been so terrified before. I also believe, should any of my readers denounce excitement under the circumstances, that had they been in our shoes they would have been just as agitated as we were. But we felt impelled to stalk this ghostly game, or rather to hover respectfully in its rear. Presently it emerged from the debris of beach and appeared plainly on a broad distinct expanse of rising rock, the dark outline of which was clearly visible. It stood motionless as a statue for about a minute, then a piercing wail seemed to ring through every crevice of the cove, and the figure was gone. We pushed on to the rock, and standing on it, we could see nothing save the dark sea and hear nothing but the low murmurs of the waves. We walked cautiously to the edge facing the sea, directly below was a black, still body of water, a narrow pool evidently left by high tides, whose shady depths only seemed more gloomy by reflecting the feeble glimmer of the stars.

Did not every circumstance connected with the apparition, every feature of its person and bearing and progress correspond with a description we had heard? Was not the scene of its chilling disappearance identical with the spot described in the legend—were we not then standing on Dame Rosamond's Rock?

No, my fair sceptic, I cannot offer you a mount for a triumphant canter over the picturesque waste of total abstinence; the appearance was no vapor issuing from the cellar; it was not a structural arrangement of the fumes of the Doctor's punch. And you, my metaphysical friend, I can assure you this was no smoke from the ashes of consuming study, nor the withered fruit of sleepless nights; it was neither the creatures of fantasy nor an effect of natural magic; but was a weird and mysterious truth seen and heard by both of us, and by each identified in the smallest particular.

In those days people from this part part of the coast used to have to drive to Exeter, or get there by a public conveyance, in order to start for London, and the "progress" from Seaford to Exeter, if that term can denote a backward move, usually occupied as much time as the journey from Seaford to London does now. We resolved not to mention our experiences at Hollywood, and the next morning, having sent on our portmanteaus and bade adieu to our kind host and hostess, we walked over the cliffs to Seaford to take passage to Exeter by that locally famous chariot, the Bus.

We thought, of course, of the mystery of the night as we looked down through a cloud of chattering jackdaws on the rocks below. As we passed old Ayers's place the charming Agnes came hurrying toward us on her way back from Seaford.

"A glorious day, Miss Ayers," cried Weston as he presented me.

I willingly admit that Agnes looked every inch a beautiful woman, fresh in the bloom of health, and free and piquant as the crisp, clear morning air we breathed.

"How an atmosphere like this," said I, "brings out the scenery; how sharp the grand outlines of the coast appear; they must be the features of an old friend to you, Miss Ayers—one that it would be painful to miss."

"Yes; there is a charm about my home and its surroundings for me. I love the hills and valleys, and the cliffs and rocks, and their old-time stories and traditions."

"Ah, their traditions?"

"Yes," cried Agnes, looking in a queer way at the horizon, "the local deeds of daring and bits of romance, and the neighboring ghosts, you know."

"Ghosts?"

"Yes, of course; but that reminds me; do you believe in dreams? I had the queerest and most vivid dream last night. I dreamed that I was one."

"I am very glad that your looks belie your dream," said I, "we have had enough—"

"One moment, pray," said Weston, as Agnes turned to go, "can you not favor us with some remembrances of phantom land?"

The odd look seemed to strengthen as she replied: "You must not believe me then; not that it matters much now, for although I have fancied myself among the shadows before this and have enjoyed it, I doubt if I shall mingle with them again. This is all I know," she exclaimed, averting an exclamation of mine, "but mark, 'twas but a dream. I thought that my good father had been attending to some final business transactions with a gentleman in Cherbourg; that as he and his comrades were looking after the fruits of their last enterprise among the rocks, it was feared that certain of the coast guard, who were known to entertain a very proper dread of the supernatural, may be visiting the neighborhood and interfering with the rewards of their industry. It seemed to me, so enthusiastic was I, that I played the rôle of the ghost of Hollywood Manor, with whose history of course you are familiar, in order to scour the coast of intruders. You seem interested; well, the ludicrous part is to follow. I fancied also, so tricky are the whims of dreams, that I had received my cue from my father at the appearance of two honest gentlemen who had been dining out, and who were mistaken by him for the watch; it was while apologizing to them for having lured them to a rehearsal of the tragedy and for having left them bewildered and shivering on Dame Rosamond's Rock that I awoke."

The strange expression gave way to a titter, and before either of us could stammer a response, Agnes had disappeared in her father's garden.

Two men never descended the eastern slope of a cliff with a more reflective and humble bearing than did we; it was not until after we had gained the quarter deck of "The Bus," that I ventured to remark to Weston that for "a poem incarnate, born of a goddess in a grotto," the young woman had a very practical turn of mind.

WINTER TALKS ON SUMMER PASTIMES.

VI.—ABOUT SOME OF THE DISTINGUISHED ANGLERS OF OUR TIME.

Though he in all the people's eyes seemed great,
Yet greater he appeared in his retreat.
—*Sir J. Denham.*

IN the long catalogue of honorable anglers are the names of apostles, kings, princes, priests, poets, bishops, statesmen and philosophers—men who made history, ruled nations, honored the church, dignified humanity, and left the impress of their scholarship upon all the centuries. And what they did they did all the better—more wisely, more humanely, and with a higher conception of the sacred character of the work assigned them—because they had the contemplative habit, proverbial patience and gentle spirit of the simple wise men who love to go a-fishing.

It has been my fortune to know and to have "camped out" with some of the well-known men of our own time, and I have always found them as companionable and merry-hearted as the most humble of the brotherhood. If there was any difference in the zest and enthusiasm with which each class plied their vocation, it arose from the fact that to the former the pastime was in greater contrast with the social and official conventionalities which held them more closely in their chafing trammels, and so gave them a keener appreciation of the freedom which came to them in the quiet places to which their love of angling led them. To all such an "outing" was not simply a holiday; it was the unlocking of their official prison house; the lifting of a leaden weight from their weary brain; a translation from work and worry to needed rest and absolute freedom and repose. The contrast between what they endured and what they enjoyed—between the red-tape technicalities of official life and the rollicking abandon permissible in the cosy camp on trout stream or salmon river—is the contrast between purgatory and paradise; and when the rebound comes it is felt in every cell of the brain, in every fibre of the body and in every pulsation of the heart. I knew just how a Chief Justice felt when, coming in from our salmon pools to lunch, he cast himself at full length beneath the welcome shade of a spreading pine, with face aglow and his voice tremulous with devout thanksgiving and exclaimed:

"'Bagone, my cares, I give ye to the winds.'

"Ah! old man, old man, this indeed is rest."

"Yes, my dear fellow, it is pleasant and—jolly," was my response, as I ripped off a piece of fresh hemlock bark to serve as a table for our humble repast.

These ripples of ecstacy; these indefinable heart-zephyrs; these foretastes of a higher felicity, which drop into the soul like golden sun-glints through the quivering leaves of the waving forests, are among the unpurchasable luxuries of the appreciative angler, and come to no other in such full measure.

Vice-President Wheeler is one of the distinguished anglers of our own time. His visits to the Saranacs and adjacent waters were and still are as regular as the seasons. His home is in close proximity to the best fishing grounds in the State, and he has grown up as familiar with all of them as he is with the various rooms in his own domicile. He has been a member of our State Legislature, has repeatedly served his district in the House of Representatives, been Vice-President of the United States, and a busy man always, but he has never intermitted his annual visits to the beautiful lakes which make a terrestrial paradise of the far-famed Adirondacks. When, years ago, he was talked of for the high position which he subsequently filled, I ventured the prediction that he would take no office that would preclude him from these annual visits to angling waters. In 1876 "Hayes and Wheeler" were the candidates of their party, and I was proclaimed a false prophet. But I not only knew my man, but the fascinating pastime of which he was a votary, and the result vindicated my prediction. He more than once mysteriously disappeared from his place as presiding officer of the Senate, and while others were guessing his whereabouts, his more intimate friends knew he had gone a-fishing. His robes of place were laid aside for the garb of the angler, and the restraints and formalities of his office for the quiet and freedom which can be found nowhere so perfectly as in the primitive forests and on the crystal lakes and flowing rivers where the veteran angler finds his most refreshing rest and highest delectation.

Although the ex-Vice-President is as skilled in all the mysteries of the craft as he is in all the intricacies of the civil law, and with all the profoundest principles of statesmanship, he affects the troll rather than the fly, and is oftener seen leisurely floating over the silvery surface of the beautiful lakes than casting in either brook or river. While this mode of angling does not come up to the highest standard of the art, and fails to satisfy the more ardent, robust and enthusiastic of the brotherhood, it is full of attraction and affords supreme delight to the more reposeful and contemplative. Indeed, the most enthusiastic of the craft—even those who fancy they would soon weary of the sport if they could not "cast" for their prey—are often lured by the pleasure available to those who spend the sunny summer days casting along the picturesque shores and among the fairy-like islands of our charming inland waters. Every measure of the oar reveals some new bit of landscape to be admired. Sunshine and shadow are ever busy painting pictures of ever-varying beauty. The gentle summer zephyrs float down from the forest-crowned mountains like heavenly benedictions. The balmy air, as free from the germs of disease and the odors of decay as the mind of the angler is from strife and contention, fills his lungs as full of invigorating elixir as his heart is of gratitude and good will. Those who have felt all this—and all of us have—will not think the less of our distinguished fellow citizen because he mostly angles with the troll, and seeks his pleasure and recreation in moving to and fro upon the lakes, which sit like sparkling gems among the everlasting hills of the far-famed Adirondacks. I hope, when my right hand shall forget its cunning, and when from old age or decrepitude I shall have fought my last battle on salmon waters, to be able to glide gently toward the dark river in the quiet and peaceful and happy way in which my honored friend has so long found his highest pleasure and most perfect repose.

Gen. Arthur, now President of the United States, is also a well known "brother of the angle." He has all the best qualities of the most famous disciples of the gentle art. He is patient, courteous, companionable, enthusiastic and expert. He is, withal, an ardent lover of all that is grand and beautiful and picturesque in nature. As I have said of another I can say of him, in all that moves our sensibilities and kindliest sympathies he is as impressible as a child and as gentle as a woman. In spite of the rough school in which he has been a life-long pupil, his heart is "open as day to melting charity," and his poetic tastes enable him always and everywhere, to see

"Sermons in stones, books in running brooks,
And good in everything."

His love of the art is the outgrowth of his esthetic susceptibilities, and this love will remain with him long after the dazzling glories of office shall have lost their charm, because the beauties of nature are as varied and exhaustless as the munificence and majesty of their beneficent author. The pleasurable emotions they excite, like the eternal principle mysteriously linked to our finite humanity, never die. Than Gen. Arthur no man can pitch a tent more quickly, adorn a camp more tastefully, cast a fly more deftly, fight a salmon more artistically or bring him to gaff more gracefully. I owe to his courtesy the opportunity to kill my first salmon, have been with him in every phase of an angler's experience, and know him to be the peer of the most accomplished and most appreciative of the masters of the art. It has been his good fortune to kill the largest salmon ever taken with a fly on this continent; and it was because I knew his intense fondness for the pastime that I appreciated how deeply he felt his disappointment when, after his nomination as Vice-President, I tendered him my congratulations, he said: "I thank you, of course, but I am afraid that, for this summer at least, it will keep me away from our grand old river." A pastime that could be remembered and spoken of under such circumstances must have a strong hold upon one's affections. I am sure he looks forward hopefully to the day when, relieved of the cares of his high office, he will be once more permitted to pitch his tent upon the Restigouche or Cascapedia and angle for salmon.

Gen. Spinner, ex-United States Treasurer, an octogenarian with whom old Time has dealt very gently, and whose sign manual is a type of his robust integrity and sturdy patriotism, is also one of the brotherhood. Long before his home friends sent him to Congress or President Lincoln made him the custodian of the treasury chest of the nation, he had become intimate with the best angling waters of Northern New York. With him the pastime was a delight, less because of the fish to be taken than because of the pleasant places to which their capture led him. He was a born botanist as well as a born angler, and during his later years he was quite as happy gathering the rare plants and ferns and flowers he met with in his forest walks as in catching trout. I have journeyed with him through the whole length and breadth of our Northern forest, and I never journeyed with a more happy or entertaining companion. While in Washington through the terrible years of the war, he found needed rest in frequent rambles along the Potomac gathering flowers and angling for bass. His office, from which he distributed thousands of millions of dollars without the loss of a farthing was a perfect museum of floral and botanical specimens and of all the paraphernalia which go to make up an angler's kit. And now, at his home in Florida, although he long ago passed the allotted life of man, the same habits remain with him and the same pleasures come to him from these cherished pastimes of his earlier years. He would, perhaps, all the same have illustrated in his life the virtues of an honest man if Providence had not, in addition to a vigorous constitution, given him the temperament and taste of an angler, but the fact that he is an angler we may be sure abstracts nothing from the high qualities which enter into the mental and moral structure of an honest man. May he yet live many years to fish with leaders as tough as his constitution, and with rods as elastic as his humor and as stable as his fame.

Judge Edmunds, the distinguished Senator from Vermont, has been for many years a regular visitor to salmon waters. He has fished many of the best rivers of the Provinces, and is as expert as he is enthusiastic in the practice of the art. Of late years his daughters have accompanied him and shared with him the great pleasure to be derived from these annual visits to the quiet places where salmon and sea-trout gather in their season for the delectation of the angler. One of his daughters was long an invalid, and although she was temporarily benefited by these summer sojourns in the silent woods, she recently "entered into rest." Hereafter the pleasure the honored statesman may derive from his angling excursions will be hallowed by the memory of the heart-gladdening companionship of the "loved and lost."

Judge Folger, the present Secretary of the Treasury, is also fond of the angle. A coterie of genial gentlemen have lodges on the banks of Geneva Lake. The Judge is chief among them in skill and enthusiasm. He has been hoping for years to accompany Judge Hadley, his near neighbor and intimate friend, in his annual raid upon the king of fishes; but he has always had the misfortune to be so tied down by the galling withes of public responsibilities that he has never been able to pass beyond the metes and bounds of his official parish for the length of time needful to make the trip and enjoy the longed-for luxury. A seat will be reserved for him in our cosy tent until a kind Providence shall enable him, unhampered by any special obligation to an exacting public, to try his 'prentice hand on the lordly salmon.

Although Gov. Seymour may not be technically classed among the brotherhood, he has the simple habits and esthetic tastes of the contemplative angler. No one has a nicer appreciation of the beauty and grandeur of forest scenery, or of the beneficent influence upon mind and heart and body of an occasional sojourn in the silent woods. It is a rare pleasure to listen to his graphic descriptions of what he has seen and felt and enjoyed during his rambles in the Adirondacks. Unlike most of the visitors to that picturesque region, he was most charmed by his winter excursions, when the solitude of the woods was doubly solitary, and when the mid-winter camp-fire gave an aspect to all its surroundings as weird-like as it was fascinating. "You ought to go to the woods in mid-winter," he said to me on one occasion. "You will never have seen them in their sublimest grandeur and magnificence until you do." The very last conversation I had with him was on the always interesting subject to the angler of fish food, and the reasons why some streams are so much more prolific than others. His theory is the existence of a weed which attracts to itself and holds, if it does not produce, a species of insect or animalculæ of which fish, especially trout, are fond, and upon which they thrive. This weed can, he believes, be transplanted and should be introduced into all waters where trout are found. A treatise from his pen on this subject would be an important and valuable addition to the multitude of papers on practical themes which he has written. As one of our honored fish commissioners, such a treatise would come within his official province, and form an important addition to our piscatorial literature. Who will say what influence this love of the silent woods and the peaceful repose of rural life has had in moulding and developing the social virtues and pure public character of this unique and distinguished statesman? None of our public men have lived more circumspectly. His declining sun reflects a mellow light and will set in unclouded lustre.

Chief Justice Ritchie of New Brunswick, and Chief Justice Gray of Massachusetts (now of the Supreme Court of the United States), were two of the merriest men I ever met on angling waters. The former, though venerable in years, had all the ardor and enthusiasm of lusty youth, and was one of the most persistent anglers I ever encountered. He cast with the skill of an expert and fought his fish with a dash and impetuosity as exciting as it was masterful. Chief Justice Gray, with less experience and more deliberation in casting and killing, was like his brother chief in his intense love of the sport and in appreciation of the enjoyable possibilities of camp life on salmon waters. Among the picturesque memories of these two eminent jurists which remain with me is this: Chief Justice Ritchie had struck a large fish about the going down of the sun. Failing to return to camp before dark, his brother chief became alarmed lest some mishap had befallen him. Whereupon he hastily extemporized a number of birch-bark torches, and started out to the rescue. The lost chief was found enveloped in darkness, sturdily fighting a huge fish among rocks and rapids as impetuously and as resolutely as if the chances were not ten to one that at any moment his canoe would be wrecked upon some one of the hundred boulders which made the rapids directly below the pool in which he had hooked his fish a boiling cauldron. As Chief Gray approached him with his flaming flambeaux, the happy angler, in a voice which overtopped the thundering of the rushing rapids, in reply to the query, "What can we do for you?" exclaimed:

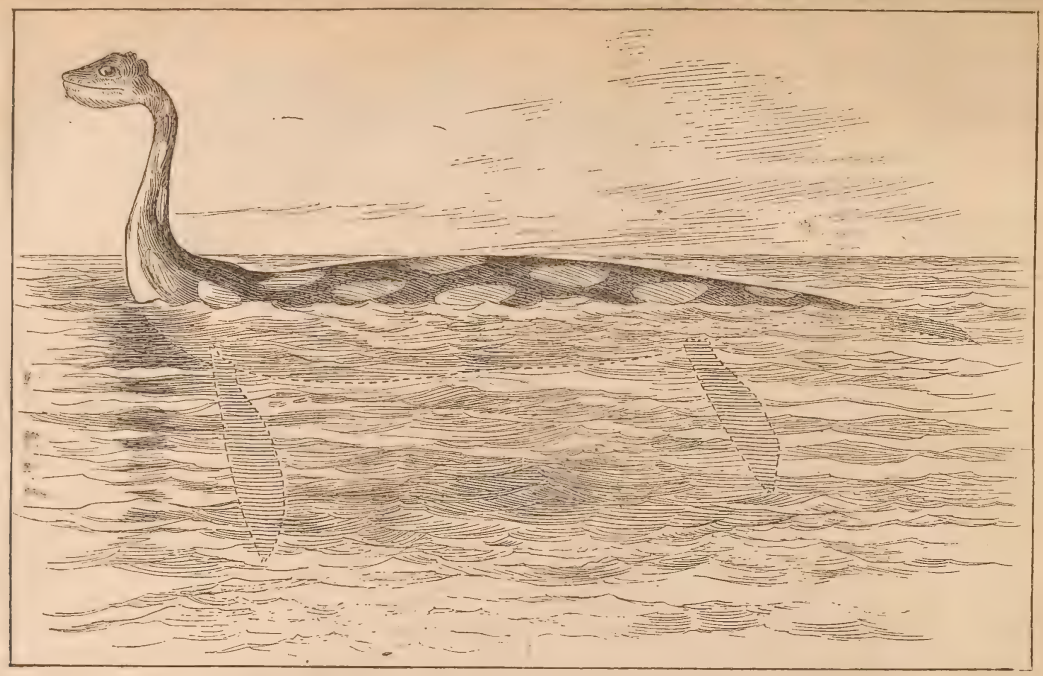
"Give me but light, Ajax asks no more,"

and, amid the ringing cheers of his admiring rescuers, after a further half hour's struggle, a thirty-pound salmon was gaffed, and these two jolly jurists, assisted by their equally excited guides, proceeded to camp—Judge Gray leading as corps commander of the most unique torchlight procession that ever gave escort to a conquering hero on land or water.

The unusual length of this rambling "Talk" prevents me from referring to several noted churchmen and scholars with whom I have either camped or met in my forest tramps. Prominently in my mind as I write is an eminent and beloved Bishop, whose fondness for the pastime often leads him to the silent woods and crystal trout streams within easy reach of his cathedral parish. His appreciation of the dignity as well as of the churchly and fascinating character of the art may be inferred from the fact that he deems it no disparagement to his sacred office to be seen bearing with him homeward his well-filled creel and the tidy fly-rod which had been his only companion through the long summer's day. If any cavil at this apostolic habit of the reverend bishop, I would say to them as good old Izaak said to similar stupid critics of his own day: "Indeed, my friend, you will find angling to be like the virtue of humility, which has a calmness of spirit and a world of other blessings attending upon it."

G. D.

New Publications.



"THE STILL-HUNTER."

In his "Still-Hunter," Mr. Van Dyke has given to rifle shooters who desire to become hunters, and above all to the tyros who have yet to take their first lessons in still-hunting, a very useful book. Its value is more especially to those who are quite without experience, and to such it will, if attentively read, give the general theory of deer hunting. No book, however carefully written, or how fully illustrated by examples, can teach the reader the difficult lesson of the woods or convey to him the knowledge which is necessary to success in hunting. This can only be acquired by long experience. In deer hunting there is no royal road to knowledge. A well written primer of still-hunting is, however, of great use, for it may serve to impress upon the student who is venturing into this new and difficult field of research, the importance of the three cardinal principles by which success may be attained, viz., caution, patience and deliberation. Keeping carefully in view these principles, experience will soon give the beginner hints as to how their practice should be modified by circumstances. Mr. Van Dyke's deer hunting has evidently been done chiefly, if not altogether, in Minnesota and in Southern California, and these two sections of country, affording as they do widely different conditions, have given him an experience which undoubtedly qualifies him to speak with authority. We wish that he had omitted in his work all reference to the antelope, for every word that he has written about this animal shows that he has seen but very little of it, and is practically ignorant of its habits. This, however, is a small matter, a trifling blemish in so excellent a book. In most of what he has to say relative to deer, their habits, and how to hunt them, old deer stalkers will agree that his ideas on the subject are, as a whole, correct. There may be differences of opinion on minor points, but with regard to the general plan of the advice given, there will be but one sentiment.

The author does not confine himself to the simple hunting and killing of the deer, but goes at length into the subject of rifle shooting. His chapter on Long-Range Shooting at Game is a most excellent one, and his ridicule of the too common habit of boa ting about long shots made at game is severe and telling. People do undoubtedly make long shots occasionally; the only question is whether such shots are regarded as a test of skill or simply as accidents. We have perhaps hunted and killed as much big game as most men, and have in our time made a good many long shots, but at the same time we always think that we are doing pretty well when we kill, standing, deer or an antelope or an elk at one hundred yards, and we do not profess to be sure at anything over that distance. It is not so much the difficulty of holding on as it is of judging the distance. It is there that almost everyone fails.

The chapters on the Effect of Recoil upon Shooting, the Killing Power of Bullets, the Hunting Rifle and Flight of Balls and the Sighting of Hunting Rifles contain a vast amount that is interesting and that is worthy of careful thought; and while many hunters will disagree with the author on certain points, as we ourselves do, there is no doubt that his book will do a great amount of good.

One of the most attractive and practical features of the work lies in the way in which the author "supposes his cases." He takes the tyro into all sorts of places and into many positions of difficulty, and then very good-naturedly helps him out again, and points out to him where and how he made his mistakes. The "Still-Hunter" deserves high praise.

ANIMAL SEEN BY CAPT. HENRY CHAPPELL, OFF MONTAUK POINT.

Natural History.

"THE SEA SERPENT."

BY DR. W. O. AYRES.

The absurd title placed at the head of this article is used simply in deference to popular prejudice and belief, and that all may know who it is that we have selected as the hero of our story; and not at all because the name gives any true idea of his nature. On the contrary, we hope to show that although serpentiform, he is not snake-like, and while we do not propose to deny the probability of his being reptilian in physical relationship, we allege that the title above quoted is entirely a misnomer.

For many years past reports have been circulated, from time to time, of the appearance along our northern Atlantic coast, of large marine animals, differing completely from whales or any other of the well recognized inhabitants of the ocean. They have been seen by great numbers, many hundreds of people, some of them, of course, not specially worthy of credence, but many being, on the other hand, utterly beyond the possibility of suspicion as to their good faith, their opportunities of observation, or their clearness of judgment. We should believe them implicitly in regard to anything else; should never think of questioning whatever they asserted to be true.

But whenever these same persons come in with a report that they have seen "the Sea Serpent" a smile of incredulity greets them at once. Any quantity of what is popularly called "chaff" is thrown at them; very affectionate inquiries are suggested as to the state of the whisky jug at the time; how near they had got to the bottom of it—"Say, how many miles long was it you thought he was?"—and all that sort of thing; until in the minds of probably the great majority of people, the existence of any such animal as we have above indicated, is accounted incredible. If they are uneducated persons, it is set down as a good joke, something to laugh about and to ridicule; if they are higher in the grade of intellectual development, they reckon it one of what Sir Thomas Browne calls "vulgar popular errors."

The occasion for this incredulity is not difficult to trace; it is not new, it is on the contrary very old. There are doubtless two reasons for the incredulity. One is that whatever, especially of a physical nature, involves mystery, naturally excites suspicion, and we demand proof, and the other is that when in connection with that mystery false and exaggerated statements and ideas have been current for hundreds of years, our suspicions are very reasonably intensified, and the proof must have confirmation strong as "Holy Writ" before we yield it our assent.

Now in relation to the "sea serpent" there is mystery, much mystery. Its tales are all of the open sea; all bear reference to some huge beast seen at a greater or less distance, and seen commonly for but a very limited time—perhaps only a few minutes. No one has ever laid hand upon him, dead, when accurate measurements, descriptions and drawings could be made. No one has ever photographed him, nor made a drawing while its object was still in sight, and errors of the drawing could be removed by verification and correction. No specimen of the animal has ever been found cast up on any seashore, nor does there exist in any scientific collection or museum so much as a single bone, which could possibly have come from an unknown animal such as we have indicated.

Here then is the element of mystery involved to a sufficient extent to justify no small amount of skepticism. Now let us add to it the fact that in the dim twilight of the past it is found associated with religious beliefs, and we shall see that the mist grows thicker, and that lines of exaggeration have spread, which, while blended with truth, hold also so much of absurdity as to make it extremely difficult to separate the one from the other. We all know the

"Sea snake, tremendous curled,
Whose girth encircles thrice the world,"

And in the Snorra Edda we are told abundantly of the Midgard Serpent, the offspring of Loki, whose circle girds the world, and will till the twilight of the Gods, when it and Thor will engage in fearful strife, which will end only when each shall kill the other.

Later still we find in the accounts a little more of truth and less of fiction, but even no longer ago than 1751, when the Right Rev. Erich Pontoppidan, Bishop of Bergen, published his Natural History of Norway, he being a member of the Royal Academy of Sciences at Copenhagen, his statements bear such evidence of incorrectness, that they have afforded constant themes for jest, and it has been not uncommon to liken any particular Munchausenish description of some strange object to old Bishop Pontoppidan's tale of the sea serpent. And yet the Bishop told doubtless much that was true, and has left a record of facts of no small value. It is but right also to add that under cover of this cloud of mist and mystery many sea serpent stories have been published which were pure matters of fiction, having nothing to originate them but the brain of some idle scribbler who thought to make a pleasant notoriety by what he deemed a harmless joke.

Add to this one thing more, and we will have done. In a number of instances large objects have been seen far out at sea, have excited astonishment and alarm in the minds of captain and crew from the belief that now really they had seen the famous sea serpent, have afforded afterward opportunity for examination, and have proved to be perhaps a tree-trunk, or a gigantic seaweed, and then on the captain's report being published, have been often quoted subsequently as fair occasions for a laugh at those who are so foolish as to believe in the existence of "the sea serpent."

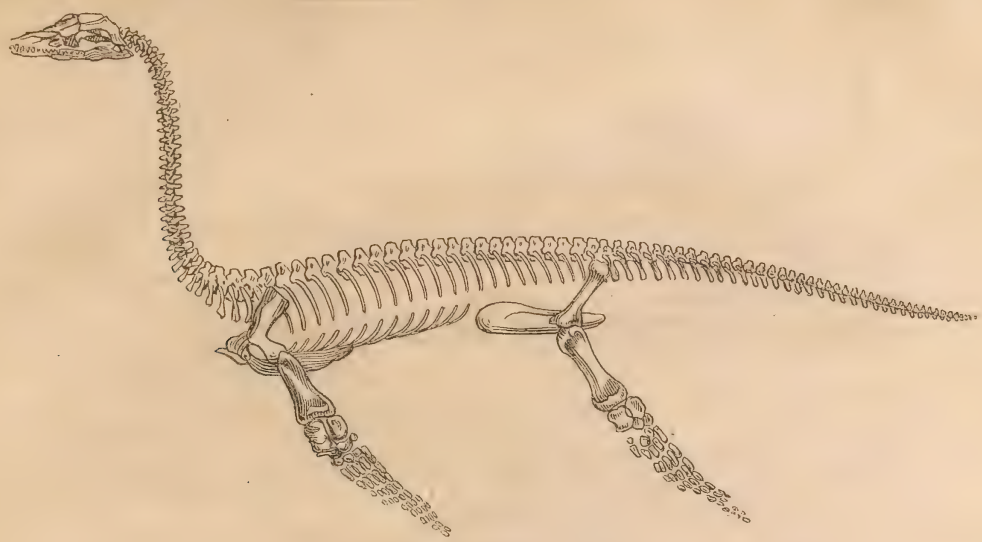
Now, though few men of science at the present day, perhaps none, are inclined to question the fact that huge marine animals, not represented in any of our collections, but which are possibly allied to some of the cnaliosaurs of the geologically long distant ages, not only may exist at the present time, but almost to a certainty do so exist, yet the popular belief has not reached that point. Within the last fifteen months, certainly not less than four separate reports have been published in the daily papers of the fact that in each case good and credible persons, credible at least on any other point, had seen some strange sea animal of great size, near our coast—two at least of these being in Long Island Sound—and in each instance the editor has seen fit in his wisdom to have a sly shot at the observers implying, doubt of their testimony.

While for those not accustomed to the sight of marine objects, a mistake on such matters might be very easy; and a common and easily understood object might readily seem a monster, and be a source of great terror, yet with those whose home and whose life have always been on the sea we can connect no such liability of error. And most especially in the case of an old whaleman, does the reason for suspecting that he should make such a mistake in regard to anything which he sees moving in the open sea, diminish till it becomes too small to be worth noticing. He has seen and watched too closely and too long every sort of whale, blackfish, killer, porpoise, sea elephant, sea lion, and seal to take anything else for anyone of them, or any of them for anything else. With very much more probability might a farmer be suspected of mistaking a sheep for a colt, or an apple tree for an oak.

And in the whalemen's case the element of fear is not to be considered as affecting the calculation, for, accustomed as they are from the necessities of their occupation to facing the dangers induced by violent attacks on the largest and most powerful of all animals known to exist, they are commonly very reckless of what they "fasten" to, so long as it is "black skin." And I have often thought that if his satanic majesty could make his appearance to an old skipper of New Bedford, Sag Harbor, or New London, in good swimming shape, the first thought would be to "get an iron into him" with particularly little care as to how quick and how hard he might "strike back." Striking back is part of the regular game, and "starn all; mind his flukes," is the word to watch out for it.

When, therefore, such a man reports that he has seen a sea serpent, I know—supposing him to be one worthy of belief on other points—that he has seen, not a string of porpoises, nor any sort of shark or group of sharks, nor a mass of kelp, nor a sea elephant or other large species of seal, nor any known species of whale. He has seen something manifestly different from them all, and from any other object which ordinarily floats on the sea.

And it is because I have three instances to put on record, in each of which the evidence comes from men who had had long experience in whaling, and who report only that which each one himself saw, that I have undertaken to group together briefly and in popular form a few of the facts which go to make up the past and the present of sea serpent lore.



The first record relates to an event of the summer of 1881, and takes us but a little way from home. The time was the twentieth of July; the place was near Montauk Point, the eastern extremity of Long Island; the observer was Capt. Henry Chappell, of New London, Conn. I have made investigation sufficient to satisfy myself that Capt. Chappell is a man whose word is as fully and readily to be trusted as that of any other intelligent and worthy member of the community. Were he speaking of any other subject than "the sea serpent" no one would doubt that he told a simple verity. Well, we will dismiss all ideas of sea serpent—call it something else. This is what he saw.

On the date above mentioned he was sailing, about six to seven miles N. E. by E. from Montauk, between the Point and Block Island. They were in twelve-fathom water, with a very light breeze, the boat making small headway. Suddenly just off the port quarter, and a little abaft it they saw the object which we are about to describe, and which the accompanying illustrations are designed to represent. Its distance from the stern of the boat was only about thirty yards. Its direction was such that they must necessarily have passed the spot where it lay, and as they certainly would have seen it in passing, the only inference is that the animal had just emerged from the water when it met their vision, and that it must have come up very gently, since otherwise the rush of so large a body through the water could not have failed to be heard at such a short distance. It was lying entirely still, and continued so to lie for many minutes, giving full time for careful observation; of course the time was not taken, but Capt. Chappell thinks it may have been twenty minutes before they lost sight of it.

They saw a slender-necked animal, with an elongated body, the entire length being as they all judged fully equal to that of the boat in which they were. I have measured the boat, she is forty feet long. The neck was raised and the head bent forward, the elevation of the head in this position being about five feet from the surface of the water. The entire length of the animal was visible, the back and sides being out of water, while the tail portion was slightly submerged, but not so much so as to prevent its being plainly seen.

The head was about three feet long, "looked something like an eel's head in shape, all but its mouth." The mouth was very large, open far back, and several times during the period of observation the animal raised its head and "gaped," opening its enormous mouth, as represented. At each time that it "gaped" it made a gurgling sound, as though in its throat, that being the only sound emitted by the animal at all. Capt. Chappell is perfectly certain that it did not "blow," thus separating it at once from the whale tribe. The testimony of an old whaleman on this point is specially valuable, for it is the one thing to which his attention would most naturally go, and it is one on which in other cases there has been a slight discrepancy. Even during the wide opening of the mouth no teeth were seen.

The distance from the head to the swell of the body was estimated at about five feet; the diameter of the neck near the head at eight inches, of the neck at its lower part twelve inches, of the body at its thickest three feet or a little less, of the tail near to its extremity twelve inches, from which it tapered very abruptly to a blunt point. These dimensions the Captain gave me by comparison with various objects

SKELETON OF PLESIOSAURUS.

near us, as we talked, the neck, for instance, with the mast of one of the boats at the wharf, the body with the body of a horse standing nigh. They represented the impression which the size of the sea animal had made upon his eye. The length from the neck to the tail was judged to be about twenty-four or five feet, and that of the tail to equal that of the head and neck.

The eye was very large and conspicuous; the animal seemed to be looking at the boat, though that probably was an error.

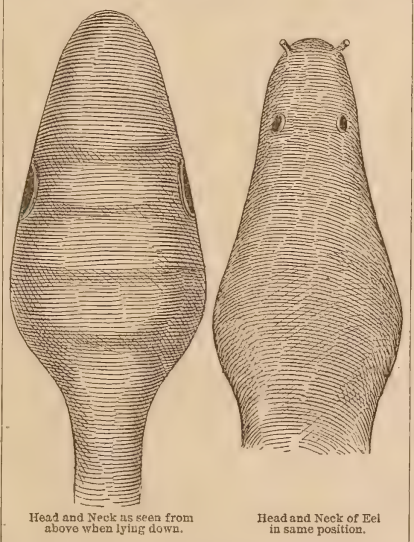
There were no fins whatever along the back or neck; of this Captain Chappell was entirely certain, for he said he noticed it particularly. I questioned him specially as to it, for in a number of instances a sort of mane has been reported as existing on the neck. I asked if there were any protuberances on the back, such, for example, as are found on the hump-back whale. No, there were none; the only thing was that the top of the head was marked by three or four broad transverse ridges or folds, as shown in the illustration.

No "flippers" or fins below were detected with certainty, but Captain Chappell was confident that they existed, for as the animal eventually moved and disappeared, he noticed that the body and tail lay still—they took no part in the process of swimming, as they would have done in a long-bodied fish like an eel—and consequently there must have been means of propulsion beneath. He thought he saw where they united with the body, but he could not be certain of it. The tail had no flukes like those of a whale; it seemed to end in a very blunt point—though it is quite possible that viewed in cross section it might have been flattened.

The skin showed no signs of hair, like the "pelt" of a sea elephant or sea lion; it was smooth and naked, like whale skin. That along the inferior surface of the neck looked as though it might be somewhat roughened and corrugated. There was no indication anywhere of scales or plates.

The color of the animal above, Captain Chappell compared to that of old kelp, that is to say, a very dark greenish olive, marked in various parts with elongated and oval spots of a similar hue, but much lighter. The throat and inferior surface of the neck he described as resembling in color the flesh and skin of a sturgeon which at the moment lay near us, which was a blending of yellowish and rusty red.

The animal, after remaining, as stated, still and quiet for a certain length of time, lowered its neck gradually till its head was level with the water and beneath it, and then started with a steady motion, but quite rapid, directly toward the boat, diving deeply as it did so. The expectation was that he would attack them, and Captain Chappell remarked, "When he comes up next time, boys, he will be alongside, and if he is I will get an iron into him," but he did not come up, and they saw no more of him at that time, perhaps not at all. That night, about ten o'clock, they being not more than a mile or two from the place where they had seen him during the day, a large object rose with a rush through the water, some ten feet above the surface, within a very few feet of the boat, and as suddenly went under and disappeared. Captain Chappell judged it to be the head and forward part of the same animal, though not with certainty.



The next event is within the experience of Capt. James F. Smith, also of New London. Capt. Smith is at present in command of the steamer Manhanset, running between New London and Sag Harbor. I know him well and feel no hesitation in vouching personally for any statement made by him, as being worthy of entire credence.

In the year 1864 he was mate of the whaleship Florence, Capt. Stevens. On the 14th of November they were in lat. 48° N., long. 178° W., bringing them, of course, in the North Pacific, about 400 miles from the nearest land, which was the Fox Islands. A heavy gale was blowing, with a rough sea, and they were under short canvas. The main topsail sheet had just parted, and as officer of the watch his whole attention was engrossed in seeing to the repair of the injury. All at once the Captain, standing near him, called out, "For Heavens sake, Mr. Smith, look there," pointing earnestly at some object, broad off the starboard beam. He looked and saw with entire distinctness the object to which the Captain pointed. The exigencies of the service demanded his care on the instant in board and for a minute or two longer. As soon as he could turn his eyes outward he looked again and saw the same object. It was but for a moment, and duty once more called him away. When he could look again it had disappeared.

He saw a large, round, elongated head, supported on a slender neck, the head bent forward so as to lie horizontally while the neck was vertical. As a heavy sea rolled over it the whole was buried, and then the next instant in the trough of the sea the head was perhaps six feet or more out of water. The distance he reckoned at about a cable's length (120 fathom), and all that he could observe, except the general form, was that the prevailing color was dark. Of the remaining portions of the animal he saw nothing, but what he saw he saw distinctly.

Here are no extended observations, and the report by itself is not much, but as a part of the whole it is of no inconsiderable value. It is the testimony of a man who knows every form of whale recognized among the whalemen, has killed too many sea elephants, sea lions and walrus to mistake one of them for anything else, and whose word is good for whatever he states.

Capt. Smith saw a head and neck, different from those of any recognized inhabitant of the sea. The sort of body and tail which made up the complete animal remains a matter of

Head and Neck as seen from above when lying down. Head and Neck of Eel in same position.

uncertainty; but he says that if I had attempted to make a drawing of what he saw, I could not have come nearer to the representation of it than in the head and neck of the figure in which I have delineated as nearly as I could the one seen by Capt. Chappell. That was drawn as nearly as I could get the idea from the Captain's statements, and then submitted to him for correction and for recorrection. He considers that it represents faithfully the animal seen by him off Montauk.

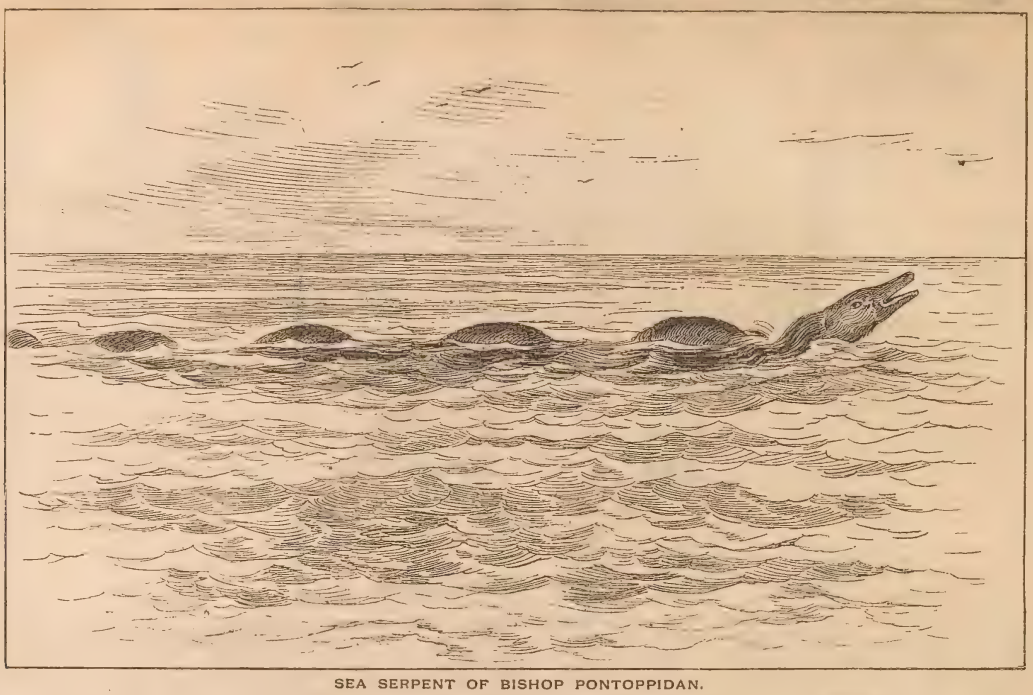
The third instance to which I referred comes to me somewhat more indirectly, but I have no question whatever, that what I report is the simple truth. The observations were made by Capt. Henry Fordham, of Sag Harbor, in 1841. My record comes not from Capt. Fordham himself, but from those to whom he made the statements, and I do not doubt that they described to me correctly what he saw. He was a whaleman of experience and a worthy and credible man.

At the time specified he was in command of a sloop bound from Long Island to Boston. He was crossing Nantucket Shoals, being then about six miles north of the old South Shoal, in twelve to thirteen fathoms of water. A thick fog was prevailing, when suddenly he heard a rushing sound, and forthwith hailed the watch forward to keep a good lookout, having no doubt that some craft was approaching. The sound continued, but no sail could be made out, when, turning his eyes lower, he saw, but a few yards distant from him, the head and neck of an animal such as he had never seen before. The head, he said, was very large, he thought three feet and more long, with a very conspicuous eye, which looked "ugly." The head was bent forward, supported on a neck much smaller than itself. The neck was round, erect, and carried the head about four feet above the water, which at the time was very smooth. The color was dark. No mention was made of any fin or "mane" on the head or neck. The sloop was making but slow headway—only about two knots; the animal was moving in the same direction and with more than double her rate of speed, as the water was curling away from the uplifted neck, thus causing the rushing sound first noticed. He turned his head toward them, as though watching the vessel, but swam steadily forward. The body was submerged so as not to be distinctly visible, but from the wake made Capt. Fordham judged he had no tail-flukes, and as there was no sign of undulations, he must have been propelled by paddles beneath. When the lookout forward hailed that the animal's head was right opposite to him, the tail, indistinctly seen, was believed to be even with the taffrail. This would make his entire length sixty to sixty-five feet.

Taking fright apparently at some noise on board he gave sudden plunge and disappeared.

These observations are not precise, but so far as they go, they indicate an animal which was in all probability very similar to the one seen by Capt. Chappell near Montauk.

These three are all of which I have any personal cognizance, but referring, for the present, only to our own neighboring coast the number of those which have been seen, and reported by perfectly credible witnesses, is great.



In 1780, Geo. Little, commander of the frigate Boston, saw one in Broad Bay, near Muscongus Island, and chased him in his cutter, but when they had approached within about 100 feet and the marines were about to fire on him, he dove and disappeared. He was not less than forty-five to fifty feet long, with a snake-like body, and carried his head four or five feet above the water.

Rev. Abraham Cummings saw one in Penobscot Bay in 1802, as reported to the Hon. John Q. Adams, secretary of the American Academy of Arts and Sciences. He says that "the head was rather larger than that of a horse, but formed more like that of a serpent," the head and neck raised above the water, color blue with a black ring around the eye, form snake-like, length not less than sixty feet. He saw him at a distance of ten rods.

In 1817 one was seen for a number of days in Gloucester Harbor, by many hundreds of people. Fortunately one of these was Col. Thomas H. Perkins of Boston, a man whose standing renders perfectly absurd the thought of questioning his veracity. He published his observations in the Boston *Daily Advertiser* of Nov. 25, 1848, doing it then because of the report made at that time by Capt. McQuhal of the British Navy. Col. Perkins saw, with a fine glass, at the distance of a third to half a mile an animal of snake-like form, about a hundred feet long, of a chocolate color, with the head flat in the water (though he says that Capt. Tappan, a man well known to him, saw the animal swimming with the head raised two to three feet above the water) and that its motion was "evidently the vertical movement of the caterpillar."

In 1819 Mr. Samuel Cabot saw a similar animal near Nahant, which he described in a letter to his friend, Col. Perkins, dated Aug. 19. The social standing of Mr. Cabot gives equal value to his assertions with that recorded above. To suspect either of the two of a hoax or a false statement is simply ridiculous. Mr. Cabot says he saw "an object emerging from the water at the distance of about one hundred to one hundred and fifty yards, which gave to my mind at the first glance the idea of a horse's head. As my eye ranged along I perceived at a short distance eight or ten regular protuberances, and at a short interval three or four more." The head was elevated about two feet above the water. The length of the animal, he judged, by comparison with a whaleboat near it, to be not less than eighty feet.

June 6, 1819, Capt. Hawkins Wheeler, of Fairfield, Conn., in the sloop Concord, saw, fifteen miles N. W. of Race Point, an animal, to the published account of which he, with his mate, Gershom Bennett, also of Fairfield, made affidavit, before Theodore Eames, justice of the peace. "The creature was entirely black, the head, which perfectly resembled a snake's, was elevated from four to seven feet above the surface of the water, and his back appeared to be composed of bunches of humps, apparently about as large as a half barrel. I think I saw as many as ten or twelve. I considered them to be caused by the undulatory motion of the animal." "The surface appeared to be smooth, without scales—his head was a proper snake's head

SEA SERPENT OF BISHOP PONTOPPIDAN.

—there was a degree of flatness, with a slight hollow on the top of his head; the eyes were prominent and stood out considerably from the surface, resembling in that respect the eyes of a toad. I had a full view of him for seven or eight minutes."

May 11, 1833, five officers of the British army, Capt Sullivan, Lieuts. Maclachan and Lyster, Ensign Malcolm, and Ordnance Storekeeper Ince, saw between Halifax and Mahone Bay, perhaps twenty miles off the land, "the head and neck of some denizen of the deep, precisely like those of a common snake in the act of swimming, the head so far elevated and thrown forward by the curve of the neck as to enable us to see the water under and beyond it. There could be no mistake, no delusion, and we were all satisfied that we had been favored with a view of the 'true and veritable sea serpent' which had been generally considered to have existed in the brain of some 'Yankee skipper.' The head of the creature we set down at about six feet in length, and that portion of the neck which we saw at the same; the extreme length we judged at between eighty and one hundred feet; the neck in thickness equalled the bole of a moderate sized tree; the head and neck of a dark brown or nearly black color, streaked with white in irregular streaks."

All of these, with the exception of the one seen by Capt. Smith in the North Pacific, have occurred on the coast of New England and Nova Scotia. They are attested in such a manner and to such a degree that if they pertained to any other subject, they would not only demand, but compel credence. I doubt if it would be possible to bring any more convincing proof at the present time that Major André was taken as a spy and was executed as a spy, than has been here adduced to the appearance at intervals on our coast of huge marine animals, to which popularly the name of sea serpent has been attached. They may be of various types; their nature we will presently consider.

The testimony of Capt. Chappell is more definite than at of any of the others, partly perhaps from the fact of having the various points recalled to his attention, while his memory was still fresh and vivid. But the others all give evidence directly cumulative upon that offered by him.

Passing now to other countries, these animals seem to have been seen on the coast of Norway, more frequently than in any other region, and perhaps than in all other combined. I do not quote the testimony of Bishop Pontoppidan, for it is much mixed with fable and exaggeration, and widely open to criticism. I copy, however, more by way of curiosity than anything else the two figures he has given, taking them from the Danish edition issued at Copenhagen in 1752.

But coming down to our own day, the evidences and the witnesses are too numerous to be individually specified. I will merely cite the conclusion reached by the Rev. Alfred C. Smith, M. A., an excellent naturalist, who published his observations in the *Zoologist*. He says, "I lost no opportunity of making inquiries in Norway of all I could see, as to the general belief in the country regarding the animal in question; but all, with one exception—naval officers, sailors, boatmen and fishermen—concurred in affirming most positively that such an animal did exist, and had been repeatedly seen off their coasts and fiords, all seemed to marvel very much at the skepticism of the English, for refusing credence to what, to the minds of the Norwegians, seemed so incontrovertible."

I will give but one example more, though I might extend them very greatly. I give this because of the rank of the observer, and because of the attention which his official position drew to it and the discussion which it excited.

When the Daedalus frigate arrived at Plymouth on her passage home from the East Indies in 1848, Capt. McQuhal made an official report to the Admiralty, dated October 11. In this report he says that on the 6th of August, in lat. 24 44' S. and long. 9° 23 E. they saw "an enormous serpent, with head and shoulders kept about four feet constantly above the surface of the sea" "at the very least sixty feet of the animal *a fleur d'eau*, no portion of which was to our perception, used in propelling it through the water." "It passed rapidly, but so close under our lee quarter, that had it been a man of my acquaintance, I should easily have recognized his features with the naked eye;" "it held on at the pace of from twelve to fifteen miles per hour." "The diameter was about fifteen or sixteen inches behind the head;" "its color a dark brown, with yellowish white about the throat. It had no fins, but something like the mane of a horse, or rather a bunch of sea weed washed about its back." Lieut. Drummond published a statement in which he says, "the fin was perhaps twenty feet in the rear of the head, and visible occasionally."

This brought into the field the great zoologist Prof. Richard Owen. His article is too long for quotation, but the conclusion to which he comes is that what Capt. McQuhal saw was simply a great seal, probably *Phoca proboscidea*, that is in English, a sea elephant. To this Capt. McQuhal replied with a sharp and possibly somewhat indignant denial, and I do not wonder at it; he had good reason. Not his seamanship, it is true, but his sea knowledge was impeached. He knew the subject about which he wrote; the professor did not. In saying this, no disrespect is intended to Prof. Owen; he has too long stood in the very fore-front of living naturalists to make such a thing possible. But it must be remembered that the animal in question he had not seen, and the Captain had, and what is the chief point of all, Capt. McQuhal was experienced in sea objects, while Prof. Owen was not. I no more believe that Capt McQuhal could have seen a sea elephant or any other seal and described it as he did, than that he could have seen a schooner and described it as a ship.

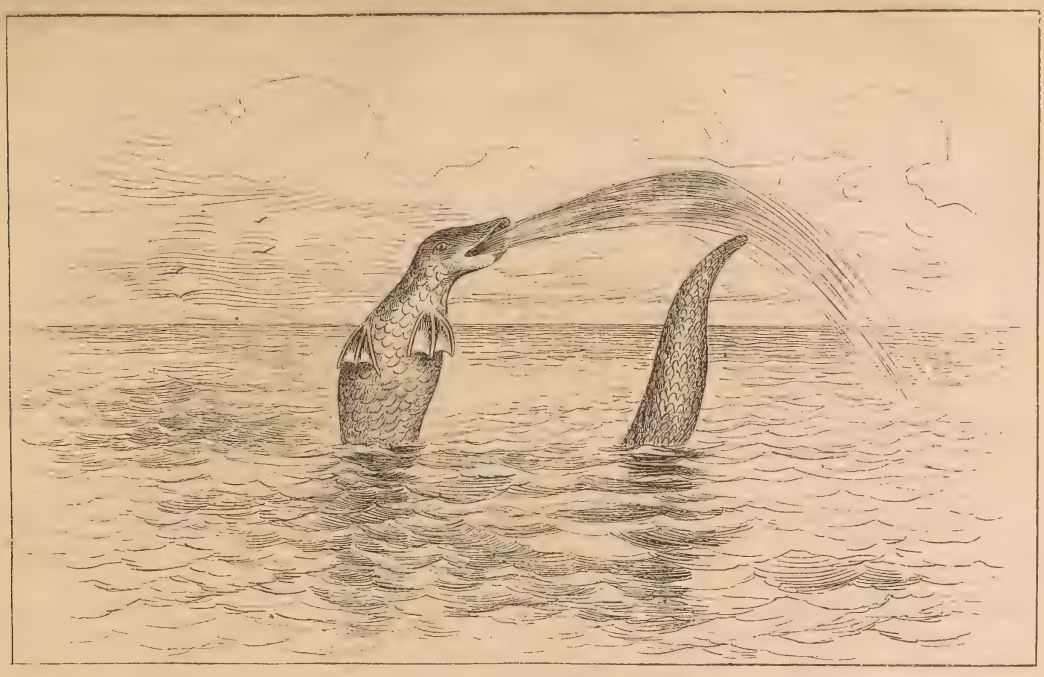
To what then do all these lines of evidence tend? Dismissing all prejudice, and taking the argument and the proof as we surely would in respect to any ordinary matter, it seems to me that we have found good reason to be convinced and to admit without doubt or hesitation, that at various times and in many instances, very large marine animals have been seen which certainly are not whales, seals, sharks, nor in fact representatives of any known living types, and that these animals while differing from each other, according to the accounts, in some respects, have yet a general agreement. They are of elongated form, have a slender neck, with a head somewhat broader, a conspicuous eye, and are of a dark color; the skin, so far as stated, is smooth, without scales. Mostly no fin is found on the neck or back, no one mentions that they "spout" like the whales, though the figure given by Pontoppidan (and which he derived from Hans Egede's reports) represents the animal pouring forth a perfect torrent from his throat, which no whale ever does or could do—of course the Bishop's figure was not taken from a photograph. As to motion, the accounts vary; some represent an undulatory appearance, but there has perhaps been error of observation, inasmuch as we know no type of vertebrate animals which swim with vertical undulations. No snake would do it, and no fish: their motion is horizontally lateral, not vertical. In others of the accounts, the body has been stated to remain quiet, even while the animal moved rapidly, and the force applied for propulsion must therefore necessarily have been beneath, probably by means of fins or flippers.

Do we know any type which will come within the range of such requirements? Look on the preceding page and see. You have there a view of a skeleton, which is not a matter of imagination; it is a common illustration, you may find it in any ordinary text book of geology. The animal is called Plesiosaurus. He is supposed to have ended his life and history very many ages ago, and yet (admitting that you shorten his neck) if you clothe him with flesh, and request him to sit or rather lie for his picture off Montauk Point, I cannot see but that you may get very nearly an idea of the animals seen there by Capt. Chappell; not that I believe he saw a Plesiosaurus, still the kinship may be good.

The Plesiosaurs were only one group among a great number of giant reptile forms inhabiting the seas and shallow waters of the Mesozoic ages, and though it was long thought that all the types of life of the fossils found in the Tertiary and Secondary rocks had passed away, yet more recent research has shown that that was only a premature judgment. We know now that Tertiary types still remain, and that especially among the inhabitants of deep water, or the open sea, we need experience little surprise at any discoveries of old forms as still in existence.

Now, inasmuch as we know that quite various types of large marine reptiles did exist, some without neck—the head being solidly joined to the body as in Ichthyosaurus—and with every gradation from that to Elasmosaurus, in which the neck comprised more than half the entire length, there seems no absurdity in supposing that here and there a straggling representative may still remain; the species in each instance having mostly passed away, with only a few survivors now in existence. This is in perfect accordance with what we know of the mode of disappearance of types in the progress of the earth's history.

Supposing this hypothesis to be correct, we should expect that now and then, at greater or less intervals, an individual might be seen; we should expect that if they were described correctly, the descriptions would vary; we should expect that they would at times raise the head above water, but that they would not "spout," and that the paddles or flippers beneath would drive them rapidly forward; we should expect that some of them would be without fin or crest on the neck, while with others such an appendage might be found. In all these points we think that the analogy between them and the animals which we have been considering holds entirely good. If so, the term "sea serpent" is, as was at first suggested, a misnomer, though there is now no probability that it will ever be changed.



If it is asked why they may not really be snakes, as well as any other reptilian type, the answer is that there never have been any true serpents inhabiting the sea with which there is the slightest reason for comparing them. There are at the present time various species of true snakes, perfectly marine, living far from land, but they are all of small size, three, four, or possibly five feet in length, and no more allied to these huge animals than is a gartersnake or rattlesnake.

An argument against the existence of the "sea serpents," so called, has been constantly urged, and even by so great an authority as Prof. Owen, that no specimen of them has ever been cast on shore; not a single bone which could have belonged to one of them exists in any collection. The argument appears to me extremely weak. Whence should such a specimen come? What probability is there that one might be found dead?

The very body of the hypothesis is that their numbers are very small, thus in the first place diminishing to almost nothing the prospect that one should be stranded. But in addition to this they are slender and heavy, not covered like a whale with blubber, and in the event of death the body would sink at once to the bottom, removing all probability, and in common cases all possibility, of even a single bone ever coming under human observation.

The body of a whale, on the contrary, being enveloped in blubber, is much more likely to float, and yet how very seldom is the body of a whale cast on shore, notwithstanding the fact of their vastly greater numbers. I doubt exceedingly if the existence of even the right whale, or the sperm whale, could now be proved from specimens found on shore, except where their death has been due to the agency of man.

That these animals are not seen more frequently is from their small numbers very natural. And then, too, the ocean is very wide. Mr. Philip H. Gosse, F. R. S., an authority not to be doubted, says that in lat. 19 N. and lon. 46 to 48° W. the ship in which he was sailed for seventeen continuous hours, surrounded by a troop of whales, of a species certainly undescribed. They were about thirty feet in length, black above and white beneath, with the swimming paws white on the upper surface—a very remarkable character. He adds—"Here then is a whale of large size, occurring in great numbers in the North Atlantic, which on no other occasion has fallen under scientific observation." Can we wonder then that an animal, or animals, existing in so small

SEA SERPENT OF BISHOP PONTOPPIDAN.

numbers as we have supposed, may be so seldom seen? Is it not rather a wonder that they come within our reach as often as they do?

We may perhaps therefore conclude that it is not so foolish after all, to "believe in the existence of the sea serpent," while we take from him his snake-like character and relegate him from the domain of mystery to that of being a simple saurian or series of saurians, though his ancestry reaches back to the days when earth was young.

May be, by and by, some lucky yachtsman may have the opportunity of immortalizing himself, by putting a charge of canister through one and thus securing a specimen such as now nowhere exists. Or one may come within the wide sweep of the explorations of the U. S. Fish Commission; no better destiny for him, and no surer means of solving all his mysteries could possibly be asked.

NEW HAVEN, Conn.

SNOWY OWLS.—Boston, Mass., Dec. 16, 1882.—*Editor Forest and Stream:* Three snowy or Arctic owls have been shot in the vicinity of Longwood. One was taken as early as November 26, the others on the 15th and 16th of this month. The average spread of wings from tip to tip was fifty-nine inches. Weight about four pounds.—F. LEWIS.

Game Bag and Gun.

GAME SEASONS.

A comprehensive statement of the game laws of America will be found in the issues of this journal for December 7 and 14, 1882. Individuals and game clubs are requested to inform us of the enactment of new local laws and of changes that may be made in the laws of the several States and Territories.

DECEMBER.

[With "Iron Ramrod's" compliments to "Dick"—see issue Sept. 21.]

NOW the man with trusty choke-bore
Stumbles slowly through the brush,
And the startled grouse in terror
"Gets up" with a sudden rush.

To his shoulder leaps the ten-gauge,
But the hammers fast are blocked,
And the little swear he utters
Tells us that it wasn't cocked. —IRON RAMROD.

OUR NEW JERSEY LETTER.

DID I promise to write you in December? I could have had but little idea of what that agreement would demand of me, for if there is any one thing that I perfectly "disgust" it is to act the scribe under compulsion or force of circumstances. And what of sporting matters is there to write about from New Jersey in December?

The abundant promise of a favorable breeding season for the quail has not been fulfilled by either large or frequent coveys, and the general verdict is that the season has been a failure. If the number of birds killed is the only "point" by which the matter is to be judged, this verdict is correct, but taking other views of the subject, I am inclined to dispute the decision. While it is true that even our best hunters have reported but few bevies and the birds hard to get, I am inclined to believe that there were more quail in the State this fall than there have been for many years, and I am glad to know that they are still here. For various reasons many a fine bunch of birds has passed the season, almost under the hunters' nose, and been permitted to survive Thanksgiving. The gunner has tired himself out day after day ranging the stubble fields and buckwheat patches according to his usual custom, and returned at night with empty gamebag and a firm conviction that there were no birds. He forgets that the long summer and frostless autumn have promoted the growth and maturity of all kinds of forest nicknacks and swamp luxuries upon which ortyx delights to feed. While dog and man have been tramping the fields the quail have kept in the woods. This is not mere surmise. During the late snow we discovered the retreat of a number of bevies in neighborhoods that had been thoroughly hunted, and where we were assured there were no quail, and we know of more birds that are alive to-day than we had heard of after two weeks of the open season had passed. Plenty of quail next year if we can have a favorable winter, but, alas! the "moon rule" says sixteen snows, Vennor is on a regular rampage, a new prophetic humbug has appeared over in Canada, and the hawks were never more abundant. Alas! for Bob White's chances when all the "probabilities" are against him.

But rabbit shooting in the central part of the State has been unusually good, and in spite of the tracking snow, the supply is by no means exhausted. We notice, too, an unusual number of raccoons, opossums and other varmint have come to grief. That reminds of the adventures of Mr. W. F. Scott, of Hightstown, who took his gun and dog with him one day recently when he went to his work. At noon he heard the dog barking near the Assanpink Creek, and found that he had something treed. A companion climbed up and punched out a large opossum, into the carcass of which two loads were poured. Another punch brought out something which at first was supposed to be a bear, but it proved to be a large raccoon. Scott found he had forgotten his box of caps, so he attacked the beast with a club, but it ran for the creek, into which the excited hunter plunged boldly in pursuit. Finding himself in a corner, the coon turned upon his adversary, and then ensued a fight that was worth recording. Græco-Roman, side hold, catch-as-catch-can, and every other known style of wrestling was exhibited, until Scott got his hands around the creature's neck and literally choked the life out of him.

Speaking about hawks, my friend, Mr. George Robbins, of Dutch Neck, who is quite a pigeon fancier as well as a lover of the forest and stream, informs me that he has more trouble with the little "bullet hawk" than any other. This diminutive but courageous bird of prey, while hardly able to master an adult pigeon, will boldly enter the cote and take the young from the nest. My friend says that after a heavy fall of snow which would close the entrances to the nests, he has captured the hawks which had been imprisoned with the pigeons. Did they go there for plunder or for refuge and company? Dr. Franklin left it on record that he had known tame sparrow-hawks to live with pigeons. A.

QUAIL IN VIRGINIA.

Editor Forest and Stream:

A writer in your issue of the 30th ult. alludes to the scarcity of the partridge (*Ortyx virginianus*, or more popularly, Bob White), in this, the Piedmont section of Virginia, and mentions the well-established fact of their abundance in the tide-water and Southside counties. In all this he is perfectly accurate. But he goes on to say that the cause of this scarcity is due to the freedmen, who, he claims, "kills the old birds during the nesting season, and then, in autumn the city sportsman goes out with his ten-bore breech-loader and slaughters them, etc." I think that your correspondent is clearly mistaken as to his conclusions, as I will proceed to demonstrate. And in order that my opportunities for forming an opinion on this subject may appear, and that it may also be seen that I am not unduly biased in favor of the freedman, permit me to say that I dwell in one of the largest of the old slave-holding counties of Piedmont, Virginia, where the freedmen are in a large majority; that I am a "bourbon democrat," a persuasion generally supposed to be not too partial to the freedmen, and that I have been all my life an ardent and active sportsman. In conjunction with some friends, I am the owner of several thousand acres of land formerly noted for the abundance of quail, which we have carefully preserved, and upon which no city sportsman has for years set his foot; yet quail and other game are scarcer on these lands than for twenty-five years, and this scarcity is general.

What is the cause? No perfectly satisfactory reasons seem to be generally accepted; but it is a slander upon the freedman to charge him as the guilty party.

In the first place it is a significant fact that quail are more abundant in those Southside and tide-water counties mentioned by your correspondent, where the negro population is in such an overwhelming majority that the districts composed of these counties are known as the "black districts." In the next place, the counties where the quail are scarcest are those Northside and Piedmont counties, where there are so few negroes that they constitute neither a social nor a political factor of much influence. The freedman is not a partridge or quail hunter. He delights in hunting hares, opossums, raccoons, and squirrels, but, with rare exceptions, aspires to nothing higher as a sportsman. He was never known to fish for trout, but is death to catfish and eels. Living all my life with and surrounded by a dense negro population, I have never seen a negro with a quail which he had killed, and never heard of a quail being killed by a negro in the nesting season. I have known them to rob the partridges' nest during the harvest, but never to an extent to do any serious damage, and in these instances the eggs were invariably presented to young master or mistress, who, by signs of irrepressible delight, never failed to encourage the robbery. That negroes may kill quail occasionally on the ground I do not deny, but they never own or hunt with broken bird dogs. They hunt with curs, bulldogs, hounds, terriers, and all varieties of the race of "pepper-and-salt," which precludes all possibility of shooting quail. Upon the other hand, I know white men belonging to the class called here "poor white trash" who shoot quail on the ground, trap quail and wild turkeys in and out of season, and shoot a whole brood of the latter before they are half grown. Two or three such characters in a community do more mischief to game than all the negroes combined.

The winters of 1856-'7 and 1857-'8, were so severe that the quail in this section were almost totally destroyed. By common consent they were not molested for several years, and gradually increased. After the slaves were emancipated, having been previously prevented by law from carrying fire-arms, they naturally exhibited a childish delight in exercising their constitutional privilege. Where you see one freedman hunting now, in the years immediately succeeding the war you would have seen a dozen, yet until a few years ago quail continued to increase.

The most satisfactory reasons assigned for the scarcity of quail are the following, viz.: The winter of 1880-'1 was the hardest we have had since 1857, and equally severe. Multitudes of birds perished, and the spring of 1881 opened with a meagre supply for breeding purposes. Just before and since that period there has been the most remarkable and manifest increase in the number of foxes, a fact universally observed and made the subject of remark by farmers and sportsmen. I well remember when the starting of a fox in the community caused excitement. Now it is common to see them in the day time, and after a snow or rain their tracks may be seen forming a network in almost all directions. There is little exaggeration in this statement. These predaceous vermin now infest the country in such numbers that unless something shall be done toward there extermination this region will be completely denuded of quail and small game constituting their prey.

Such is the opinion prevailing here among the most intelligent and observing men. The poor freedman has his sins to account for, but do not lay this to his charge. No one who has been a constant attendant before the criminal courts of the country can fail to testify as to the freedman's rapid and gratifying moral improvement. Fifteen years ago there were ten negroes arraigned for crime, where to-day there is one. He is by no means the pest some believe him to be, but as a rule is useful, law-abiding, humble and contented, trusting implicitly those who, by fair dealing, have won his confidence. M.

NORTHSIDE, Va., Dec. 6, 1882.

Any person sending their address to R. H. Pooler, Serena, La Salle Co., Ill., will receive in return free a fine colored lithograph representing pinnated grouse shooting on the prairies, also a catalogue of cartridge holders, belts, vests, &c.—*Adv.*

ONE OPINION OF THE GRAB.

Editor Forest and Stream:

Your comments this week upon the wretched mismanagement of the Yellowstone Park are entirely timely, and as one who has kept up a lively interest in this grand natural park I can only hope that your warning note may be taken up by the press of the entire country until the Secretary of the Interior may be forced by a storm of popular protest into carrying out the intentions of the promoters of the legislation which gave to the people of the whole United States, for all time, this greatest of all game preserves

It seems, however, that the wholesale slaughter of the game is not the only robbery to which the people at large are to be subjected. Washington despatches of the last few days tell of the plan to gobble up the entire domain until, so far as the public at large is concerned, it will become little more than a private pleasure ground, into which they will be permitted to come, provided they pay their way, and out of which no doubt they will be promptly hustled as soon as they fail to be profitable visitors to the company who will enjoy such exclusive and valuable rights in the Park. There is an air of mystery about the whole matter which augurs very bad for all visitors, who, like myself, have learned to know and appreciate the grand opportunities which the Park affords. It is bad enough to have a swarm of irresponsible skin grabbers shooting at everything which has a hide to its back; but this trouble could have been corrected. It needed but a few thousands of dollars annually spent in properly policing the domain to have made it in reality a place of refuge and a harbor for what yet remains of the large game of the West. The monopoly which, if our despatches read aright, the Secretary of the Interior intends to fasten upon the Park may be much more destructive to the enjoyment of the resort. It seems to be a virtual turning over this immense government trust to a group of speculative gentlemen who will work the thing for all it is worth. It bears at present every ear-mark of a job of the familiar Washington type.

It may be that all these facilities which the Yellowstone Improvement Company are to give us can best be secured at the hands of a private corporation, but it certainly does not need so much secrecy in the setting out of such an enterprise. It surely is a proper thing to ask just what this new company proposes to do, how far it is to go in the opening of the region to general travel, and what sort of a company of tourists they are to bid come and enjoy the place. There is no doubt that the opening of convenient railroad facilities to points nearer the Park than those at present reached by rail will lead to a large tide of travel in that direction. This is to be expected, and I think that the next decade will see popular enjoyment of this health-giving wilderness such as few people now dream of. It should be the great rendezvous for lovers of the grand and wonderful in nature the world over. It is a resort of whose beauties one never grows weary, and I, for one, though it may be a selfish wish, would be glad to see it remain undeveloped, if that "development" is to mean the erection of hotels at every vantage point, disfiguring the grandest landscapes, with locomotives pulling about here and there, discharging train loads of curious, unappreciative sightseers, who are there merely because it is the correct thing to have done the Yellowstone. No, let us have something of its wild grandeur to remain, where the toil of travel may be repaid by the enjoyment of rare sights and glimpses of nature such as no other spot on the continent affords.

As we, then, to suffer a double loss?—to have on the one hand a ruthless destruction of these grand natural solitudes, and on the other hand chaff, under the knowledge that it is but the outcome of a gigantic job, hatched by disreputable politicians and inflicted upon the patient good nature of the American public? It certainly looks as if something of this sort was about to come to pass, and the only check, so far as I can see, lies in a thorough ventilation of the plot. Give us the facts. Let us know just what we may expect to see when next a much-coveted respite from the exactions of business permits a run to this region of game and grandeur. A discreet system in internal improvements would be an excellent thing for the Park, but it is quite another matter to pass the control over to a group of money-making speculators, who look upon it only as a rich placer, to be exhausted if possible during their ten-year lease. I inclose you herewith a clipping* from the *Pioneer Press* of this city, giving us some hint of what is going on in connection with the scheme. I look to my favorite FOREST AND STREAM to supplement this brief suggestion of trouble with the full story of the true inwardness of this Yellowstone Park grab. MIN-TA.

St. Paul, Minn., Dec. 17.

*WASHINGTON, Dec. 12.—Senator Vest is evidently in earnest in his opposition to the proposed lease of the Yellowstone Park to private parties for hotel purposes, and to-day he introduced another resolution on the subject. It instructed the Committee on Territories to inquire what legislation is necessary for the protection of the Park preservation of game, and if the area should be extended; also, whether contracts should be made by the Secretary of the Interior, leasing the Park or any part of it and giving exclusive privileges for the erection of a hotel and telegraph lines and running stages or other vehicles through it. The resolution was agreed to, and the reference made as desired. Senator Vest says that he will fight the scheme to the bitter end, as he recognizes the fact of the existence of a large lobby intent upon securing this grand portion of the public domain for the purpose indicated; that the lobby has secured some of the leading men of the country, notably ex-Senator Conkling and Rufus Hatch, to aid in carrying out their plans, but that they will find him heart and soul arrayed against them, and that nothing will be left undone to prevent a consummation of these big steals.

WILD GOOSE NOTES.—Lockport, N. Y., Dec. 16.—In your issue of November 16, "W." says "a farmer sportsman in Minnesota" found a wild goose nest containing six eggs, from which he raised birds which he uses as decoys. A Niagara county farmer, Mr. Pomroy, living about four miles from this city, did still better. He has a baker's dozen (13) wild geese that during a severe storm alighted in his yard among a flock of tame geese, and all very quietly marched into the barn, the doors of which were open, when they were secured and wings clipped. Occasionally during the flight a few geese are shot in this county, but this is the best bag that has been made for years.—J. L. D.

NORTH CAROLINA.—Highland, Macon County, Dec. 10.—This place is 4,000 feet above the sea level and is remarkably healthful. I comprises thirty or forty families, mostly from Northern and Western States. Squirrels, ruffed grouse, quail, and trout are plentiful; wild turkeys, deer, and bears tolerably abundant out a few miles. Deer more numerous than usual; one shot a few days ago in a mill yard three miles out.—W. B.

NOTES FROM CAPE CHARLES, VA.

THE season for brant has opened auspiciously, there are a great many birds in and around Chesapeake Bay, mostly young. The weather as yet has not been suitable for shooting.

Captain Fowle, of Staunton, Jim Fox, of Richmond, and myself, all from Virginia, are here waiting for the flood tide, a bright sun and a high wind all combined, so that we can make our guns heard over the decoys. Will notify you later of the sport.

Elkeuny Cobb, of Cobb's Island, a professional gunner, always anchors off this place for his game, there being but poor shooting around Cobb's, for the reason, as I wrote you before, of the oysterman keeping up a constant fusilade against the ducks. Fortunately there are but few oysters and clams in the immediate vicinity, hence the unusual quantity of birds. The black ducks are plentiful, but to-day all the geese rose high in the air and headed their flight due south, and there is not a single one to be seen now. Whether their migration southward is the harbinger of cold weather I cannot tell, not being up on signs.

There are hardly any snipe this fall, where there was a hundred last winter there is about one now. CHASSEUR.

CAPE CHARLES, Va., Dec. 6.

PHILADELPHIA NOTES.—I have written you that quail-shooting in our section of the country—and I include in this New Jersey, Delaware and Maryland—has at best been only fair in the most favored places. Of course I have not heard from every locality, but to-day took a tour among the game dealers, as we are coming to the end of the open season, and gathered from their reports the following: Quail from Pennsylvania and New Jersey this year have been very scarce; from Maryland and Delaware not up to the average. Ruffed grouse have been scarce, and few Pennsylvania birds have reached Philadelphia. Canvas-back ducks from the Chesapeake grounds—I refer to the wild celery fed fowl—made a good showing at the first of the opening month, but since that time, excepting for a day or two last week, have been rare. It seems that the great body of fowl is now in the Currituck waters and southward. Canvas-backs and redheads from Currituck are coming into our market, but the fowl are inferior and bring a much lower price than Chesapeake fowl. I take it that all varieties of migratory birds made early and more extended flights southward this year than last, the early cold weather in the far North promoting it. I am hearing daily of snow-birds having been shot, and our taxidermists are having them frequently sent to them for mounting. Last winter not one was sent to Krider's. The snow geese have again this year appeared in the Delaware below Bantay Hook, and have been molested but little so far as I can learn. About Philadelphia the snow has disappeared, but more will surely come.—HOMO.

A CINNAMON BEAR HUNT.—Glendive, Montana, Dec. 8.—*Editor Forest and Stream:* Last week three hunters went deer hunting on Cedar Creek, about twenty miles from this place. One morning they struck fresh trail of a cinnamon bear that had eaten part of a deer that was killed the day before; two of the party followed the trail and in a short time found the bear in a hole, waiting for them. The bear charged on the hunters, and as only four feet intervened between him and John Cormack (we call him Long John), the tussel commenced very soon, and quite lively. John did not have time to raise his gun, and both bear and John rolled over each other thirty feet down a bank. Frank Hardison, the other hunter, dared not fire for fear of hitting John; but the instant they stopped rolling he sent a slug into the neck of the bear, and none too soon, for his teeth were then into John's hip about one and one-half inches. When Mr. Bear felt the bullet he let go John and went for Frank, who shinned up a cedar tree. Then John gave the bear three shots, and he shinned up a tree, and Mr. Bear skipped out. He was as big as a three-year-old steer and very savage. Next day the three hunters surrounded the wounded bear and all got treed by him. "He was a cuss." He reared up on his hind legs, chawed off limbs, tried to get at the boys, and growled and gnashed his teeth. The lads kept their Winchesters hot, and after receiving twenty-two bullets the cinnamon gave up the ghost, and the boys came down. The bear measured sixteen inches from tip of nose to the ears and sixteen and one-half inches between ears. He dressed about 600 pounds and was in prime condition. As all these hunters were rather tender on the feet, it is thought a lucky escape for them.—H. S.

NEW YORK.—Binghamton.—The sportsmen of Binghamton state that they have had better quail shooting in the neighborhood of their city this fall than for many years. Just now, however, the country about them is covered with snow, and fears are entertained the gain in quail will be lost the present winter. Mr. Waldron, of Binghamton, is about starting on a Florida shooting trip.—HOMO.

MONTANA.—Helena, Dec. 4.—I have been shooting partridges and foolhens, high up in the mountains. We find them in heavy swamps of spruce and willow. They feed on the wild rose berries and on spruce buds. They are very tame, and a dog can hardly flush them at this time of the year.—W. M. M.

DEER IN CONNECTICUT.—Plymouth, Conn., Dec. 4, 1882.—A deer was killed about three or four miles from here on the first day of this month, at a place called Poverty Hollow. It was a buck, weighed 128 pounds, and was killed by Rollin Curtiss. I had some of the meat of it for supper, it remains to be seen where it came from.—F. C. B.

LONG ISLAND.—It is stated that the resolution of the Board of Supervisors of Suffolk county, prohibiting the killing of wildfowl from boats in Northport Harbor, is having good results. The birds now come in the harbor freely to feed, and large numbers are shot by the gunners on East Beach.

MISSISSIPPI.—Vicksburg, Dec. 5.—Weather warm here, and ducks and geese not down yet in sufficient numbers to make it interesting. Quail abundant. If my legs don't give out, my hammerless won't grow rusty for want of use.—BURR H. POLK.

BARBED WIRE FENCE DEVICE.—A correspondent tells us that the Pendulous Barbed Block Co., of Williamsport, Pa., manufacture a "fence block," a device to render visible the barbed wire fence.

Sea and River Fishing.

WITH HACKLES AND GENTLES.

VI.

"Before the fire we sit and sing,
Content and happy as a King,
When winds of winter blow;
Employ'd upon our gentle themes
Till spring unbends the frozen streams,
And then to fish we go."

BEFORE the fire! What peaceful memories do these words awaken, what delightful and happy scenes and occasions do they recall! A glowing fire upon the hearth, I mean, or, barring it, a fire of coals within the grate. Out upon furnace and steam heat! There is no glory in bowing over, or before, a hole in floor, or wall, and being blown upon by hot air. It is not like standing, face to face, with a cheerful blaze welcoming us to its comfort and driving the chill away like an arrant coward. Before such a fire we may stand, rub our hands and say, "Aha! I am warm," with truth and good will—before such a fire we may sit and feel comfort, content and gratitude creeping over us till the whole system glows and rejoices. A fire is companionable and seems the personification of good fellowship when the winds whistle and roar without and the cold and frost lay siege to every "coign of vantage" the least exposed to the weather. To the fire in a sportsman's "snug harbor," what charming accessories may be added! First of all, on the rug, or the fur robe, there may—nay, there must—be a good dog (one, at least), and on the mantel, walls, or in corners, we may look for all the arms and equipments, even to minutiæ, that suggest the forest, the moorland, the river and the lake. With good taste in the grouping, and arrangement of all these, and with plenty of books (the very best furnishing and ornament for any room—even the kitchen should have its shelves devoted to cook books, books of references, and Charles Lamb's "Essay on Roast Pig") on shelves and tables what more charming place in the home domain can be found? Even this may be enhanced by a loving wife's, mother's or sister's cheerful presence and deft hand in helping to "keep things in order," and especially pleasing is it if they are in sympathy with the master's pursuits and pastimes. That many of my readers have such a retreat I hope, that most have even such I doubt not, and that all are the better for it I very surely know.

One such room, of several, I now recall, and though to enter it, in imagination, will take me a score of years backward in life's journey, I feel that I must "hark back" and lighten this "blue" sullen day with its old-time cheer.

There were three of us (never on earth "shall we three meet again!") and we loved to sit a good horse, to tramp with dog and gun and to saunter by clear streams. The time was in the "merrie May," but it was a New England May, and so less "merrie" than its old country prototype. The day ended in a cold drizzle intensified by the east wind, and drenched and draggled we were glad of the cover of night to "do" our remaining five miles. Even now I seem to see and to feel the rain and the mud, and our crestfallen guise as we met the first ray of gaslight on the forsaken streets. We were weary, we were wet, too wet to ride, and perforce must plod on. All plodding ceases at length (but how weary the length often is!) and so did ours that night. We left the pave and made short pause in hall and on stairway, and rushed for our several rooms and dry garments.

Fellow fisher or shooter, is not a change of clothing and warm slippers a most comfortable provision of home civilization after a hard "heel and toe" tramp through wind and weather?

After due attention to toilet necessities and luxuries—for the sportsman doth appreciate these also—we satisfied our gustatory desires, and with "summat hot" (beside the fire) at hand, and a goodly supply of 'baccy, we settled ourselves "before the fire" and seemed "drowning in comfort." The sensation cannot be described, but it can be remembered. "The wind blew and the rain beat" a tattoo at the windows, but the fire blazed the more brightly therefor, and the weariness and dreariness of our homeward tramp made our then comfort more delicious and complete.

We talked rather than sang—we talked of fish, and planned excursions therefor. We took Walton, anon, and read a page here and there, and we heard from the lips of one of our number a glowing description of Doverdale and other haunts of our beloved master in the gentle art.

"How sweet, when night first wraps the world
Beneath her sable vest,
To sit beside the crackling fire,
With weary limbs at rest;
To think of all the labors past
That morn's bright hours employed,
While all that toil and danger seemed
Is now at home enjoyed."

Thus might we have sung on that memorable night, so swiftly and silently changing into a vision of the past, and which stands out in bold relief, amid many varied experiences and vicissitudes.

Before the fire! How many tales of love, of thrilling or ludicrous adventure or mishap; how many tales of cheer, of trouble and of grief have been told before the fire! Before the fire men and women unmask themselves and doff the triple coat of mail, and are wont to bask in their true characters. To be sure, it is not always so; but the influence of a fire is genial, and not saturnine, and, like the sweet gloaming hour, hath a hallowing hold on the sensitive and emotional nature.

Of all times and places, give me a rough night and a fire-lit room for the making of flies and "looking over" tackle! While the body glows with warmth the mind flits hither and yon at the sight of a favorite fly, a veteran "leader," or a strained or broken joint of a rod. Retrospection and anticipation revel and wrestle with each other as the past or the future are suggested. The minutes, the hours speed fast away, and still the fingers are busy with feather, fur and floss, with silk and "hog's down," and all the treasures which swell the angler's dubbing-bag.

But my pipe is "out," my fire sulks, and lest my reader may likewise do, I will "hold hard."

"Thus all that is fairest
And sweetest and rarest
Must shortly be severed and call for a tear;
Then let each emotion
Be warm with devotion,
And anglers be thoughtful, for winter is here."

O. W. R.

THE NATIONAL ROD AND REEL ASSOCIATION.

A MEETING of the above association was held at the Metropolitan Hotel, New York City, on the evening of Dec. 14, to adopt a constitution and to transact such other business as might come before it. About forty persons were present, and many letters of regret were received from persons unable to attend. The time of meeting happened to be identical with that of one of the South Side Sportsman's Club of Long Island, and this prevented many gentlemen from being present.

The meeting was called to order by President Endicott, who stated that the interest in the association was growing daily, and that it had acquired such a momentum that it was beyond the power of the association itself to stop it. He believed that its membership would soon be numbered by thousands, and would reach from Maine to the icy rivers of Alaska, and from Minnesota to Texas. He was glad to see so many representative anglers present, and hoped that the present meeting would be the forerunner of many social gatherings, as well as productive of benefit to the interests of anglers throughout the length and breadth of our country.

The secretary then read the proposed constitution as framed by the committee appointed to draft it, and after discussion of it by article and section and proposed amendments by Hon. H. P. McGown, Hon. John Mullaly, William Mitchell, Wakeman Holberton, and Prof. A. M. Mayer, the following was adopted on motion of Mr. E. R. Wilbur:

CONSTITUTION.

ARTICLE I.—NAME AND OBJECTS.

SECTION 1. This Association shall be called the National Rod and Reel Association.

SEC. 2. Its aims and objects shall be: The preservation of game fish by every possible means; the cultivation of that fraternal feeling which always exists among the lovers of our gentle sport, and the holding of an annual tournament to compare excellence in the use of rod and reel.

ARTICLE II.—MEMBERS:

SEC. 1. Any person may become a member of the Association upon complying with the Constitution and the payment of the annual dues. There shall be no initiation fee, but the annual dues shall be three dollars. All memberships shall begin with the first day of January of each year, and cease with the thirty-first day of December of the same year.

SEC. 2. There shall be no honorary memberships, but the payment of twenty-five dollars by any person shall entitle him to become a life member and absolve him from all further payments. There shall be no balloting for membership. The fact that a person wishes to join the Association shall be proof of his eligibility. A member may be expelled at a regular meeting for ungentlemanly conduct at a meeting or at a tournament, by a two-thirds vote of the members present.

SEC. 3. All members joining this Association are considered to have pledged themselves not to take fish out of season, or in any illegal manner, and any member willfully so doing, shall be liable to expulsion.

ARTICLE III.—OFFICERS.

SEC. 1. The officers of the Association shall consist of a President, several Vice-Presidents, a Secretary, and a Treasurer.

SEC. 2. The above officers shall constitute an Executive Committee which shall attend to such matters as may be necessary for the good of the Association, and shall serve as a Court of Appeal by which all questions shall be decided as to the true meaning of any part of the Constitution; and their decision shall be final.

SEC. 3. The above officers shall hold office for one year. They shall be elected by ballot at the annual meeting of the Association to be held at such day and place as may be designated by the Executive Committee.

SEC. 4. It shall be the duty of the President, or in his absence the senior Vice-President, to preside at all meetings of the Association, and of the Executive Committee, and to see that the rules are enforced; to call all meetings, count the votes in all matters except the election of officers, when he will appoint three tellers, and to have a general supervision over the affairs of the Association.

SEC. 5. The senior Vice-President present shall take the place of the President, if absent, and, with the other officers, constitute the Executive Committee.

SEC. 6. The Secretary shall keep a record of all the proceedings of the Association, and shall attend to the correspondence and do such other writing as may be necessary. He shall keep a list of members and shall notify them of all meetings of the Association. He shall turn over such moneys as he may receive to the Treasurer, and shall issue a receipt for membership to each member.

SEC. 7. The Treasurer shall have charge of all the funds of the Association, and shall pay all bills ordered by the Executive Committee after they are audited by the President, and he shall make a report of receipts and expenditures for the year at the annual meeting of each year.

SEC. 8. In the case of the death of any officer, the Executive Committee shall have power to fill the vacancy for the unexpired term.

ARTICLE IV.—AMENDMENTS.

This Constitution may be amended by a two-third vote of the members present at any annual meeting of the Association, provided that at least thirty days' notice of such proposed amendment shall have been given to each member.

The following communications were read:

POUGHKEEPSIE, N. Y., December 11.

I think one of the first efforts of this association should be directed toward a revision of our State law.

The fish law should be divorced from game, and be a separate act, and it should be uniform throughout the State, especially where waters lie in two or more counties, and the power to tamper with these laws should be taken away from supervisors, and also the power to compel one of two or three persons who jointly violate the law, to testify, should be given; the penalty in such case to be remitted as against such witness.

I would suggest that a committee be appointed to prepare the proper act and try to secure its passage by the Legislature.

J. S. VAN CLEEF.

CLEVELAND, O., December 5.

Heartily approving the design of yourself and others in organizing a national association for the preservation of game fish, and the cultivation of fraternal feeling among true sportsmen, etc., I beg you to present my name for a life membership, and herewith inclosed, payable to your order, a New York draft for $25; the sum named in your circular addressed to me, as the fee required for a life membership.

Desirous of co-operating with the honorable gentlemen whose names grace the circular in my humble way, and to the full extent of my ability, I remain very truly yours,

D. W. CROSS,
Oneida Club.

BOSTON, Mass., December 8.

I am very glad to acknowledge receipt of an invitation to join the National Rod and Gun Association, and to accept the invitation. I hope the society will prove a great success, and if one of its objects should be the establishment in New York of a club house, I am sure it would meet the wishes of many.

J. A. L. WHITTIER.

With a vote of thanks to Mr. Henry Clair, proprietor of the Metropolitan Hotel, the meeting adjourned. Those who propose to join the association will do well to read Article II., Sec. 1, of the constitution, and communicate with the Secretary, Mr. Fred Mather, 39 Park Row, New York city.

ANGLERS' ASSO'N OF EASTERN PENNA.

THIS is the title of an organization in Philadelphia, the primary objects of which are, (1) the encouragement of fishculture in Pennsylvania by the restocking of its streams with game and other valuable food fishes; (2) the protection of the same by a vigorous enforcement of the existing laws; (3) the advancement of the art of angling and the promotion of sociability among anglers.

The necessity for such an organization is too obvious for argument. In Eastern Pennsylvania we have many streams specially adapted to the propagation of edible fish, and the State has made liberal appropriations for the restocking of them, and protective laws, ample and stringent, have been enacted; but because of the lack of enforcement of these laws, the money and labor expended by the Fish Commissioners have produced very inadequate results. It is to obviate, in some degree, this much to be regretted condition of the State fishery interests, that "The Anglers' Association of Eastern Pennsylvania" has been formed. It proposes to insist upon obedience to the requirements of the Fishery Laws, by instituting suits for any violations of them that may come to the knowledge of its membership. It further proposes to give all its influence in behalf of the restocking of the streams of the State, and in the dissemination of printed matter relating thereto.

To accomplish these results, will require the hearty co-operation of citizens in every part of Eastern Pennsylvania, and in view of that fact, the Association respectfully suggests and earnestly urges the organization of associations of kindred character and purposes.

"The Anglers' Association of Eastern Pennsylvania" will gladly furnish copies of its Constitution and By-Laws to such persons as may desire to form co-operative or auxiliary clubs, or who wish to familiarize themselves with the distinctive features.

The officers are: A. M. Spangler, President; R. M. Hartley, Secretary and Treasurer, No. 1800 N. Twenty-second Street; J. Penrose Collins, Corresponding Secretary, No. 623 Walnut Street, Philadelphia.

BLUE-BACK TROUT.

Salmo oquassa.

THE size of fishes is governed as much by the supply of food on the spawning ground for the young fry as by the after supply for the growing fish. To the wonderful supply of insect and fish life in the Sebago and Rangeley waters do we attribute the great size of the fishes in those lakes. In Sebago there is not only an immense supply of smelts, but of other fishes that are the prey of, and afford abundant food for, the trout and land-locked salmon. We have been often asked if we do not regard the big Rangeley and Sebago trout as a different species from the true *Salmo fontinalis*. Some have even declared them to be akin to the *Salmo confinis*, or big lake trout. We have had abundant opportunity to see and judge of these trout and pronounce them unhesitatingly to be pure, unmistakable brook trout, developed by an unlimited supply of appropriate food for the fish at every period of their growth, as well as an unrestricted range in the purest and coldest water.

We propose here to speak more particularly of the blue-back trout as a stock fish to be put into the other ponds to afford an unlimited supply of food for trout and land-locked salmon. This beautiful little fish takes its name from a bluish tint on the back not unlike the bloom on a plum. They are spotted like a trout, and to a casual observer the difference in a basket of fishes would not be noted. But like the togue or lake trout they have only the yellow and black spots, but not the red. They attain a length of about eight inches.

In a box of these fish sent us by Mr. C. T. Richardson, former steward of the Oquossoc Club, there were about one hundred specimens, affording a fair average of their size and weight, but few we should say would measure eight inches. The weight ranged from two to four ounces. Their tails and colorings are very beautiful, particularly in the male, the pectoral fins rivaling in color the autumn-tinted maple leaves. Like the dolphin, their brilliancy of color is lost or fades away with their lives. At the season of spawning, they come up from the deep recesses of the lake at night in pairs, but in numbers countless. The eggs in size and appearance are similar to trout spawn, the number varying from one to two hundred per fish, average about one hundred and twenty five. They run about three weeks, and in the height of the season many remain up through the day bidden beneath rocks and stumps. They are more delicate and symmetrical in shape than the brook trout and have the tail forked. They are rarely seen but in the spawning season. Now and then in deep fishing one is caught with bait in the lake, but as rarely or exceptionally as the ordinary sucker. Like the latter they will in the breeding season take a bait, but it is the exception and not the rule. As a table fish, we cannot speak advisedly, never having eaten them except when taken on the spawning bed. To us they are about as palatable as trout taken under the same circumstances.

There is a special statute allowing these fish to be taken in Franklin and Oxford counties during the close time for other fishes. We think it a great mistake to allow these beautiful fish to be taken at all, as we attribute mainly to them the great size of the Rangeley trout, and we opine that as they diminish in numbers, so will those far-famed trout. Rangeley waters teem with fish life, two or three species of the suckers, red-fin minnows, chubs, etc. The blue-back is to Rangeley what the myriad smelts are to Sebago Lake, and to Reed's Pond in Hancock county. We think this fish can be advantageously introduced into all waters that are stocked with brook trout or land-locked salmon. Of its food, mode of feeding, or habits, much is yet to be learned. Mr. C. T. Richardson, whose experience in Rangeley waters entitle his opinions to much respect, in reply to a letter from us says: "The blue-black stays in deep water in the lake, from near the middle of November until the middle of October, when they come up the brooks and streams to spawn, which almost invariably occurs between the middle of October and the middle of November. The male brook trout visits the spawning bed and prepares it for the use of the females, before the females arrive. The blue-backs go up in pairs, male and female using the spawning beds which have been cleared, used, and vacated by brook trout. The blue-back is not considered a biting or game fish, yet I have caught a bushel and a half in a day, with a baited hook; they are mostly taken in dip nets."

E. M. STILWELL.

BANGOR, Maine.

In FOREST AND STREAM of December 14, I read an article on the blue-back trout, in which Mooselucmagantic Lake is spoken of as the only place where they are found in that region. I cannot say, certainly, whether any have ever been taken in Oquossoc Lake, but I know a large number were taken this fall, and a few last fall, at the inlet of the upper Richardson Lake, below the upper dam, thus showing, without doubt, that they are inhabitants of the two Richardson Lakes, and as some have been seen below the middle dam, they must also live either in the pond, in the river, or Lake Umbagog. They are a very toothsome fish, and many prefer their flavor to that of their larger brethren. They never bite at a hook, I am told by those who have taken them, but have to be captured in a net.

CHARLES A. J. FARRAR.

JAMAICA PLAIN, Mass.

STRIPED BASS ARE NOT EXTINCT.—There have been reports of a scarcity of the striped bass (rockfish of the South) on our coast east of New York, this last season. The facts seem to be that this fish, which is always with us, and does not appear to stray far from the shore at any time, has habits which we do not fully understand. Its spawning places are still a mystery, to some extent, and its movements cannot always be foretold. A theory has been started that the fish is nearly extinct. The following account which we received from Captain Chalker, of the Blackford Fishing Company, of Montauk, disprove that theory. Last week Captain Chalker saw a school of striped bass off Montauk Point, the eastern end of Long Island, which he judges would cover ten acres. The school was composed of fish of many sizes, from forty pounds down. He attempted to put a seine around a small portion of the school, but the stormy weather prevented it. This was continued for three days, when the fish disappeared. During this time Mr. Harrison, of New London, Conn., happened there with a sailboat and took six hundred pounds of the fish with a "jig," or what anglers call a bluefish squid, hauling them in as fast as he could throw his lure among them, until he had as many as his small boat could well carry. We will say, in this connection, that Captain Chalker is well known to us as a reliable man, and we have no hesitation in accepting his estimate of the great numbers of this valuable fish.

LAND-LOCKED SALMON IN NEW YORK.—We received the following note from Mr. H. H. Thompson, Secretary of the Bisby Club, dated Dec. 12: "I left this morning with Mr. Blackford a large fish taken from the stream below Woodhull Lake and sent to me by Gen. Sherman, of the N. Y. Fish Commission, who wants you to examine it for identification. It is, or was before being frozen and thawed, a beauty and a puzzle. It may be of a plant of June '79, and what a growth! Do not fail to see and pronounce upon it." [We called at Mr. Blackford's and found the fish to be a male land-locked salmon of over four pounds weight. It had the strongly hooked jaw of a male salmon during the breeding season, and there were traces of the lictic flushes on its sides, which also characterize the males, but which were partly obliterated by frost. This is not the only evidence that these fish have survived in the waters of Woodhull Lake, in the southwestern portion of the Adirondacks, as several other specimens have been taken from there. As Mr. Thompson says, the fish were first introduced at the request of Gen. Sherman in 1879, and have made a good growth. No doubt they will in time prove a valuable addition to the fish fauna of that region and will afford a change of sport to the anglers.]

SPAWNING OF COLORADO TROUT.—Baird, Shasta County, Cal., Dec. 10.—In FOREST AND STREAM of November 9 I notice an article by "W. N. B.," on the growth of trout in Colorado. He says that the eggs were obtained in New England in December. I think they must have been dried the season before, as the trout do not spawn until December, and it then takes them from thirty-five to forty days to mature, which would bring them about the middle of January or later. He also cites Mr. Bogert as saying that the hatching was very rapid, and that he hatched ninety-nine and eight-tenths per cent. That beats anything I ever heard of. He says the growth is enormous, and the fish made spawning beds at nine months old. This is also new, as I never knew trout to spawn until three years old. Then he further says that he had some rainbow trout and did not like them. I have been engaged in fishculture for seven years and have never heard such wild statements as the above.—J. B. CAMPBELL.

CARP IN THE HUDSON.—Mr. Barnet Phillips, the well-known secretary of the American Fishcultural Association writes as follows to Prof. Baird: "To-day Mr. James Benkard, vice-president of our fishcultural association, told me that his grandfather, Capt. Henry Robinson, had, about 1830, first brought carp from Holland and put them in his ponds at Newburg, and that he had therefore reason to suppose that the carp in the Hudson were derived from these. In Frank Forester's 'Fish and Fishing,' of 1849, page 166, you may find a statement to this effect, which Mr. Benkard says is substantially correct." It is now known that these fish are not the true carp, but an uncolored goldfish. They have not the barbels on the angle of the jaw which distinguishes the genus *Cyprinus* from that of *Carassius*. The carp belongs to the former and the goldfish to the latter.

EFFECT OF COLD ON BAY FISHES.—After the first cold snap striped bass and porgies left the waters of Barnegat Bay and went up Tom's River where they were found lying along the sunny shores in a numb condition, so much so that they were caught by the inhabitants with crab-nets and even with the hand. This condition of affairs lasted for several days, and thousands were taken by men and boys.

A KNABE IN THE WHITE HOUSE.—There was seen yesterday at Messrs. Knabe & Co.'s factory a magnificent concert grand, just finished by them for the Presidential mansion, President Arthur, who is a thorough connoisseur of music, in selecting a piano for the White House decided in favor of the Knabe Piano as his preference, and ordered accordingly the instrument referred to. It is a concert grand of beautiful finish in a richly carved rosewood case, and of superb tone and action—an instrument worthy in every respect of the place it is to occupy. It was shipped to its destination yesterday. —*From the Baltimore American.*

Fisheulture.

THE OHIO COMMISSION.

THE Chagrin Falls, O., *Exponent* says: "The question of fisheulture is growing in interest year after year. The importance of stocking the depleted waters—salt and fresh, river, pond, lake and ocean—is acknowledged on every hand. But for the work of the National and State associations, fish to-day would be a luxury which could be afforded only by the well-to-do, and still, in the face of these well established facts, our Ohio Legislature has in the past shown a wonderful degree of stirgiliness, to be accounted for only on the hypothesis that its members have not familiarized themselves with the subject and with the wants of their constituents. Prof. Baird, Fred Mather, and other well-posted gentlemen in this field, claim that an acre of water, properly stocked with fish, will produce more food than an acre of fertile land, well-tilled. Granting this, and remembering the many thousands of acres of lakes, ponds and rivers in Ohio which are now producing virtually nothing, was it not parsimonious in our Legislature last winter to make an appropriation of but $5,000, when on by $7,000 was asked for by the State Fish Commission? Many times the amount required was expended in printing public documents which are in majority of cases the laughing stock of the people, which are never read, and which may be found most abundant in paper mills Appropriations for many other things are made with a lavish hand, but when it comes to this matter of fish propagation and stocking, the most rigid "economy" is observed. The Legislature this winter should make an appropriation of at least $20,000. With this sum the commissioners could stock all the inland waters of the State, and make them teem with desirable food fishes, and add to the riches of the commonwealth tenfold the cost.

The work of the commission is admirably conducted, and the money is expended with the greatest care, a report being published by it each year, showing where every dollar of it is expended, and also showing that this department is free from jobbery.

The legislators representing the counties in this section need make but little inquiry to learn that their constituents are much interested in fisheulture and stocking, and that they will fully approve of a generous appropriation this winter for furthering their interests in this direction, and what is true here holds good, we believe, all over the State.

FISHCULTURE IN KENTUCKY.—Louisville, Dec. 12.—The annual meeting of the Kentucky State Fish Commission was held at the Louisville Hotel to-night. Delegates were present from seven districts. The offer of grounds at anchorage about ten miles east of here for hatching purposes was received and the commission will go there for inspection to-morrow. The most favorable results from the State are reported from German carp and 300 applications for this fish have been received during the past two months. As the number that can be obtained from the United States Commission is extremely small, the State Commission propose to build hatching ponds exclusively for the propagation of the fish. The president of the commision reported that he had sent a man to Michigan to procure supplies of Mackinaw trout, and will distribute 500,000 the coming season.

The Kennel.

FIXTURES.

BENCH SHOWS.

March 26, 27 and 28, 1883.—Dominion of Canada Kennel Club Bench Show, at Ottawa, Canada Charles Lincoln, Superintendent, Detroit, Mich.

January 9, 10, and 11, 1883.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hooart street, Meriden Conn.

April 4, 5 and 6, 1883. Western Pennsylvania Poultry Society. Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Kenel Show Derby, for English setters whelped on or after March 1, 1882, close December 1, 1882. Chas. Lincoln, Superintendent. C. B. Elbin, Secretary Western Pennsylvania Poultry Society, Alleghenv City, Pa.

May, 1883.—Westminster Kenel Club, Seventh Annuel Bench Show, New York City. Robt. Cornell, 54 William st., New York City.

THE DOG SHOW AT HIGH POINT,

AND SUNDRY INCIDENTS, DIRECTLY AND REMOTELY CONNECTED THEREWITH.

In one of my former communications, I announced my purpose to witness the field trials, which, it was published, were to take place at High Point, a railroad town in Guilford county, in this State, about fifteen miles southwest of Greensboro. I looked forward to this time with high expectations of seeing the performances of dogs carefully trained for sporting purposes in the field and forest, and boasting of the gentlest blood which flows in canine veins. Having heard of the extrordinary value placed upon many of them by their owners—a value which I regarded as far beyond anything which a dog ought to command—it was but natural that a man who had never shot over anything but the basest of tin cans, should have his anticipations highly raised as to the superiority of the performances of the Laveracks, blue beltons, R. *big a little* I turned Llewellyns (what a name for one whose conduct and pretensions entitle him rather to the addition of B. F.), red Irish, and other famous breeds.

Well, I saw the exhibit of the first day—the second being rather inclement for a "more lookee on"—and though the canines showed careful handling and remarkable obedience, I must confess that I was disappointed. I had hoped to see more spirit and "go" bellowing that a dog with a good nose should have hunted far more ground in the time given than was done by any one of those who were put in the field. Possibly my education in this line may be defective, and possibly I may have looked for far more than any dog can do; but I did think that a good dog should be able to keep well ahead of his master, and thus save much physical strain on the sportsman. My own idea is based, doubtless, upon economy of foce notion, that if there are fifty acres in a field, the man should not be required to tramp over more than a tenth of the space, and this dog should be required to hunt the whole area. If the ground is open, the spaniel can see the dog even at two hundred yards distance, and get to him in full time to shoot as the covey rises. He can, then, in a day's hunt, save him half the walk necessary, where he hunts as assiduously and closely as the dog. Nevertheless, the dogs evinced a capacity to work whenever engaged in the real business of the field. The most of them looked to be rather thin in flesh for hard labor, and some of them seemed to work rather as a matter of duty than because they loved to do it.

I saw some of these dogs of "national reputation"—those accustomed "the applause of wondering millions to command," and, like bipeds of whom I had heard much, they fell far short of what I expected to see. They all had four legs and a tail, and, as for looks, were very like all the other dogs I had ever seen. My party had five "scrubs" with us, and, upon my honor, our Don was quite as lovely as their Don, or Mack equal, except in one essential physical appendage, to the famous Croxteth in appearance. Our Don is not very obedient, for he has loose notions of discipline, but he will find more birds in a day than their Don, and our Mack will equal Croxteth in looks, and find as many coveys besides. Still, I admit that the "blooded" dogs are far better trained. Don cost his owner $10 and Mack $15. Our Branch and Argo cost $35 each, besides express charges. Perhaps, after this season, they may get the "wiry edge" worn off, and be nearly ready to compete in the next field trials with the "staked and ridered" variety. What do you say to that, Brother Hammond?

Now, I must not be understood as undervaluing the dogs which appeared at the trials on the 17th of November. Many of them were well formed, handsomely marked, and, doubtless, capable of hard and satisfactory work; and the necessary cost of rearing and training will amount to a considerable sum. I confess I should like very much to own several I saw, and think I should be able to try their qualities before this season has passed. But when it comes to paying several hundred dollars for a dog, which, at best, can be used two or three months a year for five or six years, I am unable to see the financial wisdom of the transaction. Men of large means, who have no other use for money, may be excused for indulging in the amusement; but ordinary mortals will act wisely if they invest their spare cash in a different way.

We—that is, Tecel, Mud, Jim, L. G., Flea and Wells—had the pleasure of making the acquaintance of several of the sporting fraternity, and trust that we made ourselves as agreeable to them as they made themselves to us. Without being invidious, I must express my great satisfaction in the intercourse I had with S. T. Hammond of the FOREST AND STREAM, Dr. Williams of Mass., Smith of New York, O'Neill of Pittsburgh, and his brother, the genial disciple of Blackstone and Coxe, who lives at Hudson. We all know George Leach long before. With all these gentlemen we spent some pleasant hours, and would be glad indeed to be with them in the field and around the camp fire for many a consecutive day and night. We had hoped that the Messrs. O'Neill would have joined us on our return to home, and shared with us the pleasures of the hunt and the social joys of our tent. They intended to do so, but, as we suppose, were prevented by causes which they did not foresee. Certainly we should have done our best to make them comfortable and introduce them to a section of country of which they could know but little, and which they can find around about quite good sport, remote from railroads, where, in the future, they might have spent many a pleasant day in their favorite pastime, with their Westley Richards "hammerless" guns and their well-handled dogs, and agreeable nights under humble but respectable roofs, honorable in the possession of those virtues in which we are told "the cottage leaves the palace far behind." We all indulge the hope that we may meet these gentlemen again, and engage in a friendly contest to see whether we can handle Tolley's Scotts and Westley Richards guns as well as they can those beautiful specimens of handicraft which came from 170 Bond street, London. Whatever may be the result of such a struggle, if it shall ever take place, we are sure the victor would not disgrace his triumph by unseemly boasting, and the vanquished would feel that, though defeated, it was done by one who earned his honors by the exhibition of no mean skill in the use of his weapon.

I must be pardoned for saying that Mr. Smith of Pittsburgh is better versed in gun-ology—I make this word—than anyone with whom I ever conversed, and his general style convinced me that he was always sincere in his statements in regard to the merits of manufactures in this line. It is but just to say that I found all the gentlemen who were actively engaged in the "field trials" as courteous as I could ask and ready to give me any information which I sought.

Our purpose in visiting High Point was not only to witness the working of the dogs, but to enjoy ourselves by active sport in the field, both going and coming. Accordingly we procured a two-horse wagon, in which we placed our tent, cooking utensils—that is to say, two frying pans, two kettles and a coffee pot—bedding and provisions, and transported ourselves and guns and dogs in three buggies. Jo Carter drove the wagon and was master of the cuisine, and was assisted by Caleb Lean, a gentleman of color, who, in ante-bellum days, often performed similar service, while Morgan Hooper, a juvenile darkey, was general waiting boy. Although our bill of fare was not very extensive, often when we reached camp at night we found that cold biscuit, hot ash cake, butter and fried quail, with the addition of a cup of coffee (Mud, our delicate man, always wanted two), always tasted well, and our digestion being good we slept soundly until morning came. My companions told me that even I forgot my usual serenade and allowed them to take their repose without the accompaniment of soft strains of music.

Our hunting was done irregularly and only as we found a field on the road which looked invitingly. In such cases, after obtaining permission from the owner, when that was practicable, we stopped the buggies and got whatever we could find. Birds were scarce everywhere, though people told us otherwise. Doubtless they were correct, but the birds were not in the fields, but gathering berries in the woods. It is probable that in the course of a few weeks they may come to the fields for feeding, and if so good sport can be had anywhere in the central part of this State, where not interfered with by the local sportsmen, or those unmitigated nuisances, nets, which destroy more birds than all other causes combined. To show the destructiveness of this engine of barbarity, I will state that I was informed by a gentleman who gave us permission, somewhat reluctantly, to hunt in his fields, that he and another party had caught in one season over two hundred birds, which destroyed the breed. He suggested that if he would let us kill about fifty the netters would fail to be able to drive the birds. But he could not see it in that way, and so we had to leave one of the most inviting farms which we saw during our trip, after having killed five birds from one covey. If we could have gotten on the "blind side" of the proprietor, I think we could have filled our pockets and then left a large supply for breeding purposes.

It would be too much of a tax upon your columns and the patience of your readers to give, in detail, the incidents of each day's hunt, to tell how Mud "wiped my eye," and how, immediately thereafter, I wiped his, how L. G.'s dog Don, with unflagging zeal, scoured the fields, how gracefully and gallantly the pointer, Mack—who, whatever his pride of ancestry, has lost all hope of posterity—swept through the stubble, how my dog Branch vigorously pointed, staunchly set and elegantly retrieved the birds which Mud and I killed, and how the dog Argo, with equal performances, did the same. So short, did his duty to his master. Though none of them are to be classed as "gentlemen and scholars," and all are regardless, at times, of restraint, yet they have nose, staunchness and physical power, rarely surpassed. During the trip we killed about two hundred and sixty birds, had, on the whole, a pleasant time, and returned to our homes, happy to find that during our absence our families had been well and were glad to see us again in the enjoyment of the same blessing.

If it should chance that your correspondent again tries the field, whether "tented" or not, at any time during the hunting season, he will endeavor to find time and inclination to give you some idea of his experience and observation. He has a standing invitation from his friend Bishop Crickett to visit his hospitable home at Saints' Rest in the county of Anson, whenever it may suit his convenience, and try his skill anywhere upon his extensive domain, as well as the estates of his neighbors, in shooting, fair hunting and fine birds. That invitation it is my purpose to accept at an early day, and I doubt not I shall be able to make my Westley Richards give a good account of itself before the expiration of the time which I shall devote to the sport. My friend is fortunate in the possession of an excellent wife, who knows how to provide a comfortable repast for her guests, and who shows her hospitality by making all of them feel that they have pleased her best when they have made themselves perfectly "at home" while under her roof. WELLS.

ROCKINGHAM, N. C., Nov., 1882.

THE NATIONAL FIELD TRIALS DERBY.

AT the conclusion of the All-Aged Stake on Wednesday at 10 o'clock, the first brace in the Derby were called, but as Dr. McKinney, who handled Kate B., was not on the ground, his competitor, Mr. Avant, courteously agreed to wait until the arrival of the train by which he was expected, and the next brace was put down. At the close of their heat, the Doctor having arrived,

KATE B. AND NELLY BLY were at once ordered down. On Tuesday night Major Taylor was called home by sickness in his family, and Capt. Pat. Garry was unanimously chosen by the handlers to act as judge in his stead. Kate B. is a very handsome, stylish animal of good size and exceedingly well formed. She has not had much experience, but bids fair to turn out a capital one when her education is complete. She was handled by her owner, Dr. A. F. McKinney. Nelly Bly is rather small but very pretty, and one of the busiest workers at the meeting. She has not so much style as Kate but was her superior in speed. We greatly admired the gamy manner in which she performed her work, and believe her to be an excellent animal. She was handled by her owner, Mr. J. M. Avant. They were put down in some sedge among scattered birds. Nelly had rather a bad send off as she ran into a bird and flushed it, and as she swung back she put up another one. She then dropped on point in a very gamy manner, and Kate backed her in fine style. They were then sent into a cornfield, where Nelly flushed one going down wind, and Kate, who got below them, made a very stylish point which Nelly honored in first class style. Bess A., who had no opportunity to back in the previous heat, was ordered up, but although she backed nicely, the judges were not satisfied that she did so of her own accord, and she was held for another opportunity. Flushing the birds we swung back and Kate flushed one down wind. Nelly then made a very game point to a single bird close to the edge of a gully, and Kate backed her in grand style. Bess A. was again sent forward, and she also backed very nicely. Avant flushed the bird and killed it, and Nelly retrieved in the best of style. Then beating the sedge to the railroad, Nelly made a point to a single bird, and was handsomely backed by Kate. We then crossed the railroad and swung up the hill toward the cotton gin, where our lunch was expected but as it was not in sight we turned south and worked out a cornfield in the valley, and then beat up the hill to some woods, where the dogs pointed, Nelly soon moved on and roaded out the birds very well. Kate located them first and pointed them in grand style. The Doctor flushed two before her and then the rest of the bevy got up. Following them up, Nelly got a capital point on a single bird, which Avant flushed to order and killed, and Nelly retrieved it in good form. Meantime Kate was pointing in grand style a single bird which was flushed to order. The birds had got enough of this, and as we moved on they commenced getting up all around us. We then turned toward lunch and the dogs were taken up. The judges compared notes and awarded the heat to Kate B. Down one hour.

AMERICAN DAN AND BESS A.—As we have already stated, this was the first brace to run. It was a beautiful morning, with a very light breeze from the northeast, and a capital day's work was done. The dogs were cast off at 10:45. Dan ran in the All-Aged Stake, and we have already described him. Bess is rather under medium size. She is snow white, with lemon markings, and has a wonderful turn of speed. She also ranges wide and is a merry worker. She has a first-class nose, and is endowed with considerable hunting sense. She has not much style, except when on game. She did remarkably well for a fifteen months' puppy, and if nothing befals her she will be heard from again. They were put down near where the All-Aged Stake was finished. Both started off at their best speed; Bess, however, had the best of it in this respect, and as she sailed over the field we were strongly reminded of a bunch of cotton flying before a gale in the wind. Bessie, having a large ranch to find, very soon crossed to a run where a bevy had been seen running across the path. Upon arriving there Bess at once challenged, but as she went the opposite way from where the birds had been seen to run, she was called back. She knew better, however, and stuck to the trail, which she roaded up the run out of sight. Dan had been sent in the opposite direction, and both were ordered up, and the handler of Bess went after her. She remained on the ridge and made cast up the run and found them, but they flushed before we got there. Following those of them which settled in some sedge to the south of us, we swung round to get the wind and cast off the dogs, who ran into one and flushed it between them. Bess then dropped to a hare, but soon moved on and again dropped very prettily to a single bird, which flushed close to Dan as he came down wind toward her. They were then worked up the gully in the tall grass, where one flushed close to Bess, and soon after one got up near each dog. Dan then made an elegant point at a hare. We then turned back across the railroad toward some of the birds that had been marked down in the sedge, but they could not be found and we turned north, where Bess scored a fine b. Meantime some of the spectators had flushed a large bevy, which we followed. Dan was the first to find, and he dropped just a second before a bird rose in front of him, and two more flushed to the noise of this one. Bess then made a cast up to the woods and was unsuccessful to a point of the bevy, which she held while Dan was called up to back, but he refused and went ahead and stole the point. The birds were flushed to order and both handlers killed very neatly. Dan was just a trifle unsteady, but at once dropped to order. Bess was ordered to retrieve, which she did in the best of style. They were now ordered up and the decision was reserved until Bess should have an opportunity to back, which she did in the next heat, and the judges awarded her the heat. Down forty-five minutes. The first brace was now run as already described, and after lunch we crossed the railroad and

RICHARD III. AND GATH—were cast off at 1:18 in a cornfield. Dick is of good size and moves very well indeed. He is quite fast and ranges well, but appeared to lack experience. He was handled by Short. Gath is of medium size and quite handsome. He is also fast and a graceful mover, and makes a very stylish point. He was handled by Wallace. We went out the cornfield to some woods and then turned along the edge and crossed through a farm yard and a magnificent oak grove to a cornfield, which was drawn blank. We then swung round a gully and worked into some sprouts where Gath caught a little scent and challenged once or twice and then making a cast along the edge, he struck them and made a beautiful point, but as we came up he moved on a little and one or two of them flushed and soon the rest got up and flew back into the sprouts and briars. Following them up one flushed close by Short and Dick, and soon after one got up close to Gath, who at once pointed and would not come to call, but finally reluctantly left it at the command of his handler, and shortly after the spectators flushed a bird where he had pointed; several more were then flushed by the spectators. Gath then made a grand point where a bird had been flushed and Dick followed suit. We then swung round and Dick pointed and Gath backed him at the place who a Gath first challenged. A little further on both pointed, and then roaded some distance, but nothing was found. We then left the sprouts and crossed a cotton field toward a strip of woods where, having been down an hour and a half in the heat of the day they were nearly blown and were ordered up to go down again, and the next brace were run when they were again put down. Gath at once flushed a bird that he should have pointed, and soon after we went from the woods into a cornfield, where he put up another one. He then swung round to the left and was lost for a few minutes, and when found, was on a beautiful point, which proved to be to

MESSRS. P. H. & D. BRYSON'S BLACK, WHITE AND TAN ENGLISH SETTER BITCH "SUE."
Winner of First Prize N. A. K. C. Field Trials, 1882.

a lark, which flushed as we came up. We then turned back through the cornfield, where Dick made a capital point at the edge of some sprouts. Short flushed the bird to order and killed it, and Dick was sent to retrieve it. Short succeeded in getting the largest half of it from him, and handed it to the judges, at the same time remarking in an offhand way that the bird was shot all to pieces. We then crossed the creek and turned back, beating out a large extent of country without a find. Finally Col. Tresevant, who was carrying a large canteen of water, saw a bevy on the ground in front of him. He at once dismounted and invited them to take a drink, but they kept on. He then brought the canteen to a present, and made a staunch point, which he held while the dogs were brought up to back, but Dick pointed instead and Sho t flushed his bird to order. Dick soon had another one fast, and Gath at almost the same instant also pointed. Short flushed the birds and killed one, when Dick broke shot and gathered the bird, and when Short got there the bird was shot so bad that he did not have to explain the matter to the judges. Dick then swung out and put up one just as the heat was awarded to Gath. Down altogether two hours and a half.

COUNTESS MOLLIE AND PINK B.—This brace was sent-whelped into the last heat. Mollie, who was handled by Stafford, is a very handsome, game-looking animal of medium size. She has lots of dash and style, and is quite speedy, but showed upon little to nerve us and excitable to be at so good a one as Pink. He ran at the Chicken Trials where he gave a good account of himself, winning second prize in the Derby. He is a fair looking dog of medium size. He has not much style, but is very fast and has a good nose, and knows where to look for his birds. He was handled by Short. He was bred by Col. Key, who for that reason declined judging any of his heats. They were put down in some sedge and worked down into a cornfield which bordered a creek. The judges here rode into a large bevy, which settled in some sprouts on the opposite side. Following them up, Pink went straight to them and got a capital point, which Mollie backed in grand style. Short flushed them to order and the dogs were sent on. Mollie then made a very graceful point, and Pink swung in ahead and also pointed, evidently the same bird, which had run away, as they failed to find it. We then swung back and Pink nailed one and Mollie backed him very nicely. Short flushed the bird and Mollie was a trifle unsteady, but at once dropped to order. Pink then pointed where one had been flushed, and Mollie backed him in good style. He soon went on and again pointed a single bird which Mollie flushed. He soon had another one fast, which Short flushed to order and missed. They were then ordered up and the heat awarded to Pink B. Down fifteen minutes. This was a short heat but a very lively one and Dick and Gath were then put down to finish their heat when

PRIDE OF MEMPHIS AND FRANK were called for. Pride, who was handled by George Winford, is a very good looking animal of medium size, with a fair amount of speed. He is very stylish when on game, and appears to have a good nose. Frank is also a handsome dog and moves very well. He appeared to be rather excitable and jealous. He was handled by Stafford. They were cast off in some sedge and worked toward some birds that had been marked down. Pride got them first and dropped very nicely to a single and Frank was called up to back but he refused and went by him and then turned and went in front of him and flushed the bird. Frank then made a cast toward the edge of some woods and got a capital point which was nicely backed by Pride. Stafford was ordered to flush and he put up a large bevy which settled in the woods. Following them up Frank half pointed but moved on and flushed his bird and the judges ordered them up and awarded the heat to Pride of Memphis. Down twenty minutes.

CARRIE J. AND GUS BONDHU.—Carrie we have already described. Gus is a splendid looking dog, rather above the medium in size. He is a fast and stylish mover, and gets on his birds in fine style. He was unlucky in going down just at night, when the birds were running and would not lie, and he scored quite a number of flushes. They were cast off in the woods along the scattered birds of the last bevy at 4:38. Both started at a dripping gait, and after one or two turns, Carrie, while going at speed, winded around on a beautiful point, which Gus instantly honored in equal style. This was a very pretty picture. A little further on Carrie ran into one and flushed it. We then crossed the railroad, and beating out the woods we swung down into a valley where both challenged and roaded up the run for some distance. A large horned owl was here discovered, perched upon a tree, and the judges requested Short to kill it, and he accordingly let drive at him, but without result, except that he flew a short distance to another tree. Col. Key and Mr. Cockrell now took the matter in hand, and marching up in battle array they poured a broadside into the ill-omened bird, who now, thinking that it was time to seek safer quarters, spread his wings and was silently flitting away, when Mr. Cockrell gave him another one, which cut some of the quills from one wing, causing him to become lop-sided, and after a short circle he came to the ground close to the spectators and was at once pounced upon and made a prisoner of war. Some of the boys insisted that Short did not try to kill the bird because he was an *avant courier* of his, sent out to show him where the birds were lying, and in proof of this pointed to the fact that the owl had alighted only a short distance from the bevy that we were in search of, which was soon after seen by the spectators, and the dogs, who had roaded out the trail and lost it, were swung round toward them. Carrie found them first and flushed a brace and dropped to wing. She then moved on and dropped on point, but the bird was running, and Gus, who now came up, struck the trail ahead of her and half pointed, but moved on and flushed it. Carrie then made a cast toward the horses and dropped on point to three birds, and Gus backed her. Short flushed them, and the dogs were sent on into the cotton field, where Carrie scored a flush, and another one soon got up near the handlers. We then swung back into some sedge, where Carrie challenged and Gus went ahead, and the bird got up. Carrie then half pointed in a plum thicket, when Gus swung round below her and flushed it, and soon after another one got up near him. Carrie then got a capital point on one, which was flushed to order, and thus put up another one, when they were ordered up, and the heat was awarded to Carrie J. Down thirty-seven minutes. This ended the running for the day and finished the first series. Following is the summary:

Kate B. beat Nelly Bly.
Bess A. beat American Dan.
Gath beat Richard III.
Pink B. beat Countess Mollie.
Pride of Memphis beat Frank.
Carrie J. beat Gus Bondhu.

Second Series.

KATE B. AND BESS A.—Thursday was one of the worst days for shooting that could be imagined. It was intensely cold and the wind blew a perfect gale. A start was made, however, and we proceeded about half a mile from the hotel, when we took refuge in a deep gully and held a consultation. Nearly everyone was in favor of returning but Capt. Henry, probably thinking that this was "the next breeze sweeping from the north" which his illustrious namesake alluded to, ordered us to face the music and we sallied forth. As it would have been positive cruelty to animals to have taken our horses, we left them in charge of the attendants and wended our way on foot. It was bitterly cold and how that breeze did sweep as the dogs were cast off but we were in for it, and as it was anticipated pointing would be but few and numerous were heard. Dr. Young had not arrived and Col. Key and Capt. Henry judged the brace. Working across the open field we soon reached the woods, where Bess dropped very nicely on point to a large bevy, which Kate ran into and flushed. Avant killed one, which Kate retrieved in good form after so no little time spent in looking for it. Following the birds, which settled in a cornfield, Kate scored a flush, and Bess soon followed suit, and a mo net later she put up an skier one. Then as both were moving on close to each other, with Kate a little in advance, Bess whirled prettily round on a capital point, which Kate at once backed, but catching the scent she also pointed. Avant flushed the bird to order and Kate scored a step or two, but at once stopped to order. We then worked through the field to another piece of woods, where Bess at the far edge challenged and drew to a beautiful point, which Kate honored very gracefully. Avant, to order, flushed a large bevy and killed one. They were then ordered up and the heat was awarded to Bess A. Down forty-three minutes.

GATH AND PINK B.—Dr. Young not having arrived, Mr. J. Cockrell, of Memphis, and Dr. N. Rowe, of Chicago, were selected to act as judges in place of him and Col. Key. The dogs were cast off in the sedge among the scattered birds of the last bevy. Gath at once pointed, but moved on and routed in capital style, Pink backing him nicely. Wallace, thinking that he was at work on old scent, tried to call him away, but he knew better and would not leave it. Wallace then went to him and the bird flushed as he came up, and then another one got up. This was a very creditable piece of work for Gath. We then crossed a ditch, when Pink swung into a plum thicket and flushed a bird, which flew but a few yards; it was again flushed by Short, who got too close, but it went but a short distance and Pink was sent that way. He also got too near, but dropped on point just as it rose. We then swung back through the woods into some tall sedge, where Pink made a nice point. Short, in going to him, put up a bird some little distance to one side of him and killed it. We did not think that he was pointing this one, but as nothing was found to his point, we gave him the benefit of the doubt, as, possibly, it ran away from him. A little further on Gath pointed, but soon moved on, and turning into the woods, he again pointed, roaded a few steps, and gave it up. Pink then made a cast out of sight, and as he did not come back, we looked him up and found him pointing in grand style. Gath was called up to back, but took point alongside of him instead. Short flushed to order, but killed to kill. We then swung back to the edge, where both challenged and Pink pointed just as a brace of birds flushed in front of him. Both dogs then half pointed just as two more got up. We were inclined to score these as flushes, but in consideration of the weather we were disposed to be lenient. Pink then made a capital point to a running bird, which he roaded out in first-class style and located nicely. They were then ordered up, and the heat was awarded to Pink B. Down forty-one minutes.

PRIDE OF MEMPHIS AND CARRIE J.—Dr. Young, who had arrived just before the finish of the last heat, now resumed his duties. The dogs were cast off in the woods and swung round to get the wind, but before we had got round them Pride ran into one, and soon after he dropped very nicely just as one flushed wild ahead of him. Carrie, coming up, also pointed where it flushed. We then swung round a long distance into a cornfield, where both pointed very prettily, but moved on in season to escape penalty for a false point. We then worked toward some woods, near which Pride pointed a hare in some tall sedge, and Carrie backed him very gracefully. We then went down along the edge of the woods, when Carrie, going down wind, ran into a bevy, which flushed and settled in the sedge. Following them up, Pride dropped just as a brace flushed in front of him. Carrie then went ahead and two more got up close to her and then the rest got up wild. Turning back after them Pride pointed but soon moved on, and again pointed a moment, and then swung into the cornfield, but he went too fast and scored a flush, and as he turned down wind another got up near him. Carrie then made a very stylish point which Pride refused to honor, but went in ahead and put up the bird. Carrie then swung into some sprouts and again pointed, when Pride went around her and the birds. She then moved a few steps and located them in grand style. Dr. Young took the gun, and at pigging ahead of her flushed the birds and would have made a beautiful double had the gun been loaded. They were then ordered up and the heat was awarded to Carrie J. Down one hour and seven minutes. This ended the second series. Following is the summary:

Bess A. beat Kate B.
Pink B. beat Gath.
Carrie J. beat Pride of Memphis.

Third Series.

BESS A. AND PINK B.—As Col. Key again declined acting as judge, the other judges were requested to go on, and Dr. Rowe was appointed referee. The dogs were put down in the sprouts and worked toward the last bevy. The judges flushed a brace near the edge, and soon after Pink made a cast into a cotton field, and ran into one down wind and dropped, he then swung in ahead of Bess who was challenging, and several more got up near him, but it was so thick that we could not see whether he was to blame or not. Bess then went into a cornfield, and going down wind three or four got up near her. The judges then ordered the dogs round to get the

MR. D. BRYSON'S BLACK, WHITE AND TAN ENGLISH SETTER BITCH "PEEP-O'-DAY."

Winner of Second Prize N. A. K. C. Field Trials, 1882.

wind, and several of us waited for them under the lee of a stack of corn fodder, and witnessed one of the prettiest pictures of the meeting. Pride of Memphis, who was on chain, half pointed, and Winford offered to wager ten cents that there was a bird just in front of him. Mr. Bryson took the bet and the money was placed in trusty hands. Winford then let Pride go, when he drew grandly a few steps and made a magnificent point, and Kate B., Nelly Bly, Carrie J., Richard III. and American Dan all backed him in their very best style. This was grand, and cold and discomfort were forgotten by all as we gazed in admiration upon the beautiful picture. After we had duly admired the wonderful scene, Dew walked in and flushed a large bevy and killed one, which Pride retrieved. The other party now put in an appearance below us and we joined them just as Pink pointed a single bird, which Short flushed; he then took a few steps and again pointed. Dr. Young flushed the birds, but the cold had affected him so that he missed them. Bess then made a nice point in some sedge and Avant flushed the bird and killed it. Meantime Pink was roading in a plum thicket, but soon gave it up and was sent into the cornfield, where he pinned one in fine style. Short flushed the bird and killed it, and Pink retrieved it in good form; he then swung into the sprouts and ran into some birds and flushed two or three, when he stopped and pointed, and soon after three or four more got up. We then swung around to get the wind, and Bess challenged, but Avant flushed the birds before she had established her point. She then went on and put up another one, and soon after, close to the judges, she put up another one, Pink then made a good point and Bess, a little to one side of him, pinned another one, which flushed itself when Short put up the one in front of Pink. The judges then consulted and awarded the heat to Pink B. Down fifty minutes. We then went to lunch. This ended the third series. Following is the summary:

Pink B. beat Bessie A.
Carrie J. a bye.

Fourth Series.

CARRIE J. AND PINK B.—This was the deciding heat for first place. They were put down in some sedge and worked toward the last bevy. Carrie flushed one and Pink soon after pointed one, and Carrie backed him very gracefully. Short flushed it and scored a kill. Pink soon after flushed one just as Carrie found the bird, which was only crippled and flew a short distance. We then turned back, and Carrie, going down wind, flushed one. We then took a long turn before finding anything. Finally Carrie got a beautiful point to a single, which Short flushed to order. She then made another point, but soon moved on and drew for some distance, when she again pointed a moment, and then roaded in grand style, with her head high in the air, but the bird had undoubtedly flown, as she lost it. We then took a long tramp without result, and swung back to the woods, where Pink and Bess finished their heat, as a spectator had seen some birds run across the road. Pink ran into one of them, and the rest then flushed and settled along the edge of the woods, where Carrie found them first and made a capital point in the sedge. Pink also pointed nicely to the same birds, which were running, and both roaded a short distance, when Pink swung for them down wind and flushed one, when the rest of the bevy got up and settled in the woods. Following them up, Carrie pointed, but left it when Short whistled for Pink. We then swung round to get the wind, and Pink made a grand point near the edge to a single, which Short flushed to order. We then crossed the fence, and three or four more flushed close by. A little further on the dogs backed each other very prettily. We then turned back through the woods, and Carrie made one of the most elegant points of the meeting, and Pink backed her nicely. Short flushed a large bevy some distance to the right of her. They were then ordered up and the heat was awarded to Carrie J., and she was announced as the winner of first prize. Down two hours and twenty minutes.

Fifth Series.

PINK B. AND GUS BONDHU.—The judges selected Gus Bondhu as the best dog previously beaten by Carrie J., and ordered him down with Pink B. to decide which of them was entitled to third place. They were cast off near where the last brace were taken up, and worked toward the scattered birds. Gus pointed where one had been flushed, and Pink backed him. Gus then made a game point to a hare, Pink again backing him nicely. Pink, thinking that it was time for him to be doing something, straightened out on a grand point, which Gus at once honored. Short failed to find anything to the point and the dogs were ordered on. A short distance further on Short walked into a bevy and flushed them, and was a trifle unsteady to wing. Following them up, Gus found first and made a capital point to a single bird, which Waters flushed to order. He would have surely killed this bird, but he did not see nor hear it when it got up, and he kept on beating the bush until the judges informed him that the bird had gone. Gus then went on a few steps and again pointed very nicely another one, which Waters flushed to order. Pink then made a grand point to a single bird, which Short flushed. He then swung out into some sedge and pinned another one, which Short flushed and missed. The judges then ordered up the dogs and consulted awhile and sent them on again. Working down into a valley, Pink pointed, and then roaded for quite a distance in capital style, but finally gave it up. They were then ordered up, and the heat was awarded to Pink B., and he was announced as the winner of second prize. Down forty-two minutes.

GUS BONDHU AND BESS A.—It was now almost five o'clock, and although we were all suffering for the want of something hot, the judges ordered down the dogs. This was the last heat, and, drawing what consolation we could from this, and with the knowledge that every step was toward the hotel, we coolly followed them. They were cast off in a large open field and worked toward town. Bess was away at her best speed and soon disappeared over a knoll, and when we came in sight of her she was staunchly pointing in some sedge. As we came up she moved on and commenced roading in capital style. Gus was then called up, and, joining her, they both alternately pointed and roaded for quite a distance in first-class style. Bess was the quickest to catch it, and as they neared the bevy, which was running to roost, she made a short cast to the left and dropped on them just a second before Gus had them. He was close up, however, and made a beautiful point alongside and partly over her. This was first-class work and a fitting finish for the Trials. They were then ordered up and the heat was awarded to Bess A., who was declared the winner of third prize. Down twelve minutes. Following is a complete summary:

First Series.

Kate B. beat Nelly Bly.
Bess A. beat American Dan.
Gath beat Richard III.
Pink B. beat Countess Mollie.
Pride of Memphis beat Frank.
Carrie J. beat Gus Bondhu.

Second Series.

Bess A. beat Kate B.
Pink B. beat Gath.
Carrie J. beat Pride of Memphis.

Third Series.

Pink B. beat Bess A.
Carrie J. a bye.

Fourth Series.

Carrie J. beat Pink B. and won first prize, $250.

Fifth Series.

Pink B. beat Gus Bondhu and won second prize, $150.

Sixth Series.

Bess A. beat Gus Bondhu and won third prize, $100.

THE GILROY FIELD TRIALS.

[From the Sacramento, Cal., Bee.]

THE second annual field trials of the Gilroy Rod and Gun Club were held on grounds close to Gilroy, commencing on Monday, November 27th, at 10 o'clock A. M., and ended on Wednesday, the 29th, at 4:10 o'clock P. M. The number of entries in the All-Aged Stake was seven, and in the Puppy Stakes ten. The Brace Stakes, not receiving any entries, were declared off. The weather during the trials was very pleasant, lunch being taken in the open air each day under the shade of some friendly tree. The birds were plentiful, but the grounds were rough and covered with sagebrush, which gave out a peculiar odor, and, to some extent, destroyed the scent of the birds. The trials were a success, although the attendance was small; still it is hoped that all the sportsmen throughout the Pacific coast will take a little more interest in these field trials, as they are the best medium by which to test a dog's field merits, and will also assist in improving the breeding of our field dogs.

The judges were Daniel Horton, D. M. Pyle and Horace Briggs. A full and correct account of the running in each stake, prepared by the *Bee's* special reporter, is herewith given:

ALL-AGED STAKE, MONDAY, NOV. 27.—The party having driven out to Henry Miller's ranch, four miles from Gilroy, the first brace drawn was cast off, at 10:15 (Count Warwick and Don) in a willow thicket, which was worked through without finding. Working back again, both dogs struck the trail of some birds, and both roaded, but without finding. The spectators frightened some birds, which were marked, and the dogs were worked in the direction the birds had flown. Both succeeded in getting a point. One bird was killed, and retrieved by Count. The brace was taken up and the heat awarded to Count Warwick. The dogs were down one hour and a quarter. Dan Gilroy handled Count and E. Leavesley handled Don.

At 11:30 H. Briggs's Belle and Leavesley's Juno were put down in a weedy field, which was hunted through without finding. A covey of birds was marked down, and both dogs worked in that direction. Juno did some very fine quartering, but pointed false. Belle came to a beautiful point, and Juno, coming up, also pointed a bird. Both birds were flushed and killed. Belle retrieved very nicely, but Juno refused. The dogs were sent on, but failed to find any more birds, and at 1:45 P. M. the brace was taken up, and the heat awarded to Belle. (Mr. Briggs, being disqualified, did not judge in the heat, M. Holloway taking his place.) Belle was handled by Briggs and Juno by E. Leavesley.

At 2 P. M., W. F. Whittier's lemon belton Lewellin setter dog Rock Jr. (champion Rock-Mayberry's Sybil), and Daisy were put down. Both dogs exhibited good style. They were worked in the open for some time without finding. Rock going quite fast, came to a magnificent point. Daisy broke in and flushed; the bird was shot at by Tom Hildebrand (who was handling Rock) and missed, both dogs standing to shot. Moving further on, Rock came to another point and Daisy backed in a beautiful manner. Two birds were flushed and both shot at, one being killed and retrieved very nicely by Daisy. The other was slightly wounded and flew into an open field close by, and the dogs were worked in that direction. Rock roaded in fine style, flushed the bird and chased and caught it, disregarding his handler's order to drop. In doing this he mouthed the bird very much. At three o'clock the brace was called up and the heat given to Daisy. They were down one hour and fifteen minutes. (D. M. Pyle having handled Daisy in the heat, was disqualified to act as judge, and Mr. Holloway acted in his stead.) W. Hideman's Jim (a Gordon setter) having drawn a bye, the first series of the heat was concluded. (Jim was withdrawn on the second day.)

Second Series, Second Day, Tuesday, November 28.—After a drive of one and a half hours, the ranch of Mr. Murphy, eleven miles from Gilroy, was reached, and the first brace (Count Warwick and Belle) were cast off at eleven A. M. on a hillside. The Count, running wildly, flushed several birds, and Leavesley, who was handling him, shot and killed one, Count dropping to shot, and being ordered on, retrieved nicely. Another bird, being flushed by Leavesley, was shot at and missed, Count dropping to shot. Belle, in the meantime, was moving on, and a bird being flushed, she stood to wing. Several other birds were flushed, shot at and missed. The dogs were called in and the heat awarded to Belle. (In this heat George W. Holloway acted as Judge in place of Horace Briggs, who was handling Belle.)

The next brace (Belle and Daisy) were cast off at 1:20 P. M. Several birds flushed by Briggs, who was handling Belle, shot at and missed. Belle going on, came to a point. The bird was flushed and killed by Briggs, Belle breaking shot, but to order retrieved the bird. Pyle flushed a bird, shot and killed, Daisy retrieving nicely. Another bird being flushed, Pyle killed it, and after considerable working Daisy found and retrieved it. Daisy moving on, came to a point. The bird was flushed and missed.

The weather being quite warm, the dogs were allowed to be watered. In coming up a canyon Daisy came to a nice point, and the judges ordered Belle brought up to back. She refused to do so, and going past the bird flushed it. The bird was shot at and killed, and Belle retrieved it. At 12:50 P. M. the brace was called in and the heat and first prize (a silver cup) awarded to Daisy. The second prize (a gold medal) to Belle, and the third prize (a silver medal) to Count Warwick.

The first brace drawn in the Puppy Stakes (Foxhall and Duke) were cast off at 1 P. M., Leavesley handling Foxhall and Dan Gilroy handling Duke. Duke ranged for a while and came to a point. The bird was flushed and missed, going on, several birds were flushed by the handlers, shot at and missed, both dogs standing to shot. Foxhall being sent on, flushed two birds, which were shot at by Leavesley and missed. Going on further, several birds were flushed and flew into a sycamore tree. Two of these birds being shot, Duke retrieved one very nicely and Foxhall retrieved the other, mouthing it very much. The heat was decided in Duke's favor. The dogs were down fifty minutes.

The next brace (Scott and King) were cast off at 2:50 P. M. Considerable ground was covered without finding a bird. Finally King started a rabbit and chased it. Moving along the side hill, several birds were flushed. Dan Gilroy killed one, Scott standing shot, and to order retrieved fairly. King being sent on, came to a point. The bird, being flushed, was fired at by Hildebrand (handling King) and missed. Scott could not resist the temptation to chase two rabbits which came across his path, and he did it right royally. Hildebrand flushed a bird, shot at and killed it, and King to order retrieved nicely. The heat was awarded to Scott, King having been withdrawn.

Third Day, Wednesday, November 29.—Captain Messe having withdrawn his dog Tip, Mollie had a bye, and T. Hildebrand having withdrawn his dogs Major and General, both Red Bess and Silk had a bye.

The first brace in the drawing for the second series were Silk, handled by Martin Briggs, and Duke, handled by Dan Gilroy, which were cast off at 10:15 A. M. After walking several miles over some very steep hills, a bevy of birds was flushed. Dan shot and killed one, which was retrieved by Duke. Moving on several single birds were flushed in a ravine, and Dan killing one, Silk retrieved very poorly. She seemed to be completely used up, the weather being very warm and the ground exceedingly rough and steep. At 12:15 P. M. the dogs were called in and the heat awarded to Duke.

The next brace called was Scott and Mollie. Both dogs being sent on, ranged for some time, and after considerable time had elapsed, and no bird being found, the dogs were called in and the heat awarded to Scott.

The next brace turned loose were Red Bess and Duke, on a ridge somewhat brushy, at 2:15 P. M. Immediately a covey was flushed, and Gilroy (handling Duke) shot and killed one; Duke retrieved it in good shape. Further on, a bird was flushed and killed by Dan, and Bess retrieved it. In the meantime Duke was snuffing the air, apparently on the scent of a bird, and shortly came to a magnificent point. He re-

mained staunch for at least five minutes for Bess to be brought up to back, but as the brush was too high Bess could not see him, and the judges ordered the bird flushed, which was done. It was killed by Dan, but the dogs failed to find it. The heat was finished at 3:25 P. M. in favor of Duke.

The next brace (Scott and Duke) were cast off at 3:35 P. M. to contest for the first prize. They went into a small gulch together, and after considerable work a bird was flushed by Duke, which was killed, and was retrieved by Duke. Scott came to a false point, but discovered his error and moved on. Several birds were flushed by Gilroy and two were killed. Scott retrieving one in good style and Duke retrieving the remaining one, mouthing it somewhat. The judges being satisfied with the workings of both dogs, called them up at 4:10 P. M., and awarded the heat and first prize (a silver cup) to Scott; second prize (a gold medal) to Duke, and third prize (a silver medal) to Bess.

The special price (a silver goblet presented by W. F. Whittier, of San Francisco) to be awarded to the best brace of puppies running in the trials, owned by one person, was awarded to Leavesley's Duke and Mollie.

The special prize, a pointer pup (Susie Bow, out of Ranger Boy), presented by G. W. Bassford, of Colusa, for the best dog in the trials not winning a place, went to Whittier's Rock.

The special prize (a silver cup presented by W. W. Traylor) to the best dog in the trials was awarded to Leavesley's Daisy.

At the conclusion of the trials a business meeting of the club took place, at which the several prizes won were delivered to the owners of the winners. Several of the persons present made pertinent remarks pertaining to the method of holding field trials.

Daisy, the winner of the All-aged Stake, is a blue belton setter bitch, whelped May 6, 1876, and was imported to this coast by Tristram Burges. She comes here with quite a reputation, having won first at Cedar Rapids, Iowa, in 1877, and fifth at the Hampton, Iowa, trials in the same year. She is by Carlowitz out of True, a pure Llewellin.

H. M. Briggs's Irish setter Belle, three years old, the winner of the second place, is a fair looking bitch, but was in no condition for a field trial, being too fat.

Martin Briggs's Count Warwick, the winner of the third prize, is a black, white and tan setter dog, two and a half years old; was imported from Lancaster, Penn., and is by Gauze's Warwick, out of Gauze's Belle.

The winner of the Puppy Stakes (Scott) is a fine looking Gordon setter, very speedy, and with good staying qualities. He is owned by F. G. Abell, of Portland, Oregon.

The second went to Duke, a black and white ticked setter dog by Belton, out of Belle. This dog exhibited very good nose, but was not quite up to field form. He is owned by E. Leavesley, of Gilroy.

The third prize was won by Red Bess, owned by F. G. Abell. She is a beautiful red Irish setter of good color and very fair field qualities.

THE NEW BEDFORD BENCH SHOW.

THE Bench Show held at New Bedford last week under the auspices of the Southern Massachusetts Poultry Association, was quite a successful affair. Many fine dogs were present, and the attendance was very good. The judging was done by Dr. Al. Watts of Boston, and Mr. Bigelow of Natick, and gave general satisfaction. Following is the prize list:

Champion English Setter Bitches—1st, Opal, Nicholas Hatheway Fall River; 2d, Bow Belle, Nelson Hatheway, Middleboro.

Native English Setter Dogs—1st, Blue Dan, Nelson D. Hatheway, Middleboro; 2d, Black Dash; vhc, Count Lester, H. V. Blankenship, Fall River.

Native English Setter Bitches—1st, Flake, John J. Scanlon, Fall River; 2d, Arnold Thompson, Fall River.

Native English Setter Dog Puppies—1st, George Delano; 2d, King Dick, J. D. Bullock, Fall River.

Irish Setter Dogs—1st, Triumph, Warren E. Smith, Brooklyn; 2d, Dick, John J. Scanlon, Fall River; vhc, Joe, Philip D. Slocum.

Champion Gordon Setter Dogs—1st, Dash, Charles T. Brownell; 2d, Flash, George R. Reed, Dartmouth.

Champion Gordon Setter Bitches—1st, Ruby, J. P. Barnard, Jr., Boston.

Gordon Setter Dogs—1st, Dan, C. W. Plummer.

Gordon Setter Bitches—1st, Pansy, Chas. T. Brownell; 2d, Beulah, Chas. T. Brown-ll; vhc, Victoria, Brigham Bros., Attleboro.

Gordon Setter Dog Puppies—1st, Duke, Edward S. Shaw; 2d, Santa Claus, John J. Scanlon, Fall River; vhc, Tessie, John J. Howland.

Gordon Setter Bitch Puppies—vhc, Bell, Chas. T. Brownell.

Pointer Dogs—1st, Darkie, C. W. Bryant Bridgewater; 2d, Dick, Arthur M. Doane.

Pointer Bitch Puppies—1st, Lillie, Daniel Green; 2d, Topsy, O. M. Talbot, North Dighton.

Spaniel, over 28 lbs. other than black—1st, Hazel Kirke, J. H. Winslow, Baltimore.

Black Spaniels over 28 lbs. weight—2d, Phil, J. P. Barnard, Jr., Boston.

Foxhounds—1st, Geff, G. A. White; 2d, Nero, J. McAllister, Middleboro; vhc, Ranger, J. T. Richardson.

Beagles—1st, Bingle, H. F. Dexter, Marion; 2d, Fairy, H. F. Dexter; vhc, Sade, R. F. Dexter.

Fox-Terrier Dogs—1st, Curate, Wm. J. Turner, Philadelphia.

Fox-Terrier Bitches—1st, Vixen, J. P. Barnard, Jr., Boston.

Mastiff Dogs—2d, Simon Fawn, Morgan Rotch.

Champion Collie Dogs—1st, Wallace, Natick Collie Kennel.

Champion Collie Bitches—1st, Maggie, Natick Collie Kennel.

Collie Dogs—1st, Carlo, Frank L. Fish, Taunton; 2d, Rex, C. Sayles, Providence; vhc, Gaffa, Natick Collie Kennel.

Collie Bitches—1st, Maggie II., Natick Collie Kennel; 2d, Daisy, F. C. Sayles, Providence.

Collie Pups—1st, Bessie, J. P. Barnard, Jr., Boston; vhc, Rosalind, L. Miller, Stockbridge; hc, Roscoe, M. E. Wordell, Fall River.

Champion Bulls—1st, Judy, J. P. Barnard, Jr., Boston.

Bulls—1st, Josephine, J. P. Barnard, Jr., Boston; 2d, Juno, do.; vhc, Hero, do.

Bull-Terrier Dogs—1st, Democrat, Dr. E. M. Perry.

Bull-Terrier Bitches—1st, Fly.

Champion Pugs—1st, Echo, Mrs. Wm. P. Ricketson, Providence.

Pug Dogs—1st, Toodles, Miss S. P. Randall.

Pug Bitches—1st, Rags, J. P. Barnard, Jr., Boston.

Black and Tan Terriers, over 5 lbs. weight—1st, Champion Wallace, J. P. Barnard, Jr.

Poodle Dogs—1st, Dick, Dr. C. L. Spencer.

EASTERN FIELD TRIALS CLUB.

THERE was a special meeting of the Eastern Field Trials Club, at Delmonico's on Tuesday evening. There was a large attendance of members and the meeting was one of the most interesting in the annals of the club. After the reading of the minutes of the last meeting, which were approved, the rules were suspended, and Mr. Elliot Smith, of New York, who was an honorary member, was unanimously elected an active member. The secretary then read a communication from Mr. A. H. Godeffroy, asking for a larger fee for membership, and increased annual dues for the purpose of defraying the expense of leasing and stocking extensive grounds for the purpose of holding the Trials and for the use of the members to shoot over after the Trials were run. After a friendly discussion of the question for nearly two hours, the matter was referred to the executive committee. Mr. George T. Leach, Mr. Elliot Smith and Mr. A. E. Godeffroy were appointed a committe to ascertain the probable cost of leasing and stocking suitable grounds at High Point for the use of the club, and also to suggest ways and means for the furtherance of the objects of the association, and they were instructed to report at the first meeting of the board of governors after the annual meeting. It was voted that the club take measures to be incorporated, and the president was instructed to secure counsel and take the proper steps to accomplish this purpose. A unanimous vote of thanks was tendered the president, Mr. J. Otto Donner, for the very acceptable manner in which he has performed his duties.

The following gentlemen were proposed as members of the club: Mr. J. B. Marston, New York; Mr. J. Henry Kershow, Philadelphia, Pa., and Mr. Fred. H. Hoe, Tarrytown, N. Y.

OTTAWA BENCH SHOW.

MR. CHARLES LINCOLN, Superintendent of the Ottawa Bench Show, writes "that the numerous inquiries already received from the United States indicate a large entry. The club are anxious to have the best dogs represented at their first show. Letters have been sent to all the principal railroad companies, asking them to carry dogs free to and from the show, when they are accompanied by their owners or care takers, also to express companies, asking them to return dogs free, whose owners have paid the usual rates to the show. In the appointment of judges the club have been particularly fortunate in securing two of the best judges in the world. For the setters and pointers, Major J. M. Taylor, of Lexington, Ky., will act. Mr. J. F. Kirk, of London, Ont., will judge all the non-sporting dogs. This should give great satisfaction. Mr. Kirk is the best of a few good judges of non-sporting dogs. His decisions at Cleveland gave great satisfaction."

The prize list is as follows:

Champion English, Irish and Gordon setter dogs, $20 each; bitches the same. Prizes for these in the open classes are $30 and $10. and for pupes in each class over 12 and under 18mos., $10 and $5. There is also a class for pure Laveracks, with $25 and $10 for both dogs and bitches.

Champion pointer dogs, large and small, $15; bitches the same, and in the open classes $15 and $5, and puppies under 12mos., $10.

Champion Irish water spaniels, $15; open class, $15 and $5.

Clumber spaniels, $10 and $5.

Field spaniels, any color, except clumbers and black spaniels, 28lbs. or over, $16 and $5.

Champion field spaniels, any color, 28lbs. or over, $15.

Black field spaniel, dogs, 28lbs. or over, $15 and $5; bitches the same.

Champion cocker spaniels, any color, under 28 lbs, $15; 28 lbs, $10 and $5; bitches the same.

Cocker spaniel dogs, other than black, under 28 lbs., $10 and $5; bitches the same.

Field or cocker spaniel puppies, any color, under 12 mos, $10.

Black spaniel puppies, under 12 mos., $10.

Foxhounds, $10 and $5; puppies, under 12 mos., $7.

Harriers, $10 and $5.

Beagles, $10 and $5; puppies, under 12 mos., $7.

Deerhounds, $10 and $5.

Champion greyhounds, $10. Open class, $10 and $5.

Champion fox-terrier dogs, $15; bitches the same. Open class, $10 and $5; bitches the same; puppies, under 12 mos., $7.

Mastiffs, $10 and $5.

St. Bernards, $10 and $5.

Newfoundlands, $10 and $5.

Champion collies, $15. Open class, dogs, $15 and $5; bitches the same; puppies, under 12 mos., $5.

Bulldogs, $10 and $5.

Bull-terriers, $10 and $5.

Scotch terriers, hard haired, other than Skyes, $10 and $5. Skye terriers, $10 and $5. Dandie Dinmont and Bedlington terriers, $10 and $5. Irish terriers, $10 and $5. Yorkshire terriers, $10 and $5. Black and tan terriers, 5lbs. and over, $10 and $5. Toy terriers, rough or smooth coated, under 5 lbs., $5.

Pugs, $10 and $5.

For foreign bird dogs, such as Japanese spaniels, Pekinese, Mexican hairless, Chinese, crested or edible prairie dogs, Dachunds, Berghunds, Great Danes, etc., $10 and $5.

For any pure breed of dogs not mentioned in the list, $10 and $5.

A private letter from B. H. G. Vicars, the secretary and treasurer, states that the Dominion of Canada Kennel Club will give a prize, to be known as the D. C. K. C. Trophy Cup, value $75, for the best kennel of dogs, six in number, of any breed, whelped in Canada, and owned by the exhibitors six months before the show, the cup to be won twice before it becomes the property of the winner. The club will also offer specials for kennels of five Gordon setters, and for foxterriers of light weight.

LOUISIANA FIELD TRIALS.

[By telegraph to the FOREST AND STREAM.]

J. K. RENAUD'S Flossie won the Members' Stake at the Louisiana Field Trials.

DERBY.

Pink B. won first, Countess Magnet second, Nelly Bly third.

ALL-AGED STAKE.

J. M. Avant's London won first, H. Baily Harrison's London and Foreman divided second, Flossie and Count Noble divided third. Full report will appear next week.

COCKER CLUB.—Ann Arbor, Mich., Dec. 10.—*Editor Forest and Stream:* In response to the "Circular to Cocker Breeders and Admirers in the United States and in the Canadas," published in your valuable paper of November 9, setting forth the objects of the Association and calling upon all those who are willing to join this Association for the purpose of restoring the cocker spaniel to its primitive quality and usefulness, I have received fifty-three responses. Some of the parties addressed voted for two, some for three or more names to constitute the committee of six "to whom shall be intrusted the organization of said association." The persons voted for to comprise this committee are the following. The one having the highest number of votes is placed at the head of the list and so on to the last: M. P. McKoon, of Franklin, N. Y., 52; F. B. Pitcher, of Claremont, N. H., 52; I. H. Whitman, of Chicago, Ill., 32; E. Tinsley, of Hamilton, Ont., 31; E. C. Franklin, of Ann Arbor, 31; Dr. H. B. Wygant, of Peekskill, N. Y., 22; George Schofield, of Toronto, Ont., 22. Messrs. Goddefroy, Coulter and Cummings stand next in order, with scattering votes for eleven others. In justice, therefore, to the implied wishes of those voting for the committee of organization, I think it right and proper for Mr. McKoon to assume perogatives of temporary chairman and call the other members of the committee together at some central point for the purpose of organization and preparing for the forthcoming bench shows. I therefore notify those who have so kindly responded to my appeal for the restoration of the cocker spaniel, that my duties cease with the publication of this report and that Mr. McKoon, who by their votes has been placed at the head of the list voted for, will hereafter assume the duties of his office. In conclusion, I take the liberty, in behalf of those who have honored me with their kind expressions of opinion favoring the formation of this association, to tender them my thanks for their promised active co-operation in carrying out the true intent of the organization.—E. C. FRANKLIN ("Senex").

IMPORTATION.—Mr. J. F. Kirk, Toronto, has added to his already well-stocked kennel the above celebrated brood bitch. She arrived in excellent condition by the White Star steamship Adriatic, and her present owner writes us that he is very proud of this latest addition to his imported stock, as he considers her the most valuable bitch for breeding purposes, of this highly fashionable class, that has yet crossed the Atlantic. Her registered number in the English Kennel Club stud book is No. 3,373, and the following is her pedigree and record: By Lad o' Beverly, late Rolf (7,376) out of Lass o' York, late Belle (2,184); Lass o' York, by Boss (4,412) out of old champion Nellie (2,225), dam of champion Brush (7,271); Boss, by Towley's Ben (2,103) out of Boulton's Fern; Lad o' Beverly is by Beaver (4,508) out of Runic (4,434); Runic, by Boulton's Rex, brother to champion Rhea out of Boulton's Fan; Beaver, by Buccleuch (4,415) out of Nell (2,221); Buccleuch, by Bruce out of Nellie. Her principal triumphs on the show bence are first Devon County, first Royal Cornwall, first Crystal Palace, first Kingsbridge, first Plymouth, etc. She is the dam of champion Squaw (10,480), said to be the most perfect spaniel ever exhibited, for which £200 has been time and again refused, Lass o' Devon, Benedict, Negro, Ferryside, and many others of the most noted spaniels now before the public. Her measurements are: Nose to stop, 8in.; stop to occiput, 5in.; nose to set on of tail, 32in.; height at shoulder, 13½in.; girth of muzzle, 8in.; girth of head, 14in.; ears, tip to tip, 22in.; chest, 21in.; weight, 26lbs. Her coat is straight, smooth, and very glossy, and she is grandly feathered, a brilliant black without a white hair. Although her owner has purchased her specially for breeding, it is to be hoped that he may be induced to exhibit her at our shows, as she is an excellent model of the type and style that have long been so popular in England, and are now becoming so much in demand with us.

STRAYED—From the undersigned, a male pointer dog, large size, not trained, about one year old, color black and white, black running well into the white, making a smutty color known as blue ticked belton; had a narrow strip of leather around the neck, and answers to the name Pete. The last heard of him was in Andover. His unusual color makes him easily recognized; any information of him will be thankfully received and the informant suitably rewarded by G. W EDWARDS, North Andover, Mass.

Rifle and Tray Shooting.

RANGE AND GALLERY.

MILITARY MUSKET SHOOTING.—Match shot with military muskets, Creedmoor rules, at Shell Mound Park, I. S., Contra Costa Co., California, Dec. 3.

BOSTON, Mass., Dec. 16.—At Walnut Hill to-day, despite the extreme cold, a goodly number of riflemen were gathered, and, notwithstanding the strong 9 o'clock wind, many very good scores were made in the Decimal, Rest and Creedmoor matches. In the Victory match Mr. Lee was the only shooter, and he made 49. Christmas day the range will be opened and the regular matches on. The following are the best scores:

Creedmoor Match.										
O M Jewell	4	5	5	4	5	5	5	5	5	4—47

BOSTON, Dec. 12.—Now that the increasing low spirits of the thermometer renders the excursions to the out-of-town ranges somewhat less attractive, the regular prize shooting season has been inaugurated at the Mammoth Rifle Gallery, at 655 Washinton street. Mr. N. B. Smith, the proprietor, has made out arrangements for a series of shoots that will last during the winter months. Each month six prizes will be offered, $7, $6, $5, $4, $2 and $1 respectively, for the best six scores made by the patrons of the gallery. The shooting will be off-hand, distance 150 feet, 10 shots the best five to win, or possible 250. The attendance has been good the past week, the well-known local and out-of-town marksmen are dropping in frequently. The December list has already been opened, and following scores now appear upon the blackboard:

U A Pollard	44	45	43	41	41—210
H Lowell	44	43	42	41	41—210
I Rusell	42	43	42	41	43—210
T H Bird	40	45	41	41	42—209
G W Little	39	40	40	40	41—200

Besides the regular prizes, a special award of $20 for eight consecutive bullseyes is offered. It is also proposed to open, next month, a list for amateurs with appropriate prizes for good shooting.

WORCESTER, Mass., Dec 14.—There was the usual meeting at the rifle range to-day. The wind was blowing from 8 to 10 o'clock. The scores were as follows:

Massachusetts Target—Off-hand.										
C A Allen	11	10	12	10	9	11	11	11	12	10—107
Stedman Clark	11	8	10	10	11	11	9	12	10	12—104

Ring Target Match—Rest.										
W O Wells	11	12	11	10	11	10	7	10	9	11—102

GARDNER, Mass., Dec. 13.—There was about the usual number present at the regular weekly meeting of the Gardner Rifle Club at the Hendrantaak Range. The distance was 200 yds., off-hand, inch ring and Creedmoor target combined being used. The results of each man's shooting is told by the following score:

	R.	C.	R.	C.	Totals.
J N Dodge	86	46	91	46	177—92
A Mathews	86	44	86	45	172—89
G F Ellsworth	75	44	84	45	159—89
W C Loveland	81	45	77	45	158—90
B Williams	67	43	80	46	143—89
G C Goodall	71	43	71	43	142—86
S B Hildreth	67	43	74	44	141—86
C Shumway	71	45	65	42	136—87

A PENNSYLVANIA RIFLE SHOT.—The Harrisburg, Pa., *Telegraph* reports that Ellsworth Bierbower, son of Washington Bierbower, of Allison's Hill, is certainly remarkably skillful with a rifle.

One of his latest shots is described as follows: A piece of half-inch gas pipe was inserted through a heavy piece of iron as a base. At one end of the pipe he inserted the blade of a hatchet so that the sharp edge rested against the pipe. On either side of the hatchet he hung a glass ball. Standing off at a distance of forty feet he fired with a Winchester repeating rifle at the exposed end of the gas pipe, through which the ball passed and was split on the hatchet, dividing glass balls thrown to the right and left side of the hatchet, having done this remarkable shot to his satisfaction in the ordinary offhand way, he tried it in a different manner. Holding the gun over his shoulder he sight d through a small mirror no nel h his left hand, and fired with his arm behind him. The ball passed through the gas pipe, split on the hatchet edge and broke both balls. Still another way was tried. Bracing over, he held the rifle down and sighted in mirror as before, again firing the shot successfully. Shooting glass balls thrown by a second person, and using the rifle in his hand and shooting at arm's length, shooting a swallow in its swift flight, are all common achievements of his. Young Stedman is learning the trade of sookbinder, and indulges in his fancy shooting for his own amusement.

THE NEW YORK RIFLE CLUB has prepared a very complete and comprehensive programme of matches to be shot at their ind or range during the winter, arranged with the intent of int resting every member of the club. The skill of each man has been gauged by previous performances and the various competitions arranged so that all may have a chance to win a prize. Valuable prizes have been offered, and each month a solid gold trophy set with diamonds, presented by the president, Mr. L. V. Son, for the highest average, ten full scores, the successful to receive one any night, and the match to close at the end of any week when the above mentioned score has been made ten full scores. There are also several Borchard, Remington and Ballard rifles as prizes. Probably the most interesting and amusing competition will be a series of matches between two teams of seventeen men each, under the captaincy of the president, L. V. Sco ield, and the club captain, F. J. Donaldson. These teams will shoot every Thursday evening for a dinner once a month, to be paid for by the losing team, and as a further inducement for the members to keep up the good name of the club, the president will provide twelve medal team badges for the twelve men who have made the best seven targets out of the eleven competitions to be held, and those twelve men shall constitute the team and reserve of the N. Y. R. C. for 1883, and must be prepared to meet all challengers.

THE SEPPENFELDT CLUB.—Dec. 15, 1882.—*Editor Forest and Stream:* We hereby challenge any five (5) men, belonging to any organized club in the United States to shoot with a Ballard rifle of 22 caliber, a match for fifty dollars ($50) a side, three rounds, full Creedmoor rules to govern—to be shot at our headquarters, 15 East Houston street—J. Sendtz, Sec'y Seppenfeldt Rifle Club. This challenge is open for one month from date. J. S. The Seppenfeldt Rifle Club have elected the following officers for the year 1883: For President, B. Wragge; Vice-President, W. Lultz; Secretary, J. Sendtz; Financial Secretary, W. Seppenfeldt; Captain, G. Zimmerman; Treasurer, E. Holtzmann.

THE TRAP.

YONKERS, N. Y., Dec. 18.—The Yonkers Gun Club held their regular monthly shoot on Dec. 16, on the club grounds, Valentine's Hill; 6 pigeons, 5 yds., both barrels, and 8 clay pigeons, 18yds., one barrel.

	Pigeons.						Clay.		
A J Kolb	1	1	1	1	1	1—6	1	0	1—2
R Ellin	0	1	0	1	1	1—4	1	1	1—3
J L Thomason	1	0	1	0	1	1—4	0	1	0—1
S M Swift	1	1	0	1	0	1—4	0	0	0—0
O L Austin	0	0	1	1	1	1—4	1	0	0—1
H Eckeneyer	0	1	1	1	0	0—3	0	0	0—0
S L Pennington	1	1	1	0	0	0—3			
G Langran	1	1	1	1	1	1—6	1	1	1—3
E L Thomas	1	1	0	0	1	1—4	1	1	1—3
G B Valentine	1	0	0	1	1	0—3	0	0	0—0
P H Wragg	1	1	1	1	1	1—6	1	1	1—3
R Rowland	0	1	1	1	1	1—5	0	0	0—0
J Rowland	1	0	1	1	0	1—4	0	1	0—1
H B Waring	1	1	1	0	1	1—5	0	1	0—1
J Avery	1	1	1	1	0	1—4			

It was almost dark when the clay pigeons were shot, and this being the first attempt at them not very good scores were made. The next shoot will take place Christmas day, when there will be pigeons, clay pigeons and a basket shoot for a handsome gold medal, presented to the club by their president, Mr. E. L. Thomas, open to members only.

ALGONQUINS vs. WASHINGTON HEIGHTS.—New York, Dec. 14.—The return match between these two clubs was shot on the grounds of the former club on Dec. 7, and resulted in a victory for the Algonquins. The match was ten men each side, twenty balls each, 3yds. rise, from three traps. Fair scores were made, although the prevailing high wind and low temperature made accurate shooting difficult. If further proof was needed of the rare and genuine goodfellowship of the Washington Heights Gun Club it was fully supplied collectively, it was evinced on this occasion by the gallant spirit and graceful manner in which they accepted this their second defeat, at the hands of the Algonquins. The pleasant dinner and social festivities, made memorable by song and story, and the development of latent talent, wit and humor which followed Fielding's victory was a most fitting close to a day pleasant to remember by all present, and well calculated to augment, if possible, the kindly feeling and regard which had between these two clubs. With such a purpose in view, these friendly matches may be indeed prolific of rare enjoyment and pleasant memories, and go far to stimulate the true lover of the gun to accuracy and efficiency.—W.

JERSEY CITY HEIGHTS GUN CLUB.—Jersey City, N. J., Dec. 17.—At the regular annual meeting of the Jersey City Heights Gun Club, held at their club rooms on the 13th inst., the following officers were elected for the ensuing year: Geo. B. Eaton, president; J. Von Seugerke, vice-president; Al Berringe, secretary and treasurer; John Headden, Jr., Chas. Northrup, H. A. Newbold, executive committee. A committee was appointed to make arrangements for the third friendly shoot with the Midway Gun Club, each club having won a match. The next match is to take place on the Jersey City Heights Club grounds, any rules the Midways choose, the Jersey Heights being willing to concede that much. The match to be 25 men each, 25 birds, 7 birds each man, for the 13th of January. Think there will be a hot time.

WELLINGTON, Mass., Dec. 16.—A good company of shooters from the Malden Gun Club met at Wellington to-day, and did good work in finishing the exhibition clay pigeons from trap No. 1. The first score of the day's shooting was as follows: Fielding, 9; Moore, 5; Collins, 3; Peterson, 3; Richards, 2; Beaufort, 1. Fielding and Moore divide first honors. Capt. Sawyer, of the Middlesex Club, having arrived on the ground, desired to try his hand, and succeeded in breaking a handsome number of the five birds. Other sweepstakes followed with varying success.

WEST SOMERVILLE, Mass., has a new gun club with twenty members. Their first shoot will be held on Christmas Day.

Coughs. BROWN'S BRONCHIAL TROCHES are used with advantage to alleviate Coughs, Sore Throat, Hoarseness and Bronchial Affections. Price 25cts a box.—*Adv.*

Answers to Correspondents.

W. E. B. Detroit, Mich.—The rifle is one which has no record.

G. D.—Go to some of the stations on the Northern Railroad of New Jersey.

G. A. S. T. B., Bellaire, O.—We do not know where you can procure ferrets.

J. D. B., New Athens, O.—For Ohio quail law see our issue of December 7.

G. S., Lynn, Mass.—The 28-in. barrel will shoot practically as well as the 30-in.

J. P. U., Binghamton, N. Y.—Write to the *Army and Navy Journal*, New York City.

J. R. W.—Write to Mr. G. A. Wilson, secretary Algonquin Gun Club, 51 West 37th street, New York.

DICK, Thompsonville, Conn.—Are No. 9 pink-edge wads too large for No. 12 pap r shells? Ans. Yes.

N. B. and N. P., Baltimore, Md.—Mosquitoes are more numerous in the Adirondacks in August than in July.

W. E. L., Oxford, N. Y.—We do not know name of ferret breeder. 2. For beagles see our advertising columns.

T. P. B.—Middletown, Conn.—Consult book, "Horse in Motion," published we think, by Osgood & Co., Boston.

R. R. K.—The season for deer in Pennsylvania, as printed in our issue of December 7, is from October 1 to December 31.

J. W. H., Philadelphia, Pa.—As stated some time ago in our editorial columns, the author of "Winter Talks" is Mr. Geo. Dawson.

B. R. M.—1. For wild rice see our advertising columns. 2. Pillsbury, Minn. 3. At any of the gun stores advertised in this journal.

C. T., New York.—For an explanation of the principles of recoil see our issue of Sept. 23, 1880—article, "Dittman's Sporting Powder."

W. A. M., Pensacola, Fla.—To clean rust out of rifle use finest emery powder on oiled rag with cleaning rod and plenty of "elbow grease."

L. L., Canandaigua, N. Y.—You can buy such a gun from any of the dealers, or if you want a second-hand one advertise in this journal for it.

S. M. N., New York.—The berries, taken from quail's crop, are the fruit of the skunk cabbage (*Symplocarpus fœtidus*), a very favorite food of the quail.

G. H. DE H., Rosindale, Mass.—The sight is advertised in our columns. We cannot refer you to good squirrel shooting within an hour's ride of Boston.

C. A. G., Middletown, Conn.—A fox hunter found a fox up in a tree, and shot him. Please tell me if it is not unusual for foxes to take to trees. Ans. No.

X. Y. Z., Haverhill, Mass.—The spots in your gun will probably not interfere with its shooting qualities. Show it to some of your experienced gunning friends.

G. B., New York.—Where can I get a dugout canoe, and how much is one worth? Ans. They have them in St. Augustine, Florida. We do not know who one would sell to.

A. H., Cuero, Texas.—The charge is not a dangerous one for the gun, but it is too heavy for your own comfort. Try a lighter load and see if you cannot do just as good work.

G. T. J., Goldsboro, N. C.—For squirrel shooting you will find a 12-bore gun the best weapon. The scattering of the charge depends upon style of bore, *i. e.*, choke or cylinder.

C. E. S., Benton, O.—1. You will find a .45 calibre, 70 gr. powder, rifle suitable. 2. You can go to Fort Benton, on the Missouri, by steamer, if you go at the proper season of year.

C. L. R., Garrettsville, O.—The only way you can determine proper charge of buckshot for your gun is to experiment; but in no event use more than will readily chamber in the choke.

M. T. E., St. Martins, Wis.—Where can I dispose of a fine mounted male specimen of *Anser albifrons*, and how much would it bring? Ans. It should be worth $8 or $1, but we cannot refer you to a probable purchaser.

H. C. F., Philadelphia.—You will find at Homosassa, Florida, no less than ten distinct species of fish. At last accounts Mr. Jones was still found at his post, and that you would find no difficulty in obtaining accommodations there.

J. B. B., Sorel, Canada.—After some trouble we found the concern advertising the ride concerning which you inquire. The street magazine is an old one and was long ago discarded. We should not advise you to purchase the arm.

D. B.—To have your rifle barrel bored in good shape, send it to a regular gunsmith. If there are not good workmen in your vicinity, express the barrel to some one of the firms who advertise in this paper. The result will repay the cost.

READER.—If in shooting a rifle you elevate it 1,000yds., does the bullet fly with point the highest until it reaches the target, or does it change its position with the line of flight like an arrow? Ans. It changes its position with line of flight.

J. M. M.—For information about Florida, read pamphlet issued and sent free by the Savannah, Florida & Western Railroad, Savannah, Ga. Also "Florida for Tourists, Invalids and Settlers," by Geo. M. Barbour, published by D. Appleton & Co., $1.50. We can supply either.

SCRIBNER, Glasco, N. Y.—1. For situation with taxidermist or market for stuffed birds apply to Sauter, whose advertisement appears in our columns, or to J. Wallace, 19 North William street. 2. Mr. Bailey's address is Parkville, N. Y. 3. Mr. Steele's address is Hartford, Conn.

MARL, Toronto, Canada.—In pigeon shooting a 12-bore is taken as standard; every bore larger than that must go back one-half yard for each difference in size, *i. e.*, an 11-bore, ½yd., a 10-bore 1yd., etc.; and smaller bores go forward in the same way, namely, a 13-bore ½yd. to a 14-bore 1yd.

A. B. C.—In a club shoot B's name is put on the score card and he then declines to shoot. A says he will shoot for B, using his (A's) own gun and shells, and A's initials are placed over B's name. A shoots and wins. To whom does the cup belong? Ans. To the one who paid the entrance fee.

T. L. S.—Dugdale, Pa.—In Province of Quebec season for killing deer, elk and caribou is September 1 to February 1. Killing of moose is prohibited until after September 1, 1883, the season thereafter being September 1 to February 1. Non-residents are required to take out license, fee $30 per season.

J. W. J., Quitman, Ga.—A white quail was killed in this county last February, and as it was quite a curiosity I had it nicely preserved by an exp rienced taxidermist. Can you give me the name of some bird fancier who has a collection of American birds who would be likely to purchase this? Ans. We know of no one.

H. G. H., Cleveland, O.—1. We have ordered a number of copies of the cover from the illustration in your message. The Rifle, Rod and Gun in California," by Mr. Van Dyke, can also be supplied by us, price $1.50. 2. We are not aware that a hammerless gun is in preparation by the firm named. 3. Trajectory was applied to projectiles. It is correctly described by the parabolic line of flight.

M. H. C., Morris, Ill.—Please find enclosed a photo of a peculiar owl for these parts. It was taken with a number of others alive from my pigeon cote where they evidently had been reared. A full grown one measures from tip to tip three feet ten inches, is very light color and it has not the appearance of a monkey more than any bird I have seen. Ans. The photograph represents a barn owl (*Strix flammeus pratincola*), a species of rather southerly distribution but not very uncommon as far north as New York.

J. T. C., Boston, Mass.—Is there any way to learn if a shotgun is liable to burst? I have a cheap breech-loader and I have become afraid of it (merely enough recoil to be disagreeable) and is unknown. Ans. There is no way except to test it, and that is unsatisfactory, for while a test charge might not burst the gun, it might so weaken it that the next charge would burst it. The best plan, if you have not confidence in the gun, is to sell it and get one that you can trust, for you can never shoot well unless you have confidence in your gun.

W. M. M., Helena, Montana.—I send you by mail portions of two birds, one a partridge and the other a "foolhen," so called in the Montana Game laws. Please identify them. Ans. The bird labeled "Partridge" is the ruffed grouse (*Bonasa umbellus*). The "foolhen" is the Canada, from which it differs mainly in the absence of the chestnut band on the tail and the spots of white on the tail coverts.

J. B. W., Sharon, Conn.—A few days ago a young man heard his dog barking in a piece of pine woods. He went over and saw an animal up in a small tree, which he took to be a 'coon. He threw a stone and knocked it out, and the dog killed it. When he brought it to town some said it was a 'coon and others said it was a fox, and it looked as much like one as the other. At last one man said it was a wood fox. Is there such an animal? Its fur was a little more gray than a 'coon's, but not near coarse enough. Ans. We never heard of a wood fox. From the description it seems probable that the animal may have been a gray fox (*Urocyon virginianus*). This is a species of rather southern distribution, much grayer than our red fox, and noted for its arboreal habits and climbing powers.

Yachting and Canoeing.

CANOEING IN AMERICA.

A LOCAL reporter of Yanktas delivers himself of the sage opinion, in a turf journal, that canoeing never will flourish in America; that canoes are all nonsense any way; and that catboat traps ought to take their place. Running the Colorado River, exploring the chain of Adirondack lakes, or piloting into the rocky fastnesses of Okeechobee in a 17ft. catboat is so bewilderingly funny, that some thousands of Americans are likely to continue exhibiting a seemingly justifiable prejudice for the canoe. But why should a newspaper [illegible] of narrow mental range of experience attempt to air his opinions at all on a subject he knows nothing of? Canoeing never flourished in any country, nor grew so fast in favor as in America, in witness of which, the great Lake George meet of August may be cited. Canoeing is essentially a sociable pastime, a sport for each paddler in his individual capacity, hence, clubs and organizations may not cut great figures, yet the fleets of canoes spread apace all over the country. They make no great noise in the newspaper world, but prosperity is their's none the less, and succeeding years have seen fresh accessions to this delightful, invigorating sport by the hundreds. Canoe clubs are good in their way for headquarters and recomodation, but as the shapely double-end cockle shells can be stowed under the bed, on the mantelpiece, or slung from the library ceiling, clubs are not as essential nor is such consequence in guiding the destiny of the sport as clubs are for sailing. Organization and red tape are really foreign to the happy-go-lucky Bohemian color which is one of the chiefest attraction of this knock-about existence. The enthusiast with the paddle is not a racing man, but more a passionate traveler, bent upon exploring strange climes in search of nature's beauties in their purity, yet undefiled by men. The lonely voyager seeks in the wilderness, far or near, the close associations revivifying and sublime, which contact with the fragrances of the great, tranquil and gurgling rivers, the rustling forests, and sky of the grand and picturesque in rocky architecture is certain to engender in the breast of the least impressionable of men. All this may be naught to the sedentary faculties of a Jonkins, whose appreciation of sport of any kind does not go beyond a stretch of infernal bowling, with a beer keg as the load star in the middle. Such worthies may fail to appreciate a sport appealing to minds refined and bodies athletic, for they prefer the gratification of animal proclivities. Nothing, however, will be allowed to make converts of Americans are not of such low caliber in tastes.

SPREADING BALLAST.

Editor Forest and Stream:

Notwithstanding your summary disposition of the views of your Boston correspondent "J. W. N." about spreading ballast to prevent pitching, I am unable to reconcile your position with the statements of writers of undoubted authority and with the results of practical experience. Your view I take to be that by spreading out ballast fore and aft (either inside or out), a vessel will pitch and record in a seaway less than would do if her ballast were concentrated amidships, and you are of opinion that a man who believes to the contrary should be sent to a "school for dunces" to learn him on the right course. I must frankly confess myself to be in the ranks of the unbelievers, and as my experience and the ideas I have derived from such teachers as Dixon Kemp seem to have failed to enlighten me, I must come to you for an explanation.

Experience generally has taught me that if I want a vessel to go as easily as possible through a heavy sea, I should keep all weights out of the fore and after peaks; that my chain cables should be stowed well amidships, and that the eyes and hawse pipes in my windlass be better; and when she is pitching her worst I should not rush aft to ease her by putting one man at the bowse pipe and another at the taffrail. And, to show that I am not alone in such experience, let me refer to "Hints to Yachting Magazine" for April, 1882, p. 178, where the author of "Round Island in a Ten-Tonner" tells of the most strange and unwonted diving in his vessel we ever met by moving aft a quantity of ballast and chain that had been stowed far forward by mistake. Experience in cutter sailing has taught me that a double reef in my bow pot with a strong lee helm, and the same sail on a whole bowsprit, because the weight of the spar is brought inboard, and the effect of weights in motion is in proportion to the square of their distances from the center of gravity of the vessel.

In Dixon Kemp's book on "Yacht Designing," at p. 57, occurs the following passage: "The violence of pitching and seconding is much affected by the radius of gyration . . . . The more the weights are concentrated, the short r the radius of gyration will be, and the vessel will consequently acquire less momentum in pitching, and will pitch and second with the waves; but on the other hand, if the weights are lengthened out, the momentum of the vessel, when her bow or stern is heavily depressed or submerged by the passage of waves, will be much increased. By reducing this momentum the diving and violent part of the pitching will be much modified, and what may be termed 'longitudinal rolling' will occur more with the time of the waves." The same author in his "Manual of Yacht Sailing" says (p. 50): "So far as smooth-water sailing is concerned, nothing but a clear gain will result from having the weights well distributed in a fore and aft direction, but the case will be altered when among waves. The longer the radius of gyration and metacentric height are made, the more violent will be the pitching and seconding motions among waves, and the vessel will dive, and be very wet and uneasy." But, on the other hand, if the weights are concentrated, the vessel, while lessening the momentum that caused her to plunge into a wave, will be rendered extremely lively, and probably rise to every wavecrest, large or small. The vessel with the longer radius of gyration will not so accordingly ship the waves, and although she may be carrying her canvas better, yet she will so bury herself that to sail her must be a work of great difficulty and danger."

Undoubtedly a vessel might have her ballast too much concentrated, so that she would be slow and all her motions sluggish or jerky, and I am unable to reconcile the views of Dixon Kemp's the statement in your issue of Dec. 7, that "lengthening out ballast will check pitching." If I have trespassed too much upon your space, it is because the subject seems to me a very important one, for should it now that your views are right and that ballast are gaining ground, and men will want to get all the weight they can on the keel. Mr. Kemp's opinion that danger is results in not follow from too great fore and aft extension of ballast is at least worthy of consideration, and the views held by Fishbourn, in his "Lectures on Naval Architecture," to the distribution of weights shows that high authorities regard the subject worthy of careful consideration.

I shall be very glad if you will remove the difficulties I have endeavored to show have arisen in my mind from your statements on this subject. KOSAN.

[Our correspondent has given a wider interpretation to our remarks than we intended they should convey. Shifting ballast will certainly increase its momentum, but experience shows that by the reduction of oscillation with the sea is thereby prevented, and though pitching harder, the vessel will pitch less often in a given time, and, in consequence, be sailing more nearly a straight line. The object of stretching ballast is to counteract "weatherliness," or rocking-horse motion, at the expense of buoyancy in the ends. Narrow boats with the fine quarters characteristic of the Harvey models, are very sensitive, and easily tipped. They are apt to be too quick in a sea, and to make them safe which must be a question of ballast. In such cases as this may be overdone, and with the weights too much strung out the yacht will pitch so deep as to check her way, thus losing one way what you are trying to gain in another. Either extreme is to be avoided for racing, and the proper adjustment, giving the best mean between hard pitching and quick oscillation, is to be determined by experiment or experience in each case. The driest boat is not the easiest nor the fastest. If dryness only is required, no coaming or bulwarks are necessary, but if safety is to be sought, it cannot be stretched as in narrow forms, for the very reason that deep pitching checks a chubby boat so much that in them climbing over everything is often the best choice between two evils.]

HAWSE-PIPE CRITICS.

SAILORS are proverbially the least competent to explain clearly the performance of a vessel. They invariably get cause and effect mixed up and are loose and slovenly in their reasoning. Skipper Belmont is no exception to the rule if he is correctly reported in last Monday's *Herald*. Says that estimable tar the skippers of the cutters were racing mad in the truest sense of the word, in differing from the opinions expressed recently by Mr. John Harvey in the same journal. What Mr. Harvey's opinions may have nothing to do, being the outcome of a life-long experience, a hundred fold what Belmont can boast, Mr Harvey may be safely left to take care of himself. But as he engaged the imported skippers and stated expressly they were cruising captains and not racing men, it is probable he knows what he is talking about for he ought to know as many as the truth. We are further informed by the paper Belmont that the crews of the cutters in the Scawanaka races hunz on tooth and nail for fear of sliding overboard. Apart from being ridiculous, Belmont's statement is at variance with fact. Every one knows that the crews of the cutters drenched their crews, while the hands aboard Gracie were comfortable and dry. This is a bit of imagination for Gracie's crew were soaked to the skin by flying dust long before Belmont shipped water on the Scawanaka. Belmont goes on to say that in addition to dipping bowsprits without sheeve and bowsprits cocked skyward, as in the sloop. Suppose the cutters did dip their nose poles offence, what of it? This is one of the nightmares retailed *ad nauseam* among the truly long-shore folk who have in no knowledge to deck their ingenious building such craft. The wretched and disappointing sea-going qualities of our boamy boats are too well known to every one to be stable by an estimable yacht skipper's opinions. He will have to explain away a great deal more than this before the public in our waters have any but the giddy headed will agree to his valiant, but unstable claim that tubby boats are the equal of cutters at sea under any circumstances.

"General opinion among American yachtsmen" is a very changing commodity indeed. It had been taking around cutters as though they were at anchor, but got worsted almost every trip. On the contrary, "general opinion" is strongly inclined toward cutters that cutter principles are being accepted throughout the country, but one that built a dozen dangerous tubs now building in New York. It is a relief to find the worthy skipper "allow" Belmont's sails a good fit. It would have been rather rate in the day to claim our canvas any way near the Lay them out pet exception, for compe t judges have acknowledged our inferiority on that point. Captain Belmont, in

THE "WASP" CUTTER—SAIL PLAN.

sailing Guinevere and Sappho forgets that Guinevere is a very different sort of craft to the modern cutter. She is a barrel-bottom, without an ounce on the keel. What she is or does is irrelevant altogether to the performance of cutters. As to everything being in favor of Bedouin, Belmont is inaccurate and poorly informed. He may read to advantage what has been published on that head in these columns. As to crews, Gracie was undermanned and Bedouin had two shifts for regular watches. It will be hard to convince any one that a small sail is more difficult to set, trim or hand than a large one, simply because the small sail happens to be bent aboard a cutter. Skipper Belmont's especial notions about model and buoyancy are not over clear, and may be dismissed, for the narrowest and heaviest of English yachts, such as Samoana, Vanduara, Julanar and Seabelle, are the fastest and driest vessels in a heavy sea ever floated, to which all boat testimony who have seen them under sail proportionate to the conditions. In admitting them better in a cl op sea than our bancers, the weather-beaten critic shows that he is a likely enough candidate for complete conversion, with a little more insight and a closer process of reasoning. After all, knowing whence his bread and butter comes, the gallant captain is perhaps not the man to miss sweetening his prospects with a little taffy, even at the expense of his reputation for a clear head.

HOW TRAPS KILL YACHTING.

Editor Forest and Stream:

Am very much interested in your article on single hand yachts, and I send you herewith the plans of an 18ft. boat built from my designs. Regret to say that yachting is at a standstill about Detroit, traceable directly to the numerous accidents by capsizing and the bad reputation boating and sailing has obtained. There is but one keel yacht on the river. I think the only hope for improvement is the introduction of a number of safe keel boats. The death traps we have had here have done more harm than good. W.

DETROIT, Dec. 12.

[The plan accompanying the above letter will be published at an early day.]

ROYAL YACHTS.—The Lawleys, of South Boston, are driving ahead on new work. They will build a schooner of narrow beam and larger draft for Boston owners. She will be 70ft. l.w.g., 18ft. beam and 10½ft. draft, with a ten-ton iron keel. Modern ideas seem to take more readily in Boston than among the smooth water sailers of New York. The new cutter for Mr. Edward Burgess is to be out by May. She is spoken of as a fine and roomy ship, with 32ft. length on loadline, 40ft. over all, 8ft. 6in. beam, and 8 tons lead on the keel. She will be christened Butterfly. Another cutter is under way for Mr. Franklin Dexter, owner of Meta, schooner. This vessel promises to be a grand performer, with the accommodation of a sloop double the tonnage. The cutter is 65ft. over all, 54ft. loadline, 12ft. 4in. beam, 9ft. 6in. water, and will swing 18 tons of lead just where it ought to swing. The same firm have about finished a deep draft for Mr. J. B. Meer, of the Marblehead Y. C., 40ft. long, 13ft. beam, 6½ft. draft, with 8-ton iron keel. The Lawleys have added new land to their establishment on the north side of First street, at the foot of O street.

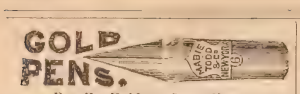
IN PROSPECT.—We are at last to have an ocean yacht race from San Francisco, something long talked of, but till now with no definite results. Mr. Harry Tevis and the Spreckels brothers are to race their two keel schooner yachts to the Sandwich Islands and back next spring for a silver cup. Capt. Turner is building the Spreckels yacht and Stone is building the other from a design by Hall. The yachts will be exactly the same size on water line—72ft.—and each will draw 9ft. The Spreckels yacht is 24ft. beam, the other being a little narrower. A captain of one of the Spreckels island schooners will act as navigator on one yacht, and it is said that Capt. Hall will sail the yacht he models. The boats will sail down, remain there a week or so, and then start on the beat back together. This will be ocean yachting to some purpose. The boats will be evenly matched, and the event will excite considerable interest. One of the yachts has just been launched, but has not yet been tried. The other has hardly been commenced.—*Pacific Life.*

BELLEVILLE NOTES.—*Editor Forest and Stream:* The five-ton open sloop Wideawake, which was built by Cuthberth some four years ago, and was one of the fastest craft of her size on the lakes, has been sold by her owner, Mr. James Clarke, of this city, to Mr. Strange, of Kingston. Mr. Pike will shortly commence the work of converting his keel sloop Sylvia into a full-fledged cutter, with lead ballast outside and cutter rig. She will bear watching next season. At present there is no talk of new craft here, but I shall be surprized if a twelve-ton centerboard cabin sloop, in which high speed will be aimed at, is not built by some members of the B. Q. Y. C. during the winter.—PORT TACK. Belleville, Ont.

CANOEING.—This sport has seen a wonderful growth in the last two years. There are now two thousand canoes of the "civilized" kind scattered throughout the country, and builders report a lively demand for the next season. The popularity of canoeing in America is not astonishing, if we recollect that our continent has facilities and attractions for the sport in all its branches far exceeding the opportunities to be found in European countries. J. H. Rushton, of Canton, N. Y., is working up $10,000 worth of stock for the spring trade. This will represent something like $30,000 in finished canoes. Thos. Kane & Co., of Chicago, are turning out by machinery a numerous fleet of their vencer canoes, which are sold to all parts of the country as fast as they can be supplied. Other builders are straining every nerve for the rush of the season, all of which is evidence of the rapid spread of a fondness for this most charming, robust and romantic method of vagabondizing with benefit to body and mind. It is probable that three canoes are turned out in America for every one set afloat in Great Britain. America is the natural home of the canoeist.

NEW SINGLE HAND YACHT.—Mr. Clapham, of Roslyn, L. I., is building a single hand yacht of the sharpie pattern for owners on Lake Erie. Her model will be of the Nonpareil kind, 25ft. over all, 9ft. beam, and 3ft. deep. She will have a keel 24in. deep, the lower 12in. of which is hung by bolts from the inside, so that it can be cast off in case of necessity or for use in shoal waters. Cabin, 11ft. long, two berths and lockers, as well as regular cruising fittings. She will be rigged as a yawl, a style now becoming very popular. Cost $325.

OCEAN CRUISING.—Schooner Intrepid, Mr. Lloyd Phoenix, N. Y. Y. C., is off on a cruise to the West Indies, and Mr. W. F. Weld's new keel schooner Gitana, has put to sea with several passengers for the same destination. A number of ladies are among the party. Capt. Sherlock goes out in her as sailing master.



NAJA.—The details of Mr. Geo. A. Beck's steam yacht have been registered in the New York Y. C. as follows: Over all, 96ft.; water line, 70ft.; beam, 13ft. 4in.; depth of hold, 5ft. 6in.; draught, 5ft. 1in.; compound surface condensing engines, 9 and 18in. diam.; return flue boiler, 5ft. 6in. diam., and 7ft. long.

DIVETTE.—This handsome little two-ton cutter has been bought by the French artist, M. Caillebotte and friend. She was to make the passage from Southampton to Havre on her own bottom. The French are buying English cutters in large numbers, and their fleet is growing fast.

NARROW CUTTERS.—We publish this week the sail plan of the narrow beam cutter Wasp, of which general plans were given in our last issue. Our article on the subject of such yachts will appear next week.

WANTED.—Best method of backing charts, such as those in the Government Coast Pilot.

"As to beer-drinking, the worst of it is that it develops diseases of the kidneys," remarked a skilled New York physician. Benson's Capcine Porous Plaster alleviates these maladies and cures when a cure is possible. Unlike all other external remedies it acts thoroughly and at once. Clean and pleasant to use. All druggists. Price 25 cents.—*Adv.*

Pencils, Holders, Cases, Etc.

WHAT WILL THE WEATHER BE TO-MORROW
POOL'S SIGNAL SERVICE BAROMETER
OR STORM, CLASS AND THERMOMETER COMBINED,
WILL TELL YOU!

It will detect and indicate correctly any change in the weather 12 to 48 hours in advance. It will tell what kind of storm is approaching, and from what direction—Invaluable to navigators. Farmers can plan their work according to its predictions. Saves 50 times its cost in a single season. Has an accurate thermometer attached, which alone is worth the price of the combination. This great WEATHER INDICATOR is endorsed by the most eminent Physicians, Professors and Scientific men of the day to be the BEST IN THE WORLD! The Thermometer and Barometer are put in a nicely finished walnut frame, with silver plated trimmings, etc., making it a beautiful as well as useful ornament. We will send you a sample one, *delivered free*, to your place, in good order, on receipt of $1, or six for $4. Agents are making from $5 to $20 daily selling them. *A trial will convince you.* Order at once. It Sells at SIGHT! Just the thing to sell to farmers, merchants, etc. Invaluable to everybody. U. S. Postage Stamps taken if in good order, but money preferred. Agents wanted everywhere. Send for circular and terms. Address all orders to OSWEGO THERMOMETER WORKS, (*Largest establishment of the kind in the World*) Oswego, Oswego Co., N.Y.

We refer to the Mayor, Postmaster, County Clerk, Bank and Second National Banks, or any Business house in Oswego, N. Y.

Write your Post Office, County and State plainly, and remit by money-order, draft on New York or registered letter, at our risk.

This will make a Beautiful and Very Useful Present.
READ WHAT THE PUBLIC SAY ABOUT IT.

I find Pool's Barometer works as well as one that costs fifty dollars. You can rely on it every time.
CAPT. CHAS. B. FOSTER, Ship "Twilight," San Francisco.

Barometer received in good order, and must say that the instrument gives perfect satisfaction in every respect. It is neatly made and a wonderfully close attender. GEO. B. PARKER, Jr., C. S. R. Office, Detroit, Mich.

Pool's Barometer has already saved me many times its cost, in furnishing the weather. It is a wonderful curiosity and works to perfection. F. J. ROBERTSON, Milwaukee, Wis.

BEWARE OF WORTHLESS IMITATIONS. None genuine without our Trade Mark, and Signature of J. A. POOL, on back of Instrument, as below:

J. A. Pool TRADE MARK

Every Instrument warranted *Perfect* and *Reliable*. Size, 9¼ inches long, 3¼ wide. If not satisfied on receiving the instrument, return it at once and we will refund your money. Please state where you saw our advertisement.

NOTICE.—$2.00 each is the regular retail price for above instrument, but being desirous of introducing them and securing good agents, we offer for a short time to deliver "a sample one" free to any address on receipt of only one dollar, or 6 for $4.00. Order at once. It's just the thing for a Christmas present.

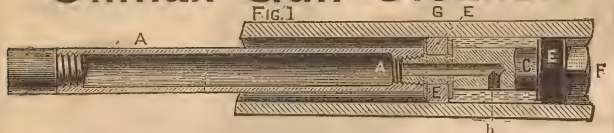
Climax Gun Cleaner.



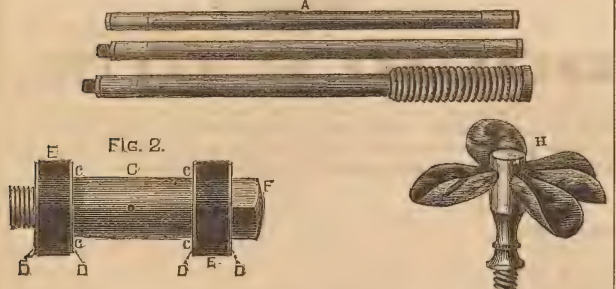


Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

NOTE.—In those made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

In offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

is made in three joints, like a common cleaning rod, and therefore is portable.
2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.
3d. The ease with which it can be adjusted to fit the barrels, loose or tight.
4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

DESCRIPTIVE CIRCULARS AND DISCOUNTS TO DEALERS GIVEN ON APPLICATION.
For sale by Gun Dealers, or address

UNITED STATES CARTRIDGE CO., Lowell, Mass.

FOR TOWN AND COUNTRY.-1883.

FOREST AND STREAM

A JOURNAL OF THE ROD AND GUN.

The year now drawing to a close has been with the FOREST AND STREAM one of most gratifying progress. Early in the year by an important mechanical improvement, the typographical beauty of the paper was greatly enhanced; and in August, with the beginning of the tenth year of publication, it was

Permanently Enlarged to Twenty-eight Pages.

There has been an equal growth in other important respects. The patronage accorded to this journal by the intelligent reading public has never been more cordial than it is at the present time. Sustained thus heartily, the publishers are prepared to maintain in 1883 the FOREST AND STREAM prestige as the

Representative Field Journal

of this country, at once entertaining, useful and influential. As the exponent of the highest types of field-sportsmanship the paper will be adapted to the tastes of all men who use the rod and gun as means of pleasure and recreation. Broad in its sympathy with all that is legitimate in field sports, free from any entangling alliances with cliques, having no interests to serve save those of its constituents, and never hesitating in its criticisms of whatever may be inimical to these interests, the FOREST AND STREAM'S highest ambition will be to preserve in the future the approval won by its course in the past. It will persist in its efforts to awaken in the public mind a fuller appreciation of the importance of the proper protection of game in the breeding season, and of due moderation in the destruction of game at other times. This it considers a matter of prime importance, not so much to the man whose wealth and leisure enable him to make extended tours to favored game countries, as it is to that already very large and constantly increasing class of business and professional men, whose favorite relaxation from the routine of employment is found in brief vacation trips to the woods and fields and brooksides.

The enlarged form of the FOREST AND STREAM enables its editors to present each week in the several departments a large and varied supply of reading. In the columns of

The Sportsman Tourist

Will be found sketches of travel and sport. Coming from many different writers, and widely separate parts of the country, these sketches always have the charm of novelty, and they are sure to be read with interest by sportsmen, because their writers see things through sportsmen's eyes, and describe them from the sportsman's standpoint.

Natural History.

This department will not deal with fossils nor with the monsters of African jungles. Quite on the contrary, it will treat of the animal life of land and water in our own country, the habits and ways of American fur, fin and feather, in which American sportsmen are presumed to take an intelligent interest.

Game Bag and Gun.

In addition to the numerous accounts of hunting and shooting excursions, necessarily varied and interesting—as such accounts must need be—these columns will be found of special value to amateur and veteran alike, because of the frequent interchanges of experience in all matters pertaining to game and shooting.

Sea and River Fishing.

The angler will find in the pages of the FOREST AND STREAM the best angling literature of the day, in quantity more than is contained in all other publications put together. This journal has inaugurated a series of angling tournaments, the initial meeting having been held in the Central Park of this city; and it is believed that others of equal success will follow in other years. Meanwhile, the man who loves to go a-fishing may find in the FOREST AND STREAM all the year around a great deal that must be to his liking.

Fishculture.

The columns devoted to this important subject furnish a complete resumé of curren achievements and progress in this important work.

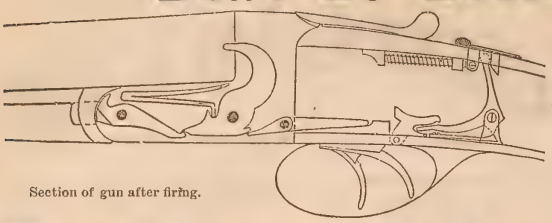
The Kennel.

This department has won the confidence of dog owners. Its reports of field trials, bench shows and other events are recognized as impartial, honest, and the most able published The recent series of papers by its editor, entitled "Training vs. Breaking," have been published in book form, and have had a very large sale. Other papers of equal importance will be published from time to time.

Yachting and Canoeing.

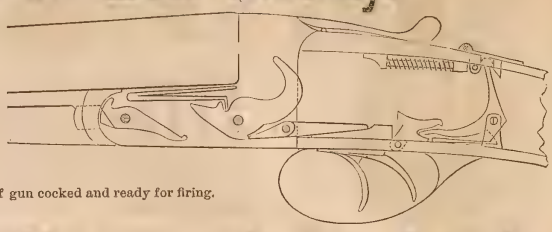
The editor of this department being a practical naval architect, and thoroughly familiar with every branch of the subject, will continue the same intelligent treatment of yachting and canoeing that have already won for the FOREST AND STREAM esteem and confidence.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.



We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each, and the files constitute a library of permanent worth. Eighteen such volumes have already been published. We furnish handsome file binders (price $1.25) which hold twenty-six numbers.



Subscriptions may begin at any time. Per year, $4; $2 for six months. Remit by post-office money order, draft or registered letter. Give name, town, county and State. Address

Forest and Stream Publishing Co., 39 Park Row, N.Y.

Don't Be Deceived or Led Astray.

Section of gun after firing.

Section of gun cocked and ready for firing.

The Anson & Deeley Hammerless Lock,

AS MANUFACTURED BY

Westley Richards & Co., London, Eng.,

HAS NO EQUAL!

And is the only hammerless gun in the market that is absolutely faultless, being simple, durable, and possessing those wonderful shooting powers, combined with that indescribable symmetry and beauty so characteristic of Westley Richards' product.

Every desirable feature is found in this gun. Superiority of Material and Workmanship. Absolute Safety in Handling. Without Comparison in Durability and Simplicity.

Shooting Qualities Unsurpassed.

The following letters from prominent sportsmen cover the ground exactly:

CLARKSVILLE, Tenn., March 20, 1882.

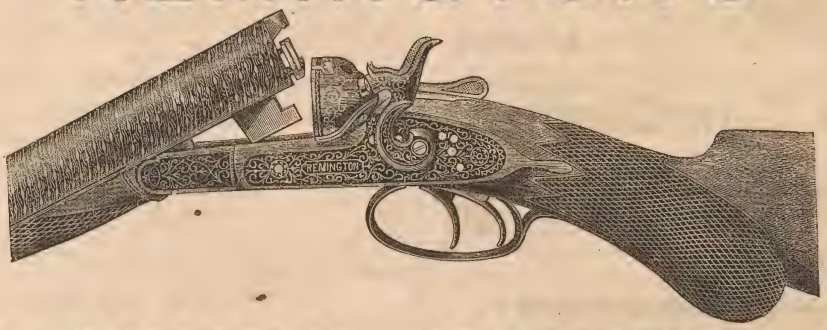
J. Palmer O'Neil, Esq.:

My Dear Sir—The Westley Richards Hammerless Gun I obtained from you has been the admiration of all my friends. I consider it much the best Hammerless gun, and recommend all sportsmen who can afford the luxury of a perfect gun, to buy a Westley Richards Hammerless. Respectfully, PATRICK HENRY.

BURLINGTON, Iowa, Sept. 20, 1882.

J. Palmer O'Neil & Co., Pittsburgh, Pa.:

Dear Sirs—The Greener and Westley Richards guns arrived safely yesterday A. M., and in the evening I took them both out and targeted them. I like the Greener better for only one reason, and that is it fits me a trifle better. But the Westley Richards made by far the best target, so I have concluded to keep it and return the Greener. The Westley Richards is certainly a little beauty, and makes as fine a target as I ever saw. One of my friends who is a great sportsman went out with me, and before the trial made all manner of fun of the "pop gun," even while he admired its graceful shape and elegant workmanship. But the result of the trial rather surprised him. He shot against the Westley Richards, his 11lbs. Daly loaded with 5 drams of powder and 1¼oz. of No. 7 shot, while I used 3½ drams of powder and 1¼oz. No. 7 shot. At 30, 40 and 50 yards I beat him badly in distribution and penetration. At 60, 65 and 70 yards fully equalled him. And the difference at 75 and 80 yards could hardly be noticed. I am much pleased with the gun, and as soon as I become a little more accustomed to it I have no doubt my shooting will be greatly improved. I shall take pleasure recommending the Westley Richards Hammerless Gun.



Yours truly, GEO. H. TOUSEY.

J. PALMER O'NEIL & CO., Pittsburgh, Pa.

Sportsmen's Goods.

GENUINE

DOGSKIN JACKETS

Made to our special order from selected skins, and imported direct from Norway.

Every jacket is marked "G. W. Simmons & Son, Importers and Manufacturers."

We offer this year the handsomest lot of Dogskin Jackets we have ever been able to collect. Each of the jackets has been made to order, and nothing equal to them can be found in the United States! We do not import the skins and make up the Jackets in work-room! The jackets *complete* are brought through the Custom House, and we sell them for *thirty per cent less* than any other house can afford to!

NOTE OUR PRICES and compare goods with others advertised as the same or similar.

A No. 1 Quality, $12.

We keep only the *best quality* of the imported jackets, and offer *no second grade.*

We claim for these jackets that they are:

1st, Windproof.
2d, Waterproof.
3d, Soft and Pliable.
4th, Flannel-lined.
5th, Never Stiffening.
6th, { 30 per cent. less than others. / Ask for the same or similar goods.
7th, The Best Made.

We warrant every jacket, and will send on approval for examination on receipt of measure.

In addition to this superior line of *Imported* Dogskin Jackets, we keep constantly on hand for the use of all who are exposed to the weather our own domestic make of Oak Hall Leather Jackets. These imitations of the imported jackets are flannel-lined, and hardly to be distinguished from the imported. They are made in our own workrooms, and every one is warranted in every particular. The domestic jackets we sell for *ten dollars.*

Our sales of Leather Jackets, last season, amounted to nearly one thousand, and we are the largest dealers in this class of goods in the country.

G. W. SIMMONS & SON, Oak Hall, 32 North street, Boston, Mass., Importers of Leather Jackets, manufacturers of the celebrated "Boston Shooting Suits." Prize medal awarded at St. Louis.

N. M. MUZZY

45 South Canal Street, Chicago, Ill.

Of the old firm of HITCHCOCK & MUZZY and MUZZY & CO. in 1852.—Having increased my facilities for the business of reaming out gun barrels, I beg to offer my services to those owning guns of unsatisfactory shooting qualities. My system is peculiarly my own. I leave no shoulders, and will guarantee my cylinder boring to shoot more even than by the old choking system, in every instance. I invite special attention to my method, and the most satisfactory testimonials will be furnished when desired. Guns can be sent, and will be delivered by express.

CONSUMPTION.

I have a positive remedy for the above disease; by its use thousands of cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy, that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer. Give Express & P. O. address. DR. T. A. SLOCUM, 181 Pearl St., N. Y.

Hotels and Resorts for Sportsmen.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as fee for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1883, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, Sheeting and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

The Hazard Powder Co.,

MANUFACTURERS OF

Gunpowder

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12½ and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard *Rifle* Powder of the Country.

ANSWERS TO CORRESPONDENTS.

THE McDONALD FISHWAY.

THIS fishway, which is constructed upon principles entirely new, has been before the public for a few years, and is rapidly growing in favor. Its mode of action is so singular, retarding the flow of water down a straight shute by means of jets of water which make a gentle ripple all along the trough, that at first sight it seems a puzzle. We thought at first that it was possible that it might work well at a very small inclination, but on careful examination find that it can be successfully used at a greater angle than any other known form; even with a fall of one foot in five the ripple is a gentle one. This, together with its cheapness of construction, will, no doubt, cause it to supersede all other forms of fish ladder.

A McDonald fishway is to be built at the Great Falls of the Potomac. One is built at Fredericksburg, on the Rappahannock. The Maryland Fish Commission has contracted for four of them for the canal dams on the Potomac, and these will be ready for the spring run of fish. The Charter Oak Company, of Hartford, Conn., have ordered one for their dam at Clifton Forge, Va. In Germany several of these fishways are to be erected on the tributaries of the Rhine, in Westphalia; and the McDonald plan has been recommended for dams in Brittany by the Société d'Acclimatation.

The fishway at Fredericksburg, though not completed until May last, during the season of its operation passed large numbers of fish. Many young striped bass, from one-quarter to three-quarters of a pound in weight, were observed to pass, as well as other species. For a long time we have watched the workings this plan in model; and even so late as the International Fisheries Exhibition in Berlin, 1880, we were not wholly convinced as to its merits. Correspondence with those near the fishways has, however, convinced us that this is the best form of fishway known, and, therefore, we do not hesitate to say so.

We learn that a company has been formed to manufacture these fishways in cast iron, made in sections, so that they can be shipped and put up in any part of the country at a comparatively small expense. If this latter report is true, then we should have fishways put upon all dams that stop the ascent of fish to the spawning or feeding grounds above.

BRAIN FOOD.—Warranted to stimulate the fancy, wake up the imagination, loosen the tongue and develop latent and undreamed of capacity of romancing. Not for sale by all druggists, but sent C. O. D. with privilege of examination by the "Miraculous Repeating Arms Co. It costs fifteen dollars and the manufacturers are overwhelmed with flattering testimonials from Michigan and Colorado hunters. "Our picture," says the advertisement, "represents the modern hunter dropping a deer at 900 yards with the bullet cartridge, and having made a selection from a flock of geese at 500 yards with the buckshot cartridge, is in the act of shooting a pigeon at 50 yards with the fine shot cartridge. No other gun in the world does it." But this is not "by a long chalk" any fair sample of what the gun can really do. It can inspire ten times bigger yarns than this, as fifteen minute's conversation with the agent of the company in this city the other day demonstrated. They call it the "Hunter combination repeating rifle and shotgun." A Texas correspondent wants to know what we think of it; well, if he needs brain food, we can recommend for this the "Hunter;" but if he wishes a gun for service in the field, let him put his fifteen dollars into a weapon that will bring to bag the pigeon, goose and buck at one shot, for three shots in a case like this are clearly a waste of ammunition.

A NEGLECTED GAME FISH.—Our wealth of game fishes causes us to neglect many that are really fine ones, and as a people we look with little favor on any fresh water fishes except salmon, trout, grayling and black bass. Even the pike and his big brother the maskinonge we think have not enough fishing stuff in them to be worth serious attention. Another fish which is sadly neglected is the pike-perch, called "wall-eyed pike" in New York, "pickerel" in Canada, and alas, that it should be so, "salmon" on the Susquehanna, Ohio and Mississippi rivers. This fish is a good gamy fish, a good table fish, and one well worth cultivating. If our English friends had this fish, the king of the perches, they would sing its praises far and wide, but we hardly notice it. There are places where the fish abounds, and where it is taken with hook and line, but no writer has yet arisen to sing its praises; invent a rod just suitable for its capture, or a hook with the right bend for its jaw. No treatise has been written on its favorite baits, nor its valiant death struggles. Here is a new field.

THE BIRDS OF MAINE.—In our Natural History columns, this week, will be found the initial installment of an annotated Catalogue of the Birds of the State of Maine. Mr. Everett Smith, who is the author of this list, has devoted many years to the study of the avifauna of his native State, and being thus constantly in correspondence with ornithologists and collectors, has had very full opportunities to make the present paper as nearly complete as such an one can ever hope to be. The catalogue contains the names of over 300 species of birds, and the notes on their habits and characteristics—in some cases very full—will be found of very great interest to ornithologists, and, indeed, to all who have any love for natural history. The geographical position of the State of Maine gives to this list an unusual interest, for through it is drawn an imaginary boundary line, across which the birds from the South do not pass. Its varied topographical character offers attractions also to birds of widely differing habits. Mr. Smith's field is therefore a broad one, and his contribution to the bird literature of the New England States will be gladly received.

PEDDLING GAME ON THE LONG ISLAND RAILROAD.—We are informed that there has been an extensive sale of snared birds on the passenger cars of the Long Island Railroad. We called attention to this matter a year or two ago, at which time measures were taken to put a stop to it. Perhaps a few arrests would have a salutary influence. We commend the matter to the attention of the Long Island Sportsmen's Association.

THE WELCH CASE.—We are informed that the appeal in the Welch case was dismissed because "no notice was given within the time prescribed by law." In this case, it will be remembered, was involved a test of the constitutionality of the New Jersey non-resident game law; and it was hoped that the case would not be dropped.

BAKER'S DOZENS OF WALTONS AND FORESTERS.—There are in this country to-day a baker's dozen each of writers just as pleasing as Izaak Walton and "Frank Forester." To find out what they have written within the past year look through the files of the FOREST AND STREAM

ADIRONDACK SURVEY NOTES.

NO. XV.—THE BLACK FLY.

DO you know the black fly of the woods? Here it might be a point of etiqutte to await a reply before saying more, but this will take weeks and then only bring in a variety of answers, mostly "yes," or "no," the variety being in the different ink used, so I will ask another question. Do you know all about him, her, or them? If you do, then tell me so that I may also know; but on the supposition that some one has answered my first question by asking "what are black flies?" I will proceed to tell him a few things that I have noticed about them and a few theories that I have formed concerning them. These may be all wrong, and if so the sooner they are discarded the better, and a new set framed that are warranted to stand the strain.

Are you listening? You man who don't know what a black fly is, I mean; for if you don't know and don't care to then this ink might as well be saved. Now, here goes for it. A black fly is a small sort of thing, not bigger than two small pin-heads placed one behind the other. He, she, or it, has six legs and two or more wings; am not so sure of the number of wings but you'll find the legs all right. What particular Greek or Latin cognomens the bug-sharps have seen fit to adorn him with is more than I know, but if these names do not translate into English to mean something with a chronic hunger for a fisherman's blood, then is science a delusion and a snare. When it is added that the legs of this fly are sometimes speckled and that the guides can tell by the spots how long they are likely to remain, then all the knowledge that the guides have of them, and a little more beside, is given. Did you ask why such an insignificant being should play the leading character in the drama of wood-life, that it should become the leading question when to go to the woods? If you did ask this then there is but one answer. It is not that the fly of himself is so pestilent but because he makes himself so numerous. The mosquito may also become numerous, but his numerousness is as naught to the multitudinous black fly. Swarms is the only word that gives one an idea of the numbers of the fly, and when you add that no amount of fighting, or threshing around, disturbs the flock in the least, each individual of which is as brave as a goat (which is my *beau ideal* of a courageous animal) then you get a fair idea of the little pest. A net is merely a hive for them to get under and to keep them from getting out, and the only protection is in some of those compounds of oil, tar, or other substances, which are smeared on the face and hands. Even these do not prevent the insects from flying against your face and tickling it in a manner almost as bad as their bite, nor does it prevent an occasional one from exploring the region covered by clothing, and an itching, inflamed spot tells where one has penetrated to a region supposed to be perfectly protected. During the season of them the only time that they are quiet is during the night, or while a breeze is blowing.

Why does this fly exist? That is just what I tried to find out. All things have their uses in the economy of nature, and if you heard one black fly ask another why you existed, the answer might be, "to feed the black fly." But this fly undoubtedly plays a more important part in life than taking an infinitessimal portion of blood from a man, a dog, a deer, or a panther, and leaving a smaller portion of poison in its place, which, while not worth as much to you as the blood, is, without doubt, poison of the first quality and might be useful in *materia medica* if experimented with. While we know that it is only the female mosquito which carols her exquisite little song and takes the blood from your sleeping nose, while her liege lord goes hungry forever, I do not remember to have heard whether the husband of the black fly has an inclination to lunch at the same table with his partner, assuming that she bites also, or not. In fact you will have perceived before this that I do not know a great deal about the insect which we are discussing together, but having told you all that I think I know positively, we will go on to the theory of the benefits which accrue to mankind from the aforesaid little black fly.

The trout are thickest where the fly is most numerous and yet few or no flies of the kind we are talking about are found in the stomachs of the trout. The further north we go, even into the Arctic circle, the more of both trout and black flies do the waters produce, and when the wild lands are cleared both the trout and the black fly either disappear together or the fly goes first and the trout lingers in diminished numbers. The food of the infant trout is gone. The little worm-like larva of the fly is the best possible food for a troutlet, and where the black fly abounds, the waters during the fall, winter, and spring

swarm with their larva. This insures life to the young fish during the first three months of its life, the most delicate portion of its existence, when they die by thousands upon the least provocation.

Large insects, with their correspondingly large larva, are well enough for adult trout, but are of little use to a fish that is smaller than they, and a troutling of an inch long has no use for the grown larva of the May-fly. There are other small flies whose lives are partly passed in the water in the form of worms, such as the gnats, midges, etc., and, of course, these furnish more or less food for baby trout as well as the black fly does, but when we add the millions of black fly larva to these, then the waters are rich in food. With the clearing of the original forest the black fly leaves and does not seem to return with its second growth, as we do not find it under such conditions except where this second growth is surrounded by primeval forest. The fly flourishes where lakes have been raised above their original level and a tract of marsh or woodland has been submerged, giving much forage of decaying vegetation as food for the fly larvæ.

While engaged in trout breeding, some years ago, in Western New York, I tried the experiment of feeding mosquito larva as a food for baby trout, and found it the best of all food, not the least of its recommendations being that it swam about until devoured and did not foul the trough. The only trouble was to breed them in sufficient quantity. Take a handful of black mud from the bottom of a good trout stream and carefully look it over, and see how many small worms it contains, some fine, transparent, and thread-like and others stout and red or black. This, in my opinion, is the primary rule that settles the question of how many trout the stream can produce. Therefore, if all these things be admitted, the little pest which comes at you in such clouds and causes the blood to trickle down your cheeks until your face is stiff with it, and which creates such an intolerable itching next day, is not wholly an evil.

There is one thing, however, which no one has attempted to explain. This is why the black fly appears in the spring and is usually gone by the first half of July in the Adirondacks, while in Maine it stays all summer. Who knows?

F. M.

THE CHASE IN HOMERIC TIMES.

WITH the early Greeks the pursuit of the chase was a duty as imperative as was the tillage of the fields. Such animals as endangered the lives of men were to be exterminated as soon as possible. The care of their flocks and herds called first of all and constantly for protection against the attacks of wild beasts; while the crops upon their sown fields would at different stages of their growth offer tempting food to others. The flesh of some animals was desirable for food; the skins of others furnished coverings for beds and for benches—so that the chase was followed at times for profit as well as for sport. Moreover, a people fond of war and eager to display their bravery and skill could scarcely fail to become enamored of the exciting pleasures of the hunt.

Homer draws some of his most striking similes from the sports of the field. The poet presents a well-drawn sketch of a hunting scene in his description of the fight which took place in front of the Greek ships after Achilles had rejected all offers of reconciliation from Agamemnon. First, he compares the onset of Ajax on that day to the impetuous course of a mountain stream swollen by melting snow and falling rain to a flood of furious waters. The rage of battle carried the hero beyond the Grecian lines until he saw Hektor on the field, and then—

Zeus, the father high-throned, inspired terror in Ajax.
Stood the man dazed, and he flung on his back his shield of seven ox-hides.
Frightened and startled, he shrunk back, eyeing the crowd like a wild beast.
Slowly he yielded his ground, as step after step he retreated,
Just as a bright red lion is kept from the yards of the cattle,
Driven away by the dogs and by men who live on the farmstead,
Who will not suffer the beast to snatch from the cattle the falling,
Watching the whole night through, while, longing for flesh, does the lion
Make his assaults; but in vain, for showers of thick-falling jav'lins
Right in his face are winged from the hands of men now emboldened.
Lighted torches as well; he dreads these although he is famished.
At the appearance of dawn he slinks off in deep disappointment.
Ajax, grieved in his heart, thus went from the Trojans unwilling.
(Il. XI., 544-556.)

The chase was followed for peltry. When Aphrodite came to the shepherd hut of Anchises, on Mount Ida, the hero's bed was spread with skins of bears and deep-voiced lions. (Hymn in Ven. 160). Agamemnon preparing to go to his brother's tent:

Risen from slumber he donned a tunic that covered his bosom,
Under his shining feet he bound his beautiful sandals.
Next he threw over himself the dark red skin of a lion,
Tawny and huge, to his feet came the pelt, then grasped he his javelin.
(Il. X., 21-24).

At that same time Menelaos was dressing to go and call on his brother:

First with a leopard's skin his brawny shoulders he covered,
Dappled the mantle it made, then his brazen helmet he lifted,
Put the helm on his head, and took his spear in his strong hand.
(Il. X., 29-31).

And on the part of the Trojans, Dolon prepared that night to go as a spy to the camp of the Greeks:

Quick on his shoulders he slung his well-curved bow and his arrows,
Over all these for a wrap he flung the skin of a gray wolf.
Put on his head a cap of weasel skin, then his sharp spear
Took he, and started to go to the ships from the camp of the Trojans.
(Il. X., 333-336).

The ancients valued highly the assistance of their dogs in the chase. When the hunting party went from the house of Autolykos to devote the day to sport upon the sides of Parnassos, the dogs went on ahead scenting the tracks of game:

When now child of the dawn came Eos of rosy-tipped fingers,
Off went the dogs to the chase and with them followed their masters,
Sons of Autolykos; their comrade went splendid Odysseus.
Lofty the mountain they climbed, its slopes covered over with forests.
That of Parnassos; but soon they reached peaks swept by the tempests.
Then afresh did the sun send down his rays on the ploughed land,
Coming up from the idly-lapping and deep-flowing ocean.
Now to a gorge did they come, these huntsmen, in front of them running
Went the dogs scenting the tracks; close after these coursers there followed
Sons of Autolykos, their comrade went splendid Odysseus
Close by the dogs, and he poised his spear which cast a long shadow.
There in some bushes thick-set perchance was lying a great boar.
Through this thicket ne'er blew the might of the blast with the rain-storm,
Nor did the shining sun with his fierce rays ever pierce through it—
Never a driving storm beat through, so dense was the thicket;
There was moreover within a thick bed of leaves that had fallen.
Trampling of men and of dogs reached now the ears of the monster
As the huntsmen came on; the boar at the edge of the thicket
Bristled the ridge of his back, the glance of his eye was like fire;
Stood his ground when they came near, then foremost of all did Odysseus
Rush to attack, and he raised with his powerful hand his long jav'lin,
Eager to wound; but the boar having gotten the better now gashed him
Over the knee, and much was the flesh he tore with his white tusk,
Striking oblique from one side, but he reached not the bone of the hero.
Wounded Odysseus the boar by striking him on the right shoulder.
Straight through the shoulder pierced the point of the glittering jav'lin.
Fell in the dust at full length the boar, and his life quickly left him.
Then did the children beloved of Autolykos close in about him.
As for the wound received by Odysseus blameless and godlike,
This did they bandage with skill, with incantations the dark blood
Staunched; and they quickly returned to the house of their own dear father.
(Od. XIX., 428-458).

The chase was presided over by divinities, notably by Artemis. It was this goddess who sent the wild boar of Calydon to ravage the fields of Oineus, because in making his offerings to the gods he had neglected her altars. This animal gave occasion for that famous hunt which was led by Meleagros, the son of Oineus, and who had in this the help of many huntsmen and their dogs.

Angry the maiden divine of birth and delighting in arrows,
Roused up a lurking wild boar that had teeth of ivory whiteness.
Great was the mischief he wrought as he haunted the cornfields of Oineus.
Many a towering tree did he throw on the ground in confusion.
Utterly these were destroyed from the roots to the blossoms of apples.
Later this monster was slain by Oineus' son Meleagros,
Calling to come to his aid the huntsmen of many a city,
Having them bring their dogs; few men could not vanquish the wild boar.
Huge was the beast, and the chase sent scores to the funeral pyre.
(Il. IX., 538-546.)

But the goddess was not always so unpropitious. To men reduced to straits for food she gave success in the chase, and if they had not dogs to scent the game, nymphs coursed for them the fields and woods to start the wild beasts from their cover. Odysseus tells how he and his companions spent the night thus in want on the island lying off the land of the Cyclops, and in the morning,

When now, child of the dawn, came Eos of rosy-tipped fingers,
Lost in amazement we gazed at the island, strolling about it.
Nymps, the daughters of Zeus, who carries the ægis, then started
Goats of a mountain breed, that my crew might prepare them a breakfast.
Forthwith our bended bows, our arrows, and long-pointed jav'lins
Took we out of our boats; then, dividing ourselves in three parties,
Chase did we give; some god gave sport such as heart could desire.
(Od. IX., 152-158.)

Homer was familiar with the chase. Scattered through the Iliad and the Odyssey the reader comes across frequent allusions to it as a manly diversion. The passages selected will serve as specimens. They do not, by any means, represent an exhaustive study. As these poems are the earliest record we can go to in the study of that old-world life, they also present the most fruitful field of research. To all of us who enjoy tracking the life of the present back to the cover of a dusky past, Homer is the god who has given "sport such as heart could desire."

I. B. CHOATE.

THE ANNUAL MEETING N. R. A.—On the evening of Tuesday, January 9, the life members of the National Rifle Association will hold an annual meeting at the Seventh Regiment Armory. It will be an important session, and the most important task is that of selecting seven directors to fill the place of those going out of office. There is ample room for a change for the better in the make up of the board. There is a demand for more active men, those who have the time and the inclination to do the amount of positive hard work required if the efforts of the association are to meet with success. There has been too much of the figure-head system in the past, now is a good time for a change, and with the work of the coming year before them, the life members can not be too particular in their choice of representatives on the board.

The Sportsman Tourist.

TRAMPS ABOUT THE SOUTH FORK.

IN the summer of 1875, my brother Richard and I made an expedition to the South Fork, accompanied by my mountaineer friend Francis M'Coy, who has been with me on many a hunting and fishing trip, and another man who went along to help carry provisions, make camp, etc. No other city people, to my knowledge, have ever visited it before or since.

I published a description of this trip in the Germantown *Telegraph* of Philadelphia, and gave an account of our meeting the "Hammondses," as the natives call them, a set of bear hunters who "infest" that region and use it as a sort of family hunting ground, killing deer and bear when they want them. They live at the mouth of the South Fork, where they have a clearing, and farm a little in a desultory sort of way, but their fame rests upon their deeds as hunters, and they spend most of their time in the woods.

In the autumn of 1880 I had a few weeks at my disposal, and resolved to spend part of that time in the neighborhood of the South Fork, making my headquarters, as usual, at M'Coy's. I reached Francis's house about the third week in October, and at once began looking after what I had gone there for, fresh air and exercise. The former of these comes unbidden, and one good whiff of it laden with the indescribable odor of the forest does more good than a month's course of tonics in the confined air of the city. The latter can be had merely for the trouble of setting about it.

M'Coy's house is three thousand feet above tide, so to go anywhere one has a mountain to descend, and of course one to climb up to get back again, giving ample room for the pursuit of exercise.

Francis told me just after I reached his house that he should have to leave home in a short time to take a trip to a distant county on business which could not be postponed, and I had been casting about in my mind as to how I would dispose of the week or ten days I should still have left after he went away. We came home one day after a hard tramp in the woods, and having eaten a hearty supper of venison of our own killing—for we had slain a mighty buck—were sitting by the fire, I smoking a quiet pipe, Francis scraping a turnip, when thus I began: "Francis, I've been thinking about what I am to do when you go away, and I rather think I will get Harmon to go with me and take to the woods to stay until my spare time is used up; what do you think about it?"

"Well, I'll tell you, Colonel, of course you can stay right here and make yourself at home as long as you've a mind to, but if you are after fresh air and exercise I believe your plan's a good one and I'll tell you what to do. I'm going to leave here Monday, and M'Collum is going with me. We have to go on horseback of course. Now, you can go down to Harmon's to-morrow and get him to come up here Sunday ready to go with you. Monday morning you can put your packs on our horses and we will carry them over to Boffman's on the river below Straight Creek, that will save your carrying them twenty-four miles. We will stop there all night, and Tuesday you can strike across the Spruce Mountain back to our river and go to Hammond's at the mouth of the South Fork; from there you can take your own route and go wherever you choose, either up the Fork and back over the Black Mountain, or cross over to Blackberry and take a longer trip round. You'll find all the exercise you want climbing the mountains there and fresh air is plenty."

I liked the trip thus roughly sketched out and accordingly went down to Harmon's the next day and engaged him to go with me. Sunday evening he appeared at M'Coy's ready for the trip, and we arranged our packs, each taking twenty pounds and I carrying my Winchester, while Harmon shouldered an old mountain rifle. We left M'Coy's Monday morning at 7 o'clock, Harmon and I being on foot reached the mouth of Spruce Creek, eight miles, at 9:30, and, after waiting ten minutes for the horsemen to overtake us, started up the mountain beyond the creek, which we topped at 10:35. While at the mouth of the creek I looked at the site of the old camp I occupied when there in 1878. Usually we used the Rock Camp half a mile below the creek, but the camp at the mouth does well enough for a night. It is a wild place that. I remember one summer a party of wandering hunters camped there, and while all were asleep a panther crawled into camp. One of the party went out to the settlement a day or two afterward, and M'Coy met him at a house where both ate dinner. While in the middle of the repast this fellow suddenly addressed M'Coy: "Francis, I seed a painter the other night." "You did," said M'Coy; "how far off was he?" The fellow, who had just crammed a huge spoonful of beans in his mouth, blurted out, "'Bout eighteen inches." The unexpectedness of this reply, with the rather extraordinary closeness of the beast, quite upset M'Coy's gravity. One does not often get within a foot and a half of a panther.

I was fishing this creek some four or five years ago, in the latter part of May, accompanied by a friend from Philadelphia, and at the latter's suggestion had left my Winchester in the Rock Camp, thereby for the first time breaking my rule, which is to always carry my 20-inch Winchester slung on my back when fishing in that wild country. We had reached the stream, and my friend and M'Coy had begun fishing some twenty yards below me, while I was engaged in looping on my flies. A movement on the other side of the creek catching my eye, I looked up and saw an enormous catamount stepping gingerly along through the wet grass. It was not over fifteen paces from me, and walked along up stream for fifty yards in open sight, but was so intent upon the prospective deer to be found at the lick above that it did not see me. Of course, because I wanted one, I could not find a stone anywhere in reach, or I would have stirred the fellow up. I killed a large panther once not far from this same place.

We traveled on top of the Spruce Mountain for an hour, turning the heads of one or two streams, when we stopped for dinner and baited the horses. At 12:05, after half an hour's halt, we started off, and at 1:05 turned down the far side of the mountain toward Straight Creek.

Deer signs had been numerous, and we had crossed ten or a dozen bear tracks on the mountain. On the creek the deer seemed to have been undisturbed, for the ground was tramped up everywhere. We traveled fast and reached the mouth of the creek at 2:20, halted twenty minutes, then struck down the river and, passing the upper house at 3:25, reached Boffman's at 4 o'clock. Here we rested over night and spent the evening sitting by the big fireplace, smoking and enjoying the amusing conversation of old Boffman, who

had a good deal of humor in him. Tuesday morning we got off a little before seven and continued our course down the river. After a mile or so the horsemen left us, as they had to strike across the mountains westward, so we shouldered our packs and marched off to Turkey Creek, a mile further on.

An hour's rapid walking up the creek took us to the second fork, and from there another hour of up-hill work brought us to the top of the mountain. Part of this region had been burnt over, and the signs of game were not as numerous as on Straight Creek. At a little before eleven we reached the upper house on the river, where we found one of the young Hammonds living.

This river is the same stream we left at the mouth of Spruce Creek the day before, but we were now twelve or fifteen miles further down stream. After looking at a huge bearskin which Hammond showed us, we went on by the mouth of the South Fork, and got to old Jess Hammond's about noon. Much to my regret, I found that Jess had gone bear hunting and was not at home. It had been raining for an hour or two before this and we were pretty wet and rather hungry. We waded through the mud to the door of the little log house—the mansion boasting but one room, with a sort of loft overhead, and a rude porch floored with puncheons across the back—and found the inmates just sitting down to dinner. I asked whether Mr. Hammond was at home, and was sorry to hear his wife say, "No, Jess ain't home; he's gone out to look for some b'ar sign. It's a pity you hadn't a-come a little sooner and found him at home; he'd a-liked to a-gone out with ye." But I was not at all sorry to hear her add, "I reckon you men 'll be a-wantin' some dinner. Walk in and sit down. We hain't got much, but you're welcome to such as it is."

We sat down. "It" proved to be roast 'coon, and now it was that I understood clearly the meaning of a peculiar expression in the eye of old Mrs. Hammond as she saw us suddenly appear at her doorway. It said as plainly as anything could:

"By Zeus! Two strangers and only one 'coon for dinner!"

I can tell you, though, that same 'coon was a monster, and with huge chunks of corn bread, made of good, sound yellow meal (to which white meal is as sawdust), afforded us a substantial repast, while a little was left for the family. The latter consisted, as well as we could ascertain, of Mrs. Hammond, a married daughter with her baby; a girl of about fifteen, one of twelve, and an irrespressible boy of an uncertain age. All occupied the one room, in which they cooked, ate and slept, unless possibly the younger children were relegated to the loft. After dinner, we lit our pipes, and as the rain continued to fall steadily, sat down to talk and rest.

Three young men now turned up, big stout fellows of from 18 to 21 years old; one was a son of Jess Hammond, the others nephews. The face of one of these seemed familiar to me, but I could not tell why.

Presently this one addressed me. "I mind of seeing you afore."

"Yes," said I, "where?"

"I seed you on the Middle Prong once about five years ago, when the old man and some of us was camped out up thar. I was only about sixteen then. Don't you mind seein' a boy along that time? I mind 'you had on a gold watch; is that the same one you've got on now?"

"Yes," I replied, "I have carried it a good many years."

"I mind of hearin' Jess tell about that watch," chimed in the old woman. "He said one time he seed a feller up the Middle Prong, didn't have but one arm, and had on a gold watch. Times in the winter when they'd be sittin' 'round the fire o' nights and git a talkin' about their watches, Jess 'ud say, 'them aint like the watch I seed on that feller up the Middle Prong, his was reel gold.' I reckon you're that feller, aint you?"

"Pete's got a watch," put in one of the three.

I asked to see it, and Pete produced a huge silver watch to which was attached a stout steel chain.

"What time does it get dark now by your watch, Colonel?" drawled my old acquaintance.

"Get dark? Ah, I don't know. I have not thought about it. I suppose about five o'clock, or somewhere along there; the days are getting short now, you know."

"It don't git dark by Pete's watch till h-a-l-f-p-a-s-t-s-e-v-e-n."

"Half-past seven!" cried I. "Goodness, Pete, that will never do. Run outside and get a hitch on it with a log chain and wind it up. Set it back a couple of hours. Half-past seven, indeed, and November already here."

So the watch was set back, and the conversation drifted to other topics.

The young men had been "over to Elk," to a store some twelve or thirteen miles off, and when they came in, brought burdens, consisting apparently of shoes, coffee and tobacco. A rush was made for the last as soon as produced, and the old woman made an equitable distribution of pieces to each and all according to size and age; even the small boy got a piece. Now this boy had not been idle all this while. He had bored first me and then Harmon, to "make a touch hole" in a certain hollow stick he had, of which he purposed making a cannon to be fired off at the front door. Harmon gave him some powder wherewith to load it, and I am sorry to say with, I think, the charitable idea of so grievously wounding and hurting the aforesaid incorrigible as that he should be debarred from further bothering anybody.

I contributed a couple of Winchester cartridges, but these he immediately carried off and hid away as a sort of curious and cunning thing to be taken out in secret and worshipped or made much of like some of the old Peruvian Huacas. The old woman's attention was at last drawn to some of the boy's performances, and having seen the way in which the Winchester operated—for the young men would not be satisfied until we had tried the gun at a mark—she suddenly became alarmed lest the cartridges should prove to be infernal machines which would go off at some unexpected moment, and thus addressed the youth:

"Now you a'nt been a askin' the Colonel for them cartridges, hev you? You ought to be ashamed of yourself. Don't you know the man wants them for his gun?"

"Well, the man give 'em to me. He said I could have 'em. They won't hurt nothin'."

I assured the old lady that I had plenty of ammunition, but she seemed hurt by the boy's want of politeness. "I declare now 't seems 's if ye hain't got no manners at all, to be a-botherin' and a-pesterin' them men that way. Let the gentlemen alone and behave yourself." Then addressing me, "Well now, Colonel, did you ever see sich a boy as that? I declare I hardly know what in the world to do with him sometimes; it seems like there aint no way to manage him. What do you reckon now you'd do with sich a boy?"

"My dear madam," I replied, "nothing is simpler. The boy is not a bad boy. I should manage him without the least trouble."

"Ye would? Well now!"

"Certainly. In the morning I would cut a couple of good dogwood gads; one of these I would wear out on him before dinner, the other after; I think there would be no trouble at all after that. You see the cartridges I gave him are perfectly harmless. The most he can do when he puts them in his mouth, will be to bite on the little cap in the end and so blow the top of his head off."

"Has he got them things in his mouth? Great goodness!" and there was an immediate rush for the boy. He opened his mouth. It was empty. The cartridges had been put away in some secret nook elsewhere. Comparative order reigned once more. Then a fiddle was produced, and the young men played. All the Hammonds are born fiddlers, and the dance music was not ill played.

It had become evident to me that there was not room enough in the Hammond mansion for us to spend the night there, so, after some apologies from Mrs. Hammond for not being able to extend us as much hospitality as she wanted to, we shouldered our packs and trudged off in the rain for Mullins's, a mile and a half down the river, on the opposite bank. Arrived opposite his clearing we halloed, and a small boy put us over the river in a dug-out. To the question whether he could keep us all night or not, Mullins said, "I don't never turn no one away." So we unslung our packs, and entering the house, stowed them and our guns in a corner and made ourselves at home.

The Hotel Mullins was built of small round logs, almost poles, and boasted but one room, of which one side was taken up by two beds, while the opposite side contained a dilapidated stone fireplace. Facing the door was a small square window, and beside it a rude shelf or two, whereon a few cups, plates, etc., made up the scanty household table service. There were a table, a couple of chairs, and two or three empty "bee gums," for furniture. The prospect was not a very inviting one, but there was present one thing which made amends for much that was lacking—we had a hearty welcome.

These poor people who could give us no better supper than "biled" cabbage, coffee and corn dodger, were glad to see us; glad to be able to give us meals and a bed; all that they had was at our service.

Harmon soon discovered that Mullins and he had come from the same county so there was no lack of interest in their conversation. The mistress of the mansion was for some time after our meal engaged in cleaning the dishes, making up bread and other like occupations, standing with her back to us.

At intervals she turned and addressed me with stories of her children, or neighbors, the point of which was lost in the rattle of pans and cups as she went to work again, or drowned by the voice of Mullins as he prosed away to Harmon some long-winded recollection of some ancient worthy of their acquaintance.

In the midst of his wife's "Now don't you think Colonel um-um-um, etc," and "Wouldn't any one ha' done the same?" to which, not knowing about what or to whom the questions referred, I answered at random "Certainly. You were perfectly right," or "Very singular if any one would not do just so," Mullins, suddenly as it were, aware of what his wife was doing, broke in with "There now, let the man alone. The Colonel don't want to be bothered with all them old tales. Hush now I say! Don't let us have no more of it."

This produced its intended effect for about two minutes, when the wife began again and Mullins administered a second reproof. This went on all the evening, the old man always winding up his rebuke with "Hush now I say, hush!" broken only by a temporary absence of Mullins and the boy who went to the mill to grind some meal for breakfast.

In the region of which I am writing there are no roads, and the few inhabitants have as a rule each a mill for his own use. An upright shaft of wood is turned by a home-made wheel at its foot and carries a stone on its top for runner; as stone and shaft turn together, the grinding is rather slow.

A few sheets of bark keep the top gear dry; and that is the mill.

At a fairly reasonable hour we went to bed. Harmon and I occupied one of the two beds, while the children slept on the floor. Mullins was so occupied in talking over old times with Harmon, that he, of course, forgot to bring in any wood to be ready for the morning fire. I woke as I always do when in camp, very early. The rain was still falling in a desultory sort of way and a faint glow from the coals in the fireplace gave an indistinct view of the cabin's interior. After a while Mrs. Mullins awoke and sat up in bed for half an hour, then she began, "Mullins! Mullins! Get up and fix the fire."

"Hush, now," was the reply, "you'll wake them men up."

"Well, but Mullins, I must have fire to git breakfast."

"Well, I say, hush! Don't make so much noise."

"Now Mullins, you know I've got the rheumatics that I can't git no wood. Git up now and git some wood and build up a fire, them men 'll be a wantin' their breakfast and it must be a gettin' on towards morning."

"Hush now about the wood, I tell you. Them men wants to sleep. Don't bother me no more about it." At last Mullins got up, and half awake, blundered out, in his bare feet, to the wood pile, picked up a few sticks and bringing them in, stuck them on end in the fire place to dry, while he started a blaze with some kindling left in one corner by a happy accident. Then he crawled into bed again and was soon fast asleep.

Mrs. Mullins got up and was presently busy about breakfast. An hour passed on, Harmon roused up and finding me awake said good morning.

Then we greeted Mrs. Mullins and asked what sort of weather there was, discovering, what we already knew, that it was pitch dark outside and still raining.

When the children rolled up their quilt and blanket and stuffed them under our bed, leaving the floor clear for the table, we thought of breakfast and were soon dressed and sitting by the fire, meditating on the depth of the mud we should have to wade through from the house to the creek to wash. While thus engaged Mullins arose, and after sitting before the fire a few minutes, got up and as though seized with an idea, went out. He soon returned and flung something down on the floor of the porch as he came.

"Now, what's that, Mullins?" said his wife, who had taken advantage of his absence to begin setting the table.

"A chicken."

"You ain't gone and killed a chicken?"

"Yes, I hev."

"Well I declare, Mullins, you are too bad, why didn't you tell me you was a goin' to kill a chicken?"

"Hush, now! hush, I say! I want a chicken for breakfast."

"Why I done biled the cabbage a'ready and the coffee's made. Them men wants their eatin', they don't want to be a waitin' so long."

"Well, I say hush now! Don't make so much noise about it."

"But the chicken's got to be fixed, Mullins, and I had breakfast all ready. It's a shame to keep them men so long without a bite. What kind of chicken did you kill?"

"I killed a rooster."

"O-o-o-oo! now we ain't got but one rooster," exclaimed the boy.

"Well, one rooster's enough," growled the old man, "it wouldn't matter if they was every one killed." Then turning to me, "I tell you Colonel, chickens is a terrible nuisance about a place. There's no tellin' what amount of grain and stuff they'll destroy and scratch up, they're always in somethin'. I'd like to get rid of the last one of them."

"You ain't a thinkin' about what you're a-sayin', Mullins. Bring in the chicken and let me be a-fixin' it." The chicken was produced and the boy handed it to his mother, who, after a glance at it let it slip from her nerveless grasp to the table and with a voice and look of horror exclaimed, "Laws if he ain't gone and killed the old black hen."

"O-o-o-oo!" cried the Arthur Sullivan chorus boy again, "what'll we do for eggs?"

"O, Mullins! what ever made you go and kill the old hen, and she a-layin' regular up there in the loft. Couldn't ye get no rooster?"

"Well, I thought it was a rooster."

"Why, don't ye know no better than to kill an old hen for a rooster?"

"Now hush about your chickens! I say hush! Don't let's hear no more about it."

The opportunity, however, was too good an one for either the old woman or the boy to let slip, and they kept up such a display of grief at the death of the old hen, and of admiration for Mullins's rare judgment in selecting a chicken for breakfast, that he was fain to beat a retreat. After a short absence he came in and flung something down as before.

The old woman started up in dismay. "What's that? You ain't never gone and killed another chicken, Mullins?"

"Yes, I have; an' I don't want to hear no more about it, neither."

"I declare, I don't know what a body's to do," moaned the wife; "here's breakfast been a-waitin', the cabbage done biled an hour ago, an' I had the old hen ready to cook."

"Don't you hear me say hush!" roared the old man. "Hush! I say, and don't let me hear a thing of it. The Colonel don't want to hear no more about the chicken. I'll have ye trained agin two more gentlemen comes here visitin'."

This was as much as I could stand, and I fled away to the creek to wash. With all the delays, our morning meal was over early, and we were ready to start not very long after daylight.

On our way to the river bank, Mullins's daughter-in-law, who lived near by, met us and asked me whether I could kill a wild chicken for her. I said I thought I could if she would point out the bird. She soon discovered the fowl, a restless rooster, which ran when he espied her approaching, but allowed me, a stranger, to get within twenty-five yards of him, when a Winchester cartridge decapitated him, and amid her thanks and the applause of the others, we beat a retreat to the canoe and were ferried over by the boy. We stopped a few minutes at Jess Hammonds's to say good-bye to our entertainers of the previous day, and then struck our course for the South Fork. We traveled very fast, and by noon had reached "Big Beechy," a good trout stream which enters the South Fork from the Black Mountain side. In 1875 I had camped there one night with my brother, in an old bark shanty of the Hammonds, but of this all traces were gone, and the little opening in which it stood was all grown up with briers. We crossed the creek, built a fire under a large overhanging rock, and ate our dinner; then we pushed on as fast as we could, and, to shorten our tramp, took to a bench high up the mountain, so as to avoid the many windings of the stream. By this course we saved some two miles, and at 3:10 o'clock found ourselves at another camp of the bear hunters, where I had first met them several years before.

The shanty they had occupied there had disappeared, but we found another one roofed with split basswood puncheons, very dilapidated and grown up inside and out with briers and weeds. We concluded, and rightly, as it turned out, that this camping place must have been deserted for some new one, but as I did not care to go further that night, I decided to camp there, so we cleared away the briers and brush from about the camp, cut a fine lot of wood, built a good fire, cooked and ate a good supper, and after the usual smoke and talk, slept soundly until early morning. We left camp at seven o'clock, and for variety started out by the creek bottom instead of taking to the benches at once as we had the afternoon before. Harmon's gun was an old rattle-trap "mountain rifle," a muzzle-loader, stocked all the length and uncertain in its action, so that I never felt quite sure whether it would go off or not when I saw him fumbling with the trigger. We were going through a little grassy opening at the edge of the bottom next the hill about half an hour after we left camp, when I saw Harmon raise his gun, and not looking in the direction he pointed it, I turned to see the pheasant, at which I supposed he was as usual trying to get a shot, fly away, when to my astonishment, at the crack of the piece, down came a fawn from the hillside and lay bawling on the grass with the dog hold of it. A ball through the head from the Winchester finished it, and we at once proceeded to arrange our packs. We had now just what we wanted, a small deer not too heavy to carry with us and eat from. We could not have used a large deer, and probably would not have shot one had we seen it. I was simply bent on getting fresh air and exercise, and looking over the ground for a possible future fishing or hunting trip, and did not hunt at all this expedition. The small deer therefore just suited us as an addition to our provisions. The things in Harmon's pack we put all into mine, giving me a pretty good load, and he took the deer, cleaned and made up knapsack fashion, with the skin of the legs for straps, on his shoulders. Thus equipped we resumed our journey. The day was as the others had been, cloudy sometimes, misty sometimes, with a drizzling rain falling, but toward noon simply dark and cloudy. We soon left the creek and took again to the mountain side, where we had good walking. We passed the new camp of the

Hammonds on a bench in a good beech region, favorable for bears and deer.

We saw no bear sign of any account as the mast was not there to bring them, but deer seemed to be in fair numbers. As we neared the forks of the stream we crossed over the point of the mountain where it descends to the junction, so as to reach a new camp Harmon had built on the upper prong the winter before. We reached this at ten o'clock, and I determined to stay until next day so we could enjoy a pleasant afternoon and evening in camp with plenty of venison to eat and a scientifically built bed of boughs to rest on. About two hundred yards below this camp is a beautiful spot. The two prongs of the creek unite on a broad table of solid rock, and just below the junction plunge over a ledge some ten or fifteen feet high, into a lovely pool below. The ridge between the two streams is narrow and entirely covered with tall spruces. By going below the fall one gets a fine view of the fall with the dark, spruce-covered ridge above and behind it, and a vista of tumbling water and picturesque rocks scattered through it up the course of each branch. I wished that I could sketch even as well as I used to do, or that I had a tourograph to catch the view and carry it away with me.

I divided the afternoon between putting the shanty in comfortable order and looking at the falls. We passed a comfortable night with a tight roof over us, a capital bed under us, and plenty to eat when we felt disposed that way. The next morning we started at 7:10, and for a while followed the dividing ridge between the two prongs of the South Fork, then crossed the one to our right as we ascended, and turning our backs on the South Fork waters struck across toward the North Prong of another river. Quite a mountain separates the two streams, and as it is in a very wild part of the country we looked for bear and other tracks, or signs, but saw few. Quite a good many signs of deer, but only a few bear tracks. The mast was not good for anything, and the only bear tracks were those of bears on their way out to the chestnut and red oak country. When the beech mast is good in this region there are always bears to be found, but when it fails, as it is apt to do, the bears go out to the chestnut country and red oak region, where they stay until near holing time, when they come back to this wild district to winter.

I was down at the forks of the river toward the north prong of which we were traveling at the time at which I write, last June, trout fishing, and was also on the mountains between the two prongs this October, having gone out there on the supposition that the beech-mast was good, but two days spent in going down one side of the mountain next the Glade Prong and back up the other on the North Prong showed no beech-mast at all. In our two days' tramp we saw but one bear track, only three turkeys and no deer. Last winter Harmon got four bears in one tree on this mountain, and also missed a large panther, two fair shots, at about forty yards. Lest he should do such a thing again, I took him down a rifle this fall and hope to hear of his killing something with it. He is a fair shot, but generally when I have seen him, has had such an outlandish apology for a gun that I wonder at his ever killing anything. Last fall by a happy accident he killed a buck, the horns of which were so large that two men, one of whom is quite fat, stood inside of them with the horns about their waists. Not thinking of me at the moment, he gave the horns to a man who was hunting with him.

This fall when I was there, he tried to buy them back for me, but the man refused to sell at any price

I enjoyed the tramp across the mountains very much on account of the real wildness of the place. I like to roam about where I know there is not a house nor clearing for miles. We got down to the North Prong about 11:30 and ate our lunch sitting on a big rock in mid stream.

The first part of the afternoon journey was interesting because when we topped the mountain between the North and Glade Prongs, we traveled for some time among immense rocks piled about in every conceivable manner, covered with moss, shaded by a dark forest of spruce and full of queer dens and caves—a delightful winter camp for bears, panthers and wildcats. The latter part of our day's journey was not as pleasant; we started down toward the Glade Prong, after keeping along the mountain on the side next it, although pretty well up to make crossing the various runs easier, about two miles from where we expected to camp at a clearing where they summer cattle, and most of the descent was in open backings where the wind and rain had full play on us and could not be avoided. When we reached the clearing it was nearly dark. The house was locked up and there was no place where we could have put up a camp had we had time.

The only resource was to try the boiling shed in the sugar camp. This was a large open shed set on posts about eight or ten feet high, not sided, and through which the wind swept furiously. Harmon looked rather blue at the prospect, but upon my assuring him that it was a delightful place to camp, that he knew well that each of us had more than once camped in worse places, he brightened up a little and shouldering his axe started after wood. While he was gone I discovered a pile of spruce clap-boards stuck up to dry and intended probably to roof a shed or addition to the log stable. With these, which were three feet long, I built a long wall or windbreak from one corner post of the shed to the end of the wall on which the kettles sat, spread a lot more for a floor and to sleep on, and, then hunting up Harmon, found he had cut a dry maple stub and helped him carry up some of it. When he got it cut up we started an excellent fire, and the wood lasted well all night. Although we had no blanket with us we slept soundly notwithstanding the roaring wind and driving rain, with plenty of venison inside us and a good fire out; we were quite comfortable, or, at least, thought we were, which was about the same thing. The morning showed no improvement in the weather, which continued cold and cloudy, but the rain degenerated to a sort of drizzle. We followed the Glade Prong for several miles up stream, then took to the mountain on our left, traveled on it to its junction into the Black Mountain, crossed that, went down to our own river, crossed it, climbed up the other side to the Spruce Knob, and at dark reached M'Coy's house, whence we had set out six days before. We saw two gangs of turkeys this last day, but got no shot. The result of my search after fresh air and exercise was that I gained twelve or thirteen pounds weight by my trip, and recuperated enough to carry me over to the next spring quite comfortably.

The first season the beech mast hits I shall visit that region and kill another bear or two.

C. Clay.

CRUSOES OF THE ANTARCTIC.

Being an Account of the Voyage and Shipwreck of the Bark Trinity and Hardships of her Crew.

BY JOHN EASMOND, SECOND OFFICER.

BORN in 1835 at St. Johns, Newfoundland, where the inhabitants are supported by the gaff and gun, and the hook and line, I have been twenty-one voyages to the seal fisheries on the coasts of Newfoundland and Labrador, and six voyages to the whale fisheries of Davis's Strait. Therefore I am well acquainted with the legends and regions of the frozen North. In 1870 I came with my family to Boston to live, and have since then sailed many voyages under the American flag, until there was a chance for me to have a look at the stormy South. This chance was no other than the bark Trinity, and a strange chance it was surely.

June 18, 1880, the bark Trinity, 317 tons, belonging to Lawrence & Co., and manned by a crew of fifteen hands all told, sailed from New London, Conn., bound for Heard's Island in the South Seas, after sea-elephant oil. After a passage of twenty-five days we arrived at Fogo, one of the Cape Verd Islands, where we shipped nineteen Portuguese negroes; and on June 26 sailed thence toward the place of our destination. The wind being fair and the sea smooth, the ship's company were variously employed; the coopers making baskets and trimming casks, the carpenters making lance poles and doing sundry other jobs, the sailors scraping and greasing and painting spars, and others repairing and fitting rigging. The Portuguese, shipped at Fogo, were regular land-lubbers, having never been to sea before. They came aboard stark naked, and were supplied by the ship with three shiftings each. The first few days after leaving port they scoffed* so much bread and drank so much water that they swelled up, and would come to me complaining of their sickness, but I soon discovered a way to cure them, and that was by cutting down their prog.

We went on with fair weather throughout, and nothing remarkable happened until we arrived at Lat. 40° S; then we found the elements to be of another cast and cold air along with it. In Lat. 42° S. we turned the meridian of the Cape of Good Hope, and then we had to encounter hurricanes, heavy gales and strong storms of sleet, hail and rain at times, with sea according, but the old Trinity braved it well.

As we made more to the south, we found the weather more severe. When it would not be blowing hard, we could see penguins in great quantities in the water, going after the fashion of leap-frog, and at night, in fair weather, their splashing could be heard at the distance of half a mile.

After living under water like the fish of the sea, and laying occasionally on board the old Trinity, we arrived at Kerguelen Land, or Island of Desolation; but before we could make a harbor a hurricane bore down on us and drove the ship about seventy miles to the southeast of the Island. Laying to all the time while the storm lasted, we arrived on Sept. 4, 1880, at Pot Harbor, Island of Desolation, and moored ship in safety in five fathoms water. Around this harbor there are rabbits in abundance, coming from some that were left there many years ago. Two of these rabbits we captured alive and took aboard the Trinity to put out on Heard's Island. Some sea-leopards would land on the island at high water, and if not captured would go off again on the next high water. A few penguins inhabited here, with many sea-hens; and ice-partridges spend all their time and breed on this island. I saw a few ducks there, and shot twenty.

While lying at anchor in this harbor we sent down to' gallant yards and spars fore and aft, and made our ship light for anchorage. All our provisions being packed in casks for rafting, we landed three months' prog, then awaited a favorable time to sail for Heard's Island. We called at Three Island Harbor and left some letters there for Capt. Fuller, of the shooner Pilot's Bride; and on Sept. 28, we sailed for Heard's Island, the place of our destination. We had a favorable passage, and nothing serious occurred, only that one man fell from the forcyard on deck, but was not much injured. We arrived on Oct. 2 at Crinton Bay, Heard's Island. Here we landed four men, with three months' prog. They were to kill what elephants they could find, and pack the blubber in casks, and we were to come and take them off on or about the first of January, 1881.

After leaving these men in Crinton Bay, we sailed down the coast to the southeast end of the island, and anchored ship off the main beach. The sea ran too high to land our boats, and each day the weather was no better, nor the water any smoother.

October 16, P. M., there was every indication of a storm at hand by the appearance of the horizon, with a thick set to the eastward, a heavy swell from northeast, and a light breeze northward. At midnight the ship was lying about three-quarters of a mile off shore, in ten fathoms water. At 2 o'clock A. M., of the 17th, the wind increased, and we veered out cable on anchors; and again at 4 A. M., the gale still increasing to a hurricane, we veered out all the cable on both anchors. The ship now began to drive and drag her anchors toward a dangerous reef. She was shipping much water and was leaking; pumps duly attended.

At 7 A. M. the Trinity lay in five fathoms water, the bottom sand and stones, and a heavy sea on; the ship labored heavily, leaked much water, and was still dragging anchors

At 9 o'clock A. M. the Captain called a council in the cabin, with his officers and crew, to know what was best to be done. We soon brought out a verdict, which was to slip the cables and run the ship on shore to save our lives. The nearest breakers bearing S. W. by S., about sixty fathoms distant, and a strong gale blowing from N. E., the S. E. point of the island bearing E. S. E. two and one-half points, the outer breaker bearing E. by N. about three miles distant, and a rocky beach and iceberg bearing N. N. W., about four miles distant—the ship could not clear the land on any tack, and there was too much wind and too heavy a sea on to fly to windward. At 9h. 30m. A. M. we slipped the cable and ran the ship for the beach.

We were then a hard crew to look at—with a wild sheet of water on the starboard bow, ice-bound cliffs and icebergs on the port bow, and before us a wild beach to make, with death staring us in the face. At 9h. 40m. A. M. the ship grounded about fifty yards from the beach. The sea was very rough, and we could not lower the boats. Antono, one of the Portuguese, volunteered to go ashore, and accordingly jumped overboard with the lance warp, and made his way to land with the rope. Then, by hauling the main yards a-back, the ship wore around and brought her side to the beach, which made the water smooth enough to lower a boat, in which many hands landed. Then we began to haul ashore what provisions we could get a-hold of. Some lost all their clothes, and all hands lost some, more or less; but we all landed safe, and got out about two months' prog, with four casks of coal. None of us suffered severely, though seven of the negroes were frost-bitten. At about 9 P. M. all hands went to a shanty, where we made a fire, dried our clothes, and then lay down to rest.

At midnight I got up and walked out to see if our provision was safe from the water. The wind had hauled around to the westward, and now blew a hard breeze off shore. When I came opposite the ship, she gave a roll to windward, and a heavy sea coming in at the time, she floated and went off from the beach. I watched her for about half an hour, and never saw her afterward. Her yards were clewed down, but sails not furled, her canvas adrift, gangways open and hatches off. She had eighty casks of coal aboard, and must have sunk soon. The two rabbits went down with the Trinity, male and female, and two cats which we left on board shared the same fate. Then I went back and told the captain that the ship was gone off. All hands felt sorry for her going, but there was one consolation for us, which was that Captain Fuller would come in the Pilot's Bride, on or about January 1. For Captain Fuller, bound for Desolation, and Captain Williams, bound for Heard's, had promised to look out for one another.

At sunrise the next morning, Oct. 18, we all assembled to see what we had saved from the wreck. We found that we had taken from the ship six casks of bread, four casks coal, one barrel molasses, one barrel sugar, eight barrels pork, coffee, five pounds powder, a small bag of shot, with eight months' supply of tobacco, in addition to which some of the men had ten or twelve pounds of their own. Then our trouble appeared in its proper shape, with two months' prog for thirty-one men to look at, and we 9,500 miles from New London. But we had no time to think about this, for we had to go to work to secure our provisions and then to fix our shanties. And now I must tell something about this Heard's Island, where we were cast away for, as it proved afterward, fifteen long months.

Heard's Island is a barren land in the Indian Ocean, some 300 miles south of Kerguelen Land, or Desolation, and about 8,000 miles from the Cape of Good Hope, the nearest land. The part of the island where I lived is in 53° 3' S., 70° 30' E., being 312 miles from Christmas Harbor, Island of Desolation. The island is thirty-five miles long, and from three to five miles wide, narrowing to a sandy point on the southeast. Across the whole breadth of the island, six miles from its southeast point, extends a range of ice mountains, with a volcano mountain in the center, 6,000 feet high. This range completely cut us off from all communication with the gang we had left at Crinton Bay. In summer there would show cracks in the ice from ten to twenty feet wide, and we could not see the bottoms of them; so it was no use to try to cross in summer, and in winter we could not depend on the weather. The cliffs and peaks of ice extended out over the sea, and huge masses of this ice would from time to time tumble down into the water. All about under Volcano Mountain, as we called it, there were great masses of black and burnt rock mingled with the ice fields. We called them the Black Hills. In summer time the ice would melt around the blocks of rock, some of them weighing many tons, which would thus be left suspended high in the air on their pinnacles of ice. We saw these rocks this way in December, 1880, and the following December we noticed the same thing. After a while the rocks would fall down, and again the ice and snow would accumulate around them.

There are no trees nor bushes on the island, the only vegetation that grows there being a coarse tussock of tangled briers and grass, no good for fire, and what we called wild cabbage and ate as such. This begins to grow about the first of September and matures in April. We found it best for eating in December.

On the island there were four shanties, which had been built some fifteen years before by the crews of Williams & Haven, of New London. In each shanty was a stove, and there were also on the island two sets of try works, having two pots apiece, of one hundred gallons capacity each, with several hundred casks. In these we used coal so long as it lasted and the scrunchins of the blubber.

We divided up the crew into four gangs, one for each shanty, myself, with two of the Portuguese, taking possession of a shanty on the northeast side of the island, some distance away from the rest.

Then we went to work to kill sea elephants and barrel up the oil for shipping whenever Capt. Fuller should come.

The Portuguese had never seen frost nor snow before, but they stood the cold very well and were a match for me, and when I say that, all seagoing men who know John Easmond know what it means. They wore nothing but canvas pants to their skins, shoes with wooden soles and skin uppers, and no stockings. They were strong fellows and good workers, would lug six or eight pieces of blubber, weighing 150 pounds, suspended on a pole three feet long on their backs. They stood hardship better than the average of the white men.

The sea elephants are a kind of seal, and are from fifteen to twenty-two feet in length. They have a trunk something like an elephant's from eight to fourteen inches in length, which they extend when smelling of anything or when enraged. They shed their hair between November 1 and December 1. They pup the first of October; the young at birth have beautiful black hair, which is changed to gray when they are three days old, and is shed altogether at the end of ten days or a fortnight, by which time they are ready to leave the island. These elephants, like the seals, can live a long time on suction, and it is well that they can, for they could get nothing to eat on this land except cabbage, and such fish don't eat cabbage. Nor yet had they time to seek anything to eat, for they would not be long out of the water before some of our party would have a lance stuck in them. I have never seen animals better hunted and worse fed than they were. The lances which we used were wooden staves six to eight feet in length, with iron points two feet long, so that the whole would be eight and ten feet in length. The elephants, when attacked, rear up about eight feet in the air, and then the lance is stuck into their heart.

We had many a hard fight with the bull elephants when they would be near the water, but when about fifty or sixty yards from the water, and over the crap of the beach, we would soon capture them with lances, as there would generally be two or three of us together.

Being busy with our work of killing the elephant (we got altogether before leaving the island 500 barrels of oil) the weeks passed away and it came time to expect Capt. Fuller in the Pilot's Bride. Then I remembered the words of the

* Ate.

Apostle Paul, "Keep wide awake and watch, for you know not what time a ship may come." This was on the 28th of December, but no ship did come, and we thought it bad that we should be left on that solitary island to spend a winter on account of Capt. Fuller's neglect. We had not much books to pass away the time, only a few pages of *Harper's Weekly*, which we would read in stormy weather, and for outside amusement we would be patroling the beach for something to eat, of which we always found plenty, such as it was, elephants, penguins and wild cabbage. We would burn the blubber of the elephants as fuel for cooking.

We had a trifle of powder and duck shot, and in one of the cabins I found a Remington double-barreled gun, which had been left there some years before. In cleaning it I broke the feather spring of the lock, so that the trigger was of no use; but I managed to shoot by holding the hammer under my thumb until I could level her on the object and then letting go. After a short practice, it answered about as well as if I had had the use of the trigger. When my shot gave out I used small stones for ammunition. My gun lasted until August, 1881. I had no time piece nor compass, but plenty of nautical instruments, so I set to work to supply myself with a time keeper. With a cooper's compass I drew a circle on a board eighteen inches in circumference, and put a peg in the center of it. Then with my quadrant I found the apparent time, and marked it off where the shadow of the peg showed on the circle, and by repeating observations I made a good time keeper, in fact the captain used to come over from his shanty to set his watch and clock by my sun dial. I also made a compass by the sun's amplitude. So I was at last well equipped.

On the last of January, 1881, a serious trouble occurred. Five of our white men went to Rocky Beach, about six miles off, for elephant meat. A heavy storm of rain and sleet came on them, and at night three of them, William Rice, James Hartwell and Christopher, returned much fatigued, and so exhausted, in fact, that they could give but little account of the other two. Christopher, who belonged to London and went by the name of "Cockney," fell down when he got to my shanty, too weak to speak.

The next morning we went in search of the lost men. We found one of them, named Kelley, on the summit of an iceberg, clinched in the cold embrace of death. By his cut hands and torn clothing, it was evident that he had struggled hard and fought bravely for his life. He belonged to New York, and was twenty-two years of age. In a short time after we found Watson, ship's carpenter, also dead. He had evidently lain down to go to sleep; he did sleep, and never woke. He belonged to Scotland, and was thirty-two years old. "Cockney" found an Episcopal prayer book in Kelley's clothes bag—given him by his mother before he left home—and Captain Williams read the burial prayers. We buried them there, and all mourned their loss; and we left them at Fairchild Beach, to await the Judgment trumpet to arouse them for further orders.

The death of Kelley and Watson reminds me of a similar trouble that came upon our crew once up in the Arctic, in October, 1864, I then being first mate of the steamship Wolf. We were out in a small boat, six hands all told, looking for whales, when a storm came on, and being six miles from the ship, we went ashore on an island for a refuge for the night. Having landed, we let our boat swing out by the whale line 400 fathoms from shore, so she would not get stove in; and then we started out to walk about for the night to keep warm. The great trouble in a time like this is that a man wants to sleep. One of our crew, James Malloy, a native of Ireland, soon grew tired and refused to go on. We shook him up and compelled him to go with us as long as we could, but finally he refused and we could not budge him; so leaving him, we went our round, and when we came back again we found him dead.

February having come around, we banked up our shanties and made them as comfortable as we could for the winter. March, April and May are the three fall months on Heard's Island; June, July and August the winter months. There was never while we were there a severe frost, but very heavy gales of wind and great falls of snow, with hail and sleet at times.

[TO BE CONTINUED.]

Natural History.

BEARS ONCE MORE.

MY personal knowledge of live bears is not extensive; and yet, living ten years (from 1835 to 1845), in Maine, at the head of tide water on the Penobscot, it is only fair to suppose that the sojourn brought under my eye many dead bears, and under my notice many facts in regard to forest life, perhaps interesting to those of less favored climes.

The bear's partiality for human flesh which has been under discussion in FOREST AND STREAM is thus far undecided, with the weight of argument in the negative. Still, there are so many cases on record wherein the bear was "just going to eat a man," that a vast amount of fear remains, and the great bugbear of children still lives. The first case I shall notice hardly tends to allay this fear, referring, as it does to a bear that actually began his repast, or rather breakfast, on a man. But then, he had no cubs, and suddenly stopped eating and "didn't eat no more." "I saw the man's hand," said my informant, "he will not be able to use it in a month, if ever." The man referred to went into the woods in March, cutting timber; the sound of his axe broke the slumbers of an old bear, who finally crawled from his den near by. Having not eaten a "square meal" in over three months, he undoubtedly

Began to feel, as well he might,
The keen demands of appetite.

He marched straight for the man with the ostensible purpose of "making meat." The man, taking in all aspects of the case, presented his left hand, which the bear kindly took in his mouth, giving it a chew or two, when the axe in the man's right hand was buried in the bear's brain. Here science felt the blow, but not quite so hard as the bear; it was a sad disappointment, however. The man in his hurry probably forgot that a great question was on the point of settlement; had he waited a few minutes, a circumstance might have been recorded which now probably never will. And yet, the inference is fair, that had the bear been allowed to eat on undisturbed, he would have eaten up the man, at any rate it is nearer a demonstration than any previous record.

Another question has been under consideration. Will a bear attack a man in defense of her cubs? "This reminds me of a little story." "My brother," said my informant, "was out hunting deer, and ran over a couple of cubs. He recollected having often heard it asserted that a bear would attack a man who should kill her cubs, here was an opportunity to settle the question, and he might never find another as favorable. He shot one cub, loaded again, and shot the other. Just then he heard the bushes crack. The old bear heard the gun. She came up to the cubs, smelled a moment, and looking up discovered the man. She sprang to within six feet of him, stood up growling, gnashed her teeth, striking her paws toward him; he in the meantime leaning on his gun, looking to see what she was going to do. Thinking best to reload his gun he proceeded to do this, keeping one eye on the bear, to be sure of the very moment when she should 'attack a man.' She went back to her cubs, both dead by that time, then made a second lunge at him, and coming a little nearer than before, she fairly threw froth from her jaws in his face. Having loaded his gun, native avarice overcame his love of demonstrative science, he presented the muzzle to her breast and shot her dead." Here again was disappointment, an addition to natural history spoiled by lack of scientific interest, and the grand question left again all afloat. The truth of the matter was this, the cubs could not run away, and give the old bear the chance to retreat behind them as in the case of the "tattoo on the tin pail," she therefore stood up with no design to attack the man but to stand between her cubs and menacing danger, falling dead where she stood.

Once more: "I was out gathering spruce gum," said my informant, "with a bag on my shoulder, and found two small cubs rootin' round. I went for them as worth more than gum, thrust them into the bag, and made tracks across a hollow, and was just going out of sight over the hill beyond when the old bear saw me. I run and she run. Being the longest winded, she gained, and the distance between us grew fearfully less. Loaded with the cubs, I was obliged to stop to catch breath. She came close up, and when I started again I stumbled and fell." (Here I rose on my toes to announce to the world that I had found a man killed by a bear.) He continued: "But I held on to the bag—there was money in it—regained my feet, the old bear running by my side till I reached the house. Up the steps I ran, and I slammed the door in her face. She knew I had the cubs, and didn't touch me for fear of hurting them." Here was another "just going to" spoiled, and I got discouraged. The old bear was a suppliant, not an antagonist. "Give me back my cubs—give me back my cubs, I do not want you," would have been her cry had she language, and when the door was shut she turned sadly and silently away. A resident of my native town, a few years since, poured a charge of partridge shot, with fatal effect, into the open mouth of a bear standing between him and her cubs, and, as he said, by a hair's breadth saved his life. The next door neighbor to my father's house was kept "up a tree" by a bear whose cubs he had shot, a long afternoon, the bear dividing her time between growling at him and trying to induce the cubs to follow her away. At length, she wandering a little out of sight, he slid down the tree, and by good use of the legs Providence had given him "providentially" escaped with his life.

An old bee hunter told me how he was chased out of the woods by a bear which seemed to hesitate when very near him, and for which he could not account. The fact was, the bear smelled the boney used in hunting bees, and only sought to negotiate for its possession.

I could cite other and numerous instances of "dangerous encounters" with bears, all of the same general import, and all but one against the bears. Of course, the exception here referred to was the first public act of "Elisha" after his investment. In this case the St. James and other translators have evidently mistaken and used the word "tear" where they should have placed scare, since the latter position the two she bears have occupied throughout Christendom ever since, and perhaps will to the end of time. But this is ground on which even a "Christian philosopher" must tread lightly, I will therefore beat a hasty retreat, and close with the earnest hope and desire that the first man who is killed by a bear will report the same to FOREST AND STREAM without delay, so that we can in this life read on record the fact that a bear has taken that one step they have been so long "just going to." I am ready to believe almost anything except that a man's hair need lift his hat off at the sight of our black bear, cubs or no cubs.

B. HORSFORD.

THE SPARROWS MUST GO!

Editor Forest and Stream:

I'm glad to find the feeling against this English nuisance culminating. If people can be induced to make game of them and convert them into pies, a good beginning will be made toward extermination; and as they are a marketable bird in Europe, what is there in our Democratic institutions to prevent their being palatable here?

Feed them for a few days on coarse meal or broken grain and they will make a pie for gods to hanker after! But before they are cooked they should be caught, and this feat may be accomplished in this way (as I used to catch snowbirds when a boy): Take an old door or very wide board and prop it up with a stick; then put a supply of food under it every morning, and every little villain of them in the region round about will find it and breakfast there. Then tie a string to the stick, and when a goodly number of them get under pull the string and they pay the penalty for stealing provisions.

This mode of ending their worthless lives would meet with no objection from humanitarians, for they would never know what happened to them. If people throughout the country would adopt this plan their numbers would be surprisingly reduced. Last summer I was at a village on the Massachusetts hills, and was told that a single pair were once seen prospecting there, but a sensible young man took down his gun and checked the tide of emigration to that region. That is what should be done in every village when they first appear. There are laws for the protection of insectivorous birds. Is this noisy little devil a member of that gang? He may be, but he seldom eats anything that we want him to eat as long as he can find anything that we don't care whether he eats or not. If he is included in that list then alter the law and let the Germans at him. When a German goes out with his gun he means business, and no two-footed thing that wears a feather and comes within ten yards of him is safe, and he shoots everything, from a woodpecker to a crow. By all means give him unlimited license in the sparrow line. One of the Ten Commandments is, "Thou shalt not kill," but you may assure your readers that when Moses wrote that law he hadn't a sparrow in his eye. I have assisted Mr. Bergh in his protests against the pigeon butchers, but if they would substitute the sparrow for the pigeon neither of us would move a finger to suppress the sport. When that blessed time arrives, and the shooting clubs begin to advertise for live sparrows a new industry will be opened to keep the tramps and loafers out of mischief, the useful song birds will increase and multiply, and the grateful people will feel like appointing a "thanksgiving day" that will last from the earliest day in January till the latest in December.

DIDYMUS.

THE BIRDS OF MAINE.

With Annotations of their Comparative Abundance, Dates of Migration, Breeding Habits, etc.

BY EVERETT SMITH.

Introductory Note.

MAINE is the most easterly of the United States of America, and occupying the northeastern corner of the Republic, includes within its boundaries more than one-half of the area of the "New England" States, of which it is one.

The area of Maine is estimated to be 31,766 square miles, or 20,330,240 acres. Its geographical position is between 66° 49′ and 71° 4′ west longitude, and between 43° 5′ and 47° 31′ 39″ north latitude. It is adjoined by the Canadian Provinces of New Brunswick on the east and north, and Quebec on the north and northwest, the State of New Hampshire on the west, and the Atlantic Ocean on the south. The definite boundaries are as follows: On the east the St. Croix River and a line running due north from a monument at its source, to the St. John River; on the north the St. John River and its tributary the St. Francis River, to the head of Lake Pohemagamook, (in north latitude 47° 31′ 39″, west longitude 69° 17′ 31″) thence a line southwesterly on the "divide" or highlands to the northeast corner of the State of New Hampshire; on the west the State of New Hampshire; on the south by the Atlantic Ocean.

Maine's greatest length is 350 miles, from Kittery Point to the northeast angle; and the width from Quoddy Head due west to New Hampshire is 200 miles. The southern boundary of coast is 226 miles in length by direct line, but by the shore line of the numerous bays and inlets the coast line is estimated to exceed 2,000 miles in length. The inland water area is about 3,200 square miles, of which two-thirds is lacustrine, and one-third fluvial. The four most extensive rivers and vallies are the St. Croix at the eastern boundary, the Penobscot, the Kennebec, and the Saco, near the western boundary.

The highest mountain is an isolated peak in the north central part of the State, Mt. Katahdin, or Ktaadn, 5,383 feet in height. Several other elevations exceed 4,000 feet. The northernmost portion of the State is a wilderness of dense forests. The region most thickly settled is throughout the southerly half of the State. The general topography of Maine is decidedly hilly, but includes a variety of small meadows and plains. The coast line is generally rocky and precipitous, and along this shore there are beaches and marshes, and innumerable islands.

The arborcal vegetation includes about all the varieties of trees indigenous to New England. The State of Maine, owing to its geographical position, extent of territory, diversity of mountains, valleys, plains, marshes, cultivated fields, lakes, rivers, and seacoast, is a region of especial ornithological interest, and includes a great variety of species in its bird fauna. Nearly all the species known to New England occur in Maine, and many whose general habitat is either more northern or more southern, breed commonly here, but rarely elsewhere in New England. Maine, as a breeding resort, appears to be the northern and eastern limit for some birds, and the southern and western limit for others. Species that commonly breed in one portion of this State, are quite unknown in other portions. For this reason it becomes necessary to qualify the terms "common," "abundant," "breeds," etc., by references to various parts of the State. Such qualifications will be especially appreciated by local observers. For example may be mentioned our largest thrush, the brown or rufous thrush, *Turdus rufus* of Wilson and Audubon, *Harporhynchus rufus* of Baird, Coues, Ridgway and others. This bird regularly breeds and is common in southwestern Maine, but seems never to be found at any time in the easternmost portion of the State.

The same may be said of the towhee bunting, or "chewink," *Pipilo erythrophthalmus*, and of other species.

The puffins and guillemots that regularly breed and are common residents along the eastermost part of the coast, are not known to breed, nor are they abundant at any time along the westermost part of the coast.

In preparing this catalogue for publication it became necessary that some nomenclature should be selected. No defined rules are adhered to by American ornithologists, and there is no exclusive authority for reference in regard to the scientific names of our birds. It therefore devolved upon the writer to determine upon whatever course might seem best to meet the object and scope of this publication. The endeavor is here made to present facts in as condensed and simple a form as possible within the limits of ready comprehension. Birds are mentioned by their customary English names as recognized by ornithologists; names that are merely of local signification are omitted from the titles, except in a very few instances. Each bird is further identified by naming the genus and species adopted by the three foremost authorities of America. These references are to "Aud."—"Birds of North America," by John James Audubon, whose work on American ornithology is in many respects unparalleled, but not generally accessible in private libraries; to "Ridg."—"Nomenclature of North American Birds," by Robert Ridgway, the eminent ornithologist of the United States National Museum, and to "Cs."—"Check List and Ornithological Dictionary," 1882, by Dr. Elliott Coues, whose publications are invaluable to students of ornithology. For references to this last work of Dr. Coues I am indebted to the publishers, Messrs. Estes & Lauriat, Boston, Mass., for advance sheets forwarded to me for this purpose.

Of the many authorities that may be quoted, the references to the three selected I deem of the most practical value for my purpose; and without the encumbrance of additional synonyms, these references should be sufficient for a convenient and unmistakable identification of every bird mentioned in the catalogue. Each reader may choose for himself what scientific name to adopt. Whether, for example, the black tern shall be known to him as *Sterna nigra*, a term sanctioned by good authority and long usage

that for appropriateness of expression and for comprehension requires no knowledge of technicalities, being literally translated "black tern;" or the same may be known as *Hydrochelidon lariformis surinamensis*. The merits of either term need not depend solely upon the signification or number (four, or fourteen) of syllables used to express a single appellation. For the eight members of the family *Picidæ*, or woodpeckers, named in this catalogue, the reader may select the single generic name *Picus*, signifying woodpecker, or choose six generic names for the same eight species.

Although this catalogue is intended to be merely a popular list of the birds of Maine, I have endeavored to make it of scientific accuracy. Authorities or references are named for such notes as are not within the personal observations or the corroboration of the writer. As is customary in similar lists, I have included the names of some birds which can hardly be termed birds of Maine in a strictly literal sense, as they are only of accidental occurrence here. But a record of such occurrences is deemed of interest in this connection, and special citations are generally given for such as come within this class.

I have received interesting notes from many observers throughout this State, and my own personal observations have extended to every county in Maine, throughout a period of many years, and covering all seasons.

To those whom I am indebted for interesting specimens and notes of birds sent to me from time to time, and from whom I hope similar favors in the future, I wish to here render acknowledgment and thanks. And to these friends is dedicated this catalogue of "Maine Birds?"

EVERETT SMITH.

PORTLAND, Maine, U. S. A.

FAMILY TURDIDÆ: THRUSHES.

1. Wood Thrush—*Turdus mustelinus* Aud,, Cs. 6; *Hylocichla mustelina* Ridg. 1.—Very rare. Although the occurrence of this species in Maine has been reported to me at various times, I can only vouch for the capture of a single specimen, which was shot by the writer at Vassalboro, Kennebec county, Maine, July 27, 1865.

2. Wilson's Thrush, Tawny Thrush—*Turdus wilsonii* Aud.; *Hylocichla fuscescens* Ridg. 2. *Turdus fuscescens* Cs. 7; —Common. Arrives late in April and in May. Breeds upon or near the ground, lays four or five blue-green eggs in June. A shy bird of retiring habits, usually frequenting dense thickets.

3. Alice's Thrush, Gray-Checked Thrush—*Turdus alicia* Baird; *Hylocichla alicæ* Ridg. 3; *Turdus ustulatus alicæ* Cs. 12.—Not very common. Probably breeds here, as it is found in summer, and the young of the year has been taken. Formerly regarded as merely a varietal form of the Swainson's thrush next named, but now ranked as a distinct species. The most apparent difference between these two forms is shown by the plumage of the head. Swainson's thrush has a yellowish-white ring around the eye, and a stripe of same color from the bill to the eye, and its cheeks have a buff tinge. Alice's thrush lacks the stripe and orbital ring, and its cheeks are gray without any buff tinge. These are the chief typical characteristics apparent to an ordinary observer as given by published descriptions. But the collector will find such descriptions unsatisfactory for absolutely determining this form. Although standard authors regard the Alice's thrush as a form most closely allied to the Swainson's or olive-backed thrush, in Maine it is more likely to be confounded with the Wilson's or tawny thrush by ordinary collectors; not only on account of comparative size, but also in some instances, because of a general resemblance in markings of the plumage.

4. Swainson's Thrush, Olive-Backed Thrush—*Turdus swainsoni* Cabanis, Baird; *Hylocichla ustulata swainsoni* Ridg. 4 a; *Turdus ustulatus swainsoni* Cs. 13.—Common. Arrives late in April and in May. Breeds usually upon the lowest branches of trees in dense thickets, lays four blue-green eggs with buff-brown spots in June.

5. Hermit Thrush—*Turdus solitarius* Aud.; *Hylocichla unalascæ pallasi* Ridg. 5 b.; *Turdus unalascæ nanus* Cs. 10.—Abundant. Arrives early in April. Breeds on the ground, lays four blue-green eggs in May and early in June. Commonly raises two broods, the second complement of eggs being laid about two months after the first, or in July. The hermit thrushes do not leave Maine entirely until November, although the autumn migration occurs chiefly in October, at which time these birds are commonly seen in the open woodland groves and about the orchards. They are then silent, excepting the occasional utterance of a single "chuck" note of interrogation or alarm. The well-known melodious song of the springtime is usually sent forth from the top of a tall tree, and the notes are of a somewhat ventriloquial nature. I have known this little thrush to be locally termed "apple bird" in Maine. Probably because it is so often seen in the orchards in autumn, where it is attracted by an abundance of food, as are also many other birds.

6. Robin—*Turdus migratorius* Aud. Cs. 2.; *Merula migratoria* Ridg. 7.—Abundant. Arrives early in April, a few in March some seasons. Occasionally found here in winter. Breeds commonly throughout the State, where cultivated lands are found. The nest usually is composed of mud, twigs, grass, etc., and placed upon a tree. Two broods are commonly raised. The first complement of five blueish-green eggs is laid in May, and the second in July. I have seen young robins flying before June 1 in Maine. Mr. Edward Tucker, of Skowhegan, Me., has given me an interesting description of a double tenement nest of this species. These two nests, made of mud and lined with grass, were placed upon a beam in a shed, and about fifteen feet from the ground. The nests were so constructed that the partition between them formed one side for each nest, and each contained three eggs when found (May 18, 1878), with a robin setting upon them. One of these robins hatched its eggs, but the other bird disappeared before a like result could be accomplished. The male of this species habitually assists in raising his family, and possibly this double nest was the home of a single pair, male and female, a supposition furthered by the fact that but three eggs were laid in each nest, or a total of but six eggs, whereas two females would ordinarily lay a total of ten eggs.

7. Mocking Bird.—*Orpheus polyglottus* Aud.; *Mimus polyglottus* Ridg. 11, Cs. 15.—Accidental. Specimens have been observed at various times, and some of them may have been stragglers from the South, although it is more probable that each one had escaped from captivity in the North, as this is a very common cagebird.

8. Catbird.—*Orpheus felivox* Aud.; *Galeoscoptes carolinensis* Ridg. 12; *Mimus carolinensis* Cs. 16.—Common in Western Maine and east to the Penobscot Valley. Arrives in May. Breeds, usually nesting upon bushes in dense thickets, and lays four or five dark blue-green eggs in June and July.

9. Rufous Thrush.—*Orpheus rufus* Aud.; *Harporhynchus rufus* Ridg. 13, Cs. 17.—Common in Western Maine and east to the Kenucbec Valley. Rare or unknown east of the Penobscot Valley. Arrives early in May. Breeds on or near the ground, and lays four or five yellowish white eggs with brown spots, late in May and in June. This bird is the largest of the thrush family found in Maine. It is a fine songster and of handsome plumage, yet rarely is seen in captivity as a cagebird.

[TO BE CONTINUED.]

WISE LITTLE BANTIES.—Falls City, Neb., Dec. 3, 1882.—Dr. Arnold, living at Brownville, in this State, has a pair of bantam roosters that seem to have developed an unusual amount of intelligence. They will fight, crow, etc., at his command, beside doing a variety of other tricks. The following well authenticated incident is told of them: Some time ago one of them in his perambulations strolled into the yard of a neighbor, and being discovered by the rooster of that place, was soundly thrashed. When the bantam reached home, he presented a most forlorn appearance, and going up to the other rooster, they put their heads together and seemed to be engaged in conversation. After a moment spent in this manner, they both started for the neighbor's yard on a dog (?) trot. After they had reached the enemy's territory they proceeded to search for him. They soon found him and gave him a most unmerciful whipping, after which they strutted back home, probably feeling that they had done their duty well.—X.

MINK AND FERRET WILL NOT INTERBREED.—Brantford, Dec. 18.—I think I promised to let you know how I made out with my minks and ferrets this season. I asked a question through the FOREST AND STREAM, if the ferret and mink would cross. I have given them a good trial, and find they will not interbreed. I raised a good, strong male mink with two female ferrets, and when they came in season he mated with them readily. Then a friend of mine brought one to him, and he mated with her, and not one of the three proved with young. Then to see if the ferrets were good for breeding, I put one of them in with a male ferret, about six weeks after, and she had a litter of ferrets. A friend of mine tried to cross them the other way. He tried a male ferret and a female mink. They mated, but there was no increase, so I think that is as good a test as need be. No one need try the experiment, for it will not succeed.—GEORGE ASH.

A MODEL MOUNTED HEAD.—While at Albany, N. Y., I had occasion to call on Dr. J. S. Delavan, of that city, who, knowing my fondness for objects of natural history, called my attention to the most perfect specimen of a buck's head I had ever seen, and I have examined many. The head was that of a buck of Dr. Delavan's shooting, killed only this October, in the North Woods, and mounted by an amateur taxidermist by the name of H. A. Miner, of Saranac Lake. I venture to say there is no more graceful or lifelike specimen existing, and I mention it because I am anxious that Mr. Miner should make a deposit of his handiwork at the National Museum at Washington, D. C., where there is now a growing collection of such objects, presented by different taxidermists of the country. Mr. Miner's forte seems to be heads, and he should donate a duplicate of Dr. Delavan's.—HOMO.

RATTLESNAKE AS A SWIMMER.—Winter Park, Orange County, Fla.—Do you know if it be a common thing for a rattlesnake to take to the water? A few days ago a man was pulling across a lake in this vicinity, and he noticed a snake in the water which he killed. It proved to be a rattlesnake. I took his dimensions and found him to measure six feet long and eight inches in circumference around his largest part. He had ten rattles and a button.—F. W. D. [We think it rather unusual for the rattlesnake to take to the water, though no doubt there are many localities where they are often obliged to do so.]

A STRANGE EAGLE'S NEST.—Minneapolis, Minn., Dec. 12.—When up in Northern Dakota this fall, I was told by a herder of a very curious eagle's nest, composed largely of buffalo ribs, which I went to see. It was upon a hillock, and could be seen a long distance off. There were about forty ribs, one end of each turning up, then filled in with nearly a cart load of turf and rubbish. It had been used this year, and looked as if it had been used many years. Saw no birds as they had left, so could not tell the species, but the large buffalo ribs in the foundation of a bird's nest looked very strange.—GEO. A. BOARDMAN.

THE OPPOSSUM ON LONG ISLAND.—Wading River, L. I.—One of my neighbors killed, a few weeks ago, an opposum in his hen roost, and I hear of two being killed on Strong's Nest this fall. Is not this uncommon for Long Island, and where did they come from?—T. C. [Very unusual, we think.]

PROLIFIC MOCKING BIRDS.—In 1866 I knew a pair of mocking birds in Charles City county, below Richmond, Va., to raise four broods of four birds each, in one season. —ENQUIRER.

Camp Fire Flickerings.

"That reminds me."

AS old Bob S. was out hunting one day he saw a flock of ducks settle in a small pond hole not far away. To call the dog in to heel and creep within shot of the fowl was the work of but a few minutes. To use his own words: "I got within easy range and gave them the right barrel, and killed five. The dog retrieved them all five and the rest of the bunch flew away. When I got home and told Bill, my brother, what a nice shot I had, and how many I killed, all he said was 'Bob, why in thunder didn't you give them the other barrel?' Says I, 'Bill, I never thought of it.'" D.

BROOKLINE, Mass.

VERMONT LAW.—A correspondent informs us that the open season for ruffed grouse in Vermont is from Sept. 1 to Feb. 1.

Game Bag and Gun.

GAME SEASONS.

A comprehensive statement of the game laws of America will be found in the issues of this journal for December 7 and 14, 1882. Individuals and game clubs are requested to inform us of the enactment of new local laws and of changes that may be made in the laws of the several States and Territories.

THE YOUNG MAN AND HIS UNCLE.

ONCE upon a time a young man started out upon his travels. He found a place where life looked rather easy, and being of a lazy disposition by inheritance he concluded to take up his abode there permanently. So he rusted in.

Having no longer use for a gun that he possessed, he lent it to his uncle, who kept a little shop of various curious commodities, with a juggler tossing three gold balls in the air for a sign.

And many times afterward the young man repented, looking wistful as a wild goose tied by the legs at a passing flock, as often as the shooting season came around; but long abstinence from active life made him slow to move; the longer he looked, the more his body protested against being exposed to the cold and wet and clamored for letting well enough alone; so his good intentions went for naught.

The young man's uncle kept the gun in a safe place until he should come again. But he did not come.

Years passed by, and each year the same battle was fought between the young man's soul and his body the same vows were made and broken, and the good intentions went to serve as paving stones in a certain locality much in need of firm footing. But each year the fight was less fierce as the soul grew weaker, and the body likewise and at last one day they agreed to disagree, and parted.

His uncle's face grew brighter as often as he looked down the street and saw him not; and at last one day he beheld a curious black carriage, with a long procession of other carriages following, and he cried out, "Solomon! Solomon Isaacs! Dake dat leetle gun and polish him till he shines like a newly coined shekel!"

"But de young man?—" answered Solomon Isaacs timidly. "If he see him bright he may want him back."

"Ah, never more!" and the young man's uncle rubbed his hands. "It is too late! He have gone to shuperintend his own paving!"

J. P. TRUE.

NOTES ON GAME AND SHOOTING.

BUSINESS engagements have prevented me, to some extent, from indulging my fondness for field sports during the present season, but I trust I shall be able to engage in it more after the lapse of several weeks. Not many days ago, however, T. C. L. and I went on a visit to our friend and kinsman, Bishop Crickett, of Saints Rest, in the county of Anson, fully prepared for any amusement which our host might be able to offer. We had our dogs and guns, and a supply of loaded shells sufficient to have killed all the game within a circle of several miles in diameter—for we believe in being ready for the game in the event we should be so fortunate as to find it. But we brought back home two-thirds of what we carried, and laid it away for future use. We found few birds in the fields, and if they are in that county in considerable numbers, they keep in the forests. My opinion is, that as the season advances they will take to the fields, and thus afford far better sport than what we now have. It is true, we got as many as we could eat, and besides this gave several of our friends whom we saw, enough to afford them a taste of the delicacy; but we had none to take home for the enjoyment of the "duddy weans," of which we are bountifully supplied. Our "quivers" are full of this kind of arrows, which the Scriptures tell us is "a heritage of the Lord." During a two days' hunt, which was seriously interrupted by a sudden change of weather, which brought the North Pole into shivering proximity with us, and made the pursuit of Bob White anything but a pleasurable pastime, we succeeded in getting only about sixty birds.

I have had information from several sporting localities that birds were numerous, but wherever I have tried it I have been disappointed. It is unaccountable to me why there is a scarcity, for the past two seasons have been favorable for their rearing, and the stock birds were abundant enough to have filled the fields. As already said, I think they must confine themselves chiefly to the woods and will come into the open land when the forests fail to afford them full shelter and a supply of food. I expect, therefore, to be able to report to you before many weeks that I have made Westley Richards ring repeatedly, and have been pleased with the accuracy of my aim and the efficiency of the gun's execution.

I noticed in your paper recently an account of a Florida hunt, in which the writer, after speaking of the quail which he and his companion had killed, startled your readers by telling them he had killed a deer with No. 9 shot. Of course I shall not doubt the truth of the statement, but I confess I should have been better pleased if he had condescended to let us know the distance at which this remarkable shot was made. I think it probable that if the deer was not more than ten yards off—possibly fifteen—a good gun would kill it with No. 9 shot propelled by over three drams of gunpowder. But I must be excused for entertaining "the shadow of the shade" of a doubt whether it could happen at twenty-five yards. In the "blue season," at forty yards a gun must shoot very hard to force a No. 3 buckshot to the center of a three-pronged buck, and I am confident that however large the charge of powder, No. 9 would not perforate the hide. No. 9 will do for quail all through the season—I prefer 8—but when it comes to deer I respectfully suggest the wisdom of using heavier shot if the sportsman expects to odorize his pot with the fumes of venison.

I trust nobody will misinterpret my meaning in the remarks I chose to make in regard to the recent Field Trials at High Point. It was far from my purpose to speak in derision of the performance and capabilities of the dogs which I saw. Many of them, no doubt, have the power and disposition to do hard and commendable service whenever real work is required. But having never before seen any exhibition of the kind, and supposing the canines were expected to do in the Trials just as they would do in a genuine hunt, I had looked for exceedingly vigorous movements on their part, whereby they would scour rapidly and closely all the ground, find all the birds within the fields, and save the sportsman all severe trial of his physical powers. Although I was disappointed, yet I saw quite a number of these royal dogs, which I would have been pleased to own, if their value had been commensurate with my ideas as to what such animals should be worth. But when it comes to rating a dog as equal in the financial balance with a first-class horse, I confess my inability to see it; and, hence, I suppose, I must content myself with

being the master of one of less gentle blood and more limited education.

But I do like a nice gun—one of neatness of finish, perfect in its proportions, material and mechanism, and capable, if handled right, of killing game at a reasonable distance. I do not want one which it is laborious to carry, but a light one of from 16 to 13 bore, which I can bear along without feeling the weight of the burden. To me, at least, one which will just turn the scale at seven pounds, and which will admit of a charge of three drams of gunpowder and one ounce of shot, is the beau ideal of a fowling piece. With such a gun I can kill all the kinds of game which I choose to hunt, but not at those apochryphal distances of which men sometimes speak whose imaginations run riot with the facts. A well made 16-bore gun weighing seven pounds, properly loaded, will kill an "antlered monarch" at forty yards, and beyond that few of larger size and greater weight can be relied upon to hit the mark. I have occasionally killed at much greater range, but such shots are abnormal.

I recollect having heard a gentleman boasting of the power of a Purdey gun of his, which cost him a very large sum of money, to kill quail and snipe at the distance of sixty yards, with absolute certainty, if held on the game. He was told that he could not hit a glass ball at that distance one time in ten. And so the trial was made, and he shot six times without touching the target. He could not plead a want of precision in the way in which the gun was held, for the ball was placed on the end of a rod fastened in the ground. From this and many other observations of a similar character, I am always incredulous when I hear a tale of unusual magnitude. WELLS.

WILD RICE IN THE ADIRONDACKS.

THE following article was published elsewhere this winter, and by request of the writer, Gen. R. U. Sherman, of the New York Fish Commission, we republish it: It contains some points on which discussion is invited:

Editor Forest and Stream:

Having heard and read a great deal of the wild rice fields of the Northwest, I was tempted in the fall of 1881 to try whether this plant could be successfully introduced in the waters of the northern New York wilderness. On the lakes and streams of that region a few ducks breed every season, but the number is not sufficient to make duck shooting worthy of the sportsman's particular attention. I thought if wild rice could be found to grow here as it does in the Northwest, we might have the same abundance of wild waterfowl in the feeding season as is found in the bays, streams and lakes of Ohio, Michigan, Wisconsin and Minnesota. I procured in October of the year stated, ten bushels of seed from Mr. Gilchrist, of Port Hope, Ontario, which I have every reason, from its appearance and the character of the gentleman from whom it was procured, to believe was good. I sowed it in a range of waters known as the "Betsy Lakes," tributary to the great Black River, which flows into Lake Ontario near the outlet of that lake in the St. Lawrence River. I selected the smaller of the lakes, where the water was shallowest and there was most alluvial at the bottom, for the plant. I sowed in the month named, strictly according to directions, in water two to eight feet deep, scattering the seed much as I would do in sowing oats. The time of sowing was at lowest water, so that there was a certainty that none of the seed should ever be left on dry land. The depth of the water where the seed was sown was in the following spring from one to three feet greater than when the seed was dropped. Where the seed was sown, water lilies, the smaller arrow head, and water mosses and grasses grew in abundance. The space sown with the ten bushels was equal in extent to three miles in length by a rod in breadth.

I examined carefully, at various times from May to August, 1882, to see if the seed had germinated, but I never found a spear anywhere, and I am forced thereby to the conclusion that the conditions, probably chemical, necessary to its growth, are wholly lacking in the soil and water of our northern wilderness. My theory is that the plants need clay or limestone, and that as these elements are wholly lacking in this region the wild rice can never succeed here. If any reader of the FOREST AND STREAM has given the subject a sufficient examination to enable him to offer any other theory, I should be glad to have him give it.

There is, strictly speaking, no soil in the wilderness of Northern New York. The whole region is underlaid with rock, largely primitive; what crops out at the surface is generally gneiss, granite and quartz. The bottom of the waters are either rock, coarse gravel or sand, mainly of the disintegrated quartz. Only in one spot (one of the tributaries of Moose River) have I known limestone. This sand possesses not a single fertilizing quality. Nothing grows out of it under water but a sort of short grass moss which, when it is in reach, is sought for in summer by the deer for food. Where the water is still, a muck or ooze, the product of vegetable decomposition, is deposited, and in this the larger water vegetation, such as water lilies, bulrushes, and coarse water grass, is found. It was in such places as these that I sowed the wild rice seed.

I have not been much in the Northwestern States, but I have understood that nearly the whole of that region is underlaid with clay or limestone rock, and that the elements of lime and potash, the latter the product of centuries of prairie fires, largely exist in all the surface soil, and that their influences prevail as well in soil under water as on the earth's surface. If this is so, it affords to me the most probable reason why the wild rice, which like all plants which make a vigorous stalk needs the nutriment of lime, thrives well in the Northwest, and does not thrive in the Northern New York wilderness. R. U. S.

NEW HARTFORD, New York.

QUINCY, Ill., Dec. 17.—The shooting has not been as good as usual here. About all we have to hunt is ducks and geese. A couple of hunters made a trip fifty miles below, to a place called Eagle Island, and were gone four days; killed eight geese and four dozen ducks, which is about the best I have known of anyone doing this season. There are quite a number of wild turkeys in the bottoms of this old river and its numerous islands, and they fly from one side to the other. They are difficult to capture, only one being killed as far as I know. Quail are very scarce.—C. D. C.

IOWA.—Anita, Dec. 14, 1882.—Quail and rabbit shooting the best we have had for years. Pinnated grouse plenty but time up Dec. 1.—C. B.

OUR CHICAGO LETTER.

[From a regular Chicago Correspondent.]

THE most noteworthy sporting event of this section last week was the return, Saturday, of the party of deer hunters mentioned in last week's letter from their trip to No-que-bay Lake, Wis. They got back all safe and sound, and brought with them twelve deer as the result, in part, of the hunt. They left here two weeks ago last Sunday night, and arrived at Peshtigo on Tuesday morning. There they found out that Hank Groves and Len Mouger had gone from the lake, where their camp was, to Green Bay to stay all winter. A despatch was at once sent to the latter place and the boys came promptly, arriving at the lake Wednesday. The hunters had to camp out at the lake after sledding it across the country from Peshtigo The got along all right, only being a little rattled at first by the cold. The outfit of these lads were given in last week's FOREST AND STREAM. The first day, or Wednesday, they killed three deer, one a handsome buck; Thursday killed five deer; Friday one, and Saturday they killed three more. Bill Haskell laid low the haughty pride of four huge fellows in one day and hung them up. He got away with six in all. They also slaughtered two porcupines, one wolverine, and a lot of partridge. They fished through holes in the ice and kept the larder well supplied with brain-food this way. The boys did not get a chance to do any hunting with the dogs, and only had still-hunting. The best joke was told on Fred Taylor. He was out on the lake on the ice and got lost. He went around in a circle for three hours. He was well "tuckered" out when the twinkling lights of the camp showed up. Near where this party was camped was a party of four from Kentucky. They were having royal sport also. It was about 22 deg. below zero most of the time. As Gamman says, "In spite of this you could go out and pick beautiful red roses—off each other's noses." The party had the twelve deer carted down to Loveday's and photographed with the hunters in a group, *en costume*. The party consisted of Perry Taylor, Charles Gammon, Fred Taylor, W. Nye and Wm. Gammon.

Of the rest of the Chicago sportsmen, Charley Rightmeyer and Fred. Peiper left Wednesday for the Upper Peninsula, Michigan, to try and "bag" a few deer. They go well fitted out, and expect to be absent about two weeks. It is doubtful if the weather is very favorable there for deer hunting now. George D. Lewis returned home last week from Lake St. Clair Flats, and reports some good fall hunting. Small game is now scarce here.

The annual meeting of the Mak-Saw-Ba Shooting Club occurred last Tuesday night at the club room of the Sherman House. Regular routine business was transacted. It has been the object of all these meetings to discuss the game law, but they absolutely refuse to divulge any of the results attained thereby. The regular annual election of officers of the club for 1883 occurred also at the meeting, and the following will serve: President, George G. Newberry; Vice-President, Charles Kern; Treasurer, W. E. Chamberlin; Secretary, C. D. Newberry; Executive Committee, Joseph A. Kinny, T. T. Cooper and C. C. Lamas.

A distressing accident occurred last week at the Kaukakee, and caused regret in all hunting circles. It was the unfortunate drowning of Berry Holmes, one of our best young shots and a hunter well versed in woodcraft. He was out after game, and attempted to push a dugout through the floating ice of the river near Morris. The current was too swift, and poor Berry went under with an upturned boat. He was overweighted by game bag, shot, etc., and sank at once. His body was not recovered for several days, and was then found about three miles below the point where the accident occurred.

CHICAGO, Dec. 18.

Dec. 24.—During the past two weeks the weather has encouraged the east and west bound mail trains to cut up divers antics, such as being delayed beyond all reasonable time, and mails have accumulated here until every one has been disgusted. This accounts for late arrival of correspondence there, and of FOREST AND STREAM here. Spotting matters were dull the past week, as the boys are all "laying low" for a chance at the turkeys, pigeons and balls Monday. There are many matches and club shoots arranged for that date.

A good many of our boys are interested in reports now being received of fine shooting in Tennessee, and last Wednesday a party, consisting of James Murphy, Ted Holloway, C. E. Gifford, Clarence Thursdan and J. K. Meyers, left for Newhall, Tenn., on a long duck, wild geese and brant hunting trip. Of course any other game that comes conveniently up in front of their shotgun muzzles would prove acceptable—provided they hit it. Lyons, Kimball, Stack, Stice and other noted Illinois shots have been at Wyoming, Ill., holding a grand pigeon tournament. Some of the Chicago boys went down, and Jerry Hamlin has just got back from the Indian Territory, where he had a splendid time shooting wild turkeys and such like game. It was reported here late Friday that there was renewed trouble at the Tolleston Gun Club house, Tolleston, Ind., but the matter could not be investigated in time for this week's FOREST AND STREAM.

PHILADELPHIA NOTES.

THERE has been considerable running ice in the Delaware River during the present week, and duck shooting from skiffs, painted white and made to represent drifting ice, has been indulged in by the few here that are fond of such sport. Below Chester Island, between Pennsville and Marcus Hook, mostly on the New Jersey shore side, mallards, black ducks and other marsh fowl are present in numbers that have repaid all who have paddled for them on the ice. I hear that below Sim Lord's, at Port Penn, fowl of all sorts are numerous. Our ice paddlers cannot go out when the wind is easterly on account of the roughness of the water, and the packing of the drift on the Jersey shore, where the best feeding grounds are located. An easterly wind of any kind opens the floating ice, and causes leads to form through which a skiff can be paddled upon the ducks which seek the open places as soon as the drift is so distributed and separated.

The snow geese are still below Bombay Hook. None have been killed. There is great trouble, I was told to-day by one of our river men, in getting quarters at night in that neighborhood, and as our duck shooters who are fond of "ice shooting" go from Philadelphia down the river in their small skiffs, it is a matter of importance to them that they should have good comfortable housing at night after an exposing day's work. At a season when ice is drifting in the Delaware it would not be advisable to sail a cabin yacht down. This is one of the reasons why the snow geese below Bombay Hook have been so little sought this year.

During the past autumn the meadows about Philadelphia were visited by a larger flight of snipe than for many years. In October many birds were killed by the Schrieber brothers, animal photographers, who have a farm on the river shore a few miles below the city. Like the woodcock this year, these snipe came all at once and afforded fine sport to those who lived near the grounds and knew of their coming. The departure of the birds was as sudden and simultaneous as their arrival. Here is another illustration of the similarity in the movements of all species of migratory birds before winter sets in. HOMO.

PHILADELPHIA, Dec. 24.

PROTECTION FOR QUAIL.

NOT long ago I saw in your valuable paper for Nov. 30, a plan for the protection of quail. I hope many of the shelters there recommeeded may be made. The Robbin's Island Club have had sixteen sheds made and placed around the island near good natural cover; and they are a complete success so far as to the birds finding them and feeding under them. The sheds are thirteen feet long and eight feet wide, with a division board across the middle. The back is one foot high, front two feet high, roof lapped one inch, covered with brush; also wings at each end made of brush acting as a snow fence. After the birds found the wheat screenings placed under the sheds and fed regularly under them, brush was placed over the front so thickly that a hawk cannot fly under one, but would be compelled to walk in the same as a quail, thereby giving the quail ample time to escape into cover, which adjoins each shed. A hawk must pounce or dart on to his game. They are very careful where they go, fearing a trap; and I do not think they will trouble the sheds in the least. The sheds all face the south, and after a snow storm the snow will be shoveled away from the front of the sheds. The birds can then alight among the brush in front, taking but one flight over the snow, roost under sheds or fly back to their cover. I should like to hear from some of your readers if black snakes will destroy young quail or eat their eggs. [They do.—ED.] B. B. H.

ROBBIN'S ISLAND, Dec. 15, 1882.

UP IN THE ROCKIES.

ON the fifth of September we returned to the deserted camp via Wagonwheel Gap. Having made camp, we all started out in different directions for an evening hunt, returning at dusk with no game. The next morning, before the sun was up, all went out again for an early morning hunt, returning at ten o'clock and reporting little game seen.

After breakfast it was determined to move camp to the Cochetope Range, a distance of about ten miles northeast. After packing the five little faithful burros with tent, blankets, provisions, camp kettles, etc., and tying to our saddles such articles as could be so carried, we set out through a trackless wilderness at 12 M. The top of Cochetope loomed up in plain view from the deserted camp, and looked to be not more than two and a half to three miles distant, but in these high altitudes all experienced persons are aware how deceptive the distances are.

We made our tedious way through wide parks densely covered with chapparal, alternating with spruce timber, up steep mountains, down through deep, sharp gorges almost canons in places. At the bottom of many of these small streams of water ran through a serpentine ditch, which could only be crossed (as it became necessary to do every hundred yards) by jumping them. In very many places they were from three to four feet deep and as many feet wide, and their banks were completely covered with high grass and short brush, rendering it both difficult and dangerous to stock and men. But up or down such gorges it was necessary to travel most of the distance, as the mountain on each side was so precipitous that it was simply impossible to ride or lead up or down; and when, finally, we found a gap out of one gorge, it soon led us into a similar one. So we went on for miles, these terrible barriers confronting us on all sides and in front. At length we arrived at our destination, all safe and sound, camping on the edge of an open park, which was some miles in length, extending along the foot of the great mountain to the north of our camp. On the trip hither we had seen numerous game, deer and mountain grouse, but had no time to pursue it, killing only one deer, which, jumping up in front of McDonald, who was always ahead, and who, quickly bringing his rifle to bear, fired, killing a very fine doe, which he somehow managed to tie to his saddle and carry to camp.

Our camp being struck and the stock turned upon the park to graze, we retired for the night to dream of the prospects of the morrow.

The morning came, bright, clear and a keen white frost, which was bracing to the nerves and most favorable to our prospects of success. Cochetope's broad, naked brow, towering 2,000 feet above timber line, fronted us to the north, and Bellows Mountain, like a great turreted monitor, stretching out for miles behind us with its round dome at the center, formed a wild and romantic panorama. All hands, of course, were soon scattered in different directions in pursuit of the black-tail deer, whose tracks were as thick as sheep tracks in a pasture. I took a straight course up the side of the immense sloping mountain, saw plenty of deer, but too far away to kill.

While musing I heard the report of a rifle, and directly another, and soon away in another direction another, until I had counted seven shots. So, after floundering around among the rocks and fallen timber, for there had been a storm seemingly of years past which had swept the mountain side of one-half its tall spruce and laid it across and piled in a manner rendering it almost impassable, I returned to camp. Soon the hunters all returned, reporting the killing of two deer.

The next morning, Sept. 8, opened clear and frosty, weather fine and prospects flattering, so all hands were soon on the tramp. The sun had scarcely risen before the keen, clear, ringing sound of a rifle told that an antlered monarch had fallen a victim to its deadly aim, for it had been resolved that morning to shoot no does. Very soon was heard the crack of another rifle, and then another, all of which had been deadly, and three monster bucks had fallen, each of the Steels and McDonald having killed his buck, while I failed to find anything but does. The balance

of the day was consumed in bringing in the game and suspending it in the open air.

Sept. 9.—A similar morning to the two preceding. This being the last day of the week, and I having as yet been unsuccessful, I was resolved to make extra exertions, which were crowned with success, as, along with others, my deer was a fine, very fat barren doe; and as it was a barren doe, I was excused from the penalty of being suspended from the next day's hunt and my gun given to the camp keeper to hunt with for one day, while I should keep camp. In addition to the fat doe, two others, one a large buck, and the other a yearling with spike horns, were brought to camp.

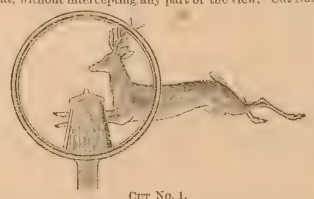
Monday, the eleventh, and my last day on the hunt, I having become tired of the mountains, and resolved to return to Del Norte, via Wagonwheel Gap after the day's hunt was over. Finding it too late to get through, however, I waited till the twelfth. Three of the parties were in luck, killing each one deer or one find buck, and two yearlings, making, all told, twelve deer on the hunt, as previously related in this narrative. These twelve, added to the eight killed in the previous hunt, fully even twenty in the two hunts, and one bear. The balance of the company have remained in the mountains up to the present writing, or at Wagonwheel Gap, and I learn from parties who came in a few days ago that they are having fine fishing in the upper Rio Grande. R. T.

DEER IN PIKE COUNTY.

THE never-failing instinct of the deer warns it of the approach of snow storms, and it forsakes its feeding-places on the high ridges and seeks the shelter of the dense laurel and tamarack swamps. After the storm is over, unless the snow has fallen to too great a depth, the deer appears on the ridges again, and roams at large until forced by succeeding storms to find protection again in the swamps. The storm of this week has left nearly two feet of snow in the woods, and has undoubtedly closed the deer-hunting season for this year, as no deer can leave the swamps, and it is practically impossible to hunt them in the treacherous fastnesses which protect them, although plenty of hunters stand ready to take every advantage of the game and dog it to death by fair means or foul. The deer have not been driven to the swamp so early in the season for twenty-five years, and the sudden closing in of winter with so heavy a storm has awakened many apprehensions in the minds of sportsmen as to the fate of their favorite game. The fall of 1882 has been one of unusual drouth in this region. The streams are unprecedentedly low and the swamps are nearly dry. Winters of deep snow are always more or less destructive to deer, but when they are attended also by lack of water the fatality is greatly increased. Legitimate sportsmen also dread the possible formation of "crust" on the snow, which when of sufficient thickness gives pot-hunters their most efficient opportunity to ply their trade. Then they can put their dogs in the swamps, the crust enabling them to make their way to all parts of it. Stationed at the points on the edge of the swamps where the deer find entrance and egress, and which are as well known to the hunters as they are to the deer, these despoilers of the woods make easy prey of the game as it is driven from the swamps by the dogs. Large numbers of deer are slaughtered in this way. In dry winters deer are frequently forced to leave their haunts among the laurels and tamaracks to seek water at the creeks or on the edges of the many lakes that abound in these mountain regions. Pot-hunters are always on the alert and the fate of a deer whose needs have thus made it venturesome is sealed when one of these men is on its trail. His dog, borne up by the crust, soon overtakes the deer, whose weight enables it only to make its way slowly and carefully over the frozen snow. It has not even the chance its speed might give it to escape, and it is powerless to defend itself. Held at bay by the dogs, the deer is soon put to death when the merciless hunter comes up, which he knows he may do at his leisure. To vary the monotony of the chase he not infrequently beats the deer to death by blows on its head with a heavy cudgel. These wretches, like death, have all seasons for their own, and the game laws carry no fear to them. It is an open secret in the Shohola region that one winter one family of these pot-hunters killed twenty-seven deer on the crust after the legal hunting season had closed. Yet there is not a county in the State which is so well provided with protective game laws, for, besides the very strict State law, Pike county has a special law whose provisions against unseasonable and unsportsmanlike hunting and fishing are still more stringent.

Taking into consideration all that game in Pike county has to contend against, it is simply wonderful how it maintains an existence in the region at so large and even an average—especially large game. Old hunters say that they are not able to see any great decrease in the number of deer in the county for twenty-five years. They may be scarcer one year in a certain locality than they were the previous year, but they will be found more plenty in some other locality than they were the year before. Such has been the case this season. Hunters in the Blooming Grove woods and about the headwaters of the Shohola Creek have not found their usual fine spoil, while on the lower Shohola and through the Paupack country deer have been plentier than for several years. Yet those two famous Blooming Grove sportsmen, Capt. Lape Westbrook and his brother, John C., were out but three days last week in the woods near here and brought in four large deer. Two of the biggest bucks ever brought down in the county were killed six miles from here one day last week. The latter part of November and the first part of December are considered the best of the season in the Blooming Grove region, so the coming of the heavy snow has put an end to the sport here before it had fairly begun. Probably not more than twenty deer have been killed between here and the Monroe county line since the season opened, so the local hunters look upon this fall as having been a failure as a promoter of sport hereabout, and they are taking the opportunity to compare the season with past seasons when deer was so plenty that it was no trick at all for a man to go out and start one within a fifteen minutes' tramp of the Blooming Grove tavern.

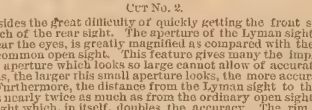
The sudden coming of the heavy snow has also killed the hopes of the bear hunters and trappers, who, from all indications, anticipated a month's great sport with the favorite game before the rigors of winter forced it to its cold weather sleep of three or four months. Very few bears will be found venturing away from their homes now, and the bear hunters are sore with disappointment. Half a dozen members of the bruin family have been captured on the mountains in this vicinity this fall, all in fine condition both as to meat and fur—a most auspicious opening of the season. It is said that "signs" of the presence of this animal in the Pike county woods were never so plenty as they were this year. If such really is the case, the unexpected closing of the season by the elements will have the effect of enhancing the sport of bear hunting when they come out in the spring. The sport at that season, however, is not of the kind that should attract legitimate sportsmen, for then the animals are not in condition either in fur or meat, and the cares of families of cubs devolve on the females. But it seems to be an unwritten law with hunters that it is proper to kill a bear at any and all seasons, and at any age, and the shaggy brutes find no mercy at the hands of hunters in this locality.—*Blooming Grove, Pa., correspondent New York Times.*



MICHIGAN SPORTSMEN'S ASSOCIATION.—The eighth annual meeting of the Michigan Sportsmen's Association will be more important than the interesting ones held heretofore. Numerous papers will be read on various subjects, and our esteemed president writes me that "the occasion will be made interesting by the presentation of several papers by lady sportsmen." The report of our Missionary-Warden Higby will be worth the "price of admission" alone, and measures should be taken to continue him in office. Some changes will probably be required in the existing laws, and as the Legislature will convene with this new year, it will be necessary that our association be ably represented by committee in Lansing. I understand there are already several bills drafted to amend the game laws by persons not acting with us, which, if passed by the Legislature, might be antagonistic to the general good of the people of our State. It is our duty to guard these matters closely. I would say right here that the members of this association could do a great deal of good by personally seeing the members of the Legislature from their own districts, and fully explaining the objects of our labors and post them up on all points.—WM. B. MERSHON, Secretary.

WEIGHT OF GAME BIRDS.—Boston, Dec. 21. I recently shot in Rhode Island twenty-two quail, which weighed exactly 9 lbs.; 6½ ounces each. Is not this a large average? What is the average weight of our game birds in their best season?—S. S. [It is difficult to give a categorical answer to your question. Your quail were slightly above the average, we think. Ruffed grouse will weigh from 18 to 30 oz.; quail about 6; woodcock about 5½; English snipe usually not more than 4. We have killed birds much heavier than these weights, but think they are about the average.]

East Milton, Mass., Nov. 28, 1882.—George Elcock, of West Quincy, shot a cock ruffed grouse here last week which weighed 3 lbs. Is not this an unusual heavy bird? There is on exhibition at Wm. Schaeffer's gun store, Boston, an albino quail, being one of two that was secured in a flock near Marshfield, Mass., the bird is pure white with black eyes.—J. G. SMITH. [We should like to see the papers for that grouse.]



ILLINOIS.—Charleston, Dec. 12.—Capt. A. N. Bain, guide J. W. Shaffer, cook R. Young, pilot Thos. Threlkeld, forager Thomas Knock, William Chilton and James Skidmore, returned home from Arkansas, where they have been hunting for two weeks. Their game bag contained two deer, several turkeys, several dozen mallard ducks and other small game. They reported deer, turkey and bear tolerable plenty, ducks and squirrels by the hundreds, ruffed grouse and quail in fair numbers, and other game too numerous to mention.—FOX SQUIRREL.

THE LYMAN SIGHT.—When aiming, this sight has the appearance of a ring or hoop, which shows the front sight and the object aimed at, without intercepting any part of the view. Cut No. 1 gives

CUT NO. 1.

an approximate idea of how the sight appears when aiming. The top of rifle barrel and front sight are seen as distinctly as if no rear sight was used. Cut No. 2 shows how the common open sight appears when aiming. The most important part of the view is shut

CUT NO. 2.

out, besides the great difficulty of quickly getting the front sight in the notch of the rear sight. The aperture of the Lyman sight, being very near the eyes, is greatly magnified as compared with the notch in the common open sight. This feature gives many the impression that an aperture which looks so large cannot allow of accurate aim; whereas, the larger this small aperture looks, the more accurate the aim. Furthermore, the distance from the Lyman sight to the front sight is nearly twice as much as from the ordinary open sight to the front sight which, in itself, doubles the accuracy. The rim of the sight can be instantly changed to give it a large aperture with a narrow rim, or a small aperture with a wider rim. For all quick shooting the large aperture should be used. President N. Y. Rifle Club writes, Oct. 3, 1882: "With this experience I am now prepared to say that for quick, deadly work with the sporting rifle, it exceeds anything I have ever used or seen, and am fully convinced that at such distances as 100 to 200yds I can do equally good, if not better, work with it than with the peep and globe sights of the larger rifle, and with the great advantage of still using an open sight. When it comes to the question of rapid firing at a moving object, with the Winchester magazine gun, the facility with which it can be used, and the quickness with which the eye catches it, are a perfect revelation to anyone who has been accustomed to use ordinary sights. If anyone doubts the assertion, I am willing to testify, in the general interests of rifle practice, that last month I saw you make thirty-seven out of a possible forty at 100yds. on a Creedmoor target, with a half-magazine Winchester rifle mounted with one of these sights, in the almost incredible short time of fifteen seconds. This shooting was done with the large aperture of rear sight in connection with the open part of the Beach sight, and this, too, when it was already too dark to shoot with ordinary sights with any degree of accuracy. Furthermore, that nothing would induce me to be without one of these sights on my sporting rifle for another campaign in the woods. J. W. WRIGHT, M. D., Pres. New York Rifle Club."—*Adv.*

Any person sending their address to R. H. Pooler, Serena, La Salle Co., Ill., will receive in return free a fine colored lithograph representing pinnated grouse shooting on the prairies, also a catalogue of cartridge holders, belts, vests, &c.—*Adv.*

Sea and River Fishing.

"Fishing is a kinde of hunting by water, bee it with nets, wheels, baits, angling or otherwise, and yeelds all out as much pleasure to some men as dogs or hawkes: *when they draw their fish upon the banke*, saith *Nic. Hemelius Silesiographiæ, cap* 3, speaking of that extraordinary delight his countreymen took in fishing, and in making of pools. *Janus Dubravius*, that *Moravian* in his book *de pisc*, telleth how travelling by the highway side in *Silesia*, he found a nobleman, *booted up to the graines*, wading himself, pulling the nets, and labouring as much as any fisherman of them all; and when some belike objected to him the basenesse of his office, he excused himself, *that if other men might hunt hares, why should not hee hunt carpes?* Many gentlemen in like sort with us, will wade up to the arme holes, on such occasions, and voluntarily undertake that to satisfie their pleasure, which a poore man for a good stipend would scarce be hired to undergoe.

"*Plutarch*, in his book *de soler. Animal*, speakes against all fishing, *as a filthie base, illiberall imployment, having neither wit nor perspicacitie in it, nor worth the labour.* But he that shall consider the variety of Baits, for all seasons, and pretty devices which our angler's have invented, peculiar lines, false flies, several sleights, *etc.*, will say, that it deserves like commendation, requires as much study, and perspicacitie, as the rest, and is to be preferred before many of them. Because hawking and hunting are very laborous, much riding and many dangers accompany them; but this is still and quiet; and if so bee the Angler catch no Fish, yet he hath a wholesome walke to the Brooke-side, pleasant shade, by the sweet silver streames; he hath good aire, and sweet smels of fine fresh meadow flowers, hee heares the melodious harmony of Birds, he sees the Swannes, herons, ducks, water-hens, cootes, *etc.*, and many other fowle, with their brood, which hee thinketh better than the noise of hounds, or blast of hornes and all the sport that they can make."—*Anatomy (The) of Melancholy. By Democritus Junior;* 1621. (PART II., sect. ii.).

In a former passage (part i., sect. 3) his inferences are less complimentary to the sport: "For example, if melancholy proceed from fleagme (which is seldome and not so frequent as the rest) it stirres up dull symptomes, and a kinde of stupiditie, or impassionate hurt. They are sleepy, saith *Savonarola*, dull, slow, cold, blackish, asselike, *Asininum Melancholiam, Melanethon* calls it; *they are much given to weeping, and delight in waters, ponds, pooles, rivers, fishing, fowling, etc.*"

WINTER TALKS ON SUMMER PASTIMES.

VII.—ABOUT SALMON FISHING.

All things by experience
Are most improved; then sedulously think
To 'meliorate thy stock; no way or rule
Be unassay'd. —*John Phillips.*

I AM often questioned in regard to the mode of procuring permits to fish in salmon rivers. This question was easily answered until a recent decision was rendered by the Dominion Courts, affirming the riparian rights of the owners of lands along the rivers. Up to that time the control of all salmon waters, as well above as below the flow of the tide, was in the Dominion government; and the right to fish with either seine or rod could only be obtained from the fishery officials. But now it is different. Permits or leases can only be obtained from the owners of the lands, whether such ownership is in individuals or in the government. Immediately this decision was rendered, gentlemen who were promptly posted either took up the uncentered government lands commanding desirable pools, or secured leases from the owners whose riparian rights had been recognized and affirmed by the courts. So that now it is quite impossible to say how or from whom either permits or leases can be procured, unless one knows who owns the lands bordering on the rivers. For instance, the entire river I fished for years had been leased from the government by parties from whom I purchased a permit. Now the same river is in the hands of several parties, either by the purchase of the lands or by leases secured from the individual riparian owners. In regard to that river, therefore, and all rivers similarly cut up, the only way to secure the right to fish in them is to ascertain their present owners or lessees, and obtain from them the permission desired. The lands on the river I have fished more recently, are owned or controlled by individuals who had, until this recent decision, secured their fishing rights from the government. The decision, therefore, does not affect them; so that my old arrangement holds good, and will hold good until the present owners transfer their riparian rights to other parties

I presume there are several rivers still entirely under the control of the government. If so, if they are not already leased for a term of years not yet completed, they will be advertised for rent to the highest bidder. The facts can only be ascertained by corresponding with the Commissioner of Fisheries at Ottawa.

It is generally believed that this decision will lead to the early depletion of the now prolific rivers affected by it. The individual owners, even where they lease their pools, will not be as likely to refrain from fishing them with either rod, spear or net as when they were restrained by non-ownership or through fear of the penalties of the old comprehensive and rigorously enforced laws. The government will, of course, withdraw its guardianship from rivers from which it derives no revenue. To be sure, the individual owners or lessees can appoint guardians, but it is very questionable whether such appointees will be as careful or as efficient as those who held an official commission. The loyal residents on and in the vicinity of the rivers have a profound respect for the authority of the Queen, even when that authority is represented by one of their own neighbors, but they have no more respect for individual rights, when those rights are simply guarded by those having no official authority, than our own free and independent citizens.

But I may be mistaken in regard to the effect of this change in the fishery laws of the Dominion. I certainly hope so; for it would be a great misfortune, not to the Provinces alone, nor yet simply to those who take delight in the princely sport of angling, but to all consumers of this kingly fish. For some reason yet unexplained, the salmon catch has largely diminished within the past few years. It would be a public calamity if this new policy should result in the indiscriminate slaughter of the whole salmon family while on their journey to and from their spawning beds at the sources of the rivers to which they resort to breed and multiply. I most sincerely hope that those who believe no harm will result from this change of policy are right. But I think otherwise, and believe my fears will be confirmed by a few years' experience.

This decision, it is proper to say, only affects the waters

of Quebec and New Brunswick. Nova Scotia rivers, as I understand it, still remain open to all comers.

"Well," said one of my inquisitive friends, who has made up his mind to kill a salmon at any cost, "assume that, by hook or by crook, I have obtained a permit, what shall I do with it; or, rather, what must I do to render it available?"

"That is a question more easily answered than how to obtain a permit. The first thing needful is an appropriate equipment, such as rod, reel, flies and leaders. In regard to a rod, the essential things are strength and elasticity. Either can easily be obtained separately, but wood in which both are perfectly combined is hard to get hold of. But without both neither is of any use, either in casting or in killing. A rod that is unresponsive is not only a very unpleasant thing to handle, but will fail to do the work required even in the hands of an expert. No one can cast a fly with a hoop pole, but one might almost as well have a hoop pole as some rods that are palmed off as appropriate for salmon casting. Unless the spring is equally distributed from tip to butt, and can be distinctly felt at the latter as well as clearly seen at the former, it is not a rod for the work for which it is intended. But with such a rod casting is an absolute pleasure, whether the responses are few or many. One may manage very well with an inferior line, if it only has strength, with second or third rate strong leaders, and with flies which would not pass muster in the eye of an artist, but he had better stay at home than to go to salmon waters with anything less than a number one rod, whether of wood or bamboo. My own favorite rod is of wood, but it is fair to say that it is the only one of half a dozen that can be branded as perfect. But this one is perfect. It has the very spirit of elasticity in every fiber, and responds to every movement as if instinct with life. Such a rod is better than rubies, and is worth more than its weight in gold. I would rather break every other rod I own than raise so much as a splinter upon the surface of this grand old hero of a hundred battles. Nevertheless, I have made slightly longer casts with a bamboo, but I never give a large fish its butt without a tremor. Its advantage is lightness of weight—no mean advantage, be it understood, when one's muscle is of delicate fiber.

"In fishing for salmon, I like a line of good weight—not alone for strength, but for casting. A heavy eighteen-foot rod needs something at the end of it you can feel. The most accomplished expert would make poor work with a light trout line on a double-handed salmon rod.' An oiled line of medium strand, a hundred or a hundred and twenty-five yards in length, is what one needs. With such a rod and line and with such leaders and flies—both in sufficient numbers—as can be procured of any honest dealer, and a reel made for use and not for ornament, one may feel sure that good sport will not be marred by bad tackling."

"Thank you, so far; but after I have secured my tackling, what am I to do with it?"

"My only reply to such a question is—use it."

"That's all very well; but how? Have you no specific advice to give a willing pupil on that head?"

"No; because while you may be taught by a cook-book how to dress a salad or stew a rabbit, I never knew an angler made by a written recipe. It is no more true that 'the proof of the pudding is in the eating' than that the only way to learn how to angle is to angle. One may be talked to until his head swims about fly-casting and salmon fishing and still make his first cast as awkwardly as if he had never seen a fly or stretched a leader. But those who have had any experience in casting for trout will have no difficulty in casting for salmon. The movements in both are practically the same. The only vital difference is in the weight of the rods, and this difference is practically neutralized by the fact that both hands instead of one are employed in the manipulation of the rod used in casting for salmon. During all my thirty years of exclusively trout or bass fishing I had never used a double-handed rod. When I first launched my canoe on a salmon river I had to float through a mile of water swarming with trout before I reached a pool where I could have an opportunity to cast for salmon. In making this distance I kept my eight-ounce trout rod in active motion, with such results as gave me a surfeit. When this stretch of water was passed, and my Indian gaffer said, 'Trout no more, salmon pool, trout rod no good,' I promptly, but very tremulously, took hold of my salmon rod, which looked ponderous as a weaver's beam and felt as heavy as a hemlock sapling, and prepared to reach out for the point indicated by my Indian mentor. Holding my rod in my left hand, with the butt pressed against my body, I pulled the line from the reel with my right hand, keeping it out by the required quick backward and forward movement until the desired length was obtained, when I seized the rod with both hands and found myself casting as easily and as steadily as if I had been 'to the manner born.' Although kind friends had given me a score of lessons, the memory of them had all vanished when the crucial moment came, but by simply doing, with a slight variation, what I had always done when casting for trout, I did just the right thing, in the right way, at the right moment. And when the rise came and I struck my fish, I did precisely what I would have done with a large trout or bass in similar waters. I held him taut when I could, gave him line when the pressure demanded it, reeled in when I could do so with safety, humored him when he sulked, brought him to within reach of the gaff as soon as possible, and landed him with a shout, probably the happiest man in all the Provinces. I have killed hundreds of salmon since, but I do not think I have ever cast better, manipulated my fish more discreetly, or received more deserved compliments from my critical gaffers, or heartier congratulations from my angling companions. No, a reasonably skillful trout fisher need have no fears about striking out boldly for salmon. It is only necessary for him to make careful use of what he already knows, and to take care that he does not 'loose his head' under the excitement of such sport as, in his wildest imaginings, he had never dreamed of."

"But," said a novice friend who is ambitious to graduate from a hand trawl to a fly rod, "what hope can I have to successfully tackle a salmon? Surely there are some rules a knowledge of which would assist such unfortunates as myself?"

"The only rule I can lay down for you and those like you who have the good sense to aspire to the dignity of salmon anglers is this: Begin as soon as you can and learn from experience. There is no other competent teacher. If you had an ambition to copy a Raphael, you might read every treatise that has ever been written on tone and tint, light and shade, the different varieties of color and the most effective mode of applying them, without being any the better qualified to make the copy than if you had never seen a Raphael. So it is with angling for salmon. No amount of reading or of mere verbal instruction, however clearly or graphically imparted, can give to you the rhythmic movement, the delicate twist, the careful manipulation, and the nice discrimination required to make a wise use of the constantly varying conditions in which an angler finds himself when casting for salmon. Topsy wasn't brought up—she 'growed;' and that is the only way to become an expert on salmon waters.

"I never knew two anglers who cast exactly alike, while I have seen scores who were the peers of each other. Each has his peculiar attitude, motion and swing; his straight, lateral or sweeping cast, but each reaches his goal with equal precision, if not with equal grace. Each manipulates his fly on the water, awaits a rise, and strikes and fights his fish after his own fashion, but certain general principles are adhered to by all, and all have the same measure of felicity from the beginning to the end of the fray. But whatever their manner of casting and striking and killing, the testimony of each will be, that whatever of skill they have was acquired, not from instructions in the theory of the art, but in the knowledge that came to them from actual experience; from all of which I do not wish to be understood as condemning the honest efforts of honest anglers to transform a novice into an expert by written or verbal instructions—I have done a little of both myself—but simply to impress the earnest aspirant with the fact that the only way to learn to cast is to cast, and the only way to appreciate the pleasure available to salmon anglers is to experience it. As no man ever yet became acquainted with the luscious flavor of the creamy flakes of a well-cooked salmon by having some one glowingly describe how deliciously the delectable morsels rested upon his own gratified palate, so no man ever yet learned how to cast for salmon, or attained unto a full appreciation of the supreme delight wrapped up in the exercise and in the results which come from it, by being told how to do the one, or by having described to him the ecstacy of the other." G. D.

"MILL BROOK."

OH yes, "Monatiquot," your first trout was caught there, so was the subscriber's first and last. Well, the shady side of life is close at hand, the period when one learns to the full that every chapter of his own personal experience abounds in "buts" and "ifs," no matter how smoothly it begins. There are gray hairs here and there; a bald spot the size of a Bland dollar is visible on that part of the cranium which is most exposed to the gaze of the youthful scoffer. There is a tendency to cynicism—to assert solemnly that the pains of life are to its pleasures as ten to one—to quote with grave emotion:

> "The world's an inn—and there, unknown,
> I, solitary, sit me down;
> Many I hear, and some I see,
> I naught to them—they naught to me."

Yet, in approaching the sere and yellow of bilious middle age, memory has a few pleasant stereoscopic slides, and no matter whether they are shown up by some other fellow or you take the glass in your own hand, one sometimes enjoys a look backward at certain phases of his youthful existence.

Thus I see Mill Brook, and myself, an ungainly youth with a passionate fondness for wildwood sports, pursued with a three-dollar shotgun or a bamboo fishing pole. It is about sunrise of a June morning; Mill Brook lies black and motionless under the rustic bridge crossing the country road. On its smooth surface are peace-suggesting lily pads, beneath which lay the mighty three-pounders, those which we dream of catching the night before; those which we mention on returning home as having been hooked and afterward lost.

There is a wonderful stillness as the sun shows its face over the tree tops. As trembling fingers adjust the writhing worm on a hook large enough for a ten pound catfish, the ear mechanically notes the chatter of a red squirrel in the spruce and hemlock which line the road. The distant cawing of crows who are discussing the matter of looking after some sprouting corn in a field close by is heard, and perchance the far-off voice of the farmer warning some early intruder to "git outer that tall grass!"

The musquitoes are specially vindictive, and the fisherman, with ill-suppressed fury, bangs his exposed face and neck with one hand, while with the other he unlimbers the bamboo pole, and allows the sinker (a split half ounce bullet) to cleave the waters with a "chug," and bear the writhing bait toward the bottom.

Not for the days of my youth were the slender fly rod or the alluring fly. Even had such been the case, the peculiarities of an alder-bound brook, with closely overhanging branches of oak, maple, spruce and hemlock, were not conducive to such displays of art. The subscriber tried it once—only once. And when he finally recovered about six feet of line from certain exultant limbs twenty feet above his head, at the expense of perspiration, abraded cuticle, and rent garments, he remarked in the strongest language affected by a profaneless boyhood, that the gaul darned old flies was gone and he was glad of it—darn 'em! This is a reminiscene of fish fished for—not the catch thereof. Every man possessing the usual or average vivid imagination, can supply the hiatus in relation to the catch, by thinking of the big string *he* would have caught under similar circumstances. Or at least those which he would say (or write) he had caught.

And now, having scrambled through clinging blackberry and raspberry vines, the subscriber is threading the mazes of a vistaed wood. That is, he presumes that vistaed wood is correct—if so, the copyright is reserved by him. Otherwise, let it pass without comment. Below the well worn cattle path on his left runs the stream with a pleasant—though strictly on cold water principles—"glugity-glug."

In the distance is a murmur of waters as of a dam roaring, which it is in truth. Yellow-hammers flash through the tree tops, squirrels chatter shrilly, and an occasional partridge whirring away from under his feet with startling suddenness, causes him to mutter vindictively that it's always so when he's left his gun (the deadly three-dollar weapon) at home.

Louder comes the voice of the waterfall, and now he emerges on the rocks near its base. There are eddying circles of massed up foam skurrying over the deep, dark pool, and anon the stream gushes down over polished boulders between ledgy banks.

Again he essays his luck, and again the writer draws the veil. Though he will remark in passing that he has pulled stroke in a whaleboat, which was doing something like eighteen knots in tow of an eighty-barrel bull, and not felt the excited pleasurement consequent upon the tug of a two-pound trout. The fact was, he was rather too wet and frightened and hungry, and worried about getting back to the vessel some twenty miles astern, shortening sail in a tropic thunder squall, to feel any such emotion as pleasurable excitement under the former circumstances.

Yet under the latter, said excitement gives place to an emotion of fierce and tempestuous wrath, for which poor, feeble speech has no vent, no expression.

What knew he of playing a trout, except as connected with the play of knife and fork over the crisp flakes of the savory fish on the following morning. And if the bamboo end is brittle and the line made fast to the said end, and the trout plungeth violently with animated protest against being "yanked" forth by main strength and stupidity—what then?

Never mind. These were the halcyon days of youth after all. No pleasurable emotion of after years approaches such scenes. And were it not for the weariness and vexation of spirit which would be the fate of the reader—even of him of the Indian nom-de-plume "Monatiquot"—I would fain follow Mill Brook to its source.

But enough. Editor and writer alike have other duties than to follow these, my meanderings, further. The one must yawn over innumerable MSS. to be read, the other over yet unfinished pages of MSS, to be written "for the instruction and education of youth," and Mill Brook be left to its own meanderings. Farewell, "Monatiquot," thanks for stirring up for a moment this side of memories.

THE SUBSCRIBER.

PHILADELPHIA, PA.

THE "HERRINGS" OF CENTRAL LAKE.

Editor Forest and Stream:

I have read in your paper of November 23 the reply of "Kingfisher" to my communication of October 27, anent the "herrings" of Central Lakes, and their annual migration. It occasioned me some surprise, as I was conscious of no misquotation. In so far as I have sinned, I ask his pardon.

While sitting in a hotel in a distant town, I read "Kingfisher's" article of August 3, laid down the paper, and have never seen it since.

This may perhaps excuse my fault, as my article was hastily written, some weeks after the occurrence of which I speak.

While I have not sought to obtain for myself public recognition as a "scientific man," I may claim this much in common with most of those justly entitled to such distinction, that I never see or hear a palpable misstatement of a fact in natural history, without at least feeling the desire to let the wind out of it, and I seldom attempt to explain occurrences for which I myself cannot satisfactorily account, but prefer, instead, to make known such facts as have come under my own observation, in the hope that by comparison with the notes of other observers, the cause of exact science, which is simply "an organized inquiry into facts," may be the better served.

I may perhaps claim as wide an experience with the rural population of America, and possibly as extensive a knowledge of its characteristics as "Kingfisher" himself.

There are few States or Territories from Maine to Texas in which I have not found myself at one time or another in pretty close association with "the people."

I have traveled, camped, hunted, trapped, fished, voyaged and starved with the best of them, and the respect of Mr. Hickory for their many admirable qualities is not greater than my own. Nevertheless, it may be said that he who accepts blindly the loose, unsupported statements of any man, be he city or countryman, is liable to err, and if I do not now possess the degree of credulity which "Kingfisher" would seem to inculcate, it is that certain, bitter lessons of my life have taught me otherwise.

I remember years ago the authoritative statement of an old sportsman that the largest flights of woodcock were always on the night of October 10, but my heaviest bags were never made on the 11th. I think, but I am not certain, that it is Herman Melville who states on the authority of the natives of Typee, that there is a certain fish which is only seen on a particular day of the year, and which then appears is taken in great numbers, and vanishes for another twelvemonth. I do not learn that this statement has ever been verified or confirmed. Such tales are common, but it is needless to repeat them here. I think that those most competent to give opinions on such subjects will agree with me that the periodical movements of birds and fishes, like the blossoming of the flowers, cannot be depended on to occur with any given species upon a certain day.

The habits of the fishes of the Intermediate lakes and rivers furnish material for a most interesting study, and it has long been my hope that I might one day find more leisure for its pursuit. In many waters with which I am familiar, the common "bullhead" (*Pimelodus atrarius*, De Kay) is of all fishes the one on which the rustic angler chiefly depends for sport. It may always be counted on to furnish material for a fry or chowder, and little skill is requisite for its capture. In these lakes, however, all this is changed. The bullhead, though rarely seen, is here, but I have so far heard of none captured by the hook and line. Were it the habit of this fish to ascend the streams and spawn, like many others, and if in consequence they should at times appear in large numbers, at the mouth of brooks, what idle tales might be set in circulation concerning them by those who had failed to observe them unless when thus congregated, and who had neither time nor taste for obtaining accurate information concerning their haunts or habits.

"Kingfisher" expresses doubts if I am an "honest angler." When I cast my eye over the worn fishing tackle in my gun case, and about my establishment, the old fly book and favorite, though used-up rod, and remember the many glorious and fruitful seasons when we kept good company together, when that same old rod waved above the mountain streams of Maine, or sent its long line whistling over Western waters, I cannot resist the conclusion that I have a claim to that title.

As I have said, I have sought no recognition as a scientific man, and neither do I claim distinction as a destroyer of fish. I should find far more pleasure in such studies in natural history as I have indicated, concerning fishes and their surroundings, than in taking from the water a lubberly five-pound pickerel, only to break its neck before putting it back again. I here enter my protest against such useless and wrongful slaughter of fish, by which our lakes are becoming depleted of their valuable food fish, to the serious annoyance of the residents of this region. I have talked with no one who is of the opinion that any good can be accomplished by such a course, and I regret that one whom I regard as an estimable member of the angling fraternity should have found self-justification for such practices.

That whole herring statement appeared to me so ridicu

lous that I was led, perhaps unwisely, to publicly give it my attention. The query "why herrings move up stream on the 10th of November?" is not likely to find a solution, unless, perhaps, in the words of "Kingfisher" himself, at the hand of a "natural fool." They were first seen this season on the 14th.

"Xingfisher" thinks I have earned the thanks of FOREST AND STREAM, and I have reason to believe that FOREST AND STREAM thinks so too.

CENTRAL LAKE, Mich, Dec. 14, 1882.

POSITION OF THE REEL.

HERE it is again! In your paper of Oct. 19, "Floridian" takes me to task about using the reel "before the hand," and claims that I am in error in adhering to the idea that the position before the hand is the only true and practical one of using that implement. Although I accept "Floridian's" criticism as of honest meaning and liberal advice, yet, withal, I cannot agree with him. His notion of using the reel behind the hand may do for fingerling trout, or in fly-fishing; but I still contend that the method will not do for black bass, such as we met in Florida. One reason is on account of their great power on the rod, and another, in casting the minnow, and still another in the use of the Meek & Milam reel, which I use. Suppose the reel is seated three or four inches from the extreme butt of the rod and you hook an eight or ten-pound black bass, how in the name of reason would you manipulate the reel and not have room behind the reel to secure a good hold on the rod so as to control the movement of the reel in checkmating the bass?

How can you cast the minnow, *à la* Henshall, with the reel behind the hand? (See "Book of the Black Bass.")

How can you use the Meek reel at all unless before the hand, as with the click off it will turn either back or forth from the least motion, and tangle the line all to thunder? as there is no casting with the click on in minnow fishing, for you want the reel to run freely without noise or friction in order to make long and pleasing casts. For if you were to cast a six-ounce or eight-ounce minnow seventy-five to one hundred feet as we did in Florida, the reel being behind the hand, the starting or initial force necessary to throw such size bait that distance would turn the spool of the reel with such velocity as to cause the reel to "overrun" and tangle the line into more loops and knots than you could undo in an hour, and the result would be that your line would run off twenty or thirty feet and check up all at once and your minnow tear loose and go—Well, you try it once and then see where he will go. However, it is all new to me, and one lesson was enough for me in my debut with that villainous bass; nor did I require a second encounter that threatened to take off a brace of fingers to convince me of the proper position of the reel.

I took my lessons from Dr. Henshall's treatise on casting the minnow, in his "Book of the Black Bass," nor do I see how those lessons can be improved, and I expect to adhere to them until "Floridian" or some other will produce a better. My rod unfortunately had the "reel seat" behind the hand when I purchased it, which was at a time when I had little or no experience in reel fishing, but when I have another made, I will most certainly have the reel placed before the hand, that is if I continue to use a Meeks reel, in which I don't see how any improvement can be made, especially for minnow casting, and that is my choice method of angling for black bass, (big-mouth).

As to the reel being placed before the hand impairing or affecting the "balance" of the rod, I think that this is owing altogether to the shape of the rod and can be very easily regulated by the manufacturer, if he understands what he wants to do, for there is little in such things that art cannot accomplish. The reel seat can be made six or eight inches from the butt, and have a slight additional weight added to the butt which would regulate the balance. Next.

C. L. JORDAN.

WILLIS, TEXAS, Dec. 2, 1882.

NEW YORK ANGLING NOTES.

WHILE in the State of New York during the present month, I was fortunate in meeting a Mr. Herrick of White Lake, Oneida county, who gave me some very interesting information relative to the land-locked salmon, which were put into Woodhull reservoir, Herkimer county, N. Y., three years since. He tells me the fish are doing well, and readily take almost any bait or fly in season, and that he saw them in great numbers on the spawning beds this year. The California trout that were planted in Bisby Creek about the same time, he informed me, were thriving, and he had at the time two fish which he was taking to Rochester for identification. They were of a very rich color, and the salmon-like hooked lower jaw was very prominent in one of them. Without being positive, I would venture to state the fish he had were of the California mountain trout species.

Mr. Herrick tells me that deer were never more plentiful than this year, and that bears during the past summer were quite a pest. I learn also that in Vermont, back and beyond Rutland some distance, farmers found it difficult to keep sheep in some localities.

The land-locked salmon put into Woodhull reservoir have run down into Sand Lake, Mr. Herrick states, and the latter waters will have the benefit of the plant.

Mr. J. B. McHarg, of Rome, informs me that the bass put into the Mohawk River at Rome, N. Y., are doing exceedingly well. These fish it will be remembered were put into the river above the dam, and although now numerous they battle all attempts of the angler to take them either with fly, bait or spoon.

Two years ago a number of trout were planted in Canada Creek, four miles north of Rome, N. Y. A great increase of fish is observable and attributed to this. Henderson Harbor, Jefferson county, Lake Ontario, proved a rare spot for the anglers this season. Fishing never was better, and all who visited it vow to return next year.

Bass were freely caught in Oneida Lake all through their season, thanks to the Syracuse Club, who have been untiring in their efforts to protect the fish in the spawning season. The law now in sections round about Syracuse is strictly observed, and is likely to be, as more than one example was made of violaters of the statute.

I was told while at Rome, N. Y., that there were fishermen still living there that had taken salmon in Fish Creek, Oneida county, twenty years ago. These fish undoubtedly had made their way up from salt water, thence to St. Lawrence River to Oneida Lake, then to Fish Creek. My informant, Mr. J. B. McHarg, distinctly remembers the time when it was not uncommon to take them there.

HOMO.

PHILADELPHIA ANGLERS.—An anglers' association has been formed in Philadelphia, a society of a social nature, and also for the protection of the waters of this and neighboring counties. The organization should have as one of its social features a yearly fly-casting tournament, similar to the one held in New York under the auspices of FOREST AND STREAM. Philadelphia can furnish some expert fly casters, three or four of whom, I know, would have reported themselves creditably at your tournament. One gentleman I could mention has scored eighty odd feet with a rod of his own manufacture. He would not wish his name in print, and I withhold it for this reason.—HOMO.

RAINBOW TROUT.—Mr. Waldron, a prominent sportsman of Binghamton, N. Y., lately told your correspondent that the California trout fry put into Thomas Brook, which runs into Chenungo River, have grown nicely and appear to thrive. Many fish have been seen two and three inches long and were much smaller last spring when they were planted. Thomas Brook runs through private property and is posted almost its entire length.—HOMO.

Fishculture.

WATER PLANTS FOR CARP PONDS.

BY LESTER F. WARD.

[From Bulletin of the United States Fish Commission.]

THE following list embraces only such plants as were named in a list furnished by Mr. Rudolph Hessel, superintendent of the carp ponds. The names given in that list where obsolete are placed in parenthesis, the modern ones standing before them. The vernacular name of each is added whenever it is known, and the localities of the American species are given according to the best authorities. When found in the vicinity of Washington the particular locality is mentioned. In the case of exotics the general region of the globe is stated.

RANUNCULACEÆ—CROWFOOT FAMILY.

Ranunculus aquatilis, L.—White Water-Crowfoot.—The type is rare, but the var. *trichophyllus*, Gray, is common in the United States. The var. *heterophyllus*, DC. (*R. heterophyllus*, Weber), is chiefly a European form. *Ranunculus multifidus*, Pursh. (*Ranunculus fluitans*, Bigel)—Yellow Water-Crowfoot.—East New England to South Pennsylvania, Illinois and Northwest. *Caltha palustris*, L.—Marsh Marigold, Cowslips.—Common North and West.

NYMPHÆACEÆ.—WATER LILY FAMILY.

Cabomba caroliniana, Gray. (Not in original list, but known to be in the carp ponds. Probably wrongly named.)—Florida to North Carolina and westward. *Nymphæa odorata*, Ait.—Sweet-scented white Water Lily.—Found at Great Falls and below the Long Bridge. Common in the Northern States. *Nymphæa tuberosa*, Paine.—Tuber-bearing Water Lily—Western New York to Michigan, Illinois, and probably in the Southern States. *Nuphar luteum*, Smith.—Smaller yellow Pond Lily.—Chiefly European; the var. *pumilum*, Gray (*N. pumilum*, Smith), is not rare northward in the United States.

HALORAGEÆ.—WATER MILFOIL FAMILY.

Myriophyllum.—Water-Milfoil.—Six species are found in the Northern United States, of which *M. spicatum* is the most common, and occurs sparingly near Washington. *Hippuris vulgaris*, L.—Mare's Tail.—New York to Kentucky and northward; rare in the United States; more common in Europe.

ONAGRACEÆ—EVENING PRIMROSE FAMILY.

Trapa natans, L.—Europe, Siberia.

UMBELLIFERÆ—PARSLEY FAMILY.

Oenanthe sarmentosa, Presl. (*Phellandrium aquaticum*, L.)—Oregon and Washington Territory.

PRIMULACEÆ—PRIMROSE FAMILY.

Hottonia inflata, Ell. (*H. palustris*, Pursh.)—Featherfoil.—Massachusetts to Louisiana.

LENTIBULARIACEÆ—BLADDERWORT FAMILY.

Utricularia vulgaris, L.—Bladderwort.—Throughout the North and West.

POLYGONACEÆ—BUCKWHEAT FAMILY.

Polygonum (amphibium, L.?)—Water-Persicaria.—Common. Has been sparingly found near Georgetown, D. C.

CERATOPHYLLACEÆ—HORNWORT FAMILY.

Ceratophyllum demersum, L.—Hornwort.—Abundant.

ARACEÆ—ARUM FAMILY.

Acorus calamus, L.—Sweet Flag, Calamus.—Common.

LEMNACEÆ—DUCKWEED FAMILY.

Lemna trisulca, L.—Duckweed, Duck's meat.—Widely diffused. *Lemna minor*, L.—America and Europe. *Lemna gibba*, L.—Chiefly in Europe, but has been found in Arizona.

TYPHACEÆ—CAT-TAIL FAMILY.

Typha latifolia, L.—Cat-tail Flag.—Very common. *Typha angustifolia*, L.—Narrow-leaved Cat-tail.—Less common, but found in this district and notably in a pond near the foot of Eighteenth street.

NAIADACEÆ—POND-WEED FAMILY.

Potamogeton natans, L.—Pond-weed.—Common.

ALISMACEÆ—WATER-PLANTAIN FAMILY.

Alisma natans, L.—Water-plantain.—Europe, Siberia. *Sagittaria variabilis*, var. *latifolia*, Eng. (*Sagittaria latifolia*, Willd.)—Arrowhead.—Common. *Butomus umbellatus*, L.—Europe, Northern Asia.

HYDROCHARIDACEÆ—FROG'S-BIT FAMILY.

Anacharis canadensis, Planchon. (*Elodea canadensis*. Michx.)—Water-weed.—Common. *Vallisneria spiralis*, L.—Tape-grass, Eel-grass.—Common.

IRIDACEÆ—IRIS FAMILY.

Iris pseudacorus, L.—Europe; Siberia.

JUNCACEÆ—RUSH FAMILY.

Juncus effusus, L. (=*J. conglomeratus*, L.).—Common Rush.

CYPERACEÆ—SEDGE FAMILY.

Scirpus lacustris, L.—Bulrush, Tule.—Common.

GRAMINEÆ—GRASS FAMILY.

Zizania aquatica, L.—Indian Rice, Water Oats.—Potomac Flats, etc. *Glyceria aquatica*, Smith—Reed Meadow Grass.—Common northward. *Glyceria fluitans*, R. Br.—Common, but has not been found nearer Washington than Great Falls. *Festuca fluitans*, Leeds.—Europe. *Paragmites communis*, Trin. (*Arunda phragmites*, L.)—Reed, Cane.

CRYPTOGAMIA.

Azolla caroliniana, Willd.—New York to Illinois and southward.

PUBLISHER'S DEPARTMENT.

A fishing club wishing a good location for a club house will find it to their interest to attend the auction sale of Gooseberry Island. See advertisement.—*Adv.*

"Up like a rocket, down like the stick," is the short history of all things projected by powder or gas. *Benson's Capcine Porous Plaster* holds its place in the public esteem, and daily wins new friends. It is the perfection of external remedies. Liniments, medicated oils, salve and other plasters are relics of a "time that is past." "Quick, Searching, Curative." It will keep faith with you. Price 25 cents.—*Adv.*

FIXTURES.

BENCH SHOWS.

March 26, 27 and 28, 1883.—Dominion of Canada Kennel Club Bench Show, at Ottawa, Canada. Charles Lincoln, Superintendent, Detroit, Mich.

January 9, 10, and 11, 1883.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden Conn.

April 3, 4, and 5 1883. Western Pennsylvania Poultry Society's Fifth Annual Bench Show. Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters whelped on or after January 1, 1883, close February 1, 1883. Chas. Lincoln Superintendent. C. B. Elbin, Secretary.

May, 1883.—Westminster Kennel Club, Seventh Annual Bench Show, New York City. Robt. Cornell, 54 Will am st., New York City.

THE LOUISIANA FIELD TRIALS.

[Specially reported for FOREST AND STREAM.]

OPELOUSAS, La., Dec 16, 1882.

"Beautiful is the land with its prairies and forests of fruit trees,
Under the feet a garden of flowers, and the bluest of heaven
Bending above and resting its dome on the walls of the forest.
They who live there have named it the Eden of Louisiana."

THUS wrote the New England songster and this reporter can verify the truth of his description of this land of Evangeline. The selection of grounds made by the committee from the New Orleans Gun Club on which to hold their second annual Field Trials was wisely chosen. An Eden for the farmer, it is the hunter's paradise, and I venture the opinion that no readers of the FOREST AND STREAM can find a finer field for hunting the various upland and waterfowls than the vicinity of Opelousas, St. Landry parish, Louisiana. This assertion applies particularly to quail and will account for the short time it took the judges to decide the heats between the dogs.

A glance at the list of entries will show you what a success these trials have been. Never in the history of field trials in America have so many famous dogs been gathered at one event. Added to this the warm welcome the hospitable citizens of this little town have extended to all the visitors and the kindly feelings displayed at all times, and we can unhesitatingly assert that a new phase has been added to and an impetus given to the cause of field sports in this country.

The judges selected by the committee were Col. James Gordon, of Pontotoc, Miss., Judge James M. Thompson, of Covington, La. (judge of the eighteenth judicial district of La.), and Mr. N. D. Wallace, of New Orleans, a prominent member of the N. O. Gun Club. The two former gentlemen acted in a similar capacity for the club last year. The first stake on the programme was the New Orleans Gun Club Stake, open to members of the club only. There were thirteen entries in this stake. The rules required that owners should handle their own dogs. There was also a handsome prize donated the club by the Messrs. Folsom Bros., of New Orleans, to be given to the second best dog in this stake. Mr. John K. Renaud's Llewellin setter bitch Flossie, winner of the first prize in the All-Aged Stake of last year at the State Trials, added to her owner's expectations of her future good qualities by capturing the cup, while Mr. M. S. Humphries's lemon and white pointer Tyler won the Folsom prize. The races in this stake occupied all of Monday and until 10 o'clock Tuesday morning.

ALL-AGED STAKE.

First prize, $200; second prize, $150; and third prize, $75; entrance fee $5.

In this stake there were twenty-two entries, four of which were subsequently drawn. Possibly no stake in America was ever watched with more interest and followed more closely throughout than this. Here were gathered together the champions for two seasons back. I doubt if at any one meet in this country so many noted dogs will ever be seen together again. Gladstone had been sent down on exhibition by his owners, while pitted against each other for the championship were Peep-o'-Day, Sue, winner of first at Grand Junction the week before; Leonora, champion of the Eastern Field Trials; Count Noble and such dogs as young London, Mr. Crawford's Foreman, Flossy, Victor, and a host of others, all aspirants for fame. Mr. Renaud's bitch Flossy has never been in the hands of a professional trainer, and her owner, who was to handle her, had not had her in the field since last February. She was nursing a litter of nine puppies by Gladstone, all of which had distemper, and the last one that had been kept with her died the day previous to her winning the Member's Cup. Her handler, Mr. Leach, who had several dogs working for the trials, is comparatively inexperienced for furnishing a dog for field trials, having never attended one before. He had simply exercised her, and hardened her for work. He is a good man for our section, and his experience at these trials has proved beneficial. Flossy was the only dog on the ground that won on merit alone, and her many admirers feel proud of her performance. Among several gentlemen who had attended the Trials with a view of purchasing a good dog was Mr. Will H. Coleman, who, becoming satisfied at the work he had seen London perform, before he had finished a heat purchased him from his owner, Mr. J. M. Avant, of Hickory Valley, Tenn., for $400 on the field. Young London is a Gladstone-Clip dog, and full brother to Peep-o'-Day of the first litter after her. This is his first performance in the All-Aged Stake. He had strained his hip on one occasion, preventing his entering in the Derby of that year, and just previous to the Grand Junction Trial of this year he got lost, was picked up by some negroes and while indulging in rabbit chasing, 'possum hunting and such, was badly worsted in a rough-and-tumble fight by a jealous 'coon dog. Fearing he had become wild from such unlimited liberty, his handler did not enter him at Grand Junction. His performances here were of such a character as to surprise everyone, and his owner tried to repurchase him after the Trials for $1,000, but without success. Mr. Coleman has since refused $1,500 for him.

ENTRIES ALL-AGED STAKE.

1. D. C. Sanborn enters black, white and tan setter Count Noble (Count Wind'em-Nora).

2. M. S. Humphries enters liver and white pointer dog Tyler, 5½ years old.

3. E. L. Raulett enters liver and white ticked pointer dog Dinks, 5 years.

4. John K. Renaud enters black and white setter bitch Flossy (Rake-Daisy), 3½ years.

5. C. E. Wallen enters black and tan Gordon setter dog Turk, Jr. (Turk-Nell).

6. J. W. Prescott enters solid liver-colored setter Joe Coumbers (Jim-Rose).

7. C. B. Maginnis enters black and tan Gordon setter dog Gordon (Rupert-Whip).

8. John Skannal enters red Irish setter dog Boston, 5½ years.

9. P. H. & D. Bryson enter black, white and tan setter bitch Sue (Druid-Ruby).

10. H. M. Short enters black, white and tan setter dog Frank H. (Don C.-Cora), 2 years.

11. D. Bryson enters black, white and tan setter bitch Peep-o'-Day (Gladstone-Clip).

12. J. M. Avant enters orange and white setter dog Victor (Gladstone-Frost).

13. W. B. Mallory enters black and white setter dog Pink B. (Gladstone-Countess Key).

14. J. W. Jackson enters liver and white pointer bitch Louise.

15. J. W. Jackson enters liver and white pointer dog Lorne (Faust-June).

16. J. W. Jackson enters red Irish setter dog Mark (Elcho-Noreen).

17. E. W. Condon enters black, white and tan setter dog Blue Monarch.

18. E. W. Condon enters black, white and tan setter bitch Jenny Lind.

19. C. F. Crawford enters black, white and tan setter dog Foreman (Dashing Monarch-Fairy II.).

20. H. Bailey Harrison enters blue belton setter dog London (Paris-Leo).

21. W. Freeman enters liver pointer dog Chips (Carson-Moll).

22. J. M. Avant enters black, white and tan setter dog London (Gladstone-Clip), 2½ years.

First Series.

TYLER AND BOSTON.—Mr. Humphries has a fine pointer in Tyler, whose education, though somewhat neglected, did not deter him from defeating Maginnis's black and tan Gordon, winner of second at State trials last year. Tyler had been defeated in Members' Stake by Flossy, and then won second, the Folsom prize. Dogs were turned down in cornfield, where Flossy, who was following her owner, had pointed a bevy in rose hedge, after all the other dogs had passed. The birds were flushed by order of judges and lit in cornfield badly scattered. Boston, handled by Skannal, soon established a point, and the bird was flushed, but not shot at. Tyler returned the compliment and the bird was shot at and killed. Tyler retrieved handsomely and both dogs were staunch to wing and shot. The field having been drawn blank, a long round was made for another succession of field, where birds were reported more plentiful. In high sedge grass near a pond a bevy was flushed by the spectators, and, working on single birds, each dog scored a flush. Along a line of fence Tyler made another point, and as his speed and nose exceeded his opponent's, they were called up and heat given to Tyler. Down one hour and forty-five minutes.

FRANK H. AND MASK, handled by Short and Jackson. Mr. Jackson, having withdrawn all his entries, Frank H. had a bye.

FOREMAN AND BLUE MONARCH were put down at 12:05 noon, Curry handling Blue Monarch and Tallman Foreman. Blue Monarch and Jenny Lind are the property of Mr. E. H. Condon of this State, and were turned over to their handler, Mr. Curry, only the day previous to the race. He of course was at a great disadvantage, not knowing even the commands necessary to work them. Foreman is a splendid animal and destined to rank higher in the list of prize winners. The heat was a short one, as Blue Monarch showed no evidence of training, and a want of speed, style, nose and obedience. Running across a cornfield alongside of a ditch, Foreman pointed a bevy, and Blue Monarch ordered up to back, not only refused to do so, but rushed in and flushed. The birds were shot and killed with each barrel by Tallman, and Foreman retrieved handsomely, while Blue Monarch sent to retrieve the other did so very badly and mangled his bird. Dogs called up and Foreman wins. Down twenty-five minutes.

COUNT NOBLE AND LORNE.—Lorne withdrawn and heat given to Count Noble.

PEEP-O'-DAY AND DINKS, in the hands of Short and Fontaine, were put down at 12:40. Dinks is one of those self-willed pointers that has been hunted with the hounds and acquired much of their pure cussedness. He takes a good rating as a compliment and a sound thrashing as a thing he had been looking for. His owner being absent Mr. Fontaine undertook to handle him, and won Dinks's confidence at once by giving him a good thrashing as a starter. A bevy having been marked down in grass bordering a pond, the dogs were sent in and Dinks immediately corkscrewed on a point. A snipe was flushed immediately in front of him, and he was ordered on. Passing over his point, the judges flushed a quail, showing that Dinks "had sense same as folks." Peep having meanwhile exhibited herself to the spectators in the matter of speed, style, and quartering, now came up and dropped on a beautiful point. Her handler flushed and fired both barrels without orders, which had the effect he evidently intended on his opponent's dog, for Dinks, who was working around the pond, reading a rail, came running to heel and flushed two birds. Dogs called up, and heat given Peep-o'-Day. Down five minutes.

SUE AND JOE CHAMBERS.—Joe Chambers withdrawn and Sue wins the heat.

FLOSSY AND TURK, JR. were put down at 12:50. Flossy was handled by Mr. Renaud and Turk by Mr. Leucht. Working on toward birds, Flossy immediately set the pace, and discounted her opportunity in speed, style and quartering. On the edge of a pond, Flossy pointed, and the bird being fired at, Turk broke shot. Dogs called up and Flossy wins. Down ten minutes.

VICTOR AND GORDON.—Gordon having had a fit the day previous, and being in no condition, was withdrawn by his owner and Victor given the heat.

CHIPS AND JENNY LIND were cast off at 1:05 P. M. Tallman handling the former and Curry the latter. Neither dog displayed much style, Jenny ranged well, but was evidently deficient in training. She has all the speed necessary, and after her present handler has used her a while, will show a marked improvement. Chips is a heavy built, surly pointer who has evidently seen his best days. He has been carefully handled by Tallman, who is capable of getting all there is out of a dog. Chips quartering to windward, pointed in grass patch. Jenny ranging wild flushed single bird in field, and gave wilful chase. Dogs ordered up, and heat given to Chips. Down fifty minutes. Making for a negro cabin the party sat down to lunch and cool off, as weather was very warm.

AVANT'S LONDON AND HARRISON'S LONDON.—The first, handled by his owner, and the latter by Tallman, were put down at 2:38 P. M. This was the race of the day, and the spectators crowded up to witness it. The Canadian's London was fresh from his victory at High Point, N. C., where he won the championship in the free for all at the Eastern Field Trials. He is a magnificent animal, and well deserves the laurels he has won. It is barely possible that the difference in cover and climate may have had something to do with his defeat here, but the dog that administered it is a good one, and is ready to stand up with the best. Turned down to the southwest in a cornfield thick with burrs, some magnificent ranging, quartering, and speed was witnessed. Honors were about easy with speed slightly in Avant's London's favor. Quartering to the south the latter made a magnificent stand on a bevy. Harrison's London responded with a handsome back. A bird was killed and retrieved. Working down in sedge grass Avant's London scored another point on a single bird, while Harrison's London got in a bad flush. On birds running up fence row, both dogs did some beautiful reading, and Harrison's London working too eagerly got in another flush, which was responded to immediately by one from his opponent. Birds having scattered in heavy marsh lands, the dogs were called up and carried eastward in fields alongside of railroad tracks. After some hard work over heavy ground, and one or two small fields proving blank, both dogs finally succeeded in flushing a bevy. Working on single birds, Harrison's London dropped on point and was handsomely backed by Avant's London. A bird was shot and winged, and well roaded and retrieved by Harrison's London. Crossing a fence into short grass Avant's London pointed a single bird, which was flushed to order. Dogs called in and Avant's London given the heat. Down two hours and ten minutes.

PINK B. AND LORNE.—Lorne withdrawn, and Pink B. wins the heat. This closed first series of heats.

Second Series.

FRANK H. AND TYLER, the former handled by Short and the latter by Humphries, were put down at 4:10. Tyler was eager for business, but was overmatched at the start. The dogs were turned down on a covey that had been marked down in an open cornfield. Frank H. struck out at a rattling pace, and whipped around on a beautiful point, and when the bird was shot he dropped handsomely and retrieved to order. Tyler, hustling through the cornstalk, pointed, but no bird was found. Frank H. made another handsome point; the bird was flushed to order and the heat given Frank H. Down seven minutes.

COUNT NOBLE AND FOREMAN, Waters and Tallman, handlers, went down at 4:20. Both dogs struck out at a good pace. Passing through a hedge the judges flushed a single bird that lit alongside of the hedge and ran. Foreman and Count both roaded, and Foreman pointed. Count Noble ordered to back, blinked badly and failed to back. Working down in the flats Count pointed, and Foreman called up, backed handsomely. No bird was found. Quartering to left, Foreman pointed and this time Count backed. It being late and birds getting scarce, the dogs were called up, to be put down in unfinished heat on following day.

THURSDAY.

This was the warmest day of the week, and both handlers and dogs felt the effects of it before the day was over. The dogs were turned down in a field southeast of town at 8:15 A. M., and soon began work in earnest. Count, working up wind alongside of a ditch, pointed a small bevy on the opposite side from Foreman. Ordered over, Foreman evidently smelled birds, and refused to back until he had stolen a point. Birds flushed without being shot at. Ordered down the ditch, Count dropped in corn furrow and was handsomely backed by Foreman. Ordered to flush, Waters failed to find the bird. Crossing ravine, Count repeated the same performance, and was again credited with a false point, but the spectators afterward flushed a bird near where the dog had pointed. Two of the birds having scattered in a large open cotton patch, the dogs were turned toward them, and Foreman scored a flush, which was soon after offset by Count doing the same thing. Some beautiful roading was then done by Foreman, who finally established his point, and was awarded the heat. Down twenty-three minutes.

PEEP-O'-DAY AND FLOSSY were put down at 8:45. Short handled Peep and Renaud Flossy. Peep is possibly the handsomest bitch in America, and has a magnificent record on the bench, the field and in the kennel. She was not in good working order for the heavy cover and warm climate, she was ill and her handler claims she has been petted so much as to render her somewhat fractious. Opposed to Flossy in style and quartering, but Flossy offset these in speed and nose. The ground was not suitable for quick work, but Flossy seemed indifferent to its character, and gained the good will of everyone by taking cockle burrs, briers, corn and cotton with perfect nonchalance and making her first point on a flock of doves that were feeding in a cornfield fully forty yards off. Unfortunately for the dogs, an over-zealous handler of dogs, eager to display their supposed qualities, had preceded the crowd to the grounds, and succeeded in scattering most beautifully a bevy or two. Some fast chasing must have been indulged in, as scattered birds were found fully half a mile apart. The handler was promptly interviewed, and vanished with his mongrels.

One of those rare scenes that painters delight in picturing was afforded by this brace of intelligent animals. Ranging fully two hundred yards across an open peapatch, Flossy suddenly whirled on a point up wind and came to a dead stand. Peep, nearly a hundred yards off, caught sight of her and made back in her handsomest style, while a crowd of nearly one hundred horsemen from the top of a hill cheered the scene. Ordered to flush the bird, Mr. Renaud moved up toward Flossy, when some thirty or forty larks arose from their feeding. Crossing a fence into a cornfield Peep made a bad flush on a single bird that flew and lit in a tree. The field was drawn blank and handlers were mounted to cross into another field later on. Here dismounting in thick weeds the dogs were worked around the edge of a peapatch, and a large bevy was flushed by the spectators and lit in weeds and briers. Both dogs roaded well, but the birds got up wild. Finally Flossy pointed staunch and a point claimed by the handler of Peep was also allowed. This was sharp work on Short's part, who flushed, shot and killed without orders. Both dogs dropped to wing and shot. It was asserted, by those on horseback, who could see, that Short had turned Peep on Flossy's bird and that he was not entitled to his point, but as the judges were dismounted in high weeds they could not see. Both dogs were running fast in the field, and Mr. Renaud had called point some time before Peep's handler did. As the birds were running Flossy moved down toward a thicket of briers and could not be found for some time. Her owner had called her to heel, and as she did not come in he and another gentleman, accompanied by one of the judges, went to look for her. When found she was on a beautiful point, her body resting in a small ditch, and forefeet resting on the ridge. Two birds were flushed before her and she dropped to wing. Calling the dogs in, Flossy was given the race after being down in all two hours and fifteen minutes.

SUE AND CHIPS.—Sue handled by Short, and Chips handled by Tallman, went down at 11:05. Sue is the daughter of Druid, out of Ruby, and has a record for speed equal to Gladstone. She made a magnificent race for first place at the Fairmont (Minnesota) Trials, and won the championship at Grand Junction this year. Great things were expected of her, but in her race with Chips the cover was too heavy for her to display her ranging power. The dogs were turned down in heavy weeds and sedge grass among scattered birds, and it being very warm and dry the work was heavy and hard on the dogs. Chips quartering and ranging well, hustled the sedge, and after crossing a cotton patch into similar ground scored two more in succession. Finding the dogs unequal to the work, after being down thirty minutes, they were called up to be cast down about a mile further on in fields across the bayou. Considerable difficulty was experienced in crossing the sluggish and boggy stream and the men and dogs were badly scattered. Your reporter and a visitor from New York, Mr. Halsey, were among the first to get out of the swamp and discovered a fine bevy of quail in some open cover. After nearly an hour's wait the dogs were brought up and sent in. The bevy flushed wild and lit in sedge grass. Sue finally got in a point and was backed by Chips; bird shot at and missed, both dogs dropped to shot. Moving on across a ravine Sue pointed a single bird, which was shot and handsomely retrieved, giving her the race. Down, altogether, forty minutes.

COLEMAN'S LONDON AND PINK B., handlers Avant and Short, were put down at 2:15. From the manner in which London had defeated his formidable namesake of the day previous, it was thought he would have an easy thing with his saucy little competitor; but the race proved to be one of the most hotly contested of the entire meet. This was partly owing to the jockeying of the two handlers. Avant had been promised fifty dollars by the owner of London if he worked his dog fairly and won the championship. Short had trained both dogs and could jockey London if he so desired. It was plain that neither was worked judiciously. Turned down where some birds lit in some briers at the head of a hollow, Pink B. scored a flush, and was closely followed by London further down. Roading up toward a fence, Pink got in a point, and the birds rose wild, alighting in grass and weeds over the hill. London got in a false point, but soon after did some beautiful work on a bird running through the weeds. He finally pointed, and the bird, being shot at, was missed by Avant. Ranging south, Pink B. made a bad flush in weeds, and both dogs were called up, to be put down after dinner. At 3 P. M. they were cast loose, and, working down hill, Pink pointed a rabbit and gave chase, but was stopped by handler. While giving the dogs some water, a bevy flushed wild and in tall, thick weeds in an old field across a lane. Dismounting and turning the dogs in, the bevy flushed wild and lit in similar cover, with thick grass and briers to hide in. Pink's handler claimed a point, but both dogs were too close to each other when found to distinguish which had pointed, and in fact a flush instead of a point should have been credited to each. Coming up to where the birds had dropped both dogs were found on a point; birds flushed and shot at by Short with both barrels and one bird killed. Recrossing to horses, and dogs being watered, they started on, where Pink flushed a single bird near the spring. Some beautiful work was done by both dogs and was much admired by the crowd at end of hollow. London pointed a bevy that flushed wild. London drops to wing. Moving on to where a bevy lit, London flushed a bird in the grass and then got in a point. Bird flushed wild. Pink in meantime gave evidence of scent, and after roading some distance pointed on a bird in the woods. London backed. Bird flushed wild and lighted in the grass. Directed to where a bird had lit, several bevies ran in front of the dogs, and interfered with the scent. Pink on nearing bird flushed it and dropped to wing. His handler claimed it was not a flush and made threats to withdraw all his dogs if same was scored as a flush by the judges. After being reprimanded by the judges he continued his threats and judges held a consultation. In view of the fact that the dogs had just passed in front of the dogs and might have bothered them the flush was not scored. Sent on Pink made a bad flush on a single bird in grass. Both dogs quartering in grass and cornfield pointed a covey and the bird was shot and retrieved by Pink B. Dogs called up and heat given to London after a run of two hours. Short withdrew from the grounds and refused to run his next entry, Victor, but allowed Avant to do so for him.

VICTOR AND FOREMAN.—Victor, handled by Avant, and Foreman by Tallman, put down at 4:40. Victor was badly handicapped at the start, from the fact that his handler had never worked him before. Short's withdrawal left no other alternative to Avant, who owns the dog and wished to see him work. Cast out in a hollow to the north, where some birds had lit, Victor soon pointed, and was backed by Foreman. Bird flushed, but not shot at. Foreman got a point in thicket, and was backed by Victor, who soon after made a flush, which compliment was returned by Foreman. Roading rapidly, Foreman makes point, and bird is flushed without being shot at. Attempting same thing, he scores a flush, and then both dogs get a point on different birds at the same time. Working along roadside, Victor makes a false point and loses the heat. Down thirty-five minutes.

As Short had given no notice of withdrawing his dogs, and Frank H. was down for next heat, it was decided to wait over for the following day and give Short a chance to apologize if he thought proper.

FRIDAY, DEC. 15.

Third Series.

FRANK H. AND FLOSSY.—Frank H. withdrawn and Flossy given the heat.

SUE AND COLEMAN'S LONDON.—Sue withdrawn and London given the heat.

Fourth Series.

FOREMAN AND FLOSSY, handled by Tallman and Renaud, went in a field northwest of town. The weather had changed very materially during the past twelve hours; a stiff northeast wind was blowing a perfect gale when we left town, and by the time the dogs were cast out it had turned due north and become very cold. Myriads of ducks were flying, and quite a number of gentlemen could not resist the temptation to stray away from the crowd and try a shot or two. A slight rain had fallen during the night, and the ground was quite soft and heavy. Flossy, as usual, set the pace for Foreman, and, coming up to a small hedge, made a very pretty stand. Discovered her error and moved on. Ranging down the wind near the railroad track, she dropped to a point, but before her handler could "scatch on" a small bevy flew up and lit just across the track. Crossing over Flossy roaded and flushed a single bird down wind. Both dogs then made a point on same bird. The bird was flushed to order, and shot at by Tallman and missed. Dogs both down to wing and shot. Flossy roading on scent, came to a point. Ordered to flush, her handler waited too long, and the bird was seen to leave the cover and run toward heavy grass on the side of the ditch. Her handler walking in between Flossy and the bird failed to flush, and she was penalized for a false point. Working back toward the railroad track, Foreman feathered to scent and pointed a bird Flossy had failed to locate. Flossy backed. Bird shot and retrieved by Foreman. Moving on Flossy was a little too fast and showed want of obedience. Two birds were flushed in front of Tallman, and Foreman came to a point. Birds flushed to order, but not shot at. Foreman roading made a false point. Dogs called up and heat given to Foreman. Down twenty-five minutes.

FOREMAN AND COLEMAN'S LONDON.—Foreman handled by Tallman and London by Avant. Down at 9:45 A. M. Working west of the railroad track and heading north, London and Foreman did some magnificent ranging. The judges were testing the speed, style, and ranging qualities of the dogs. Soon London began to feather and quickly established a point on a bevy. Birds were flushed by Avant and missed. Both dogs dropped to shot. Roading on single birds, Foreman seemed to have caught Flossy's whim and worked wild. He came to a dead point and was penalized for false pointing. London swinging round to the left got in a staunch point. Foreman backed and the bird was flushed down wind. Several birds got up wild, when finally London got in another point and won the heat and championship with first prize of $200. Foreman and Harris's London were in for second place and divided the money, $150, while Count Noble and Flossy divided third, $50.

DERBY STAKES.

The next race was the Opelousas Derby for dogs whelped on or after April 1, 1881, and embraced three cash prizes: 1st prize, $150; 2d prize, $100; 3d, $50. Entrance fee, $5. The following dogs were entered in this stake:

PINK B., black and white setter (Gladstone-Countess Key), owned by W. B. Mallory, Memphis, Tenn., 19 months.

COUNTESS MAGNET, black, white and tan (Count Noble-Sparks), D. C. Sanborn, Dowling, Mich., 18 months.

NELLIE BLY, black, white and tan (Count Noble-Nellie), J. M. Avant, Hickory Valley, Tenn., 16 months.

BESSIE A., liver and white setter (Dashing Lion-Aminda), J. M. Avant, Hickory Valley, Tenn., 15 months.

GUS BONDU, black, white and tan setter (Dashing Bondhu-Novel), D. C. Sanborn, Dowling, Mich., 18 months.

BIDDY, red Irish setter (Boston-Duck II.), N. B. Murf, Shreveport, La., 17 months.

JARVIS, red Irish setter (Elcho-Noreen), J. W. Jackson, Opelousas, La., 18 months.

BEAU, black, white and tan setter dog, Wm. F. Weeks, New Iberia, La., 17 months.

DON, black and white setter, W. F. Weeks, New Iberia, La., 17 months.

WHISKEY, white pointer, O. J. Stokes, Opelousas, La.

MR. WM. B. GATES'S BLACK, WHITE AND TAN ENGLISH SETTER BITCH "CARRIE J."

Won First Prize in N. A. K. C. Derby, 1882, and divided Third Prize in All-Aged Stakes.

The country around Opelousas is slightly rolling toward the west, but becomes quite level eastward of the town. The soil is remarkably fertile, and consequently vegetation in this tropical clime is remarkably luxuriant. Scarcely a heat was decided without some dog becoming lost from its handler in the tall sedge grass, weeds or briers, while the cockle burr was very trying on the dogs, young and old.

TUESDAY, DEC. 10.

First Series.

D. C. Sanborn's Llewellin setter dog Gus Bondhu, black, white and tan, 18 months old, by Dashing Bondhu out of Novel,

against

N. B. Murff's red Irish setter bitch Biddy, 17 months old, by Boston out of Duck.

Waters handled Gus and John Skannal, Esq., of Shreveport, La., Biddy. Down at 10:15 A. M., in cornfield one and one-half miles northeast of Opelousas. Weather warm for the youngsters, with slight wind from southwest. A bevy had been flushed and marked down in cornfield and sedge grass. Both dogs were speedy, Gus displaying good speed and style, while Biddy ranged far and displayed most speed. Alongside of ditch both dogs flushed single birds, and soon after Biddy, working in sedge grass, roaded, then pointed a covey. The birds getting up wild, she displayed great staunchness. Bondhu dropped to wing, and birds were not shot at. Crossing ravine, where birds had been running, Bondhu roaded and made false point. Biddy pointed staunchly and the bird was shot, and she dropped to shot. Bondhu's handler flushed a bird while looking in brier thicket for his dog, who was busily roading a bird that had flushed wild. Bondhu finally pointed staunchly, but no bird was found. Crossing a cotton field, a small covey was flushed by Biddy, while Bondhu established a point, but the bird got up wild. Bondhu, along a ditch, flushed and chased them, giving the race to Biddy. Down thirty-eight minutes.

BEAU AND WHISKY.—Leucht handled the setter and Stokes the pointer. Down at 11 A. M. Beau is quite a nice-looking Llewellin puppy, whose handler, Mr. Leucht, had had but little experience with him, and being unaccustomed to public trials was quite nervous in his handling. Mr. Stokes, owner of Whisky, is a resident of Opelousas, and deserves much sympathy for being handicapped by so indifferent and careless a dog as he has. Both dogs were coaxed into snuffing at a brier patch where three or four birds had been marked down, but failed to take cover. A bird being flushed by one of the judges, was marked down in tall weeds, and when the dogs were brought up Whisky made a point but failed to establish same. Dogs were called up to be cast down in field further on, when soon after Whisky fell over a bank on a bevy, straightened out a tail some three feet or more, and presented such an *outre* figure that Beau's handler called his attention to it, and the dog stopped to take in the situation. Ordered to flush, the bevy rose up, and Stokes killed his bird. Whisky wanted to go and see if it was a sure enough bird, but took her handler's word for it, while Beau was so overcome with astonishment that he had to sit down as the birds flew, and only got up when the gun went off. Ordered on to where birds lit, Beau seemed to realize all at once that Whisky had a nose at the other end of her tail, and therefore attracted Whisky's attention to the fact that he had been taking lessons in quartering his ground, ranging and speed. Whisky evidently acknowledged that this was not taught at her school, and she didn't care to imitate such didos, but when Beau suddenly spread out his legs, straightened his tail, and stopped still in a thinking attitude, Whisky's kind heart palpitated with sympathy, and she stopped at once to consider what she had best do if Beau was going to have a fit. Words fail to describe that dog's thoughts and expression when Beau's handler flushed a bird, a real live bird, just under Beau's nose, actually shot at it and missed. Nothing could convince her to the contrary until she had rushed forward and seen for herself if a bird had actually got up. Then it dawned on her that Beau had been playing off on her, and was actually hunting. All sympathy was banished from her breast, and she scorned to notice him further. She at once struck out for herself, and ranged fully thirty feet from her handler's heels. Meantime Beau was delighted at the trick he had served Whisky, and buckled down to work. Flush after flush was scored to him, until four in succession had been gained, when he was called up and stopped in his mad career by the judges awarding heat to Whisky. Down one hour and ten minutes.

BESSIE A. AND JARVIS.—J. M. Avant handled Bessie and J. W. Jackson Jarvis. The dogs were put down at 12:15 P. M. Mr. Jackson's kennels had been very recently visited by distemper and all his dogs were in bad order. Particularly was this the case with his red Irish setter dog Jarvis, who was in no condition to hunt. Bessie A. had quite a reputation, gained at Grand Junction the week previous, and her actions here was quite a disappointment to those who were acquainted with her. Dogs were cast off in a cotton field with a full complement of cockleburrs and worked toward a ravine, where a covey of birds had been marked down on the side of a ditch. Jarvis came to an indifferent point and was not backed by Bessie. The birds ran and false point was credited to Jarvis. Bessie roaded and pointed in a thicket and the bird was flushed to order, shot at and Bessie dropped to order. Bessie, roading in a canebreak, got away from her handler, and Jarvis was ordered in until she could be found. While under orders Jarvis pointed. Avant followed Bessie and found her on a point just established. The point was not allowed either dog, and they were ordered back into field, where a bevy had been marked down. Bessie ranged well and displayed good speed, while Jarvis worked close to heel. After considerable work Bessie succeeded in making four or five bad flushes and displayed no nose at all. Both dogs ordered up for want of merit under Rule 4. Down fifty-five minutes.

COUNTESS MAGNET AND NELLIE BLY, handled respectively by Waters and Avant, were next in order. Having lunched, the judges ordered these two little bitches down in a cornfield at 12:35, and they immediately began to awaken some interest in the Derby, which heretofore had been regarded as a stake that might well be dispensed with if such work as had been witnessed was any criterion to judge by. Both dogs displayed splendid speed, style and ranging qualities, with speed in favor of Nelly Bly. One of the spectators flushed, on the edge of a marsh, a bevy that lit along a fence across marsh. Working down wind Nelly made a flush, and Magnet, not to be outdone, false pointed. The birds got up wind, and lit in heavy marsh grass that tested the nose of both these youngsters to the uttermost. Nellie made another flush, while Mag. pointed staunchly and a bird was shot at. Both dogs were steady to wing and shot. Moving on, both dogs were glad to get out of the grass and did some beautiful work in a cotton field that proved, however, barren of birds. Nearing the head of hollow in the field a stray horse flushed a bevy that lit in sedge and briers. Nelly made a bad flush, while Mag. pointed a single bird down wind. It was flushed to order. She dropped to wing handsomely, and won the heat, after being down one hour and ten minutes.

PINK B. AND DON were now put down, the first named handled by Short and Don by Leucht. Pink is a remarkable animal and is built like a race horse and tough as iron. Cast off into a cotton patch where several birds had been marked down, he pointed so quick, roaded so fast, and cut out his work in such rapid fashion that this reporter was "bothered entirely." He quickly scored two points, while his opponent made two false points, which so nettled Pink that he got in a flush just to show Don that birds were around. This steadied him somewhat, and Don succeeded in getting in a point. Crossing a ravine alongside the hill Pink scored another flush, while Don got in another point, and then pointed another bird that Pink had run over. Instead of sobering him up by this good example, Pink must needs flush his third bird, and Don, thinking that Pink was having all the fun, got up a bird and came near chasing it. The example seemed contagious, for one of the spectators soon after started a rabbit that rushed pell-mell into a bevy of birds feeding in a pea patch. They got up incontinently, and lit a short distance away in a cornfield. Both dogs got in a point and dropped to shot. Judges not being able to decide between the two, they were turned loose again, when Don pointed a bevy, got nervous, flushed and chased. This settled his chances after a fifty-five minutes' race.

Second Series.

WHISKEY AND BIDDY.—At 4:30 P. M., Whiskey, handled by Stokes, presented the most crestfallen air imaginable, and seemed to wear her honors in a manner that plainly showed that she would prefer swapping them for something to eat. Again, she evidently did not like the treatment she had been subjected to when the other dogs were running. She considered herself "a *native* and to the manner born," whereas her owner had kept her tied to a rope and dragged all over the fields at the tail of a big Kentucky mule, and whenever the rope straddled a corn or cotton stalk, it made no difference to the mule, Whiskey had to keep up all the same. Biddy, on the contrary, evidently felt the honor she had gained over the hated Llewellin breed. Turned down on scattered birds, Biddy's handler, Skannal, flushed a bird, and Biddy scored a good point on another, while Whiskey, trying to protect her owner from briers and "sich," kept square between his legs, and scared up two birds in succession that were trying to block the way. No amount of coaxing could persuade her to hunt. She had the sulks, and wanted to go home. Compassionating her, the judges called up Biddy and gave her the heat, while Whiskey went home firmly resolved never to be fooled into another field trial. Down eight minutes.

COUNTESS MAGNET AND PINK B. were put down at 4:37 P. M. This was the event of the Derby. Some good work was expected, and the crowd was not disappointed. Scarcely two minutes elapsed before Pink pointed, but the bird flushed wild. Pink, ranging in cover, established another point, which proved to be a rabbit. Pink proved unsteady when the rabbit got up, but was stopped to order. He then made another point in grass, and the bird was killed. Magnet roaded and got in a false point. Sending the dogs over the hill in low cotton the spectators witnessed a fine race. Both dogs displayed splendid speed, style and ranging qualities, with style and quartering in favor of Mag., speed and ranging for Pink. A bevy being marked down in a cotton patch, both dogs did some good roading on running birds, and each scored a point. A bird flushed by handler, Mag. proved somewhat unsteady to wing. Turning back Magnet roaded out of sight of handler, and when found was on a staunch point. No birds being found dogs were called up and heat given to Pink B. Down forty-one minutes.

WEDNESDAY.

Third Series.

Weather was cloudy in morning, but cleared up warm.

PINK B. AND BIDDY, handled by Short and Skannal respectively, were put down at 9:10 A. M. in a cornfield west of Opelousas. The dogs found less cover to work in, but birds were scarcer than in field of the day before. Biddy was quite fresh and a little wild. She ranged well and evidently liked the work her companion cut out for her. In fact she was too fond of looking at him and did not pay attention to her work. Pink is not the least bit gallant. He buckled down to business and soon pointed a bevy in the cornfield. Biddy, ordered up, failed to back, and stole the point. As the odds were unequal the heat was given to Pink B., and the honor and money went with it.

Fourth Series.

COUNTESS MAGNET AND BIDDY were cast off at 10 A. M. A bevy having been flushed near a pond in cornfield lot in hedge some good ranging was done by both dogs, when suddenly Biddy made a bad flush. Magnet soon after pointed alongside of her hedge, and Biddy backed her. Moving on, Biddy scored another flush, then roading together both dogs got in another point, which proved false. Biddy soon got a good point, and Magnet offset it by establishing a similar one soon after. Dogs called up and heat and second money given to Magnet. Down fifty-eight minutes.

Fifth Series.

NELLY BLY AND BIDDY.—Biddy was evidently getting too warm and refused to range any more. She had been allowed fully an hour's rest, but it seemed to do her no good. Nelly Bly is a fine ranger, possessing great speed, but seems sadly deficient in nose. In this race she scored five flushes and two false points, while Biddy did not get in a single point. The heat and third money was given Nelly Bly, and the Derby was finished.

This ended the Second Field Trials of the New Orleans Gun Club, and certainly the gentlemen composing it must feel highly gratified at their grand success. Only one thing occurred to disturb the perfect harmony of the meeting, and that was the action of Mr. Short in withdrawing his dogs. The executive committee of the club wrote him a letter and gave him ample opportunity to make an explanation, which he did not choose to take advantage of, and they had no other course left than to debar him from all future trials given by the club. It is the intention of the gentlemen who have been so successful in getting up these trials to hold another next winter on a much grander scale and have prizes of such a character as to induce some of the sportsmen across the water to send a delegation of men and dogs.

BIRMINGHAM DOG SHOW.

THE twenty-third annual exhibition of dogs at Birmingham, Eng., took place on the last four days of November, and was a very successful affair. One thousand dogs were exhibited, and for want of space many entries were returned. The Rev. G. F. Hodson judged the pointers, Mr. W. List the setters, and the Rev. W. Sergeantson the spaniels. We have space only for the comments and awards in those classes, for which we are indebted to the *Live Stock Journal:*

POINTERS.

In large size champions, Ponto and Bang II. met again, this time in favor of the former, who was looking uncommonly well, while the latter was short of flesh. In non-champion dogs, Young Ponto was second; he has first-class bone, with good loin and well-formed head, but we hardly like the expression of his eye. Graphic, first prize, is a fine young dog with capital quarters, well-bent stifles, and stands on good legs and feet. Lake is a fair dog, better behind than in his forequarters. Major is weak in loin and has rather a plain head. Don is nice in style, but a little light in thighs. Peach, the winner in bitches, has good bone and is very stylish, but a trifle throaty. Ruby, second prize, a great favorite with us, was shown much too fat, or she would probably have displaced the winner. Belle of Kirton is a good bitch, with great depth of brisket, but has a short stern, which detracts considerably from her appearance. Small-sized champions mustered in force, there being four, but old Bow Bells, although she scarcely looked as well as we have seen her, was equal to the occasion, and secured the prize from Sambo, the Devil and Joss, Prime being the property of one of the judges, and not for competition. In small-sized, non-champion dogs, Prior we thought very lucky to get first. He has good bone, but a weak loin, and anything but a nice head. Young Wagg, second prize, shows much more quality. He stands well, but is highly bitch-faced. Banner is stylish, and an improving youngster, with a nice colored eye. Devon Wagg is already a little heavy in head, but he shows well. The lemon and white Don is well formed, but his head is plain. The first in small-sized bitches is making up into a high class bitch, and was, moreover, shown in splendid condition. She has good loin and haunches, with beautiful head. Cora has a nice head, and is well made, but short of muscle. Bona Belle is well formed, but Bona Dora is too light. Mite is a little plain in head, and might have more bone. Lass of Devon has improved, but is upright in shoulder. Amber II. has nice quality, with a lean head. Champion Prude II. has good bone and legs and feet, but shows age.

SETTERS.

The absence of Royal Rock in the champion class for English setters left Royal IV. without opposition. This is a very

MR. JOS. H. DEW'S BLACK, WHITE AND TAN ENGLISH SETTER DOG "AMERICAN DAN."
Divided Third Prize in N. A. K. C. All-Aged Stake, 1882.

characteristic dog. Mr. Shorthose was again successful in open dogs with Royalty, a son of the champion winner, and his celebrated bitch Novel. Royalty is a taking dog of the workmanlike type, with plenty of bone and a good coat. Young Rock also shows great character and style, and has beautiful feather. Curacoa was the reserve number, but we thought him rather lucky, as he has not the best of heads, and is decidedly light; Count Waldersee is a better stamp, and has a nice lean head; Mr. Pearson's Rock is heavily marked and just a little coarse; Bounce has good depth of brisket and legs and feet, otherwise we thought him plain; Rocket has good style and was in fair coat; Tam is a bit long in the back, and might have a better head; Jock should be stronger in loin; the liver marked Rake is a fair dog, but Rap, although good in coat, has a short head; Hatteraick is good in shape and well feathered, but bitchy in face; Jock o' Hazledean is plain in head. Bitches made another good class, headed by Mr. Shorthose with Novelty, own sister to the winner in the previous class. This bitch is full of quality and has a beautiful head, but we have seen her in better coat; Empress Symbol is rather small and weedy, and has a light eye, but at the same time shows great character; the lemon-and-white Helen by comparison is decidedly coarse; Belle has a good body, but a plain head, and not very clever in feet; Royal Ruby has plain ears and a light eye, but a good coat; Meg Merrilies is very good in style, with typical head and nice flat coat. This bitch ran the second prize winner close for her position.

Black and tan or Gordon were a good lot. The well-known Fan II. carried off the champion prize from Sibyl, Grouse and Ranger; and in the Open Dogs, Marquis for the first time scored at Birmingham. He is all through well made, but we should like him better with a little more markings; Dan II., second prize, was in splendid coat, with fair tan, but a plain head; Sam is a fine big dog, with heavy bone; Chilled Shot should be better marked; Bruce VI. is too light in eye; Roy wants quality and more marking; Lord Harry is too curly, but Rhoderick Dhu is a fine dog out of condition. Bitches also came out strongly. First, Floss, rather light in tan; but a good bitch, in clipping condition; second, well shown, rather light in bone, and might be deeper in tan; Moll IV., a beautiful bitch, quite out of condition; Czarina, rather leggy, but with a nice lean head; Kate, rather weak in loin, but well marked; Kate IV., very good style; Norwich Bloom, a good bitch out of condition.

In Irish Champions, Garryowen won from Kate and Count, but it was a close thing with the bitch, who is very first-class. Bob, first in Non-champion Dogs, is good in head, hindquarters and feather, but struck us as being a trifle loaded in shoulder. Roden, second prize, is well made, and was shown in good coat, but his color is too light, and he is inclined to be bitch faced. King Richard is better in color. Sir Shot has a good coat, but is inclined to be coarse. Mountaineer is a nice sort of dog, except that he is a little leggy. Rufus is also leggy, and has a plain eye. Chief is a fair dog but for indifferent feet. Frisco has nice feather, but a plain head. Nellie, the winning bitch, is large, and, we thought, rather short of quality. She was also much out of coat. Wee Kate, second prize, is very pretty and full of quality. We certainly liked her the better of the two. Lady Palmerston II. is showy, but too light in color. Ruby Junior is well made, but out of coat. Lucy is very smart, with good feather, but not dark enough in color. Rose II. has a typical head, and is a rich color, but out of condition.

SPANIELS.

Irish water spaniels headed the list: Mickey Free, in good coat, held the first position in dogs; Young Patsey, second prize, has also a good jacket, but is plainer in head; Laverick is shorter in head, and not in such good condition. Young Hilda, first in bitches, is a very good one, and was well shown, beating her kennel companion Lady in shape of head; Molly Brallaghan was not herself at all. Of the two water spaniels other than Irish, Swimmer was in the best coat, and won.

Clumber dogs were well represented, with the well-known John o' Gaunt first, and York, equally well known, second; Tower is a very fair dog, with a good coat; Placid Rover is lengthy, and has a good coat, but is altogether too big; Racket is too high on leg. Leda took the prize for bitches; she is good in coat and feather, but wants character in head.

Sussex dogs found Guy first; he might be better in head, but his coat and color are right. Quince is quite big enough, and has a bloodhound eye; Rover III. showed most quality in head, but he was out of condition. In bitches, a second prize was given to Merrythought, with a fair coat, but rather wanting in character; Zulu, that very typical black, was first; we have often looked through this dog and cannot find a fault in him, except his eye. Solus, second prize, is rather high on leg, and not quite so good in head, but he is the right sort; Kaffir is heavier in head, but is very true to spaniel character. In bitches, nothing could beat Squaw, who always holds her own. Flash II., second prize, is a good sort, a trifle short in body. Topsey is a bit common and curly in coat. Salus II. is good in style, coat, and condition. Beverly Bee was out of coat. It was a close thing between Fop and Alonzo in field spaniels other than black; they are both grand, but we lean to the latter; but on the present occasion the former was in best coat. Counsellor is a liver and tan of the old fashioned style. Little Bob II., nearly a black, is well made, but fails in head. Jingo is small, and has a plain head. In bitches, the winner, Lass of Devon, a liver and tan, is long in body and close to the ground, with a nice head. Floss, the same color, is very typical. Busy, a black and tan, has a good coat, but Fanciful, a black, tan and white, is pretty in color, but poor in quality. In the above class Gwladys, a black and tan with a nice coat and good tan, but rather leggy, took Messrs. Willetts' cup for the best black, white and tan or black and tan spaniel in the show.

Following are the awards:

TEAM OF POINTERS.—Llewellin prize, J. Fletcher (Young Ponto, Ruby and Joss).

POINTERS.—(LARGE)—CHAMPION: Prize, J. Fletcher (Ponto).—OPEN—Dogs: 1st, E. C. Norrish (Graphic); 2d, J. Fletcher (Young Ponto). Vhc., G. Pilkington (Lake). Hc., T. Whippell (Major). C., T. Wippell (Rex and M. Firth (Don. A very good class. Bitches: 1st, A. P. Heywood-Lonsdale and B. Field (Peach); 2d, J. Fletcher (Ruby).—SMALL—CHAMPION: P. J. Lloyd Price (Bow Bells).—OPEN—Dogs: B. Lewis (Prior); 2d, S. Smithies (Young Wagg). Hc., C. Andrew (Don) and R. P. Leach (Banner). C., W. Coates (Bob). Bitches: 1st, E. C. Norrish (Glee); 2d, R. P. and P. J. Charles (Cora, late Bess). Vhc., B. Field (Amber II.) and J. E. Mason (champion Prude II.). Hc., R. P. Leach (Bona Bell). C., T. Wippell (Mite), R. J. Lloyd Price (Silver Bells), J. L. Bulled (Lass of Devon), and J. P. Pattison (Fanc). An excellent class.

SETTERS.—ENGLISH—CHAMPION: Prize, J. Shorthose (champion Royal IV.). Open—Dogs: 1st, J. Shorthose (Royalty); 2d, J. Freme (Young Rock). Vhc, A. E. Batchelor (Jock), A. Evans (Bounce), J. Royle (Count Waldersee, late Count), A. E. and H. Parkinson (Curacoa), and E. Pearson (Rock). Hc, T. B. Bowers (champion Royal Jock, late Jock II.), T. D. Syers (Rocket), A. E. Batchelor (Tam), J. B. Barrow (2) (Rake and Rap), H. F. Grant (Dirk Hatteraick), and A. Evans (Jock o' Hazledean). C., W. H. Calder (Grouse of Dalgona, late Grouse). A very good class. Bitches: 1st and cup, J. Shorthose (Novelty); 2d, J. R. Robinson (Empress Symbol). Vhc, A. P. Heywood-Lonsdale (Helen) and H. F. Grant (Meg Merrilies). Hc, G. Ryall (Belle). C., T. E. Issard (Royal Ruby).—BLACK AND TAN—CHAMPIONS: Prize, J. U. Winkfield (Fan II., late Fan).—OPEN—Dogs: 1st, T. Jacobs (champion Rodon). Vhc, J. Shorthose (Sir Shot), Capt. P. Priestley (Sam). Hc, R. Chapman (Lord Harry, late Harry), Sir A. Chichester, Bart. (Roy), E. L. Parsons (Bruce VI.,) and W. M. Eglington (Chilled Shot, late Shot). C., J. Shorthose (Don I.), J. C. Williams (Young Blossom), and T. Jacobs (Czar). Bitches: 1st, J. G. Williams (Floss); 2d, W. M. Eglington (Fan IV.). Vhc., J. Shorthose (Moll IV.). Hc., T. Jacobs (Czarina) and R. Chapman (Kate IV., late Kate).—IRISH—CHAMPION: Prize, J. J. Giltrap (champion Gerryowen).—Open—Dogs: 1st, J. Kennedy (Bob, late Villikins); 2d, D. Sullivan (Roden). Hc, T. M. Hilliard (King Richard), D. Stoker (Shot), H. L. Jephson (Sir Shot), and J. K. Milner (Frisco). C., T. M. Hilliard (Chief), H. M. Wilson (Mountaineer), A. F. Hawkins (Rufus), and J. J. Meldon (Jack). A good class. Bitches: 1st, H. M. Wilson (Nellie); 2d, L. F. Perrin (Wee Kate). Vhc., J. Kennedy (Lucy), G. F. Smurthwaite (Ruby Junior), J. J. Giltrap (Lady Palmerston II.) and G. H. Lotus (Rose II.). Hc., S. D. Hine (Countess Patrick), T. Adkins (Nell), W. H. Cooke (Judy), and R. Harrison (Polly). C., J. Kennedy (Countess), D. Sullivan (Rose II.), and T. M. Hilliard (Countess Palmerston). A splendid class.

WATER SPANIELS.—IRISH—Dogs: 1st, J. S. Skidmore (Mickey Free); 2d, R. B. and T. S. Carey (Young Patsey). Vhc and hc, A. Canty (Laverick, late Limerick, and) Barney. Bitches: 1st and vhc, G. S. Hockey (Young Hilda and Lady); C, R. B. and T. S. Carey (Molly Brallaghan).—OTHER THAN IRISH: Prize, F. E. Schofield (Swimmer). A poor class.

SPANIELS.—CLUMBER—Dogs: 1st and Spratt's cup, H. H. Holmes (John o' Gaunt, late Boss); 2d, C. E. Holford (York). Vhc, H. H. Holmes (Tower) and E. Bishop (Placid Rover). Hc, R. Smallwood (Racket). C, A. Pemberton (Duncan). Bitches: 1st, E. R. Allen (Leda). SUSSEX—Dogs: 1st, J. G. Gamon (Guy); 2d, T. Newington (Quince). Vhc, A. E. and A. Parkinson (champion Rover III.). C, J. G. Gamon (Vita) and A. Phillips (Ben). Bitches: 2d, H. B. Spurgin (Merrythought). FIELD (BLACK)—Dogs: 1st, J. Royle (champion Zulu); 2d, F. E. Schofield (Solus). Vhc and c, J. Freme (Kaffir and Little Bob III.) Bitches: 1st, T. Jacobs (champion Squaw); 2d, P. Bullock (Flash II.). Vhc, F. E. Schofield (Salus II.), J. N. Clarke (Topsey), and J. C. Phillips (Beatrice). C, J. Freme (Beverley Bee) and Rev. A. G. Barker (Smutty).—OTHER THAN BLACK—Dogs: 1st and 2d, H. B. Spurgin (Fop, late Don Pedro, and Alonzo). Vhc, J. C. Phillips (Pembroke) and J. G. Gamon (Counsellor). Hc, C. E. Holford (Little Bob II.) and G. W. Carter (Jingo). C, G. Wellings (Tichbourne). Bitches: 1st, T. Jacobs (Lass of Devon); 2d, H. B. Spurgin (Floss). Vhc, J. G. Gamon (Fanciful) and J. Freme (2) (Busy and Gwladys). Hc, C. E. Holford (Nelly Bly), J. G. Gamon (Cosie), J. Royle (Zuess), and J. C. Phillips (Pollie). C, C. E. Holford (Leda). A very good class.

SIBERIAN BLOODHOUNDS.—Can any of our readers give us any information regarding the dogs of this breed that were owned by the late Francis Butler of New York?

AN ARKANSAS 'POSSUM HUNT.

BEING out of the city some time ago, I found that a number of enterprising colored individuals had made preparations for a 'coon hunt. I am fond of that sport and offered my services, which they condescended to accept, and appointed a meeting place. I was promptly on hand and found five or six stout negroes, with axes and torches and a pack of dogs, the like of which was never seen but among 'coon hunters, being composed of hounds, mongrels and "curs of low degree," mostly very low. We started up the creek bottom into the paw-paw and persimmon thickets, and soon the dogs opened. Away we went with a yell, over logs, through mud, water, briars and thorns, to the point where a general yelping proclaimed that the dogs had treed. Arriving there, we quickly found that our game was a 'possum. It was a matter of but few moments to take him in, and we were quickly under way again.

Here I encountered a curious piece of superstition. The leader of the hunt, an old, grizzly negro, had a pocket full of nails, and drove one into each of the sides of the tree out of which we got one 'coon, in as nearly the direction of the points of the compass as he could guess. Taking pity on my ignorance, he informed me that witches followed all hunting parties, scared away the game, bewildered the hunters and did various other damage, but on coming to the tree would have to take time to draw all these nails out with their teeth before they could go any further. This was news to me, though familiar with many negro superstitions.

Leaving our tree, the dogs soon made another start, and the chase began. We crossed the creek several times, and then the chase took over the adjoining mountain and down a deep ravine. We followed hard, first on one side of the ravine and then the other, and at last came to the tree. The axes soon brought it down, the dogs rushed in, the negroes yelled and, I believe, I whooped as lively as any one. The music was lively around the top of the tree. Every now and then a puppy would come out crying and scratched, but at last order came out of the chaos, and we found two dead 'coons in the brush. It was an old den, and one was in there when we chased the other in. When we started out, no one knew which side of the ravine we came in on, and no one cared. We were completely lost, and concluded to hunt until daylight, which we did, catching another 'coon, two 'possums, and rabbits and polecats almost without number. I do not think anything but an Arkansas mongrel will catch a polecat, but they enjoy it. Daylight enabled us to get out, very tired, but all ready to go on some other occasion. SPORTSMAN.

THE ESSEX COUNTY (N. J.), HOUNDS had a fine run and a feast on Christmas by way of celebrating the day. It was an impromptu affair, gotten up in response to a special canine appeal from the kennels. It seems there has been no fox hunting for over a month on account of frost, and the hounds feeling aggrieved at the season closing so early, appointed a committee consisting of Loud, Lovely, Lead and Sprightly, headed by the old veteran Towler, to wait on their master huntsman Howard. The jovial huntsman could not refuse their appeal, although it is hard on horses to follow this weather 'cross country, so early in the afternoon the horn sounded and every hound was alert for the chase. The whole pack were called out and taken to cover, where the scent of the fox was soon found. Towler led the pack in full cry, and for over an hour the fox led them a merry chase. Finally old Reynard took to water near a convenient swamp, and thus throwing off the eager dogs for some time. At last the uncomfortable position started his foxship to his heels again, when the hounds took his scent, full breast high. Every tail was plumed high and every nose close to earth, with the air ringing with a chorus of deep voices as the pack sprang forward at increased speed. Now the fox is doomed! and it proved so, for he was run to earth in a meadow close by. The Christmas feast was quickly finished, and as the huntsman and a few followers came in sight, every hound was licking his chops for more. The kill was near Brookdale, and the run over twelve miles.

ST. BERNARD IMPORTATION.—Mr. R. R. Hamilton, of New York, has recently imported from the Kennel of Dr. Gordon Stables, of Twyford, Berks, Eng., the smooth-coated St. Bernard dog Tel-el-Kebir. He is five months old and weighs sixty pounds. His color is a brindled fawn with black points, his toes and tip of tail are marked with white, and he has double dew claws. He is by Mr. H. W. Wild's Hermit out of Mr. Hall's Dora. He is a very promising puppy and his owner may well be proud of him.

TRANSPORTATION OF DOGS.

Editor Forest and Stream:

In the past the transportation of sporting dogs on Southern railways called forth censorious remarks in your columns. In compliance with my suggestion, the managers of the Savannah, Florida & Western Railway, the Jacksonville, Pensacola & Mobile Railroad, and the Fernandina, Cedar Keys & Tropical Railroad consented to carry sporting dogs free of charge in this State, upon conditions previously stated in your columns.

Acting on my suggestion, Mr. Taylor, the General Passenger Agent of the S. F. & W. Railway, communicated with the managers of the Associated Railways of Virginia and the Carolinas, and succeeded in securing very liberal rates for the transportation of sportsmen's dogs, as the appended circular will establish. AL FRESCO.

ASSOCIATED RAILWAYS OF VIRGINIA AND THE CAROLINAS.
Office Traffic Manager,
RICHMOND, Va., Nov. 3, 1882.

(Circular No. 324.

To AGENTS.—Rates for transporting dogs on passenger trains, taking effect Nov. 10, 1882.

Dogs carried on passenger trains, when accompanied by owner or attendant, will be charged one-half cent per mile each. For distances less than fifty miles, twenty-five cents. Sportsmen en route to or from hunting ground will be allowed free transportation for one dog, and above rates charged for each additional animal.

Dogs will be carried in baggage cars only. In no case will they be permit ed to ride in passenger coaches, and not taken unless accompanied by owner or attendant.

Above supercedes all previous dog tariffs over these lines.

T. M. EMERSON,
Gen'l Pass. Agt., Atlantic Coast Line.

Approved, W. CLARK,
Gen'l Pass. Agt., Seaboard Air Line.
SOL. HAAS, Traffic Manager.
M. SLAUGHTER,
Gen'l Pass. Agt., Rich. & Danville Line

DEATH OF WHISKEY.—The well-known black and white pointer bitch Whiskey, owned by the Westminster Kennel Club, died Dec. 14, aged eight years and five months. She was formerly owned by Dr. W. S. Webb. She was exceptionally well bred, and in her younger days we have seen her do capital work on ruffed grouse and quail. She was possessed of great intelligence, and was very affectionate. She will be greatly missed by the members of the club who were much attached to her. A stone suitably engraved will mark her resting place. The club has also lost by death their promising young dog Corker, by Sensation out of imported Polly. He was a rare good one, and was entered in the Eastern Field Trials and had been doing capital work until a few days before the trials, when he was taken with a severe attack of rheumatism, soon after his arrival at High Point, from which he died.

FAUST AND SPINAWAY.—St. Louis, Mo.—I have sold the champion pointer dog Faust to S. A. Kaye, of the Missouri Kennels, this city, for $500. Mr. Kaye will have the dog in the public stud, and put him at the head of his already fine kennel of pointers, among which are the bitches Mus:tte, by Bow out of Queen, Rose II., by Sensation out of Rose, and Lettie, by Vandal out of Maggie G. I have bought of Mr. E. C. Sterling, of St. Louis, the liver and white pointer bitch Spinaway, by Garnet out of Keswick. A St. Louis gentleman offered Mr. Pilkington $2,500 for Garnet, but the dog remained in England. Keswick cost the St. Louis Kennel Club $500 in England. Spinaway is the only Garnet bitch in America. I shall breed her to Croxteth, by whom she had her first and only litter. Keswick is by Faust out of Faith, a sister to Jaunty.—JNO. W. MUNSON.

OTTAWA SHOW.—Detroit, Dec. 22.—Charles Lincoln, superintendent of the Ottawa Bench Show in March next, assures me that the prospects for its success are very promising. Applications for prize lists are coming in rapidly from all parts of the United States and Canada, and applications for entry blanks are quite common. In addition to the prizes announced last week, there is a special, offered by the president of the show, of $50 to be competed for by dogs sent from England and the United States, Canadian dogs being barred. The prizes for fox terriers and cocker spaniels are calling for much inquiry by the owners of those breeds.—W.

LUNA MAY.—Elmwood, N. C., Dec 20.—*Editor Forest and Stream:* In your journal of the 8th inst., you say "Luna May ran at Robbin's Island two years ago." You are mistaken. This year was her first public appearance in trials. Please make the correction and oblige, yours truly, E. S. WANMAKER. [We wrote of Maida: "She won second at Robbin's Island a year ago. Luna May is very graceful," etc., but somehow things got mixed].

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, or breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Trixy. By Mr. Chas. J. Henri, Chicago, Ill., for orange and white pointer bitch, whelped July 11, 1882, by Jerry (Sensation—Collum's bitch out of Snowflake (Glenmark—Girl).

Soup and Chip. By Mr. Chas. A. Tucker, New York, for liver and white cocker spaniel dog and bitch, whelped Oct. 11, 1882, by Snipe out of Cute.

Franco. By Dr. H. S. Piffard, New York, for liver and white cocker spaniel dog, whelped Oct. 14, 1882, by Snipe out of Cute.

Quail O'More. By Mr. H. Gaylord, Elmira, N. Y., for red Irish setter bitch, whelped May 16, 1882, by champion Rory O'More out of Sampson's Nora (Elcho—Firefly).

Dash II. By Mr. D. A. Goodwin, Newburyport, Mass., for black and white ticked English setter dog, 3mos. old, by Dash III. out of Juno (Leiaps—Belle).

Saphira. By Mr. W. S. Kittle, Princeton, N. J., for black, white and tan beagle bitch, whelped June 17, 1882, by Flute (Rattler—True) out of Lucy (Juno—Bess).

Rop. By Mr. Geo. L. V. Tyler, West Newton, Mass., for black and white ticked pointer dog, whelped June 13, 1882, by Alden's champion Pete, Jr., out of Campbell's Rozie.

Sam B., Oscar, Dixie, Sampson, Collum and Rozie. By Major Lovejoy, Bethel, Me., for red Irish setters, four dogs and two bitches, whelped Aug. 14, 1882, by Ned Elcho (Elcho—Stella) out of Bridget O'More (Rory O'More—Lotta).

Ned Kelley. By Mr. J. B. Hadley, Marion, Mass., for white, with lemon ears, English setter bitch, whelped March, 1881, by Fay's Coin out of Belfast (Dash III.—Opal).

Rosecoad. By Mr. F. W. Wheaton, Wilkes-Barre, Pa., for white, black and tan beagle dog, whelped July 25, 1882, by Mr. N. Elmore's imported Ringwood (Hunter—Beauty) out of his Roxy (champion Rattler—Fan).

Bertie. By Mr. W. E. Rea, Hackettstown, N. J., for black and white ticked English setter bitch, whelped Sept. 5, 1882, by Druid out of Poetess.

Bonny Kate II. By Mr. James Cooper, Jr., Red Bank, N. J., for liver and white setter bitch, whelped Sept. 7, 1882, by Miles Johnson's Joe out of E. H. Woody Bet.

Venus. By Mr. E. P. Hodges, Pittsburgh, Pa., for fawn, with black mask and ears, English mastiff bitch, whelped Nov. 5, 1882, by Mr. W. H. Lee's Turk (Rajah—Brinda) out of Mr. W. Wade's imported Gipsy.

Bruce. By Mr. James Burrill, Hackettstown, N. J., for orange and white English setter dog, whelped Sept. 3, 1882, by Druid out of Poetess.

Breeze. By Mr. James L. Smith, Hackettstown, N. J., for black and white English setter dog, whelped Sept. 3, 1882, by Druid out of Poetess.

Blow. By Mr. James L. Smith, Hackettstown, N. J., for orange and white English setter dog, whelped Sept. 3, 1882, by Druid out of Poetess.

Brant and Bonnie. By Mr. Hugh L. Willoughby, Saratoga, N. Y., for black, with white markings, cocker spaniels, dog and bitch (Sipio—Klea).

Wasp. By Mr. T. B Dorsey, Ellicott City, Md., for black, white and tan fox-terrier bitch, whelped Sept. 23, 1882, by the Missouri Kennel's imported Sting II. out of Tipsey II.

Deacon. By Mr. W. J. Percival, Palo, Mich., for black, white and tan foxhound out of imported Tomas—Crowd; also

Maud. For black, white and tan foxhound bitch, same litter.

BRED.

☞ *See instructions at head of this column.*

Syren II.—(Glencho. Mr. A. S. Guild's (Lowell, Mass.) red Irish setter bitch Syren II. (Elcho III.—Mag) to Mr. W. H. Pierce's Glencho (Elcho—Noreen), Nov. 12.

Nora—Glencho. Mr. A. A. Sampson's (Troy, N. Y.) red Irish setter bitch Nora (Elcho—Firefly) to Mr. W. H. Pierce's Glencho (Elcho—Noreen), Dec. 8.

Chica—Grouse. Mr. J. F. Johns's (Haverhill, Mass.) black, white and tan English setter bitch Chica (Royal Blue—Diana) to Mr. D. F. Waters's Grouse (Grouse—Romp).

Lassie—Cashier. Mr. J. J. Scanlan's (Fall River, Mass.) English setter bitch Lassie (Blue Dan—Flake) to his Cashier (Dash III.—Opal), Dec. 4.

Princess—Black Princess. Mr. W. B. Williams's (Nyack, N. Y.) black and white cocker spaniel bitch Princess (Wildair—Dolly) to Mr. A. C. Wilmerding's (New York) black spaniel Black Prince (Benedict —Madeline), Dec. 7.

Majorca—Comet. Senor Don Jose Fonrodona's (Havana, Cuba) liver and white Spanish pointer bitch Majorca to Dr. James Warner's liver and white pointer dog Comet (Croxteth—Vinnie), Dec. 1.

Jaunty Bow. Mr. Edward Chiles's (New Orleans, La.) imported liver and white pointer bitch Jaunty (Lord Sefton's Marquis—Pilkington's Jessie) to his champion Bow, Dec. 12.

Gretchen—Bergman. Mr. Wm. Loeffler's (Preston, Minn.) dachshund bitch Gretchen to his imported Bergman.

WHELPS.

☞ *See instructions at head of this column.*

Rose. Mr. Fred. Smith's (Elmira, N. Y.) liver pointer bitch Rose (Duke—Queen), Dec. 5, seven (five dogs) by Knickerbocker (Glenmark—Girl).

Flake. Mr. J. J. Scanlan's (Fall River, Mass.) English setter bitch Flake, Dec. 11, nine (six dogs) by his Cashier (Dash III.—Opal).

Pixie. Mr. Robert C. Cornell's (New York) fox-terrier bitch Pixie, Dec. 17, six (four dogs) by Mr. J. C. Drayton's Tartar.

Fan. Mr. Richard-Torpin's (Philadelphia, Pa.) Gordon setter bitch Fan (Dick—Gypsy), Nov. 24, six (three dogs), by Mr. Samuel G. Dixon's Pilot (Grouse—Maud); all black and tan.

Nell Kelley. Mr. F. B. Hadley's (Marion, Mass.) white, with lemon ears, English setter bitch Nell Kelley (Coin—Belfast), Nov. 23, five (three dogs) by Wagner (Rink—Mollie).

SALES.

☞ *See instructions at head of this column.*

Trixy. Orange and white pointer bitch, whelped July 11, 1882 (Jerry—Snowflake), by Mr. W. J. Percival, Palo, Mich., to Mr. Chas. J. Henri, Chicago, Ill.

Reine. Mastiff bitch, whelped July 21, 1882 (Duke—Pride), by Mr. Charles Shaw, Clinton, Mass., to Mr. La Monte Green, Attica, Ind.

Olivette. Liver and white pointer bitch (King Bow—Grace), by the Detroit Kennel Club, Detroit, Mich., to Mr. Geo. E. Poyneer, Dayton, Iowa.

King Lear. Lemon and white pointer dog puppy (King Bow—Chess), by the Detroit Kennel Club, Detroit, Mich., to Mr. Geo. E. Poyneer, Dayton, Iowa.

Rosalpa. Liver pointer bitch (Ranger—Chess), by the Detroit Kennel Club, Detroit, Mich., to Mr. Oscar Allen, Lincoln, Ill.

Lurette II. Liver and white ticked pointer bitch (King Bow—Lurette), by the Detroit Kennel Club, Detroit, Mich., to Mr. W. J. Valden, Uniontown, Ala.

Pete. Black and white pointer dog puppy (King Bow—Chess), by the Detroit Kennel Club, Detroit, Mich., to Mr. H. C. Crosby, Ionia, Mich.

Chess II. Liver and white pointer bitch (Ranger—Chess), by the Detroit Kennel Club, Detroit, Mich., to Mr. R. L. Cheney, Sioux City, Ia.

Dish IV. Black and white ticked English setter dog, 3mos. old (Dash III.—Juno), by E. H. Hartshorn, Boston, Mass., to Mr. D. A. Goodwin, Newburyport, Mass.

Rex. Black and white ticked pointer dog, whelped June 13, 1882 (champion Pete, Jr.—Roxie), by Mr. Geo. L. V. Tyler, West Newton, Mass., to Mr. E. E. Haines, Charlestown, Mass.

Telfine. Red Irish setter bitch puppy (champion Rory O'More—Quail II.), by the Rory O'More Kennels, Albany, N. Y., to Mr. John Farnsworth, same city.

Captain. Red Irish setter dog puppy (champion Rory O'More—Norah O'More), by the Rory O'More Kennels, Albany, N. Y., to Mr. E. Hall, Buffalo, N. Y.

Clive. Red Irish setter puppy (champion Rory O'More—Norah O'More), by the Rory O'More Kennels, Albany, N. Y., to Dr. John Buckley, Moorhead, Mich.

Vancouver. Red Irish setter bitch puppy (champion Rory O'More—Quail II.), by the Rory O'More Kennels, Albany, N. Y., to Mr. Fred. Comfort, Catskill, N. Y.

Nancy Lee. Red Irish setter bitch puppy (champion Rory O'More—Quail II.), by the Rory O'More Kennels, Albany, N. Y., to Mr. M. Walrath, East Albany, N. Y.

Deacon. Red Irish setter dog, whelped Feb. 19, 1883 (Ned Elcho—Bridget O'More), by Major Lovejoy, Bethel, Me., to Mr. C. W. Felch jr., Denver, Col.

Oscar. Red Irish setter dog, whelped Aug. 14, 1882 (Ned Elcho—Bridget O'More), by Major Lovejoy, Bethel, Me., to Mr. Thos. Eagan, Halifax, N. S.

Sam B. and Sampson. Red Irish setter dogs, whelped Aug. 14, 1882 (Ned Elcho—Bridget O'More), by Major Lovejoy, Bethel, Me., to Mr. Samuel Belton, Philadelphia, Pa.

Rock—Norah whelp. Red Irish terrier dog, whelped Aug. 7, 1882, by imported Rock (Gaelic—Midge) out of Norah (Spring—Nettie) by Mr. Lawrence Timpson, Red Hook, N. Y., to Mr. Robert Ives Crocker, New York.

Bruce. Orange and white English setter dog, whelped Sept. 3 1882 (Druid—Poetess), by Mr. James Ayres, Allamuchy, N. J., to Mr. James Burrill, Hackettstown, N. J.

Breeze. Black and white English setter dog, whelped Sept. 3, 1882 (Druid—Poetess), by Mr. W. E. Rea, Hackettstown, N. J., to Mr. James L. Smith, same place.

Blow. Orange and white English setter dog, whelped Sept. 3, 1882 (Druid—Poetess), by Mr. W. E. Rea, Hackettstown, N. J., to Mr. James L. Smith, same place.

Queen. Liver pointer bitch, whelped April 14, 1881 (Peep—Patchett), by Mr. Lemuel Willey, Baltimore, Md., to Mr. B. B. Greenwood, same place.

Venus. English mastiff bitch, whelped Nov. 5, 1882 (Turk—imported Gipsy), by Mr. Wade, Pittsburg, Pa., to Mr. E. P. Hodges, same place.

Lightfoot. Blue belton English setter dog, 1 year old (Lincoln—Daisy Dean), by Mr. Jos. H. Dew, Columbia, Tenn., to Col. J. M. Renfrew, Atlanta, Ga.

Shot. Lemon and white English setter dog, age and pedigree not given, by Mr. Judah Avant, Hickory Valley, Tenn., to Col. J. M. Renfrew, Atlanta, Ga.

Sensation—Bellona whelps. Two pointer dogs, whelped Aug. 20, 1882, by the Westminster Kennel Club to Mr. Pierre Lorillard, New York.

Don—Maida whelp. Pointer bitch, whelped July 7, by the Westminster Kennel Club to Mr. Pierre Lorillard, New York.

Judy. Pointer bitch, whelped May 5, 1882 (Sensation—Dell), by the Westminster Kennel Club to Dr. Shaw, Shawboro, N. C.

Pilot—Fan whelps. Gordon setter, whelped Nov. 24, 1882, by Mr. Richard Torpin, Philadelphia, Pa., a bitch to Mr. J. B. Huckins, Boston, Mass., a dog to Mr. J. E. Gillingham, a bitch to Mr. T. A. Ashburner, a dog to Mr. E. S. Dixon, a bitch to Mr. Samuel G. Dixon, and a dog to Mr. R. Torpin, Jr., all of Philadelphia, Pa.

Dandy. Black, white and tan beagle hound (Rattler—Sill), by Mr. W. J. Percival, Palo, Mich., to Mr. Ross W. Nichols, Plattsburgh, N. Y.; also

Drops. Black, white and tan foxhound to Mr. Peter Leclaire, Superior, Wis.; also

Fleet. Black and white foxhound bitch (Pockwindsor—Juno) to Mr. Peter Leclaire, Superior, Wis.

Carrie. Fallow red dachshund bitch pup, by Mr. Wm. Loeffler, Preston, Minn., to Mr. H. C. Beverung, Wausau, Wis.

Bruno. Fallow red dachshund pup, by Mr. Wm. Loeffler, Preston, Minn., to Mr. H. L. Goodman, Chicago, Ill.

PRESENTATIONS.

☞ *See instructions at head of this column.*

Druid—Poetess whelps. English setters, whelped Sept. 3, 1882, by Mr. W. E. Rea, Hackettstown, N. J., a liver, white and tan bitch to Mr. Geo. Merritt, La Porte, Ind., and an orange and white dog to Mr. James Ayers, Allamuchy, N. J.

DEATHS.

☞ *See instructions at head of this column.*

Juno. Beagle bitch, whelped Aug. 4, 1882 (Victor—Nelly), owned by Mr. A. Krueger, Wrightsville, Pa.

Druid—Poetess whelps. Orange and white English setters, dog and bitch, whelped Sept. 3, 1882, owned by Mr. W. E. Rea, Hackettstown, N. J.

Whiskey. Black and white pointer bitch, 8yrs. old, by Dr. Strachan's Flash (George—Peg) out of Schieffelin's Jumo, owned by the Westminster Kennel Club, Dec. 14.

Corker. Lemon and white pointer dog, 18mos. old (Sensation—Polly), owned by the Westminster Kennel Club, Nov. 23, from rheumatism.

KENNEL MANAGEMENT.

GROUSE, Elmira, N. Y.—1. Will it improve the hunting qualities and intelligence of a setter bitch to be spayed? 2. Would you advise any one to have it done where they do not wish to breed? 3. Can you give me the name of some valuable dog trainer who breaks them on Hungarian partridges in America? 4. Trials? Ans. 1. Yes. 2. No. 3. Write to Wm. Tallman, Rock Hill, S. C.

J. W., Lansing. 1. Will you be kind enough to tell me what the trouble is with my dog; as he seems at times to lose the sense of smell. His nose at these times is dry and hot, and he will run into a covey of birds an I not know they are there. He is a Llewellin setter, 18 months old. Ans. Unless there is some catarrhal trouble, of which, however, you make no mention, your dog is probably one of those whose nose is either not yet fully developed, or is perhaps lacking.

BEAGLE.—My beagle bitch puppy, about three months old, has poor appetite, eyes seem weak and drowsy, keeps very thin and seems depressed in spirits. Her bowels are rather loose this while back. Some of my other little puppies bowels are very loose but otherwise as lively as crickets. I feed them on corn meal and skimmed milk for drink. Ans. Give a dose of tinct. of rhubarb one-quarter teaspoonful, which will first clear them and tone the bowels. Keep the pup from the others as she has some of the premonitory symptoms of distemper. The corn meal should be boiled. Perhaps a little salt in the milk will correct the looseness.

W. B. P., New York. 1. Is there any difference between canker of the ear and inflammation of the ear of a dog? If so, what are the symptoms and remedies? 2. Is a dog penalized in field trials for standing to shot and wing as advised in "Training vs. Breaking," instead of flopping? 3. I have a setter puppy, 10 months old, that is lame in one of his hind legs. I think it is a rheumatism, as he favors his hind quarters first, but has now settled in one leg. When he first gets up he seems very sore on it, but after walking a little way it seems to get better. What will cure him? Ans. 1. True canker of the ear is cancer, a malignant recurrent disease, but the name canker has been given to all troubles of the ear when accompanied with a discharge. Which do you want to know about? describe the case. 2. Judges have generally and very probably ruled that a dog which has been accustomed to stand instead of dropping is not penalized if he only remains quiet. 3. Time, assisted by exercise and a stimulating liniment, for external use, viz., oil of turpentine, tincture of opeum, Foot's Liniment, of each one ounce; Tincture capsicum, one drachm; mix well rubbed in.

New Publications.

PROCEEDINGS OF THE PHILADELPHIA ACADEMY.

Part II. of the Proceedings of the Academy of Natural Sciences of Philadelphia covers from May to October, 1882. The Part contains many brief notes of interest as well as several quite important papers. Mr. Rafael Arango describes new Species of Cuban Land Mollusca from Cuba. Dr. Leidy has a number of papers, most of them short, as follows: On some Entozoa of Birds; On a Coprolite and a Pebble resembling an Indian Hatchet; On *Bastilus anthracis*; On *Enchytræus, Distichopus* and their Parasites; The Nests and Eggs of its flocks of *Apais* and *Coccus*, Colorless Garnet and Tommaline; On *Balænis*, etc., at Bass Rocks, Mass.; On the Tobacco Worm, etc.; Rotifers and Rotary Organs (with Plate II.). The notes and papers contributed by Mr. Thomas Meehan are as follows: Isolated Notes on the *Arbor Vitæ*, Influence of Heat on the Separate Sexes of Flowers, Liquid Exudation in *Okebia* and *Mahonia*, Individual Variation in Species, Nest of *Chætura pelagica*, Summer Migration of the Robin, Night-Closing in the Leaves of Pursiane, Colored Flowers in the Carrot, Heliotropism in Sunflowers, Apparent Bird Tracks by the Seashore. An important paper by Dr. Harrison Allen has to do with the Muscles of the Limbs of the Raccoon (*Procyon lotor*), and is followed by the same author's treatise on the Distribution of Nerves, the Vitality of Fresh Water Polyps and the Asymetry of the Turbinated Bones. Mr. Angelo Heilprin's geological papers are of interest; they are: On the relative Ages and Classification of the Post-Eocene Tertiary Deposits of the Atlantic Slope; On the occurrence of Nummulitic deposits in Florida and the Association of Nummulites with a Fresh Water Fauna; On the Age of the Tejon Rocks of California, and the occurrence of Ammonitic Remains in Tertiary Deposits. Mr. Charles Wachsmuth has a short paper on Supposed Tertiary Ammonites, and Miss Lewis one on the Nodes of *Chætura pelagica*. Mr. Molr gives an interesting account of his rediscovery in the old locality of *Rhus cotinoides* of Nuttall. Mr. J. W. Eastlake contributes a paper on Chinese Conchology, and Mr. R. E. C. Stearns one on the Habitat of Conrad's *Mytelus falcatus*.

TRANSACTIONS OF THE LINNEAN SOCIETY.

The Linnean Society of New York was organized March 17, 1878. The men who originated it are, almost without exception, workers in science, and the Society has had little or no waste material in it. Each member is interested in some department and carries on his investigations quietly, but unceasingly. That the work done by the Society is good work, and reflects high credit on its members, is abundantly proved by the beautiful volume, the first of its Transactions, which is before us. In all that concerns its mechanical execution the volume is beautiful; clear, large type, excellently careful press work and heavy, hand-some paper, but it is in its contents that it is most attractive.

The frontispiece to the volume is a beautiful engraving of the celebrated Swede whose name the Society has taken. After a brief notice as to the origin of the Linnean Society and lists of the original and present officers, the volume opens with the first instalment of Dr. Merriam's paper on the Mammals of the Adirondack Region, Northeastern New York. The present paper fully bears out the rich promise given by this observer's earlier papers, the chief of which was his remarkably excellent Review of the Birds of Connecticut, and it will cause zoologists to look forward with anxiety to the appearance of the work in its completed form, although this cannot take place for some time.

Dr. Merriam has been long known to zoologists as an enthusiastic worker, a keen and accurate observer, and withal a cool, level-headed investigator, whose scientific ardor never runs away with his judgment. In this paper, which contains the General Introduction to his work and his remarks on the Mammalia through the *Carnivora* has given us much that is new. He has especially done a great deal toward clearing up a number of popular beliefs, *pseudaxia epidemice*, which have general currency without any basis of fact to rest upon. In his introduction the author deals with the location and boundaries of the region under consideration, its geological history, topography, general features, botany and faunal position. The list of Adirondack Carnivora includes the panther (Canada lynx, bay lynx, wolf, fox, fisher, martin, least weasel, ermine, mink, skunk, otter, raccoon, bear and seal (in Lake Champlain). At another time we hope to be able to present to our readers some of Dr. Merriam's observations on this group.

A brief but interesting note by Mr. William Dutcher demonstrates that the fish crow is in all probability a winter as well as a summer resident at the northern limit of its range.

The concluding paper in the volume is one by Mr. E. P. Bicknell's Review of the Summer Birds of a part of the Catskill Mountains. Few names are better known among the younger working ornithologists of today than Mr. Bicknell's. He has done more than anyone toward giving us a clear view of the ornithological status of the valley of the lower Hudson River, and has contributed many papers of great interest to our ornithological journals and made a number of important discoveries. The present paper contains the result of observations made during three short excursions to the Catskills, the whole time spent there covering only about twenty days. In his prefatory note the author gives an extremely clear and concise statement of the character of the region and of its faunal and floral features. In this introduction therefore we find lists of the mammals, reptiles and batrachians of these mountains. But few fishes besides the brook trout were seen. To the plants much attention was given, and Mr. Bicknell states that more than three hundred and twenty-five species exclusive of vascular cryptogams were observed by him during his visit.

About ninety species of birds are recorded in his list, some of which would hardly have been looked for in these mountains, and much that is new has been noted in regard to the distribution and breeding habits of a number of species. It is impossible within our limits to give a satisfactory review of this very interesting paper.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, Dec. 23.—At Walnut Hill to-day there was a fine attendance of riflemen, and, despite the rain and fog, some extra fine shooting was done. The wind was light from 11 to 12 o'clock, and the gray light brought out the ball prominently. In the rest match Mr Duffer made a clean score of 50, and followed it up with a re-entry of 99, and having made a ten in his sighting shot, it gave him a score of 10 consecutive 10's, which means putting nineteen consecutive bulls into a 3½-in. circle—a record which stands very high, and which will be hard to beat. The following are the best scores of the day, all at 200yds:

Creedmoor Match.

A Duffer	5	4	5	4	5	5	5	5	5	5—48
G Weston (mil)	5	5	5	5	4	5	5	5	4	4—44
J A Cook	5	5	4	5	5	4	4	5	4	4—44
W C Akin (mil)	4	4	4	4	4	5	5	4	4	4—42

BOSTON GALLERY SHOOTING.—The competitors in the prize contest at the Mammoth Rifle Gallery have increased, and the scores improve with each day. The following table will show that there has been some good shooting, and the contest for the first place on the board is very close:

C S Sevon	45	45	45	45	46	—226	J T Stetson	41	44	42	43	44—214
U A Pollard	44	45	46	45	44	—224	G W Little	42	42	43	43	43—213
F E Rollins	44	44	43	44	45	—220	C R Bartlett	43	42	41	42	43—211
D Kirkwood	44	43	45	45	42	—219	H Lowell	43	43	42	41	41—210
J H Bird	43	45	44	43	43	—219	J Russell	42	42	42	41	43—210
W E Robinson	43	41	43	42	46	—215	Ch Morrill	40	41	42	43	40—206

GALLERY SHOOTING IN NEWARK.—The central association of the Newark clubs is at present an organization for the single purpose of bringing the various clubs represented into friendly contest at the target, and but little other business is ever transacted at the periodical meetings. The formation of a central organization there can be no doubt would establish a range and headquarters unequaled by any at present existing in this country. They might have meeting rooms, gymnasium, billiard room, bowling alley, library, dancing hall and ranges, all in one building, for less than the aggregate amount now spent by several organizations in this city. This action would tend to elevate rifle shooting and improve the minds and morals of all participating in the privileges of the association.

GARDNER, Mass., Dec. 20.—At the last meeting of the Gardner Rifle Club at Hackmatack Range the attendance was good, while the interest was unabated. The distance was as usual 200yds., offhand, with the inch ring and Creedmoor target combined. The score tells the following story:

	R.	C.	R.	C.	Total.	
G F Ellsworth	92	47	89	49	191	96
S B Hardy	99	47	79	48	178	95
J N Boltge	88	45	86	46	174	91
A Mathews	83	46	77	45	160	91
G C Goodall	70	42	75	43	145	85
W C Loveland	73	46	70	44	143	90
C Shumway	72	44	65	44	137	88
F Underwood	46	39	37	38	83	77

CREEDMOOR Dec. 20.—The "Grand Christmas Match," under the direction of the National Rifle Association, was shot to-day. The match was open to all comers and attracted a large number of marksmen. The wind was favorable and the scores were considered excellent. The conditions were five shots at 200 yards, any military rifle within the rules; sporting and military rifles with three pounds pull to allow regular military rifles with six pounds pull one point in ever ten shots. There were some three hundred entries. The highest score of the day was made by Mr. J. H. Brown, with a score of 122 out of a possible 125. The other principal scores were as follows: G. Joiner, 121; T. J. Eolan, 121; W. V. Overeboro, 120; John Smith, 118; Captain J. C. Mallory, 118; A. B. Van Dusen, 118; J. Hassan, 118; A. Hoevelt, 114; William Simpson, 114; A. McInnes, 114; F. Stuart, 113; G. J. Seabar, 113; J. Schroeder, 112; S. A. Day, 111; J. W. Mangam, 110; D. D. Teal, 110; W. A. Dixon, 108; W. Cushing, 109; John James, 108; J. Fraser, 108; H. H. Dunlap, 106; H. R. Schefelin, 106; C. G. West, 101; E. E. Lewis, 103; P. M. Morrow, 102; J. Duane, 101; J. H. Cowperthwaite, 101, and J. Gallerrez, 99. The marksmen who made the above scores will all draw prizes. Among the prizes is an elegant Remington 45-caliber rifle and a 50-caliber Winchester rifle. There were also several baskets of vine and several fine bronze statuettes. Among those present on the grounds were the newly appointed Inspector General of Rifle Practice for this State, C. F. Robbins, and Colonel John Bodine.

WORCESTER, Mass., Dec. 21.—The Rifle Club had their regular meeting at Pine Grove Range to-day. The attendance was unusually good. The scores made were as follows:

Creedmoor Target—Off-Hand.

A S Rice	5	4	4	5	5	4—27
Stedman Clark	4	5	4	5	4	4—26
Frank Wesson	5	4	4	4	4	4—25

Massachusetts Target—Off-Hand.

Stedman Clark	11	9	12	7	11	9	12	10	12	—101
C Dusenbury	10	11	10	10	10	11	10	11	9	—103
S Burton	11	10	10	12	12	8	10	8	12	10—103

H O Wells	9	9	10	6	8	11	11	10	12	11—97

BOSTON, Dec. 19.—The winter shooting season at the Mammoth Rifle Gallery, 655 Washington street, is now fully inaugurated, and the many gentlemen, amateurs and professionals, find the cosy quarters there much preferable to roughing it at the out-of-town ranges. The prize contest is becoming interesting, and the list of competitors receives an addition every day. The leading scores up to last evening were as follows:

U A Pollard	44	45	43	44	44	—220	T F Stetson	41	41	42	43	44—211
T H Bird	43	45	44	44	42	—218	H Lowell	43	43	42	41	41—210
W E Robinson	43	41	43	42	46	—215	J Russell	42	42	42	41	43—210
G W Little	42	43	43	43	43	—214	Ch Morrill	40	41	42	39	40—202
F E Rollins	41	44	42	44	41	—212						

NEWARK, Dec. 21.—The December match of the Newark Rifle Association closed last evening with the Essex to the butt, who won the match with a score of 491 out of a possible 500 points. The Frelinghuysen held the lead throughout the match, but the fine shooting of last evening topped the score. Below is a complete score of all the entering. The next match will take place in January on the Frelinghuysen Range. The Plymouth having won third place in order, will shoot on this range:

Frelinghuysen Team.—Wm. McLeod 48, J. K. Walsh 48, Geo. D. Weigman 47, R. Westerman 47, S. Shackelford 47, A. C. Wenmare 46, Geo. Zimmer 46, Tobin 45, W. F. Lyne 45, Chase 43, total, 469.

Warren Team.—Wolf 45, A. Welsher 45, Burns 45, Nunley 44, Freche 44, Wm. Clare 43, J. H. Cox 40, Alexander 34, A. Hunt 36, Cheeseman 35, total 416.

Nameless Team.—C. Rittenmeyer 46, W. Farrell 45, J. Spearport 44, L. Rively 44, L. Kretchma 43, P. Jaques 42, A. Schmoll, 42, Y. J. Rowe 42, A. Meyer 41, J. Donelly 41, total 435.

Plymouth Team.—J. L. Sommers 47, G. M. Townsend 46, Chas. H. Townsend 46, J. F. Hill 46, P. L. Sommers 46, J. O'Neil 44, M. S. Brade 44, C. E. Baldwin 42, Pollard 42, J. Brower 41, total 444.

Celluloid Team.—Parbery 48, Bamblitz 46, W. O. Lyons 46, M. Puder 45, Vreeland 45, Brant 45, Turner 45, Willet 42, S. Simmonds 42, Whitman 40, total 442.

Domestic Team.—Stroble 43, Wm. Fuller 43, J. Lietz 42, J. Reynolds 42, Young 41, Crocker 41, Wilson 40, Wm. Eaton 38, B. Jeffery 37, McGinniss 37, total 405.

Essex Team.—McCallum 49, Coppersmith 48, Pahls 47, Meisel 47, Hesse 46, Nell 46, Dutcher 46, Welter 45, Felts 45, Watts 42, total 461.

SMALL ARM IMPROVEMENTS.—Col. Lozelle, in the course of a prize article on the "Art of War," in the *Journal of the Military Service Institution*, says: "By comparison of our service rifle with those of European countries, it will be seen that it is about equal in power to the best except the Austrian gun. In aggregate results of range, penetration, accuracy and rapidity of fire, a gain of power in small arms in the last twenty years may be safely asserted as eight times greater in accuracy, two-thirds greater in range and penetration, and five times greater in rapidity of aimed fire, while the weight of cartridges has been diminished and the number per man that may be carried increased."

THAT SEPPENFELDT CHALLENGE.—New York, Dec. 23.—*Editor Forest and Stream:* In your last week's issue appeared a challenge under the head of the Seppenfeldt Rifle Club In answer we desire to to state that we will accept the same, providing they will agree to strike out the name of the gallery. We will accept no shoot the match at the gallery of the New York Rifle Club, without previous practice by members of either team after the making of the match, or the editor of FOREST AND STREAM to toss up for choice, the team winning the choice to choose either the Zettler or Seppenfeldt gallery. We would also beg leave to say that we would prefer to shoot ten men to ten, so as to give them a chance to beat the champion team, and to increase the stake to any amount agreeable to them. Daniel Patterson, Pres.; N. D. Ward, Sec., Zettler Rifle Club.

THE TRAP.

THE WASHINGTON GUN CLUB of Brooklyn, N. Y., still lives and flourishes, as was shown by the large attendance of members at their shoot on Christmas Day. The competition was for members only; handicap rise, five birds each at expense of club. There were nearly a dozen handsome prizes, all donated by members, among them a handsome sportsman's toilet case, several cleaning rods, gun cases, cartridge bags, etc, etc We append the score: P. McGill, 23yds., 2½; J. Bohling, 23yds., 2; Theo. Obrig, 23yds., 3; H. Altenbrand, 23yds., 3; C. Newton, 23yds., 1; J. Evans, 25yds., 4; W. H. Nolte, 21yds., 2; B. Muench, 23yds., 3; H. F. Konnecamen, 21yds., 2; John Cotter, 25yds., 3½; F. Morgan, 23yds., 3; M. Rontee, 21yds., 2½; A. Rockfeller, 23yds., 2; H. Winains, 31yds., 5; W. E. Trott, 23yds., 5; R. M. Hopps, 23yds., 2; H. Newton, 21yds., 2½; R. Monsees, 23yds., 2; W. Jones, 23yds., 3½. The ties were shot off, miss and out, and the winners in their order took choice of prizes. There was such a bountiful supply of these, that the second best men in each tie also secured one. At the conclusion of the shooting the birds killed were served at supper at the hotel on the grounds, through the kindness of Mr. H. Kornahrens, and the Nassau Club were the guests of the Washingtons. The birds were tender and toothsome, and the little reunion was enjoyed by all.

AILSA CRAIG, Ontario.—The Ailsa Craig Gun Club held a series of matches (open to all) here on Dec. 14 and 15, which were, considering the small amounts of the prizes and the execrable weather, very well attended. All of the events come off with a high wind blowing, and the glass ball match was shot in a driving snow storm. Entries and scores as under:

Dec. 14, Pigeon Match; 10 birds, 21yds, rise, ground traps; ties, 1yd. back for each tie shot, miss and out, otherwise Bogardus rules. Entrance, 15 pigeons and $1.50 cash.

John Morgan	1011110011—7	Jos Ellison	0111001101—6

B Judge	0001111010010—8	H C Munro	0000010000010—3

In shoot-off Truan won first, Beck second, Elber third, Smith fifth, Dought sixth.

Rifle match; 100yds.; 3in. bullseye; 21in. target; string measure, any rifle; telescope sights barred; dead rest; 8 shots each. Entrance; 50 cents. J. Campbell, 31-16in.; H. C. Munn, 7in.; W. Robson, 81in.; E. Hepkins, 84in.; J. Morgan, 73in.; W. Weir, 11in.; W. Singular, 114in.; W. Wittle, 55in.; A. Wittle, 34in.; H. C. Munro, 16in.; W. Allen, 46in.; T. Thirlwell. D. S. Cameron, C. Walker and Graham officiated as judges, and R. Tweddle as referee; Hon. W. Barbour, scorer.—W. DROUGHT, Sec.

A LONG DISTANCE CONCENTRATOR.—The following account of a fatal accident at a pigeon match is taken from the *Halifax Courier*, of Yorkshire, England, October 21: "On Thursday Mr. Hill deputy coroner, held at inquest on the body of a lad ten years old, who was accidentally shot at a pigeon shooting match on Monday. Walter Jagger said last Monday afternoon, about 4.30, he was watching the pigeon shooting in company with deceased. All at once the latter fell down, having been struck on the head with something. There was a hole in his head large enough for witness to put his finger in. They were about 135 yards from the shooting ground and in front of them. There was a fence between. William Culpan, landlord of the Half Way House, said he got up the match to shoot at five birds, 21 yards rise, 40 yards fall, and one ounce of shot. No wadding or cartridges were used in the shooting. The guns were loaded with concentrators, contrivances something in the nature of cartridges, by which a quantity of shot was held together until after being discharged. They had always considered 60 or 70 yards from the shooting to be absolutely safe distance, other shooting matches by individuals. He had sent a short time before the accident to clear the field of spectators, but he thought the distance at which deceased was standing perfectly safe Mr. John Whiterson, surgeon, gave the result of a post mortem examination. He found a circular wound, 5-6 of an inch in diameter in the left temple, corresponding in size and shape with one of the gun wads. The skull was fractured from front to back, and the brain protruded. The place had all the appearance of a rifle bullet wound. The Coroner said that shooting matches he did not like, but could not say any kind of conclusion than that the deceased came by his death accidentially by misadventure. It was shown to be a rare occurrence for a concentrator to cause a wound like that described at such a great distance; and it was the first case of the kind of which he had heard. The jury gave a verdict of "Death from gunshot wound by misadventure."

CANNON vs. DAVIS.—South Amboy, N. J., Dec. 25.—Match between W. S. Cannon, the one-armed shooter, of Newark, N. J., and Geo. Davis, of South Amboy, N. J.; 25 birds each, 25yds., 8yds. boundary; trap, find and handle:

W. S. Cannon	1111110001111011101101101101110011,	Total, 25; killed, 23; missed, 12.	
Geo. Davis	1110101110011010001111011111010101.	Total, 25; killed, 23; missed, 12.	

In the shoot off it was decided to allow each contestant 10 birds, to be shot at under same conditions as above specified.

W. S. Cannon—1101111. Shot out opponent.

Geo. Davis—0011100. Shot out by opponent and retired.

Yachting and Canoeing.

OUR ANNUAL TRIP TO THE LOWER BAY.

Editor Forest and Stream:

While laying off in our yacht's cabin, talking to some friends who had come on board to see us off, the mate informed me that Mr. Wood (for whom we had been waiting) was coming off in the yawl; that the anchor was short and the after canvas "sweated up." "All right, sir, get underway!" As we stretched off into the stream we fell in with other yachts, also bound out. These we soon passed and were congratulating ourselves with the handsome manner our boat behaved when the sloop Alert came up and passed us with a rush, beating us as fast as were beating the fleet. This pancake is 36ft. long, 16ft. beam, and 24in. deep. At sundown she was nearly out of sight. Our yacht is one-third of the loadline in beam, and 1½in. in depth to 1ft. of length over all. Straight keel frame and ballasted with 2ft. treeboard rising perpendicularly from the water surface, draws over 3ft. aft and 14in. forward. Now, what right has a mud-turtle to beat this kind of a boat? True, the wind was light and the water smooth. A sense fog set in after night, and the lookout was continually bawling out, "Hard a starboard" or "Portall to clear the vessels at anchor." We came to at Hognock, a Jersey Helicon, the birthplace of a poet long since defunct, and where apple-jack once flowed from a spring not yet dried up, and undiluted. All hands turned in with the mystery of that spring hanging close about the edges of reality. Had a brush in the morning with two oyster schooners, who slightly bested us in the light airs, but as the wind freshened we got away handsomely, and at Salem Cove, where we anchored, were more than a mile ahead. By this time we had forgotten the thanksgiving we received from the "pancake" the day before. The cove that night was alive with black ducks, and answered our call from every direction. Next day our friend Wood, whose duties as an officer of the Pennsylvania Railroad would not permit him to stay longer with us, left for Philadelphia via West Jersey Railroad. As he stepped into the yawl to go on shore he remarked, pointing to the westward, where a dark cloud was rising, "You will have a dirty night of it, Cap.; I'd rather be snugged away under your point; good bye all." Taking the hint we signalled the gunners to board ship, but the repeated booming of their heavy guns gave us to understand that they were not taking any stock in storm signals. The skiff did not come alongside until after dark, and gave us but barely time to board them and get them down before the wind struck us. Finding the yacht stern foremost nearly under water; let go the kedge, stopping her so suddenly as to jerk every man off his feet. The sea came with the wind, and being in the bight of a lee shore, our little ship rolled fearfully, and we soon no longer had need to cross nearly straight out of water, and then plunged headlong into the combing sea up to her mast; her wire stays at every roll were brought to the tension of a fiddle string, and sounded not unlike that instrument while in course of tuning. Would the mast stand? Would the anchors hold? Would our ship ride it out? No sleep! No rest! At daybreak the wind hauled slightly more to the westward, and began to moderate. From four to six feet will be taken off the mast next spring, the gaff lightened, and double head-sail substituted. Had the Alert been with us we would have had a good race. We were told that she was so limber that when a heavy puff struck her she would heel down, while her transom retained its normal position or level; that the cotton crawled out of her seams, and therein lay her great speed. Sloops count for much at this race.

By noon the sea had gone down sufficiently to use the yawl. Mr. Albert, who fortunately survived the late shaking up, got together what was left of him worth taking to his wife and departed. Got under way by the morning, wind still ahead. After a pleasant but rather tedious sail, arrived at our destination. Were not beaten by anything this day. R. G. W.

PHILADELPHIA, Pa.

MASTHEAD IRON WORK.

Editor Forest and Stream:

It is well known that iron work and fittings are still very much neglected in our yachts. This can be more particularly said of small craft, for in most of them the iron work is of very inferior pattern, shabbily made and of proportions greatly at variance with the strain liable to be applied in critical moments. Considerable progress has been made in late years, but much also remains to be done before blacksmith and outfitter can be commended for work well schemed out and highly finished. The principal fault running through them has been a mistaken idea that lightness where stock is needed for strength in section and for stiffness, and on the other hand, a waste of metal in clumsy appliances which call for no such superfluous provision. It was strikingly illustrated at the time the cutter Madge lay in the Sewanhaka Basin in the company of a number of sloops of about her size. The difference in workmanship was most apparent. Aboard the foreign yacht every bolt, cavil, pin, strap or eye was patterned with a special view to the duty expected, and all were finished in detail to perfection. Our yachts, per contra, betrayed a certain unpardonable haste in their fittings, the crude approximations of minds and hands inexperienced, and often a complete disregard for the consequences of negligent or incompetent supervision. Our builders seem to start with the assumption that rigging is a matter of secondary importance, and that any sort of woe work which will put hull, spars and gear to a crucial test of strength and endurance. If this be true of large yachts, it is doubly so of craft of modest pretensions as to size. Builders are, however, not altogether to blame. The standard of excellence ruling among our yachting classes as a whole being still rather low and not very exacting, the question has always been how to produce the biggest vessel for the least money, instead of the most perfect. We had been educated in America to such false notions concerning model, that size became an imperative adjunct to reasonable safety and accommodations.

Small boats which are sloal were so notoriously dangerous and pos essed such cramped cabin comforts, that every one strained for more room. Then came the centerboard craft. Naturally the builder sought to meet his customers' wishes Hence poor fastening in hull, hand-n e-town rig, scanty dimity and the more or less poverty-stricken appearance so many yachts present in all but their gorgeous paint. The remedy below, which, appealing to the new yachtsman's understanding more forcibly than other really important considerations, profited in lavish display by every dollar saved on hull and on rig. Our small yachts being nothing more than the merest fair weather butterflies, with no pretensions to other than mild weather service, and the charge of inattention and neglect being laid at a degree proportional to their tonnage. There are, of course, exceptions to this charge, particularly where an experienced yachtsman's eye has had supervision of the building, or where specifications from a designer have been closely followed. With the general awakening to a better appreciation of the opportunities small yachts offer for a thorough participation in the sport of sailing in the broadest interpretation, more attention should be given to the iron work of small craft, as they are fair to meet an importune moment and some lamentable disaster may result which will give a serious set-back to the impetus that branch of yachting is now fortunately feeling.

As an example of masthead iron work some working drawings accompany this communication. They were designed by me for a new set of caps for a cutter of three tons, measuring 30ft. loadline, 31ft. over all, and 7ft. beam, with 3ft. 6in. draft. For yachts of small tonnage I would recommend pole masts as the simplest and most reliable, making always the pole heads above the rounded deck sufficient to swing a good-sized topsail, and is regularly stayed by wire to the bowsprit cap, and a shroud each side with a backstay in addition, if ballooners are a part of the owner's vanity. But the stoutest and most reliable is the jury rig, with housing topmast of impo-ing lightness, and it was never my desire to depart from original rig. She had been launched for short moorings by some lubber, and had the topmast twisted out of her, the spar holding while the caps gave way at the weld, one of them being wrenched half round, like so many corkscrew candy.

The internal diameters of the caps were not a matter of choice, but had to be fitted to the spars as they were found, the drawings being intended as general guides, subject to such variations as each case may require. The upper cap is made simply of two rings of 3-16 iron, stayed the proper distance apart, to give a fair lead to the topmast, by braces of the same thickness, one on each side, welded at the ends to the caps. The depth of the latter should be enough to give good bearings on the mastheads for the topmast enough to prevent a sharp, racing nip when buckled to leeward. A stout eye is securely riveted and welded to the back to take one of the peak blocks. For want of enough taper or shoulders the upper cap was held from working down by a ¼-in. screw each side, the holes giving ship to one point only, as shown. The lower cap is somewhat peculiar. In place of dropping solid over the masthead, it had to be slipped over sundry riveted eyeboits for the peak halliards in the masthead, and for that purpose was left open aft and clamped by screws when in place. The bounds, or shoulder, on the mast having been pretty well chafed away, the cap was further secured by four ¼-in. screws. The forward half, for the reception of the topmast heel and fid, was of less depth and secured by a strong weld to the rest. Two horns projected upward 3½in. on the clamping ends for the accommodation of the crosstrees or spreader. Their object was to lift the crosstrees

up clear of the eyes of the rigging, as the oak spreader was cut with jaws in the center to grasp the mast half way round, for the better securing with extra long wood screws. As a chair or support for the oak spreader I devised a short iron one to go underneath. This was a flat bar 1¼in. wide in the middle, with tapering ends, and 18in. long over all. Two lugs were "jumped" on this by the blacksmith at a distance of 1¼in. apart, as shown in the section on the drawings. After the lower cap had been secured, this chair was rested on the horns of the cap, the lugs coming outside the horns and the two ¼-in. bolts passing clear through the horns and lugs. The nuts were then screwed up tight, some thin washers being used between the horns and lugs to make close faying work. In this way I had a secure foundation 18in. long, on top of which the oak spreader was held with a couple of ⅜-in. rivets in each arm. The object in devoting more care to the crosstrees than usual was to supply something rigid and perfectly trustworthy, so that a hand up aloft to clear things, for a lookout, or to reeve outgear, would not have life or limbs imperiled by a fall from his aerial position through something giving way, and also to keep the crosstrees square at all times. Nothing looks more lubberly in the nautically educated eye than a spreader bent or cockbilled, and having my feelings lacerated daily by the sight of gawky, spiderish spreaders askew aboard other yachts, I made amends by the device just described aboard the cutter in question. It should be added that a link was slipped over the lower bolt to take the upper block of the throat. The edges of the caps and iron chair were beveled for neatness and the whole galvanized.

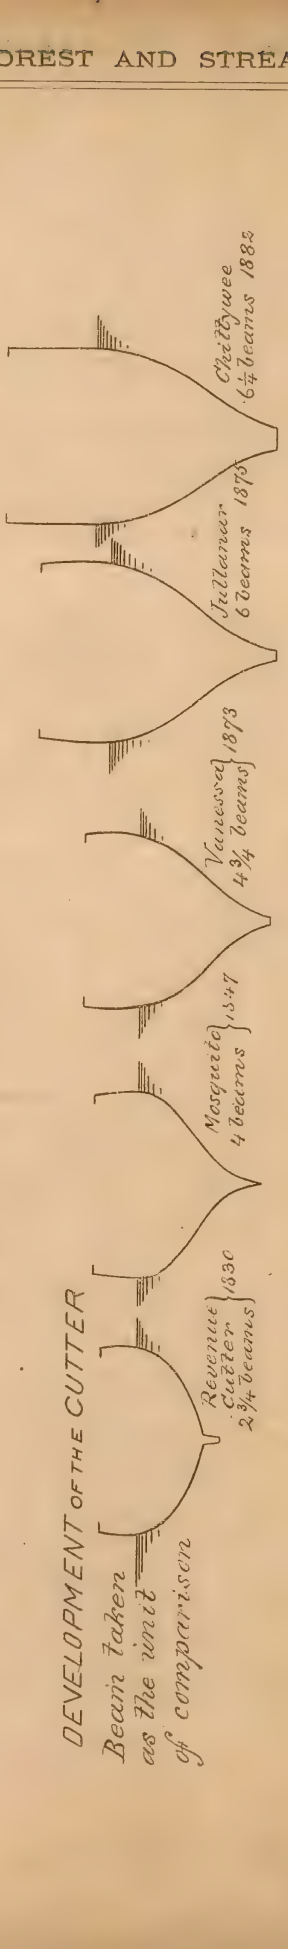
My experience in having this work carried out, may serve as a warning. Having no faith in "intuitive talent" among mechanics, and knowing how they work by thumb rule, I was anxious that my own plans should be carried out in detail, and for that reason put them on paper in the shape of working drawings, with the dimensions and a variety of cautionary remarks in red ink, also informing the blacksmith, as he is of the best in the trade, that should he be able to work in any iron in his shop, he might vary slightly to suit his stock. In spite of this, the sight of the sketches with the multitude of harmless figures, so frightened the good man that he declared such fine and complicated work beyond his usual practice, and he would have to "charge extra," as it would take him double the time ordinarily spent upon such work. Being in a hurry, I told him to heave ahead and "charge extra," so he got the job out as fast as he could. Well, he did charge extra, and in the haste to be off on a cruise, the charge was paid without a murmur. The blacksmith was a constitutionally honest fellow, I am convinced, but, like most of his kind, got frightened at figures, and no doubt spent hours divining the meaning of the sketches, and made many slips which had to be corrected at a loss of time and material. In the future I will guarantee fifty per cent. discount on plain drawings to scale, and no figures or notes, or better yet, a pasteboard model which mine honest Vulcan can comprehend at a glance with no further cudgeling of the brain. The worst of it was that the worthy knight of the anvil ventured upon some fine notions of his own, and came near making the usual botch job the drawings were intended to prevent. Thus he made the braces in the upper cap as wide as the caps themselves, and actually welded the caps in the whole distance between them! He volunteered braces each side the lower cap as well, thereby detracting from appearances and adding much weight just where it was not wanted. When asked why he had taken such liberties, the sturdy wielder of the sledge excused his extra trouble by saying "he had always made them that way." Now, "that way" was the very thing I sought to avoid, as my way was far neater, and provided three times the strength of the old caps, and more than was actually required, "the factor of safety" having been fully considered in getting out the plans. All I got for my trouble and expense was a job ugly to look at and heavy enough for a yacht three times the tonnage of the cutter. A friend proffered sympathy by saying, "I told you so: you have to stand right over them while they are doing it." Considering the basciusmith who tackled the job has ironed innumerable yachts, and is known most favorably in that particular line, I am forced to conclude my friend about right, and wonder what sort of looking animals those yachts must be aloft upon close inspection. C. P. K.

WORKING UP IN A NORTHWESTER.

Editor Forest and Stream:

One afternoon cook and I were shooting over our decoys at a point on the Delaware Bay shore. The wind had been blowing northwest down the bay for several days. My gun lay across my left arm, ready for use, yet several bunches of ducks had passed over our decoys unmolested. "Mark!" my companion, as he brought his large open palm down on my shoulder; "see, a big bunch of ducks are coming right for our stools; now, Billy, why in thunder can't we go up the bay? "Don't know, Cap," and his round, good-natured face assumed an unwonted curiousness, "guess our ship has not got hold enough." I knew this, and the cook's foresight rather added to my chagrin. I shook myself up, however, and when I returned to the yacht our game compared favorably with the rest. Wind still N. W. and making ice, as it had been for ten days previous. Two sloops, twice as large as ours, with really less displacement, lay close aboard. We had made up our minds to give the little boat a trial, and had rubbed in a smooth treble reef and "bobbed" the jib. Can you conceive a more lubberly rig? The wind was still from the old quarter, and the flood tide got up a nasty short-chop sea. "Guess we'll be poking up the bay to-day," said the captain of one of the sloops as we filled away under his stern. I can see his broad, derisive grin even as I write this. We had trimmed the yacht considerably more by the head, to give her a hold and done all we could to help out a bad rig, and, in fact, not much better shape. Well, let me make a clean breast of it. We came back washed out, and glad to get back at that. Did we anchor near those two turtle-back sloops? Hardly. These worthies that sail over the marsh in a heavy dew would have given a hundred dollars apiece if their vessels could have done what we tried to do and failed. We had a pleasant trip and were successful in taking game. Our party was a unit all the time. But our little ship, good as she was, as I said before, was not good enough, and I feel put out about it. Shortly after our return I was talking to Mr. Middleton, a wealthy yacht owner, who always believed in dishboats; but he has gone to the other extreme, having sailed in the same boat with your correspondent and passed through the same humiliating and exasperating detention.

We had, of course, some laughable experiences trying to work up the Delaware Bay in the blow, but those on board will, perhaps, excuse me giving all away to the public. THE CAPTAIN.



CRUISING ON LAKE ONTARIO.

Editor Forest and Stream:

GROCERY wagons, carpenters, painters, and riggers made a lively picture as the Katie gray, eleven tons, lagged at her lines in the old harbor, Oswego, on the afternoon of September 5th. Two o'clock her owner and crew, amateurs, were hard at work in their several departments of business, with no thoughts of a cruise, at five o'clock the boys were swinging their hats at the fast-receding Katie, bowling up the south shore of Ontario with a fair wind, steering W. ¾ S. Fair Haven, fifteen miles, was passed when out one hour and twenty-five minutes; passed Genesee lights at midnight. The wind died away, and for two hours we lay as were the stars which shone bright and clear. An hour tells we noticed the smoke from our pipes curling itself under the main boom and drifting lakeward. We soon had a pleasant breeze from the land and went plowing along on our course, with water smooth as a pond. Passed the Devil's Nose and were auressed of Oak Orchard when the land breeze fell, soon after daylight. Our crew of five were all in high spirits—as we rounded the watch, for our little stove was doing good work toward breakfast—at the splendid run we were making, very few, if any of our yachtsmen than sing it at all probable that we would succeed in running almost the entire length and across Lake Ontario in the time necessary to witness the first day's regatta of the Royal Canadian Y. C. The first night out, as yachtsmen know, sleeping on watch or even below is not indulged in to the extent that follows when accustomed to it. The sun rose a fiery ball, and indications of unsteady weather were visible. Softly a light air came, rippling the glassy surface of the lake and spreading a darker shade as far as the eye could reach to the north and eastward. Our pipes were "steamed up," chart consulted, and we were soon slipping along lazily, carrying squaresail; at eight bells we were carrying all our light sails; from about that hour I date the finest run and pleasantest day's sail, on or off record. A large fore and aft schooner which was hull down ahead of us at breakfast time was in like manner over our stern when luncheon was spread at mid-day. As soon as our hardtack was smoked snugly down, we perched ourselves along the cabin top, the Doctor's tenor started in, and "the Sweet Singer of Ontario" brought butterflies and birds of the sea from their haunts.

The fun and enjoyment, among congenial tastes, of yachting life is too well known and loved among yachtsmen to be logged, and to those who have never experienced it I say, go and try it. While one of the crew was forward looking to the pulling of our balloon sails, he sighted land over our starboard bow. We had been steering W. by N. all day and expected to sight the north shore more abreast of us; examined the compass and found that the pivot on which the card revolves had become loose and allowed the card to cant to the side of the box, where it had remained stationary. We were fifteen miles out of our course; we lost no time in bearing away to the westward; the wind was now fresh and our sheets were taut and straining. Everything in the shape of canvas aboard was rigged to do something. The constantly increasing wind only resulted in our setting the staysail back of the balloon jib to ease it. The water was leaping in over the bows and out through the scuppers. The first glimmer of the lights along shore as we dashed by seemed to hurry us along; darkness settled down and the breeze grew a little colder: it was exciting, as we were going faster than any of us had ever gone before, and the large spread of canvas threatened to take something out, but "the little cherub who sits up aloft" deserted us not. At 7 o'clock Toronto light was abreast of us: the exposition grounds were illuminated by the electric light; the effect from the lake was grand, especially to us, as we had been in total darkness, nothing to attract the eye but the binnacle lamp, and now and then a lighthouse far off. Coming suddenly in view of the electric display, we didn't know what to make of it; one of our crew were even accused of being navigators to the degree of spiritual fear, but the careless sweeping of a sleeve across the vision, the rather strong grip on the marine glass were evidences of weariness, at which we were forced to laugh at the time. As we got well into the bay the wind died down, leaving us finally entirely. An artillery band was making a great demonstration near the docks, so we were entertained. A little breath of air would now and then give a little motion to the yacht. We dropped anchor opposite the Toronto Yacht Club House at 10 o'clock, having made the run from Oswego light to Toronto light in twenty-six hours. Took our dinggy and boarded the yacht Gracie, of Belleville, expecting to find her good captain and owner, R. M. Roy, Esq. She had come up in racing trim and crew. Proceeded to telegraph office and informed friends at home of our arrival.

Our first day in the much Americanized city of Toronto was most enjoyably spent, winding up in the evening with a grand dinner, the compliments of Capt. Hugh Dennis, whose 35-tonner (centerboard) Cygnet won the Prince of Wales cup, downing the big Aileen and the famous Verve from across the sea. It was a proud day for our generous host, no less so Mr. Rob't Wood, of Boston, who turned the spokes on the Cygnet. The following day we made sail and took in the points of interest. There was a fresh breeze in the bay. We came to at Hanlan's dock, with a courtesy to "Ned" as we hauled our mainsheet home. Our Yankee yacht ensign at the peak caught the spirit of the thing, and stood out straight, saying to the aping Canadians, "I've come across the water; I'm superior to you, and am going to make myself at home" (no reflection on the hospitable Britishers, but a Yankee will roar). The island, or Hanlan's island, as it may as well be called, is a strip of land directly opposite the city. It contains Hanlan's Hotel, the Royal Canadian Yacht Club House the Wiman swimming baths, several fine summer residences and the lighthouse. Soon after dark some rascally inclined devil cut our cable while all hands were ashore. How the yacht drifted clear of the surrounding yachts, and of passing craft, is a mystery. She was found three miles from her anchorage, beached; no harm happened her. We were informed that the attention of the yacht Alarm was called to the drifting Katie; we did not credit the information. A jolly, manly crew we met from Hamilton, on the yacht Coquette. Among the party was a titled Irishman—Lord Boyle—a very clever fellow and an enthusiastic yachtsman. This party entertained us at the Queen's Hotel. This house, which is under the proprietorship of Commodore McGaw, of the Toronto Yacht Club, we found a most delightful place to put up at. The Royal Canadian Yacht Club House was our headquarters next day. Whether we were tough-looking customers or what, we don't know; but we must candidly say that we were somewhat surprised, after the efforts the Oswego Yacht Club had put forth to enhance the pleasure of the R. C.'s, that so formal and light a greeting was ours. However, the manners and customs of all nations are not identical. Tuesday, the 12th, was our last day in Toronto. The morning was spent in storing the ice and usual goods for a voyage. KATIE GRAY.

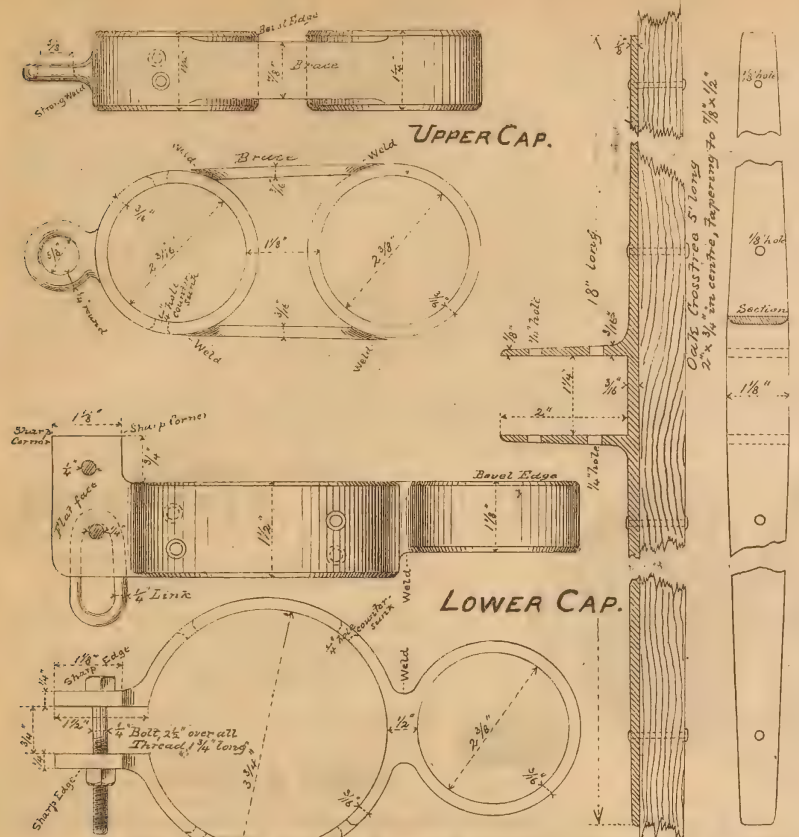
MORE NEW CUTTERS.

BESIDES the new cutters already specified in these columns, we learn with pleasure that two more real yachts are at present under way. Upon the eve of departure for England, Mr. John Harvey was detained with a couple of new jobs. One of these has been finished, the contract signed and the work commenced by Mr. Myers, of City island. He is getting out the keel for a cutter of about seven tons yacht measurement, to the order of Messrs. Zerega and Rathbone. In type and general arrangements she will be similar to the Wasp, illustrated recently in this journal, but with 1½ft. more beam and about 6in. less depth. Length on loadline, 35ft.; length over all, 41ft.; beam, 7½ft.; draft, 6½ft.; displacement, 13 tons. This yacht presents such novel and satisfactory features that the plans are worthy of the place in our columns which will be shortly accorded them. She shows a noteworthy combination of economy with great accommodations and ability, being in all these respects a vast improvement upon current New York customs. Ballast consists of eight tons of lead, some five of which will be on the keel and the rest outside. Hoist of mainsail, 32ft.; main boom, 31ft.; gaff, 21ft.; bowsprit, outboard, 14ft. Area lower sails, 1,000 sq. ft. She will be flush decked fore and aft, with a blind cockpit, or possibly with a shoal well. In order that this well may not interfere with the ladies' stateroom in the run, the post will be carried out to the end of the loadline, as generally the custom, which, with a moderate rake to the post, will carry the rudder head sufficiently far aft to introduce a drop floor cockpit abaft the cabins below. There will be no hatch forward of the mast, access to the forecastle being had by the forward panel of the main skylight. This will be located about amidships, and being narrow, leaves broad gangways each side, giving far more available deck room than found aboard the house encumbered deck of a sloop of twice the beam. On the quarterdeck will be a quadrant companion, and, completely separated from it, the cockpit, with a scuttle leading to the sailroom, and space for nets and trawls.

In broadside this new cutter will be almost a fac simile of the Wasp, having 2ft. 10in. for least freeboard to top of planksheen, but showing a regular cutter's square tuck instead of an elliptic counter. The cabins below are remarkable for their spaciousness and economy in arrangements. We find standing height fore and aft from stem to post. Along any forecastle for a couple of hands and the galley with a passageway on starboard side communicating with the main cabin. On port side of the passageway is a w. c. and dressing room, with lockers and shelving. The ladder to the forcastle lands in the passageway. The main cabin has a comfortable berth each side, the upholstering at the sides being carried up to shoulder height, also *elageres* of neat design at the forward ends. The companion is between bulkheads, each side being utilized for pantry and locker space. The ladder, when swung round on pivots to one side, admits of entry to the stateroom aft. This shows a wide berth each side, and a seat with dressing cases at the after end. On the under side of the ladder arrangements for washing are supplied. The overhang is devoted to sailroom and general stowage.

The yacht will be copper fastened to the wales, fully fitted and supplied with all but cabin furniture, and the sails will tally mainsail, foresail, three jibs and two topsails. Anchors, chains, galley, ballast, boat, davits, joiner-work and rig to be delivered by the builder. Total price, $8,000. Iron ballast could be used just as well as lead, as there is plenty of room below the floor to concentrate it as much as desired, and from four to five tons can be readily hung to the keel. When so ballasted, a difference of $300 may be deducted, making the cost of the yacht only $7,700! Now mark, there never was built a sloop of her loadline length in New York showing as much floor below, or as wide gangways on deck, or anything like the privacy and accommodations or headroom, or a rig as small by a third, or as well built, or as safe and able, or as fully and highly finished, for anything like the sum it takes to own such a smart, handsome craft as this cutter. It is no wonder such yachts are steadily gaining in favor as rapidly as familiarity with facts removes unfounded prejudice and the stupid libels current among those opposed to innovations upon practice which had its origin in the river sailing of half a century ago.

CRUISE IN THE SNOW.



[Continued.]

Editor Forest and Stream:

I did not intend to further trespass upon your good nature, but am induced to send the finale of that snow cruise, by the receipt of several letters in general, and one in particular, from a very pleasant deep keel correspondent, who was curious to know what happened to the skipper after anchoring in Cos Cob River, and how he kept comfortable on a sharpie.

Time, 6 P. M. Scene, cabin of sharpie, 9ft.x12ft.x4ft. 10in. of head room. Lamp lighted, warm fire in stove. Skipper makes coffee, toasts bread, elaborates a Welsh rarebit, eats, drinks and just revels in hearing the storm howl outside. Reclines on oil cushion, with feet to fire and reads a capital story called "Vice Versa" until 2 A. M.

Turned in and slept the sleep of a passably honest tar until 9 in the morning. Cooked and ate breakfast. Poked nose out of companionway and discovered that everything on deck and aloft was covered with snow and frozen solid. Also noted many wild ducks flying near. Wind N. W. and cold? Whew! But those ducks; must have some of them. So overhauled decoys, and anchoring in skiff some two hundred yards from sharpie, blazed away until frozen nearly stiff, and returned to ship in a couple of hours with twelve nice, plump birds, every one of them shot on the wing with No. 6 shot, and not a sin-

gle poor cripple knocked over and left to die a miserable death. Spent afternoon and evening reading and snugging things up. Next morning started for home, wind still howling from N. W., and cold! Well, yes! The wind was fair, however, and the skipper left his mainsail furled, or rather frozen in a solid mass. Trimmed driver sail and jib to the correct angle. Put sharpie on her course, about S. W., and seeing the sound was well clear of other vessels, went below, shut the doors, and kept the cabin warm. Sharpie sailed some eight miles without her captain once touching the tiller. Shot a duck and wounded it so that it could manage to dive about twenty feet whenever approached.

Lay ship to, with driver flat and jib weather, jumped into skiff, picked up duck after much chasing, and returned to sharpie. Arrived home, embraced family, and have been nursing an interesting influenza ever since. THOMAS CLAPHAM.

ROSLYN, L. I.

OSWEGO Y. C.

Editor Forest and Stream:

One of the pleasantest occurrences of the yachting season was enjoyed by the officers of the Oswego Y. C. on the evening of the 19th inst. Upon invitation of Commodore Mott our local yachtsmen assembled at his residence for the purpose of "wafting" their ideas and fixing the policy of the club for the season of '83. With the makeup of the prominent yacht clubs before them in their handsome little books, a signal code, uniform, etc., were drafted, taking what appeared to be the best and simplest, not omitting to dispense with all gilt and brass in the uniform, black club-bottom and double-breasted sack coat being conspicuous enough for the "toilers of the lake." Mr. A. B. Parker was appointed chairman of the regatta committee. Mr. P. can handle the matter in good shape, as he has had several experiences and is a worker. The Commodore's dining room was visited, where a most elegant spread was awaiting attack. It is not necessary to state that the entertainment was perfect, for all who have met Commodore Mott know that he never fails or wavers.

The club's fleet consisted of the following: Schooner, Rhoda, 30 tons. Sloops, Ella, 19; Laura, 12; Katie Gray, 11; Fascination, 11; Vixen, 7; Maud, 3, and others. The club house, which is handily situated, will have to be moved in the spring, it being on the line of a projected addition to the railway pier. There is still plenty of good ground; no trouble is anticipated in changing basis. Oswego, with its new breakwater, furnishes one of the most desirable harbors possible, the lake, its broad blue waters, with its many ports and bays the novelty of the short run across to a country of different people and manners; the near and always available St. Lawrence, where the Thousand Islands afford deep water and all the interest of a summer resort, with beauties unrivaled in attraction. The Oswego Y. C. would give a yachtsman's greeting to all craft from any quarter, who might be pleased to spend a few days on the Erie, where they can enjoy the summer breezes, and where the tide never turns nor the barnacle reaps. K. G.

Yachting on the lakes is looking up fast. The great inland seas are destined to boast a very large fleet of able yachts of moderate tonnage in the near future. The policy pursued by the clubs will have much influence in furthering the good ends of the sport. So far the clubs have not only kept up with the times, but on some points have gone ahead of the conventionalities of the Atlantic seaboard. It is the rule on the lakes to open matches to all comers, thereby giving to racing a dignity and broad influence which mutual admiration affairs, limiting entries to one club, can never attain. There is also discernable in many quarters a praiseworthy inclination to distant cruising, creating a demand for seaworthy boats which the experience of the future will no doubt find satisfied in deep keel yachts with outside ballast. Safety and ability to cope satisfactorily with a short sea we deem two more important requisites to lake yachts than models conforming to cutter principles are sure to be appreciated when once fairly tried. We have in preparation a number of designs of small yachts actually built or building, to which the attention of lake yachtsmen is especially called. These designs will appear in our January numbers. We do not think many of sand bag tossers of the old New York style worthy of regard or confidence where sailing is to be done outside the smooth water of small harbors, and advise those intending to build or buy to give depth and safety the weight they deserve in their choice if they wish to get most service from their vessels. Whether much or little beam is to be adopted is a matter to be decided upon considerations of economy in build and running, snugness of rig, limitations to draft and accommodations below, covering all of which much evidence of importance will be found in current numbers.]

YACHTING IN AMERICA.—Last year American yachting experienced a flutter of excitement in the victories of the little Scotch ten-tonner Madge, who had at her mercy in all her races the sloops of New York and Boston. These triumphs, without precedent, the fresh successes which the fifteen-ton cutter Maggie, sent to America from England this year, has achieved over the American sloops; the trials also made this year in the United States with several cutters after the English idea, all seem to have prepared a coming revolution in American construction. The Americans, seeing the recent progress of yachting in England, have lost that confidence they used to have in their centerboard boats, and they would not now dare to race at Cowes, as they did in 1852, with a hundred-ton sloop. The old Style of Geo. Steers, which still exists, would without doubt have a hard job with the new English racing cutter Vanduara and Samoena. We find, therefore, two systems actually present in America; one seeks to conserve the old type with centerboard, light and shoal; the other seeks the adoption of the new English type, the boat of great draught, narrow beam and great displacement. Each system has its enthusiastic partisans who claim naturally superiority for what they believe in. . . . The cutters had sails of English make from Lapthorn & Ratsey. Who would have thought, after the admiration bestowed upon the sails of the America in 1854, that English sails, by a singular return of appreciation and fashion, would in 1882 be considered superior in America to those of home manufacture. We must expect next year prodigeous efforts in American yachting in the battle between cutter and sloop. Opinion is highly excited, but it cannot be doubted that next year will give the solution which has been sought for in vain this year. We are interested directly in this question in France, for having no constructions of our own, we float about undecided, occasionally given to old American ideas, then again to those of English origin. The experience America is about to indulge in must be to our profit.—*L. More, in Le Yacht.*

CHICAGO NOTES.—*Editor Forest and Stream:* The regular quarterly meeting of the Farragut Boat and Yacht Club occurred last Wednesday night at the club house, foot of Twenty-fifth street. There was a full attendance present. C. L. Washburn, C. L. Stevens and C. K. Ballard were elected active members, and Lincoln A. Brown and George W. Hancock associate members. The officers were ordered to purchase a fine paper-shell four-oared racing boat, to be used in the regattas of next year. Resolutions were adopted in memory of S. W. McArthur, a member recently deceased. Applications from several gentlemen to become members were referred to the committee on membership. The yacht Burke was rated and signals given her. It was decided to try and hold a rowing and sailing regatta combined here next summer. J. Thorpe, one of our enthusiastic canoers, informs your correspondent that in ten days or so he goes by rail to St. Louis, accompanied by his famous Rob Roy canoe Birdwing, and that he will start from that city in his canoe for New Orleans. He goes down the Mississippi River.

BEDOUIN.—An interview in the *Herald* recently started afresh the nonsensical tales about Bedouin's being wet and heeling to an uncomfortable angle in the Seawanhaka races last October. We have the testimony of the pilot who shipped aboard the Bedouin for those races, as follows: "Why, sir, I went aboard of her thoroughly prejudiced against such craft. I came back completely converted. There was my pea jacket lying on the gratings all day and not a drop ever got near to wet it." As for the stuff bandied round about her crew hanging on tooth and nail to keep from sliding overboard, it is too absurd to require refutation. We may say that we have been informed by those on board that they found the cutter remarkably comfortable, and that a lady enjoyed the third day's racing in the sea and never thought of laying hold with nails or teeth. The fables to the contrary are best characterized in the language of our informants as "perfect rot."

YAWLS.—In 1861 there were only about thirty yawl-rigged yachts in British waters, one of them, by the way, being the old Julia, who gained fame by beating the American sloop Sylvie, modelled by Geo. Steers, in 1853, and owned at the time, we believe, by the late Commodore Stebbins, of the New York Y. C. Up to 1865 only few more yawls were added, the merits of the rig for cruising not yet being appreciated. It was not until 1866 that the first match, open to the rig only, was sailed under auspices of the Royal Thames Y. C. In 1870 there were about one hundred yawls; in 1878 the number had increased to 350, and now there are probably over 500 in the British fleet, with the rig fast gaining in popularity.

YAWL FOR BUFFALO.—Mr. Gustav Grahn, well known as the maker of the best model yachts in America, has sent a handsome little yawl to Mr. C. M. Cordell, of Buffalo, as an example of a safe, handy little cruiser. The model is 31in. water line, 7in. beam, and has 7½lbs. lead on her keel. She is pronounced a very handsome piece of workmanship, perfect in detail and to scale throughout. From what we hear, it is likely several boats like her will be built full size for use on the lakes, where yachtsmen have plenty of opportunities to appreciate the value of depth and safety in the short chop which works up at short notice on our inland seas.

HANDICAPS.—The London *Field* says: "For racing mixed rigs handicaps may be occasionally resorted to, but it is devoutly to be hoped that they will be sparingly used, and that no attempt will be made to bring together vessels of widely different capabilities by abnormal time allowance. Above all it is to be hoped that such an amazing absurdity as sealed handicaps will never be heard of again."

NEW SINGLE HAND YACHT.—W. P. Stephens, of Staten Island, is to build a single hand yacht like the design published in this journal October 19, for a gentleman in Providence, R. I. Just the kind of boat, we should say, for Narragansett Bay and near-by waters. This is the fifth single hander now under construction in New York.

COLUMBIA Y. C.—The following officers were elected for 1883: Commodore, W. S. Greacen; Vice-Commodore, W. H. Rowe; Measurer, W. H. Stone; Steward, E. Gosenheimer; President, R. P. H. Abell; Vice-President, Isaac M. Vail; Secretary, Charles M. Armstrong; Treasurer, Joseph A. Weaver.

CANOES IN NEW ZEALAND.—At Auckland there is quite a fleet of canoes, mostly of the Rob Roy pattern, with one or two sailing canoes on Nautilus lines. The sport is becoming fashionable.

Answers to Correspondents.

C. A. M., Skowhegan, Me.—See next issue.

C. A. R., Allegheny City, Pa.—Rabbit skins are not strong enough for gloves.

P. S. M. C., Portland, Me.—Coues's "Key to North American Birds" is out of print. The price was $7.

G. S., Marion, O.—For dimensions of the Creedmoor and Massachusetts targets see answer in issue of Dec. 14.

W. E. B., Oakdale, L. I.—Wild rice may be bought of Mr. Chas. Gilchrist, Port Hope, Ont., or R. Valentine, Janesville, Wis.

C. H. P., Danvers, Mass.—What is necessary to get carp for stocking purposes, and what season is best for stocking? Ans. Write to Mr. E. G. Blackford, Fulton Market, New York city. This is a good time.

E. G. K., Steele, D. T.—Try Batty's "How to Hunt and Trap," price $1.50; or Gibson's "Tricks of Trapping," price $1. We can supply either.

W. B. R., Waynesburgh, Pa.—The gun is perhaps sufficient; many find it so. A repeating rifle would be the best arm for Rocky Mountain work.

I. Y., Lynn, Mass.—Can I do anything to increase the pace of my dog, and will he be likely to hunt faster with experience? Ans. Read "Training vs. Breaking," which contains the information you wish.

TEXAS INQUIRER.—The model of the arm of which you inquire is a discarded one, and we should not advise its purchase. There are excellent repeating rifles in the market, but you cannot expect to buy a good weapon for a song.

W. A. R., Plymouth, N. H.—What is the original color of the fur seal, and have they long hair which is plucked out for general use. Ans. The color is a very dark gray, almost a black. The long hair is always removed in the sealskin of commerce.

SALMON FALLS, N. H.—1. Where and at what price can I buy "Practical Taxidermy?" 2. Do the pine grosbeak and crossbills have duller colors as they grow older, as stated in "Bonaparte's Ornithology?" Ans. 1. We can furnish it, price 50 cents. 2. Their colors grow brighter with age, at least until the bird's vigor begins to fail.

W. C. H.—Buffalo, N. Y.—For shooting at this season of the year, you cannot do better than to go to the Gulf Coast, or to the mouth of the Roanoke River, in North Carolina. At the latter place you will find wildfowl, and back in the interior quail. The Gulf Coast is further off, but you will be repaid by abundance of wildfowl to be found there.

RAZOR, Wrightsville, Pa.—1. Is it advisable to keep puppies out of doors during winter? Will a dog house be sufficient protection for them? 2. I am the owner of several fine beagle hounds and I think I could get a premium on some of them if exhibited; but I cannot afford to accompany my dogs to the show. Is there a way of exhibiting dogs without the owner's presence, and would they be well taken care of? Are the expenses great, and how am I to go about it? 3. What would be the proper charge for a 10-bore muzzle-loader? Ans. 1. If the kennel is well filled with straw and in a sheltered place they will do very well. 2. You can safely send your dogs to the secretary of the show, who will see that they are well cared for. The only expense will be the cost of transportation and the entry fee. 3. 3½ to 3 drams of powder and ¾ to 1 ounce of shot.

T. C., Wading River, L. I.—1. I send you a bird for identification which I shot yesterday, and a neighbor shot two more. I think it a pine grosbeak, but find it called in the State work by De Kay, pine bullfinch. 2. One of our neighbors killed a few weeks ago an opossum in his hen house, and I hear of two being killed on Strong's Neck this fall. Is not this uncommon for Long Island, and where did they come from? 3. If the sale of game in the New York market were to be prohibited at, or soon after, the season for shooting expires, would it not have a good tendency in the direction of game protection? Ans. 1. The bird is the pine grosbeak or pine bullfinch (*Pinicola enucleator*). See recent issues of this journal for an account of its habits. 2. Quite unusual, we think. Have any others of our readers noted their occurrence recently on Long Island? 3. No doubt it would have a very beneficial effect.

FACT AND FANCY.

J. L. Shirley, of Dallas County, Texas, went out hunting, and, forgetting to take a supply of wads, used paper in lieu of them. Returning he interested himself in the game bag, but he had $300 in paper money in the same pocket with his wadding, and, after shooting away over $50 in bills, found that he was, perhaps, the only man in the country who used greenbacks for wads.

Statistics are published in India of persons and domesticated animals killed in 1881 by snakes and wild beasts, also of snakes and wild beasts killed by men. Snakes alone in that year are declared to have destroyed 18,670 human lives, and wild animals 2,757 lives. The lives of 43,609 cattle, in the same period, were taken by snakes and wild animals. The number of snakes destroyed during the year was 254,967 and wild animals 15,274.

One of the heroes, we should say heroines, of Tel-el-Kebir, is an old Irish setter named Juno, belonging to the 1st Battalion, Gordon Highlanders. She "rushed the intrenchments at the head of the troops amid a rain of bullets and came off without a scratch. Juno has long been a pet of the regiment. When the order came to proceed to Egypt everyone said that she must go too; and go she did, to the delight of the men.

Old miners have a great respect for rats of the lower levels, says the Virginia City (Nev.) *Enterprise*. They neither kill the rats nor suffer them to be killed by green hands. In the first place, were there no other reason, a dead rat left underground would scent up a whole level, and, in the second place, the living rats devour any bones, scraps of meat or fragments of other food left in the mines, which would, by their decay, vitiate the air, generally hot and unpleasant at best. Rats also give warning when a cave is about to occur. They feel the pressure of the settling ground even before the cracking of the timbers is heard, and come forth upon the floors and scamper uneasily about by scores. For these and other reasons the miners have a friendly feeling toward the rats, feeding and protecting them. In nearly every mine the men have one or more of the little animals as pets, and these are quite tame, coming out of their holes to be fed at lunch time. When rats come into a new drift or crosscut it is considered a good sign—is thought to mean that the men will strike ore. The other day, while the men were at work in the face of the new west crosscut on the 2,700 level of the Sierra Nevada mine, a rat came to them, traveling along the line of the compressed air pipe. Some of the new hands wanted to kill it, but the old miners would not allow it to be hurt. They said it would bring luck to the crosscut. So they fixed up in the roof of the drift a box as a house for the rat, and placed food near at hand, in order that it might find its new quarters profitable as well as comfortable. There is

much talk among the miners about the coming of this rat, and the men on the new crosscut are very proud of it, and have high hopes on account of its presence. Woe unto the man who shall intentionally kill that Sierra Nevada rat!

An antiquated rifle stands in the corner of the gun room in M. C. Westbrook's house in Blooming Grove—a house once famous as a sportsman's tavern, the rifle, says a Milford, Pa., correspondent of the New York *Sun*, was made years ago by a gunsmith in the central part of New York, for Solomon Westbrook, father of the celebrated Pike county deer slayers, John C. "Mose," and the Hon. Lafe Westbrook. It has the old-fashioned swivel breech, and is known all over the country as "Old Swivel." The original owner of the gun killed more than a score of deer with it. He died thirty years ago. Then Lafe Westbrook used it for years. Ten years ago he laid it aside as worthless. He couldn't hit anything with it, he said. Then Uncle Ira Crissman, justice of the peace, and a member of Moses's household, took it up. He said the gun was worth all the rest of the guns in Pike county, and that the reason Lafe couldn't kill anything with it was because he didn't know how to shoot. Uncle Ira has hunted with it every season since, and no one else ever thinks of touching it. It stands in the corner waiting until he goes up to take his annual hunt, he having come to Milford a few years ago to be justice of the peace here, and to help Frank Crissman run the Crissman House. "I never missed a deer since I hunted with Old Swivel," says Uncle Ira, "and I've drawn bead on a good many of 'em with it. I've shot 'em at short distances and at long distances. If I can only get that gun on 'em once that's all I ask. They say deer are scarce this year, and give all sorts of reasons for it, but the main one is the bringing of Old Swivel into the county. When I die and they lay that gun to one side deer will soon pick up again and be plenty as ever."

The great American bird is under every condition a bird altogether, says the Wood River, Neb., *Times*, but it usually flocks alone on Wood River, because its mates are as scarce as lady partners at a programme ball. That eagles are birds of prey is established by various stories in school readers, where they are shown to have frequently carried off into mid-air children, lambs, and other food ten times their own weight, and disappeared with them into dim space toward the summit of the mountains, where they store their grub for winter feasts. The largest birds of the eagle species are found in the Wood River Mountains, and yet no mules, nor cows, nor people have ever been carried away by them. The eagles of this country have often been known to omit devouring weakly rabbits and squirrels, and to have shown almost human kindness. An event which occurred ten days since at Foster's ranch, above Hailey, fully establishes this trait of the Wood River variety. One of the ranchers saw a huge eagle flutter over the barnyard, interested in a fat turkey, and immediately secured his rifle. The first shot broke the eagle's wing, and in its crippled condition it wobbled and flopped around uttering screams of pain. The man was watching the result before firing again, when he discovered another eagle coming from a distance. It was evidently a mate of the first one. Like an arrow it flew to the rescue, and examining its wound and seeing its mate could not escape, it took hold of it by its claws and beak and flew to the mountain side, where it laid down the victim of the sportive hunter. During the past seven days the men on Foster's ranch have noticed each day that the mate carried food to the wounded bird regularly, and is yet feeding it upon squirrels, rabbits, birds and mice. Mr. Foster could kill the two birds any day, but has refrained on account of the affection displayed between them. A small American flag will be fastened about the wounded bird, and when it again flies it will carry the emblem of freedom with it to the highest mountain peak.

This is the unhappy season, says the New York *Times*, when the mania for hunting spreads among all sorts of people in the metropolis like a deadly malaria. It does its destructive work in the most unexpected quarters. No office, or warehouse, or shop but is likely to suffer from it. The experienced fisherman who "went out" earlier in the season with expensive tackle and convinced themselves and their friends that they knew nothing about angling, are convinced that their true field is hunting, and they borrow dogs and guns in the most reckless way, and spend days in tramping over pieces of country that for years have been as innocent of game as the City Hall Park. Clerks, lawyers, clergymen, shop boys meet on common ground and on equal terms when they encounter each other on the edge of a tiny New Jersey or Long Island forest. There are no class distinctions among them, for they are all alike in not being able to find any game and not being able to hit it if they did. There are some good hunters in New York, but these know better than to go prowling about the cornfield and potato patches within twenty miles of the city. These sportsmen who go into the upper counties of New York and Pennsylvania, or down to the lower end of New Jersey, very often come home with some practical results, the product either of skillful shots or successful barter. But those amateurs whose circumstances keep them within an hour's railroad ride of home are well satisfied to return with dry feet and a pair of rabbits. In the vicinity of any of the railroad stations tired and disgusted hunters may constantly be seen coming back to the city with empty pouches and aching bones. The possession of a dog and a gun makes a railroad passenger at once common property, and his fellow passengers rarely wait for the formality of an introduction before they make themselves entirely at home with him, asking him all about the make and value of his gun, the brand of powder he uses, where he is going, and the breed and age of his dog. Hunting stories are common these bright days in all the incoming local trains, and the sportsman who is well covered with mud and who brings home as much as a rabbit or two is a hero second only to the great hunters and trappers of the Bowery stage.

A Cough, Cold or Sore Throat should not be neglected. BROWN'S BRONCHIAL TROCHES are a simple remedy, and will give immediate relief. Price 25 cts.—*Adv.*

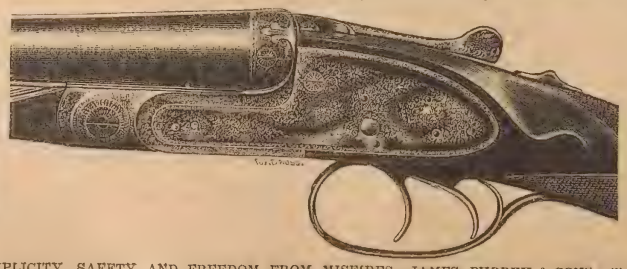
NOTICE.



JAMES PURDEY & SONS,
OF 287 & 289 (late 314½) OXFORD ST., LONDON,

Gun manufacturers, by special appointments to Her Majesty the Queen, H. R. H., the Prince of Wales, and the most noted shots of Europe, give notice that on January 1st, 1883, they will remove to the new and large manufactory they are now building, and that after that date their address will be

Audley House, South Audley Street, London.

They take this opportunity to inform American sportsmen that they have patented **A NEW REBOUNDING HAMMERLESS GUN,** which, after the most careful practical trials and severe tests, they confidently reccommend as by far

THE BEST AND HAMMERLESS

ONLY PERFECT GUN MADE.

Its advantages are STRENGTH, SIMPLICITY, SAFETY AND FREEDOM FROM MISFIRES. JAMES PURDEY & SONS will only make one quality of gun for the United States, viz.: THE BEST. Guns take about five months to make, and can be ordered direct from the makers, or through the agencies of SCHUYLER & DUANE, 189 Broadway, New York, and JOS. C. GRUBB & CO., 712 Market street, Philadelphia.

N. B.—Messrs. Purdey & Sons are prepared to sell the rights, or grant a license (subject to certain conditions) for the sole manufacture of this gun in the United States.

FOR TOWN AND COUNTRY.-1883.

A JOURNAL OF THE ROD AND GUN.

The year now drawing to a close has been with the FOREST AND STREAM one of most gratifying progress. Early in the year by an important mechanical improvement, the typographical beauty of the paper was greatly enhanced; and in August, with the beginning of the tenth year of publication, it was

Permanently Enlarged to Twenty-eight Pages.

There has been an equal growth in other important respects. The patronage accorded to this journal by the intelligent reading public has never been more cordial than it is at the present time. Sustained thus heartily, the publishers are prepared to maintain in 1883 the FOREST AND STREAM prestige as the

Representative Field Journal

of this country, at once entertaining, useful and influential. As the exponent of the highest types of field-sportsmanship the paper will be adapted to the tastes of all men who use the rod and gun as means of pleasure and recreation. Broad in its sympathy with all that is legitimate in field sports, free from any entangling alliances with cliques, having no interests to serve save those of its constituents, and never hesitating in its criticisms of whatever may be inimical to these interests, the FOREST AND STREAM'S highest ambition will be to preserve in the future the approval won by its course in the past. It will persist in its efforts to awaken in the public mind a fuller appreciation of the importance of the proper protection of game in the breeding season, and of due moderation in the destruction of game at other times. This it considers a matter of prime importance, not so much to the man whose wealth and leisure enable him to make extended tours to favored game countries, as it is to that already very large and constantly increasing class of business and professional men, whose favorite relaxation from the routine of employment is found in brief vacation trips to the woods and fields and brooksides.

The enlarged form of the FOREST AND STREAM enables its editors to present each week in the several departments a large and varied supply of reading. In the columns of

The Sportsman Tourist

Will be found sketches of travel and sport. Coming from many different writers, and widely separate parts of the country, these sketches always have the charm of novelty, and they are sure to be read with interest by sportsmen, because their writers see things through sportsmen's eyes, and describe them from the sportsman's standpoint.

Natural History.

This department will not deal with fossils nor with the monsters of African jungles. Quite on the contrary, it will treat of the animal life of land and water in our own country, the habits and ways of American fur, fin and feather, in which American sportsmen are presumed to take an intelligent interest.

Game Bag and Gun.

In addition to the numerous accounts of hunting and shooting excursions, necessarily varied and interesting—as such accounts must need be—these columns will be found of special value to amateur and veteran alike, because of the frequent interchanges of experience in all matters pertaining to game and shooting.

Sea and River Fishing.

The angler will find in the pages of the FOREST AND STREAM the best angling literature of the day, in quantity more than is contained in all other publications put together. This journal has inaugurated a series of angling tournaments, the initial meeting having been held in the Central Park of this city; and it is believed that others of equal success will follow in other years. Meanwhile, the man who loves to go a-fishing may find in the FOREST AND STREAM all the year around a great deal that must be to his liking.

Fishculture.

The columns devoted to this important subject furnish a complete resumé of current achievements and progress in this important work.

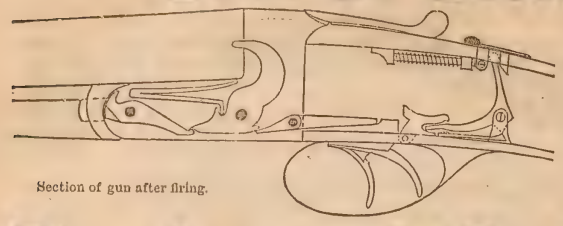
The Kennel.

This department has won the confidence of dog owners. Its reports of field trials, bench shows and other events are recognized as impartial, honest, and the most able published. The recent series of papers by its editor, entitled "Training vs. Breaking," have been published in book form, and have had a very large sale. Other papers of equal importance will be published from time to time.

Yachting and Canoeing.

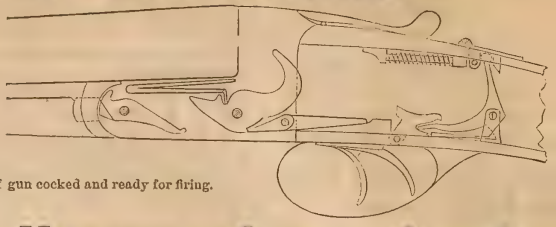
The editor of this department being a practical naval architect, and thoroughly familiar with every branch of the subject, will continue the same intelligent treatment of yachting and canoeing that have already won for the FOREST AND STREAM esteem and confidence.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.



We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each, and the files constitute a library of permanent worth. Eighteen such volumes have already been published. We furnish handsome file binders (price $1.25) which hold twenty-six numbers.



Subscriptions may begin at any time. Per year, $4; $2 for six months. Remit by post-office money order, draft or registered letter. Give name, town, county and State. Address

Forest and Stream Publishing Co., 39 Park Row, N. Y.

Don't Be Deceived or Led Astray.

Section of gun after firing.

Section of gun cocked and ready for firing.

The Anson & Deeley Hammerless Lock,

AS MANUFACTURED BY

Westley Richards & Co., London, Eng.,

HAS NO EQUAL!

And is the only hammerless gun in the market that is absolutely faultless, being simple, durable, and possessing those wonderful shooting powers, combined with that indescribable symmetry and beauty so characteristic of Westley Richards' product.

Every desirable feature is found in this gun. Superiority of Material and Workmanship. Absolute Safety in Handling. Without Comparison in Durability and Simplicity.

Shooting Qualities Unsurpassed.

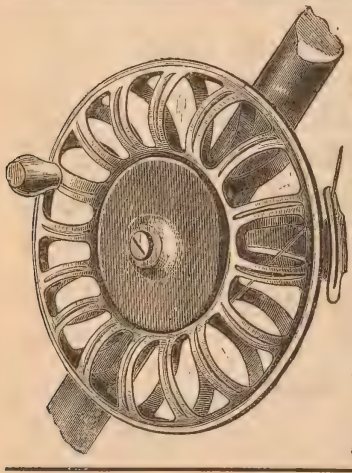
The following letters from prominent sportsmen cover the ground exactly:

CLARKSVILLE, Tenn., March 20, 1882.

J. Palmer O'Neil, Esq.:

My Dear Sir—The Westley Richards Hammerless Gun I obtained from you has been the admiration of all my friends. I consider it much the best Hammerless gun, and recommend all sportsmen who can afford the luxury of a perfect gun, to buy a Westley Richards Hammerless. Respectfully, PATRICK HENRY.

BURLINGTON, Iowa, Sept. 20, 1882.



J. Palmer O'Neil & Co., Pittsburgh, Pa.:

Dear Sirs—The Greener and Westley Richards guns arrived safely yesterday A. M., and in the evening I took them both out and targeted them. I like the Greener better for only one reason, and that is it fits me a trifle better. But the Westley Richards made by far the best target, so I have concluded to keep it and return the Greener. The Westley Richards is certainly a little beauty, and makes as fine a target as I ever saw. One of my friends who is a great sportsman went out with me, and before the trial made all manner of fun of the "pop gun," even while he admired its graceful shape and elegant workmanship. But the result of the trial rather surprised him. He shot against the Westley Richards, his 11lbs. Daly loaded with 5 drams of powder and 1¼oz. of No. 7 shot, while I used 3¼ drams of powder and 1¼oz. No. 7 shot. At 30, 40 and 50 yards I beat him badly in distribution and penetration. At 60, 65 and 70 yards fully equalled him. And the difference at 75 and 80 yards could hardly be noticed. I am much pleased with the gun, and as soon as I become a little more accustomed to it I have no doubt my shooting will be greatly improved. I shall take pleasure recommending the Westley Richards Hammerless Gun.

Yours truly, GEO. H. TOUSEY.

J. PALMER O'NEIL & CO., Pittsburgh, Pa.

Agents in the U. S. for Westley Richards' Hammerless Guns.

WHAT WILL THE WEATHER BE TO-MORROW

POOL'S SIGNAL SERVICE BAROMETER

OR STORM GLASS AND THERMOMETER COMBINED,

WILL TELL YOU!

It will detect and indicate correctly any change in the weather 12 to 48 hours in advance. It will tell what kind of storm is approaching, and from what direction—**invaluable to navigators. Farmers** can plan their work according to its predictions. **Saves 50 times its cost** in a single season. Has an accurate thermometer attached, which alone is worth the price of the combination. This great **WEATHER INDICATOR** is endorsed by the most eminent Physicians, Professors and Scientific men of the day to be the **BEST IN THE WORLD!** The Thermometer and Barometer are put in a nicely finished walnut frame, with silver plated trimmings, etc., making it a beautiful as well as useful ornament. We will send you a sample one, *delivered free*, to your place, in good order, on receipt of **$1**, or six for **$4. Agents** are making from $5 to $20 daily selling them. *A trial will convince you.* Order at once. **It sells at SIGHT!** Just the thing to sell to farmers, merchants, etc. Invaluable to everybody. U. S. Postage Stamps taken if in good order, but money preferred. **Agents wanted everywhere.** Send for circular and terms. Address all orders to **OSWEGO THERMOMETER WORKS,** (*Largest establishment of the kind in the World*) **Oswego, Oswego Co., N.Y.**

We refer to the Mayor, Postmaster, County Clerk, First and Second National Banks, or any Business House in Oswego, N. Y.

Write your Post Office, County and State plainly, and remit by money-order, draft on New York or registered letter, at our risk.

This will make a Beautiful and Very Useful Present.

READ WHAT THE PUBLIC SAY ABOUT IT.

I find Pool's Barometer works as well as can that cost fifty dollars. You can try on it every time.
CAPT. CHAS. B. ROGERS, Ship "Twilight," San Francisco.

Barometer received in good order, and must say that the instrument gives perfect satisfaction in every respect. It is neatly made and wonderfully cheap at two dollars. GEO. B. PASSONS, M. C. R. R. Office, Detroit, Mich.

Pool's Barometer has already saved me many times its cost, in foretelling the weather. It is a wonderful curiosity and works to perfection. P. J. ROSSARROW, Milwaukee, Wis.

BEWARE OF WORTHLESS IMITATIONS. None genuine without our Trade Mark, and Signature of J. A. POOL, on back of Instrument, as below:

J. A. Pool TRADE MARK

Every Instrument **warranted** *Perfect* and *Reliable*. Size, 9½ inches long, 3½ wide. If not satisfied on receiving the instrument, return it at once and we will refund your money. Please state where you saw our advertisement.

NOTICE.—$2.00 each is the regular retail price for above instrument, but being desirous of introducing them and securing good agents, we offer for a short time to deliver "a sample one" free to any address on receipt of only one dollar, or 6 for $4.00. Order at once. It's just the thing for a Christmas present.

Sportsmen's Goods.

GENUINE

DOGSKIN JACKETS

Made to our special order from selected skins, and imported direct from Norway.

Every jacket is marked "G. W. Simmons & Son, Importers and Manufacturers."

We offer this year the handsomest lot of Dogskin Jackets we have ever been able to collect. Each of the jackets has been made to order, and nothing equal to them can be found in the United States! We do not import the skins and make up the Jackets in work-room! The jackets *complete* are brought through the Custom House, and we sell them for *thirty per cent less* than any other house can afford to!

NOTE OUR PRICES and compare goods with others advertised as the same or similar.

A No. 1 Quality, $12.

We keep only the *best quality* of the imported jackets, and offer *no second grade.*

We claim for these jackets that they are:

1st, Windproof.
2d, Waterproof.
3d, Soft and Pliable.
4th, Flannel-lined.
5th, Never Stiffening.
6th, { 30 per cent. less than others. / Ask for the same or similar goods.
7th, The Best Made.

We warrant every jacket, and will send on approval for examination on receipt of measure.

In addition to this superior line of *Imported* Dogskin Jackets, we keep constantly on hand for the use of all who are exposed to the weather our own domestic make of Oak Hall Leather Jackets. These imitations of the imported jackets are flannel lined, and hardly to be distinguished from the imported. They are made in our own workrooms, and every one is warranted in every particular. The domestic jackets we sell for *ten dollars.*

Our sales of Leather Jackets, last season, amounted to nearly one thousand, and we are the largest dealers in this class of goods in the country.

G. W. SIMMONS & SON, Oak Hall, 32 North street, Boston, Mass., Importers of Leather Jackets, manufacturers of the celebrated "Boston Shooting Suits." Prize medal awarded at St. Louis.

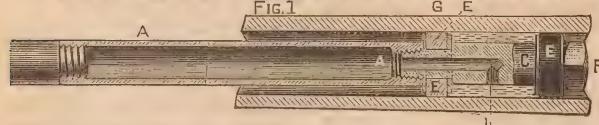
Climax Gun Cleaner.



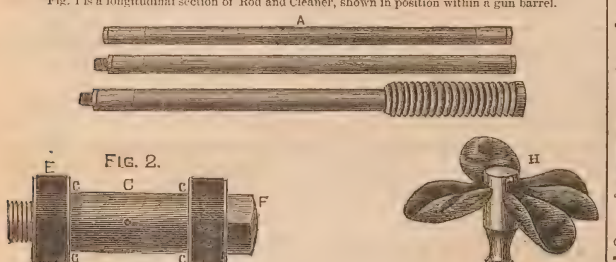


Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

NOTE.—In those made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

In offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

1st. It is made in three joints, like a common cleaning rod, and therefore is portable.
2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.
3d. The ease with which it can be adjusted to fit the barrels, loose or tight.
4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

DESCRIPTIVE CIRCULARS AND DISCOUNTS TO DEALERS GIVEN ON APPLICATION.

For sale by Gun Dealers, or address

Send stamp for Illustrated Price List.

ALBERT FERGUSON,
Office, 65 Fulton street, N.Y. (With Conroy & Bissett).

N. M. MUZZY

45 South Canal Street, Chicago, Ill.

Of the old firm of HITCHCOCK & MUZZY and MUZZY & CO. in 1882.—Having increased my facilities for the business of reaming out gun barrels, I beg to offer my services to those owning guns of unsatisfactory shooting qualities. My system is peculiarly my own. I leave no shoulders, and will guarantee my cylinder boring to shoot more even than by the old choking system, in every instance. I invite special attention to my method, and the most satisfactory testimonials will be furnished when desired. Guns can be sent, and will be delivered by express.

CONSUMPTION.

I have a positive remedy for the above disease; by its use thousands of cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy, that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer. Give Express & P. O. address, Dr. T. A. SLOCUM, 181 Pearl St., N. Y.

Hotels and Resorts for Sportsmen.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free owner's risk.

It is our aim to make sportsmen feel "at home on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest Packed in 6¼ lb. kegs and 1 lb. canisters

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. This Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

ANSWERS TO CORRESPONDENTS.

THE PARK GRAB.

THE project of the worthy speculators who are after the peoples' pleasure ground, appears to be flourishing. Here and there a feeble voice is raised in protest against the steal, but with a powerful lobby to back them, and no opposition from the Interior Department, the grabbers have little to fear. The term of office of many congressmen is now expiring, so that they feel they have little to lose, and can thus act as they please. Their constituents have rejected them at the polls, and they need no longer regard the wishes of the people.

It is hoped that Senator Vest, who took hold of this subject in an earnest way at first, will make a strong fight against the monopolists who desire to appropriate for the benefit of their pockets the only National Park possessed by the American people. It is whispered that his interest in the subject has on a sudden ceased, but we cannot believe this to be true. Little by little interesting information is leaking out in regard to the purposes of this Improvement Company. At first its promoters, if their own story was to be believed, were working solely and simply for the interests of the people of this country. They related with tears in their eyes most heartrending stories of the slaughter of game, and told about the destruction of geysers and other natural wonders. It is true that none of these statements were very new, for all that they spoke of had been going on for years, and was perfectly well known to every man who kept himself at all informed as to what is taking place in the Park, but they talked about "vandals," and quite made it appear to people ignorant of the subject that they were acting almost entirely from philanthropic motives. It is true that they mentioned incidentally that they wished in return for the benefits that they were going to confer upon the people, to have a monopoly of the hotel, stage and telegraph privileges in the Park, but they said that this would be a small matter, and that they would really scarcely pay expenses. A little later it appeared that they were to charge for the guides and the horses which tourists would require while in the Park, and were to have the sole right to all timber and arable lands; and now we are told quite as a matter of course that this company is going into the cattle business, and that the Park, which has been set apart for the people, is to be turned into a big stock range for the benefit and behoof of the Yellowstone Park Improvement Company. Truly the modesty of these monopolists is startling, but not more so than the meekness with which the people endure this monstrous invasion of their rights.

This then is about the way things appear to stand at present. The lease which the company hopes to obtain provides that it shall have the free use of timber in the Park for building purposes; shall have the free use of arable land in the Park; shall have the free use of the waters of the Park for supplying hotels and other buildings; shall have the exclusive right to put yachts, sailboats and rowboats on Yellowstone Park Lake; shall have exclusive right to erect telegraph wires throughout the Park; shall have the right to establish stores and trading stations, and shall have exclusive right to furnish transportation and guides to and from points within the Park. The company has selected seven tracts in the Park, each containing, with one exception, 640 acres, and the lease provides that those interested shall have the use of this land for a period of ten years with privilege of holding it longer. A provision in the lease also gives the company the right to occupy such other portions of the Park as may be desired. The annual rental of the land is not to exceed $2 per acre, and the company expects to get a much lower rate. In other words, these enormously valuable privileges are to be leased to these men for the pitiful sum of $9,000. Their store privileges alone will be worth many times this sum, to say nothing of all the other valuable franchises enumerated before.

The lobby which is working for this lease is a strong one, but a more powerful ally than any lobby has been secured. The press of the country, through its Washington correspondents, has been captured, and that at a very moderate cost. This shrewd maneuver was carried out by the private secretary of Mr. Rufus Hatch, who himself is an old newspaper man. This gentleman, week before last, gave a grand dinner to all the correspondents of the press in Washington. The occasion was a delightful one; the company was good, the viands delicious; wine flowed freely; the schemes of the Yellowstone Park Improvement Company were discussed and applauded, and from this time the despatches to the newspapers throughout the country took a different tone. The press telegrams now began to speak of it rather favorably, and to attempt to soothe the fears of those who had become alarmed about the matter Now was not this money well invested? Just think of muzzling the press of the whole country by means of a good dinner, at a cost of only a few hundred dollars. How the schemers of the company must have chuckled over their economical methods. No doubt they resolved that the young man who originated and carried out this idea should have a good place in their employ, for he will be useful in the future. This is cheaper than buying up Congressmen.

As for the press at large, it remains to be seen whether its conductors will be held in check by their Washington correspondents who have parted with their independence for a mess of pottage washed down by a bottle of champagne. If they should be so controlled, it will give people generally, quite an exalted idea of the power and importance of a Washington correspondent.

We refer our readers to a press dispatch to the *Herald* for further details of this project for grasping the people's rights by this band of monopolists. The correspondent who sent this is one of the few who has had the manliness to speak honestly on the subject of this outrageous piece of business. In a few words it tells a significant story:

> A gentleman who was recently at the Park said to-day that he would rather have the lease which the company desires than have a fee simple title to the entire tract. He stated that during the past season fully ten thousand people had visited the Park, a number five times greater than during any previous year. Among the visitors have been some of the most prominent men in America, and also travelers from England, Scotland, France and Sweden. Those whose travels have been extensive pronounce the scenery the grandest in the world. A traveling physician said the medicinal waters were the finest that have ever been discovered.
>
> The gentleman also stated that since last September a considerable number of men have already been at work under Rufus Hatch, and at present are at hard labor in getting out timber for the proposed hotels. Several saw mills are in active operation. The company has already selected seven sites for hotels.
>
> General Sheridan in a report recently made opposed the granting of such privileges as have been given to the Yellowstone Park Association. He also described the acts of vandals who were destroying the cones of geysers and burning the forests. Others also oppose the scheme, claiming that placing the Park in the hands of a monopoly would not be in the interests of the public. They believe that the privileges to be allowed should be divided.
>
> One of the chief elements in this proposed enterprise is the stock-raising venture, which is to be on a large scale. It is believed that the contract, which appears to relate chiefly to hotels, includes the right to use all the grazing lands in the Park, and that under this cover the most successful stock ranches can be conducted. The whole scheme is one that evidently needs more careful scrutiny than it has yet received.

There certainly was never a more audacious and barefaced plot to rob the people, nor one which apparently encountered so little opposition.

How will it turn out?

THE MICHIGAN ASSOCIATION.

A MEETING of the Michigan Sportsmen's Association will be held at Detroit next Tuesday. Several matters of importance will receive attention, among which we may mention the appointment of a State game constable, the abolition of spring shooting, and the repression of antagonistic legislation.

Michigan has been in many ways the pioneer in game protection, and the experience of this association is a valuable guide for similar societies in other States. The most important work accomplished by the Michigan sportsmen during the past year has been the formation of game clubs in sections of the State where formerly there was a misapprehension of the spirit and aims of the society, and a decided antagonism to its members and their work. The formation of these clubs is due to the tact of Mr. Cyrus W. Higby, who was sent out by the association as its agent. Within the year Mr. Higby has organized twenty such clubs, and as the natural sequence there has also been wrought a decided change of sentiment in the towns so visited by him.

We understand that with the success of the past year upon which to base their claims, the Michigan sportsmen propose to apply to the State for assistance in the support of a State game warden, who shall carry on the work so successfully inaugurated. This demand is just and reasonable. If the game is worth preserving at all, it is the concern of the State to secure the protection. It cannot be expected that a number of individuals, no matter how earnest and enthusiastic they may be, will go on forever paying out of their own pockets what should be paid by the public. The Michigan Sportsmen's Association is working not for its own members only, but for the public as well; and it is not asking too much that the burden of expense be borne by all who reap the harvest.

The abolition of spring shooting will be discussed, and while there is little probability that it will meet with favor from the majority of the delegates, discussion cannot fail to be a profitable one. There is certainly a very decided change of sentiment on this question, and it is not improbable that should one State set the example others would follow in forbidding spring shooting. Among the oldest and most experienced sportsmen the wisdom of such a step is not questioned. What State will be the pioneer in incorporating in its game law a clause forbidding spring shooting?

Like all other societies of this kind, the Michigan Association has encountered much opposition among individuals whose toes have been trodden upon. In certain sections of Michigan the deer shooter is no respector of seasons; the buck, the gravid doe and suckling fawn are all one to him. Everything is meat that comes within range of his gun. He scouts game laws, and, for that matter, other laws as well—witness the Clare county case, reported in these columns last year.

There is also, and always will be among men who are high minded and public in their convictions, an honest difference of opinion regarding certain phases of the law. No society, organized as is the Michigan Association, can be perfect in all that it does, nor hope to escape criticism from outsiders. It can demand, however, that in discussing its work, these outside critics shall take into consideration its general character and work and not attempt to simply pick flaws.

MINNESOTA VENISON.—New York game dealers are raising the usual complaint, because they can no longer sell Minnesota venison, of which they have a large stock on hand. The season closed with the last month. There is no valid reason for changing the present law, even if the dealers cannot get rid of their stock. On the contrary there is every reason why the law should remain as it is at present If Eastern markets for Western game are cut off, so much the better for the Western game supply. As for the over supply, that may be easily remedied by the market-men themselves; if they cannot sell so much, let less be shipped to them.

HUNTING WITHOUT A GUN.—I.

THERE are certain advantages in going hunting without a gun. One sees more game and gets far better chances for shots if he is empty-handed than if he had a gun at his hip, with a thumb on the striker and forefinger nail against the inside front of the trigger guard.

I remember with a pang how, one day last fall, I had been waiting an hour on a runway, in just such readiness for the coming of a fox, my heart hammering at my ribs and the back door of my throat as the merry music of the hounds tended toward me, then sinking with dull thuds to ignoble regions as the wild melody sank below the whispers of the light breeze, till at last, grown tired and thirsty, I set my gun against a tree and went down to the brook for a drink. Then, while I was on all-fours, getting breath between sups, an aimless glance down stream disclosed, at first dimly, as if in a dream, then with sickening distinctness and reality, the fox, picking his way across the brook not five rods away. And one rainy day, when its soaked charges made my gun useless as a rotten stick, as I rounded a bend of the wood-bordered stream, I came upon the biggest flock of wild ducks I ever saw, one-half of them dozing on a log, inviting a raking shot, the rest lazily swimming in a huddle just under the sedgy bank. My grief at losing such chances would have been slight if my gun had been at home, instead of being so near and yet so unattainable, or in my hand so useless.

When you wander gunless in game-frequented tracts, there are no misses to account for to yourself, nor any occasion for telling "wrong stories" when you get home. If a ruffed grouse bursts with muffled thunder from the border of your forest path, a hare bounds into sight and out across it, or a woodcock whistles out of the thicket before you, each gone almost as soon as seen, your ready fore-fingers come into line, getting the range of every one, and you say: "I could have killed him," and feel almost as satisfied as if you saw him tumble to the earth. "If your finger'd been a gun," ten to one your charge had brought down nothing but a shower of leaves, nor done beast or bird any harm but fright. When you had searched the underbrush for half an hour for a feather or a tuft of fur and found none, you would rack your brain for reasons why you missed, and find none but your own unskillfulness, one which affords little comfort. It is pleasant, too, to come home boldly, without fear of meeting the man or odious boy who asks: "Where's your game?" After a bootless tramp with a gun, if you skulk home ever so slyly, you are sure to be accosted by one or the other, if not till you get to your own back door.

One may so hunt in close time, when the grouse is summoning his harem by beat of drum, the woodcock wooing his mate at twilight with towerings and unwonted notes, and the wood drake has donned his bravest attire to win his bride, or, when wooing and honeymoon are over and family cares have fallen upon them, and even on Sunday—without fear of game warden or town grand juror.

But I believe the greatest and best of all is, that without a gun one has time—or takes it, which is the way to have it—to look at everything about him and so see ten times more than he does when his chief purpose is the killing of game. Then a tree or rock or clump of underbrush or sprangle of ferns or tuft of sedge is not looked at, but sought to be looked into and beyond; and if a sight is caught of some strange growth, or a bird, new in itself or its ways, one passes it by with a twinge of regret, and forsakes a chance that may never come to him again, all for the craving of the game bag, as hungry as an empty stomach, and the savage blood thirst that we dignify by calling it love of sport. The game bag obliges, and one is ashamed to go home with it empty. But without it and the gun that feeds it, we may get more than it could hold, and that which needs neither ice nor fire to preserve, not for the short space of a week, but for all our days.

When my fox that day had vanished, I could not tell how he looked nor anything of him but that he was a fox and had given me the slip, for while he was in sight I was only wishing for my gun, and cursing my carelessness, and suffering in anticipation the jeers and reproaches of my companions if I dared to tell them what had happened. His beauty and grace, his adroit maneuvers and self-possession, his air of thinking to himself, were as much lost as was the chance of a shot. If my gun had been at home and I had taken in these, he might have carried off his skin and welcome. I would have something more lasting to treasure up. As it was, the ruddy ghost of that fox troubled my sleep for a week, and the lost opportunity vexed my awakening.

And if I had not had the gun to frighten the ducks with the snapping of its ineffectual caps, I might at least have counted them before they flew away with their beauty, were they thirty or fifty or one thousand. R. E. R.

NIMROD IN THE NORTH.—In our next issue will be begun the publication of a series of papers from the pen of Lieut. Frederick Schwatka, U. S. Army, in command of the late Franklin search expedition to the Arctic. It will be remembered that the members of this expedition lived upon the game of the country, and in his contributions to the FOREST AND STREAM Lieut. Schwatka will detail his very interesting experiences as a sportsman.

A NUMBER of ENGLISH PHEASANTS are soon to be imported into this country.

The Sportsman Tourist.

RABBITS, RELICS AND RUINS.

DURING the week just passed Aix and its inhabitants have been treated with an atmospherical phenomena; for three entire days no rain has fallen and bright, sunshiny days were the exceptions to its general climatic rule. The promenades and the Elisengarten have been thronged, and the open-air tables of the cafés of Frankenberg, Lonsberg, and Burtscheiden Wald were well patronized, and perhaps their proprietors rescued from the imminent risk of bankruptcy, due to the almost continuous bad weather which has characterized the season. To the army of invalids, who seek here relief from rheumatism, gout, and many kindred ills, the bright sunshine was a boon indeed, and temporarily compensated for, or drove from their notice, the bath-chairs and crutches necessary for its enjoyment.

The beneficial effects hoped for from the morning bath and douches of water, heated and sulphur-seasoned in Nature's laboratory, were in no danger of counter-action from too close contact with purer but colder water from the heavens, and every face was smiling.

To me, though, these sunny days did not bring unalloyed pleasure, for, on the first of them, plans which I had made "ganged aglee," and throughout both the others I could but fret that unexpected obstacles forced me to postpone a long looked-forward-to excursion.

Our *ober-kellner*, Henry, had one day overheard a conversation at table d'hôte between my vis-a-vis, Mr. James Du Bois, our Consul here, and myself, to the effect that we would enjoy far more the shooting of some of the hares and partridges, of which fair specimens were being served to us, than we did in dining on the same; and he had taken a very pleasant part in the conversation by informing us of the existence of an uncle, who, in the neighborhood of Cologne, owned and rented nearly three thousand acres of land, a large portion of which was well stocked with game of all descriptions, and further, that undoubtedly this uncle would be very willing to permit us to shoot on the same.

Naturally no time was lost in communicating with this uncle, and by return of mail a most cordial invitation had come, accompanied with an offer of the use of any outfit we might lack, and the assurance that the services of himself, sons and dogs were at our disposal.

We had no trouble as to outfit. Mr. Du Bois was already equipped, and I was able to hire a very good pinfire Lefauchaux, and to buy cartridges to fit it; the first at three marks (75 cts.) per day, the second, fresh loaded, at two cents each.

The afternoon of Sept. 26 was bright and fair, all obstacles had been vanquished and everything looked fair for a start on the morrow, so we telegraphed to expect us. In less than three hours the east wind (which is the fair weather one here) died out, suspicious looking clouds—*moutons*, a young French lady styled them—began to appear in the southwest; a gentle breeze sprung up from that quarter, and we went to bed with our doubting caps on to awake at midnight and hear the rain pattering on our windows. At 5 A. M. things looked still doubtful, but we determined to start, and we had hardly gone five miles from the station when our pluck was rewarded by a clearing up, and for the remainder of the day the weather was all we could wish.

Our shooting ground was in the vicinity of Hüscheln, a little village about two miles from Königsdorf, which latter is a thriving manufacturing town about thirty miles from Aix.

The hour and a half occupied by the railroad ride was passed most pleasantly. The road runs through one of the most important manufacturing districts in Germany, and before reaching Königsdorf we had passed through a number of villages made up of manufactories and homes of operatives. Of these the principal were the Stölberg, Eschweiler and Düren, at the second of which places the iron works alone employ over four thousand hands, and in the thirty miles we passed acres of rolling and puddling mills, foundries and factories devoted to all sorts of business; there were brass factories and zinc mills, cloth, paper and sugar mills, establishments for the production of pins, needles, mirrors and chemicals, in short, it was a human hive.

Water power was not wanting, for several brisk streams, viz., the Inde, the Roer and the Erft were all at work, but I fancy that, although in the language of the country these streams are termed "rivers," they had all they could do to supply water to the boilers of the many establishments worked by steam, whose lofty tapering chimneys seemed a very forest. And raw material in plenty and of many kinds is abundant. We saw coal and iron mines, and were told of others producing lead, zinc and cadmium; and some of these mines were worked perhaps before the Christian era, for very ancient Roman coins and other relics have been found in them.

All of the land between the villages is most thoroughly cultivated, the principal crops seeming to be cabbages, sugar beets and bricks, for wherever the soil would admit, a brick kiln was located. The fields were dotted with women and dogs, getting in the crops. At intervals among these evidences of the busy, prosperous life of the present are scattered many interesting relics of the far-off past. In those "good old days," when the law was that "He should take who has the power, and he should keep who can," the lords of the manor "roosted high," for they were prudent as brave, and the more inaccessible the location the better; hence on prominent hills and peaks the landscape is made picturesque by the presence of ivy-grown, moss-covered and tree-crowned ruins of the impregnable castles, through whose loopholes they fought, and of the cathedrals and chapels, which they built from their spoils as atonement for murder, lust and rapine.

Some of these ruins have histories, but others depend upon tradition and legend. Among the former is a chateau near Stolberg, which was occupied as a hunting lodge by Charlemagne the Great, whose name is associated with many legends. This hero lived in the eighth century, and died, it is claimed, at Aix-la-Chapelle, which has the proud honor of being one of the cities which gave him birth, and in which he spent a good portion of his life, making it his capital and *point d'appui* for his numerous raids upon Goth, Vandal and Roman. Here, ensconced in a tower and castle, overlooking a lake, in which he used to gaze by the hour, mourning over and thinking about the late Mrs. Charlemagne, or rather one of the late Mrs. C.'s—for in the matrimonial line Saint Charlemagne and Saint Brigham Young very much resemble each other—the hero mooned away his last few years of life.

There is a very pretty legend by the way about this latest spouse. Through a series of circumstances, possible only in a German legend or the "Arabian Nights," this dame became the possessor of a ring which insured to its wearer the undying devotion of Charlemagne. After her death his affections remained constant. So unusual an event (for he had had a regular chronic habit of getting married, making of the ceremony a means of gratifying every passion, from love to ambition or revenge) attracted great attention, and the secret of the ring, being duly brought to light, it was removed from the dead woman's finger and thrown into the lake, which was a part of the moat, surrounding the Castle of Frankenberg. But the water did not quench the fire, and his devotion was transferred to it. And there's a legend of about ten pages boiled down, and any doubter can, as I have often, sit by the borders of that lake—now a mere frog pond—and while enjoying a mug of Pilsner lager, listen to the tale as rehearsed in English, more or less broken, by the waiters of the Frankenberg beer gardens.

Everywhere in this vicinity exist monuments of Charlemagne. In Aix, the most interesting one is the Cathedral, a portion of which consists of the original structure, built by him eleven hundred years ago, and under the floor of which his remains were found after two hundred years of rest, sitting upright in a throne built of plain, uncarved marble slabs, arrayed in kingly garb, sceptre in hand, Bible on his lap, and the iron crown of Lombardy on his brow. And there they were permitted to rest for another century, until in 1165 the reigning Emperor, Frederick Barbarossa, reopened the tomb, and transferred the remains to a marble sarcophagus, evidently of Roman origin, and the throne to the gallery of the Cathedral, where both throne and sarcophagus are shown daily to tourists, who, if so disposed, and many are, can for a slight additional fee to the showman obtain permission to seat themselves in the seat where for many generations the emperors of Germany have been crowned. I must confess that while gazing at the Parian coffin, and reviewing, or trying to in my mind, a few of the great events which marked the hero's career, my attention was sadly distracted by the vigorous representation of the "Rape of Proserpina," with which its front was adorned, in relief—a most curious ornamentation for the tomb of a saint, for to this rank was Charlemagne promoted the year before he was placed in it, and he lay there nearly another hundred years, when they were placed, it is claimed, in a golden reliquary by Frederick II., and deposited among the treasures of this Cathedral.

The reliquary is there. I'll vouch for that as may any one who takes advantage of this privilege advertised as follows:

SHOWN DAILY, SUNDAYS AND FESTIVALS EXCEPTED.

Tickets, 1 to 3 Persons..... 3 Marks.

Each Additional Person..... 1 Mark.

Whether the bones are there is *otro cosa*. If, however, one can bring oneself to believe that the Shrine of the Four Great Relics, also in this show at a mark a ticket, actually contains, as is claimed—first, "the swaddling clothes of the infant Christ," second, "the robe of the Virgin Mary," third, "the cloth in which the body of John the Baptist was wrapped," bloody enough to please Toddy, and fourth, "the linen cloth used in binding Christ to the cross," why, a bone or two, or even an entire skeleton of so comparatively modern origin, can be easily accepted.

It is rather difficult, in studying up the history of this old city, to draw a line between legend and actual record. On the one hand I presume, it will be quite safe not to put entire faith in the original story of the origin of the hot sulphur springs, which abound in this valley, which is to the effect that the devil having been outwitted by the priests got very angry, and labored so hard to get even with them that the sweat poured in torrents from his body, and hence these springs. On the other hand, excavations, which have from time to time been made, have been rewarded by finds of Roman relics, which confirm the history that once there existed on this site a Roman city called "*Aquis grannum*," and throughout the neighborhood such finds are not infrequent. On the summit of a hill near the station at Stolberg, surrounded by a rough wooden fence, I visited the remains of what was once a Roman villa. Only the walls of the lower story are now standing, and they show that the villa was about forty yards front by twenty-five depth, and cut up into the many little apartments, courts, passages, etc., which mark the fashion at Pompei; tesselated pavements, carved columns, and statues which have been removed from it indicate the wealth of the former occupant. The discovery of this villa was made during the autumn of 1880 and it was the result of a systematic exploration under the direction of Captain Behrens of the Russian Army, an officer who has devoted himself to archeological pursuits, his attention having been turned in this direction by occasional finds, of coins, implements, and finally of a statuette by peasants.

It takes a lively imagination to enable one to get a great deal of comfort out of these old ruins. The same day that I visited this one, I also visited, at Stolberg, the immense mirror and plate glass factory of the St. Gundin Company, and did enjoy seeing in their fiery furnace, through a blue glass screen, quantities of great crucibles, each holding about a barrel of molten glass, brought out, carried glowing to the rolling table of iron, then dumped and pouring out an immense pudding-like pile, which was quickly reduced by the roll to a plate half an inch thick, and fifteen feet by ten in size. And then we watched on other plates the various processes of annealing, cutting, polishing, and silvering, through which they were transformed into mirrors. The making of the glass, in many respects, resembles that of the rolling of copper or iron plates with which I am familiar, but it was none the less interesting, and discounted the ruins.

But, although there can be no doubt but that, if thoroughly investigated and well written up, all of this business, data and antiquarian research, would furnish material for a most interesting paper, or series of them; the place for such papers would not naturally be found in the columns of the FOREST AND STREAM, so I'll return, not to my mutton, but to my hares and rabbits.

We left the train at Königsdorf, and after a brisk half hour's tramp through fields by well worn foot paths, reached the village of Hüscheln, the most prominent object in which was an immense two-storied white house, which proved to be the homestead of Herr Metzmacher, and a tall handsome old gentleman who met and welcomed us warmly at the

threshold, turned out to be the Herr, the uncle to whom we were accredited. Henry was with us and introduced us to his aunt, and two buxom cousins who were engaged in domestic pursuits, the results of which we soon after enjoyed in the shape of a hearty breakfast, to which the old gentleman contributed a goodly portion of most excellent Moselle wine.

While the *fräulein* of the family were preparing our breakfast, we utilized our time by a tour around the premises—and it was quite a tramp—under the guidance of Robert and Engelhard, two sons of our host whose fine physiques had been developed into most manly shape by the drill and discipline which, in common with all German youth, they had received during their service in the army.

It was a curious place. The building extended around three sides of a large square, and under one continuous roof were brewery, homestead, woodhouse, wagon-house, pig sties, cow stables, horse stables, hay barn and granery, occurring in the order mentioned. To our ideas it seemed strange in a place scrupulously clean and as white as whitewash could make it (even the pigs and cows showed evidence of careful grooming), to see the court in the center devoted to the collection of manure, which in a rich layer filled it three feet deep, leaving but a footpath around it; the kitchen and stable doors being vis-a-vis. The house was built of brick and timber intermingled, a fashion which is prevailing in Germany. Either their mortar is very poor, or they display great economy in its use, for in nearly every brick wall the interstices between the bricks soon become without form and void, the quality of both mortar and bricks being so poor that there is neither adhesion nor cohesion between them. In order to remedy, as far as possible, the unsafe weakness of the structure, a system has been adopted of supporting the brick-work with timbers, which form a net work horizontally, perpendicularly and at angles, resembling very much the frame of an ordinary "house kite," the intermediate spaces where in the kite only the paper shows, being filled in with the bricks; and to continue the simile, the balance strings of the kite are reproduced in many cases by long timber props; in spite of which support the streets of a village present a very curious appearance, for here a pair of houses are leaning toward each other as though indulging in a cosy gossip; and there another pair who as evidently have had a bit of a row, and no longer on speaking terms, bend as far asunder as possible; and again an eager wooer is being met with symptoms of great coyness. Hüschein consists of about thirty such houses, most of which are the homes of the numerous employes of Herr Metzmacher, and of course it has its church and *gasthirthschaft* or inn.

One thing is noticeable in these German hamlets: there is no sign of poverty. Every house looks comfortable. The women and girls, down to little ones of eight years, are busily knitting, or caring for the still younger ones, and the bright-faced, flaxen-haired, wooden-shoe-endowed youngsters are kept clean and well fed.

Only the very young girls retain the flaxen hair in its original state; the custom which prevails of going bareheaded gives to the sun and rain fine opportunity to produce the most inartistic mingling of many colors, and did the women ever, as fortunately for them they never do, require the assistance of a switch or false front maker, the best artists in Europe would be sadly puzzled to match the original hair.

One thing strikes me very forcibly, though, while knocking about in the rural districts. If there is anything at all in the theory of transmission of qualities and character from mother to child, what will the average European peasant develop into after a few more generations? Fathers all off to the barracks, keeping up the great standing army, and mothers laboring by the side of cows and dogs in the field, and carrying on their heads immense burdens, a toil from which even the incident of childbirth does not relieve them for more than two or three days after, sometimes none before. And the little ones, swaddled into living mummies, entrusted to the care of little sisters, themselves mere infants. In China this system has produced the coolie. Can it be expected here to fail to effect the same?

The farms in vicinity of Hüscheln and along the Rhine are much devoted to cultivation of the sugar beet. The agricultural implements in use are wonderful to behold, and the most convenient of them all, if placed on exhibition, would, in the United States, form a nucleus for sightseers at an agricultural exhibition—plows with three wheels, wheelbarrows fitted with traces for cows and dogs, hoes heavy enough to make two each, and most curious reaping and mowing implements.

I should think that this country, Belgium, and Austria would prove most profitable fields for a good drummer for agricultural implements, who could speak French and German. I believe that, if I had been in position to carry out my contracts, I could have effected a number of sales since I have been here.

After breakfast our party of three, re-enforced by the two male cousins and four good dogs, started with every prospect of a good day, for we had "the southerly wind and the cloudy sky which proclaim the hunter's morning," and we had hardly got our line extended before a flock of about twenty partridges got up, started by the dogs, which, just unchained, had not settled down to their work, and were, like ourselves, rather too frisky and noisy for business. This taught us a lesson though, and we indulged no more in such waste of opportunities. Our day's hunt took us over most varied country. Now crossing a plowed field on the alert for hare, then through patches of the sugar beet, yet unharvested, from which we got a fair show of partridges, then over heather-covered fields, where little clumps of blackberry bushes sheltered abundance of rabbits, of which, however, although many were called, but few were chosen, for when bunny did break from one cover and display a little bunch of gray lightning on her way to another, either the pace was too fast for us or the dog's head was so close that a shot would be too risky. I heard a number of claims as to hits, which were far in excess of the actual results. I own up to four clear misses, "unaccountable misses" I believe, is the correct term, and the first hare, which sprung up from a furrow not forty yards away, was fully double the distance before I realized that the bounding six-legged creature—for its ears had the appearance of reversed legs—was really a hare and not one of the dogs or a little jackass. Of course I followed up the first by a second bit of stupidity, or perhaps I might claim it was the same old stupid, and cut loose with both barrels. It is not necessary to record the result.

We hunted in line, abreast, with intervals of about one hundred yards. Not speaking German, I had great trouble in trying to manage the dog that was assigned to me, an old pointer bitch named Flora, and I had little success until the old gentleman stationed me next to him, and then, he managing the business, Flora proved herself equal to the occasion, and pointed steadily, and I, being given the privilege of the shot, made a fair percentage of the partridges shot.

Our "nooning" was something to be remembered. It was on a heather-covered knoll, overlooking a great plain of cultivated fields and vineyards, with the city of Cologne just visible on the horizon. It was not till I had this view of it that I realized the magnitude of the Cologne Cathedral, from which we were about ten miles distant, and the loftiness of its twin towers. When in the city I strolled around it, the grand bulk of the structure was not so noticeable, for there were high houses around it; and each of its own various parts was so grand in its proportions that it tended to dwarf its neighbor. The roof, two hundred feet from the ground, seemed but little below the summit of the transept tower, although actually a hundred and sixty feet separated them; and in town this tower seemed little less lofty than the spires themselves. But from our hill I could see the difference. While the city, with its wealth of churches and spacious mansions, was but little more than a slightly irregular, checkered line on the horizon, the Cathedral loomed up like an immense ship on a smooth sea, and the spires, 512 feet above the summit of the hillock on which the Cathedral stands, and by its addition 575 above the level of the Rhine, which flows past its base (to us invisible except by a line of mist), showed out in grand perspective. But that we knew to the contrary, we could have easily believed that we were gazing at a great church rising from a cluster of hamlets but a couple of miles away.

Toward sunset the hares began to show themselves in goodly numbers, but they were very wild, and saw and heard us long before we were within shooting distance; and the difference in distance between two successive seconds was wonderful. We were going through a big stretch of ploughed ground, and not quite so spryly as before our long tramp, and I fancy the hares had been resting as hard as we had been working.

I achieved the first success, by a method which might be called a scratch. Tired out, I had taken advantage of a dry pile of pea brush, and sat for half an hour or more resting.

As I rose to rejoin the party, the biggest hare of the day came flying by me, and by a long and lucky shot I stopped him, not though till he had turned a complete sommersault.

We found a good dinner awaiting us, and did such justice to it, that we are prejudiced witnesses if the subject of the excellence of the kitchen, vintage and malt, of our worthy host comes under discussion. Then came settling up.

Du Bois, who speaks German fluently, undertook this branch, and thus became the principal victim to rather a good joke. We had insisted that we should be permitted to pay for our entertainment, thus pre-empting the privilege of ordering at discretion.

The game bags were emptied, and from the goodly pile we, Du Bois being spokesman, insisted that our host should select for his own use such as he wished, and the Herr, not to be outdone in politeness, was equally persistent that we should take first choice, even to the extent of the whole, calling our attention to the fact that we two had killed by far the larger proportion—a fact due, it is fair to state, to the politeness of our companions, who gave us the shots. Considering this point, we modestly contented ourselves with just enough for a little game supper for six, and it was fortunate we did, for in our bill were items

Vier Feldhühner (partridges)	4 M. 80 Pf.
Ein Hase (hare)	3 " 00 "
Zwei Caninchen (rabbits)	2 " 50 "

which items were all right and in strict accordance with German custom. We had received free gratis politeness, hospitality, the services of men, women, dogs, guns and horse, but custom made it the thing to charge for the game.

As a whole, our day was a success. We had a jolly good time, and hope for another soon. PISCO.

AIX-LA-CHAPELLE, Prussia, Oct. 4, 1882.

CRUSOES OF THE ANTARCTIC.

Being an Account of the Voyage and Shipwreck of the Bark Trinity and Hardships of her Crew.

BY JOHN EASMOND, SECOND OFFICER.

[Continued from Page 425.]

MY shanty was only three miles from the base of Volcano Mountain; and when one night in May of this year (1881) there was a terrible eruption of the volcano, I was pretty badly scared. There was a great deal of excitement on the island while this thing lasted, and we all watched the flames with much anxiety, until finally the blaze died down, and so did our fears vanish. This eruption was a grand and awful sight to see, but the next time I want to be further off.

In the first week of October, 1881, I left my shanty about daylight to hunt up something to eat, with messmate Antono, the same negro who had brought the line ashore from the Trinity. After walking a short distance I took one route and let my companion go on another by himself, so that we would have two chances. Shortly after the negro went off on his cruise he met up with a large bull, one of the largest size. I was not within two miles of him at the time. We were badly in need of meat, and he was bound to have a fight with the monster. They were about a hundred yards from the water, and the battle began. Antono would stick his lance into the elephant and then run from him, and in this way the fight went on until Antono broke his lance, when he pluckily managed, with the piece that remained in his hand, to poke out the beast's eyes, as the Philistines treated Samson, and when his eyes were out the elephant soon became a victim. "He no see aqua," cried Antono when I came up to him, "me fight! Beef! beef!" The elephant measured twenty-two feet in length and ten feet around, and gave us meat enough to last three weeks.

Every day in this month we were expecting a relief vessel from Lawrence & Co., but none appeared, which troubled all of us very much. Very many of the Portuguese began to get sick and would not travel the beaches. I did not wonder at it either.

I was for some time then without seeing Capt. Williams or Mr. Keeney, and I wanted to know if they were all getting sick. I wanted to know how I would make out how many were on the sick list, and I soon taught myself a plan. October 16 I hoisted the signal flag, and gave one of my men a note to take to headquarters, telling them that there were two ships arrived and anchored off Fairchild Beach. In less time than it takes to tell it all hands were cleared out of their shanties and came rushing over to my shanty to see the glorious sight. Then their names were all scratched off the sick list and stayed off as long as we were on the island.

All these months we had not heard from our four comrades in Crinton Bay, nor they from us. There was a chain of icebergs between, as I have already said, so we could not go to them nor they to us. By this time the Crinton Bay gang were as eager to see us as we were to see them. They built a boat out of some boards they pulled off from their shanty, and Henry Story, captain of the gang, with one white man, paid us a visit. We were very glad to see them. The boat was of a strange model for either safety or speed; she was square built, 7ft. 7in. long, 3ft. 3in. wide, and about 1ft. deep. After a few days' visit they made their way back again.

We had all this time little to amuse us except to hunt for food; this kept us busy most of the time, and when we were not robbing the penguins' nests or killing elephants we were looking out for a ship to heave into sight and take us off the island, or else we were finding fault with the weather, which was bad all the year round, being foggy and windy and rainy and chilly, with sandstorms blowing that will in time wear through the boards of a shanty if it is not kept well banked up with tussock and turf. In November of this year (1881) we had a sorry game of base ball, using a wooden ball to play with; but there was no fun in it for us, and we didn't try it more than that once.

The Portuguese had some kind of a game that they played with pebbles—something like dice; but I never could make out anything what it was.

First when we began to hunt penguins, when they would see us, they would come toward us; but it did not take them long to know our character, and then they would give us a wide berth. There are four kinds of penguins on this island, the Johnnies, Maccaronies, Rock-hoppers and Kings. These birds have wings from eight inches to a foot long; they cannot fly nor run very fast on the land; any man can catch them; but when they get into the water and get their flippers into motion they would run down any locomotive.

The King penguins were from 2½ to 3ft. in height, and a right proud bird to look at. They did not breed on the island.

The Maccaroni penguins, smaller than the Rock-hoppers, went away from the island for nine months in the year, going off to the south, so people must conclude that there is land to the south of Heard's Island; and, for one I should like to go down there and explore for it.

The Johnny penguins were the most common; they were there in great numbers, and stood up in long lines a quarter of a mile long—truly a cruel* sight to look at in any Christian country. They came ashore and stayed all day in the breeding season. The best time to catch them was just after sunset. They live on fish, and were not so good to eat as the sea-hens, but we thought them pretty good because they were all we had to stand by. They sleep lying on their bellies. It was always very hard to catch a penguin asleep, for they would be sure to hear you. They bred on the level tussock, of which their nests were built; and they would go right on making their nests when we were standing by within ten feet of them. They would lay two eggs each when we gave them a chance. Their eggs were our principal food. To be sure and have them fresh we would rob the nests one day and then go over the same ground in two or three days again. The Johnnies would keep on laying as long as we would rob their nests. They would keep at it until their eggs had no yolks; and when they couldn't lay any more they would roll a stone into the nest and sit on that. They didn't propose to move so long as they were accommodated, even if their furniture was taken out of the house. We wanted fresh eggs all the time, but at last we would find only stones, but in November we generally got enough eggs to last us through December. The rock-hoppers would only lay one egg, if this was robbed that was the end of it.

About the first of November the penguins would begin to lay, but the eggs were not plenty until the fifth or sixth of the month. Then it was useless for anyone to get sick, as we had to go to Rock Beach, six miles away, for the eggs. About 150 of these eggs made a fair load for a man to bring. When the weather was fair we would go in gangs for this glorious food. We were better off than that old adventurer sailor Crusoe, for he had only Friday to accompany him, but there was a whole month of us.

Many of the eggs that I stored in my shanty would be broken, and I scolded my Portuguese for their carelessness, but we found one day that the rats were to blame for it.

When we first landed on the island there were only a couple of rats in the shanties. They were as tame as chickens, and by the time we left there were 200 of them.

The gale birds came November 18 and were with us until December. There were millions of them. They would come flying in for three hours at night, one-half hour after dark, or in moonlight nights for an hour. They are a white bird with black saddle on back, and red beak and feet.

They bred on the island, burrowing into the level tussock, and some of them into the banked-up sides of our shanties. These burrows go down about three feet, slanting into the ground, and are just about large enough at the entrance for a man's hand to get into. The he and she both went into the burrow. It was wonderful how, when they came ashore, they would pitch right down, each one at the mouth of his own burrow, and dive right in. When they came out again they would fly from their burrows directly out to sea. They lay one egg, and when the young bird comes up out of his hole he waddles around two or three hours and is then ready to go to sea—the first time he sees the light he is just as good as his parents, except that he hasn't seen so much of the world—and he won't see much of it either if a seahen gobbles him up and takes him down feathers and all. The gale birds look much like a small chicken; when you take their feathers off they weigh about a quarter of a pound; they didn't pay for the picking. They have a squeaky note, and are in fact good for feathers and noise and nothing else. We made beds of their feathers, and I gathered about 200 pounds of them.

Gale bird is their most common name, because they are always seen in a gale, or when seen it's a sign that a gale is coming, but all New London and New Bedford sailors call them "whale birds."

The ice partridges were with us from June 1 to Sept. 1. Some of the men called them white paddies. They are a guide for the sailors to show them where the seals are on the ice. They ate meat and the seeds of the cabbage. They were very tame; we could kill them with sticks, and sometimes I shot them from my cabin; their meat was very

* Cruel; *i.e.*, wonderful.

tender. About the first of September they would fly up the island, but whether they left the land I don't know, but think not, for there was no other land nearer than Kerguelen, and the prevailing wind was from the north, so that while they might have come from Kerguelen, it would have been tough work for them to go back again.

The sea hens came in September, built nests like the partridge, laid two speckled eggs and hatched in December, and left the island the first of June. Their flesh tasted very much like that of tame ducks, of which they were the size. We usually boiled them about an hour. They would at first be very tame, but after a month ashore they came to know our ways. We killed some with the shotgun; when one was dead throwing it up, and the rest would hover around it; but we got the most by snaring them. We would take a line thirty fathoms long, and making a noose at one end would put into it on the ground a piece of blubber; then when they stepped into the noose we would haul away on it, often getting two hens at a time. When they first came they would be very tame, but after a month ashore they would come to know our tricks, and would lift up their feet very carefully when going for the blubber.

Other birds that stop on this island all the time are called the stinkers. They are carrion birds, and, of course, not good to eat. They are about the size of a turkey, and would eat blubber until not able to fly.

The stinkers were with us all the year around, and many a barrel of blubber they scoffed. They have a very keen sight; sometime when we would kill an elephant, no stinker was to be seen in any quarter; but within five minutes they would heave in sight and soon would be squatting around waiting to take their turn at the carcass. I remember that one time a barrel of blubber was left unprotected for an hour, and when we came back there was none there, the stinkers had made way with it. They were a terrible nuisance, and gave us much trouble. The captain saw them breeding at Long Beach.

The shags had a rookery on the iceberg, near the water. Every morning about daylight a crew of them would start off, and make a circular flight about fifteen miles out to sea. They are thus a good guide to the mariner making Kerguelen or Heard's. The shags would be gone on this voyage two or three hours, when they would come ashore, and another crew would go out. They lay on the bare ice or in the tussock, breeding in January and into February, and leave the island the last of March, from which time to January again they live on the sea. They were fishy and tough, and though we tried we could not eat them. Two or three of the Portuguese once ate a couple of shags that had been boiled a long time, but they didn't know what it was.

A few Mother Carey's chickens blew ashore in the storms, but went right off again.

I saw that the gulls bred in November and December nesting away up in the cliffs, two hundred feet high.

The Cape pigeons would be on the island from October to January. They were very tame, and were easily killed with a stick. We would heave them a piece of blubber and then throw the stick at them.

We didn't see many fish; those that we caught were like porgies. Sometimes after tremendous pinnacles of ice would be broken off the bergs and fall into the water the fish would be hove ashore, dead or so stunned as to be easily caught. We thought the falling ice did it.

There had been no seals to speak of for fifteen years. We captured nine fur seals, of which I got five. They came in February, and, if not caught, would leave in May.

A few sea leopards paid us visits from time to time. They are like seals, with long neck and long flippers. The blubber is poor, but we made good use of the skins, making them into mittens, stockings and bootlegs. We saw fifty leopards and killed twelve.

As I have before said, we had nothing on Heard's Island for amusement but to be patrolling the beaches for something to eat; and as the weather during all these months was mostly cheerless and gloomy, we all came to be in despair of keeping up our spirits. Heard's Island is as barren and bleak and dreary a bit of land as Desolation, and deserves the name equally with that.

But the thing that troubled us most of all was that we did not know whether we should ever make out to get off from our island prison, nor whether we should ever see our wives and children more; and we thought it hard that neither Lawrence & Co., nor the government should send a relief ship to take us off the island. But none came: and so it went on, until we had been cast away fifteen months; and it was a sorry New Year's Day we had when 1882 came and found us still in our cabins or making our way along the shore, on the lookout for a vessel. What added much to our misery was that we had been now eight months shut up on this island without tobacco; and many of the men thought that this was the greatest hardship of all, as in truth it was.

Among the Portuguese was a big black fellow called Bernaline, an artful rogue, who was always up to some devilry. He once gave a false alarm of a ship in sight, and for some prank of his, on a certain occasion, I had forbidden him ever to set foot in my shanty again. He never dared to show himself there until one day, the 12th of January, he came running in, greatly excited and grinning all over.

"Get out of this, you black rascal," said I, starting toward him to throw him out, "and never let me catch you in this shanty again."

"You see ship?" cried Bernaline.

"Ship? Where?" and I ran out.

"There!" and looking to the northwest, where he pointed, sure enough, I saw a man-o'-war rounding to; for the gangs in the other shanties had already seen her and had hoisted their signal, at which she had hove to.

But it wasn't half a minute before I had the flag run up to the peak of my own signal pole, and when the ship saw this she made it out to be the true signal, and rounding the point of the island, she came to and anchored a mile to the eastward of my shanty and half a mile off shore.

We were all too happy then to sleep much that night, and by daylight next morning all hands had assembled on the beach near my shanty. At seven o'clock a boat's crew came off from the ship. Taking up a big sea elephant's bone, I held it high and carried it along the beach until I came to a safe place to land, where I dropped it, and then the boat came ashore.

"Man-o'-war?"

"Yes."

"English?"

"No, American."

"Have you any tobacco?"

And when the officer handed it over, it did not take us long to get it into our mouths, either, as far as it would go among so many.

The ship, as we then learned, was the United States ship Marion, which upon petition of our families had been dispatched by the government "to go to 53° S., 70° E., Heard's Island, in search of the crew of the bark Trinity, supposed to have been cast away there." And the Marion had found us.

We were then taken off from our solitary abode; and all hands went aboard the Marion. Then indeed all our troubles were at an end as we steamed away from Heard's Island, with the Stars and Stripes over our head, and bound for our far-distant homes. All our old tattered rags were hove overboard, and each one of us was dressed in a navy suit of blue.

We put in at Crinton Bay and took off the gang there, and then held our course to island of Desolation; and thence put out for Cape Town. I speak for every man in the Trinity's crew when I say that we shall always remember with gratitude the officers and men of the Marion who were so kind to us; and we shall always love and regard the Stars and Stripes.

The crew of the Marion was made up of many different nationalities, among them being Greeks, Turks, Spaniards, French, English, Portuguese, and even Indian, there being 180 altogether. Nor should I forget to mention Lieut. Chambers' pet South American lion, which was kept in a cage at night and chained to the rail by day. He was very tame and gave us much amusement. I got along very well with him until one day when he ripped my shirt off, then I gave him a thrashing with a netted rope.

After a passage of thirty-three days we arrived, all hands safe and sound, at Cape Town, and were there put in charge of the Consul, until he could find a way to send us home. Capt. Williams and Mr. Keeney, the first mate, could pay their passage to the United States in the mail boats via England. I had no money, therefore I could not pay my passage in a mail boat; but I thought I had been long enough away from my home and family. So I went on board the English mail steamer Trojan, Capt. Coxwell, master, and told him my situation. He gave me a free passage to Southampton, England, and also gave me a letter to give to the captain of the mail steamer Neckar, of the Lloyd German Line; and on the 2d of April at noon I landed in Jersey City, in good health and home once more. I have seen great kindness from each nation, American, English and German, perhaps more than I did deserve, at least more than I could expect.

Capt. John Williams and Mr. Geo. Keeney, first officer, deserve great credit for having kept good rule among so many and for so long a time.

The crew were the loyalest men I was ever with. If one party had not something to eat another party would have it, and they always shared with one another. They were always cheerful and kept a stiff shoulder against the breeze of trouble, and never looked on the dark side, but always hoped for a brighter day.

I do believe that the old Trinity buried herself under sand and seas somewhere about the southeast point of the island, and she may on some other day arise in the shape of Scrifton, or the One-Eyed Pilot, and cruise around this island to protect the elephants and penguins and wild cabbage and other passengers who may visit this solitary land. My sundial, I suppose, is still there, keeping its record of the hours.

WINTER IN THE ADIRONDACKS.

WE publish the following extracts from a personal letter, by permission, from Mr. A. R. Fuller, of Meacham Lake, Franklin county, N. Y., under date of December 12:

You say you have a big snow storm on hand, and think we must be enjoying the same kind. Yes, "Winter Notes" from the Adirondacks will be in order. We have had a little snow fall for fifteen consecutive days, till we have about eighteen inches of snow in the woods. Outside they can't measure it. My team started at 8 A. M., December 8, for Malone, and made the first ten miles in seven hours, and reached Malone at 7 P. M. The horses were in the snow several times where they had to be shoveled out. About the lake our roads are first rate. We are busy getting out some pine logs that have lain on the ground several years, and as they are growing no better, I thought best to get them out where we could see them.

The lake closed the night of December 8, when the thermometer marked fifteen below zero. One lone duck was frozen into the ice about a half mile out, in front of the house. I looked at him several times during the day with the glass. About 3 P. M. went to the barn and saw an eagle come sailing down over the clearing; when I reached the house I saw that he had found the duck and was feasting on wild duck, not roasted even. I got the glass and watched him till he had finished. He was a very large one, but looked very ragged, quite a number of quills gone from his wings and tail, his head and neck were white, the white feathers extending further down than we usually see them. Now that the lake is frozen over the foxes use it as a playground; their tracks show in every direction. I have only seen one, and he was just too far off to shoot. To see their tracks one would think the "woods full of foxes."

Now "when the summer days are gone" I am almost alone taking my rest. December 20 the family and all the help will leave me to have their Christmas, then I will be a Crusoe indeed. But I enjoy these quiet times, and as I sit before the open fire to-night I think I am quite as comfortable and contented as most of the "busy ones" confined to office and shop, and this year, more than ever before, I find I need the rest. I am somewhat better than when you left me, and hope soon to be able to say I am as well as usual.

My trout eggs are doing nicely, and I hope to have a nice lot of young fry to turn into the lake. I have about 65,000 eggs on the trays.

After the dogs were hauled off I tried to put out my traps, but found I was not able to stand the tramps, so have to trap about the lake. This ought to be a good year for trapping, as there was nothing in the woods in the way of "shack" for the small animals. The deer do better; they can get ground hemlock and mosses and lichens. The partridges will be confined to birch buds almost entirely during the snow storm. They have been in the snow; we have started out several when at work at our logs, and from the looks of the hole you would think they had not been out for a month. The pile of manure looks larger than the bird.

The deer are very busy these days. We see fresh tracks near the house every morning. Two crossed the road this morning near the letter-box.

The Malone *Palladium* copied your letter on Meacham Lake in full, also made quite an article on their own account. One of the editors, F. J. Seaver, is quite a sportsman, takes more interest in such things than anyone I know in the county; he is the best fly-fisherman in Malone.

How the FOREST AND STREAM improves. Every number seems better than the one before, and from the advertising pages it must be paying somebody something. I am glad of it; I wish you all success.

Since you left "Old Bluefoot" took a race and never came back. His last race before that he drove in the biggest buck of the season, which was killed by a Mr. Weston.

A. R. FULLER.

BAYPORT, FLORIDA.

Editor Forest and Stream:

All the old visitors of Homosassa remember the genial, attentive and industrious Frank Knapp (the nephew of Alfred P. Jones) who was ever ready to aid all with his information and assistance. He has rented a winter resort at Bayport, twenty miles east of Homosassa, and is prepared to accommodate sportsmen on reasonable terms. The village of Bayport is located at the mouth of the Weeawachee river. This stream is about ten miles in length, and rises in a large spring. From the best information we have been able to secure, this stream offers greater advantages to the piscator than any one north of Charlotte Harbor. One advantage of this place is the fact that the visitor will reside within a few yards of the gulf where he can enjoy the invigorating sea breezes; and if disposed, can indulge in a sail in the large bay in front of the house. At the mouth of the river, cavallie, channel bass and sea trout fishing is excellent. In the upper portion of the river, fish similar to those caught in the Homosassa can be captured in great numbers. The spring offers many natural beauties and is well worth a visit. Ducks, snipe and curlew are (as we understand) very plentiful, and we have been informed, that during the course of last winter large numbers of English snipe were killed in the neighborhood. In the interior, and to the east of Bayport, good hunting can be secured.

From our knowledge of Frank and his wife, we feel assured that visitors will receive every attention, and at no distant day the sporting attractions of the locality will attract numerous visitors.

AL FRESCO.

JACKSONVILLE, Dec. 20, 1882.

LONG JOHN.

FOLKS says I'm just a hunter,
And a kind o' wagabond,
But some time they'll come to know me,
In the huntin' ground beyond,
Where they'll find, with all their talkin',
That they've lost what I have found.

When the yeller leaves in Autumn
Goes a waverin' from the trees,
And the gentians in the swamp lot
Cheer the flowers that's got to freeze,
Then I sort er get to thinkin'
How we all must go like these.

And I wonder if the town folks.
Always wraslin' with each other,
Think the One above sets store by them,
Because they stay in cover,
When the church bells ring on Sundays.
And they've got to think it over,

A sperit voice comes whisperin' like,
That speaks direct to me,
When the early sun glides down the hi
And birds fly 'round so free.
That allers makes me symperthise,
And let all business be.

There ain't no home for comfort
Like a squirrel's dead-limb hole;
And the folks that s'pose that houses
Beat the woodchucks little knoll,
Never think of going to the woods
For spreadin' out the soul.

It's so; that when I married,
Marthy made it seem the best
To git inside a picket fence
To build our humbly nest,
And little John and Mary
Runnin' round it, give me rest.

But the partridge was a-waitin',
In the bresh, down by the brook.
And the trout was just a-achin'
For to dash on to my hook;
While the fox run 'round a-thinkin'
He wa'n't likely to be took.

The beech limbs was a beck'nin',
And the hemlocks smelt so sweet,
As the breezes wafted through 'em
Wavin' brakes around so neat.
That I kind o'wandered off in mind,
And followed with my feet.

They think I'm but a wagabond,
Who only hunts for game;
But the freedom of the furrest
Makes a man that's worth the name.
Goin' 'way ahead of them as hunts
For money and for fame.

MARK WEST.

George Conklin, the lion-tamer, says that his invariable rule is to keep his eyes upon the eyes of the animals. He refuses to perform with a cross-eyed brute, "for he's like a cross-eyed woman; you can't tell whether she's flirting with you or with the man on the other side of the street."

The Virginia City (Nev.) *Enterprise* thinks that after the ostrich ranching experiment in California has proved a failure, some of the birds will be allowed to shift for themselves, and will thus stock the wilds of Arizona, New Mexico, and other regions in that direction. It is about like the business of breeding camels. Camels do well in Nevada, increasing about as rapidly as any other kind of stock, but no one appears to know what to do with them. A lot taken to the desert regions for use in packing and prospecting; proved of so little value that they were turned loose to shift for themselves, and are now breeding and running wild up toward the headwaters of the Gila River.

Natural History.

THE BIRDS OF MAINE.

With Annotations of their Comparative Abundance, Dates of Migration, Breeding Habits, etc.

BY EVERETT SMITH.

FAMILY SAXICOLIDÆ: STONE CHATS, BLUEBIRDS.

10. Stone Chat, or "Wheat Ear"—*Saxicola œnanthe* (L.) Ridg. 21, Cs. 26.—Accidental straggler from Europe. Geo. A. Boardman, Esq., has in his fine ornithological collection of the birds of northeastern America, a mounted skin of this species. This specimen was sent to him from Musquash, near St. John, New Brunswick. Mr. Boardman informs me that "the person who sent this specimen had deceived me about a grebe and I marked it as doubtful."

A stone chat was shot at Indian Island, near Eastport, Maine, August 25, 1879, and its skin sent to Mr. Boardman by Mr. George Moses who procured the specimen.

11. Bluebird—*Sialia wilsonii* Aud.; *Sialia sialis* Ridg. 32, Cs. 27.—Abundant in western Maine, and common East to the Penobscot Valley. Arrives early in April, sometimes in March. Breeds in hollow posts, trees, etc., and lays five or more pale blue eggs in May and June, commonly raises two broods. Apparently this species was formerly unknown east of the Penobscot River, and but rarely in that vicinity. Thoreau wrote of this species, "Unknown in the vicinity of Bangor," and the sentence may have been true at the time it was written. But the bluebirds have now become common in that vicinity, and although not abundant there, they appear to be yearly increasing in numbers, and making their way gradually toward the East. In the autumn of 1879 I saw a flock of seven bluebirds in Western New Brunswick, where the species is likely to become common in the future.

FAMILY SYLVIIDÆ: THE SYLVIAS.

12. The Ruby-Crowned Kinglet—*Regulus calendula* Aud., Ridg. 30, Cs. 33.—Common. Arrives in April. Probably breeds in Maine. A few are found here in winter.

13. Golden-Crowned Kinglet—*Regulus satrapa* Aud., Ridg. 33, Cs. 34.—Common. Arrives in April. A few birds of this species are found here in winter. Breeds. Lays six or more eggs of a yellowish-white color, obscurely spotted. Until somewhat recently the nidification of this very common and widely distributed species appears to have been omitted by writers upon ornithology. Mr. Harry Merrill has a nest, taken near Bangor, Me., in 1876, with *ten* eggs; and he informs me that this nest is figured in Gentry's "Nests and Eggs of the Birds of the United States." Part No. 8. In 1871, I found a nest with eggs, in Carroll county, New Hampshire, but a dozen miles or less from the western border of Maine, the identification of which was assured by the presence of both the male and the female birds.

14. Blue-gray Gnat-Catcher—*Muscicapa cærulea* Aud.; *Polioptila cærulea* Ridg. 27, Cs. 36.—Very rare visitant from the South or West. The only record of its occurrence in Maine is that of a single specimen shot at Cape Elizabeth, Cumberland county, August 29, 1880, by my friend Mr. Nathan Clifford Brown, of Portland, to whom I am indebted for knowledge of the fact.

FAMILY PARIDÆ: TITMICE OR CHICKADEES.

15. Black-Capped Chickadee—*Parus atricapillus* Aud., Ridg. 41, Cs. 44.—Abundant throughout the State. Resident. Breeds, usually in the holes of trees, posts, etc., and lays from six to ten white eggs with reddish spots, in May and June. In the summer of 1879 a pair of chickadees of this species nested in a bird-house upon the stable of Mr. John Mead, at North Bridgton, Me.

16. Hudsonian Chickadee, Brown-Capped Chickadee—*Parus hudsonicus* Aud., Ridg. 45, Cs. 49.—Common in the interior, eastern, and northern portion of Maine. Resident. Breeds in May. Habits somewhat similar to those of the species next above named, but less gregarious, more secluse, and coniferous trees more exclusively frequented. The cries of these two species are similar, but may be readily distinguished by an ear familiar with them. A soft, chirping note is frequently uttered by the Hudsonian chickadee while feeding. Its ordinary cry usually consists of four notes, resembling the cry of the black-capped chickadee, but less prolonged and uttered with rather more force and abruptness. This cry of the Hudsonian chickadee I can best express by the syllables, *Pitt-weet, chee, chee.*

FAMILY SITTIDÆ: NUTHATCHES.

17. White-Bellied Nuthatch—*Sitta carolinensis* Aud., Ridg. 51, Cs. 57.—Common. Breeds, usually in holes in trees, stumps, etc., and lays four or more white eggs with reddish brown spots, in May. This species is common in Maine throughout the entire year.

18. Red-Bellied Nuthatch—*Sitta canadensis* Aud.; Ridg. 52, Cs. 59.—Common, more especially in the interior and in Eastern Maine. Breeds, usually in holes in trees, etc., and lays four or more white eggs with reddish spots, in May.

FAMILY CERTHIIDÆ: CREEPERS.

19. Brown Creeper—*Certhia familiaris* Aud., Cs. 62; *Certhia familiaris rufa* Ridg. 55.—Common. Nowhere abundant. Arrives in March and April. Breeds, usually placing its loosely-constructed nest under the scales of coarse bark upon such trees as the hemlock, etc., or in the crevices or holes in the trunks of trees, and lays six dull white eggs with reddish spots, in May and June.

FAMILY TROGLODYTIDÆ: WRENS.

20. House Wren, Wood Wren—*Troglodytes ædon* Aud., Ridg. 63.; *Troglodytes domesticus*, Cs. 74.—Not uncommon. Arrives in May. Breeds, in holes in trees, etc., and lays from six to nine eggs, in May and June. The eggs are white, entirely covered with fine red spots, so that the eggs appear to be light red. But few, if any, wrens of this species are commonly found further east than the Penobscot valley, and even in that region they are not very common. Mr. N. A. Eddy informs me that he obtained a set of six eggs of this species from a nest in a bird-house in Bangor, Maine, in 1875. Until within a few years the wrens have commonly bred in Portland city and vicinity each season, but now they are quite rare here. They are pugnacious and plucky little birds, but the increasing numbers of the imported domestic sparrows (*Fringilla domestica* Linn.) may have caused them to give up their places of resort here, a result that has been effected among other species of our native birds to an appreciable extent.

21. Winter-Wren—*Troglodytes hyemalis* Aud.; *Anorthura troglodytes hyemalis* Ridg. 65, Cs. 76.—Not uncommon. Breeds in Eastern Maine. Its eggs and habits are similar to those of the house wren, but the winter wren is of a more retiring nature, usually frequenting the forests and less often seen about the habitations of men.

22. Short-billed Marsh-Wren, *Troglodytes brevirostris* Aud.; *Cistothorus stellaris* R. 68 Cs. 81.—Uncommon, but probably a regular summer visitant. Breeds. Lays five or more pure white eggs in June. Usually the nest is placed near, but not upon, the ground, and is composed of grass woven into a hollow ball of four or five inches outside diameter, with an aperture of about an inch in diameter for the entrance and exit of the birds. The interior is lined with soft materials, such as the down of plants, etc. This curious nest is supported by the coarse marsh grass to which it is attached, and is generally built in the midst of a thick tussock, where it is not easily detected.

Mr. N. A. Eddy called my attention to the fact that the nest and eggs of this species had been found in Penobscot county, and for a detailed account thereof I am indebted to Mr. E. S. Bowler, who has kindly sent a nest to me.

Mr. Bowler informs me that "two nests with eggs were taken in June, 1881, and twenty or more empty nests were found at the time in the same locality. One of these nests contained four eggs, and the other nest contained five eggs." It is said that the male bird builds nests each season, which are not occupied, unless after another nest is deserted for some reason.

As above stated, it is probable that wrens of this species are regular summer residents of Maine, in restricted localities, but owing to the nature of their habits and haunts they are not easily detected. Frequenting the grassy meadows and marshes, where they are not easily put to flight, when alarmed, they skulk under the grass or dart through it by short flights, and by this means, aided by their diminutive size and brown color of plumage, easily escape observation. Even when their presence is discovered they are with difficulty procured if they have become alarmed.

FAMILY ALAUDIDÆ: LARKS.

23. Horned Lark—*Alauda alpestris* Aud.; *Eremophila alpestris* Ridg. 300, Cs. 82.—A common winter visitor in Western Maine. Mr. Boardman reports it as "rare" in Eastern Maine, where I have never seen it. It does not appear to be a regular migrant through Maine. Probably the birds of this species which appear here, usually in small flocks, or associated with the snow buntings, are wanderers.

FAMILY MOTACILLIDÆ: WAGTAILS.

24. American Titlark, or Pipit—*Anthus ludovicianus* Aud.; Ridg. 71, Cs. 89.—Common during autumn migrations in September. Although rather abundant in autumn, the species is rarely, if ever, seen here in the spring, when a more western route is followed to the nesting places in the North.

FAMILY SYLVICOLIDÆ: WARBLERS.

25. Golden-Crowned Wagtail. "Oven-Bird" — *Seiurus auricapillus* Aud., Ridg. 115, Cs. 135.—Abundant. Arrives in May; Breeds, and lays four or five yellowish white eggs, with brown spots, in June. The name "oven-bird" has been applied to this species on account of its peculiar nest, which, placed on the ground, is inclosed above, and has the entrance on the side. To this species and the others of the genus *Seiurus*, the name thrush has been applied; on account of the colorations of plumage, resembling that of our small thrushes. The *Seiuri* are closely allied to the family *Motacillidæ*, and the name wagtail is appropriate to these birds. Modern writers have placed this genus among the warblers in the family *Sylvicolidæ*. The habits of the oven-bird are more arboreal than those of several of the terrestrial warblers with which it is commonly classed. Although nesting on the ground, it seeks much of its food during the breeding season upon the trees.

26. Water Wagtail.—*Seiurus noveboracensis* Aud.; *Siurus aurius* Ridg. 116, Cs. 136.—Common. Arrives in May, breeds on or near the ground, and lays five pure white eggs with brown dots and blues, in June. Frequents the shores of lakes and streams.

27. Black and White Creeping Warbler, Variegated Warbler.—*Mniotilta varia* Aud., Ridg. 74, Cs. 91.—Common. Arrives in April and early in May, breeds on or near the ground, and lays from four to seven yellowish white eggs with reddish spots, in June.

28. Prothonotary Warbler—*Protonotaria citrea* Aud., Ridg. 75, Cs. 95.—Accidental straggler from the South. A single specimen was taken near Calais, Maine, October 30, 1862, by George A. Boardman, Esq.

29. Worm-Eating Warbler—*Helmaia vermivora* Aud.; *Helmitherus vermivorus* Ridg. 77, Cs. 96.—Rare straggler from the South. Since Audubon recorded this species for Maine, the capture of but a single specimen here has been publicly reported. This was recorded by Prof. A. E. Verrill in the "Proceedings of the Essex Institute," Vol. III., p. 156.

30. Nashville Warbler—*Helmaia rubricapilla* Aud.; *Helminthophaga rufficapilla* Ridg. 85, Cs. 106.—Common. Arrives early in May. Breeds on or near the ground, and lays from four to six eggs covered with brown spots, in June.

31. Orange Crowned Warbler—*Helmaia celata* Aud.; *Helminthophaga celata* Ridg. 86, Cs. 107.—Audubon recorded this species as occurring in Maine, but it must be only as a very rare visitor, and the species is named here upon his authority and record.

32. Wandering Warbler, Tennessee Warbler—*Helmaia peregrina* Aud.; *Helminthophaga peregrina* Ridg. 87, Cs. 109.—Not uncommon. Probably breeds. A regular summer visitant.

33. Blue Yellow-Backed Warbler—*Parula americana* Aud., Ridg. 88, Cs. 93.—Common. Arrives in May. Breeds on trees, and lays four or five white eggs with brown spots, in June.

34. Tiger Warbler, Cape May Warbler—*Sylvicola maritima* Aud.; *Perrissoglossa tigrina* Ridg. 90; *Dendroica tigrina* Cs. 126.—Not very common. Mr. Boardman reports that it breeds in Eastern Maine, and it breeds in the western part of the State also, but in very limited numbers. A regular visitant.

35. Golden Warbler, Summer Yellow Warbler—*Sylvicola æstiva* Aud.; *Dendroica æstiva* Ridg. 93, Cs. 111.—Very common. Arrives in May. Breeds on trees or bushes, and lays from four to six greenish white eggs with brown spots, in June and July.

36. Black-Throated Blue Warbler—*Sylvicola canadensis* Aud.; *Dendroica cærulescens* Ridg. 94, Cs. 117.—Not very common. Arrives in May. Breeds usually in trees, and lays four or five white eggs with reddish brown spots, in June.

37. Yellow-Crowned or Yellow-Rumped Warbler—*Sylvicola coronata* Aud.; *Dendroica coronata* Ridg. 95, Cs. 119.—Abundant. Arrives early in April. Breeds on trees usually, and lays from five to seven white eggs with brown blotches, in May and June. This is the first warbler to arrive here in the spring. My friend Nathan Clifford Brown observed a single specimen at Cape Elizabeth, March 21, 1882.

38. Magnolia Warbler, Spotted Warbler—*Sylvicola maculosa*, Aud.; *Dendroica maculosa*, Ridg. 97, Cs. 125.—Common. Arrives in May. Breeds on low trees or on bushes, and lays four or five dull white eggs spotted with brown, in June.

39. Chestnutsided Warbler — *Sylvicola pensylvanica*, Aud.; *Dendroica pensylvanica*, Ridg. 99, Cs. 124.—Common. Arrives in May. Breeds on trees, and lays four white eggs with brown spots, in June.

40. Bay-Breasted Warbler—*Sylvicola castanea*, Aud.; *Dendroica castanea*, Ridg. 100, Cs. 123.—Not common. Arrives in May. Breeds on trees. The eggs have been described as greenish-white with dark brown spots. This species appears to be quite uncommon in Maine, except in restricted localities of the extreme western portion of the State.

41. Blackpoll Warbler—*Sylvicola striata*; Aud; *Dendroica striata*, Ridg. 101, Cs. 122. Common. Arrives in May, and breeds commonly in Eastern and Northern Maine. Nests on low branches of coniferous trees, and lays four or more white eggs with cinnamon brown blotches, in June.

42. Blackburn's Warbler—*Sylvicola blackburniæ*, Aud.; *Dendroica blackburniæ*, Ridg. 102, Cs. 121.—Not uncommon. Arrives in May, breeds on bushes or trees, usually in dense thickets. Eggs, white with reddish brown spots, June.

43. Black-Throated Green Warbler—*Sylvicola virens*, Aud.; *Dendroica virens*, Ridg. 107, Cs. 112. Common. Arrives early in May, breeds on trees or bushes, and lays four or five white eggs with brown spots, in June and July.

44. Pine Warbler—*Sylvicola pinus* Aud.; *Dendroica pinus* Ridg. 111, Cs. 134.—Abundant. Arrives in April and early in May. Breeds usually in the trees known as "hard pine," which are most commonly frequented by this species. Early in June it lays four eggs, which are greenish white, spotted all over with brown. Although this catalogue is not intended to include descriptions of plumage, I will, in this connection, mention a discrepancy that occurs in descriptions of the pine warbler hitherto published. These descriptions name two pairs of tail feathers as blotched with white. In the brief diagnosis of this species in the "Key to North American Birds," Dr. Coues puts especial emphasis upon the following sentence: "Tail-blotches confined to two outer pairs of feathers." In Maine it is not uncommon to find adult birds of this species having *three* outer pairs of rectrices blotched with white, and this appears to be the normal marking of the perfect plumage of the male at full maturity, and I find them in spring and autumn thus marked.

45. Redpoll Warbler, Palm Warbler—*Sylvicola petechia* Aud.; *Dendroica palmarum hypochrysea*, Ridg 113a, Cs. 133.—Common during spring and autumn migrations. Arrives in April. The autumn migrations occur in September and October. A few warblers of this species breed in Eastern Maine, but nearly all of them pair beyond the limits of the State. Nests on the ground, and lays from three to five yellowish-white eggs blotched with brown, early in June. The species is of uncommon summer occurrence in the Penobscot Valley, where it is known to breed, however. I am indebted to Anson Allen, Esq., of Orono, Me., for the following account of a nest and eggs found in that vicinity:

"The nest was found by Prof. C. H. Fernald, and contained three eggs, but when I went with him two days later to identify the bird, there were three young birds. I scared the old bird from the nest and had a good chance to observe her. She was certainly *D. palmarum*. The nest was on low, dry ground, with a thin growth of young hard wood around it." The same gentleman writes me further, "I think the species not a regular but a frequent breeder in this vicinity."

46. Agile Warbler, Connecticut Warbler — *Sylvicola agilis* Aud., *Oporornis agilis* Ridg. 118, Cs. 139 Very rare. My friend, Nathan Clifford Brown, of Portland, procured a warbler of this species at Cape Elizabeth, Cumberland county, Maine, August 31, 1878, and Mr. Harry Merrill, of Bangor, Maine obtained an immature specimen of Lake Ebeme, Piscataquis county, Maine, in August 1879.

47. Philadelphia Warbler—*Trichas philadelphia* Aud.; *Geothlypis philadelphia* Ridg. 120, Cs. 142. Not common. Arrives in May. Mr. C. T. Maynard has reported this species as breeding at Lake Umbagog in Maine. In Prof. C. E. Hamlin's list of birds published in the Maine Agricultural Report of 1865, there it was cited "one pair, the only ones found in Maine." Since that date, much has been learned of its occurrence in Maine, where the species is of regular occurrence in summer, but not generally distributed. It is rare about the seacoast, but Mr. Chas. F. Batchelder has reported its occurrence near Fort Fairfield, Aroostook county, as "common in suitable places." ("Notes on the Summer Birds of the Upper St. John," by Charles F. Batchelder, 1882.

48. Maryland Yellow-Throated Warbler—*Trichas marilandica* Aud.; *Geothlypis trichas* Ridg. 122, Cs. 141.—Abundant. Arrives in May. Breeds on or near the ground, and lays from four to six pure white eggs with brown dots and blotches, in June.

49. Wilson's Flycatching Warbler, Black-Capped Warbler—*Myiodioctes wilsonii* Aud.; *Myiodioctes pusillus* Ridg. 125, Cs. 147.—Not common. Migrant through Maine. Arrives in May.

50. Canadian Flycatching Warbler, Canadian Warbler—*Myiodioctes canadensis* Aud., Ridg. 27, Cs. 49.—Common. Arrives in May. Breeds on or near the ground, and lays five pure white eggs with brown spots, in June.

51. Redstart—*Setophaga ruticilla*, Ridg. 128, Cs. 152; *Muscicapa ruticilla* Aud.—Abundant throughout the State. Arrives in April and May. Breeds on trees or bushes, usually in thickets, and lays four or five dull white eggs with brown blotches, in June.

52. Yellow-Breasted Chat—*Icteria viridis* Aud.; *Icteria virens*, Ridg. 123, Cs. 144. Very rare. Although this species is reported as a constant visitor to Massachusetts, where it breeds, it is almost unknown to Maine. A specimen was sent to a taxidermist in Portland, from Eliot, in the extreme southwest part of Maine, in June, 1876.

[TO BE CONTINUED.]

SNOWY OWLS.

Editor Forest and Stream:

In answer to Mr. Jenvey's inquiry in a recent issue as to the southern distribution of this species, we will reply by quoting from our diary of the fall and winter of 1876. From the Port Jarvis (N. Y.) *Union*, December 4, 1876: About three weeks ago it was noticed by residents of the surrounding country that large flocks of owls were flying southward from the north. Since that time flocks have been seen now and then. Many have been captured. The owls are nearly all white, *i. e.*, Arctic owls; a taxidermist here has received six of these birds. One taxidermist in New York city received sixty-two within ten days. Capt. J. Birch, of Newburgh, N. Y., received twelve white owls at his store.

Cleveland, Dec. 16, 1876.—Big snow storm, migration of northern birds in variety and numbers, beyond anything I ever before witnessed.

"About Nov. 22, 1876, great numbers of snowy owls were noticed migrating from the North to the South. The flight continued about two weeks and was noticed from Maine to Denver, Colorado, and from there to Portland, Vancouver and Astoria, Oregon and Washington Territory. At Boston one taxidermist, received forty-two white owls during this flight, thirty of which were white ones. White owls were also brought to bird stuffers and bird fanciers during this period in the following towns in great numbers, as follows: Albany, Rochester and Buffalo, New York; Erie, Pennsylvania; Cleveland and Toledo, Ohio; Chicago, Milwaukee, St. Louis, St. Paul, Omaha and Denver, the last two places in great abundance."

November 30, 1876, at Newbern, N. C., white owls from the North were seen for the first time by the oldest inhabitant. This is further South than Mr. Jenvey's owl.

Perhaps it may be asked, "Where did I get this information?" From telegraphic and other clippings from newspapers, as they published the daily records of what was then, and is still, going on.

In the fall of this migration of owls, an open winter was predicted by the "weather-wise." The husks on the corn were thin, the muskrats' huts were only half size, etc., etc.; but this winter of 1876-'7 proved the most severe since 1862. December 18, 1876, there was ice in the Cuyahoga, at Cleveland, *eleven inches* thick, and it held its own until spring; in fact is noted with the winter of 1880, the coldest of cold winters. So much for prophets and corn shucks.

I do not know that the following has any bearing on cold snaps, snow owls and "weather miseries," but I quote nevertheless.

"December 21, 1876.—To-night 8.30 P. M., Cleveland time.—There passed over the greatest bolide or suction noticed in modern times. Noticed first at Topeka, Lawrence and Emporia, Kan.; St. Louis, Morlity, Mo.; Jacksonsonville, Peoria, Galesburgh, Clifton, Ill.; Indianapolis, Bloomington, Ind; Toledo, Green Springs, Bucyrus, Cleveland, Ashtabula, Ohio; Erie, Pa.; New York city; New Haven and Wood's Hole, Conn.

"A very favorable hour for this independent metallic rock to pass one way. Everybody up; no moon, consequently quite dark; thirty-nine miles a second in flight; twenty eight miles in diameter; eighty miles or more above the earth, but yet within our atmosphere, bursting and thundering from frictional heat; sending off, now and then, a holiday chunk; rattling windows and shaking doors, proclaiming, 'I am the boss St. Nicholas.'" DR. E. STERLING.

Uncle John Krider says the reason why so many snowy owls are showing themselves in more Southern localities than they are usually seen is "because they want to get out of the very cold weather North," and that it does not so much indicate that we are to have a severe winter in the Middle States. We agree with Uncle John so far as that the owls can't stand the pressure northward, but that we are to have a very cold winter, notwithstanding a month of it has passed without much indication of severity, we are confident, and do not agree with him. We venture to "Vennorize" and point out that January, February and March will make up for the shortcomings of the last month of 1882. With all deference to the opinions of Uncle John; we would say as all said at the last shoot of the Philadelphia Sportsmen's Club, when he took a part, "he is not so young as he used to be." HOMO.

In the course of an interesting paper on "Owls," read before the Buffalo Academy of Natural Sciences, Dec. 22, Prof. Linden says of the snowy owls:

"They never fail to visit our neighborhood and arrive here sometimes in October, which is a sure indication that the winter in the higher latitudes has set in very early and with unusual severity. Their southern migrations extend also over a great territory, since they have been reported as far as South Carolina, although they are more common along the shores of the New England States and Lower Canada, whence, following the course of the St. Lawrence, they stray to our neighborhood. The snowy owl has been shot here as early as the middle of October and remains often until late in the spring. In my own experience I observed one near Angola on the 9th of June flying about in an old stump lot, which it made for several days its headquarters. Among the many different specimens shot here not one, however, was marked with the pure white color which, according to Gould, is characteristic of its full plumage. Up to this present month about a dozen of them have been killed this winter along the shores of the Niagara, which they frequent on account of the dead fishes and refuse of all sorts left by our fishermen on the beach. It is this species only and the hawk owls, which are strictly diurnal in their habits, and never hunt after dark. Both are inhabitants of the Arctic zone, where the sun never sets for at least two months of the year, the very time in which they raise their brood and require an abundance of food. This circumstance alone would account for the exceptional modification of their sight, which must conform itself to the special environment in which they live."

Belleville, Ont., Dec. 11.—A snowy owl was shot on the bay shore near the railway wharf a few days ago by Mr. Henry Pretty. R. S. B.

ENEMIES OF THE SPARROW.—Lockport, N. Y., Dec. 23 1882.—Within the past two weeks my son has had given him to put up two pigeon hawks, shot near the center of the city while in pursuit of English sparrows. I expostulated with one of the parties for killing them, while doing so beneficial an act. I should almost be inclined to protect them within the city limits during the winter, if they will confine their depredations to the extermination of that most stupendous fraud of the age. I have noticed for the past few days that the sparrows have congregated in large flocks, and I would like very much to have a few shots among them, for at such times I think this would be the best and only way of exterminating them, and there are no other birds about to be frightened away. There was one thing about the hawks that I never saw before—each of them had brown ticks or flies on them. I inclose one for your inspection and explanation. I have read much in your valuable paper of the ticks on ruffed grouse, but have never seen them. Can this be the same, and has it left the grouse and taken to the hawk? I hope it may be so.—J. L. DAVISON. [The insect inclosed is the same as the partridge fly, or at least very closely resembles it. As we have said many times, these insects are found on grouse, quail, hawks, owls and herons.]

TAXIDERMISTS' PERMITS.—In their annual report the Maine Commissioners of Fisheries and Game say: "We hope no more commissions for taxidermists may be granted without the strictest scrutiny as to the objects of the applicants, and bonds required for the faithful adherence to the terms of the commissions under the statutes. Is it less damage to the State to kill birds for the sale of their skins during close time, than to kill for the sale of their bodies for food? Our song birds in particular are most eagerly sought during the mating and nesting season, as they are then in their gayest plumage. We believe that among the very many commissioned taxidermists of the State, but few have sought the office for scientific purposes. Let our farmers, who are most intimately interested in the protection of insectiverous birds, look to this."

THE MUNGOOSE IN JAMAICA.—At a meeting of the Zoological Society, of London, held Nov. 28, 1882, Mr. W. Bancroft Espent read a paper on the acclimatization of the Indian mungoose (*Herpestes griseus*) in Jamaica. The author explained that the object in introducing the mungoose into Jamaica was the destruction of rats, which had committed serious ravages among the sugar and coffee crops. The first mungooses were introduced in 1871, and so beneficial was the effect produced that the saving to the sugar and coffee planters now was estimated at least at £100,000 a year.

AN EAGLE ATTACKS A CHILD.—Belleville, Ont., Canada, Dec. 11.—A very remarkable event occurred in this city on October 20, which, although fully described in a local journal, I have not seen any note of in your columns. In the afternoon of that day a boy aged about five years, named Wall, was playing near his parents' home, near the outskirts of the city, when an eagle swooped down upon him, and, fixing his talons in his dress at the shoulders, tried to carry him off. The burden was, however, so heavy that the bird could not rise with it, and as the child struggled and screamed, the eagle beat him about the head with its wings, dealing out very powerful blows. What the issue would have been it is impossible to say, but the struggle was ended by an elder sister of the little boy, who, hearing his cries, came out and drove the eagle off with a stick. This, I think you will agree with me, is a strange occurrence to happen in a city of 10,000 inhabitants.—R. S. B.

SHOOTING DEER IN SUMMER.

IT was a delightful evening of May, 1870. I had been to listen to an able discourse on the probable immortality of human and animal life. The faithful dog, the patient and long-suffering horse, and shy wild animals, were ably and interestingly discussed. I returned home, and, as my wife was away on a visit and I was alone, I called my faithful hunting dog into the house with me. Retiring to rest, I fell into a fitful slumber, when I distinctly heard my name called. Rising up, I saw a mist-like form, with beautiful, expressive eyes, and a sweet, quiet voice said, "Come with me." An irresistible power seemed to control me, and we passed up into mid-air, above my dwelling, when, with a seemingly familiar voice, my companion asked me if I would like to visit the Adirondacks. "O, yes," said I, and, twining its transparent drapery about me, we flew along rapidly. The soft, warm air fanned my cheeks, crickets were chirping, and the katydids were having their disputes. I was both startled and delighted as we floated along over towns and cities, and looked down upon them. At one point, hearing strains of music, I asked my companion where we were. "Listen," said she; "this is Saratoga." Lingering but a moment, we sped away again. Woods, bushes, and mountains seemed all in quiet repose. The moon rode bright and silvery, seemingly nearer than ever before. Up, up, and away we rose. As we passed over a mountain I heard the dismal howl of a wolf; then again we passed over a clearing, a marsh, and a small lake. The hoot of an owl rang out in apparent mockery as we passed over a forest; again we lifted up over a mountain, then lowered our flight over a lake, where all was quiet. A small flock of ducks, a mother with her brood, were seemingly all asleep, and there stood a deer knee deep in the water, slender and alert, apparently alarmed, turning his head from side to side.

As we passed along, I recognized the lake and the very place where, a year before, I shot by torchlight at a large doe, wounding her so severely, she was just able to get away out of the water and up into the woods. As I spoke to my companion, she seemed to sigh, while a shudder passed through her frame. Slowly we turned from the lake, and passing up the side, we came to a beautiful glade, and descending here alighted where the tall, woody grass and ferns formed a natural bower. Looking around, I saw before me two little fawns, emaciated and starving. Their unkempt faces showed the want of the toilet of their mother's tongue. Their little weeping eyes were glossy and death-stricken. I could only just hear a plaintive whispering bleat of the little dying infant deer. And as I stood there, one leaning forward fell prone upon the grass, dead. The other settled down upon its little knees and closed its eyes in death. Near them lay the festering form of their dead mother. Turning away from the cruel, sickening sight, I spoke to my companion. She sighingly said, "It is the deer you shot at on the lake. Ah!" says she, "the Angel of Mercy passeth by on the other side and hath no tears to shed when the cruel man dies." Heartsick, I asked to return home, and as we neared my house, I asked my companion who she was. She replied, "I am the spirit of that deer you shot at, the mother of those dead fawns." G. F. W.

Game Bag and Gun.

GAME SEASONS.

A comprehensive statement of the game laws of America will be found in the issues of this journal for December 7 and 14, 1882. Individuals and game clubs are requested to inform us of the enactment of new local laws and of changes that may be made in the laws of the several States and Territories.

GAME IN TEXAS.

IT was Friday morning last that two inexperienced gentlemen, along with myself, boarded the east bound train on the Sunset road, for a day's shooting. At seven o'clock we got off at Socorro, and "spread out" over the valley in quest of ducks and quail. The day was all one could wish. I soon found a slough, in which the water had been turned from the acequia, and along which the ducks were flying to different feeding grounds. Just now the "natives" are letting on the water for the purpose of preparing their grounds for wheat sowing. At this time the ducks always come to feed on wheat and sunflower seeds. Shortly after taking my stand a flock of mallards came up and I managed to make a clear miss somehow, very much to my chagrin. Soon two mallards came by and I dropped both very nicely, one with each barrel. The shooting was pretty good for an hour and then suddenly stopped. In this time I bagged eight mallards and two teal, making only four misses.

Leaving the slough I went toward the mesa in quest of quail, which I found quite abundant. Owing to the dense weeds and the disposition of this bird to run, I found the shooting very hard. The valley quail found here is a beautiful bird, but unfit for hunting with dogs, as it will not fly, but will run as long as it has life. Flocks of fifty are not infrequent. Market hunters kill a great many and find ready sale for them here at $1.50 per dozen. In two hours, by much walking, running and tiresome work, I managed to bag sixteen of these beautiful birds.

On my way to the depot I found some snipe along a shallow acequia I got six in good style, not missing a single shot.

Soon the train came by and brought us home. My friends bagged only a few quail.

North of this place, fifteen miles, there is pretty good antelope and deer shooting. Quail abundant there. I am going soon and will give report. Ducks are to be found in abundance anywhere along the Rio Grande Valley, where there are ponds or fields under irrigation. As soon as the wheat is up the geese will be here in great numbers.

On the plains the like of antelope is unprecedented, and some buffalo to be found by hard hunting.

GEO. W. BAINES, JR.

EL PASO, Tex., Dec. 14.

INDESTRUCTIBILITY OF GAME BIRDS.

THAT every question has two sides is admitted, tacitly or overtly, by every one; and if it has not been already proved that the destruction of certain of our game birds is inevitable, in spite of existing laws, I would like to say a few words in support of the other side, and show, if possible, by advancing such theories as have seemed to me rational and consistent with the point in question, that the total extinction of our game birds is next to impossible.

In the first place, it is noticeable that the change of habits of birds ever tends toward a greater ability to escape their pursuers, and this change, therefore, ameliorates their instinct of self-preservation, which is paramount in all the animal kingdom. Witness the difference of habits of the ruffed grouse of the Maine and Canada woods and of those in the much shot over districts of Massachusetts, New York and Connecticut. I venture to say that of seven birds flushed in Eastern Massachusetts, not more than one is ever killed, day in and day out.

To what limit this change may reach, we know not; but it needs only to instance the increased development of this faculty to evade their enemies to show that it is sufficient to meet the dangers to which they are exposed.

Doubtless, too, this faculty is hereditary, and birds that have once associated the sound of a gun to proximate danger to themselves, and the voice of man to imminent peril, will in course of time hand down to their offspring a like association of perceptions.

Again, those who assert that certain quarters are shot over too much for a continuance of its game supply must, from the very terms of their assertion, admit also that in those same quarters the birds never die a natural death of old age, which entails the admission that none but the young, relatively, and healthy survive till succeeding spring to breed—*i. e.*, only those that can and do reproduce their kind.

That, owing to an undue persistence in their destruction, quail and grouse make partial migrations from the localities where they were reared to others more remote and better suited to their peace and rest, none but the blindest will deny. This holds equally true of deer.

After being hunted and hounded for some time in the Plymouth Woods, Cape Cod, there appears to be a decrease in the number of deer, and at the same time a corresponding increase in the number of those at more southern parts of the Cape; from this fact it is fair to surmise that they were driven from their wonted retreat to others less frequented.

To revert to migratory birds, it is well known that wildfowl when disturbed at night on their resting grounds (or more properly speaking, waters), will forsake those waters, and not, as is generally the case, return again in the same season at least; this, far from tending toward their destruction (the popular view), only increases their chance of life, rendering them as it does more shy, vigilant and suspicious for the future, which in turn puts them within reach only of the most accomplished sportsmen—a very small class of men.

Furthermore, when birds are shot in large numbers, the markets become glutted, and the price of the birds being lowered, offers less inducements to the market shooter, and ultimately the slaughter must cease.

Of the extinction of bay snipe little or no fear need be felt. These birds are so prolific, their breeding-grounds for the most part so remote, the demand for them in the market comparatively speaking so small, and their season of appearing and reappearing on our shores so untimely for active exercise or even for sun-basking, that their total extermination, however great the increase of breech-loaders, is impossible. In an out-of-the-way corner somewhere in the Gulf of St. Lawrence, I have for the past three years shot

these birds, but noticed no decrease in their numbers, except of the golden plover last season, which, however, I attribute to some freak in the weather when the birds were at sea migrating, and so perhaps altered their line of flight.

Other reasons, analogous to, but less salient than those already shown, might be given in support of this view of the question, but if I have added any hope to the despondent and complaining class of sportsmen, who are forever bewailing the dearth of game and its speedy extermination, of which I am heartily tired, I have won my point. To do more would but be needlessly trespassing on your space. H. W. A.

CAMBRIDGE, Mass.

The scarcity of the partridges (or quail) in Northern Virginia is a progressive thing. It is due, I think, mainly to the great increase of the number of persons owning and shooting over setters and pointers, and to the destructive effect of the modern breech-loader; to the destruction of the cover by changed methods of culture, thicker settling of the country and clearing of forests and swamps and brushlands. It is not due, as one of your correspondents suggests, to negroes shooting them in nesting time. It is a curious fact that these people have to a very great degree given up hunting and trapping of all sorts for which in a state of slavery they seem to have such an insatiable fondness and which they indulged in so freely immediately after the war as to make it an intolerable nuisance. Self-binders, and other improved harvesting implements, leave no waste wheat on the stubble lands, and the birds have taken largely to other feeding grounds, their habits changing accordingly.

DR. M. G. ELLZEY.

WASHINGTON, D. C.

MAINE GAME.

[From the Report of the Commissioner of Fisheries and Game of the State of Maine, 1882.]

DEER have been unusually plenty. Notwithstanding very inadequate means and very weak and faulty wording of the statutes, and the consequent imperfect enforcement of the law, the increase within the last two years has been very marked. The slaughter of deer has been greater than for very many years. The law forbidding the hunting of deer with dogs has been utterly disregarded. There can be no such sport in our State as coursing deer with hounds. Our ponds and lakes dot almost every square mile of our territory. It is simply driving the poor, timid, scared brute into one of our thousands ponds, where the murderous poacher in his canoe, awaits the fear-paralyzed victim with either knife to cut its throat, or deliberate cold-blooded gun shot at close quarters. Killing sheep in a slaughter-house, or butchering calves in a pen, is soul-stirring heroism in comparison.

There can be no adequate protection with such legislation as gives us the following silly law, viz.: "No person shall hunt, kill or destroy with dogs, any deer or caribou within this State, under a penalty of forty dollars for every such deer or caribou so killed or destroyed." The same wording fatal to the efficiency of the law, is employed in the statute for the protection of moose. The same old poaching hand has emasculated the law, that formerly doctored the salmon and trout laws.

No penalty for hunting deer, or caribou, or moose, with dogs! The warden, without pay, must follow the dogs and see the deer killed, and then establish the ownership of the dogs, and then prosecute the parties, and then returns home a rich man from the accumulated wealth of one-half the penalty. Every man who takes dogs into the woods, should be held to have killed every deer traced to his possession, and every man in every cabin where dogs are sheltered or kept, should be held responsible and fined for hunting and killing deer with dogs. Much destruction of moose is perpetrated by Indians from Dominion borders in spring, within our State. Some of our own poachers act in complicity with them by exchanging moose hides for peltries that they can sell here without fear of arrest. These hides all come back here in due course. The poacher has become a dangerous criminal, whom the lumberman who owns cabins in the forests, or timber lands, or aught else that can be destroyed, fears to offend. The safety of the public demands his speedy punishment and suppression. He is but the deserter, the bounty jumper of the late war, back again in the haunts from whence he sprung. He picks a few cranberries before they are ripe, for fear the honest farmer may fairly obtain them; he nets white perch in our ponds; he poaches salmon on forbidden ground and in forbidden seasons; he nets and spears trout on the spawning beds; he even steals from his brother poacher, hounding deer, by watching and killing the deer driven by the dogs of some brother thief. His arrest and conviction and punishment, will rid society of an expensive blight, the cause of burdensome taxation for the punishment of crime.

We give below the return of the number of carcasses of deer and venison shipped by the American Express Company. Large as is the amount, it constitutes but a small item of the slaughter that has taken place thus far this year. We have heard of some nineteen carcasses of deer, spoiled by too long keeping, thrown into the river at Rockland. All this should have been consumed by sportsmen in our own State. As it now stands it was mostly killed by non-taxpaying men from other States, for profit, and returns to our own State hardly one cent. No one should be allowed to give up work as a citizen, and make a living by killing and selling what belongs equally to all, and what is intended and should be protected as a healthful recreation and holiday pastime for all. A law somewhat similar to one in force in Nova Scotia should be passed, forbidding the killing of more than two or three moose or deer or caribou by any one person. The laws in New Brunswick and Nova Scotia and other provinces of the Dominion, requiring the payment of $25 or $30 for permission to hunt or shoot within their boundaries, by every non-resident, has had the effect to precipitate upon our State an unusual number of hunters, mostly for market:

"AMERICAN EXPRESS COMPANY, North Eastern Division, Nov. 22, 1882.—Number of saddles of venison and carcasses shipped by American Express Company from Oct. 1 to Nov. 23, inclusive:

Bangor, 43 (and one caribou and bear); Piscataquis route, 7 (and one caribou); Mattawamkeag, 4; Lincoln, 39; Forest, 8; Olamon, 47; Win, 46 (and one caribou); Ellsworth, 62; Costigan, 34; Machias, 26; Milbridge, 93; total, 408."

Wild ducks are rare and to be seen but in limited numbers, owing to the wide-spread crime of baiting and netting. Farmers who like to vary the monotonous fare of their tables by an occasional duck or bit of venison, must aid us in fearlessly testifying in all cases of infractions of our game laws that come to their knowledge. If we had the means of employing competent detectives, we would soon root out this great evil of poaching, which now bids fair to exterminate the fish and game of our State. Woodcock and plover and many of our young ruffed grouse, in close time, are still shot for market, along our lines of railway by our own and outside poachers.

Our insectiverous birds require protection. There is a statute forbidding their being killed, but as there is no penalty attached, it is valueless.

BIG GAME AT TIM POND.

Editor Forest and Stream:

Knowing the great interest a multitude of the readers of FOREST AND STREAM take in matters concerning the above-named ponds, I send you an extract from a letter I have recently received from Kennedy Smith. The letter was mailed the 18th inst. The location referred to is "hallowed ground" to many anglers, for thousands of speckled swimmers have gladdened their hearts near Hack and Alder Inlets.—J. W. T. (New Britain, Dec. 25, 1882.)

Mr. Smith writes: "The autumn after you left here was pleasant, but when cold weather did come snow came with it, and now we have on an average full twenty inches. Edgar and I went to Tim Pond last Wednesday to break out the road and to get a caribou. I think I have told you that when the right time came and the law is off it is no trick to get one of these beautiful animals; so Wednesday we took the old gun and started. We got to the cabins about four o'clock. We soon had the team put up in the stable and a good fire in one of the cabins, and passed the night very comfortably. It was quite different from what it was some years ago when at this season we got to Tim Pond wet and tired and were obliged to build a bough camp and keep up a large fire all night to keep from freezing, and you may believe I appreciate the change, as I fully realize I cannot stand now what I could once.

"Friday morning after breakfast, and while Edgar was taking care of the horses, I stepped down to the boat landlanding to take a view of the Pond. Up to the west, near Hack Inlet, I saw four caribou on the ice. Edgar took the old gun and went up around the pond by Alder Inlet, and when they came along by he fired and brought down one, a fine buck. The three others stopped and looked at the dead one long enough for him to have killed them, but Edgar had no more shot. When we left home we expected to find plenty of buckshot at the camp, but some one had taken them, and we had to content ourselves with one noble fellow, and truly he was a beauty. With the horses and sled we took him out to the house. Not very many have been on the ice this fall. We saw a good many tracks in the snow, and in one place tracks of a flock of deer. We also saw tracks of one moose. If nothing prevents we shall go in again next week, and with more ammunition get more large game before close time, which is January 1st.

"Foxes have been very plenty here, and many have been shot near my farm."

HUNTING DEER IN MICHIGAN.

ON the 17th of October I left home for the purpose of finding a favorable locality for a party of six to spend from two to three weeks deer hunting. I took the cars at Ionia, went to Owasso, thence to Bay City, thence to Roscommon, thence to a lumber camp about six miles from Houghton Lake. I made it my business to get all the information possible from those I met in regard to the best places for deer within their knowledge. I met a gentleman on the cars who lives a few miles above Evart on the Muskegon. There were five hunters boarding with him who were hunting with dogs, and they had killed eighteen deer in two weeks. I remained at camp two weeks looking the country over thoroughly. I found parties hunting, but not getting many deer. I heard from parties on the Sauble who were getting very few deer. I went north to Gaylord, thence across to Elmira on G. R. & I. Railroad. I saw there a few local hunters, who gave me no encouragement to stop there. I was told that a white deer was in that vicinity and had been shot at, but not killed. On my way home I met a man who had been visiting twelve miles east of Fyfe Lake. From his account of the country and the deer I concluded to hunt there.

On the 14th of November two of the party and myself started for Fyfe Lake and the next day at noon we arrived at our boarding house, one mile and a half from the Manistee. A party was camping on the east side of the river and was hunting with dogs, and had twenty deer. We hunted two weeks and shot five deer. The rest of our party were detained till late in the season and concluded to go to Lake county, where we had hunted for a few seasons past. The three killed eleven deer and one fox. While returning home I talked with a number of hunting parties, who had been out from two to four weeks, and nearly all reported less deer killed than usual.

Among the reasons for this lack of success was noisy hunting, we not having snow except for about one week before the season closed. The short time allowed to ship game made it necessary to use about three days in getting deer to the railroad to have them shipped as freight. From what I saw and the best information I could get the parties who used dogs got the greater part of the deer killed this season.

I will give my views of the Michigan Sportsmen's Association in relation to the game laws now existing. Here are a few extracts from addresses delivered at their last session. Mr. Cate says: "I think the result of shortening the season has been good. Heretofore still-hunters would go in the woods as soon as snow came and stay, and they could kill twice as many on snow as without it. I think it saves thousands of deer in this State to shorten the sporting season." President Holmes says the thing of first importance is a code of simple and equitable laws that will command the respect of all order-loving and law-abiding citizens. Again, sportsmen and game protectionists, who like other men cannot all think alike, must compromise with each other and agree on a code of laws that all will endorse and support. Professor Roney believes that the present game law has reduced the annual slaughter of deer from 70,000 in 1880 to 10,000 in 1881—a wonderful effect if true. Do our game laws command the respect of all order-loving and law-abiding citizens? I think not. They favor one class of sportsmen, while they deprive as great and perhaps a greater number of a few day's sport in hunting. The ostensible object of the association is the protection of game. If this is the real object why not secure the passage of an act to prohibit the hounding of deer? If the short season saves thousands of deer why not stop the dogs and save thousands more? Will the association do this, or will they try to have the season close on the 15th of November? Mr. Jewel, of the Howell Gun Club, said: "We organized three years ago, and set to work to post ourselves on what the game law was and to secure obedience to it. I found it one of the most difficult undertakings I ever got into. We expected the support of all the leading farmers around Howell, but to our surprise we found we had debased ourselves in their opinion as a lot of nabobs in the town who wished to preserve the game for our own shooting." It looks that way to many here, and I think for good reasons.

I will refer to one more prominent member of the association, I feel inadequate to do him justice. He stands a representative man among sportsmen, a snap-shot, and an effective deer hunter. I make a few extracts from your correspondence. The "Michigan State Sportsmen's Association has evidently been doing a good work in its efforts to put a stop to the wanton destruction of game. Ed. Gillman of this city, and a party of Ohio friends were on the happy hunting grounds at sunrise on the 1st inst. and have since been sending down from ten to sixteen deer per day." Consistency is a jewel. Again: "E. H. Gillman and two friends have just returned from a six weeks' sojourn in the North Woods, during which time they have killed nearly fifty deer and several good bags of ruffed grouse and quail." They are not pot or market hunters, but gentlemen sportsmen and game protectionists. I fail to see the difference between the killing of fifty or a hundred deer by Mr. Gillman and his friends with their fancy hounds, and "the pot hunter with his mangy hound of doubtful antecedents." An extract or two from your Adirondack correspondence. "Murrit" says, "One hundred and fifty will not cover the number of deer killed in Beaver River, and the lakes and ponds within two miles on either side of the river, by driving them into the water with hounds during the open season just closed, and unless still-hunters are more successful than they have been in previous years they will not get one-tenth as many as have been killed by hounding." "Why Not?" says, "Still-hunting by common consent is as a sport eminently legitimate. Hounding supplements every other method of destruction. It is the multiple of all the evils and abuses threatening game destruction. There is no season, no hour of day or night, no bottom soft or hard, snow or crust, no condition of weather, when the dog may not scour the most secluded game haunts, and there is no quality or condition of humanity on its legs that may not share the degradation of this pastime." Shooting deer in the water during the open season is quite common among hunters who use hounds in Michigan. We are waiting for Mr. Gillman's report of his hunting trip and hope he will be able to put himself in a better light before the public than your correspondents did. STILL-HUNTER.

PALO, Ionia County, Mich., Dec. 23, 1882.

HOUNDING vs. STILL-HUNTING.

I NOTICE in the last number of your journal that your correspondent, Mussit, makes a comparison between still-hunting and the killing of deer in ponds or rivers. I suppose it was only a question of still-hunting, or hunting with hounds. I do not consider that because hounds are used it becomes absolutely necessary to kill the deer after they have taken to water. I did say in my article "that when deer took to water ahead of the hound, half to three-quarters of the time that was the end of the hunt." Of course as far as the dog was concerned. Now, under the present law it is the end of the hunt, as far as the hunter is concerned also, but formerly under the old law, as I said, "quantities of deer were slaughtered in the lakes and ponds," not by the hunters (for no man who butchers a deer in water deserves that name), not by the owners of the dogs, for they, the hunters, were in the woods and on the runways where they belonged, but by a class of people who simply wanted venison, and made it a business to go to the ponds and get it, the hunters very seldom getting any share, and very often not wanting any. It is worse than casting pearls before swine for the State of New York to allow deer to be killed in the lakes and rivers of her Adirondack region as is described by Murrit. Let the Legislature pass a law similar to the law of this State, which forbids, under a heavy penalty, the killing of deer at any season, in or within two hundred yards of any pond or river. Then let the hunter use his hound and stand upon the runway to kill his game, and there need be no fear of its being exterminated.

BUCK SHOT.

MASSACHUSETTS, Nov. 18, 1882.

DETROIT NOTES.

THE shooting season, which nominally closed to-day, in reality closed two weeks ago, with the exception of quails and ducks, and but few bags of these have been made. The grouse disappeared in an unaccountable manner early in the fall, and hunters are at a loss to know what became of them.

Since the State Sportsmen's Badge, contended for monthly for nine years, became the individual property of E. H. Gillman, by his winning three successive times, there has been no trap shooting. The fact is, the shooters are still afraid of the Society for the Prevention of Cruelty to Animals, though it is as dead as the junior member of the firm of Scrooge & Marley.

There are plenty of rabbits in this section, but the ground is as barren of snow as it was in August, and the cotton-tails are but little hunted in consequence.

The shooting and fishing clubs throughout the State have chosen delegates to the State Convention that is to be held on the 9th prox., and there is no doubt that it will be a large and interesting meeting. W.

DETROIT, Mich., Dec. 30, 1882.

LAST MOOSE IN THE ADIRONDACKS.

The undersigned is desirous of obtaining full data concerning the number of moose killed in the Adirondacks since 1850. Any information bearing on this point will be thankfully received and duly acknowledged.

C. HART MERRIAM, M.D., Locust Grove, N. Y.

MISSOURI.—Moberly, Randolph County.—Game has been rather plenty this fall; ducks, quail, wild turkeys and prairie chicken. One day, in November, my bag was sixty-eight quail, one turkey and four chickens.—B. F. D.

Mr. Paul B. du Chaillu will address the New York Association for the Protection of Game at their meeting next Monday night.

GAME IN THE WOOD RIVER COUNTRY.—A correspondent of the Oakland, Cal., *Vidette*, writing from the Wood River, Idaho country, says: The country abounds in game. The writer has seen deer within a short distance of Hailey, not once merely, but many times during last season. These are of the species known as "black-tail," by the hunters. They sometimes attain the weight of 300 pounds each. Bear are numerous, the grizzly being not infrequently met with. One of these monsters was killed the past summer at Muldoon, which weighed 1,400 pounds and which was shot within speaking distance of the town. Of smaller game many kinds abound. There are grouse of two species, sage hens and "fool chickens," the latter deriving their name from their habit of allowing themselves to be killed without an attempt to fly away. Stones are sufficiently good ammunition for the hunter of "fool chickens." The rivers, the Wood River, Little Wood River, Deer Creek, Malade and the other numerous streams furnish the best fishing to be had anywhere. Trout of fifteen pounds weight have been taken from Wood River, while, as one travels up toward the headwaters of each stream he finds the trout grow smaller and smaller but not less numerous. To take a hundred pounds of speckled trout in a day does not overtax the Idaho fisherman. All these resources in flesh and fish are accessible at a very short distance from the principal towns; if one goes to the Sawtooth mountains, some half-a-hundred miles away, he can add elk and mountain sheep to the before-mentioned varieties of game. So much for the ways of pleasure. Now for business affairs. Bellevue, Hailey, Galena, Muldoon are places in the vicinity of Wood River which have been founded and settled since the fall of 1880. Hence they are but little over a year old. In the next spring Hailey had a half-dozen inhabitants, who by the following autumn had increased to 600 and then suffered a falling off to 300 on account of the cold winter. In winter everybody leaves the river who can get away. The camps which through the summer have been hives of enterprises become the abiding place in winter of a few who remain to protect their property or to be on hand early in the spring. Hailey, the chief town, has a daily newspaper in the open season, which is now owned and run by Mr. T. E. Picotte, formerly proprietor of a paper in Nevada, and who is well known on the Pacific coast. Journalism on Wood River has its hardships, and it would, perhaps, amuse Mr. Picotte's San Francisco friends to read an account of how he has been brought to book by aggrieved neighbors, who usually pummel him soundly only to read the next day a full and unreserved account of how the editor of this sheet was painfully thrashed last sowing by Arizona Jack and other gentlemen. This sort of candor has won the respect of the miners to considerable degree, and the editor finds now sufficient time to administer the affairs of his paper without fearing outside interference.

A STRANGE BURSTING OF A GUN.—A very strange accident befell Mr. G. W. Given, of Philadelphia, while rail shooting last season, which will doubtless be interesting to the readers of the FOREST AND STREAM. Having been pushed by his poleman over the low Clemel marsh on the Jersey shore opposite the upper end of Tinicum Island, and killing seventeen rail birds, Mr. Given found the tide would yet admit of his getting over a portion of Monnis's Island, also on the same side of the river some distance below the Clemel marsh. Taking the oars to pull down to Monnis's to save his pusher's strength he soon reached the "gut," which makes in above the glycerine works located there. Just as he was rounding the pier previous to getting ready to go on the marsh he got upon his feet with gun in hand, and his pusher got upon the pushing deck of the skiff. A steamboat passing down the river at the time made his boat dance, and finding she rocked a little too much, and thinking she would ship water, Mr. Given supposing he was nearer the bank of the "gut" and in much shoaler water jumped overboard with his gun in hand. Instead of finding two or three feet of water he found himself going down in a depth of twelve or fifteen feet with his gun in hand in the ordinary position of holding muzzle upward. He sank to the bottom, rather allowing himself to do so that he might make an upward spring when he touched the ground. When he felt bottom he quickly shifted his gun to the other hand and turned the muzzle downward, grasping it as he thought, just back of the guard. At this moment he heard a muffled report and felt a stinging sensation down his leg. On coming to the surface he swam to the boat, holding up his gun with one hand. On reaching the skiff he found his gun had burst under water, laying one barrel completely over, and the load passing through into the right hand barrel, had utterly ruined his gun. Examination proved that he had not been shot, and that the stinging sensation was caused by the concussion. The right hand cartridge was found inact, and when he had grasped the gun at what he supposed was the small of the stock he had pulled the trigger of the left hand barrel and discharged it under water. This certainly was a narrow escape. Mr. Given showed your correspondent the bursted barrel, and I confess I have never seen the like before.—HOMO.

SIZE OF DEER.—Philadelphia.—We have had an argument in regard to the general size of our Eastern deer (*Cervus virginianus*). I maintain that any animal seen by excited sportsmen in the woods assumes exaggerated proportions and that Mr. Buck, when he comes prancing through the leafy cover he looks as large as a mule. He is only three and a half to three and three quarters feet high at the shoulders, and a bullet fired two and a half feet from the ground will grass almost any member of aforesaid species if aimed far enough forward. I fancy that a foot rule would bring down proportions of game and distance to the surprise of many a story teller who thinks he is but telling the facts.—T. M.

A KENTUCKY GAME RESORT.—Nashville, Dec. 20.—*Editor Forest and Stream:* I have just received a letter from Col. Geo. F. Akers. Here are some extracts which will be read with interest by those desirous of visiting one of the best shooting and fishing grounds in the Middle States. He writes from Cadiz, Ky., Dec. 18, as follows: "I have been in the chase, and hunting birds, ducks, squirrels, rabbits, etc., which are abundant here. The turkeys are very wild and hard to get a shot at. The river is yet in fine fishing order. About half a mile from Joel McK's is a very large and deep spring, near the river, about 50 feet deep. During high water the river backs its water into this spring, and thousands of fish find clear water and make it their home for the winter. We have plenty of minnows, and any evening we go down and catch a fine string of black bass and perch. I have caught bass in this spring over four pounds in weight. The water is clear, and affords a stream running out to the river, only about sixty or seventy-five feet, large enough to run a good sized mill. We have had fine sport at this spring. This is a haven of rest to me. Splendid quarters—big log fires, comfortable rooms. We have game or fish every day. I am up at 5:30 every morning and exercise as I fancy during the day. We generally ride out in the woods or fields, with a boy along to let down fences, hold horses, and carry the game. A light snow fell yesterday (Sunday), and I am off this morning for rabbits and birds." Cadiz can be reached by rail to Hopkinsville, Ky., thence by stage to Cadiz. Matt and Joel McKinney will gladly assist any strangers to make themselves comfortable, and put them on the track of game.—J. D. H.

ONTARIO.—Belleville.—The deer shooting this season has been one of the most successful on record, no less than 500 head of these beautiful animals having been killed in the northern townships of this county (Hastings) since the season opened, and one of the bucks weighed 280 pounds dressed. Ducks were also more plentiful than usual, and squirrels, woodcock and plover were numerous, but snipe were scarce. In order to prevent the indiscriminate slaughter of ducks, arrangements are being made to protect the great marshes a few miles northeast of the city, which comprise some of the best feeding grounds in Canada.—R. S. B.

TENNESSEE.—Savannah, Dec. 5, 1882.—Since I last wrote you we have had several killing frosts and a light snow fall. As a consequence the weeds have been killed and the shooting greatly improved. I was out one day last week and bagged seventeen quail. Several ducks have been killed recently near here, but have not "come in" in any large number as yet. Some geese are reported in the river bottom, and a large flock flew over town yesterday, flying quite low.—WILL.

CHARLESTON, Ill., Dec. 28.—John Cartright has bagged 102 quail from 10th to 23d inst. The largest bag was made on the 18th inst.—thirty-one quail. The quail are getting along finely in this locality. John Parker and Plaske Moore killed a large coyote yesterday noon, one and a quarter miles northeast of this city.—FOX SQUIRREL.

SNIPE.—Owen Sound, Ont.—Four years ago, while in Manitoba, I shot and killed or wounded twenty-two snipe (the long-billed with stripes on the back) in one shot, having a charge of No. 7 shot. I have told this to several, but they generally looked incredulous or laughed.—H. G. T.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

ESQUIRE, New York.—$15.

D. S., Rushford, N. Y.—See answer to C. B. V.

J. K. H., Cuba, N. Y.—Any of the gunsmiths advertising in this paper can take the bulge out of your gun.

C. G. S., Fort Washington.—A "brace" signifies two, and never in correct hunters' parlance does it mean three.

"MAINE FOX HUNT."—Will correspondent who sent us account of "Maine Fox Hunt" please favor us with his address?

H. H., Dorchester.—You can get an excellent gun of the makers named. We do not think the grip liable to get out of order.

J. U. M., Boston, Mass.—For note about the combination rifle and gun see last issue, page 421. The same arm is advertised under another name.

J. F. W., Camden, N. J.—Photographs of birds in flight have been published in England; but we are not aware that they can be obtained in this country.

C. B. V.—The Roper gun was an improvement over the old muzzle-loader, but not equal to a breech-loader of to-day. The mechanism of the gun is cumbersome.

J. E., Cleveland, O.—The arm was manufactured by the Providence Tool Company. You can probably secure one by writing to the New York or Boston dealers.

D. M., New York.—Read Barbour's book on Florida, published by Appleton's; and handbook published by Savannah, Florida and Western Railroad, Savannah, Georgia.

J. F. W.—Danbury, Conn.—Highlands, in Macon county, North Carolina, is reached via the Piedmont Air Line Railroad, to Walhalla, S. C., from which it is distant 30 miles.

FRED S. K., Chicago, N. Y.—The only two books published by Mr. Van Dyke are "Flirtation Camp; or, Rifle, Rod and Gun in California," and "The Still-Hunter." We can supply either; price, $2.

F., Amelia C. H., Va.—I found the inclosed fly on a quail killed to-day. I have never found one before. Perhaps it is the partridge fly? Ans. It is the partridge fly. We have frequently found them on quail.

G. H. P., Middletown, Ct.—Where can I get a copy of the "Proceedings of the Philadelphia Academy," part 2d, and at what price? Ans. Apply to Edward J. Nolan, M.D., Academy of Natural Sciences, corner Nineteenth and Race streets, Phila. Price for the whole volume $6.25.

W. P., Phila.—Can you direct me how to procure a medium priced work on trout culture? Ans. "Domesticated Trout," by Livingston Stone, published by Osgood, Boston. Price $2.50, we believe. Write to Mr. Stone, Charlestown, N. H., for full information.

W. N. M., Bellevue, Ohio.—1. You can get the glass by ordering through any of the dealers in rifles. 2. Either one of the rifles mentioned will answer, they are all in use on the ranges, and choice is much a matter of individual taste. 3. In selecting powder take any one of the standard makes, but do not use a cheap brand.

J. S., Hensler, Mercer county, D. T.—Will you please inform me if there is any such animal as a black badger. Ans. There is no species which is black, but a black specimen of the common badger might be found, just as we sometimes see a black woodchuck, a black chipmunk, or a black robin. The phenomenon of melanism is analogous to that of albinism.

C. E. N., Lindsay.—A great many people say that our common snow (*S. americanus*) migrates, and others say it remains all winter in the swamps. I myself have seen them in mid-winter in very severe winters. Ans. The crow undoubtedly migrates. Those seen in winter are probably Northern birds which have come to us, while those which are with us in summer have gone further South.

BYE, Virginia.—"Don a bye." What do you mean by that expression? A "bye" in the dictionaries means a dwelling. Ans. This word, used in connection with Field Trials, signifies that the dog to which it is applied wins his heat without running for it. For instance, supposing that there are nine dogs to run. Their names are drawn in pairs, and the last name drawn, having no competitor, is entitled to his heat just the same as though there had been ten dogs, and he had beaten the one drawn against him; or, in other words, he has a "bye."

V. A. B., Laudont, Ontario.—I have had for the past six months four trout in an aquarium, water constantly running. Temperature at present 42 deg., Fahr. During summer I gave occasionally flies and worms (not often). Until lately they have been remarkably healthy, when one died and now another is going. The only thing I can see is a white film which is beginning to surround the butt of the tail. I have tried to rub it off, thinking it may be of a fungoid nature. The water is from our water works, and is beautiful spring water, flowing through iron outside, and in the house leaden pipes. Could you suggest any remedy? I have seen the same on gold fish. Ans. It is probably a fungus growth, akin to the so-called salmon disease of Europe. It sometimes comes from injuries, as handling, etc. Do not rub it off. If not too bad, try giving a salt bath every day and put gravel in the tank for them to rub on. Make the salt bath moderately strong—sea-water is good.

Camp Fire Flickerings.

"That reminds me."

HERE is a little fuel for the camp-fire. Jack is a good sort of a fellow, but is "given" to telling fish and snake stories sometimes. We were down at Smith's grocery one evening roosting around on the barrels and boxes. The wind was howling and the snow drifting outside at a fearful rate, and Jack was drawing on his imagination and telling us about how many charges of shot he used in trying to kill a cat, when Bill Y—, an old frontiersman and miner, extricated himself from the cracker barrel, sliced off a piece of cheese and exclaimed:

"Talk about tenacity of life and hard critters to kill, you oughter seen some shootin' that I did once!"

Jack opened his eyes and invited Bill to go ahead and give us the benefit of his experience. Expecting a story about a grizzly or some other "varmint" we hitched around and were all attention.

"Well," said Bill, "It was out in the Black Hills. I had been down to Cheyenne and bought a new Winchester. I wanted to try it on something to see how she would carry, so I went out back of the camp, and the first thing I set eyes on was old Ike Irving's horse. I thought that would be a good thing to practice on, so I drew a bead right square between its eyes and pulled. I saw the critter kinder jump a little as the bullet struck, but it did not tumble, so I unhitched again. I saw where the second bullet struck—right between the eyes—but the eyes kept staring at me just the same as before, so (helping himself to a handful of loose muscatels) I fired again and again, until I had emptied the magazine, and every bullet struck between its eyes, and that air horse stood there just as well as ever."

"Now Bill!" exclaimed Jack, "that's too thin altogether. How far away were you from that horse?"

"About forty yards."

"And you—you fired seventeen .44 calibre bullets in between his eyes and didn't knock him off his feet?"

"Yes," responded Bill, sidling toward the door, "you see old Ike was a carpenter, the two I's were capitals (old Ike's initials), the horse was a sawhorse, and—"

Bill had just time to get outside the door when a starch box crashed against it and flew into kindling wood. But Jack called him back again, and in a few minutes the store was blue with the smoke of Smith's best Havanas.

IRON RAMROD.

Sea and River Fishing.

Somius. Worse and worse, but how wilt thou live?

Epiton. By angling; O 'tis a stately occupation to stand foure houres in a colde morning, and to have his nose bitten with frost before his bait be mumbled with a fish.

"*Euphuism*" (*J. Lilly*, 1591). *Act IV., sc. 2.*

WINTER TALKS ON SUMMER PASTIMES.

VIII.—ODDS AND ENDS.

I would do what I pleased, and doing what I pleased, I should have my will; and having my will, I should be contented; and when one is contented there is no more to be desired; and when there is no more to be desired, there is an end of it.—*Cervantes.*

AT a recent sitting of the local brotherhood, one of them was moved to murmur thus:

"My usually placid temper is often disturbed by the stupid criticisms which outside barbarians sometimes pronounce upon our gentle pastime. Their ignorance is their only excuse. But men have no business to speak dogmatically upon a subject of which they know nothing. And this is just the mental status of those who speak disparagingly of angling and of those who engage in it. There is a thousand times more of the divine element of saintliness in our harmless and healthful recreation than in the dirt-worn habit of perpetually delving for filthy lucre, and there is a great deal more of rock-bed common sense in a man who cheerfully spends ten dollars to preserve his health than in one who would rather jeopard his health than spend a dollar. No honest angler would ever wet a line if there were nothing in the art besides the mere material pleasure it affords him. But it has other and higher attractions—attractions which reach into the æsthetic realm and lift its votaries up to the very border-land of Bulah."

"We can all, I am sure," said another of our number, "speak from our own personal experience on this point. Two or three hours a day of the forty or fifty I pass on angling-waters every year, give me all the fishing I desire. The intervening time is filled up very delightfully in leisurely rambling through the silent woods; in reclining beneath some umbrageous arbor,

'Whose green leaves quiver with the cooling wind.
And make a checker'd shadow on the ground,'

and which overlooks the lake or stream on the borders of which I have pitched my tent; in clambering to the summit of some lofty eminence which gives me an enchanting view of the vast forests spread out illimitably before me; in floating hither and thither, where the kingly salmon

'Cuts with his flashing oars the silvery stream;'

in listening to the music of singing birds and to the melody of rippling waters; in lazily loitering about our cosy camp; in filling my exciting lungs with the pure atmosphere in which I am enveloped, and in inhaling the delectable odors of the virgin woods as they are borne to me by the summer zephyrs which sweep down from the forest-clad mountains with the refreshing balminess of the breath of the morning. Fishing is but a pleasant incident in these forest experiences. To me it simply gives zest to what, independently of it, is a source of perpetual delight. Possibly, at first, I might not have sought out these quiet places if I had had no taste for angling; but certain it is that angling would never have come to be to me what it is if it had not been associated with, and if it were not a part of, these other and higher sources of mental and physical delights. I am sure, also, that I am not exceptional either in my tastes or in my habits from the great mass of the brotherhood. There is not a fluttering leaf, a rippling rapid, a silver cascade, a momentary sun-glint, a passing shadow, a bird note, a tiny flower, a feathery fern, or any one of a thousand other 'things of beauty' we see and hear where our pastime draws us, which is not remembered by the appreciative angler equally with the rise and strike and swirl of trout or salmon."

"That is true, every word of it," was the reply. "Angling

never yet made a bad man worse, while it has made a great many good men better. I admit that all anglers are not saints, but I insist that they would be less saintly if they were not anglers. For the recreation brings its votaries into close and constant contact with whatever is sublime and beautiful and exalting in nature, and no one can long hold communion and loving fellowship with the thing created without acquiring a higher appreciation of the beneficence, wisdom and power of its Creator."

"There is," I suggested, "one beautiful thing about angling which is well worth taking into account: one never wearies of it. Other pleasures grow stale or insipid, but this acquires new fascination with every new experience. This is the verdict of all who, 'e'en down to old age,' have secured mental rest and physical vigor from the practice of the gentle art, which good Sir Henry Wotton found to be 'rest to his mind, a cheerer of spirits, a diverter of sadness, a calmer of unquiet thoughts, a moderator of passions, a procurer of contentedness, begetting peace and patience in those who profess and practice it.'

"I have a friend who is the very type and embodiment of a happy angler and an honest man.

> 'Age sits with decent grace, upon his visage,
> And worthily becomes his silver locks;
> He wears the marks of many years well spent,
> Of virtue, truth well tried, and wise experience.'

"He has fished for fifty years, and is to-day even more eager to take his place on angling waters than when he first felt the ecstatic thrill which comes to all who have ever had the good fortune to kill a salmon. Here is what he says to me in a recent note:

"AT HOME, Dec. 12, 1882.

"*My dear D.:*

"What has become of you? Have you again been playing Cincinnatus on your Western ranch, or are you simply digging yourself out from beneath the political avalanche under which you and all of us were buried in November?

"As the hart panteth after the water brooks, so do I pant for the coming of the time of the singing of birds when it will be right to go a-fishing, where

> 'Soft whispers run along the leafy woods,
> And mountains whistle to the murmuring floods.'

"What a blessed time we shall have (D. V.) exploring the beautiful lakes mapped out for us by our faithful henchman, wherein no white man has ever yet cast a fly! I have 'dreams in the night' about them: for I know what they must be from what we have already seen of two of them. Husband your vitality, my dear fellow, that you may be able to make the circuit.

"Six months yet before the 20th of June! Meanwhile I will have passed my seventieth birthday, and as you, old chap, are 'there or thereabouts,' you cannot greatly boast over your humble servant. But, next to a vigorous youth commend me to a lusty old age and this is what both of us have had vouchsafed to us—for which devout thanks. But would it have been so but for the rest, recuperation and repose which have come to us from our annual visits to salmon waters?

"No politics in mine, if you please, for politics at present form no part of my mental ailment. I simply keep the run of things—feeling very much as Bret Harte's Abner Dean of 'The Society of the Stanislaus" felt:

> 'Then Abner Dean, of Angel's, raised a point of order, when
> A chunk of old red sandstone struck him in the abdomen,
> And he smiled a kind of sickly smile, and curled up on the floor,
> And the subsequent proceedings interested him no more.'

"As ever and forever, yours, H."

"The lakes referred to in the foregoing note are trout lakes in the vicinity of the salmon river myself and friend annually visit. We had heard of them but could find no one who had ever visited all of them. Last summer we requested our local servitor to hunt them up and make a map of them. This he has done, and I anticipate as much pleasure in visiting them as I do in fishing our favorite pools for salmon—not alone because we are sure to find them full of trout, but because we have found the two or three of the group we have already seen perfect gems of beauty. From my very first visit to the woods I have had a passion to hunt up new places, and make side excursions whenever I could hear of anything worth visiting. To do so often involved hard work, but that fact simply added to the fascination of the habit, and, I am inclined to believe, has contributed to the large measure of vigor which has continued with me through all these decades. Now that I have reached my three-score years and ten, I may not be able to pass over rough places or climb steep hills as sprightly as in the long ago, but I can do both passably well still, and find no abatement in the delight these adventures and the pleasant places they reveal afford me. Indeed, I am not sure that my fondness for them has not even outrun my passion for the excitement derived from the more material incidents connected with angling. Of this, however, I am sure, that every new exploration reveals to me new beauties; that many pretty bits of scenery that in my former greater haste were passed by unnoticed, now attract my attention and excite my admiration. Whether this is because we become more observant as we advance in years, or because our tastes, like our virtues and our vices, grow by what they feed upon, I cannot say. But this I know, that I look forward to no phase of the pastime with more glowing anticipation than to these delightful rambles."

"I notice," said one of our coterie, "that you speak of yourself and friend in a way that leaves the impression that you two make up your entire party in these annual excursions. Is that so?"

"Yes, not because we are unsociable or exclusive, but because we have both been taught by experience that the fewer cogs the less friction. I have known the start of a party of five or six delayed for a week because some one of the number was not quite ready; and not infrequently the equanimity of a whole camp is disturbed because some one wishes to go when others do not, or to stay when others wish to 'fold up their tents, like the Arabs, and silent steal away.' In a crowd, some are night birds, who never care to 'go home 'till morning,' or to bed either, while others deem sleep and regular hours as necessary to comfort in the woods as at home. Both classes may enjoy themselves equally well, but, though they may not say so, each in their hearts wish "t'other dear charmers away.' It is best, therefore, when it can be done, that only those whose temperaments and home habits are similar should camp together, that as little as possible should interpose to mar the pleasure of these forest visits. My first experiences were in crowds. Later on, the number of my angling companions was gradually curtailed, until, during recent years, two of us, whose ideas of comfort and of times and seasons are always in harmony, constitute a 'party' as happy and contented as 'two drops of water blended into one.'"

"But," said my questioner, "how do you manage to pass the evenings? You must get talked out after a while, with only two of you to contribute to the common stock."

"That would be true if my friend was like some fellows I know, who are really 'talked out' before they begin to talk at all, because they never have anything either useful or edifying to say."

"That's all very well, but for my part, when I am in the woods I don't care to be very 'edifying' myself nor to be very greatly edified by others, if by 'edifying' you mean only such conversation as would be expected from a party of monks in a cloister or of a bevy of savans in a salon."

"Nor do I, for I don't go to the woods myself to be superlatively grave, but to be innocently happy. My companion is *au fait* in all the intricacies of the law, in all the mysteries of the sciences, and, like all the graduates of Old Union when its historical President was at its head, he is as profound in the classics as he is familiar with current events. There is no subject about which he cannot converse—gravely, if the subject demands it, or humorously if otherwise. And as for myself, ask him, and if his friendship does not induce him to hide my faults, he will tell you that, while lounging around our camp-fire, I talk 'an infinite deal of nonsense; more than any man in all Venice.' No; there is neither wearisome sameness nor somnolent gravity in our party of two during the restful hours between early gloaming and our night retreat. If our conversation is not always what would please a fool if it is never what would disgust a scholar."

"I can very well believe that; but it has always seemed to me that at least a third party is necessary to give piquancy to personal jests; for how can one laugh at his own joke, or how can the other fellow be expected to laugh when he is its subject. A looker on in such an encounter is a mighty stimulant to one's wit."

"As to that, we are never without subjects that provoke laughter; but we always find it pleasanter to laugh with than at each other. He is walking on thin ice and making a dangerous experiment with assumed friendship who habitually indulges in either personal or practical jokes. He must be something more than a saint who always receives them with equanimity, and he a great deal worse than an average sinner who, having a giant's strength in that direction, persistently uses it like a giant. No 'practical joker' ever long retains the hearty respect of his friends, nor their hearty friendship either. A persistent punster is less offensive. He is only a bore; the other fellow is a nuisance."

"Talking of practical jokes, "you remember the 'good thing' played on Mark Antony when he was fishing with Cleopatra:

> *Charmion*—"'Twas merry when
> You wager'd on your angling; when your diver
> Did hang a salt-fish on his hook, which he
> With fervency drew up."

"'Tony must have been in a sweet-tempered mood just then to have received the joke complacently. I once knew a miserly sort of a fellow who would almost literally sleep on the brink of the best 'spring-hole' within a five miles' circuit, in order to retain its monopoly. To punish him for his unsportsmanlike behavior, one of the guides was bribed to launch a hemlock bush upon the current every two minutes, at a point just above the coveted spring-hole; and while the astonished angler went up stream to investigate, another chap took possession and held it through the day. When told of the joke, instead of enjoying it he was very angry, and I doubt whether he had a hearty laugh in a twelve-month."

"The danger of practical jokes," I interposed, "is that they are generally aimed at the most vulnerable point in the victim's harness. For this reason, as in the case just cited, they cut, because they are somehow felt to be deserved. A proverbially thrifty chap would not feel half so much offended by being presented with the empty shell of a sucked egg as would a spendthrift who had 'wasted his substance in riotous living.'"

"You remember the case of ———" our practical joker had begun to remark, when he was interrupted by the most exemplary of our number, who said to him:

"Now, Jeemes, my good fellow, I see what you are driving at. You know only too well how you always fascinate me when you draw your long bow, and you know just as well that my time is up; and yet you are deliberately and with coldly concocted malice, trying to beguile me into forgetfulness and thereby subject me to a 'curtain lecture' when I get home. But you can't play any such practical joke on me any more then you could humbug me by telling me I was hitched to a log when I felt the twitch of a salmon. So, 'go to' old man, and good night to all of you." G. D.

MY FIRST FLY ROD.

REMINISCENCES OF THE RANGELEY LAKES.—I.

"WHAT is true of other pastimes is pre-eminently true of angling. No other affords so many incidents that it is a pleasure to remember and a greater pleasure to recount to appreciative and sympathizing listeners." So says Mr. George Dawson in his pleasant "Winter Talks on Summer Pastimes" in FOREST AND STREAM, and it is well said. The readers of FOREST AND STREAM are "appreciative and sympathizing listeners," and I must confess to both the "pleasure" and the "greater pleasure."

The interval between my first trout, caught with a tape string and a pin hook, and my first fly rod, was a long one. The art of fly-fishing was certainly in its infancy, if not unborn in Maine in my boyhood. I do not remember even seeing a fly rod, or hearing of an angler who used one, till the border land of young-man-hood was well nigh passed. After the tape string and pin hook came the alder "pole," as light and straight as one eight or nine feet long could be found, furnished with a twelve foot fishline and trout hook from the village store. This was kept in readiness on the shed beam, high up out of the reach of younger brothers and sisters, and when its owner was tired of lessons, or longed for the open air, the babbling brook, and sympathetic solitude, it would be taken down, the brook sought, all the well-known little pools under bank or log or stone carefully approached, and almost always the virtue of effort, if not of skill, was rewarded.

This brook ran near my father's house, and so was easy of access, and to this fact is owing greatly the growth and culture of the angler's love in me. If I had but an hour to spare I could yield to the allurement, if inclined. To this, too, is owing that a charm was added to schoolboy days, which sometimes is wanting, and, I think, a health to body and mind, which is sometimes nearly or quite sacrificed in the service of early study and discipline. The trout brook, I may add, had almost an equal rival in the salt water bay into which it found its way. This bay was nearly land-locked, a jutting point leaving only a narrow passage for outgoing and incoming coasters, and its rambling shores were charmingly indented with little coves, while its surface was broken by a small island and several large rocks, which, while they made navigation difficult, added picturesqueness and afforded capital opportunities for cunner and other small fishing. Memory has stored away the experience of many a pleasant day spent in rowing and fishing and exploring the shore in that bay, and often brings them back in bright light. A Cooper's Virgil, still on my shelf, was sometimes *compagnon de voyage*, not because it was much loved or highly appreciated, but because it was a deal pleasanter to con a task *recubans sub tegmine fagi*, or rather *sub tegmine pini* in the cool breeze, than in the attic chamber which served for both sleeping room and study at home.

In the course of time the alder pole gave place to a jointed ash brook rod, and equipped with this I set forth one July morning, one of a party of five, equally lovers of the angle and equally guiltless of any knowledge of the fly, for the unknown region of the Rangeley Lakes. We had heard of them and their famous trout, and our bosoms were big with expectations. The train dropped us at noon at Bethel, and after dinner, having procured a carriage and driver, we were forthwith on our further way. The road makes its way down Bethel Hill, along the course of the Androscoggin to Bear River, crosses Bear River, follows up its left bank clear to its source in the Grafton Mountains, turns through the Notch under the noble brow of Speckled Face, and so on to Upton, at the foot of Umbagog. The mere mention of these names and this slight tracing of the course, will call up in the minds of many a reader of FOREST AND STREAM as beautiful scenery as can be found of its kind, and the visits to Screw Augur Falls and the jail—natural curiosities which of course must be seen the first time one passes that way—and more, the pleasantries of jest and song, and a thousand little things which wake the laugh and beguile the tedium of the way. Our driver took us up apparently as a party of pleasure-seeking, easy-going fellows, as the word goes, and he was not far out of the way; but it led him to a liberty of tongue which was not altogether agreeable. One of us at last suggested that he should anchor some of his hard words. He did, and then shortly struck up a Methodist tune, and kept it going most of the time the rest of the way. We concluded when he set us down he thought he had along a party of Methodist parsons.

Upton to tea. Mosquitoes and black flies! How thick they were, and we were unprovided with any defense. We were sheltered very well as long as we kept to the verandah, behind the smoke of the smudge, but one step away from that and we were helpless victims. Cambridge River—the large brook dignified with that name—which tumbles under the bridge, just in front of the Lake House, and then winds and twists through the meadow some three miles quite river like to the lake—was then still abounding with trout. Alas! it is not so now. There one could be sure of trout, right out of the water, for breakfast, if he would get up an hour beforehand and go out and catch them. Now, if he should try the experiment, he would get vile pickerel instead, and enough of them. Then, however, the trout were still there, and the desire to capture a few after supper could not be resisted by two of our number. Their success was good, but so, also, was the success of the mosquitoes and black flies. Those two men were sadder men that night for their fun, and for days afterward. It was, however, a lesson in season, and we all wended our way duly, per steamer Diamond, to Cedar Stump, and the carry to Middle Dam, provided with that delightful unguent, tar and oil. One thing we first heard at Upton, and that was that the best way to take trout in that region was with the fly, and there my eyes first rested upon the slight and flexible form of a fly rod, with its adjuncts of reel, braided silk line of forty or fifty yards, gut leader, and stretcher, and dropper flies. I took it in my hand, gently tried its flexibility, and wondered how a trout bigger than a fingerling could be got out of the water with it. I have seen it since—that rod—in the hands of its skillful owner, whom I have met many times at the "tristing place," land many a noble fish.

That Monday was a hot day. The water was high, and the Diamond landed us at Cedar Stump itself. They told us that the carry was but four and a half miles long to Angler's Retreat at Middle Dam. But Bonny, the old horse, was not there, and our luggage, though mostly left to be brought by the horse in the afternoon, was something, and though, too, the heaviest was taken by our guide, yet became heavy before the end was reached, and the legs, unused to any such travel on such a road as that then was—it is not much better now—ached in every muscle. It was voted that to declare that carry to be but four and a half miles long, was a cheat and a fraud.

Middle Dam Camp as we then found it is pictured in Farrar's Guide Book for 1881—two log cabins in line north and south, separated by a four-foot passageway, and a frame cabin at right angles with and touching corner to corner the southerly one at its southwest angle. The north cabin was cook house and cook's quarters. The second was—the third part of it—dining and sitting-room, where savory trout were eaten, and in the evening, around the great open Franklin stove in which most often a cheerful fire was blazing, required by the cool night air, let the month be what it would, stories were told, jests were uttered, and peals of laughter poured forth; the other two-thirds by sleeping rooms. The former building also was occupied by sleeping rooms. A platform extended along the water side of the two latter cabins, the favorite gathering place for chatting and smoking after meals, and especially in the evening light, when the day's sport was over.

I love to linger in thought over the old camp as it then was, for with its retirement, its splendid fishing vicinity, and the society of genial anglers, which it gathered, it had a fascination for me for years, which now I am sorry to say is gone, and I fear no other place can have. Then no steamer vexed the waters of Welokennebacook, Mollychunkemunk, Mooselucmegantic, and no mere tourists found their way thither. No mail even found its way thither, except as brought in over the Umbagog and the carry on its semi-weekly arrival at Upton. Now, the log cabins are stables or workshops of the company who have rebuilt the dam, and just above stands a two story hotel.

Hotel, indeed—I hate the name as applied to the buildings put up around the lakes for anglers and tourists' accommodation. Rough quarters they are at best, and must be so. Why not then still call them camps? It is a far more suitable

term, and far more attractive in sound to those who wish to penetrate those regions and try their rough fare.

The unusual high water interfered with fishing. The best pools could not be reached, or if they were, the trout seemed not to care much for the bait we offered them. Still, we were not altogether without luck, and after a three days stay, pushed our way up the lakes to Upper Dam, Indian Rock, and so out by Phillips and Farmington with the mental decision on the part of each to have a fly rod the next time we visited Middle Dam, and that next time should be the next season. MONATIQUOT.

BLUE-BACK TROUT.

IN the year 1844 I visited the Rangeley Lakes, and heard from the settlers about the above-named fish. They called it simply blue-back—did not class them with the trout. At that time, all that was known of this fish was that they run up what was called "Toothaker Cove" into the outlet of Quimby Pond, a small brook, about the tenth to the twentieth of October in each year and from the Rangeley Lake.

They were taken in large quantities by the Rangeley people, mostly the poorer classes, from the above stream, with dip nets, and improvised at that. Some used a large bag, or sack, spread out with an ash bow and a handle; and they fished for them at night altogether, and made sluices for them to run up, with convenient places at the end of these to set their nets. The fish run into them, and by this method each man would secure several bushels of a night. They were cured for keeping in many ways, some by salting, others by drying, and still others by smoking; some dressed them, and others cured them whole.

It was proverbial of certain families that they lived on blue-backs and crossbills—the crossbills were birds they also dried whole, without dressing and so provided their summer food in the fall and winter beforehand.

The blue-back was never seen in any of the other lakes until after the building the "Upper Dam," about the year 1838, when we hunters discovered them below the dam, where they stayed until the river was entirely frozen up. They were never fished for with a hook, but either netted or speared.

I well remember getting greatly excited while spearing them one night by pine torchlight at the apron of Upper Dam, and slipped in, trying to save a nice one, where it was over my head, in icewater.

This was above the Mollychunkemunk Lake, into which lake they probably finally went. No other time of year are they now, or ever have been seen, except the late fall months.

About this time (1858) they were discovered in the Kennebago River, and Rangeley stream (outlet of Rangeley Lake), above Indian Rock, but I believe were never fished for there.

I have fished all the lakes from Rangeley to Umbagog, winter and summer since that time (1844), but have never seen a blue-back in any other place than the above, nor at any other time of the year.

And I have never seen them in any river or stream contiguous to these lakes, although I have fished Magaloway, Pamachene, Cupsuptuc, Beema, Kenebago, Rapid rivers, and many smaller streams for the last thirty-five years, and I never saw one that weighed over six ounces.

BETHEL, Me., December, 1882. J. G. RICH.

FLORIDA FISHES.

IN the proceedings of the United States National Museum for 1882 we notice "Notes on Fishes Observed About Pensacola, Florida, and Galveston, Texas, with Descriptions of New Species," by Prof. D. S. Jordan and Chas. H. Gilbert. The report covers sixty-eight pages, therefore we can only extract those things which will interest our anglers.

The tarpum, *Megalops atlanticus*, C. and V., is common along the Gulf coast, but only scales were obtained. It reaches a length of some six feet. Its habit of leaping out of the water, like the mullet, causes it to be dreaded by the fishermen. It is said that several persons have been killed or injured when in small boats by the *grand ecaille* leaping into the boat. It seems to the writers that the specific name of *Atlanticus* should be adopted as the name of this species, being the oldest name ever really conferred on it, instead of *cyprinoid.s, thrissoides*, and *gigan'eus*.

Spanish mackerel were abundant in spring and summer and are one of the most important food fish. The pompano is also abundant and reaches a weight of ten or twelve pounds. The bluefish, *Pomatomus saltatrix*, is rather common about Pensacola and is valued as food; it is rare or unknown at Galveston. The red snapper, *Lutjanus blackfordi*, is at present taken in far greater numbers than any other on our Gulf coast; at Pensacola it is the most important food fish, and in the New Orleans market it is sold in greater numbers than all other species combined; it is taken with hook and line on the "snapper banks," usually from five to thirty miles off shore, and reaches a weight of thirty-five pounds.

The fish known at different places on our coast as red drum, channel bass, redfish, etc., *Sciæna ocellata*, is the most important food fish on the Texas coast, the amount taken exceeding that of all other species combined. A good fish when not too large. It reaches a weight of forty pounds, the large specimens being known as bull redfish. The serratures on the opercle, which are conspicuous in ordinary specimens, wholly disappear with age, the edge of the bone being finally entire and wholly covered by skin. This change takes place gradually, being complete at a length of about thirty inches. Colors of adults, deep brassy yellow above, verging toward orange on the sides; belly, white; head, bronze, darker above; a band of deeper bronze backward from eye. Young without bronze shades, all of which intensify with age; scales in the young with darker shades forming undulating streaks; these obliterating with age; fins all pale, tinged with reddish, the pectoral most red; second dorsal and caudal somewhat dusky. Mouth white within; lining of opercle black. Caudal spots (ocella) varying much in size, sometimes wanting; sometimes two or three or even eight or ten or more in number. About nineteen out of twenty individuals have the normal single ocella on each side. It is yellowish.

STRIPED BASS IN CHESAPEAKE BAY.—Washington, D. C.—As to the striped bass the past summer, they abounded in Chesapeake Bay and the rivers and inlets along its coast to an extent unknown for many years. Early in the season there were thousands of them from five to eight inches long. Later they were succeeded by great numbers of larger fish, say, from twelve to eighteen inches long. The pike, formerly numerous in those waters, disappeared some ten years ago, and now a pike is never seen there at all.—M. G. ELLZEY, MD.

STRIPED BASS OR ROCK FISH.

FOR the last fifty years our striped bass has borne without question the specific name *lineatus*, in connection with the generic name *Labrax* of Cuvier, or, later, that of *Roccus*, of Mitchell. It is however doubtful whether the species has any claim to the name *lineatus*, other than that of fifty years undisturbed possession.

The name *Sciæna lineata* was given by Bloch about a hundred years ago to some fish supposed to be from the Mediterranean Sea, and which, according to Schneider, who considered it a variety simply) differs from the common European bass (*Labrax lupus*, Cuv.) in having the lower jaw longer, the dorsal spines 8, and the sides with yellow lines. Bloch's original description (which I have now at hand) is thus summarized by La Cépide:

Eight spinous rays in the first dorsal fin; one spine and twelve soft rays in the second; three spines and ten soft rays in the anal; the lower jaw more advanced than the upper; a single orifice for each nostril; posterior border of the opercle emarginate; general color silvery; back violet, body with yellow, longitudinal stripes.

The figure published by Bloch resembles in a general way our striped bass, but the preopercle is represented as armed with strong curved spines, both behind and below, as in the case with the European bass.

It appears that the *Sciæna lineata* was either the American striped bass, or the bass of Europe. If the former, we have to suppose that Bloch was mistaken (as was frequently the case with him) in the locality whence he received his specimen, and that his artist had somehow drawn the armature of the preopercle from the European fish. If we suppose Bloch to have intended the European species, we have the habitat and armature of the preopercle correct, but the faint silvery lines along the series of rows of scales (as in our white perch) are exaggerated into "yellow longitudinal stripes." I do not think it possible to say certainly which species Bloch actually had, but it is more likely to have been the European than ours. Unless our species can be shown to have been the original *Sciæna lineata* of Bloch, it cannot fairly retain the name *lineatus*, and the oldest name actually given to it should be used.

The oldest name not open to question is that of *Perca saxatilis* of Bloch and Schneider (Systema Ichthyologia, edit. posthu., 1801, p. 89). If *lineatus* be rejected we should call the striped bass, *Roccus saxatilis*. I am not quite sure that it is best to adopt this name, but it is my impression that to "this complexion must we come at last." In our efforts to secure fixity of nomenclature, the law of priority is all important, but its rights must not be extended to names which have no claim to them. The end to be attained by our rules is defeated, if the names which we adopt as oldest really belong to some other species, and only confusion comes of the adoption of ancient names of uncertain application. DAVID T. JORDAN.

INDIANA UNIVERSITY, Dec. 21.

LORENZO PROUTY.

IT is with deep sorrow that I record the death of Mr. Lorenzo Prouty, for many years at the head of the fishing tackle department of the house of Bradford & Anthony, Boston.

For nearly a score of years had I known him and never in any other character than a courteous gentleman, a devoted angler and an honest man. Amid the din of the busy town, at his duty, it was my pleasant privilege to "drop in" for a few moments and exchange words with him about babbling brooks and secluded lakes and the fish thereof, and to see him no longer as of yore is another bitterness added to life's fast increasing tally. His loss will be deeply felt by all fishermen who were wont to replenish their kit at his deft hands, and his sudden and sad "taking off" will be deplored by all who knew him.

Thus do I make brief pause to place an honest tribute of praise and affection upon the fall of a kind friend, a boon companion in camp or by the waters, a pure-minded and an honest angler. The memory of such is precious!

Requiescat in pace! In this prayer, I am sure, all brethren of the gentle art will join with me. O. W. R.

Lorenzo Prouty died suddenly at his residence in Chelsea, on Saturday last, aged 43 years.

It will be sad news indeed to the many near and distant friends of Mr. Prouty at the beginning of the new year to hear of his decease, and sadder still when they learn that the summons came suddenly, just as he was about to embark in business with a friend of years' standing and with every prospect of success.

Mr. Prouty had been in the employ of Messrs. Bradford & Anthony, of this city, for twenty-seven years, and was known far and near by all lovers of the rod and gun as a gentleman particularly adapted for the position which he occupied at the head of the fishing tackle department of the above house. He was a true sportsman, a keen lover of nature, a companionable friend, a tender husband, a devoted father and a man of the strictest integrity.

It was expected, by his intimate friends, at least, that he would have an interest in the business of Messrs. Bradford & Anthony after their retirement, he having done much to build up that particular branch of their business for which he was by nature and education so well qualified; but it was not to be, and during December he left them to engage in a similar business with his friend, Mr. George B. Appleton, also so long and favorably known as being connected with the same house.

Returning from New York, where he had been with Mr. Appleton for the purchase of goods for the new establishment, under the pressure of business of a different nature from that to which he had been accustomed, he was prostrated by illness, and in a moment of temporary insanity committed the act which caused his death.

From the fact that upon returning consciousness he had no knowledge of what he had done, and that his future prospects were at once of the most flattering nature, it is clearly shown that he was in no way responsible for the act which has caused many a heart to bleed and tear to flow.

No words of sympathy, however tenderly expressed, no words which we can utter, no tears which we may shed can restore to its completeness that once so happy, now so desolated home, but to her who waits in sadness may come to soften the asperity of the blow, the sad yet feeble consolation that the departed loved one will be mourned in many a household throughout our land. Truly,

"God moves in a mysterious way
His wonders to perform."

BOSTON, Jan. 2. C. W. S.

One of our most beloved members of society, a true-hearted fellow-man, a lover of all nature as the great Designer made it—the primeval forest and all that was placed therein, and God's beautiful lakes and streams and their inhabitants—in fact and reality the type of a good man and a true sportsman was Lorenzo Prouty. Few men in the New England States were more generally known and universally loved. M

Fishculture.

AN OCTOGENARIAN ON CARP.

MR. EDWARD STABLER thus writes to the Baltimore *American*:

SANDY SPRING, Md., 9th Month, 26, 1882.

Editor American: This is my eighty-eighth birthday, and to while away the tedium of a slow convalescence from a recent spell of illness I resort to the pen on this subject, as likely to prove more beneficial than that of the gold to some persons.

That the carp will pay, and pay well, without labor or capital expended, I am fully satisfied, as any one who has an ice pond may have an abundant supply in two or three years of good fresh fish for the table, and good sport, if that be an object, as he can have in the mountain streams in taking trout or bass cast of the mountains. I have taken both probably by thousands—the trout in the Alleghenies of Maryland, West Virginia and Pennsylvania, and also in the parks of the Rocky Mountains, where they attain the weight and size of our shad—say to three or four pounds. In Nevada I saw hundreds quite of this size and weight. In the Upper Potomac and tributaries I have taken bass quite as large; and in my experience would say that, with the proper kind of bait, and in the hands of an expert, the carp is readily taken, and as gamy a fish as I ever caught with fly or bait. The rapid growth of the carp is wonderful—far before either trout or bass; are strict vegetarians, and rarely, if at all, feeding on animal food, and never, as I know the bass does, feed on their own "small fry," indiscriminately with other small fish, and as most likely does the trout, as an excellent bait for the trout is the gullet, white and tough, or a tin of another trout. I have seen a large trout when landed disgorge half a dozen or more leeches, full grown.

My carp were about the size of herrings—nine to ten inches long—the 1st of April last, then of two summers' growth—when I received them from Prof. Baird, United States fish commissioner, Washington city. They were occasionally fed the past two months, some three to four times a week, with scraps of wheat or corn bread, fruit parings, boiled potatoes or soft corn, etc. Wishing to see the growth and weight this season, I recently caught one with a barbless hook—a fair sample of the lot, no doubt—measuring, as near as we come at it, full seventeen inches in length, five inches at the side, two and a half inches across the back and weighing three pounds—as large as ordinary shad, and not yet two and a half years old from the spawn.

If they have spawned this season, as is probable, my stock of fifteen will most likely have increased to fifteen hundred or more in number. But, according to the French adage, *nulle rose sans epine*, or, in plain English, no rose without a thorn—that is, some drawback to most enterprises; I have found it difficult to get an ice pond to hold water, owing to the depredations of muskrats making a honeycomb of the banks. My last one had to be lined inside with boards set on end, and below the depth of the water probably one hundred yards or more around the pond. A few were caught in steel traps, but did not abate the nuisance. We caught more feet than rats, for they would gnaw off the feet, leaving them in the trap, and escape.

On a visit to Dr. Hessel, superintendent of the United States carp ponds at Washington, he stated that he had been greatly annoyed by these pests; but now, after destroying them by hundreds probably, he had no trouble. His mode was to suffocate them, as follows: Four pounds of sulphur mixed with half a pound of saltpetre finely pulverized, set on flat stones or a piece of sheet iron, say half a pound or a pound to a hole (as it costs but a few cents), and placed in the holes; after burning a few minutes, close the holes with sods. The saltpetre insures the combustion of the sulphur, which is certain death to all within. He supposed he had killed hundreds of the rats in this way. I tried it, and have seen no evidence of the rats in those localities since. There are three other drawbacks in some sections to fishculture, but of easy remedy—the turtle, kingfisher, and water snakes. For these I use explosive shells of my own construction in a breech-loading rifle, but the safe to load in a muzzle-loader, which explode into fragments on striking, even on the water. It is not safe to use solid balls, except in very isolated situations, as they glance, or ricochet, on striking the water, and may go half a mile or more beyond, as I know is often the case in shooting deer swimming, or other objects in the water. We have destroyed a score of turtles in this way. I am satisfied they feed on the spawn and very young fish. The kingfisher is an arrant poacher, and hence the name. A neighbor who has a carp pond states that he has killed ten or a dozen at his pond, and "they were stuffed with young carp." The water snakes, which live on young frogs and fish, for I have seen them in chase of the young fish, have not as yet interfered with me; but Dr. Hessel informed me that he found them quite destructive to the young carp in the government ponds, and he had destroyed great numbers—I suppose, with the shotgun. He also informed me that he had carp in one pond, some ten years old, perhaps, supposed to weigh twenty-five pounds, and in another ponds supposed to weigh ten pounds, probably six years old. There are well-authenticated accounts of carp in European ponds, covering ten to two thousand acres, living to a great age and attaining a weight of sixty to eighty pounds, and raised for market like other products of the farm.

These explosive shells are admirably adapted to the purpose of extermination for these pests, and also to destroy rattlesnakes in their dens, where I have often used them, and have killed deer, antelope and buffalo with them on the plains and other game in the Rocky Mountains, but for large game I greatly prefer the solid, hard point ball, as it has four or five times the penetration in wood or bones as the explosive shell, and does not "mix up things" so disgustingly like the shell used for small game, as jack rabbits, grouse, etc.; there is little left for the cook. The explosive shell is usually fatal, but not directly, as I have had deer and antelope to run a mile or more on the plains, distance a horse, and fall dead, and buffalo to stand at bay until a hard point ball crushing through the shoulders brought them down, and in every case with the shell exploding in the body, a general mixing up of entrails, etc., and tainting the meat.

To show the heroism of the mountain lassie or foolhardiness, as some would say, I will refer to an incident occurring some twenty years ago. In my many mountain excursions, quite as much for health or more than for recreation—for in early life I was quite an invalid from repeated hemorrhages of the lungs—I visited a rattlesnake den with some companions, to destroy them pro bono publico. While there we were joined by two mountain nymphs of "sweet sixteen" or thereabouts, and I well remember that one, and, I believe both were barefoot; but they were born and raised within a mile of the den, and accustomed so to tramp, scarcely knowing what fear was. They were never "snake bit," in mountain phrase, and are now notable matrons, with each a numerous progeny around her. I frequently visited the dens in my spring fishing excursions in the Alleghanies, but never alone and never without the protection of thick leather or rubber boots. Four of my acquaintances, however, were bitten—two by rattlesnakes and two by moccasins, or copperheads—(a mean thing, whether in politics or serpents, for they give no warning before striking) and all on the hands; but by the free use of the antidote, whisky, all recovered after much suffering. But all this is a digression from my programme when taking up the pen, and I return to fish.

In my experience, trout only do well in ponds, and I have visited many—in cold water near the spring heads, or in cold

mountain streams. Bass are not suited for small ponds, as they will feed on their own young, and far preferable in large streams or lakes. They are about as voracious as swine, and as little discriminating in their feeding. I have occasionally taken them with the fly and other artificial bait; but the bass prefer live bait, as small toads, crayfish, helgramite, minnow, etc., and a small bass just as good as minnow. I have seen in a bait bucket young bass, taken by net, of scarce a finger's length, choked and dead from the effort to swallow another "small fry" of near half its own length. Few fish are more tenacious of life than bass, or afford more sport; and I learned from an expert cook in West Virginia that those of large size were as readily skinned and scaled by a cut around and back of the head and down the back, beginning at the cuts the stripping; that they cooked better and more thoroughly. Some eighteen or twenty years ago I caught in the Upper Potomac two lots of bass, and transported them in the tank of a tender in a strong bag net to Swann Lake—now Lake Roland—and I heard they had prospered. The carp appears to be exactly suited to our ice ponds, where the water becomes very warm in summer, and in winter seek protection from the cold by burrowing in the mud at the bottom—in other words hibernate during winter.

If those who have ice ponds were aware of the little labor and even less expense, and also the pleasure and profit derived from the carp culture, I believe few would be without them, as the healthy luxury of a mess of fine fresh fish could be had nearly at all times and in all seasons. I am now too old to cast the fly and tramp the mountain streams, but the sport and profit in the carp culture are brought, as it were, to my own door. EDW. STABLER.

SPAWNING OF TROUT IN COLORADO.

Editor Forest and Stream:

Mr. J. B. Campbell, of Baird, California, in FOREST AND STREAM of Dec. 21, questions my statements as to the hatching and growth of Now England trout at the Colorado State Hatchery near this city. He says he "never heard such wild statements before." I will only add that each and every one of them can be proven by Hon. W. E. Sisty, State Fish Commissioner; Mr. E. V. Bogart, his assistant and one of the most experienced and successful fisheulturists in the United States; by scores of other reputable citizens, and by the fish themselves.

I know the spawn came about the last of Dec., '81. I know that when I saw the fish on or about the 9th of Nov., 1882 there were plenty of them from eight to nine inches long, and Mr. Bogart pointed out to me upon a bed of clean gravel under some overhanging willows, where he stated the larger ones were making spawning beds. Mr. Sisty to-day confirms Mr. Bogart's statement upon this point. Mr. Sisty also furnishes me the following letters, with permission to copy.

PLYMOUTH, Mass., Oct. 30, 1882.

Mr. W. M. Sisty:

Dear Sir—As the season for selling trout eggs is near at hand, I thought I would write to ask you if you shall want any this season. I am taking eggs quite freely, and shall probably take 1,000,000. I shall be ready to begin to ship early in December and through January. I will guarantee the eggs to reach you in good order. Please let me hear from you.

(Signed) W. L. GILBERT.

PLYMOUTH, Mass., Nov. 16, 1882.

Mr. W. E. Sisty:

I will furnish you two or three hundred thousand trout eggs of my latest taking. I think I can ship as late as the last of January, and perhaps into February, your waters being quite warm (54 deg.) forces them along very fast. If you had water as cold as say 45 deg. they would be three times as long hatching and absorbing the sack. I can hatch the eggs until the eye-speck shows and then pack them in tin boxes in ice or snow, and keep them back for a month more. They do this with whitefish eggs and keep them back so that they will not hatch until March. I send all my eggs to Europe in the steamers the house packs the ice. One degree in a hundred in temperature makes six days difference in their hatching, and the same in absorbing the sack. Eggs would hatch in your water in about thirty-five days after taking. My water is 49 deg., and it takes sixty days to hatch and about the same time to absorb the sack, making some four months from the time the eggs are taken until the young fish begin to feed. * * * I am glad of such good success, and it beats anything I have been able to do. * * *

(Signed) W. L. GILBERT.

The above may also read a little "wild" to Mr. Campbell, but I think it contains items of information that will interest many of your readers and I have therefore made liberal extracts.

Mr. Sisty has already received and laid down 100,000 eggs of this year's crop and they are not "dried ones" either. They will produce fish that in September and October next will take the fly, as last January's hatch did in the autumn of this year. I have heard repeatedly of their being taken in various streams of the State that never contained an Eastern brook trout until last May. WM. N. BYERS.

DENVER, Colo., Oct. 29, 1882.

Editor Forest and Stream:

In FOREST AND STREAM of Dec. 21, I notice an article by J. B. Campbell, in which he doubts that New England trout eggs could be received in Colorado in December.

As I had the pleasure of furnishing the eggs I think I am able to give the facts of the case. I sent the first lot of 100,000 eggs to Colorado Dec. 21; the second lot of 100,000 Dec. 28, and the third lot of 100,000 Jan. 17. The eggs were taken from Nov. 15 until Dec. 1 previous, making them about thirty-six days old when shipped, and the eye-specks showing plainly.

The temperature of the water at the hatchery at Colorado is 54 degrees Fahrenheit, which caused them to hatch in a few days after being placed in the trays.

Mr. Sisty wrote me that the eggs were received in good order and that over 99 per cent. hatched.

Mr. Campbell also says New England trout do not spawn until December. Last year my trout began to spawn Oct. 19, and this year Oct. 21. They are nearly through spawning Dec. 1. W. L. GILBERT.

PLYMOUTH, Mass., Dec. 30, 1882.

FISHCULTURE IN SCOTLAND.—Howietoun Fishery, Stirling, Dec. 1.—Referring to your article, page 277, "Fish-culture in Scotland," we have the pleasure to inform you that we produce from our own stock ponds twenty million trout ova per annum. We have carefully studied the official American and European reports, and fail to find any fishery in the same scale. The use of grilles is easily explained as the ova of Lochleven trout in which we principally deal is between three and four times as large as the *S. fontinalis*, and secondly, because we have invented a construction of grille which can be made for a fraction of the expense of the old French grille, while by its use we can rear ninety-five per cent. of the eggs laid down as yearling trout. We have no doubt that after the Great International Fisheries Exhibition in London next year our method will be greatly used in the States.—JAMES R. GUY, Secretary. [We would be pleased to have a description of the grille.]

THE COLD SPRING HATCHERY.—We are glad to learn that the New York Fish Commission has decided to begin work in earnest at Cold Spring, Long Island. Some time near the end of last winter a few troughs were put in the old mill and then no more was done. Men are now at work fitting up the old mill and putting up more troughs and a set of the McDonald hatching jars, and the indications are that the hatchery will be in running order by the middle of January. Prof. Baird has taken an interest in this station and will aid it in many ways. A competent man has been selected to take charge of it, and we hope that this station will prove a valuble addition to the fisheries of the State. The advantages of this place are many, and its proximity to salt water will make the station a desirable one if experiments with sea fishes are undertaken. This winter there will probably be hatched sea salmon, land-locked salmon, brook trout and whitefish.

CARP CULTURE IN GERMANY.

THE following account of stocking of the Bay of Stettin with carp, translated from the *Magdeburgische Zeitung*, of Oct. 27, 1881, for the Bulletin of the United States Fish Commission, contains so much of interest that we publish it in full. The article says:

A truly gigantic enterprise which will greatly increase our sources of national wealth, if successful, is at present agitated by the well known pisciculturist, M. von dem Borne, of Berneuchen, viz., the stocking of all the waters belonging to the mouths of the Oder, *i. e.*, the Stettiner Haff, the Papenwasser, and the Dammsche See, with the highest esteemed German food fish, the carp. This large expanse of water, extending far to the east and west of the usual steamboat route, is only partially known to the visitors of our Baltic watering places; it embraces an area of 87,000 hectares, or more than 15½ German square miles—about 214,985 (English) acres. If every hectare of water is on an average stocked with 250 carp it would require the enormous number of nearly 22,500,000 carp, which, placed in these waters when young, would after three years be fit for the market, and would—even if during that period many of them should have been destroyed—furnish ample food to a vast number of our population.

No one will deny that this is a grand idea, and the only question was for Mr von dem Borne to furnish the proof of its practicability. Mr. von dem Borne has done this in the presence of a specially invited company of representatives of the authorities most interested in this matter, by laying his plan before them on the occasion of large pond-carp fisheries near his estate of Berneuchen. The result was such as to remove all doubt from the minds of those present as to the feasibility of Mr. von dem Borne's plan for increasing the productiveness of large sheets of fresh water. It may, therefore, interest our readers if we lay before them an outline of this plan.

The main question is whether it is possible to produce about twenty-two millions of young carp in four years and place them in the Stettiner Haff. As pisciculture has reached a high degree of development in our country, one might think that the easiest way of solving the problem would be to obtain the necessary carp from our pisciculatural establishments, commissioning them to furnish as many young carp as possible, paying perhaps three marks (71 cents) per 100 for the required number of fish. This could be procured in a comparatively short time. But at this rate the cost of stocking the Stettiner Haff with carp would be between 660,000 and 700,000 marks, not counting the expense of transporting the fish. Although this large sum might pay some interest at a future time, the expense of starting the enterprise would be too great, and the parties to profit by this arrangement would be the pisciculatural establishments and not the people.

Another way of solving this problem would be to adopt the method followed for a number of years by the eminent pisciculturist, Mr. Eckardt of Lübbinchen, by which carp eggs can be sent a great distance, and by which the German Fishery Association has succeeded in stocking with carp some of our largest German rivers within a comparatively small number of years. The objection might, however, be raised that it would be advisable to place the young fry of the carp, immediately after leaving the eggs, in the large basin of the mouths of the Oder, where strong winds often prevail and produce considerable waves. Mr. von dem Borne's plan, therefore, proposes that the parties most interested in the fisheries of the Stettiner Haff, *i. e.*, the local authorities, should procure the required 22,000,000 of carp, not by buying them, but in the simplest manner in the world, by raising them.

In order to fully understand this plan, we should give a brief review of artificial carp culture, as it has been developed among us on a national manner. Not only during the last few years, but for centuries, the nutritious, delicate, golden-yellow carp has been the favorite of our nation. The carp, the unassuming inhabitant of our numerous marshy ponds, has by its peaceful nature become almost as much of a domestic animal as the hog or the goose. All during the Middle Ages carp formed the favorite dish during the Lenten season; and to-day more than ever it is, at certain season of the year, the favorite food of a large number of our population, and has, in the shape of "carp beer," become a characteristic national dish of the Germans. The flesh of the carp contains (in proportion) as much nutritious substance as the finest piece of beef, and is peculiarly suited for making a savory dish; it is, moreover, entirely free from the disagreeable fishy taste found in many other fish. Owing to the very limited development of its brain, the carp possesses but little ambition, and is content to grovel in the mud of our ponds, generally living on small aquatic plants, and only occasionally allowing itself the luxury of a larva or an insect. Its excellent appetite is followed by favorable results sooner than is the case with any other artificially raised fish, and its well rounded body soon assumes such proportions as to make the pike—that most voracious fish-of-prey—absolutely harmless, for the simple reason that no pike can be found large enough to swallow such a carp. The carp occasionally, as in the famous carp pond of Charlottenburg, near Berlin, reaches the age of a hundred and more years.

It is well known that all fish have a large number of eggs. As the "first incarnation" of the vertebrate type, the last and highest grade of which is man, their body has such very simple fundamental forms as to enable nature to produce its germs in every female fish in the hundreds of thousands of copies. Even in this respect the carp occupies, on account of the large number of its eggs, a very prominent place among fish. It nevertheless indulges in the pleasure of spawning only once a year, in spring, when the warm May sun raises the temperature of the ponds to a comfortable condition. Then its "spawning season" comes on. Both male and female fish may be seen, principally during the early hours of the morning, swimming about in the water at a lively rate, emitting the eggs and milt among the reeds and aquatic plants. After eight to eighteen days thousands of young fish leave the eggs. In order to spawn successfully the carp must not be disturbed in the least, and it is absolutely necessary that *no pike should be allowed in the pond;* for otherwise the carp will not spawn. All these peculiarities are of course well known to the pisciculturist, and he manages his ponds by showing due regard to them. If he wishes to obtain young fry from his carp, he is careful to keep pike out of his ponds; if, on the other hand, he wants to raise large carp, he prevents them from spawning by placing a few pike in the pond. Much to the disgust of the carp, the pike plays the part assigned him with the indefatigableness and energy of a policeman, keeping the carp constantly in motion and chasing them through every part of the pond. The result is a very fine, even breed of carp, with hardly any small fish, because the pike, proceeding in a most summary manner, will simply devour any fish which are smaller in size than itself.

The swiftness and strength of the pike are, however, also the cause of the presence of this most dreaded of all fish-of-prey in all our lakes and ponds, where it seriously interferes with the increase of the carp. As Mr. von dem Borne says in his work "Die Fischzucht" (Pisciculture), second edition, P. Parey, Berlin, 1881, the pike in one week eats a quantity of fish equal to at least twice its own weight. Owing to the very general occurrence of the pike, and the extremely small size of its fry, it is absolutely impossible to keep it out of carp ponds which are fed by a brook or other running water, and, mainly owing to this reason, the raising of a large number of young carp, even in carefully managed ponds, is connected with innumerable difficulties, of which Mr. von dem Borne treats fully in his book. After the cause of the evil has been recognized it is comparitively easy to remove it, viz: to select only such ponds as spawning ponds which have absolutely no connection with other waters. Such ponds are supplied with the necessary water either from springs or by rain or snow. Nearly every farmer can have such a pond. Any alder marsh or peat-bog with some water can be transformed into a carp pond by making a single dike with pipe for drawing off the water, which can then be kept at the required depth of one meter, and be left off whenever necessary. By constructing this dike from the mud of the pond itself a deep place is formed, the so-called "fish-pit," in which, whenever the water is left off, all the fish gather, so that they can easily be caught.

But to return to the plan proposed by Mr. von dem Borne: This plan chiefly consists in constructing such ponds near the shores of the Stettiner Haff in every place where this can possibly be done. In these ponds, which of course would be entirely free from pike, a number of millions of young carp could be raised every year, and in autumn transferred to the Haff. If, for example, the entire 22,000,000 of carp are to be raised in three years, the ponds referred to would have to produce on an average a little more than 7,000,000 per annum.

The principal point which Mr. von dem Borne desired to prove by the draining of the ponds last week on his estate of Berneuchen, at which time that whenever mature carp are allowed to propagate undisturbed, the result it absolutely enormous. It was his object to give his visitors a correct idea of a genuine fish harvest, such as will presumably be had in the future in the Stettiner Haff. In answer to Mr. von dem Borne's friendly invitation, a large number of gentlemen interested in pisciculture had come to Berneuchen, among whom we noticed Councilor von Bunau, superintendent of fisheries of the Stettiner Haff, and Forester Baron von Dicker, both from Stettin; Governor von Heyden, Forester von Waldow, Superintendent of Fisheries von Behrekor, all three from the district of Frankfurt-on-the-Oder. The neighborhood of Berneuchen was represented by Councilor Jacobs, from the district of Landsberg, Councilor von Kalkreuth-Hohenwalde, and the landed proprietors von Sydor-Barenfelde, von Klitzing-Charlottenhof, and others. With his usual hospitality, Mr. von dem Borne received his numerous guests in the old and spacious manor house of Berneuchen, and made them feel at home during their stay, which extended over a period of several days. Every day a district of about 2 hectare or 8 acres was gone over with the fishing apparatus, the water having been let off a few weeks beforehand, so that the fish had all returned to the deepest place in the pond, the so-called "fish pit" referred to above. In this place the water was only knee-deep. About 9 A. M. we reached the ponds, after having traveled for some time through dense forests. The dark, muddy water revealed absolutely nothing of its contents, although its agitated surface indicated that the muddy pool, scarcely measuring 40 paces in diameter, contained numerous small and a number of large fish, which manifested their presence by a greater or less commotion in the water. The fishermen soon commenced their work, and during the first forenoon went over the so-called "Maxa Pond." At the first haul the net could barely hold the densely crowded mass of fish, which, in spite of the most violent struggle for liberty, was safely brought to land. Here the foreman of the fishermen dipped out the harvest with pass-sacks, and deposited the fish in large baskets, transferring every time hundreds and thousands of small, golden-yellow young carp, which measured on an average 5 to 6 centimeters, and occasionally some magnificent food-carp and delicate leather carp. Basket after basket did the men carry up the steep bank, and, separating the large from the small fish, put them in enormous tubs half filled with fresh water, where the little fish remained quiet, gathered in dense crowds, while the large ones, as if by common consent, engaged in a sort of swimming race, swimming invariably to the left, around the tub, the having expired their first astonishment by standing on their heads and beating the water with their tails. The next part of the programme was to count the fish, by repeatedly filling a certain standard measure, and thereby calculating the entire quantity. A number of wagons were on hand, each supplied with several fish-kegs half filled with water, and the measuring and loading of the wagons soon commenced, the pond meanwhile having been emptied after seven or eight hauls. All this time the water was getting out.

Although every one of our party was well supplied with rubber boots and warm clothing, the fine rain and raw air soon seemed to penetrtae even the thickest covering. It was, therefore, with no common pleasure that we were called on to witness the preparations for an original and savory meal, which the forester of Mr. von dem Borne cooked with consummate skill, closely following the method employed by the North American trappets and sportsmen during their sojourn in the vast forests of the Western Hemisphere. Four plump carp were cleaned, washed, well strewed with salt and pepper, both on the inside and the outside, and thereupon wrapped—each one separately—in a white sheet of paper well buttered. Round this a sheet of newspaper was wrapped, the package was for a few moments dipped in cold water, and finally placed on a bed of hot coals of an open fire. Above the four carp came a layer of raw potatoes, which were thus baked in the ashes. The dining-room was as primitive as the preparation for the meal and consisted of an open frame shanty of the simplest construction. In about half an hour the "pepper carps" were ready for the table. Full of their own juice, they formed a most tempting and delicious dish, and being handed round, together with potatoes, on large napkins, satisfied even the most epicurean taste, and were washed down by an excellent bowl of punch (amid great merriment). After the meal we again turned our attention to the fish, which had meanwhile all been placed on the wagons. The result of this forenoon's work was 90,000 small and 528 large carp, this whole enormous number having been produced from 570 large carp, which Mr. von dem Borne had placed in this small pond—not quite as large as the Lustgarten in Berlin—in the beginning of April of the present year—only six to seven months ago. While the 570 large carp had been reduced to 528 by fish of prey, thieves, and other causes, but had increased in weight, the total number of 90,000 beautiful young carp had originated in this time. These were, of course, not a single pike in the pond, and nothing whatever was brought up in the nets with the fish but a number of frogs, water-beetles, and sticklebacks. These three last mentioned are notorious enemies of the roe of the carp, and we were destined to learn on the following day how dangerous they may become to the roe.

Wonderfully rich as was the result from the Maxa pond, it was hardly the original intention that it should be so, for all these 90,000 young carp had come into life contrary to regulations, and owed their existence to a mere accident. It had by no means been the intention that the 570 large carp should spawn in this pond, but they were intended to grow up into large food-carp. For the simple reason that they were not yet supposed to be ready for spawning, no pike had been placed in the pond with them, and about a dozen of the carp which were fully prepared for spawning had made good use of this circumstance, and had done their utmost to stock the pond with young fish. If the pond had been intended for a spawning pond, twelve spawners and six milters would have been sufficient for a pond of two hectares. This number had been placed in the large "Dach-

Winner of First Prize in both N. A. K. C. Derby and New Orleans Gun Club Derby, 1882.

berger" pond, which on the second day of our visit, was subjected to the same process of fishing as the Maxa pond. We were now destined to witness the injurious influence of other enemies of the carp than the pike. The young carp in this pond were on an average six times as heavy as those captured on the previous day, and the total yield was twice as large as that of the Maxa pond. The increase in the size of the eighteen carp originally placed in the pond was also much greater than that of the carp placed in the Maxa pond; but the total number of fish captured fell below the expectation. Even during the first haul we were struck with the unusually large number of sticklebacks which were brought up with the carp. Large numbers of these dangerous fellows were boldly pushing their way in the tubs among the pretty golden-yellow young carps, in some cases, it is true also struggling for life, as they cannot live without fresh air as long as the carp. What damage was done by these fish of prey, which, by persistent attacks, even succeed in killing large fish, during one summer, to the young carp of the Dachsberger pond, may be gathered from the circumstance that we only captured 20,600 young carp, while in other years as many as 100,000 to 150,000 had been caught every autumn. In stocking the Stettiner Haff such circumstances should be taken into consideration, the recurrence of which may in this case be avoided by simply laying the pond dry and pouring in a solution of lime and water. The average production of a hectare of water may therefore be calculated at 45,000 young carp per annum. In order, therefore, to produce the required number, 22,000,000 of carp in four years, all that would be necessary would be to construct and put in working order about 120 hectares of spawning ponds. According to Mr. von dem Borne's former experience, the result would be more favorable. He found that a good spawning-pond produces on an average 50,000 to 75,000 young carp per hectare, in one year, so that eighty to ninety hectares of spawning-ponds would be sufficient to stock the Stettiner Haff with the required quantity of carp within four years.

In answer to the question, whether there are near Stettiner Haff places suitable for the construction of such ponds, the administration of forests for that part of the country has returned an affirmative answer. In the extensive government forest on the western shores of the Stettiner Haff, between Uckermünde, Pölitz, and the Papenwasser, there are a number of marshy places, which as far as their productiveness as forest land is concerned, are practically useless. With very little trouble, in many cases by merely constructing a dike with a pipe for draining off the water, very fine spawning-ponds for carp could easily be constructed in the immediate neighborhood of the Stettiner Haff. Only nine fully matured carp per hectare, each weighing about four pounds, placed in these ponds in the spring, would in the autumn of every year yield 40,000 to 70,000 young carp per hectare. If one wishes to save the expense of constructing a number of ponds, it will be sufficient to commence with one pond, and let the young carp grow large enough to become spawning carp after three years, and then stock the other ponds with these carp. The transportation of the young carp to the Stettiner Haff could be accomplished by wagons or by trenches leading from the Haff into the ponds; and this should be done every year in October. The question arises whether the Haff is suitable for carp? or if wind and waves, and the numerous enemies of the carp, especially the pike, or lack of food, or the salt water from the Baltic which occasionally enters the outer mouth of the Oder, might injure the carp? In reply we would say that the carp lives under the same conditions as the bream, and is everywhere found in its company; and since we find the bream in the Stettiner Haff, there is not the slightest doubt that the carp can also live in these waters. We must, of course, be prepared to see the Haff pike, that most voracious fish of prey, devour many thousands of the delicate young carp, and the herons, gulls, sea-eagles, and other enemies of carp do their share in destroying the young fish. Very probably the most dangerous of all enemies of the carp, man, will capture the young fish before they have reached their full size; but there is no doubt that the flat bottoms of the Haff, which, especially in the west, are rich in the best humus, will provide an inexhaustible supply of food for the carp, and afford many excellent places of refuge. Against the fish-of-prey we shall declare open war, and as for man, the fiercest of these enemies of the carp, is concerned, we shall endeavor to limit his power for evil by carrying out a long and often talked of plan, viz: to build a swift small steamer, which will act as the policeman of the Haff. Millions of young fish will be furnished for the Haff every year from the safe spawning-ponds, and make up for any losses. Success will surely crown these efforts at last, and our waters will again be filled with fish. A successful experiment, like the one we have described will soon be imitated in other parts of our country, and our lakes and rivers will no longer, as at the present time, when our fresh-water fisheries have reached the lowest stage of their decline, only yield an average annual increase of 2 marks (47 cents) per hectare; but will equal in productiveness the finest and best cultivated portion of our land, and the income from each hectare of water will be at least twenty times as large as the one mentioned above. Whenever this takes place, our pisciculturists, and among them Mr. von dem Borne with his 600 acres of water, will be the first to feel the consequences of the change, for fish will become much cheaper food. But this disinterested man, who has conceived the plan of stocking the Haff with carp, will not be influenced by such narrow considerations. The execution of this plan will prove a great blessing to our people, for we shall again see the carp, which has been banished from all tables except those of the rich on account of its high price, grace the table of our middle and poorer classes.

The Kennel.

FIXTURES.

BENCH SHOWS.

March 26, 27 and 28, 1883.—Dominion of Canada Kennel Club Bench Show, at Ottawa, Canada. Charles Lincoln, Superintendent, Detroit, Mich.

January 9, 10, and 11, 1883.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden Conn.

April 3, 4, and 5 1883. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters whelped on or after January 1, 1883, close February 1, 1883. Chas. Lincoln Superintendent. C. B. Elbin, Secretary.

May, 1883.—Westminster Kennel Club, Seventh Annual Bench Show, New York City. Robt. Cornell, 54 Will am st., New York City.

February 20, 21, 22 and 23, 1883.—Grand International Bench Show, Washington, D. C. Chas Lincoln, Superintendent, Office, Skating Rink, Washington, D. C.

BUTLER'S SIBERIAN BLOODHOUNDS.

ONE day last week I received a letter from a young gentleman bitten with the passion to become a member of the "fancy," and by that term I mean the breeding, rearing and exhibiting of dogs. I had previously been reading him a lecture upon the necessity of restricting his attention to one or two breeds, and he said he would, but at the same time I knew he had an offshoot in the shape of a lately-purchased boar hound, Ulmer dog or something of that kind. He asked me if I know anything about Butler's "Prince" breed, or Siberian bloodhounds. I had heard a good many yarns now and again of a wonderful strain bearing that name, and which were said to have run up to thirty-six and thirty-eight inches at the shoulder. Now I have measured a good many dogs, and I have never yet found one to touch a standard measure at thirty-four inches, so Butler dogs I always regarded as a fable. When I got the letter referred to, I concluded that, as it was a nice bright day—good walking weather—I would tramp it down town and visit a few places *in re* Butler and his dogs.

Luck favored me at my first call, which was on old Doctor Gardiner, who is now in Seventh avenue, near Seventeenth street. I regret to say that the old gentleman has never fully recovered from the severe sickness which prostrated him last winter, and he could do no more than sit up in bed to receive me. I had a little commission I wanted him to execute, and while explaining the case, he made a reply bringing in "Butler's great dog." "By Jove, doctor, that is really the very thing I wanted to see you about. Tell me all about that dog of Butler's."

"Well, sir, Butler's dog—Prince, they called him—was the largest dog I have ever seen, and he was also the best shaped big dog I have ever seen. A fine head, nice smooth coat, had great legs, as straight as a post and as big as my arm almost, and, for all his size, he was as active as a little terrier. Now, I have in my time heard a lot of people talk about the size of dogs and how high they were. I don't know how they measured them, but I think I know how a dog ought to be measured, and now I tell you, sir, this dog Prince was the biggest dog I ever saw, and I don't think there ever has been another as large. Prince stood just thirty-four inches at the shoulder."

"Thirty-four inches, eh?"

"Yes, sir; not a fraction of an inch over that."

"How did you come to know about him, Doctor?"

"Didn't you ever hear, sir, that Butler and I took him to England and showed him before the Queen of England?"

"No, I never did. Tell me the whole story. I have got lots of time."

"Very well, sir. I'll go back to the beginning and tell you first about Butler. He was a teacher of languages, could speak I don't know how many different kinds, and wrote books too. But he was always after dogs, and made a lot of money out of them. He would always buy any dog that was out of the common, and one day as I was standing in the Astor House I saw a man come in with such a dog as I had never seen before. I got talking with the man and he said he wanted to sell him, so I went to Butler and told him, and he asked me to find the man. I searched a long time before I could get trace of him, and at last I succeeded and took him to Butler. I don't know what bargain they made, but Butler got the dog, and then he engaged me to keep him and take care of him. Butler said 'I have given more money for this dog than I ever gave for any other, and I want you to be careful of him.' By and by Butler said he was going to Europe with him and wanted me to go with him. I said no, my wife would not let me go. 'Ask her,' he said. No, I said, I would not even do that. At last he said, 'I'll ask her for you,' and he did. Butler was always a good talker, used fine language and was a handsome man, so somehow he talked my wife over, and off Butler and I and the dog sailed for England. When we got over we began exhibiting the dog through the country, and Butler who was always a man of great ideas, got up a large sign representing this dog, with a negro in his mouth and dashing in pursuit of others who were running away from him. Then he had the name 'The Great American Slave Hunter' painted in large letters on the sign. Dear me, how the people did come to see the dog to be sure. I am certain we must have had as many as fifty people in at a time, at a shilling each. By-and-bye the fame of this great dog spread so much that Butler received an order to show the dog to the Queen of England. I went with Butler, and we had a pass, so that when he got to Windsor Castle the sentries let us go in. We had to show this pass three or four times before we at last got to the part where the Queen was. We got there just as a lot of ladies and gentlemen came out and some carriages drove up to take them out riding. I did not know which was the Queen, but a lady asked me a lot of questions. Whether the dog was a native of America? Whether it was a distinct breed? If they were all as large as this one? Whether it was gentle with people, and could be trusted with deer? I told her just what I believed to be true, that he was a good-tempered and kind dog with men, but could not be trusted with animals. Why, sir, he would go crazy if he saw a goat, and would kill one just as a terrier would a rat. Butler all this time was talking with a gentleman in some foreign language, and I could not understand what he said. At last the Queen gave me two five pound notes, and they got into the carriages and drove away. This set Butler nearly crazy, and he said now we could sell the dog for any money we

MR. J. M. AVANT'S LEMON AND WHITE ENGLISH SETTER BITCH "BESS A."
Winner of Third Prize in N. A. K. C. Derby, 1882.

liked. Then we showed him in London, but we could not get anyone to buy him. Butler advertised him, and he was shown to several noblemen. I remember we took him to Lord Ward, and I am sure he wanted to buy him, but Butler had no sense about price. He went on one side with Lord Ward, and I could see that the question was asked about the price, and when Butler gave his answer, Lord Ward turned right away and never said another word, only shook his head.

"By this time our wives were getting anxious about us; there was sickness over here, and every letter we got it was to come home at once. At last Butler sold the dog for $750 to Henry Archer, of 21 Warwick square, Pimlico."

"About what year was this, doctor?"

"I can't say exactly the year, but there was great excitement in England about the Crimean war when we were there."

"Now, doctor, what about breeding him; did he leave any pups?"

"Not one, sir. He was never out of my possession, and he was bred to but one bitch belonging to Butler. That was such a difficult operation that it was never tried again. She was a half-bred mastiff bitch. When we were in England Butler got a letter from his wife saying that all the pups were dead, so that you may say he never had any pups, though I know Butler got rid of a lot and said they were by Prince."

I had just finished the above story when FOREST AND STREAM for this week arrived, and on opening it I found a query for information which the foregoing is a reply to. I have only one little thing to add, and it is this. A large number of your readers have doubtless had dealings with the old doctor. To such I would say he is sadly in need of friends at present and has but a cheerless outlook for the new year. Won't they kindly give him a little assistance? To those who do not know him I would say that I have on various occasions given him little commissions, and I have never had cause to regret doing so. I therefore feel I can consistently recommend his case to the charitable sportsmen of the community. His address is 113 Seventh avenue. JAS. WATSON.

THE LOUISIANA FIELD TRIALS.

THE report of the running of the Members' Stake failed to reach us in season for last week's issue. It is not so full as we would like, owing to the fact that our reporter misunderstood our letter of instruction.

THE MEMBERS' STAKE.

First prize, a solid silver cup; Second prize, a handsome game bag.

There were twelve entries for this stake, and they were drawn to run as follows:

Mr. J. W. Jackson's liver and white pointer bitch Louise, by Bow out of Jaunty, against Mr. N. D. Wallace's black setter dog Captain.

Mr. J. W. Jackson's red Irish setter dog Mark, by Erin II. out of Biddy, against Mr. J. A. Scamal's red Irish setter dog, Boston.

Mr. C. B. Maginnis's Gordon setter dog Gordon, by Rupert out of Whip, against Mr. E. Ranlet's lemon and white pointer Dinks.

Mr. A. H. Stewart's black, white and tan setter dog Bang, by Peter out of Flash, against Mr. J. W. Jackson's liver and white pointer dog Lorne, by Faust out of June.

Mr. E. L. Ranlet's red Irish setter dog Kilkenny, by Rory O'More out of Lotta, against Mr. M. S. Humphrie's lemon and white pointer dog Tyler, by Uno out of Flirt.

Mr. W. E. Kennedy's lemon and white pointer dog Bow, by Faust out of Belle, against Mr. J. K. Renaud's black and white English setter bitch Flossie, by Rake out of Daisy.

The first brace was put down about 9 o'clock. Captain was the fastest and got nearly all of the points. Neither of them were very steady to shot. After running half an hour the heat was given to Captain.

MARK AND BOSTON were now put down. They were nearly equal, although Mark appeared to have the best nose, and to be under the best control. In the number of points they were nearly equal, but Boston made two or three flushes, and after an hour's run the heat was given to Mark.

GORDON AND DINKS were then put down. Gordon was much the best, but after a short run he was taken with a fit, and some of the other dogs were run before this heat was finished. When they were again put down the judges soon decided the heat in favor of Gordon.

BANG AND LORNE were put down while Gordon was recovering. Bang had the best of it all through, making the most points, some of which were very stylish. After an hour's run the heat was given to Bang, and we then went to lunch.

After lunch KILKENNY AND TYLER were put down. Tyler won the heat in a few minutes with only one point, Kilkenny flushing and chasing.

The last brace, BOW AND FLOSSIE, almost repeated the performance of Tyler and Kilkenny. Bow was unsteady and flushed his birds. Flossie made a good point and won the heat. This ended the first series with the following result:

Captain beat Louise.
Mark beat Boston.
Gordon beat Dinks.
Bang beat Lorne.
Tyler beat Kilkenny.
Flossie beat Bow.

Second Series.

CAPTAIN AND MARK were put down in a cornfield, Mark showed up the best, getting the most points, and after a half hour's run the heat was given to him.

GORDON AND BANG were the next brace. They ran about twenty minutes, when Gordon was given the heat. He made two or three good points to Bang's one.

TYLER AND FLOSSIE were then put down. Both did some good work, but Flossie had the best of it, and at the end of half an hour she was given the heat. This ended the second series, with the following result:

Mark beat Captain.
Gordon beat Bang.
Flossie beat Tyler.

Third Series.

MARK AND GORDON were then put down. There was not much difference in their work, but after an hour's run the heat was given to Gordon. This ended the running for the day, and also ended the third series, with the following result:

Gordon beat Mark.
Flossie a bye.

Fourth Series.

FLOSSIE AND GORDON.—On Tuesday morning this brace was put down shortly after 9 o'clock. This heat was to decide first prize, which was given to Flossie after a half hour's run. Both did good work, but Gordon was a little unsteady. This ended the fourth series, with the following result:

Flossie beat Gordon and won the cup.

Fifth Series.

GORDON AND TYLER were put down to decide the second prize. After a half an hour's run, during which both did good work, Gordon had another fit and was withdrawn, and Tyler was given the heat and second prize. Following is the

SUMMARY:

First Series.

Captain beat Louise.
Mark beat Boston.
Gordon beat Dinks.
Bang beat Lorne.
Tyler beat Kilkenny.
Flossie beat Bow.

Second Series.

Mark beat Captain.
Gordon beat Bang.
Flossie beat Tyler.

Third Series.

Gordon beat Mark.
Flossie a bye.

Fourth Series.

Flossie beat Gordon and won the cup.

Fifth Series.

Tyler beat Gordon, withdrawn, and won second.

VALUABLE DOGS TO BE DISPOSED OF.—The valuable kennel of dogs imported two years ago by Mr. C. H. Mason will be disposed of by raffle on March 1. Among them are some excellent animals. The management is in the hands of Mr. James Watson. For particulars see advertisement.

TWO DAYS WITH THE BYRON HOUNDS.

WHAT fun I had two consecutive days with the united packs of T. G. T. and Basset Rawlings! T. G. T. loaned me a Banker pony to ride. I took him home the one evening, and by day the next morning I was at his house. I took breakfast with him and though the wind blew fierce and chilling we soon thereafter mounted our steeds and hurried to the appointed place of meeting, Clem. Charis's, in the county of Brunswick, Va., some five miles equally apart from the two huntsmen. Do you know what a Banker pony is? On the sea coast in North Carolina large numbers are raised. They are small, hardy and untiring. They are full of hair, coarse and almost wooly. Their manes and tails are heavy and long and their fetlocks unusually so. The one T. G. T. loaned me is just the animal for a boy and is up to all work. But his manner of mounting a fence and crossing a ditch does not suit me. He leaps over both, like a sheep, all his legs being up at the same time, and his flight several feet over all obstacles. Only a good rider can sit him and I must confess I prefer dismounting whenever these feats are to be performed.

So much for my pony; now for myself. I am just in my teens, weigh eighty-six pounds, pretty daring in the chase, and ready at all times for field sports. T. G. T. loaned me a Sharp's breech-loader many years ago. It was made to order for Edw. St. John Chambers, of Mississippi, the son of the late Judge G. R. Chambers, of Virginia, and nephew of the late United States Senator of Alabama, Henry Chambers, and presented by him to his uncle T. G. T. With this gun I have acquired a fair skill at game on the ground and when not moving, and I occasionally venture to shoot on the wing; but I am no Bogardus at that. Being the only son of some seven children, my parents are always uneasy whenever I take my gun in hand, and enjoin on me great caution. This takes off my vim and unfits me for the full enjoyment of the sport. Now, I like firearms and my fondness for them comes quite naturally. My father, Dick K., whom everybody in Virginia knows, is a splendid shot. My grandfather on my mother's side was a West Pointer and a Confederate general; my great-grandfather was a United States general during the war of 1812, and both knew all about projectiles. Other field sports have charms for me in the degree of quick and rapid scene. But fishing is too quiet and slow for me. I can't sit still an hour or two patiently awaiting a bite, particularly when the bite occurs the chances are greatly against a catch.

Well, now for the packs. T. G. T.'s is composed of full bred Byrons; Mr. Rawlings's of part Byron. Tom Wilkins is the only black and tan in T. G. T.'s pack; Mr. Rawlings has several. The general color of both packs is similar, but the indigo blue predominates in T. G. T.'s; white, black and white does in Mr. Rawlings's. United, the two packs make a beautiful calico in the run, and can be seen a long way. Their music is perfectly thrilling—there is the tremulous scream, the wild and protracted whine, the loud and short bark harmoniously mingled. Stonewall, a black and tan, is Mr. Rawlings's favorite. His note is as clear and protracted as that of a clarion. His action is superb and his energy full up to T. G. T.'s Fannie. But he has a habit when at fault, of going back on the track just run over. This is a very serious objection. I saw him bring the pack to grief by this folly and the fox escaped. But Mr. Rawlings has three black and white hounds by Critic, out of a slut from Judge Beauford's pack (part Byron) that I think is equal to Stonewall. T. G. T.'s Fannie, a red slut with white legs and neck, is a long way ahead of all rivals. She covers the track and runs like an arrow. But Bettie is the slut after my own heart. She hunts like papa's old Bravo, a setter of the first magnitude, and always gets the strike. She never wearies of doing well. Plunder and Blunder I notice are generally ahead. T. G. T. says that is owing to their style of running the fox. They lean to the track when they get off, keep moving onward until they get upon it again. Most hounds hesitate and draw in a little when this occurs, and lose the lead. Plunder and Blunder never slack up.

Now, for the ground over which the chases occurred. At Clem Charis's, even in his enclosure, the country is level and consists of old fields and pine forests, excellent even in dry weather, for the chase. This continues for a mile or two any way. After this we have only occasional patches of covered land as you go south toward the Roanoke River, the intermediate portions consisting of large cotton fields, which are now too dry to run a fox over. This our fox soon discovered and

whenever pursued invariably sought them, and always, of course with success. When T. G. T., Tommie, his master of the hounds, and myself, were near Clem Charis's. Mr. Rawlings came to us and sent Tommie to notify T. G. T., that he had started a fox. T. G. T. was to our right, some half mile off, moving parallel to us. Tommie soon gave him the information and as quick as thought almost, he was in place. Mr. Rawlings's dogs were at fault, but as soon as T. G. T.'s pack came up things went right along. The fox went through the entire length of the covered land and the cry of the pack went clear through me. But as soon as a cotton field was reached all was still, except an occasional note. It reminded me so much of a pianist playing a half learnt piece of music. Part would be rattled off in splendid time, but then a stop, followed by tink, tink, tink, for awhile, then again rattling music. Just so with the hounds, which continued as often as a cotton field interposed between covered land.

The chase was continued for an hour with these interruptions, and about 2 o'clock I grew very hungry, and went to T. G. T.'s for relief. There had a fine lunch, fed the pony and rested. About two hour's rest made me eager for the fun again, and off I went to join in. I got up just as the fox was hurrying through a large pine forest, and whew! how the ashes flew! But soon the crafty fox made for a cotton field, and all was stillness; but, at this point, Stonewall took the back track, and turned the whole pack back entirely from the fox. It was now sunset, and I was determined to let things stand until the morning. We remained for some time on the spot until the pack had satisfied itself that the fox was lost.

I would give you what followed that morning, but I reckon it would not please your readers. I have already bored them enough, I must now close. WILLIE K.

COCKER SPANIEL PRODUCE STAKE.

THE following entries have been made for the American Cocker Spaniel Club's Produce Stakes, to be competed for at the Westminster Kennel Clubs' show of 1883:

1. Hornell Spaniel Club's Lady Bath.
2. J. S. Cattanach's Queen Vic.
3. Dr. J. S. Niven's Dolly.
4. Hornell Spaniel Club's Frin.
5. E. C. Hale's Nina.
6. J. F. Kirk's Toronto Jet.
7. W. M. Bowe's Gypsey.
8. Eugene Powers's Mignon.
9. Hornell Spaniel Club's Curlew.
10. Hornell Spaniel Clubs Beatrice.
11. Hornell Spaniel Club's Nelly M.
12. Hornell Spaniel Club's Flirt II.
13. Dr. J. S. Niven's Black Bess.
14. F. F. Pitcher's Chloe II.
15. Hornell Spaniel Club's Topsy.
16. Hornell Spaniel Club's Madge.
17. F. F. Pitcher's Feather.

J. F. KIRK,
Secretary A. C. Spaniel Club.

TORONTO, Dec. 29, 1882.

THE RORY O'MORE KENNEL.

I HAVE lately had an opportunity of visiting the Rory O'More kennel, situated on Riverside avenue, in Greenbush, New York, on the east bank of the Hudson river, opposite Albany. The kennel is situated on the "Old Mansion" grounds, well known as a place of considerable historical notoriety, on account of its age (having been built in 1642), and now the property of Mr. Wm. N. Callender, the founder of the Rory O'More Kennel. The old mansion is said to contain thirty-five rooms, and is still in an excellent state of preservation. All of the brick used in its construction were imported from Holland, as also were the heavy white oak timbers, some of which are twenty inches square, and run the entire length of the main building in the cellar.

The kennel building, which occupies the rear of the grounds, is of the Queen Anne style of architecture and decoration, and is about thirty-five by forty feet in extent, the main floor, elevated about three feet from the ground, giving excellent ventilation where it is most important. A hallway in the center of the building runs its entire length from east to west, rendering the inspection of the canine inmates of the kennel convenient and thorough. On the left as one enters the kennel, Mr. Callender has his office, a room about twelve by fifteen feet, handsomely furnished with desks, closets for medicines, writing materials, guns and breaking equipments, some rare sporting scenes, and a painting that especially attracted my attention, of a rare species of snipe native of Japan. The bird much resembles our "little brown back" of the Atlantic bays, but having the end of the bill broadened like the spoonbill or "pink curlew" of the Florida coasts. The specimen, I understand, was obtained by and belongs to Mr. E. Corning, of Albany. It is surely a rara avis.

On both sides of the hall the first floor, excepting the office, is devoted to stalls for the various dogs. These apartments are separated from each other, and from the main hall, by wainscoting and wire netting, and each stall has raised benches for beds. The second floor has a line of stalls on the south side, and the remainder of the floor is devoted to yard breaking and exercise in cold and wet weather. Among the noted dogs your correspondent first noticed was champion Rory O'More, whose numerous winnings are so familiar they need not be mentioned in detail. Suffice it to say that he was the gainer of first in New York in 1877 and a tie with Paris in the sweepstakes open to all sporting dogs, and in 1879 first in the champion class, and in 1880 the gold necklace in the specials. Rory is the principal stud dog in the kennel, and bears his age well.

When we reached Rexford, a Berkley-Sampson's Nora setter, litter brother to Lady Berkley, Mr. Callender told me it was his intention to use him in the stud freely in the future, especially to bitches of Rory O'More's get. I think Mr. C. is wise in this respect, for he will gain in the progeny the fashionable Berkley head combined with the more intelligent appearing cranium of the Rory O'More family.

Next to Rexford it became Nora O'More's turn to be admired. Nora, no doubt when in condition, is one of the handsomest bitches of her breed in the country, but she has just reared a litter of puppies and shows the wear. Her dark coat and splendid feather are yet prominent notwithstanding the three months of care she has gone through. Her litter by Rory O'More is a beautiful lot, and as Nora was out of Tilly by Berkley, the youngsters are a combination of rare strains.

A great favorite with Mr. Callender is Lady Berkley, a Berkley-Sampson's Nora bitch, who occupied a stall near Nora. Lady Berkley much resembles her sire, and being let out in the yard showed wonderful speed. I fancy her as much as any bitch he had. She is also a winner, taking first at Cleveland in 1882. A litter of her puppies by Rory O'More, in a stall near by, are perfect counterparts of old Berkley, yet having the stouter form of their own sire. These puppies are the gems of Mr. Callender's kennel.

Gay, a beautiful bitch by champion Elcho ex Fire Fly, could not be passed without notice. She is a splendid specimen of her breed, and quite near her were two of her puppies, seven months old, by Rory O'More, very promising.

Quail III., by Red Gauntlet ex Quail II., winner of first in puppy class at New York in 1879, was next shown me. She was nursing a litter of youngsters by Rory O'More, a strong and well advanced lot for their age. Rory O'More, Jr., by champion Rory O'More ex Nora O'More, whose turn it was next to be shown, is the most superb specimen of the red Irish setter at his age I ever saw. If I am not mistaken he will make his mark and is a coming dog. His head is faultless and his form needs only development to make it that of the best. Although only nine months old he is very "doggy" for his age, not a white undersized, and of splendid color. I fancy Mr. Callender counts on him as his main stay in the stud when Rory O'More is put on the shelf. There were also some unnamed very handsome young bitches about seven months old, by champion Rory O'More ex Sampson's Nora that Mr. C. showed me, and the kennel stock, some forty in number all told, are remarkably dark-coated and handsome. This kennel is probably the largest of the kind and one of the best in the United States, and as it will be seen embraces in its blood a combination of the most prize-winning strains in the United States, namely, that of Rory O'More, Elcho and Berkley.

The covers not a great distance from Albany harbor the woodcock in its autumnal passage south, and the dogs of the kennel are daily worked when the flight is on. While at the Rory O'More kennel I witnessed the handling by Mr. Callender's breaker of three green young setters, and must say the care, patience and method evinced by his man can not fail to turn out good house-broken animals ready for field training.

Mr. C. paid a high compliment to your journal as a means of advertising, and told your correspondent he hears daily from parties in every State in the Union making inquiries for Irish setters. HOMO.

A KANSAS 'COON HUNT.—This is how it began: We are two bachelor farmers. * It is the fall of the year, the day's work of corn husking is done. We have carefully laid away the ration of pork, mush, corn bread and coffee, and are sitting around the fire chatting to our two cousins, up from the city on a two days' hunt. Stories commence, and soon the 'coon is introduced, tale on tale following fast; our mouths fairly water for 'coon. Suddenly Everett remembers that he has not yet gone for the daily mail, which is doled out every evening to him at the farm house, one and one-half miles away. (Doubtless the regularity is owing to pretty Maggie S., the postmaster's daughter.) He leaves the circle and saddling Cyclone (his mustang) is away. But soon unearthly shrieks and yells are heard, and listening we know them to come from an osage orange hedge on the hill one-half mile away. We answer and listen. Immediately we hear in loud tones Everett shouting that there is a 'coon in the hedge. Instantly we seize our guns, and hasing to the stable we mount our best horses and away. Visions of roast 'coon float through our mind. Soon we reach the hedge, and there in the reflection of the pale, new moon we see him, dimly visible against the darkened sky. Ain't he a beauty? See his eyes! What a splendid tail! Rather long for a 'coon, ain't it? We shout, and in the confusion do not notice that Eugene hangs back. Everett claims the first shot, and Eugene kindly lends him his gun, and holds his pony. He draws near, and taking good aim fires. "Shades of Neptune!" "Immortal gods!" we should judge that the "coon" and Everett fired simultaneously. A retreat is effected in good time and bad order, and we, "Ev," included, in an incredible short time, are on the way to the house. Our hero cusses and yells viciously, and when most home, we meet the postmaster and his daughter coming home from town; and from all appearances they had heard our heated discussion on the way. Mag. goes with another fellow now, and when we approach the subject to Everett, he growls under his breath, "It was fate. Bismillah," but we don't think so, and this is how it ended.—ESTA BUENO.

ROBBIN'S ISLAND.—Some of the members had good sport next day after the trials, especially Dr. Speir, Mr. A. T. Plummer, and Mr. L. Waterbury, all fair shots, and have good dogs. Dr. Speir's Prince Hal and Maida arrived here from North Carolina in time for him to have a day with them in the field. They worked like machinery and were well handled by him, scoring point after point, back after back, until he cried, "Hold! enough." He enjoyed it hugely and bagged several birds with his 20-gauge, enjoying the work as much or more than the killing.—D. B. H.

TOM AND CAPTAIN DORSETT.—Major Geo. R. Watkins, who intends to go aboard to be absent two or three years, offers for sale his valuable brace of setters, Tom and Captain Dorsett. Tom is well-known to our readers who have followed our description of the field trials. Captain Dorsett is well bred, and has been thoroughly trained, and is said to be an excellent fielder. We dare say that Major Watkins will have less trouble in disposing of them than he will find in replacing them upon his return.

THE OTTAWA BENCH SHOW.—*Editor Forest and Stream:* By the time this reaches you I hope to be in Ottawa to meet Mr. Vicars, the secretary and treasurer of the show, to make all preliminaries for the coming show. The prize list, together with the special list, will be at once put into form and be ready for distribution next week. All particulars and information can now be had from Mr. Vicars, the secretary, or myself, CHARLES LINCOLN, Superintendent, Ottawa, Canada.

A NEW CLUB.—Several gentlemen have leased Fisher's Island, near New London, Conn., for the purpose of making a game preserve of it. They will at once procure a large number of quail, which will be turned down in the spring. Should the enterprise met with encouragement from sportsmen, it is intended to hold fields trials there. Any one wishing information regarding the matter can obtain full particulars by addressing Mr. Max Wenzel, Hoboken, N. J.

MASTIFF IMPORTATION.—Mr. William Wade, of Pittsburgh, Pa., has just received from Mr. Graham, of Belfast, Ireland, the English mastiff dog Tiney. He arrived on the steamer State of Georgia on Dec. 20. He is eleven months old, very massive, and well formed. He stands twenty-eight inches high at shoulder and weighs 130 pounds, giving promise, when mature, of making a magnificent animal.

WASHINGTON, D. C., BENCH SHOW.—We have received a letter from Mr. Chas. Lincoln, stating that there will be a bench show at Washington, commencing on February 20, and continuing four days. The show will be held in the skating rink and will undoubtedly prove a very successful one, as Mr. Lincoln assures us that the arrangements will be first class in every respect.

IMPORTATION OF THE BLACK COCKER SPANIEL BITCH NEGRESS.—In our notice of the recent importation of this valuable addition to the kennel of Mr. J. F. Kirk, in our issue of December 21, all of the heading except the word importation was carelessly omitted, for which we humbly beg the little lady's pardon.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Ringwood II. By Mr. Aug. Krueger, Wrightsville, Pa., for white, black and tan beagle dog, whelped Oct. 13, 1882, by imported Ringwood (Ranter—Beauty) out of Silver (Flute—champion Bess).

Shaughran. By Mr. Robert Ives Crocker, New York, for red Irish terrier dog, whelped Aug. 7, 1882, by imported Rock (Gaelic—Midge) out of Norah (Spring—Nettie).

Jumbo. By Mr. Lanson Davis, Richburg, N. Y., for red Irish setter dog, whelped May 9, 1882, by Rory O'More out of his Buff.

Gem II. By Mr. Geo. Haseltine, Boston, Mass., for liver and white cocker spaniel bitch, whelped Nov. 4, 1882, by champion Beau out of Gem (Snip—Feather).

Ginger. By Mr. A. McDonald, Rockland, Me., for red pointer dog, whelped Sept. 5, 1882, by Alden's champion Pete, Jr., out of owner's Pride.

Knox. By Mr. A. McDonald, Rockland, Me., for black cocker spaniel dog, whelped Nov. 15, 1882, by Bret Harte (Dick—Gipsey) out of Smut (Wildfire—Scoot).

Rena. By Mr. H. Brown, A Hegany, N. Y., for red Irish setter dog, whelped May 9, 1882, by Rory O'More out of Mr. Lanson Davis's Buff.

Daisy. By Mr. Benj. Stimpson, Connenutville, Pa., for red Irish setter bitch, whelped May 9, 1882, by Rory O'More out of Mr. Lanson Davis's Buff.

Beau II. By Mr. John R. Haseltine, Boston, Mass., for black cocker spaniel dog, whelped Nov. 4, 1882, by champion Beau out of Gem (Snip—Feather).

Dexter and Dash Belton. By Capt. B. F. Devinney, Moberly, Mo., for black and white ticked English setters, dog and bitch, whelped July 3, 1882, by Laverack Chief out of Fame (Breeze—Bramble).

Princeton. By Mr. R. P. Stockton, Philadelphia, Pa., for red setter dog, whelped Feb. 15, 1882, by his Irish (Toby—Hattie) out of his imported Bessie Lea.

Clingstone. By Mr. J. F. Johns, Haverhill, Mass., for lemon and white English setter dog puppy by Wagner out of Nell Kelly.

Black Silk, Black Bo and Black Gem. By Mr. F. F. Pitcher, Claremont, N. H., for black cocker spaniels, three dogs and one bitch, whelped Aug. 7, 1882, by Obo (E. K. C. S. B. 10,452) out of imported Chloe II. (Dash—Nellie).

BRED.

☞ *See instructions at head of this column.*

Smut II.—Pete. Mr. T. M. Aldrich's (Providence, R. I.) black setter bitch Smut II. (Trim—Smut) to Mr. W. Green's Pete (Sam—Mill), Dec. 27.

Negress—Toronto Beau. Mr. J. F. Kirk's (Toronto, Canada), imported black cocker spaniel bitch Negress (E. K. C. S. B. 8,373) (Lad of Beverly—Lass of York) to his Toronto Beau (champion Knight—champion Squaw), Dec. 23.

Toronto Jet—Tippo. Mr. J. F. Kirk's (Toronto, Can.) imported black cocker spaniel bitch Toronto Jet (Nigger—Belle) to Mr. J. W. Kelly's imported Tippo, Dec. 11.

Snow Flake—Spirt. Dr. Geo. W. Fisher's (Danville, Pa.) lemon and white pointer bitch Snow Flake (Glenmark—Girl) to Mr. Clark Lough's Spirt, Dec. 21.

Gleam—Knickerbocker. Mr. J. H. Phelan's (Jersey City, N. J.) lemon and white pointer bitch Gleam (Sensation—Whiskey) to Mr. Geo. L. Wilms's Knickerbocker, Dec. 26.

Floss—Jeff. Mr. T. M. Aldrich's (Providence, R. I.) setter bitch Floss (Bradford's Pete—Lotta) to Jeff (Duke—Nettie), Dec. 23.

Sprite—Major. Mr. M. O'Brien's (Sherburne, Me.) black and white ticked cocker spaniel bitch Sprite (Wildair—Mignon) to Mr. F. L. Cook's Major (Charley—Ruth), Nov. 28, 1882.

WHELPS.

☞ *See instructions at head of this column.*

Mary D. Mr. E. T. Banks's (South Bend, Ark.) setter bitch Mary D. (Joe, Jr.—Sherrard's Flight), Dec. 10, eight (three dogs), by Light (Gladstone—Buck, Jr.); one dog since dead.

Queen. Mr. M. Ballard's (Indianapolis, Ind.) English setter bitch Queen (Rake—Lady), Dec. 19, ten (five dogs), by Col. Stner's Frank.

Buff. Mr. Lanson Davis's (Richburg, N. Y.) red Irish setter bitch Buff, May 9, 1882, five (two dogs), by champion Rory O'More.

Reign. Mr. Geo. D. Conner's (Hillsdale, Mich.) English setter bitch Reign (Belton—Breeze), Nov. 19, twelve (nine dogs), by the Detroit Kennel Club's Royal Sultan (Racket—Kelp).

Flog. Mr. J. H. Dallibu's (Cleveland, O.) English setter bitch Floy (Rob Roy—Belle), Dec. 12, ten (nine since dead) one dog living, by Mr. C. M. Munhall's Sam Tilden (Dash—Belle).

SALES.

☞ *See instructions at head of this column.*

Rowdy O'More. Red Irish setter dog, whelped Feb. 24, 1882, by champion Rory O'More out of Gay (Elcho—Fire Fly), by Mr. W. L. Lake, Troy, N. Y., to the Rory O'More Kennel, Albany, N. Y.

Rory O'More—Buff whelps. Red Irish setters, whelped May 9, 1882, by Mr. Lanson Davis, Richburg, N. Y., a dog to Mr. S. H. Brown, Allegany, N. Y., a bitch to Mr. B. Stimpson, Connenutville, Pa., a bitch to Mr. Kerwick, Richburg, N. Y., and a bitch to Mr. L. Merket, Bolivar, N. Y.

Beau II. and Gem II. Black dog and liver and white cocker spaniel bitch, whelped Nov. 4, 1882, by champion Beau out of Gem, by Mr. Geo. S. Tucker, Peterboro, N. H., to Mr. Geo. W. Leavitt, Jr., Boston, Mass.

Samuel of Posen. Black and white ticked English setter dog, whelped May 27, 1882 (Young Laverack—Lady May), by Mr. H. W. Towner, Nyack, N. Y., to Mr. R. Moller, same place.

Obo II. Black cocker spaniel dog, whelped Aug. 7, 1882 (Obo—Chloe II.), by Mr. F. F. Pitcher, Claremont, N. H., to Mr. J. P. Willey, Salmon Falls, N. H.

Reign and whelps. Black, white and tan English setter bitch Reign (Belton—Breeze) and her litter of twelve puppies, whelped Nov. 19, 1882, by Royal Sultan (Racket—Kelp), by Mr. Geo. D. Conner, Hillsdale, Mich., to the Detroit Kennel Club, Detroit, Mich.

Ringwood II. White, black and tan beagle dog, whelped Oct. 13, 1882 (Ringwood—Silver), by Mr. N. Elmore, Granby, Conn., to Mr. Aug. Krueger, Wrightsville, Pa.

Bo. Black cocker spaniel dog, whelped Aug. 7, 1882 (Obo—Chloe II.), by Mr. F. F. Pitcher, Claremont, N. H., to Mr. Wm. A. De Caindry, Washington, D. C.

PRESENTATIONS.

☞ *See instructions at head of this column.*

Beau II. Black cocker spaniel dog, whelped Nov. 4, 1882 (Beau—Gem), by Mr. Geo. W. Leavitt, Jr., Boston, Mass., to Mr. John Haseltine, same place.

Gem II. Liver and white cocker spaniel bitch, whelped Nov. 4, 1882 (Beau—Gem), by Mr. Geo. W. Leavitt, Jr., Boston, Mass., to Mr. Geo. Haseltine, same place.

Rifle and Trap Shooting.

THE MATCH OF 1883.

GEO. J. SEABURY, Secretary of the National Rifle Association, has issued for the information of intending competitors the following letter:

The return match will take place at Wimbledon in July, 1883, during the annual meeting of the National Rifle Association of Great Britian.

The special committee having in charge the recommendation of a suitable arm for preliminary and actual use, have concluded after careful experiments to recommend to competitors:

1. The Brown Military Rifle (new model) as approved by the National Rifle Association. Address J. H. Brown, 408 Bleecker street, New York City.

2. The Remington Military Rifle (new model) as approved by the National Rifle Association. Address Remington & Sons, 283 Broadway, New York City.

The committe are, however, to continue their investigations until a weapon is produced that shall represent the highest possible shooting capacity, equal or superior to those recommended for practice prior to the match.

Early in January the National Rifle Association will issue a circular giving information connected with ammunition, loading, lubricants, bullets, powder, shells and allied topics.

The qualification scores for final competition will be 165 or over out of a possible 205, at the six distances prescribed in the conditions of the International Military Match, eighty-five or over at 200, 500 and 600 yards; eighty or over at 800, 900 and 1,000 yards.

The Adjutant Generals of the various States will be requested to officially recognize the match, as in the first competitions, by offering a prize to all who succeed in winning a place on the Wimbledon team.

REGULATIONS FOR THE SELECTION AND GOVERNMENT OF THE AMERICAN TEAM.

1. Each State or Territory (including the District of Columbia) desiring to be represented on the team is requested to establish competitions at such place or places as its military authorities may prescribe, for the selection of proper competitors to represent it, such competitions to be open only to members of the uniformed National or State Guard, who have been such since January 1 1883.

2. Each of such competitions should consist of seven shots at 200 500 and 600 yards each (constituting the first stage) and at 800, 900 and 1000 yards each (constituting the second stage); the two stages may be fired on the same or on different days, Creedmoor targets to be used.

3. Weapon, any military breech-loading rifle within the rules agreed on in regard to match (a copy of which is hereto annexed.

4. Position. Standing at 200 yards, prone at 500 and 600, any at the others.

5. No sighting shots to be allowed, or cleaning except between ranges.

6. All competitors who, taking the three best scores made in any one of these competitions, shall average at least 105 points out of a possible 225, (not less than 85 at 200, 500 and 600 yards or less than 80 at 800, 900 and 1000 yards) shall be qualified to compete at Creedmoor to represent their respective States.

7. In May or June on dates which will be hereafter announced four competitions will be had at Creedmoor by the competitors representing the several States. On the conclusion of these competitions eight competitors making the highest scores will be selected by aggregating their three best scores in these competitions. The Board of Directors will then select either from the other competitors or either from riflemen not competing shall may not have shot in any or all of the competitions not to exceed eight additional competitors. From among the sixteen so chosen a team of twelve and two reserves will be finally selected by the Board of Direcors who will be sent to England.

8. The Board will decide whether any of these competitions shall be postponed on account of weather or other reasons, should it be necessary they will name another day.

9. The Captain of the team will be selected by the Board of Directors of the National Rifle Association. He shall have the management of the team and prescribe the rules for its government and practice, including the decision as to the selection of the twelve who shall finally shoot in the match.

10. Each person entering for the competitions at Creedmoor shall be required to produce a certificate from the Adjutant General of his State, stating that he is, and has been since January 1, 1883, a member in good standing of its uniformed National or State Guard, and is a proper person to represent his State on the team.

11. Each competitor so entering shall subscribe to the following: I desire to compete for a place on the American Military team to represent the United States in the international Match of 1883, and hereby agree to conform to the conditions prescribed for the section of said team. If I am selected to compete I hereby pledge my word that I will shoot in the match and will in addition perform such practice and submit to such discipline and government as the captain of the team shall direct.

12. All persons authorized to compete in the final competitions for the selection of the team shall have the free use of the range at Creedmoor for practice for two weeks prior to such competition.

13. Any person selected in accordance with the foregoing regulations may be removed for lack of proficiency, misconduct, or other proper cause, by the Board of Directors of the National Rifle Association or the captain of the team.

14. Notice shall be given to the secretary of the National Rifle Association by May 1, by such of the States and Territories as intend to be represented, stating the number of the competitors they propose to send, and their names.

15. In case any State or Territory shall neglect to hold a competition for the selection of members of its National Guard to represent it on the team, any member of such National Guard, who shall make the scores above prescribed, shall, upon forwarding to the secretary of National Rifle Association on or before May 1, a copy of such scores, certified by an officer of our National Guard, or his own adjutant, and producing the requisite certificate from the adjutant general of his State, be entitled to enter the final competitions at Creedmoor.

16. Members of the team and reserve may be required, on and after their selection, to use such rifle or rifles and ammunition as shall be ordered by the National Rifle Association.

SPECIAL RULES AGREED ON AS TO RIFLES.

From regulations of National Rifle Association, but omitting irrelevant matter, etc.—"M. B. L."—Military Breech-Loaders.

Military Breech-Loaders not of government pattern, but comply ing with the following conditions:

To be fitted with an arrangement for fixing sword or other bayonet.

WEIGHT.—Not to exceed, without sword or other bayonet, 9 lbs., 4 oz.

LENGTH.—From 48 inches to 55 inches, measured from the muzzle to the butt when placed vertically on the ground.

STOCK.—Sufficiently strong for service purposes and fitted with a metal cleaning rod, and swivels for a sling, (without pistol grip.)

SIGHTS.—Backsight, *a*, to be attached to the barrel in front of the lock with a military volley sight graduations on plate *b*, leaf *c*, the sliding-bar to be with or without permanent vertical lines or apertures, and the upper edge either straight or with a notch; *e*, the outside measurement of the part on which the flap or leaf rests must not exceed one inch. Foresight, to be of government pattern called "barley corn."

SIGHTS.—May be temporarily blackened or whitened. Backsight, *a*, may be tilted forward or back, and may be supported at the necessary angle by any extemporized means; *b*, the sliding-bar may be reversed and may be used on either side of the leaf. No addition of permanent lines to one fine one down the centre for Snider, and three for Martini-Henry will be allowed, but temporary marks or lines of any kind, removable at pleasure, may be used; detached "vernier" or "globe sights" may be used.

PULL OF TRIGGER.—Minimum 6 lbs.

STOCK.—No pad or shoe for the Heel-plate of the Butt.

AMMUNITION.—Where military breech-loaders are used, the bullet must be inserted in the cartridge-case not less than 2-3 (two-thirds) of the diameter of the bore, and no part of the charge is to be inserted at the muzzle.

PISTOL RECORDS.

TIME brings many changes in the shooting world, and there as elsewhere history repeats itself. Twenty years ago duelling pistol practice at mark target was the popular way to practice shooting indoors. A crack shot was then, indeed, a lion. Gradually the muzzle-loading rifle found its way into favor; to be superceded by the 22-100 calibre breech-loading rifle with plain, open sights. The latter weapons were looked on as a much more scientific weapon, and their accuracy was greatly doubted. Improvement followed improvement in both rifle and sight, and to-day the muzzle-loader is a mere piece of antiquity. The almost perfect scores made with the breech-loader show not only the great degree of skill by many of our marksmen, but the finest workmanship in the many American cartridge factories. The record of marksmanship for the past year shows, in many instances, a great improvement over the former efforts of the knights of the trigger. This is more evident among the pistol scores. The ready pistol, which combines a quick aim and accurate measurement of every shot fired from center of bullseye to center of shot, offers the greatest test of accuracy. The rifle scores made on these targets is the total of distance from shot to center of bullseye in inches, while pistol scores are based on the average number of points, and is somewhat similar to the regular Creedmoor targets. The number of targets, or objects for aim in pistol practice, is practically without end; among the most difficult is driving tacks, lighting parlor matches, cutting threads, hitting the respective spots on a playing card, or cutting it in two when placed edgewise to the shooter. The various feats performed with the pistol at Conlin's Gallery in this city are too numerous to mention, but the actual marks by which the many records have been made are on exhibition in the record room of the gallery, and can be seen there at any time. Some of the scores made with the rifle and pistol we give below:

Teaser Target, with Pistol at 12 Yards.

A. Fernandez	43½	C. F. Jones	39½
H. W. Wickham	42	E. A. Bogardus	37
Frank H. Lord	41½	J. B. Miller	34½
A. Brennan	41	Col. J. I. Browne	34
Dr. E. T. T. Marsh	40	L. Pike	31

Teaser Target, with Rifle.

A. L. Cauldwell	46	Geo. W. Hamlin	43
J. B. Blydenburgh	46	Harry Watts	43
N. H. Wade	45	F. F. Moller	34½

Revolver Shooting at 12 Yards—Creedmoor Target, 1¼ in. bullseye.

RANGE AND GALLERY.

AIR SPACE IN GUNS.—'Twas a foolish thing to do: nevertheless, for the benefit of our readers, I will relate the incident. Wishing to have a rifle practice, I shouldered my weapon, a military breech-loading Snider-Enfield, and wended groveward. I had no ball cartridges at hand, but took a few blanks and some bullets out of old muzzle-loading cartridges. It knew that it was against "regulations" to use this combination, but determined to risk any bad consequences. It took position 10 yds. from a railway telegraph pole and proceeded carefully and rather dubiously to load. I first inserted the blank and closed the breech; next, placed the bullet (a hollow-based; the plug was not in) in the muzzle and rammed home, touching the blank cartridge very gently. I aimed carefully and fired. Then—well, I hit my pole, and was pushed back a few paces only; but my first voluntary movement was to carry my hand to my forehead, expecting to find some brains outside. Assuredly I could not have lost a great quantity of them, possibly missing the mislaid in my manual search for brains, I next proceeded to examine the rifle. The breech block had blown open, and, in doing so, had wrenched off the hammer and axle level with the lock plate, and the breech, interior and block, was blackened by the escaping discharge. I never found that hammer. Beyond a scorching of hair and eyebrows (I need scarcely state that I was then innocent of beard) I escaped uninjured. I attribute the mishap to the space created by the turned down rim in the front of the blank cartridge and the vacant plug-hole in the bullet. With the exception of the loss of the hammer and a broken axle, the rifle was uninjured.—BULLSEYE.

BOSTON, Dec. 26.—The competitors in the prize contest at the Mammoth Rifle Gallery, have increased to an even dozen and the scores improve with each day. Though the attractions of the Christmas tree are very formidable, they did not seem to wean the devotees of the target from their favorite pastime, and the interest in the indoor ranges is far from languid during the holiday season. The following table will show that there has been some good shooting, and the contest for first place on the board is very close:

A Pollard	46 46 46 46 45—227	W E Robinson	43 41 43 42 46—215
C S Seyon	45 45 45 45 46—226	C R Bartlett	42 45 42 42 43—214
F E Rollins	44 44 43 44 45—220	G W Little	42 42 43 43 43—213
J H Bird	43 45 44 44 43—219	H Lowell	43 43 42 42 41 210
D Kirkwood	44 44 43 45 43—219	T Russell	42 42 41 43—208
T P Stetson	42 44 43 43 44—216	Chas Morrill	40 41 42 39 40—202

Following are the scores for the month of December, 1882:

J Merrill	46 46 46 47 48—233	J H Bird	43 45 44 44 43—219
J Francis	46 46 46 46 48—232	F P Stetson	44 44 43 43 44—218
J A Pollard	46 45 46 45 45—227	C A Wellington	44 44 42 42 42—216
C S Seyon	45 45 45 45 46—226	W E Robinson	43 41 43 42 46—215
J A Steadman	44 45 44 45 46—224	C R Bartlett	42 43 43 43 43—216
F E Rollins	44 44 45 46 45—224	G W Little	42 42 43 43 43—213
A Johnson	44 44 44 44 45—221	A Ellis	43 42 42 44 42—213
D Kirkwood	44 44 43 45 43—219		

In last month's shooting Mr. J. Merrill took the first prize of $7; Mr. J. Francis the second, $6; Mr. A. Pollard the third, $5; Mr. C. S. Seyon, the fourth, $4, and Messrs. Rollins and Steadman are tied for fifth place.—N. B. SMITH, Prof.

NEWPORT, R. I., Dec. 28.—The Christmas matches of the Newport Rifle Association came off as advertised. The all-comers re-entry match was well patronized. There was, however, hardly sufficient targets provided for the accommodation of the marksmen present. A very brilliant score was made. The gold medal presented by Mr. W. Milton Farrow, five shots on a Massachusetts target, 200 yards, off-hand.

W B Knight	12 12 12 12 11—59	W S Bryer	8 11 11 9 10—49
G H Burnham	11 11 10 10 10—52	Geo Holcum	9 11 9 10 10—49
C Wyatt	10 12 12 7 10—51	Dan Brown	10 8 10 11 7—46

In the 200 yards continuous match, two scores to count, re-entries unlimited, the following scores were made.

W Smith	22 23—45	Bliss	22 17—39
Lawton	21 23—44	Holcum	17 21—38
D Morse	22 20—42	Openshaw	16 23—38
Donahue	19 22—41	McDonald	16 21—37
Riley	22 18—41	Sherman	16 20—36
Caswell	20 21—41	S Bryer	15—15
Geo Lewis	18 21—39	D Caswell	18 16—34
C Wyatt	21 18—30	W Bryer	17 16—33
F Wyatt	21 18—39	M Swinburne	14 15—29
		Chase	12 16—28

BOSTON, Dec. 30.—The shooting at Walnut Hill to-day was very good. The wind was light, but the sun was rather bright. However, some of the scores were very fine. The range will be open for New Years callers. The Victory match closes with the year, and then new matches will be begun, viz., a decimal rest, a decimal off-hand and a Creedmoor off-hand. Two Creedmoor practice match will be continued. Following are some of the best scores made to-day:

Creedmoor Practice.

J. B. Fellows	5 5 5 5 5 4 5 5 4 5—48		
R. Withington	5 5 5 4 5 4 5 4 5 5—47		
A. Duffer	5 4 5 5 5 5 4 5 5 4—47		
C. Weston (mil.)	5 5 4 5 5 4 3 4 5 5—45		
J. A. Cobb (Re-entry)	4 5 4 5 5 4 5 4 5 4—45		
D. P. Holden	5 4 5 5 5 4 5 4 5 4—45		
D. H. Pine	4 5 5 4 4 4 5 5 4 4—43		
W. Higgins	4 5 5 5 3 4 4 4 5 4—43		
C. C. Foster (mil.)	5 4 4 5 4 3 4 5 4 4—42		
H. Reed (mil.)	4 5 3 4 4 5 3 4 4 4—42		
A. Keach	5 3 4 4 3 3 4 5 4 4—39		
H. W. Atkins (mil.)	4 4 3 4 4 4 3 4 5—35		
A. H. Floyd (mil.)	4 3 5 4 3 4 3 3 3—34		
H. W. Edwards (mil.)	0 4 4 4 3 4 3 4 4—32		

Decimal Match.

H L Lee	10 8 8 10 10 8 9 6 9 7—85		
G Duffer	7 8 7 10 6 8 7 10 10 10—83		
O M Jewell	10 8 7 10 8 7 9 9 6 10—83		
G Warren	10 8 7 10 8 7 7 8 9 8—82		
H L Lee (re-entry)	9 5 8 10 7 10 10 9 5 9—82		
Jewell (re-entry)	8 10 9 6 8 7 8 9 9 7—81		
W Guild	10 6 4 8 8 10 9 8 9 7—79		
B Davis	10 6 8 7 7 10 9 8 8 6—78		
L L Harding	8 7 9 8 9 9 9 5 8 6—78		
J N Frye	3 10 7 8 8 9 8 6 9 5—73		

In the Victory Match E. J. Cram did all the shooting. His best score was 49.

Decimal Rest Match.

A C Adams	10 10 10 10 9 10 10 10 10 9—98		
G Warren	10 10 10 10 9 9 10 9 9 10—97		
S Wilder	10 10 9 10 9 8 10 10 10 10—96		
J F Noyes	10 10 10 10 9 8 10 10 10 9—96		
W Guild	9 9 10 10 9 10 9 10 10 9—95		
A A Clinton	10 6 10 10 10 9 10 8 10 9—95		

In the Badge Match H. L. Lee made 48.

WORCESTER, Mass., Dec. 28.—On Christmas Day many of the members and friends as well of the Worcester Rifle Association went out to Pine Grove Range where they were treated to a day of pleasure which has had but few equals in this vicinity. The crack of the rifle began soon after 9 A. M., and continued until dark. The wind was light and variable 9 to 12 o'clock, while the day was clear and but few clouds. The following records were made:

Massachusetts Target.

C A Allen	10	11	11	12	12	12	9	11	11	11—110
Sted Clark	11	11	9	12	12	11	10	12	10	11—109
Moses Carter	12	9	11	11	11	9	9	8	9	12—99
J N Morse, Jr	11	10	10	9	9	7	10	8	12	11— 97
H T Farrar	10	10	10	9	8	10	9	10	8	11— 95
F Johnston	12	11	11	10	7	10	8	8	7	11— 95
J W Murphy	11	9	11	5	10	9	10	9	8	11— 93
A L Rice	10	12	8	10	11	9	8	11	7	7— 93
V W Eames	6	9	10	8	11	9	10	10	11	8— 92
M Furgerson	10	6	10	5	7	11	5	11	8	9— 83
Newton	3	9	10	4	4	7	8	5	3	11

Creedmoor Target.

M Carter	4544354545—43	Stedman Clark	4354454444—41

V W Eames	4455444444—42	M Furgerson	2333344553—39

To-day witnessed the close of the fall series of matches. The weather was delightful; it could not have been better for field sports. The wind was at 9 o'clock while the sun was bright. The following was the score:

Massachusetts Target.

Stedman Clark	11	10	9	9	12	12	10	10	11	8—102
C. Duscenberry	11	9	10	9	11	11	11	9	11	10—102
A. L. Rice	5	7	11	10	10	10	9	11	11	11— 95
J. N. Morse, Jr.	10	9	10	10	9	11	8	11	11	11— 95
Chas. Arthur	11	11	7	7	11	8	6	10	12	9— 92
F. Johnston	8	8	12	9	9	11	11	9	6	10— 91
J. W. Murphy	8	11	10	6	10	11	9	10	9	8—92

Creedmoor Target.

Frank Johnston	4	4	4	4	5	4	5	4	4	4—42
J W Murphy	3	4	5	5	4	4	4	4	4	4—40
J E Fuller	4	4	3	4	4	4	4	4	3	4—38

The prize winners and their scores are as follows:

Massachusetts Target.

C D Eames	102	103	103	102	103—510	(b)30—540
Stedman Clark	104	104	104	107	103—521	(b)30—551
J N Morse, Jr.	98	105	102	103	107—515	(b)20—535
C A Allen	102	101	101	102	107—512	(b)20—533
F Johnston	95	105	95	90	98—484	(b)40—524
H T Farrar	98	93	93	90	108—488	(b)30—518

Creedmoor Target.

J N Morse, Jr.	5	5	4	4	5	5	4	5	5	4—226	(b)10—236
Stedman Clark	4	3	4	3	4	2	5	4	5	5—220	(b)10—230

F Wesson	4	4	4	4	4	4	4	4	4	4—205	(b)20—225

Rest Match—Ring Target.

Stedman Clark	110 110 114—334	Dr Knight	97 101 97—295
H T Farrar	115 100 111—323	J W Murphy	99 101 83—283
J H Howell	102 105 103—310		

On next Thursday the Midway series will begin, and continue weekly until March 29, 1883. It is expected that they will be of more interest even than the fall series which ended to-day.

The Woodlawn Gun Club had a field day at their grounds on Christmas. The main trial was for a club badge, which was won by C. C Houghton. The following is the score made by them at glass balls:

C B Holden	9	C C Houghton	9
C H Bliss	5	F H Fuller	4
A S Newcomb	3	A L Gilman	3
C S Macomber	4	E A Holmes	1
John Tompkins	3	C A Barker	3
Geo Chamberlain	3	John T Moscroft	1

GARDNER, Mass., Dec. 27.—At the last regular meeting of the Gardner Rifle Club, at Hackmatack Range, the inch ring and Creedmoor target combined was used, distance 200 yards, off-hand. The following is the score:

	R.	C.	R.	C.	Totals.
G F Ellsworth	91	47	84	45	175—92
A Mathews	93	44	92	47	185—91
F H Knowlton	93	44	89	47	184—91
G C Goodale	82	44	78	43	160—87
B Williams	79	44	74	45	153—89
C Shumway	73	45	67	45	139—90
F Underwood	56	42	40	39	96—81

THE TRAP.

JERSEY CITY HEIGHTS GUN CLUB.

THE members of the above club, with representatives from several other clubs from Newark and vicinity, spent New Year's Day in a very satisfactory manner. It was indeed a glorious day, not too cold, nor too warm, but just that bracing air with sun enough to tone down the raw winds. "Old South Paw," furnished the birds, and a good lot they were, as numbers of shots discovered without being told. It was sweepstake shooting, open for all, 25yds. rise, second boundary, according to standard of the rules, counting 2½ birds. We arrived on the grounds a little late. We found a goodly number of shooters at work and that two sweeps had been shot off. We expected to join in the festive occasion in a sweep or two, but a very short look on satisfied us as well as others that we had better keep the money in our pockets. The scores the smiled congratulations! We could easily see there were several in full operation. We regard them as ungenerous, ungentlemanly and unsportsmanlike. Two or three, say, of the best shots will combine to go snacks, as the saying is, and "pot-shot" the day—pocket the stakes. Now it is very well to have one combination are liable to tie one will miss first barrel, or both, as the occasion requires, so as to get in on second money or third as may be. Now, a medium or second rate shot has no show for his money in such a case, for in the shoot-off he is going to second redemption, while if all had shot in a fair and open manner, that is, decide their best, some of the low down fellows might stand a chance for second, third or fourth money, but as it is a few of the crack shots are apt to scoop the whole.

Upon drawing on his bird, his gun snapped. He put the shell hastily in his pocket, put another shell in his gun, and called for another bird. But some shooter challenged the shell, and the ingulfing the expression that filled across the criminal face as he reluctantly handed forth the shell for examination was beyond description. Upon cutting open the shell, some five or six wads were discovered away down to the powder, but no shot. This shell had been premeditatedly and deliberately filled for such very occasion. He calculated to shoot the blank and kill with the second. The shout that went up from the appreciative crowd was loud and hearty. He got his other bird; it proved a low driver and was missed clean, putting him among the "also lans," where he has easily shot out. And thus it seems with nearly all sports nowadays. Base-ball (once a splendid game), billiards, ten-pins, cricket, and others, are debased by this gambling spirit, until the better portion of our citizens are driven from participation therein, or attendance even.

Well, the day for the return match with the Midway Gun Club and the Jersey City Heights is setting fast, and the big affair will come off on the grounds of the latter club at Marion, N. J., on Wednesday, the 17th inst. Each club having won a match, the tug will come there, and each club will put its best men to the front. That there will be a large attendance and a close match there is little doubt. May all be fair, a good time had, and the best club win.

The match is twenty-five men each club, twenty-one yards rise, seven birds each man; one barrel only, the J. C. H. giving the Midways choice of rules. Come over and see it. JACONSTAFF.

STILLWATER, N. Y., Jan. 1.—Matches shot on Christmas day.

Match No. 1.—Ten glass balls from Davenport rotary trap, sides captained by Messrs. Pitney and Hotaling.

Pitney's side.		Hotaling's side.	
W Pitney	0100011001—3	G Hotaling	1111101011—7
J Whitbeck	0100011101—4	J Smodell	1111111111—10
E Van De Kar	1110101100—6	J Gilbert	0000000000—0
W Holroyd	0000000000—1	E Hewitt	0000000001—1
J Hart	0000000000 1		

Match No. 2—Ten tame pigeons—11 and 7 plunge traps—21yds. Geo Hotaling 1111100111—8 W T Holroyd 1110101111—8
Ed Lansing 1101011111—8 A P Hawley 1111100100—6
A Paul 1111111110—10

Paul won first, Lansing second, Hotaling third. Tie for second money, miss and out: Lansing 3, Holroyd 1.

Third Shoot.—Same Conditions.

E Lansing 1101111111—9 G Hotaling 0111111111—9
A Paul 1101111111—9 J Smodell 1111110011—7

Ties for first, 3 birds—A Paul 111—3; E Lansing 0; G Hotaling 0. Paul first, Smodell second.

Match No. 4.—Five Rises.

E Lansing	11111—5	A Paul	00111—2
G Hotaling	10111—4	A Hart	00010—1

Lansing first, Hotaling second, Paul third.

Match No. 5.—Three Double rises, 18yds.

A Paul	11 11 01—5	G Hotaling	10 11 10—4
E Lansing	10 11 11—4		

Paul first, Lansing and Hotaling divided second.

MALDEN GUN CLUB.—Christmas Day witnessed a large gathering of shooters on the spacious platform, as well as in the comfortable rooms of the substantial and attractive club house of the Malden Gun Club. The warmth and coziness within were in striking contrast with old Boreas blowing rather icily from the northwest without. But there was no lagging in the enthusiasm of the clay pigeon annihilators from Trap No. 1, although each clay pigeon received an additional impetus as it went scooting through the ambient void with the swiftly passing breeze. You have seen a black

lightning; well, all I can say is that no sooner had the words "ready" and "pull" been uttered than the ord traveled in so lively a manner that, like an "ignis fatuus," when you thought you had it you had'nt. The result of the several contests is given below. In the first match, at pigeons, Lanergan and Loring divided first, Fielding, second; Souther, third; Hanford and Whitney, fourth. In the second match, Fielding and Loring divided first; Hanford and Lanergan, second; Souther third. The third match was taken by Carson, Wemyss, Jones and Woodbury in one, two, three order. In the fourth match, Fielding, Clark and Cross captured the trophies in similar order. In the fifth match Hanford was first; Cross and Noble second; Amerage, third; Souther, fourth. In the sixth match Jones was first; Loring, second; Fielding and Clark, third; Noble, fourth In the seventh match, at glass balls, Schaeffer and Loring scored first; Jones, second; Amerage and Dean, third; Scott, fourth. In the eighth match, at balls, Schaeffer was first; Jones and Woodbury, second; Scott and Clark, third; Amerage, fourth. In the ninth match Long and Schaeffer were first, Carson, second; Amerage and Woodbury, third; Scott, fourth. The tenth match was taken by Jones, Schaeffer, Loring and Babson in the order named.—T. C. F.

Yachting and Canoeing.

NARROW BEAMS.

IN quarters where the subject has not been well thought over, the question is continually arising: "Why not give her more beam and keep the depth. We do not object to the depth in the cutter, but we want more beam." To those brought up to one side of the thing the query is natural enough. We trust that this article will make it plain way narrow beam is preferred as having advantages which far outweigh anything which can be brought against the fashionable waist exhibited in the design for the new cutter accompanying this dissertation. The qualities which make up the most successful design can be set down as follows, their order expressing the relative importance to one another:

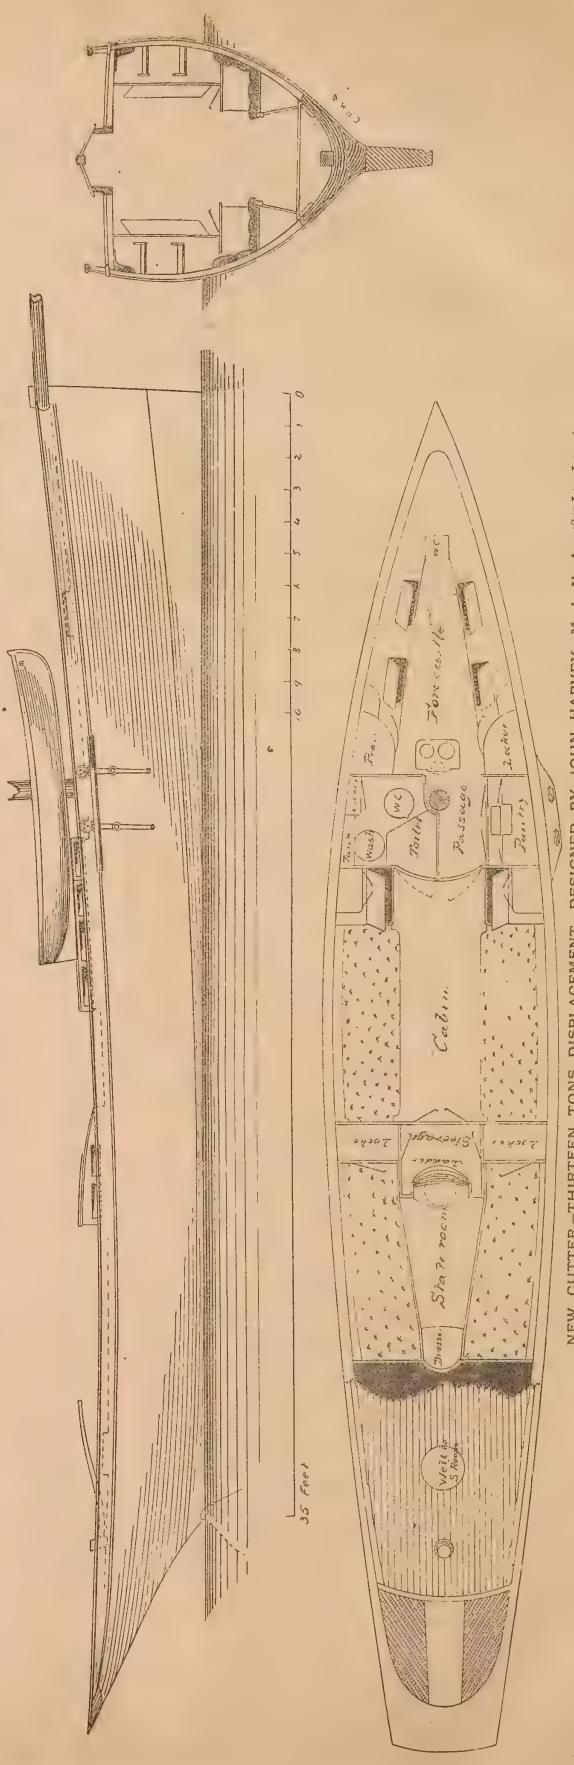
Safety.
Speed.
Ability.
Accommodation.
Handiness.
Economy.
Draught.
Comfort.
Sightliness.

SAFETY.

We take it that no yacht of any kind is fit for all round purposes if safe only upon the assumption of the utmost care and ceaseless vigilance under critical circumstances. We are now speaking in the broadest sense. That dangerous boats are admissable, even necessary, in answer to certain especial requisites, such as for sailing in very shoal waters, for beaching and for carrying numerous passengers or a large party of "guests" for a short turn of an afternoon in fine weather, is not to be disputed. The use of such boats is, however, properly confined to the one purpose they have been built to meet. As soon as put to other employment or pressed into general service they fall under the ban of being dangerous to a degree which unfits them for the legitimate duties of an all round vessel. Thus, while a Blondin may cross a chasm in sufficient safety balancing on nothing steadier than a cable, it would be a trifle rash to abolish all bridges by pointing to the possibilities a swinging rope holds forth.

Similarly a deft sand-bag acrobat may manage time and again to tool his tippy flatiron down to the Hook and home even in bad weather, but that is poor proof, indeed, that the staid knock-about cruiser should rest content hanging on by his eyebrows, with his heart in his mouth and his life in his hand, while bent on enjoying a whole season's sail, with all the variety of untoward conditions he is sure to meet unexpectedly in his roving life afloat. Safety implies, first, an immunity from capsizing, and, second, effective precautions against filling and foundering. The first is to be obtained only in one way. There must be enough weight, and the weight must be low enough down to bring back the vessel thrown on her beam ends or simply knocked down. It must act continuously as an all-powerful factor at every angle of heel clear over to ninety degrees, with the mast parallel to the surface of the water. Nothing short of this can accomplish the end, for the capacity to right up to a less angle than ninety degrees represents safety only up to the particular point where the limit is found, beyond which the boat will refuse to return to her normal position.

A vessel with effective stability limited to less than the extreme angle of keel she is capable of assuming, is safe only to the extent of that angle, and it needs only some luckless instant to drive her beyond the critical point to accomplish the worst with the same facility and the same dire results as though she were one of the most positive traps ever built. To the extent she fails in this great requisite she is unsafe, while in partially answering to the conditions of uncapsizability, a seductive snare to serious consequences is constantly leading on the mind in command to destruction by shaving too fine in coquetting with the Biblical injunction, "So far shalt thou go and no further." The yacht reaches her "sticking point" without warning and spins along without apparent risk or misgiving, until an extra steep sea gives her the final fatal lift under the bilge, or an unseen puff sends her to perdition in a second, unless met with the utmost quickness in time to avert the catastrophe. She depends for very life upon the least touch of the helm, the hawklike eye and the subtlest action of the brain and senses of the man at the wheel or the hand at the sheet, and should either refuse to act as expected for a single second even, the highest of skill and the keenest of perception cannot circumvent the immutability of natural laws, and the yacht rolls over or sinks, to pay the just penalty of faulty design in the first place.



Vessels liable to misadventures upon such slight provocation are rightly classed as machines, and if some owners are willing to shoulder all consequences in the belief that they are concomitant evils with speed or some other longed for quality, it never can make a trap commendable for general yacting purposes as long as that necessity is still fairly open to question. Given the smallest loophole of a chance by which we can escape the serious responsibilities accepted in knocking about in a trap, and that loophole is worth all the experiment, all the labor and expense which can possibly be brought to bear in seeking a solution to the problem of design which shall not be open to so grave a charge as capsizability at the fallibility of the one mind generally master of the vessel's care and her maneuvering.

A trap may sail about a bay year in and year out, and with great regard for the weather, an ever watchful hand at the wheel, short hours of work and many a hairbreadth escape, she may continue to carry herself proudly free from accidents recorded and able enough for all purposes in the eyes of those who have never seen a vessel put to a crucial test in moments where one false motion, one likely error of judgment would drag in their wake misery to happy homes and disheartening obstacles in popularizing a grand sport through the undeserved repute of danger attaching where none ought really to exist if yacht modelling were pursued with intelligence, instead of suffering prejudice to dictate. We have said the only exemption from capsizing lies in the righting effect of weight. Some will take exception and insist that great beam will accomplish a like end, since a boat may be supposed so stiff that she will carry the spars out of her before turning bottom up.

To such a statement we demur very decidedly. For one thing it would be practically impossible to indicate just when such a result could be depended upon. Much hinges upon spars and rigging, and as no one can guarantee their going just at the instant wanted, safety sought through such means is always an open question. Then again, can vessels suitable to yachting purposes be given the beam demanded by such an exigency without very serious sacrifice in other respects? The capsizing of some of the stiffest and beamiest yachts ever built points a lesson to the contrary. Beam measured across deck by a tape line is altogether delusive. To have appreciable effect upon stability it must be more than seeming beam, it must be beam in reality, and that is nothing less than bulk athwartships. Given stiffness obtained by such means and invariably the yacht is and must be sparred in accordance.

Very stiff yachts have very big rigs. They must have big rigs or they won't go; but, fortunately, we are not yet reduced to the necessity of resigning ourselves to slow, underrigged plugs in the search for safety, or, indeed, the outlook for a favorable solution would be about hopeless. Yachts deriving their power from beam gain little or nothing thereby in point of safety, for their huge rigs count just so much against them. Furthermore, all danger lies not in the wind, but quite as much in the sea. Now, a fair-weather drifter may shirk a steep, ugly jump by running for moorings or a lee, but the cruiser bound up and down the coast finds himself cut off at times from accessible shelter, and has to face the music as he finds it tuned. It may be night, he may be a stranger on the coast, he may be too far to leeward to fetch up into smooth water, he may be on the bosom of the deep. If he has been duped into great beam, his error in judgment will be brought home to his senses most forcibly, strikingly, in fact, as his round-waisted ship refuses to lie head on, but is twisted off into the trough, and tipped aweather high into the air to each on-rushing comber.

As he watches the frantic efforts of his craft to lay her decks parallel to the sea, and acquiring a constantly augmenting roll with a

NEW CUTTER.—THIRTEEN TONS DISPLACEMENT.—DESIGNED BY JOHN HARVEY, M. I. N. A. (SEE LAST ISSUE.)

a snappish jerk to windward when she falls into the hollow, to be met and then hoisted like a feather to the next, the lee rail buried and acting like a trip, the yacht rolling from under his feet in her agonized trial to drive broadside before the capsizing sea, but with the lee rail planning her as in a vise and a composite somersault sideways the attended at every repetition—then, we say, he will learn in a flash the abominable vice of great beam, and all his wise prating and patriotic effervescence in club room gossip will fade out of his constitution as naught before the sun, and music. Deeply he will asseverate, if not swear, that his next undertaking will be in favor of less beam and less provincial talent and more depth and common sense, such as the experience of older heads than his have conseled as the road by which not only safety but even some approach to comfort shall be coupled with going to windward in her depth.

Great beam can only delay the time of capsizing in quiet waters. It is an ever-present factor in the aid of a capsize at sea. No boat having built in great beam can have built in great depth and possess the attributes of good sailing and weatherliness demanded in yachts of every kind. Boats bulky in both beam and depth are not simply slow and leewardly in smooth water, but they become unmanageable in a sea, let alone working off shore for an offing with the elements adverse to the proceeding. A boat looking to beam for safety must be scant in her depth. What she gains one way, therefore, is sacrificed in another, with the fresh perils of tripping superadded in a tussel for life with the angered deep lashed into overpowering avalanches of seething water.

But let no amateur, thinking to cruise, lose courage at this picture, likely enough though it be, for there is a way of reconciling even furious elements to your presence. They decline to be fought. They must be cajoled and evaded.

Depth must be called in to give safety and ease, and with depth beam must disappear. Then, with a sound, well-fastened, thoroughly-fitted structure for your tool, and plenty of room to boot, and in an experience of many years' life at sea we have never yet crossed the gale we would not undertake to outlast with little else than the rough handling from the ocean's ventures of this kind, even in vessels coming their tons by the thousand. We go further, and assert that the gale can be survived with actually less discomfort and less bodily and mental strain than in vessels of great pretensions; and we speak from experience it has been our lot to pass through.

[TO BE CONTINUED.]

EXPERIENCE VERY MUCH TO THE POINT.

Editor Forest and Stream:

I send to-day blue print of a "Single Hander's" lines. These lines are on the outside of the planking. I did this because the frame lines do not give a correct idea of how the boat will look when finished. Here is a short history of my experience in the Ella: Two years ago I built a small rowboat, 15ft. 3in. long, 4ft beam and about 18in deep. One sail, 6ft. hoist, 8ft. boom and 4ft. 6in. gaff. This was plenty of canvas, and the boat was moderately stiff. The centerboard was of iron, 3ft. long and weighed 30 lbs.

Now note the change. This spring I built her 4in. deeper, or rather 4in. higher, and put on a rocker keel 1in. thick, 7in. deep in the middle, and 15ft. long, of cast iron, weight 200 lbs.; also put 300 pounds pig inside. I changed her rig to the one mentioned further on, and she doubled her speed to windward in smooth water, while in rough water she will carry everything, and with dry decks will go to windward like a young steam yacht, where before she would stop at every jump and send spray over everything. Some improvement by only adding weight down low where it is needed. To test her stability we have pinned everything down flat until her sails were in the water and it poured into her cockpit, but as soon as the tiller was released up she would come like a flash; in fact, it is impossible to capsize her. The fact that she has broken several masts speaks for itself.

Now for some of her faults. She is too small, too shallow and too flat, and clinker built. Being built originally for a rowboat, she is, of course, too light. Her siding is ⅝in. white pine; stem and stern post of rock elm, each 4in. x2½in.; ribs also rock elm, ⅝x⅝in., and one foot apart. Least freeboard, 11in.; at bow, 28in.; at stern, 26in., and both ends are alike or sharp. Mast, 20ft. from deck, and 6in. diameter at partner. Decked entirely with the exception of a 3ft. 6in. cockpit. Her sail plan is as follows: Hoist, 16ft.; boom, 17ft.; gaff, 8ft. 6in.; leech, 18ft.; jib on foot, 7ft.; on stay, 11ft.; on leech, 11ft.; topsail, 14ft. on yard, 13ft. on foot, with club and 6ft. on leech. Total area, 210sq. ft. Every rope on her except jib sheets and anchor line is ⅜in. manilla; anchor line, ½in. manilla, 50ft. long; jib sheets, ⅝in. manilla; anchor, 14lbs. galvanized iron boat-pump, 3in. diameter; all metal blocks and patent cleats.

Our beautiful Detroit River runs about 2½ miles per hour, and she will easily beat to windward against the current. We have cruised from Wind Mill Point, in Lake St. Clair, to Round Point, Lake Erie, in her in all kinds of weather, and she is always "with you." Last winter I never even laid her up, and sailed when the ice would permit, except one week, when rebuilding. Last summer we were in a fresh S. W. breeze, carrying jib, mainsail and topsail, when we rescued a skimmer 16ft. long, which capsized, and towed her water logged in a heavy sea three miles, and as we had the wind free, it was very trying to rigging, as our prize held as back with awful jerks.

DETROIT, Mich. E. B. W.

WHAT WILL YOU CALL HER?

A LIST guaranteed not to be found in "Olsen's," and intended as a suggestive cue to those in search of names, neither hackneyed nor prosy:

For the stately vessel: Pride of the Sea, Constellation, Superb, Grandee, Empress, Sultana, Abjector.

For the brine-loving tar; Sea Horse, Shellback, Finback, Spindrift, Buccaneer, Ving-y-Ving.

For the chubby boat: Buxom, Bouncer, Roundhead, Bowl, Bullfrog.

For big steam yachts: Centaur, Titan, Vulcan, Cavalier, Courier, Ironsides.

For steam launches: Puffer, Belcher, Spitfire, Blazer, Flash, Buzzfly.

For narrow beams: Harpoon, Darning Needle, Stingaree, Quiver.

For the sentimentals: Darling, Sweetheart, Beauty, Fantasy, Diva, Octoroon, Creole, Belle Americaine.

For a lawyer: Plotsam.

For the partner's sister boat: Jetsam.

For fishy people: Porpoise, Swordfish, Sturgeon, Flying-fish.

From the animal kingdom: Zebra, Llama, Giraffe, Antelope, Spider, Otter, Squirrel.

For very small yachts: Bubble, Atom, Drop, Wink, Sparkle, Twinkle, Nugget, Rogue, Pebble, Speck, Jot.

For your own design: Hobby-horse, Solitaire, Bohemienne, Happy-go-lucky.

For geographical minds: Lass of York, Sandy Hook, Massasoit, Hemlopez, Matuminicook, Sanbro, Nantucket.

From the flowery realm: Pansy, Jasmine, Heliotrope, Delia, Tulip.

From the opera: Carmen, Traviata, Sonnambula, Pericole, Ernani, Marguerite, Camille, Velontine.

For players in the past: Cleopatra, Minerva, Semiramide, Venus, Aspasia, Chloe, Phryne, Andromeda, Chlotilde, Sphinx, Portia, Sabine.

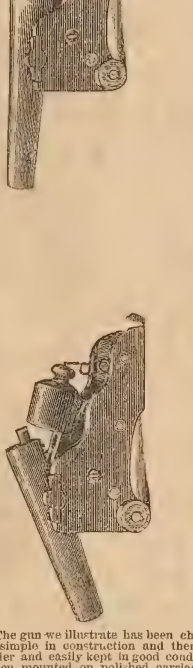
From history's pages: De Soto, Marco Polo, Paul Jones, Vespucius, Pizarro, Cortez, Tecumseh, Montezuma, Montezuma.

From the feathered tribe: Flamingo, Bat, Owl, Swallow, Hawk, Sparrow, Humming Bird, Swan, Brant, Spoonbill, Coot.

And finally for the snoal draft boat: Caromo, Right-side-up-with-care, Tenderfoot, Sunflower, Mind-your luff, Acrobat, Touch-me-not.

TO WHOM DID HE REFER?

Editor Forest and Stream:



Mr. Newberry D. Lawton wrote recently to the *Herald* concerning measurement. With his dogmatic imperativeness and self-contradictions I will not trouble you. The main proposition of his argument is, however, peculiar, and calls for notice. Those who do not agree with his views are waived aside as "pedants having little knowledge and less experience." I confess his sentence amused me highly, coming from a young man who had no right to criticise rests upon a few weeks' drifting about the Sound in midsummer. Does Mr. Lawton refer to Dixon Kemp, to Baden Powell, to Watson, to Beavor Webb, and the host of other well-known authorities, who decline to accept length rule as a fair one? Or did he have in his mind's eye some persons nearer home? Did Mr. Lawton intend his complimentary thrust for FOREST AND STREAM?

If a question between it and Mr. Lawton is to be decided upon a claim to "experience," the public is not likely to exhibit much hesitation as to choosing between the young beginner and a paper which all comers fifty-two times every year; whose popularity is attested by an unequaled circulation among yachtsmen, and whose potential influence is seen on all sides in the modifications of models, rigs and customs, and in the introduction and habitation of the cutter in our waters. Compared to the work it has accomplished, Mr. Lawton's efforts are those of a pigmy, and the notion of brushing aside the influence of FOREST AND STREAM with a sentence in a lay paper struck me as quite comical. Mr. Lawton acknowledges that deep and narrow yachts are as fast as broad, shoal boats, and to that extent has discovered FOREST AND STREAM to have been sound in its opposition to the notions in favor of traps he once entertained. As that gentleman's views on measurement are superficial and not at all digested on their very face, it is quite possible he may yet learn to consider himself a pupil instead of a critic of FOREST AND STREAM. In the meantime he should be chary of charging a successful journal with pedantry and flippantly dismissing all opposition, or he may find himself met to his discomfiture. A gentleman with much to learn and little to teach on the subject of measurement is overbold to put himself forward as the champion of any plan.

C. P. KUNHARDT.

NEW BREECH-LOADING GUN.

GUNS aboard yachts are one of the lingering relics which indicate the tie once existing between pleasure fleets and the national navies from which they originally sprung. In the good old days the pride of the owner was to keep his vessel as near an imitation of her warlike sister as circumstances would permit. In rig, fittings and outline the navy was looked upon as the guide, and conventionality demanded that yachts should conform to the "service" in all the minutiæ which went to make up the crack frigate of the period. Bulwarks were pierced and guns with their paraphernalia frowned ominously, but always handsomely, from the red painted ports, never hitting though much given to barking at their master's command. In the British yacht fleet of the day, guns and even the regulation navy bells have disappeared and the ceaseless din of petty popping and the clanging of metal tongues is no longer the nuisance it threatened to become with the increase in the number of yachts anchoring in favorable ground. With us in America the pop gun still remains and is yet almost an indispensable adjunct to the red tape dignity of a squadron assembly. Brass buttons, lace and bullion have recently been sent into well merited re-entry and now confront us only as tawdry relics in the junk shop's dingy windows, but whether the national weakness for noise and bustle, clanging and wanging, firecrackers and toy pistols will consign the yacht gun to the pot metal yards to emerge after resmelting in more useful forms, hinges to such an extent upon national propensities that the future must be allowed to settle the strife by the process of natural evolution. Until then yacht guns will continue to be an object of interest and we may be pardoned for introducing such a brazen barker in these columns.

The gun we illustrate has been christened the "Commodore." It is simple in construction and therefore not liable to get out of order and easily kept in good condition. Like others of its breed, when mounted on polished carriages of mahogany and burnished bright, a dazzling and imposing presence condones for its loud-mouthed befalling in the minds of many, and what nuisance some senses may experience is in a measure made up in gratification of the eye. Either brass or paper shells can be used to feed the "Commodore," the two small cuts showing the flend with breech open ready for a charge and closed before making itself heard in the world. The gun is a self-cocker, which ought to commend it to vainglorious admirals of the deet firing each other off with the absurdity of twenty-one bangs from one and the same muzzle on a run. It is not touched off with a hot poker or a red stove lid, nor yet with the pipe fresh from the skipper's mouth, but regulation fashion with a hammer and lanyard. The section represents the gun split through the middle, showing the lock with the top plate off. A is the barrel, B the breech block or plug, C the hinge on which it operates, D the case and lock, E the lever fastening breech and barrel, and F is the hammer The barrel is made of the finest gun metal as well as the breech stopper. The lever E acts as a cam around the steel lug attached to the barrel, so that when closed it shows as in the small cut. The lock is very simple. The "dog" which drops into the hammer F is in a sliding brass case, which, when pulled back by the plunger G, pulls back the hammer until it passes the center, when the hammer flies forward, impelled by the main spring, striking the firing pin as in breech-loading shotguns. The under part of the carriage is shod with rubber to counteract rebounding. The gun self-cocks as soon as the shell is in place, by the small spring on the dog throwing it back into position. They are manufactured by the Strong Cartridge Company, of New Haven, Conn.

ONLY A SIDE SHOW.

Editor Forest and Stream:

I have been much amused with the recent attempt in the *Herald* to revive a discussion on measurement. But it produced only a few desultory replies, including an amateurish lot of contradictions from Mr. Lawton of your city. But one of the letters to the *Herald* seems to deserve any notice. I allude to the idea of measuring wet surface put forward by "Measurement Tyro," who is evidently very far from being the tyro he modestly designates himself. His plan, whatever its merits, is impracticable because of the great difficulty in obtaining correct measurements of outside surface. It would be even more troublesome than measuring bulk. After all, this whole measurement question is one of your special creation, and without you have a finger in the pie, he matter will quickly drop out of sight. Can you not open the battle again with a few shots in the length quackery? AN OBSERVER.

[The subject referred to by "An Observer" has been so fully discussed in our former volumes that nothing further can be added to advantage. Having had our say, we are willing others should make what capital they can by knawing over the bones left from our feast. It now only remains for yacht clubs to take action to the best of their understanding and abide by the consequences they invite by their choice. We remain satisfied in knowing that "mean length" has been scotched beyond resuscitation, and with that all future length rules shorn of their worst and most grotesque feature, which was as much as we hoped to accomplish for the present.]

SINGLE HAND YACHTS.

[CONTINUED.]

FROM the illustration of Macgregor's yawl Rob Roy, given in our issue for Nov. 16, it will be seen that she was under-sparred and could bear a much larger spread than she carries. But for an experimental cruise alone in the British Channel her snug rig was selected from motives of safety and comfort, speed not being an object. The Rob Roy is 21ft. long, built on the double-skin plan from plans of John White, Cowes. Beam 7ft., and 4ft. deep. Iron keel and iron keelson; four water-tight compartments; one bulkhead near each end, and one across the cockpit. The cabin consisted of a hatch, the after end of which could be lifted and an awning stretched from it over the cockpit to afford access to the cooking gear, which was located in a locker on the port side. This consisted of a device known as a "Nippy" lamp, which could be used as a flame for a period long enough to boil eggs or fry ham, and then subsides. The bulkhead separating cabin and cockpit was built with a slope aft, so as to serve as a reclining lounge when covered with the mattress. In the cockpit was a cork cushion to be seized as a life preserver in case of extremity. On the bulkhead hung a lifebuoy blanket with brass casing and 3½in. liquid card, a counterpart of which has lately been sent from England for Mr. H. W. Eaton's new single hand yawl mentioned in this journal. Charts and proper frame to receive them, binoculars, lead line, knife, axe, boat hook, sharp, storm mizzen and other accessaries were arranged about the cockpit to be within reach without leaving the helm.

Mr. Macgregor adopted his cuisine from camping reminiscences after giving up as hopeless all the usual contrivances for cooking. This outfit to be a strong recommendation for his peculiar apparatus, but whether from imperfect attempts or want of experience, we have never been able to obtain satisfactory results from the lamp after martydom of burned hands, explosions and like mishaps. He kept wisely on hand needed for a hurried meal while coming the boat, in a watertight bag close at hand. The water tank was inside the cabin and had a vulcanized rubber tube connected. By a slight suction the water would flow, and when reclining at night thirst could be slaked by simply turning the tube to the mouth. His daily allowance was a tin vessel eight inches in cube, about two gallons. Soap and towels were kept on top of the tank Forward of this were boxes of tin, about 8in. by 6in. wide, one holding dressing materials, the other reading and writing. A portmanteau filled with clothing was stowed underneath these boxes. On the opposite side were spaces for tools and comestibles with pantry for teapot, cup, tumbler, knife and fork, spoons, salt in a snuff box, coarse pepper, mustard, corkscrew, etc. In a watertight locker on starboard side of the cockpit the bread was kept in a tin box, also a butter keg, spirits, etc. Aft there were also spare blocks, ropes, sidelights, signals, etc. A barometer hung inside the cabin bulkhead. The supply of "drinkables" in the shape of ale and beer found a place beneath the cabin floor.

The tender or dingey was in the shape of a wide lozenge-shaped canoe, decked for the greater part with the same material. At sea this boat was stowed in the cabin to obviate towing. The Rob Roy's rigging was of wire set up with turn-buckles. The bowsprit was shipped on the outboard side of stem to give more room for raising the anchor. The jib was 9ft. on the foot. The forehatch leading to the forecastle was thirteen inches square, capable of admitting a person with a little squeezing. The chain was marked by being painted red after the length of a foot was run and twenty fathoms. In place of a hawsepipe there was an iron sheave on port side of stem with a high cheek to prevent slipping off. Although the jib was so small, Macgregor records the fact that the strain on it in a good breeze was so great that he had to make use of a purchase to flatten in. The bulwarks were low fore and aft. The mainsheet worked on a traveler just forward of the cockpit. The traveler was of one inch red wood in preference to iron, being smoother and serving as a roller for taking inboard the dingey. All iron work was galvanized. For very stormy weather a canvas cockpit hood was buttoned to the cabin hatch and passed about the shoulders of the helmsman over the rest of the cockpit to prevent shipping water below. The boat was rated at 4 tons register. For sea togs Macgregor recommends "Norfolk" jacket and trousers, sou'wester hat for the sun, sou'wester cap for wind, sou'wester for rain, thick boating jacket, oilskin coat, shoes and canvas slippers and pair of overalls for dirty work.

WHAT HAS BEEN ACCOMPLISHED.

Editor Forest and Stream:

I have visited Lawley & Son, also D. J. Lawlor of Boston and was very much pleased to notice the change that had been made not only in type but in position and kind of ballast, since I first visited City Point, six years ago. We have all got to come to keels and cutters or get left. LETTERY.

SAINTE CECILE.—It will be remembered that Wm. Force, of Keyport, N. J., sent to Holland the model for a beamy centerboard schooner for Mr. Solvyns, secretary of the Royal Sailing Club of Gand. The owner has ventured abroad in her this season, crossing to Hrwich, then coasting down to channel ports, with a run across to France. The result was generally much only on two occasions were reefs hardened down. The conclusions of the experiment are summed up from *Le Yacht* as follows; The yacht rolled heavily at her moorings, was deemed excellent for shoal waters, such as the mouth of the Rhine, on account of steering quickly in her own length almost. She was dry at sea, but too buoyant for fast sailing and not equal to the cutters in open waters. Concerning her so-called light draft the owner has a word to say, but his experience does not quite bear him out. With the confidence his supposed light draft engendered he cut across lots and was hung up on a sandbank for twenty-four hours, the cutters in company sticking to the channel and having a laugh at the fat yacht's expense. Occasionally it would seem to be rather a good thing to draw enough to keep out of harm's way. She did not impress strangers favorably, but was an awkward looking tool among highbreds. Should Mr. Solvyns feel encouraged to renew his ventures outside and get caught in the overfalls of St. Catherine's or the Lizzard in ugly weather, his tale would not be quite pleasant reading—that is, should he survive to recount his impressions.

THE BOOM IN SINGLE-HANDERS.—A new single-hander, 18ft. long, has been designed by Mr. A. Cary Smith, for Mr. Auchincloss, of this city. The yacht will be a keel boat, of course, with 800 lbs. outside ballast, built on lines similar to the design illustrated in our issue of Nov. 30. It is the intention of her owner to try sails of American cotton and a smart suit of Lapthorn make in competition.

YACHT DESIGNING.—We call attention to the card of Mr. Beavor Webb of London, who designed the two cutters now building by Lawley & Son of South Boston. They are spoken of in high terms as fast and handy craft. Mr. Webb is a Yankee, by the way, is 12.1ft. beam on 6ft. load line, not 12.4ft., as reported.

THE BOSTON CUTTERS.—The fine vessels building by Lawley & Son, for Mr. Ed. Burgess and Mr. Franklin Dexter, are from lines by Beavor Webb, England. Mr. Dexter's 30-tonner is to be raced, while the 10-tonner is mainly for cruising.

ACTEA.—This Boston schooner, Mr. David Sears, passed through Hell Gate Thursday last, from Havana for Boston. She returns after an extensive cruise to the English Channel and the Mediterranean.

THAMES CLUB.—The three principal clubs on the Thames, England, are the Royal Thames, Royal London, and New Thames, Their income is $10,000 yearly, derived from over 2,000 members.

MEDUSA.—The new cutter, 54ft. on load line, now being built by Lawley & Son, South Boston, for Mr. Franklin Dexter, will be called the Medusa.

THE BOOM IN CUTTERS.—Mr. A. Cary Smith is getting out the lines for a cutter of ten tons, with 35ft. load line.

For Coughs and Throat Disorders use BROWN'S BRONCHIAL TROCHES. "Have never changed my mind respecting them from the first, except I think yet better of it than which I began thinking well of."—*Rev. Henry Ward Beecher.* Sold only in boxes. Price 25 cents. —*Adv.*

PUBLISHER'S DEPARTMENT.

In noticing the perfection of any modern invention did any orator ever omit to state that it is yet in its infancy? The Esterbrook Steel Pen is yet in its infant, having been twenty-two years ago, and you cannot go anywhere without finding it.—*Adv.*

"No, I didn't have to wait a month. I was relieved in a few hours. I could scarcely credit my senses, for I had suffered from Kidney disease for twenty years." Thus testifies Mr. S. T. Hancock, a well-known citizen of Richmond, Va. "I am now sound as a bale of India rubber. Hunyon's Capcine Porous Plasters actually cured me." Quick, strong, clean. Price 25 cents.—*Adv.*

FINE FEATHERS DO NOT MAKE FINE BIRDS—Nor can a worthless article be bolstered up by a fancy wrapper. The reason that the Vanity Fair Smoking Tobacco and Cigarettes are enclosed in the handsomest wrappers of the kind in the civilized world is not because the article needs any exterior adornment to commend it, but because it is of such superlative inherent excellence that it would be sacrilege to encase it in anything inferior.

GOLD PENS.

Pencils, Holders, Cases, Etc.

THE CALLI-GRAPHIC PEN.

WHAT WILL THE WEATHER BE TO-MORROW

POOL'S SIGNAL SERVICE BAROMETER

OR STORM GLASS AND THERMOMETER COMBINED,

WILL TELL YOU!

It will detect and indicate correctly any change in the weather 12 to 48 hours in advance. It will tell what kind of storm is approaching, and from what direction—**invaluable to navigators. Farmers** can plan their work according to its predictions. **Saves 50 times its cost** in a single season. Has an accurate thermometer attached, which alone is worth the price of the combination. This great **WEATHER INDICATOR** is endorsed by the most eminent Physicians, Professors and Scientific men of the day to be the **BEST IN THE WORLD!** The Thermometer and Barometer are put in a nicely finished walnut frame, with silver plated trimmings, etc., making it a beautiful as well as useful ornament. We will send you a sample one, *delivered free*, to your place, in good order, on receipt of **$1**, or six for **$5. Agents** are making from $5 to $20 daily selling them. *A trial will convince you.* Order at once. **It Sells at SIGHT!** Just the thing to sell to farmers, merchants, etc. Invaluable to everybody. U. S. Postage Stamps taken if in good order, but money preferred. **Agents wanted everywhere.** Send for circular and terms. Address all orders to **OSWEGO THERMOMETER WORKS,** (*Largest establishment of the kind in the World*) **Oswego, Oswego Co., N.Y.**

We refer to the Mayor, Postmaster, County Clerk, First and Second National Banks, or any Business house in Oswego, N. Y.

Write your Post Office, County and State plainly, and remit by money-order, draft on New York or registered letter, at our risk.

This will make a Beautiful and Very Useful Present.

READ WHAT THE PUBLIC SAY ABOUT IT.

I find Pool's Barometer works as well as one that cost fifty dollars. You can rely on it every time. CAPT. CHAS. D. ROGERS, Ship "Twilight," San Francisco.

Barometer received in good order, and must say that the instrument gives perfect satisfaction in every respect. It is neatly made and wonderfully cheap at two dollars. GEO. B. VANCOTE, M. C. R. R. Office, Detroit, Mich.

Pool's Barometer has already saved me many times its cost, in foretelling the weather. It is a wonderful curiosity and works to perfection. F. J. ROSEWATER, Milwaukee, Wis.

BEWARE OF WORTHLESS IMITATIONS. None genuine without our Trade Mark, and Signature of J. A. POOL, on back of Instrument, as below:

J. A. Pool TRADE MARK.

Every Instrument **warranted** *Perfect* and *Reliable*. Size, 6½ inches long, 3¼ wide. If not satisfied on receiving the instrument, return it at once and we will refund your money. Please state where you saw our advertisement.

NOTICE.—$2.00 each is the regular retail price for above instrument, but being desirous of introducing them and securing good agents, we offer for a short time to deliver "a sample one" free to any address on receipt of only one dollar, or 6 for $4.00. Order at once. It's just the thing for a Christmas present.

FOR TOWN AND COUNTRY.-1883.

A JOURNAL OF THE ROD AND GUN.

The year now drawing to a close has been with the FOREST AND STREAM one of most gratifying progress. Early in the year by an important mechanical improvement, the typographical beauty of the paper was greatly enhanced; and in August, with the beginning of the tenth year of publication, it was

Permanently Enlarged to Twenty-eight Pages.

There has been an equal growth in other important respects. The patronage accorded to this journal by the intelligent reading public has never been more cordial than it is at the present time. Sustained thus heartily, the publishers are prepared to maintain in 1883 the FOREST AND STREAM prestige as the

Representative Field Journal

of this country, at once entertaining, useful and influential. As the exponent of the highest types of field-sportsmanship the paper will be adapted to the tastes of all men who use the rod and gun as means of pleasure and recreation. Broad in its sympathy with all that is legitimate in field sports, free from any entangling alliances with cliques, having no interests to serve save those of its constituents, and never hesitating in its criticisms of whatever may be inimical to these interests, the FOREST AND STREAM'S highest ambition will be to preserve in the future the approval won by its course in the past. It will persist in its efforts to awaken in the public mind a fuller appreciation of the importance of the proper protection of game in the breeding season, and of due moderation in the destruction of game at other times. This it considers a matter of prime importance, not so much to the man whose wealth and leisure enable him to make extended tours to favored game countries, as it is to that already very large and constantly increasing class of business and professional men, whose favorite relaxation from the routine of employment is found in brief vacation trips to the woods and fields and brooksides.

The enlarged form of the FOREST AND STREAM enables its editors to present each week in the several departments a large and varied supply of reading. In the columns of

The Sportsman Tourist

Will be found sketches of travel and sport. Coming from many different writers, and widely separate parts of the country, these sketches always have the charm of novelty, and they are sure to be read with interest by sportsmen, because their writers see things through sportsmen's eyes, and describe them from the sportsman's standpoint.

Natural History.

This department will not deal with fossils nor with the monsters of African jungles. Quite on the contrary, it will treat of the animal life of land and water in our own country, the habits and ways of American fur, fin and feather, in which American sportsmen are presumed to take an intelligent interest.

Game Bag and Gun.

In addition to the numerous accounts of hunting and shooting excursions, necessarily varied and interesting—as such accounts must need be—these columns will be found of special value to amateur and veteran alike, because of the frequent interchanges of experience in all matters pertaining to game and shooting.

Sea and River Fishing.

The angler will find in the pages of the FOREST AND STREAM the best angling literature of the day, in quantity more than is contained in all other publications put together. This journal has inaugurated a series of angling tournaments, the initial meeting having been held in the Central Park of this city; and it is believed that others of equal success will follow in other years. Meanwhile, the man who loves to go a-fishing may find in the FOREST AND STREAM all the year around a great deal that must be to his liking.

Fishculture.

The columns devoted to this important subject furnish a complete resumé of curren achievements and progress in this important work.

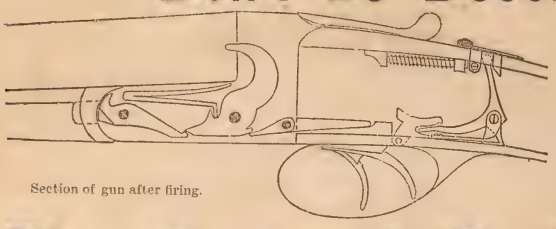
The Kennel.

This department has won the confidence of dog owners. Its reports of field trials, bench shows and other events are recognized as impartial, honest, and the most able published The recent series of papers by its editor, entitled "Training vs. Breaking," have been published in book form, and have had a very large sale. Other papers of equal importance will be published from time to time.

Yachting and Canoeing.

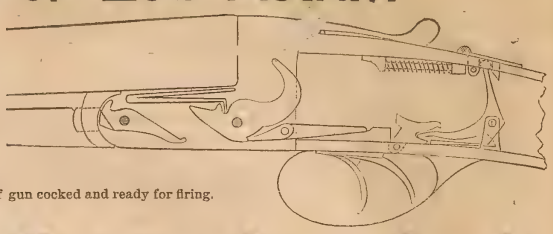
The editor of this department being a practical naval architect, and thoroughly familiar with every branch of the subject, will continue the same intelligent treatment of yachting and canoeing that have already won for the FOREST AND STREAM esteem and confidence.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.



We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each, and the files constitute a library of permanent worth. Eighteen such volumes have already been published. We furnish handsome file binders (price $1.25) which hold twenty-six numbers.



Subscriptions may begin at any time. Per year, $4; $2 for six months. Remit by post office money order, draft or registered letter. Give name, town, county and State. Address

Forest and Stream Publishing Co., 39 Park Row, N. Y.

Don't Be Deceived or Led Astray.

Section of gun after firing.

Section of gun cocked and ready for firing.

The Anson & Deeley Hammerless Lock,

AS MANUFACTURED BY

Westley Richards & Co., London, Eng.,

HAS NO EQUAL!

And is the only hammerless gun in the market that is absolutely faultless, being simple, durable, and possessing those wonderful shooting powers, combined with that indescribable symmetry and beauty so characteristic of Westley Richards' product.

Every desirable feature is found in this gun. Superiority of Material and Workmanship. Absolute Safety in Handling. Without Comparison in Durability and Simplicity.

Shooting Qualities Unsurpassed.

The following letters from prominent sportsmen cover the ground exactly:

J. Palmer O'Neil, Esq.:

CLARKSVILLE, Tenn., March 20, 1882.

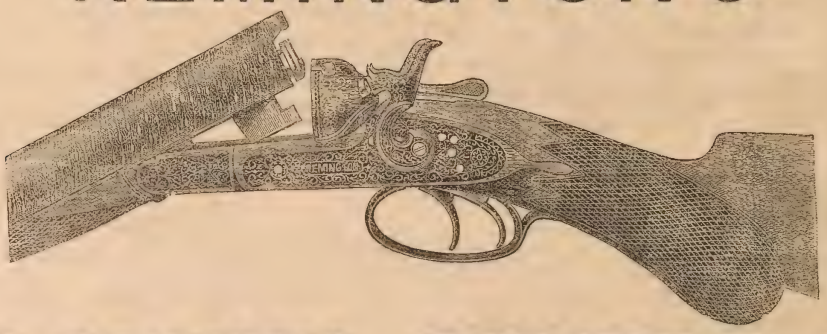
My Dear Sir—The Westley Richards Hammerless Gun I obtained from you has been the admiration of all my friends. I consider it much the best Hammerless gun, and recommend all sportsmen who can afford the luxury of a perfect gun, to buy a Westley Richards Hammerless.

Respectfully, PATRICK HENRY.

J. Palmer O'Neil & Co., Pittsburgh, Pa.:

BURLINGTON, Iowa, Sept. 20, 1882.

Dear Sirs—The Greener and Westley Richards guns arrived safely yesterday A. M., and in the evening I took them both out and targeted them. I like the Greener better for only one reason, and that is it fits me a trifle better. But the Westley Richards made by far the best target, so I have concluded to keep it and return the Greener. The Westley Richards is certainly a little beauty, and makes as fine a target as I ever saw. One of my friends who is a great sportsman went out with me, and before the trial made all manner of fun of the "pop gun," even while he admired its graceful shape and elegant workmanship. But the result of the trial rather surprised him. He shot against the Westley Richards, his 11lbs. Daly loaded with 5 drams of powder and 1¼oz. of No. 7 shot, while I used 3¾ drams of powder and 1¼oz. No. 7 shot. At 30, 40 and 50 yards I beat him badly in distribution and penetration. At 60, 65 and 70 yards fully equalled him. And the difference at 75 and 80 yards could hardly be noticed. I am much pleased with the gun, and as soon as I become a little more accustomed to it I have no doubt my shooting will be greatly improved. I shall take pleasure recommending the Westley Richards Hammerless Gun.



Yours truly, GEO. H. TOUSEY

Sportsmen's Goods.

GENUINE

DOGSKIN JACKETS

Made to our special order from selected skins, and imported direct from Norway.

Every jacket is marked "G. W. Simmons & Son, Importers and Manufacturers."

We offer this year the handsomest lot of Dogskin Jackets we have ever been able to collect. Each of the jackets has been made to order, and nothing equal to them can be found in the United States! We do not import the skins and make up the Jackets in work-room! The jackets *complete* are brought through the Custom House, and we sell them for *thirty per cent less* than any other house can afford to!

NOTE OUR PRICES and compare goods with others advertised as the same or similar.

A No. 1 Quality, $12.

We keep only the *best quality* of the imported jackets, and offer *no second grade.*

We claim for these jackets that they are:

1st, Windproof.
2d, Waterproof.
3d, Soft and Pliable.
4th, Flannel-lined.
5th, Never Stiffening.
6th, { 30 per cent. less than others. Ask for the same or similar goods.
7th, The Best Made.

We warrant every jacket, and will send on approval for examination on receipt of measure.

In addition to this superior line of *Imported* Dogskin Jackets, we keep constantly on hand for the use of all who are exposed to the weather our own domestic make of Oak Hall Leather Jackets. These imitations of the imported jackets are flannel lined, and hardly to be distinguished from the imported. They are made in our own workrooms, and every one is warranted in every particular. The domestic jackets we sell for *ten dollars.*

Our sales of Leather Jackets, last season, amounted to nearly one thousand, and we are the largest dealers in this class of goods in the country.

G. W. SIMMONS & SON, Oak Hall, 32 North street, Boston, Mass., Importers of Leather Jackets, manufacturers of the celebrated "Boston Shooting Suits." Prize medal awarded at St. Louis.

FITS

A Leading London Physician establishes an Office in New York for the Cure of EPILEPTIC FITS.

From Am. Journal of Medicine.

Dr. Ab. Meserole (late of London), who makes a specialty of Epilepsy, has without doubt treated and cured more cases than any other living physician. His success has simply been astonishing; we have heard of cases of over 20 years' standing successfully cured by him. He has published a work on this disease, which he sends with a large bottle of his wonderful cure free to any sufferer who may send their express and P. O. Address. We advise any one wishing a cure to address Dr. Ab. MESEROLE, No. 96 John St., New York.

Climax Gun Cleaner.

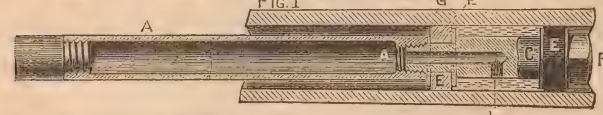

Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

NOTE.—In these made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

In offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

1st. It is made in three joints, like a common cleaning rod, and therefore is portable.

2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.

3d. The ease with which it can be adjusted to fit the barrels, loose or tight.

4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

DESCRIPTIVE CIRCULARS AND DISCOUNTS TO DEALERS GIVEN ON APPLICATION.

N. M. MUZZY

45 South Canal Street, Chicago, Ill.

Of the old firm of HITCHCOCK & MUZZY and MUZZY & CO. in 1853.—Having increased my facilities for the business of reaming out gun barrels, I beg to offer my services to those owning guns of unsatisfactory shooting qualities. My system is peculiarly my own. I leave no shoulders, and will guarantee my cylinder boring to shoot more even than by the old choking system, in every instance. I invite special attention to my method, and the most satisfactory testimonials will be furnished when desired. Guns can be sent, and will be delivered by express.

CONSUMPTION.

I have a positive remedy for the above disease; by its use thousands of cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy, that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer. Give Express & P. O. address, DR. T. A. SLOCUM, 181 Pearl St., N. Y.

Hotels and Resorts for Sportsmen.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free owner's risk.

It is our aim to make sportsmen feel "at home on this route. For Tourists' Guide a handsomely illustrated book of 100 pages sent free. For Time Cards, Folders and further information, address

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 new; burns slowly, strong and very clean; great encrustation, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest Packed in 6¼ lb. kegs and 1 lb. canisters

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 87 Beaver St., N. Y.

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

THE PARK MONOPOLISTS CHECKED.

THERE is going to be a fight, after all. The Yellowstone Park is not to be put into the pockets of a few speculators without some resistance on the part of the representatives of the people. This is encouraging; it is as it should be. And the people whose property was thus to be seized, who were to be admitted to the Park, but were not to be allowed to approach within a mile of the natural objects which form its attractions without the consent of the combination, may thank Senator Vest and his colleagues on the sub-committee for their faithful guardianship of the trust which they hold. It requires courage of no mean order to face the power of a monopoly, backed by a powerful lobby, and, tacitly at least, by a considerable portion of the press of the country. Too much praise cannot be given to Senator Vest for his fearless devotion to the people's interests, for if the Park is to be saved to those who now own it, it will be wholly due to the wise labors of his committee. It was scarcely to be supposed that the philanthropic bosh prated by the men who attempted, with an audacity rarely equaled, to obtain possession of this enormous tract of public land, would impose on any intelligent and honest man. It did not impose on the Senators who had this matter in charge. To use an expression familiar to any Western man, they "sized up" the monopolists at once, and, having taken their measure, they treated them as they should have been treated.

It is evident enough that the Yellowstone Park Improvement Company thought that they would have no difficulty in perpetrating this wrong upon the government and the people. They felt that with the assistance of their lobby and what aid and comfort they could derive from the silence of the press, they held the matter in their own hands. With a boldness that is astonishing they have absolutely gone on and begun to build their hotels, thus virtually taking possession of a government reservation, using timber which is not theirs, and killing the government's game and fish to feed their employes. Not only this, but they have the hardihood to declare that they will hold the Park against all comers. They talk as if they intended to defy the government. They have seized a portion of the public territory and declare that the revenue to be derived from it shall flow into their own pockets. They insist that they will go on with their hotel building and their cattle ranching. They say in effect, "We have secured a contract from Mr. Josslyn, no matter by what means, and so the 'public park' is for a term of ten years our private farm. What are you going to do about it?" Well, now, what are the people going to do about it? The question is more easily asked than answered. But we venture to predict that, although these individuals now assume so loftily independent an air, they will not succeed in their schemes for the appropriation of the public territory. The people are a little tired of having the public domain given away with a lavish hand. It is worth something now, and is yearly increasing in value. The time will come, and at the present rate of settlement it is not far distant, when Uncle Sam will not be able any longer to give every man a farm.

We hope the day of "land grabs" is over. A project like the one under consideration, might have succeeded years ago, but we cannot think that it will be carried through now.

We have from the first viewed the movements of this Yellowstone Park Improvement Company with serious concern and alarm. To give the devil his due, the thing has been managed with a shrewdness and a boldness which in a more honest cause would have compelled our admiration, but we think that now the people are beginning to understand what an invasion of their rights was intended, and we very much mistake their temper if they will permit the wrong.

The very clear and altogether admirable report of Senator Vest's committee deserves the earnest support of every citizen. The Park is for rich and poor alike, and every one should have an equal interest in it. Its wonders should never be given over into the hands of any who might say to a visitor no matter what his rank or condition, "You cannot camp within a mile of this geyser basin."

The methods of some of the men interested in this scheme are precisely what might be expected from the underhanded course which has hitherto been pursued by them. Enraged at being checked in their project for securing the property of the people for their own personal ends, they, or rather the one who poses most prominently before the public falls to abusing those who object to the steal, and begins to throw mud on such distinguished persons as General P. H. Sheridan and Colonel Schuyler Crosby. Happily these gentlemen need no defenders, and the vituperation which is hurled at them will do them no harm, and cannot fail to injure those from whom it proceeds. The loose talk about the existence of a military ring comes with a peculiarly poor grace from one who is so deeply involved in the Yellowstone Park Improvement Company ring; it is unsupported by a particle of proof, and is on its face ridiculous.

This company professes a desire to improve the Park and to have the tenderest care for the game. This is probably the reason why they have contracted for 20,000 pounds of wild meat to be used in feeding their employes. A correspondent of the Bozeman *Courier*, writing from the Mammoth Hot Springs in the Park, January 7, says:

"The Park Improvement Company have a sawmill in operation at this place getting out lumber for a 150-room hotel to be built here next spring, and I am credibly informed that Mr. E. Haupt, Superintendent of the National Park Improvement Company, has let a contract for 20,000 pounds of venison at five cents per pound to supply his men. He has some 80 or 100 men at work, and is going to feed them on elk deer, mountain sheep, and bison, killed in the Park, as it is cheaper than beef. It is a 'Park Improvement Company' that is doing this, and I suppose they consider it an improvement to rid the Park as far as possible of game."

What better commentary than this could there be on the purposes and intentions of this greedy band of speculators? How do these facts agree with their pretentions? It is now more than ever apparent that they are dishonest in all their protestations, and that all that they have said about their patriotism and their love for the people and people's interest is a mere tissue of misrepresentations, by means of which they have hoped to hoodwink the people, and above all, the representatives of the people. If these representatives were all so honest and so fearless as Senator George G. Vest, of Missouri, we should not fear that this gigantic steal would ever be consummated. We have every confidence that the Senator from Missouri will keep up the fight, and we can assure our readers that he shall have the strongest assistance and encouragement that the FOREST AND STREAM can give him.

The tenor of certain press despatches would seem to indicate that Secretary Teller has ranged himself on the side of the monopolists and is inclined to further their project. As we showed last week, however, these despatches are not always to be trusted, since too many correspondents are known to have yielded to the fascinations of the lobby employed by the "Improvement Company." We should sincerely regret to learn that Secretary Teller's name is counted among those who favor this monopoly. He has kept himself clear of it up to this time, and we trust that his name may never be connected with so palpable a job.

This subject is one of so much interest to every individual citizen of this country, and to all foreigners who visit our shores, that we devote this week considerable space to showing the drift of public opinion with regard to it.

THE SENATE SUB-COMMITTEE REPORT.

The appended extract from the report of the Senate Sub-Committee is so sensible and wise that we trust that the bill recommended by it may be adopted by Congress without delay. With relation to the proposed lease the report says:

It is evident from this contract and proposed lease that a monopoly or exclusive privilege to erect hotels and run stages and to construct and operate telegraph lines within the Park is created for the term of ten years, the parties having this monopoly to pay a nominal rent not exceeding $2 per acre for 4,400 acres of the Park, on which are situated the objects of curiosity and interest most attractive to visitors. By the terms of the act of dedication it is not entirely clear that the Secretary of the Interior has the power to make any contract in regard to stage or other means of transportation within the Park such as is set forth in the contract release. The power is not here expressly conferred upon him by the act, and if it exists at all can only come from the provision giving the Secretary of the Interior exclusive control of the Park. By specifically naming the matters of preserving the game, protecting the Park from spoliation, and granting leases for building hotels, it would seem to exclude all other powers, including that as to transportation. But without discussing this point further it seems evident to the committee, from the entire scope and terms of the act of March 1, 1872, that Congress did not intend that the Secretary of the Interior should, under the provision giving him "discretion to grant leases for building purposes of small parcels of ground," place under the exclusive control of private parties 4,400 acres of the Park, embracing all the objects and points of interest which make the Park valuable for the purpose to which it is dedicated. By the terms of the lease no one, without permission from the lessees, could camp within one mile of the principal points of interest in the Park. The geysers, the great falls, the waters of the Yellowstone Lake are all placed under the control of the parties named as lessees. It is true that the lease provides that the lessees shall not prevent the public from having free access to the curiosities, wonders and points of interest in the Park; but this provision would not extend further than to permit the public to visit and inspect these curiosities and objects of interest, while giving to the lessees the right to prohibit visitors from camping or remaining upon their grounds. The virtual and real effect of the contract and lease is to put the entire Park, containing 3,300 square miles, under the control of the lessees for the term of ten years at a nominal yearly rent of a few thousand dollars. The geysers, great falls and Yellowstone Lake constitute the only attractions to visitors, and aside from these the Park is absolutely worthless as a place of resort to the public. When, therefore, private parties are given the possession and control of tracts of land around each of these objects of interest amounting to 640 acres in each tract, it amounts to the possession and control of the entire Park. It is difficult to understand why seven tracts of land, upon which are located the geysers and other objects of interest and aggregating in amount 4,400 acres, should be included in the lease for hotel purposes, when the lessees only bind themselves in the sixth article of the contract to erect within the limits of the Park one hotel building, with necessary out-houses and bath-houses. While it may be necessary to make some provisions for the accommodation of visitors to the Park in the way of hotels and stores for the sale of goods and supplies, the ground lease should not exceed the amount necessary for building sites and so much land as might be used for garden or for the grazing of domestic animals required in the business of the hotel; nor does it seem necessary or right that the exclusive privilege of keeping hotels in the Park or furnishing transportation of visitors and tourists should be given to any person, however worthy or respectable. The principle is wrong to begin with, and odious to the country. It is urged in defense of this monopoly that it must be created in order to induce persons of capital and enterprise to furnish proper and sufficient accommodations to the public. The assumption is false and unfounded. If the public wish to visit the Park, enterprising capital will very soon discover the fact and be ready to meet the demand. Experience shows that in this country not only will capital be found for any paying enterprise, but competition will soon bring about improvement in the nature of accommodations and cheapness in rates. Besides, the Secretary of the Interior will always, under the law, have exclusive control of the Park, and no building can be erected or remain within its limits, except by his permission. This insures, under a faithful attention to the law and the interests of the public, the absence of all nuisances under the guise of hotels and of all extortions. The monopoly feature in the contract and lease should be stricken out and no contract should be executed by the department which does not reserve the right to permit the construction of other hotels within the Park, if in the judgment of the Secretary the interest of the public so requires. As

to the means of visiting the Park, there should be no restriction of any kind, but every visitor should be at liberty to go in such vehicles and after such fashion as may suit either his purse or inclination. The Secretary of the Interior transmits to the Senate a copy of the letter addressed by him to James J. Brisbin, giving him the privilege of putting a steam vessel for carrying passengers on Yellowstone Lake, but upon what conditions or under what restrictions this permit was given does not appear. So far as the committee is informed in the communication, the party running the vessel is under no restrictions whatever, either as to the capacity of the vessel, the accommodations furnished or the rates charged. If such permission be granted at all, it should certainly be guarded as to insure the comfort of visitors and absence of extortion. Nothing but absolute necessity, however, should permit the great national Park to be used for money-making by private persons, and in our judgment no such necessity exists. The purpose to which this region, matchless in its wonders and grandeur, was dedicated—"a public Park and a pleasure ground for the benefit and enjoyment of the people"—is worthy the highest patriotism and statesmanship. If Congress shall do its duty and perfect the legislation contained in the act of 1872, it will be no longer necessary for Americans to visit the Alps in order to enjoy mountain scenery. No other region can rival in wonders and attractions the Yellowstone Park.

THE SENATE BILL.

An admirable bill has been drawn by the Committee for the future government of the Park. The Committee are disposed to think that the Interior Department transcended its authority in agreeing to lease the Park, and

It was agreed to report a bill clearly defining the duties of the Department, and also extending the area of the Park to the east to a line north and south through Cedar Mountain and southward to the 44th parallel of north latitude, an addition of about 3,344 square miles to the Park, the whole area of which would be 6,644 square miles. The bill provides that all of the territory embraced within the limits of the Park as so extended and increased shall be reserved and withdrawn from settlement, occupancy or sale under the laws of the United States, and dedicated and set apart as a public park or pleasure ground for the benefit and enjoyment of the people of the United States, and said territory so set apart shall be under the control of the Secretary of the Interior and subject to all the provisions of sections 2,474 and 2,475 Revised Statutes of the United States, except as herein otherwise provided; that the Secretary shall make and publish rules for the government and protection of the Park, and cause all persons trespassing upon its territory to be removed therefrom, and shall take all measures which he may think necessary to carry out the purpose of the act, and the Secretary of War is directed to make such details of troops as the Secretary of the Interior may require for the purpose of preventing trespassers or intruders from entering the Park with the object of destroying its game, or for removing such persons from the Park. The killing, wounding or capturing, at any time, of any buffalo, bison, moose, elk, black-tailed or white-tailed deer, mountain sheep, Rocky Mountain goat, antelope, beaver, otter, marten, fisher, grouse, prairie chicken, pheasant, fool-hen, partridge, quail, wild goose, duck, robin, meadow lark, thrush, goldfinch, flicker or yellow hammer, blackbird, oriole, jay, snowbird, or any of the small birds commonly known as "singing birds," and the taking of fish in the waters of the Park by means of seines, nets, traps, or by the use of drugs or any explosive substance or compound, or in any other way than by hook and line are prohibited within the limits of the Park under penalty of a fine for each offense of not less than $50 and not more than $150, or imprisonment not longer than three months, or both. The possession of dead birds or fish is constituted prima facie evidence of violation of the provisions, and any person, stage, express or railway company receiving or transporting such bodies are liable upon conviction to forfeit for each offense $250, to be recovered by a proceeding in the nature of an information in the court having jurisdiction.

The Secretary of the Interior may, in his discretion, grant leases for terms not exceeding ten years of small parcels of ground within the Park, but no more ground shall be so leased than is necessary for the hotels or storehouses necessary to the accommodation of visitors and necessary outhouses and icehouses, and for gardening or grazing land in connection with said hotels; but no exclusive privilege or monopoly of any kind shall be granted to any person or company or corporation for any purpose within said Park; nor shall any lease or contract be made which in any degree or manner interferes with or prevents the free and unrestricted access of the public to all portions of the Park.

The laws of Montana are made to cover the Park, which for jurisdictional purposes is made part of Gallatin county. The regulations made and published by the Secretary of the Interior for control of the Park and protection of the game are given the force of law, and penalties for their violation are prescribed. The Secretary of the Interior is authorized to appoint a superintendent at an annual salary of $3,000 and ten assistants at $900 each, who are given the authority of deputy marshals within the Park. The Secretary of War is instructed to detail an officer of the Engineer Corps, who shall survey such roads and bridges as may be necessary.

GAME IN THE NATIONAL PARK.

Among the interesting literature concerning the attempted National Park grab is a letter sent by Col. John Schuyler Crosby, Governor of Montana, to Senator George G. Vest. It will be seen that the statements made therein bear out all that has been said on the subject in the columns of FOREST AND STREAM. The letter is as follows:

[COPY.]

CHICAGO, December 29, 1882.

Hon. George G. Vest, United States Senator, Washington, D. C.:

MY DEAR SENATOR: In compliance with your wish, expressed to me on the floor of the Senate Chamber early in December, that I should give my views on the subject of game protection in the Yellowstone National Park, I have the honor to address this note to you, and should be glad to have a subject so important to Montana and to the national interest in the Yellowstone Park laid with this letter before the Committee on Territories, of which you are a member, and also, should you think proper, before Congress.

From careful examination of Congressional legislation creating the National Park (see sections 2,474-2,475 United States Revised Statutes), and of the Territorial laws of Montana, the report of my predecessor and the expressed wish of influential citizens of this Territory, I judge that the preservation of the large game of the Northwest in the Park and in the Territory of Montana would accord with the sentiments of the public. Congress has enacted that the Honorable Secretary of the Interior shall provide against the wanton destruction of the game within the Park itself and against their capture for the purposes of merchandise or profit. The laws of Montana to a like end for the game within her borders are explicit. The Territorial laws of Montana for 1879 protected the bison or buffalo for ten years from that date in the counties of Madison, Jefferson, Deer Lodge and Lewis and Clark, somewhat contiguous to the Yellowstone Park, and the beneficial effect of this legislation seems to be indicated by Lieutenant-General Sheridan in his report of 1831 that "this year I noticed that buffalos were on the edges of the Park." The Territorial laws of Montana also wisely provide that none of the large gramnivorous game shall be killed during the breeding season, and absolutely prohibits the hunting of elk, antelope and mountain sheep with dogs at any time in any part of the Territory. The killing of any of the animals above named for their skins and not for food is prohibited under heavy penalties, and still further to protect them bounties are given for the scalps of the panther and the bear.

Under these positive conditions of national and Territorial protection of game by statute, the splendid and interesting game animals of North America, the bison, the elk, the black and white-tailed deer, the Rocky Mountain sheep and the antelope ought to increase and fill the thousands of square miles of the Yellowstone Park with objects of instruction to the naturalist and curious delight to the tourist from every land. Even the overflow of game from a well preserved park of such extent would supply forever large quantities of food to the settler and the sportsman in its proper season. So far as legislation is concerned, national and Territorial provisions, though capable of some desirable improvement, would seem to be rightly directed and reasonably efficient for their ostensible object—the protection of the large North American game in Montana and the National Park. But the report of General Sheridan presents evidence of lamentable deficiency in the means or powers of enforcement.

General Sheridan states in his report dated November 1, 1882, page 8: "The game in the Park is being killed off rapidly, especially in the winter. I have been credibly informed that since its discovery as many as 4,000 elk were killed by skin-hunters in one winter, and that even last winter in and around the edges of the Park there were as many as 2,000 of these grand animals killed, to say nothing of the mountain sheep, antelope, deer and other game slaughtered in great numbers."

The entire paragraph or page of his report of 1882 is respectfully commended to your kind attention as embodying most admirable practical suggestions for protecting the rights of the people of Montana and of the whole United States against the greed or wanton cruelty of a few marauders, and of preserving and increasing the value of the most splendid game park in the world, which cannot fail to redound to the fame and profit of this magnificent Territory. I believe that the suggested increase of the area of the Yellowstone Park, the absolute protection of the game within its borders from all molestation by hunters and enforcement by the people of Montana of their own wise and excellent game laws in the rest of the Territory are steps auxiliary to each other and quite within the scope of legislative power. For the settler now despoiled of his amusement and his food by wanton waste; for the Indian made savage when hungry; for the naturalist, the tourist and the true sportsman; for the reputation of this unequalled Park and Territory, the national power over the Territories is invoked to prevent a waste of life that must end in the extermination of the large game. At the moment that the invaluable Baird Commission is laboriously renovating our streams and rivers depleted of fish and striving to increase the ocean supply of food; at the moment that societies to prevent cruelty to animals are assuming national importance, the failure to protect the wild herds of the Northwest against wholesale slaughter for their pelt alone or for the brutal and unsportsmanlike love of killing would seem a crime as well as a blunder. Our opportunities have no equal in the world. I would take the liberty to urge upon Congress the passage of a law extending the limits of the National Park eastward as proposed by General Sheridan, inasmuch as I am informed by officers and others who have been over the country of the Shoshone ranges of mountains between 44 degrees and 45 degrees north latitude adjoining and east of the Yellowstone Park that the altitude and general roughness of this region are such that can never be utilized by settlers, while it is the natural habitat of the game to be preserved.

I need not suggest that the policy of making provisions for the great natural interests in the Territories has been so illustrated in the past that Congressional legislation for the Territorial Park would seem natural and proper. So-called "sportsmen" from other lands annually destroy vast quantities of game and return to their respective homes publicly proclaiming the large number of head they have killed, and then return again with increased forces to repeat their wanton slaughter. These and skin-hunters would be found the most violent objectors to national and local laws that should essay to protect the large game for the bona fide settler of Montana and adjacent Territories. In the name of her hardy, industrious and enterprising people and of true sportsmanship everywhere, I ask for absolute protection for the game that flies to the Park for safety. Again I earnestly solicit your attention and consideration to General Sheridan's proposition touching the increase of the Park and the methods of enforcing the game laws within its limits. As this Park has been very properly placed under the control of the Honorable Secretary of the Interior, and a certain amount appropriated for salaries, I would suggest that an engineer officer of the army be detailed to report to the Secretary of the Interior for special duty as General Superintendent of the Park, with powers and means granted to him to lay out roads and make other necessary improvements, and with authority to call upon the military stationed in the neighborhood for such details of troops as may be needed for emergencies. After laws are passed the Superintendent of the Park should be in condition to enforce them, which now is impossible. To allow the game of the Park to be harried out of it and then to suffer its extermination in the Territory is of course fatal to both Park and Territory. But by protecting the Park and enlarging it an ark of safety will be provided for the great game of North America until the flood of folly subsides, and Montana and the neighboring Territories will rejoice to find in the overflow from the Park a constant supply of game for their true sportsmen. The protection of the buffalo seems to rest on different principles from that of other game requiring less extensive range. Within Territorial limits the killing of game by settlers for food is natural, and in my opinion the killing of buffaloes in large quantities for food and hide is not objectionable; for, from my own experience in constant campaigning for several years on the plains of Texas to the northern Territories, the buffalo has been replaced between the Red River and North Platte by hundreds of thousands of cattle, far more useful animals. But nothing supplies the place of the elk, the deer and Rocky Mountain sheep and goat that thrive over the rough and mountainous territory that forms a large part of the National Park. Yet from neglect on the part of the general government, and State and Territorial governments also, to properly protect this game for the past fifteen years, it is impossible to find a hundred of antelopes, elk or deer, where there were formerly vast numbers. The importance of general local protection in the Territory, and of national protection by a proper responsible officer in the Park, with sufficient means and power to absolutely interdict shooting there, is vital. To permit the Park to be harried and the game stampeded into the Territory left unprotected by the non-enforcement of the laws, will exterminate the whole game of Montana, Idaho and Wyoming. This would be a calamity entailing a real loss upon the people. Even little municipalities and all great ones add a few deer to their parks and pleasure grounds. The southern side of Mont Blanc jealously preserves its chamois. Blair Athol and the estates of Buccleugh have a world-wide reputation for their herds of deer and wild cattle. Every dukedom has its preserves for a few aristocratic possessors. Why, in a country where the people are kings, should all neglect the addition to a people's park, which for its extent and the magnitude and number of its game in no land can we show an equal? A park of 5,000 square miles, with scenery sublime beyond description, and countless herds of elk, deer, antelope, buffalo and Rocky Mountain sheep, would dwarf the preserves of any monarch in the world. The people, through Congress, have decreed that this park and its game should be free from spoliation (See Revised Statutes, 2,474, 2,475). The citizens of Montana have already shown their purpose in the vigorous laws, interdicting the hunting of large game with dogs, prohibiting the killing of it for pelt and not for food, have absolutely protected buffalo in several counties for ten years, and the other large game during breeding time throughout the country.

The machinery for conviction is effective. Possession of buffalo green hides in the four protected counties is prima facie evidence of guilt.

Informers are entitled to a quarter of the fine collected, and the government can change its venue. The spirit is willing; but the flesh is weak. Imprisonment instead of fine would seem more effectual to protect the people against maranders.

I would venture to recommend that transportation companies should be prohibited from carrying game unlawfully killed, as they are now prohibited from carrying fish taken by illicit means. But the main defense against game extermination will be undoubtedly found in enlarging the great parks of the Yellowstone, which must be our future nursery of game.

As a citizen of Montana and intrusted with the honor of its administration, my pride and my interest are wrapped up in her future reputation and prosperity.

I should deeply lament any step that would put one of her great treasures, the National Park, into the hands of speculative individuals and out of the power of the government to manage it for the best interests of the whole people. I am, sir, very respectfully, your obedient servant,

JOHN SCHUYLER CROSBY, Governor of Montana.

THE DRIFT OF PRESS OPINION.

The readers of FOREST AND STREAM need not be told what opinion this journal as held with regard to the project to turn over the National Park to a handful of monopolists to the very serious injury of the rights of the people. The fact that we have for many years been familiar with this lovely spot, and have kept ourselves informed as to what was going on in it, gives us the right to judge very clearly as to the merits of this project. This special knowledge, perhaps, explains why it is that FOREST AND STREAM has condemned the contemplated lease by the Secretary of the Interior, and why, up to the publication of the Senate Committee report it has stood quite alone in its opposition to this monstrous job.

The Park is a long way off, and is as yet known to comparatively few persons, and hence there are but a small number of individuals who can speak of it intelligently. The admirable report of Senator Vest's committee has thrown a great deal of light on the subject, and the press are now beginning to appreciate what we have long seen and insisted upon—the importance of preserving the region to the people. It must be governed by the people for the people. A correspondent of the New York *Times* in a very intelligent communication and one which shows that he is familiar with the Park, says:

It seems to me remarkable that so little opposition to the iniquitous Yellowstone Park land grab should have developed. This silence is, perhaps, due more to the fact that the promoters of the scheme have managed it with great shrewdness than that the people are without interest in the matter. I have had occasion to visit the Park in years past and have spent much time in examining its wonders and in familiarizing myself with its strangely beautiful scenery. Knowing the region thoroughly, I cannot but feel that if the Park is given up, as proposed, to a company of speculators, the people of this country will, before long, deeply regret and reprobate the hasty action of the Interior Department, and of Congress. A lease and exclusive privileges so valuable as these are should never have been granted hastily, and, least of all, by a subordinate in the absence of the head of the department; and, if they are to be granted, at least something approaching an adequate return should be demanded for such franchises. The present status of the project, as stated by FOREST AND STREAM, is as follows:

"The lease which the company hopes to obtain provides that it shall have the free use of timber in the Park for building purposes; shall have the free use of arable land in the Park; shall have the free use of the waters of the Park for supplying hotels and other buildings; shall have the exclusive right to put yachts, sailboats and rowboats on Yellowstone Park Lake; shall have exclusive right to erect telegraph wires throughout the Park; shall have the right to establish stores and trading stations, and shall have exclusive right to furnish transportation and guides to and from points within the Park. The company has selected seven tracts in the Park, each containing, with one exception, 640 acres, and the lease provides that those interested shall have the use of this land for a period of ten years, with privilege of holding it longer. A provision in the lease also gives the company the right to occupy such other portions of the Park as may be desired. The annual rental of the land is not to exceed $2 per acre, and the company expects to get a much lower rate. In other words, these enormously valuable privileges are to be leased to these men for the pitiful sum of $9,000 (per annum). Their store privileges alone will be worth many times this sum, to say nothing of all the other valuable franchises enumerated before. The lobby which is working for this lease is a strong one."

If these statements are at all correct, do they not reveal a condition of things that is greatly to be deplored? The men interested in this Yellowstone Park Improvement Company evidently consider that they are sure to get their lease, and acting on this supposition they have begun work in the Park, cutting the government timber, building saw mills, fouling the streams, now so full of trout, with sawdust, and killing the government game to feed their gangs of lumberers. They seem to think that they hold the government and the people of these United States in the hollow of their hand, and believe that they have now so firm a clutch upon this people's pleasure-ground that their grasp cannot be loosened. Although the promoters of this project have, in their communications to the press, talked as if striving to convey the idea that they had only the interests of the people at heart, and desired above all things to preserve the geyser cones from mutilation and the game and timber from total destruction, it is scarcely to be supposed that these fair words will deceive any one. Look at the list of those who are known to be interested, and you will see that they are all speculators. They are not the kind of men who go into a legitimate business with the hope of making a fair profit. Not at all. They see that, to use the cant phrase, "there are millions" in this thing, and they have seized it, and propose to hold on to it as long

as they can. Their bold and defiant action in going on with the work before the lease has been signed shows how confident they feel of their ability to handle Congress and to consummate the great wrong on the people that they have in contemplation. Their action in this respect is like that of the railroad companies that we so often read about, where a line of track is laid in the night to forestall an injunction to be issued the next day. In addition to the privileges already enumerated it appears that this company proposes to add to its occupations that of breeding cattle, and that the "public" Park (see act of March 1, 1872), is to become the private range for its herds. Those of your readers who are familiar with cattle ranching west of the Missouri River will readily comprehend that if this takes place, the game, which these pseudo philanthropists profess to desire to preserve, will not long remain in the Park. The presence of the cattle will at once cause the deer and elk to flee to other localities where stock is not so abundant. Much might be said with regard to the value of the franchises hoped to be obtained under the proposed lease, and the wholly inadequate return which the government is to receive, but I have contented myself with pointing out some of the bad features of the project and the bad methods by which it is attempted to be secured The United States government appears to delight in giving away its most valuable possessions—witness the many land grants in the past—but I had supposed that the day of grabs was over. Certainly these speculators are very bold and shrewd, but if they succeed in consummating this great outrage it will be owing to the supineness of Congress and to the unaccountable silence of almost the entire public press.

Commenting on the above in connection with the report on the subject by the Senate Committee, the *Times* says editorially:

The enterprising gentlemen who obtained from the Acting Secretary of the Interior a very advantageous lease of 4,400 acres of land, comprising most of the world-renowned natural curiosities of the Yellowstone Park, may have been actuated by the most patriotic motives, and may have merely a secondary interest in the gainful possibilities of their bargain. But a people who have grown somewhat suspicious of the methods by which exclusive rights are obtained over large portions of the national domain, will be relieved to find that the Senate Committee which has had the subject under consideration has pronounced against both the validity and the expediency of the lease in question. The bill which has been prepared defining and strictly limiting the powers of the Interior Department in regard to the Yellowstone Reservation is clearly demanded by the public interests, and ought to receive prompt attention from the Senate. The lessees exhibit somewhat suspicious haste in proceeding to exercise the rights granted them under very dubious authority, and they cannot be too soon restrained from carrying out what looks like a very bold grab of property which neither the actual or the Acting Secretary of the Interior ought to have temporarily alienated.

Other papers express similar views. An editorial in the *Commercial Advertiser* says:

It is the tendency of grand national show places to foster monopoly and extortion. Niagara, which has hitherto held the post of honor among the great sights of America, has already lost the greater part of its patronage through the colossal impositions and grand army of harpies. It is only a matter of right that the Yellowstone National Park, which is coming to the front as a leading natural attraction, should be protected in the interests of the public by the government. No one can possibly object to the granting of leases to men who will open up the Park and cater to the comfort and convenience of visitors; but these should only be granted under certain conditions and understandings, and it is but simple justice that every one should have a fair chance. The Senate appears to have the welfare of this great national attraction at heart, and is to be congratulated upon its recent action.

The *Tribune* also has an editorial on the subject, which says:

There seems to be little doubt that the Interior Department exceeded its authority when it agreed to lease substantially the whole of Yellowstone Park to a company of capitalists for a term of ten years. The act of Congress approved March 1, 1872, by which the Yellowstone tract was made a public park, provided that the Secretary of the Interior might, "in his discretion, grant leases for building purposes for terms not exceeding ten years of small parcels of ground at such places in the Park as shall require the erection of buildings for the accommodation of visitors." The lease to Rufus Hatch and others, which was promised by the Interior Department in September last but which has not yet been signed, gives them exclusive control for ten years of 4,440 acres of the Park. This vast tract contains the geysers, great falls and Yellowstone Lake, all the principal objects of interest to the visitors, so that the lease is practically a surrender of the whole 3,300 square miles of the Park to a private association of capitalists. In return for this valuable privilege the United States will receive only a nominal rent of a sum not exceeding two dollars an acre, and the lessees bind themselves to erect only one hotel building.

It is easily apparent that this lease is a violation of the spirit of the act of 1872. A tract of 4,440 acres cannot be called a "small parcel of ground" required for the erection of buildings for the accommodation of visitors. To be sure the ground is let in seven different tracts of 640 acres each, but then they are included in one lease and are all leased to the same persons. It was clearly the intent of the law to have each separate grant of land used for the erection of a hotel, thus encouraging rival establishments, which would prevent the extortions upon visitors which are certain to arise from a monopoly of hotel privileges. The Park is for the people and should be managed in the interest of the people rather than in the interest of speculators. It is clearly not in the interest of the people to put the only portions of the Park worth visiting in the exclusive control of a single company of capitalists who will be able to make all visitors stop at one hotel. While the lease provides that the public shall have free access to all the natural curiosities of the region, it also gives the lessees authority to forbid visitors remaining or camping on the ground.

Another objectionable provision of the lease is the granting to the lessees the exclusive right of transportation of visitors by stage or otherwise through the Park. This is open to the same objection as the exclusive hotel privilege—that it will permit and encourage extortion. A still further objection to the lease lies in the fact that it will permit the wholesale destruction of game in the Park. The Committee on Territories in the Senate have reported through Mr. Vest a bill which meets all these objections, and by clearly defining the powers of the Interior Department, makes any future mistakes of the kind which this lease appears to be impossible, and at the same time prevents the fulfilment of the contract which the Assistant Secretary of the Interior has made with Mr. Hatch and his associates. The bill appears to be clearly in the interest of the people and ought to be passed.

The *Herald* handles the subject in its usual vigorous style, and joins its powerful voice to those already quoted in support of the Senate Committee's report. It says:

The Senate Committee on Territories is entirely right in objecting to the concession to a New York company of the exclusive right to build and manage hotels, construct roads, run stages and operate telegraph lines in the Yellowstone Park. Exclusive rights in regions interesting only for their peculiar natural attractions already exist in some parts of the United States to the great profit of the managers, and the annoyance, in many ways, of nearly all visitors. Hotels are built wherever best suits the convenience, not of tourists, but the owners. Roads are laid and stages or boats are managed in the same way, so the traveler is practically restricted to whatever can be seen, done or eaten with least expense or trouble and at the most remunerative prices to the autocrat of the locality. Such monopolies cannot now be abated, for they exist through purchase of land, but there is no possible excuse for establishing one in the Yellowstone Park. Hotel privileges in the Park should be for limited periods only, and subject to revocation for cause; they should be as numerous as may be demanded by proper persons; the sites should be determined, not by the builders, but by engineer officers charged with the duty of not allowing buildings to mar the more interesting portions of the scenery, and control of ground should be limited to the area absolutely required by the buildings. The location of the roads, also, should be determined by government engineers, so that individual parsimony or greed cannot possibly make one interesting place inaccessible, so that the traveler may be compelled to remain longer at another. Not one single hillock, geyser, pool or tree should pass under the exclusive control of any individual or company. Our monopoly-cursed country will look to Congress to protect the great National Park so perfectly that any one can visit it without being at the mercy of a single person, firm or "combination of capitalists."

It will be seen from what has been printed above that there is but one mind among the New York press upon the project which this curious company have so hardily pressed forward, and which they hoped to have rushed through and confirmed without an examination. The watchful vigilance of Senator Vest alone defeated the project, and if the people are still to have their Park they will owe it to him.

The Cuvier Club of Cincinnati, O., well known as one of the largest and most influential game protective societies of the country, is the first to acknowledge and appreciate the crying needs of the National Park as voiced in the report of General Sheridan, dated September 20, 1882. At a meeting held early in the present month, the attention of the club was called to the subject of this report, and the following resolution offered:

Whereas, The Cuvier Club, of Cincinnati, has read and approved the recommendation of Lieutenant General Sheridan in his report to the War Department, November 1, 1882, as to the extension of the boundary of the National Park as therein described; therefore,

Resolved, That we respectfully and most earnestly urge upon the members of Congress from the First and Second Districts of Ohio to exert all their influence to secure the extension aforesaid, and to order the protection thereof by the military power, if necessary, as suggested in said report.

The resolution was unanimously adopted.

The Cuvier Club has a membership of 900.

A NOVEL CARTRIDGE.—A recently devised explosive for use in firearms consists of paper prepared by a secret chemical process and rolled into a compact cylinder, much resembling in appearance a firecracker. It may be exploded by the ordinary percussion cap, or by a bit of fulminate in the end of the cartridge itself. This cylinder of paper is inserted into the chamber behind the bullet, or it may be attached to the bullet and both inserted together. When exploded the cartridge is, in theory, entirely consumed, leaving the barrel of the arm free for another charge. Our tests of this new invention have not been sufficient to warrant an expression of opinion as to its merits; but, as we said long ago, it is probable that the sportsman of the future may use an explosive which shall be in principle very like this new device.

THE GUINEA FOWL.—A correspondent suggests the possible utility of the guinea fowl as a game bird. We believe that in the West Indies, where this bird has been acclimatized, it has reverted to a wild state, and is considered game. We can conceive of no reason why it should not thrive in the southern part of our own country. There may be a question whether the wild guinea fowl would lie to the dog, or whether it would not flush and take to the trees. The tame birds will lie to a dog. We should be much pleased to have any information on the subject. The experiment seems to be worthy of a trial.

THE FISHERIES EXHIBITION.—Goods for the International Fisheries Exhibition at London, this year, will be received until February 15. They may be sent to Washington, or to Mr. E. G. Blackford, Fulton Market, New York, but must be marked "For the Fisheries Exhibition," and a memorandum of contents on the outside of the box, as well as the name of the person sending them.

AMONG THEIR FRIENDS AT ALBANY all men who are interested in game protection may count Mr. James Geddes, of Syracuse, a member of the Assembly. We congratulate the sportsmen of the State on their having in the legislature so sensible and fearless and honest a champion of game protection.

CARE FOR THE QUAIL.—The present fall of snow emphasizes the necessity of making some provision for the quail. Hints of how this may be done have been published in this journal, and a note will be found in another column of this issue. Let it be remembered that a very little practical attention to these matters just now will do more good than several hundreds of hours' talk. Individuals and game clubs may accomplish a great deal in the way of practical game preservation if they will provide shelter and food for the birds.

THE CUVIER CLUB of Cincinnati held its annual meeting last week, a report of which, reaching us too late for insertion to-day, will be found in our next issue.

The Sportsman Tourist.

NIMROD IN THE NORTH.

BY LIEUT. FRED'K SCHWATKA, U. S. ARMY.

I.—Bruin Borealis.

IN choosing the subject of Nimrod in the North, in general I shall confine myself to such hunting scenes as passed under my own personal observations; but I shall still try to describe the sportsman in the polar wastes, with all his trials and triumphs, his cares and his comforts, his camps, his singular native allies and their wonderful and ingenious hunting implements, and above all, the game he may pursue, or that may pursue him.

Men have hunted for all reasons, from dire necessity to frivolous fun, and from the equator across every parallel to the pole; and this quality has brought forth as instruments to the accomplishment of its ends the simple swing and stone, the bow and arrow and boomerang of savages and the rapid magazine rifle of the civilized modern world, dealing death at astonishing distances and unerring certainty. Let us transfer this latter weapon into the Torrid Zone, and to confine ourselves to our true subject, Nimrod in the North.

The writer, as a member of the American Franklin Search Party, that prosecuted its objects in the Arctic for a little over two years, during 1879 and portions of its contiguous years. He had many rare opportunities to gain a knowledge of the fauna of the frigid zone in interesting encounters. This party, mainly through the vigilance of its friendly native hunters and allies, subsisted almost wholly on the game of those regions during its sojourn there; and during its sledge journey of a year in length, but one month's provisions were taken, making this little band of seventeen people with their forty odd dogs, truly Nimrods in the North, to procure their necessary subsistence from day to day. To the man, civilized or savage, who procures his daily food from the chase, that chase may lose much of its true sportsmanlike character. The constant every-day encounter with game soon reduces exciting incidents to monotony and converts the disciple of St. Hubert into a peculiar kind of pot-hunter, if such strong epithets can be properly bestowed upon the human being, who may be said to have the same right to these products of nature as any other, so long as they conduce to his well being and existence. Still this business principle of hunting brings civilized man, when he has once acquired it, into the very best position possible to study and portray his victims, their habits and haunts, and all that is interesting in connection with them. He is a much better observer than his equally conscientious brother who views the enthusiasm of the chase through the distorting lenses of the amateur, rendered highly chromatic by an excited imagination.

It is not intended to give a strict treatise in a zoological sense, of the many animals I saw on my trip, even could I improve upon those who preceded me in such an undertaking; and thus I make no presumption whatever, but I desire to present my observations in as popular a way as my pen can command. However strongly I may adhere to this rule, there is no denying whatever that the student of nature has widely extended the pleasure that can be derived from the chase, be it polar or tropic, and he who is both naturalist and Nimrod has at his command all the elements for the maximum enjoyment of the hunter in all latitudes.

It was on the 19th day of June, 1878, that my little party of four white men, consisting, beside myself, of Colonel Wm. H. Gilder, second in command; Henry Klutschak, and Frank F. Melms, and Esquimau Joe, the celebrated Esquimau guide and hunter, left the harbor of New York to prosecute a two or three years' search in the polar wilds for the records, traces, relics or information of the brave British captain, who had gone there many years ago, never to return, and of whom so very little was known. Small as the party was, which circumstances had thus confided to my care, I do not hesitate to state that I assumed the responsibility with much diffidence. I had seen no Arctic experience whatever, and a careful perusal of the literature of those regions showed me that the leaders had in every case served previously in subordinate capacities and were thus placed in possession of that most valuable of information, the information of practical experience. True, an American cavalry officer's service on the frontier is oftentimes that of much arduous field duty, and occasionally the severest of winter exposure; but all these in my mind faded into insignificance as I read of the colossal ice fields many hundreds of feet in thickness, and stretching as far as the eye could reach; the thermometer so low that mercury froze and cast into bullets was fired through thick boards, and strong and powerful white men staggered around as if intoxicated from the effects of breathing the terribly cold atmosphere of those regions.

My only guide and counsellor in the party for that dreary land of desolation was "Esquimau Joe," or simply Joe, as we used to call him; and he is already well known to those conversant with Arctic exploration as the faithful guide and companion of the lamented Captain Hall on his two Franklin search expeditions, and also on the celebrated Polaris expedition, when Joe and a portion of that party had the memorable ice-drift of more than 2,000 miles from Smith Sound in Upper Greenland to near the island of Newfoundland, occupying 196 days, through the long Arctic winter, during which time Joe, with the assistance of another Esquimau, Hans, maintained a party of nineteen souls with their rifles. That rifle of Joe is now sacredly held by the Smithsonian Institute in Washington as a prominent memento of the longest ice-drift that has ever been recorded or endured. I shall have occasions to refer to Joe and his many pleasant chats of his former hunting experiences when we were living buried many feet beneath the snow in the curiously constructed abodes of the denizens of these regions.

It is my intention in this and the following papers to take each prominent animal or class of animals in the Arctic, and relate all that may be interesting concerning each before proceeding to another; leaving all the minor items of interest, as the dogs and sledges, the hunting implements of our friends of the frigid zones, as well as the people

themselves, the peculiar clothing by which they withstand such phenomenal temperatures, and everything else that is dear to the hunter's heart, as small accessories, to be woven into the narrative at such points as may seem most appropriate.

I have selected for my first subject the polar bear, the "tiger of the ice," as Dr. Kane calls him. Our first introduction to this boreal Bruin was in the latter part of July, in 1878, when we encountered the Esquimau of the savage islands, on the northern shore of Hudson's Straits, who had a few of their skins to sell, among other kinds of Arctic merchandise. These simple natives are certainly easily satisfied, or, more properly speaking, easily cheated, as a half tumblerful of shot secured four saddles of reindeer meat, while a nice polar bear robe was had for a half of a plug (one-twelfth of a pound) of tobacco and a few charges of powder. Twenty-five musket caps were given for one-fifth as many white fox skins, and many other things were bartered for on equal terms. I secured three dogs—all they had brought in their *oomiak* or seal-skin scow—for my party, and when I gave them something approximately near their true value (for I was not a little disgusted with the Shylock manner in which they had been treated), their astonishment knew no bounds, and one old fellow so insisted on rubbing noses with me that, despite the fact that it signified eternal friendship, I almost repeated of my intended generosity.

Polar bears are quite numerous along the shores of Hudson's Strait, and as they are extremely aquatic in their nature, being often found on cakes of ice or ice-bergs many miles from land, it occasionally results that American whalers en route through these straits to their whaling grounds in North Hudson's Bay, or the Hudson's Bay Company's ships, in their annual visits to their trading posts, encounter Bruin here, and have many int resting bouts with him. If he is found on isolated cakes or limited floes of ice, his capture is almost certain when pursued in the well-manned small-boats of the whalers, who have no trouble in overtaking him in a fair race in the water, and then shooting him. But if the ice cakes are numerous enough to force the rowers to make sinuous courses and wide deviations, or if packed very tight so as to obstruct them altogether, Bruin generally manages to save his blanket. If the pack-ice is very dense, the only method is the Esquimau one of bringing him to bay by pursuing dogs, the same as if on land or on the salt ice. So great indeed is the polar bears' love for the salt water, that it is a very unusual thing to find them far from the seashore, and the only times that I have ever known them to leave it any distance, is when the salmon run up the small streams opened by the perpetually shining sun of the short Arctic summer, for on the ripples and rapids of these cold creeks Bruin finds a most generous commissary department while it lasts.

After the winter has set in and the ice has formed to considerable depth along the coasts, the native sledging parties that are then following this shore ice from one village to another are the ones most likely to come in contact with this particular game. In fact over nine-tenths of the robes are thus secured by them. When in the summer this ice is broken up and driven out to sea by the winds, currents and tides, the polar bear often follows his icy home to its new abode and it is here and under these circumstances that he is most generally encountered, killed and studied by civilized man, and his habits and peculiarities noted. His love for the sea in which he is so characteristically distinct from all other of his species, has determined his commonly accepted scientific name, *Ursus maritimus*, although the assertions of some that their habits are purely maritime must be received with some few grains of allowance. In the summer he is occasionally found inland under the circumstances already noted, and in winter, when there is but little difference between the land and ocean, both ice-covered with their common mantle of drifting snows, these inland excursions are not at all rare. The absence of the encounters between them and man in such places is due more to the rarity of visits by the latter than the former. It is undoubtedly the case with which they obtain seals, the carcasses of "flensed" whales, or those which have had their blubber stripped from them by whalers, walrus and other sea-abiding animals, that attracts them so persistently to their abodes. The inland country would not furnish them enough to support their huge carcasses for even a single day's subsistence, unless, perchance, they should fall in with the meat *caches* of the inland reindeer hunters, which, by the way, say the Esquimaux, they have been known to destroy a distance of two or three days' sledge traveling from the main coast (probably thirty or forty miles), although it may be nearer some of the deep finger-like fiords, characteristic of the Arctic coasts of the older geological periods.

The winter camp of our little party for 1878-'79 was pitched near Depot island, in the northermost part of Hudson's Bay, amid a large camp of mixed Iwilik, Igloolik and Netschilluk Esquimaux, their proportionate numbers being mentioned in order. I employed four families of them or thirteen in all, to accompany me on my proposed spring sledge journey to King William's Land, a large island in the Arctic Sea.

Here the natives reported bear were reasonably common, and quite a number of them had promised that we, the white men, should be indulged in some of this sport before the winter should wear away, if we would accompany them on their sledge journeys along the coast. That winter, however, yielded us no sport in this line, although one of my hired hunters, Ik-quee-sik, a big roomist Netschilluk of fully six feet in height, killed one bear on Depot island while encamped there for walrus hunting, and this was the only one, I believe, whose tracks were seen near our camp that winter. Bruin had evidently been attracted by the scent from the numerous walrus *caches* that dotted Depot island, and in came lumbering along, suspecting no danger, early one February morning. Now "early in the morning" depends upon the season, and in the Arctic February acceptation it is nearly eleven o'clock in the forenoon, and consequently our polar ursine friend found everybody astir in order to take full advantage of the short day. Ikquessik's family were alone on the island, many of his associates of the village being absent at the whale ships wintering at Marble Island, some seventy or eighty miles to the southward, and the bear got fairly into the village before he was discovered even by Ikquessik's four or five runty little half-grown black dogs that looked more like wolverine kittens than the true Esquimau class of canines. They were, however, equal to the emergency, and Esquimau-like Ikquessik had to first come out of his snow hut unarmed to see the cause of the disturbance, when Bruin got a good long start of him despite the persistent nippings of the pups, that delayed him considerably. It was a running chase for a considerable distance, but Ikquessik got in one good shot in the foreshoulder of the bear with his smooth-bore musket that brought him effectually to bay, and although our Netschilluk Nimrod had one close shave from a daring charge of the ferocious beast, he was soon dispatched and his robe brought triumphantly into camp. He was an immense fellow, weighing undoubtedly over a thousand pounds, and would have been a bad customer at close quarters, had not his shoulders been rendered worthless by the first fire.

The size of the polar bear varies considerably, even with those that may be considered full grown specimens, and some naturalists class them as the largest of the genus *Ursus*, yet no doubt his western brother, the grizzly (*Ursus horribilis*), will dispute this point closely with him. This one killed by Ikqueesik was pronounced by the Esquimaux to be *un-a-ya-ad-o*, very large, and had he been weighed I would not have been surprised to see him show 1,200 pounds. I certainly would have been surprised had he stopped short of 1,000. Captain Lyon, a British Arctic explorer, mentions one weighing 1,500 pounds and measuring eight feet seven inches from tip to tip. It is said that Barentz in his expedition of 1596 killed two polar bears, whose skins measured no less than twelve and thirteen feet in length, and which must have represented enormous animals, rivaling even the grizzly. They were secured on an island near Spitzbergen. Franz-Joseph Land is pre-eminently the paradise of polar bears, the Austrian expedition of 1872-4 that discovered it, encountering and killing them by scores, yet the largest one they mention "was eight feet long, and therefore of unusual size." In Parry's Arctic voyage of 1819, his party succeeded in killing a bear that although measuring eight feet and two inches in length only weighed 900 pounds. "It will be seen," says a chronicler of that expedition, "that his weight is not at all in proportion to his dimensions, for he was a very large animal, as far as length and height went, but although six inches longer than the bear we killed in this country last summer, he was upward of two hundred pounds lighter. On opening him we discovered the cause of this disparity, for the whole of the alimentary canal was in a high state of gangrene, the liver and lungs were very much inflamed, and the spleen apparently shrunk considerably below the natural size. The stomach was empty and collapsed in fact, the whole of the abdominal viscera bore evident marks of disease." This is evidently an unintentional exaggeration of the state of affairs, as any polar bear which has been subsisting for a length of time on putrid seal or walrus will apparently have an internal gangrene if the nose plays the part of the chief factor in the diagnosis, and at such times it becomes extremely dangerous to partake of such of the internal parts as are usually eaten, as the liver. A number of cases of death are recorded from it, and the direct illness is sure to supervene. I believe, however, it the bear has had a long exclusion from such meat, that his liver is harmless. The natives always throw it away, however, and will not even allow the dogs to eat it. I noticed this conspicuously in the one that Ikquecsik had killed, it being flung out to sea.

During the fall of 1878 my hired native hunters, as well as many from the village that had clustered around our tents as a nucleus, started inland on their annual reindeer hunts to procure the hides of that animal, which are used almost exclusively for their winter clothing and bedding. Joe attached himself to a young Iwilik Esquimau, Toolooah by name, who will appear many times in these accounts as my most valuable and intelligent hunter. Toolooah and Joe, as the autumn snows commenced falling, had pitched their sealskin tent on a precipitous hill overlooking a small fresh water lake, where the reindeer on their autumnal southward migrations could be seen for many miles. When the weather became too cold to allow the tent to be warmed by their rude stone lamps, an *igloo*, or snow house was built, and the hunt continued. One cold, gloomy storm-boding day when both our heroes were snugly ensconced in bed, (which with the natives means stripped stark naked, lying between their dressed reindeer blankets) a terrible racket was heard near the lake, sufficient to excite their curiosity. Joe rose, and partially dressed emerged into the open air. Toolooah stretched out with his chin in both hands, awaiting the result. It was a big haggy polar bear breaking the ice of the lake, where it emerged into a small creek, trying to catch the fish that some instinct told him would be found there. As soon as Joe comprehended the situation he seized a loaded musket, the only arm on the outside of the hut, and taking deliberate aim at Bruin who was about a hundred and fifty yards away, he let him have an ineffectual shot in the leg. This astonished his bearship, who had perceived no danger, so much that he only looked at Joe in amazement, howling furiously at his slight wound. "*Nannook! Nannook!!* (a bear! a bear!)" yelled Joe as he fired and then dodged into the low entrance of the snow-hut in order to get his Winchester carbine, his head meeting with a good round bump that of Toolooah, who, stark naked, was emerging, Winchester in hand. By the time that Toolooah had straightened up in front of the entrance, and recovered from his dizzy concision, Mr. Bruin had begun to appreciate that he was in an unhealthy neighborhood, and had just swung his carcass around for a retreat, when he got Toolooah's first fire in his hams, and he started on the run, Toolooah giving him a second as he disappeared over a crest about forty yards further on. He was not yet permanently disabled, although packing three wounds more or less severe; and there was no time for our hunters to delay if the prey was to be secured. Despite his immodest appearance, and to the Esquimau mind the more palpable reason that the thermometer was below zero, Toolooah ran like a racehorse for about a hundred yards and got a long range shot of probably three hundred yards at the retreating polar, who was looking at him from his haunches on a second ridge. This shot gave him a fatal bullet through the neck. An Esquimau, stark naked, standing half knee deep in the snow, in the midst of an Arctic winter, gun in hand, over a fallen bear, would be a good picture to hang in one's room of hunting trophies, to contemplate in the summer time. The robe of this bear and that secured by Ikqueesik had fallen to me, but during my absence on my long sledge journey, and during the summer of 1879, the retiring whaler that had landed us in North Hudson's Bay had "gobbled" these trophies along with others, for the polar bear robe has a market value in the civilized marts.

Just how brave, ferocious or dangerous the polar bear may be it is extremely hard to say, owing to the variety of opinions and dissimilar traits it has exhibited in this respect under the scrutiny of equally creditable observers. One good authority says "it is the largest, strongest, most powerful and, with a single exception, the most ferocious of bears," the exception evidently meaning the grizzly. Yet the many mutilated persons I have seen in the great West who have been intimate with the "cinnamon" of that region, and who place him on a par in ferocity and a superior in activity to the grizzly, would certainly not be willing to surrender his claims to those of the polar bear. Again, the testimony of those who have shot from the decks of an exploring steamer a helpless animal swimming in the sea, is of no more value than that of a menagerie keeper who has poisoned a caged Bengal tiger. I am inclined to place the polar bear below both the cinnamon and grizzly of the West in bravery, although the superior of either in activity. His long, lithe, snake-like form, compared with the bungling carcasses of others, would show this without further argument or practical demonstration, yet it has received the latter without doubt. Those who argue of the ferocity produced by a carnivorous diet may think the polar should excel his omnivorous brethren of the south, as he is wholly of this type; yet singularly enough his system of dentition is exactly the same as that of the other bears. Still, as has been said, the polar bear has exhibited all traits of bravery, from that of the most ferocious disregard of its life, to the most abject cowardice. The old Norsemen, than whom no braver men ever lived, came in contact with these glacial grizzlies when their most adventurous discovered Greenland, and Erik the Red, their bold leader, quarreled furiously with one of his best friends from sheer envy because the latter had killed a polar bear, and thus distinguished himself among those who valued bravery as high as it has ever been held since, when his chief should have been given this honored opportunity. They certainly valued him as a plucky adversary. "Killing a bear," says Chevalier Rink, once Danish inspector of Greenland, "has, in ancient as well as in modern times, been considered one of the most distinguishing feats of sportsmanship in Greenland." If the Esquimaux of Greenland are the peers of their polar brethren on the main continent, they would certainly pick no mean opponent to be thus distinguished.

All Arctic authorities seem to unite on the fact that the mother is unsparing in her exhibitions of bravery to protect her young, and hardly a boreal book exists that does not recount one or more of these instances of maternal affection; and yet I will be compelled to narrate an incident that came under my own personal observation that will shatter somewhat even this unanimity of opinion. My party of four white men and Toolooah's family were on their southward search along the western coast of King William's Land in August, 1879, and had encamped inland about five or six miles from Erebus Bay, crossing over the peninsula between it and Terror Bay, fifteen miles wide. While thus crossing our effects, I had occasion to send Toolooah back to the former bay to get a large driftlog that I had seen there and had had split up to be used for firewood. He took a number of the dogs harnessed and only a snow-knife, a two-edged one, about sixteen inches long in all, which had had the handle knocked off of the tang, in order to crease one end of the logs so that the drag rope would not pull off. Nearing the shore of the bay, he discovered a she bear and a goodly sized cub trotting along the edge of the water, which the dogs, when slipped, soon brought to bay. Nothing daunted, Toolooah separated the dam from the cub by petting the former vigorously with stones, and while she was employed growling at the snapping dogs a short distance off, he dispatched the cub with his decrepid knife, and after running the mother out to sea on the icefloe, he brought the carcass of the cub triumphantly into camp, tied on the spreading pieces of the split log. I told Toolooah a story of Captain Hall's, which he mentions in his book, of having killed a polar cub while his native allies were in a fruitless chase after the separated dam, and their consequent fright and dismay when they saw it, who so feared the vengeance of the returning mother, that they made almost incredible exertions to avoid it, such as doubling upon their retreating track repeatedly, and traveling nearly all night; and then asked Toolooah if he was not afraid of the mother following his plainly marked trail to the tent and reeking due vengeance. But he smiled as he answered that he hoped she would, as he felt very angry at himself for being caught in such a predicament without his gun, and if she would only come along again he would make due amends. He said that he had known several instances wherein the cub of the polar bear had been killed, and where the mother was not injured, but has never known any evil resulting from the anger of the latter, unless it occurred right on the field of battle, where she will display more energy in the defense of her young, but seems to have shown a lamentable absence of that trait in this particular instance. It would seem from this that either Captain Hall's allies were needlessly frightened, or that the disposition of the polar bear varies much with the locality. Joe, who was with Hall in all his Arctic travels, and remembered this instance, says that both views are partially correct, and in fact, that the polar bear is very uncertain in its comeat veness. Probably had a less active hunter than Toolooah, who was agilityly personified, undertaken the assault, the result would have been different, for his rapidity evidently confused the animal so, that the whole tragedy was enacted before she really comprehended the situation.

About the middle of October, in '79, while Toolooah was in Terror Bay, he killed three polar bears in about half as many minutes. He had descried them from a distance as his sledge came over the eastern ridge of the bay and managed to so direct his course among the hummock of ice as to get within a couple of hundred yards of them before they noticed his presence, when he slipped the dogs, and although the open water along the shore ice, to which they always take when pursued, was no further away, they were so slow in getting under way that one was brought to bay by the dogs, which Toolooah dispatched with a single shot through the head, and so quickly that when he gained the edge of the ice-floe the other two were not over forty or fifty yards away swimming for dear life, although they did not manage to save themselves, as two well-directed shots laid them out. Then Toolooah, extemporizing a raft from a floating cake of ice, managed to get them both in, and brought us the three robes to verify his prowess.

Toolooah killed a monstrous polar bear, that would probably "kick the beam" at 1,300 or 1,400 pounds, the day we reached the northermost cape of King William's Land July 3). Bruin came snuffling into camp when Toolooah and Frank were absent, and while the dogs were yet harnessed to the unloaded sledge, when a good view of the situation sent him off on the sea ice at a smart lope, Toolooah and Frank following him with the light sledge over the terrible rough hummock of Victoria Channel. The nineteen strong and ex-

cited dogs would have made a spectator think they were playing the butterfly trick with the sledge as it caromed from one hummock to another, leaving only tracks on the crests of the snowdrifts as they flew after their enemy. It was a good five mile chase before Tooloosh got near enough to slip his team and the dogs soon commenced nipping polar's hamstrings so assiduously that he sat down on them for protection and commenced playing lawn tennis with the bolder dogs' heads. A shot through the neck so infuriated him that he plunged for Tooloosh, who was only a few steps away, but the latter's activity with his carbine put another shot through the beast's backbone and he lay spread out a huge helpless mass of howlings and hair. There were thus five bears killed on our sledge journey, lasting from April 1, 1879, to March 20, 1880, nearly one year, Tooloosh scoring them all.

While camped on the northern side of Simpson's Strait, in the fall of '79, and waiting for them to freeze over, we all participated in an exciting foot race of a couple of miles after a large polar that had been started up some seven or eight miles inland. Bruin, however, placed Simpson's Strait between the pursuers and pursued and thus saved his robe. Tooloosh, never exhausted, waylaid a herd of reindeer that had remained stupid spectators of the bear chase, killing two and wounding two others, making a handsome score of nine in as many hours.

Tooloosh told me that he has seen the polar bear climb up the flat perpendicular walls of icebergs to escape his pursuers, and when these were high he generally succeeded in eluding them, as it then becomes very dangerous to attempt to ascend by cutting niches in the ice wall for foothholds, which is the method the natives adopt in pursuing their prey under these circumstances. This seems almost incredible, and I have never seen it mentioned by previous Arctic travelers, but I consider Tooloosh altogether too good an authority to lightly cast aside what he affirms. Lieut. Perry, in 1831, after much severe labor, succeeded in getting on top of a flat iceberg in Baffin's Bay, and here found a white bear in quiet possession, who, discovering the party, jumped over the perpendicular side of the ice mountain, fifty-one feet into the sea, and swam to the nearest land, over twenty miles away.

While living among the Netschilluk Esquimaux, who inhabit the shores of Simpson's Strait, I remember their telling me a story of a very strange animal that they met at long intervals of many years, when upon their summer reindeer hunts with *kiaks* (skin canoes) and spears. They describe it as a black monster as large and heavy as a musk ox, with a face like that of a man and feet like those of a bear. They report them to be very ferocious, making sad havoc among the Esquimaux dogs that attempt to bring them to bay, and when thus irritated do not hesitate to attack the natives themselves. Joe (Ebierbing) tells me that the Kinnepetoo Esquimaux of Chesterfield Inlet, who are armed with guns obtained from the Hudson's Bay Company, have killed several, so they report, but I have never been able to procure or even see any of the robes. I think it can be no other than the grizzly bear of North America, which is thus shown to occasionally extend his limits as far north as the Arctic Ocean during the short summer of that region, and no doubt returns to the timber limit, many hundred miles to the southward, to hibernate.

Speaking of hibernating, there is probably no subject of Arctic zoology on which there is such a variety of opinion, and of which there is so little known, and so much interesting information yet to be gained, as pertains to the hibernation of the Northern bear. The very first conclusion at which one would naturally jump is that this species of all others would be the very one to seek such a state to protect them from the intense and bitter cold of the polar winter, and I am much inclined to think that the published opinions of many have been based on such conclusions rather than personal observations. Some are found who deny that the polar bear hibernates at all in the true sense of that word, and from what little I know of the subject I feel disposed to side with them. Dr. Richardson, the naturalist of several Arctic expeditions, a most conscientious and voluminous writer on the natural history of the polar regions that he traversed, limits the hibernating of these animals to the females during the time they are with cub or pregnant, yet I find by native testimony that they have slain them in this condition, and I believe that this can be relied upon. Others think that the mothers remain secluded while the cubs are too weak to elude pursuit, but it is hardly worth while to deny this, so numerous are the cases furnished by civilized and savage observers who have secured the cubs when they could not have been much over a few days of age. I am prone to believe that the polar bear never hibernates under any circumstances. The mother for a few days on either side of the cubs' birth may remain secluded in the den which she has excavated in some deep snow bank, and during pregnancy is more shy than at other times, but beyond this and these bear holes which are occasionally found, there is nothing to base any conclusive theories upon in favor of hibernation, while the fact that polar bears of both sexes have been killed and encountered in every month in the year and in all sorts of conditions are the opposite statements in the case. These bear holes in the snowbanks are very interesting little affairs, but the fact that they are only found after the cubbing season, and never during the coldest weather of winter, would show that they were not used permanently, unless it be argued that the maker has made them too carefully secreted to be observed at this time. Lieut. Payer, of the Austrian Expedition, was fortunate enough to see them occupying these abodes, though even the Esquimaux seldom, if ever, have this opportunity. He says, "But almost immediately again the bear disappeared in the snow, and when we came to the place of his disappearance we discovered the winter retreat of a family of bears. It was a cavity hollowed out in a mass of snow lying under a rocky wall. The bear had shown herself only once, but resisted all our efforts to seduce her to leave the shelter she had chosen, nor had we any special desire to creep on all fours into the narrow dark habitation. Sumbu (one of the dogs) only was bold enough to follow her, but he saw too many things which led him to return very quickly. From the snow which had been thrown up at the entrance of this hole, we inferred that this had been the work of the bear in her efforts to close the approach to her abode. It was the first time we came upon a family of bears in their winter quarters, or had the chance of adding anything to our scanty knowledge as to the winter sleep of those animals. Middendorff does not admit that they sleep during the winter. He considers the bear far too lean to be able to do so."

The world turned on its axis and revolved in its orbit and finally brought our stay of two dreary years to a close in the Arctic. We had bade adieu to our old Esquimaux friends, and were on board the whaler George and Mary, of New Bedford, for home. Fresh water was on board, and everything stored snug for a struggle with the old Atlantic. The whaling season had not been good at all, but one seventy-barrel fish having been caught. So as we bent our course for Hudson's Strait, Captain Baker thought he would take one more hurried peep into Roe's Welcome to see if a whale could not be raised, as we wended our way home. The 8th of August saw us entering its southern mouth, and when squarely off Whale Point, the man in the crow's nest (the lookout placed in the foremast to watch for whales) reported a couple of polar bears off our starboard beam, and the Captain hove the ship too, lowering the mate's boat, which was sent in pursuit, your humble servant in the bow. It was a she bear and a three months' old cub, who, hearing us lowering the boat, took to the water. The cub kept close to his mother and occasionally took a rest on her shoulders. As it became evident to the dam that in a fair race she could not escape, she crawled up on a large cake of ice, roaring furiously at us—not unlike the deep roar of the lion—and faced us for a fight. At about forty yards I put a bullet through her back just behind the shoulders with my rifle, and she sank "spread eagle" style over the ice cake, and was knocked completely *hors du combat*. Her vain efforts to back again into the water were silenced by a shot from the mate through her swaying head, and we were left facing the little cub, which I was extremely anxious to capture alive. A lance-warp was procured, a running noose made, and the little fellow soon lassoed and dragged into the water, riding on the dead body of his mother to the ship, upon whose deck we soon had him "triangled" by three converging strong ropes, at which he bit with a vengeance that kept us all at a respectable distance. The Captain, when he came upon deck, ordered him to be shot, as he considered him too dangerous a fellow to have on board during a storm, when he might break loose and create an uncomfortable consternation. I was, therefore, not destined to bring him home alive, as I had anticipated, and probably it was just as well that the mate put a pistol to his head, as we never afterward saw a seal or walrus to kill, and the sleek little rascal would probably have died on our hands from the worse death of starvation.

Natural History.

THE BIRDS OF MAINE.

With Annotations of their Comparative Abundance, Dates of Migration, Breeding Habits, etc.

BY EVERETT SMITH.

FAMILY VIREONIDÆ: VIREOS.

53. Red-eyed Vireo—*Vireo olivaceus* Aud., Cs. 170; *Vireosylvia olivacea* Ridg. 135.—Abundant. Arrives in April. Breeds, usually on high trees, and lays four or five white eggs with brown spots. The most common species of vireo in Maine, an indefatigable songster, whose pleasing notes may be heard at all times of day, and throughout the entire summer.

54. Philadelphian Vireo—*Vireosylvia philadelphicus* Ridg, 138.; *Vireo philadelphicus* Cs. 173—Uncommon. In Prof. Hamlin's list of the birds of Waterville, Maine, 1865, was recorded "one specimen, the only one yet found in New England." The few that are summer visitants to Maine probably breed here. Mr. H. A. Purdie informs me of its occurrence in the region of the upper valley of the St. John River.

55. Warbling Vireo—*Vireo gilvus* Aud., Cs. 171; *Vireosylvia gilva* Ridg. 139.—Common. Arrives in May. Breeds, on high trees, and lays four or five white eggs with brown spots, in June. Not common in Eastern Maine, but a regular visitor to Western Maine, where it commonly breeds.

56. Yellow-throated Vireo—*Vireo flavifrons* Aud., Cs. 176; *Lanivireo flavifrons* Ridg. 140.—Not very common. Arrives in May. Breeds on trees and bushes, lays four or five white eggs with brown spots, in June.

57. Solitary Vireo, Blue-headed Vireo—*Vireo solitarius* Aud., Cs. 177; *Lanivireo solitarius* Ridg. 141.—Common. Arrives in April and early May. Breeds on trees and bushes, lays four or five white eggs with brown spots, early in June.

58. White-eyed Vireo—*Vireo noveboracensis* Aud., Ridg. 143, Cs. 181.—Rare. Audubon mentioned this species as occurring as far east as Nova Scotia, and also wrote that he observed a few specimens in Labrador. Mr. Montague Chamberlain mentions the capture of a specimen "shot by Harold Gilbert at South Bay, near St. John, New Brunswick, May 24, 1877. (N. O. C. Bulletin, April 1882).

A pair of vireos once nested upon one of the upper branches of a maple tree near my home in Portland, Maine. The nest was but a few feet from a chamber window and I had most excellent opportunities to observe the birds and identify them as of this species. I hopefully watched for the birds to appear again the following season, but none were seen.

FAMILY LANIIDÆ: SHRIKES.

59. Northern Shrike, "Butcher bird"—*Lanius borealis*—Aud., Ridg. 148, Cs. 186. Common in winter, arrives in October. Not known to occur in Maine in summer, nor to breed here; not seen here in spring later than April, and usually returns to its more northern haunts before this date.

60. Loggerhead Shrike. "Butcher bird"—*Lanius ludovicianus* Aud., Ridg. 149, Cs. 187. Common in summer. Not found here in winter, arrives in April. Breeds on trees and bushes, throughout the State, at least the central and southern portions, and lays from four to six eggs in May. The eggs are white, entirely covered with drab blotches, which give a general appearance of the latter color to the eggs.

The two species of shrikes known to Maine, may generally be distinguished by the characteristics below named.

Loggerhead Shrike: The eye is inclosed by the broad black stripe along the side of the head, and this stripe extends forward to meet its fellow at a point in the center at the base of the bill.

Northern Shrike: The eye is not inclosed by the broad black stripe along the side of the head, and this stripe does not extend to the center at the base of the bill. These descriptions apply only to adult birds.

The plumage of immature birds does not fully show these characteristics, but the species are readily separated by a comparison of specimens. The northern shrike is appreciably the larger of the two, and for persons not having opportunity for comparisons of specimens the considerable difference in length of wing (tip to flexure) of young or old birds will determine their species. The loggerhead shrike's wing is under four inches in length. The northern shrike's wing always exceeds this, and its average length is about four and a half inches.

Upon young loggerhead shrikes, the black cheek band does not appreciably extend above the eye until after the first moult has occurred and the bird has assumed its "second plumage." But the plumage of the upper parts of the young bird is gray, and never so brown as that of the immature northern shrike. The shrike, or "butcher birds" are termed "kites" in some localities of Maine, and their habit of killing small birds is well known. In the cities cage birds hung at windows sometimes provoke an attack by a shrike.

FAMILY HIRUNDINIDÆ: SWALLOWS.

61. Purple Martin—*Hirundo purpurea* Aud.; *Progne subis* Ridg. 152, Cs. 185.—Abundant in local colonies. Arrives in April and May. Breeds, usually in bird-houses erected for its use, and lays four or five pure white eggs in June. The largest of our swallows, and sometimes locally named "bee martin," on account of its manifest fondness for honey bees, which are not molested by other species of swallows. It seems remarkable that the Kingbird or tyrant flycatcher (*Tyrannus carolinensis*), so serviceable a friend to the farmers, has been accredited the name of "bee martin," and the reputation of a fondness for bees, while ornithologists generally have ignored the fact that our purple martin is much better entitled to the name and fame. A colony of purple martins, resident near an apiary, will destroy more bees in a season than all the Kingbirds that can be found within the area of a small kingdom. The bee martins, the swiftest and strongest birds of their family, destroy vast numbers of noxious insects, and will fearlessly attack and drive away any hawks that may venture near their abode, and are thus very desirable birds, excepting where hives of bees are kept.

62. Cliff Swallow, Eave Swallow—*Hirundo fulva* Aud.; *Petrochelidon lunifrons*, Ridg. 153, Cs. 162.—Abundant in local colonies. Arrives in April and May. Breeds on outside of buildings under the eaves, inside covered bridges, on the beams and rafters, etc. Lays from four to six white eggs with brown spots in June and July. For a number of years a colony of birds of this species had their nests under the eaves of the Eastern Railroad station in Portland, and on the side toward the street where the most noise occurred.

63. Barn Swallow—*Hirundo rustica* Aud.; *Hirundo erythrogastra*, Ridg. 154.; *Hirundo erythrogastra horreorum*, Cs. 159.—Abundant. Arrives late in April and early in May; breeds in colonies, usually in barns on the beams and rafters. Lays from four to six white eggs, with reddish brown spots, in June. Two broods are commonly raised.

64. White-bellied Swallow—*Hirundo bicolor* Aud.; *Tachycineta bicolor* Ridg. 155, *Iridoprocne bicolor*, Cs. 160. Abundant. Earliest of swallows seen here in spring. Arrives early in April; breeds in holes of trees, and in bird houses erected for the purpose. Lays five white eggs, in May. The stomachs of the specimens procured at Scarboro, Me., April 6, 7 found to be filled with the drupes of the common bay bush; no insect of any sort in their stomachs, but the birds were in fat condition. Later in the season their food consists almost exclusively of insects.

65. Bank Swallow—*Hirundo riparia* Aud.; *Cotile riparia* Ridg. 157, Cs. 163.—Abundant. Arrives late in April and in May; breeds in banks, making a hole of gravel or sand, in holes excavated by itself. Four broods in June.

FAMILY TANAGRIDÆ: THE TANAGERS.

66. Scarlet Tanager—*Pyranga rubra* Aud., Ridg. 161, Cs. 154.—Common in Western Maine. Rare east of the Kennebec Valley. Arrives in May; breeds on trees and bushes, and lays four or five bluish-white eggs, with brown spots, in June.

67. Summer Tanager—*Pyranga æstiva* Aud., Ridg. 164, Cs. 155—Accidental straggler from the South. A specimen was obtained at Wiscasset, Maine, some years since by Dr. S. B. Cushman, to whom I am indebted for information of the fact.

FAMILY AMPELIDÆ: THE CHATTERERS.

68. Bohemian Chatterer or "Waxwing"—*Bombycilla garrula* Aud; *Ampelis garrulus* Ridg. 150, Cs. 166.—Irregular winter visitant. Although sometimes this species occurs here in large flocks, its appearance is rare. Birds of this species may always be distinguished by their chestnut-colored under tail coverts, from the cedar-birds, whose under tail coverts are white.

69. Cedar-bird. "Waxwing"—*Bombycilla cedrorum* Aud.; *Ampelis cedrorum* Ridg. 151, Cs. 167.—Abundant. Sometimes seen here in flocks in midwinter. Although commonly arriving early in the spring, its eggs are not laid until late in June and in July. Lays five yellowish-drab eggs with brown spots.

FAMILY FRINGILLIDÆ: THE FINCHES.

70. Pine Grosbeak—*Corythus enucleator* Aud.; *Pinicola enucleator* Ridg. 166, Cs. 190.—Common autumn and winter visitor from the North. The only eggs ever recorded as taken in Maine, or the United States, I believe, were laid by a caged bird in the possession of Samuel R. Carter, Esq., at Paris, Me. This gentleman's son, Mr. Jarvis L. Carter, takes especial interest in ornithology, and in the autumn of 1878 procured a pair of pine grosbeaks alive. Concerning the interesting results I quote from an explicit letter received from Paris:

"A male and female pine grosbeak were captured in December, 1878). They were exceedingly tame from the first. They thrived and seemed to bear captivity well. In the next May the female commenced laying, and deposited in all nine eggs. These eggs were greenish-blue, spotted and blotched with two shades of brown. Both birds were in one cage, and the male destroyed a part of the eggs, throwing them out of the nest. During the next winter the female suddenly died, without any apparent previous illness. The male is yet living. After moulting when the plumage was renewed, the crimson color was replaced by orange, and the former color has never returned.—SAML. R. CARTER (March 8, 1882).

Mr. Carter further informs me that various materials were given to these birds for nesting purposes, without suiting them. Among others, old birds' nests, which were diligently pulled into pieces. "Finally they accepted a cocoa-nut shell with dried grass in the bottom."

Both birds were together in one cage, and the male destroyed nearly all of the eggs by throwing them out of the nest. When first captured they would eat only fresh fruits

and seeds with hulls. If the latter were hulled for them they were refused.

Mr. Carter kindly sent me for examination the eggs which were saved from utter destruction, thus enabling me to give the following description of three that are sufficiently perfect for the purpose:

The color is blue-green, resembling that of the eggs of the chipping sparrow (*Spizella domestica* Ridg. 211, Cs. 269), sparingly spotted with dark umber brown, chiefly in dots, concentrated upon the larger end and not forming a ring around it. Blotches of pale umber brown, more dispersed and profuse than the dark dots, also center upon the larger end. The smaller end is nearly or quite immaculate. Removal of the white lining membrane shows the shell to be blue-green throughout, and the dark umber dots and paler blotches also pervade the shell to its interior surface. The shell is exteriorly smooth. The greatest longitudinal and lateral diameters of each of the three eggs examined, expressed in decimal fractions of inches, are as follows:

.93x.70—.98x.67—.97x.67.

These measurements are given in order of their exactness, the last specimen being too much fractured for a longitudinal measurement, for which the mean between the other two is given

Mr. Carter states that of the nine eggs laid by his grosbeak one was considerably larger than the others.

I once kept a pine grosbeak alive in confinement for nine months, and it proved an interesting pet. Its song was very sweet, but so subdued as to have at times a ventriloquial effect; and the notes uttered in a room sounded as if from a bird at a distance in the open air. Mr. Carter's grosbeaks were "very fond of cranberries, shelling the minute seeds and also eating the pulp." My bird manifested an especial fondness for the seeds of apples and pears, and would eagerly fly to my shoulder to take a seed from between my lips

In the summer of 1878 Mr. H. A. Purdie observed a pine grosbeak at Second Connecticut Lake, in Northern New Hampshire, "a red male feeding young the last of July and in early August. The young were able to fly. I also shot a male of the year." Mr. Purdie further informs me that he saw a pine grosbeak in June, near Edmundston, N. B., at the northern boundary of Maine. This bird was "either a female or a young male, I thought the former, and in good plumage."

It is not improbable that a few birds of this species breed in the wilderness of Northern Maine, but there has been no discovery of their nests publicly reported.

71. Cardinal Grosbeak, Virginia Redbird—*Pitylus cardinalis* Aud.; *Cardinalis virginianus* Cs. 299, Ridg. 242.—Accidental. Birds of this species have been observed at various times, but they may have been escaped cage birds, as the bright red plumage and pleasing notes of this species conduce to make the birds common pets in confinement.

72. Rose-breasted Grosbeak—*Coccoborus ludovicianus* Aud.; *Zamelodia ludoviciana* Ridg. 244, Cs. 289.—Common but never abundant. Uncommon in Eastern Maine. Arrives in May. Breeds on bushes or trees, lays four eggs, very pale green with brown blotches. The furthest East I have seen this species, was in the month of July, at the upper part of the east branch of the Penobscot River, where I observed a pair. The beautiful male gave me morning serenades from a bush within thirty feet of my camp.

73. Blue Grosbeak.—*Coccoborus cæruleus* Aud.; *Guiraca cærulea* Ridg. 246. Cs. 291.—Accidental. A rare straggler from the South. Mr. Boardman procured a single specimen in 1861, that had wandered as far East as the mouth of the St Croix River.

74. Common Crossbill—*Loxia curvirostra* Aud., Cs. 199; *Loxia curvirostra americana* Ridg. 172.—Common in coniferous forests. Resident. Breeds, and eggs have been found in February and March. I have observed crossbills of both species known in Maine making love in August, and dissection of specimens proved that they were about breeding at that time. But I am unable to state how many broods are raised each year, or in what month the eggs are most commonly laid. Mr. L. P. Rowe writes me an interesting account of two nests which he found in Franklin county, Me., the latter part of February, "one with three eggs which had the appearance of having been just laid, the other nest having five eggs with young birds well grown in them and alive when I broke the eggs. I found these nests in a spruce tree that I was cutting for camp wood. Both nests were in one tree, twenty feet from the ground, and six or eight feet apart. They were made of moss such as grows on spruce trees, and were very thick and warm. At a distance one would not distinguish the nest from a natural bunch of moss." Mr. Rowe could not state with certainty to which species the birds were.

75. White-winged Crossbill—*Loxia leucoptera* Aud.; Ridg. 173; Cs. 198.—Common in coniferous forests. Resident. Breeds.

76. Purple Finch—*Erythrospiza purpurea* Aud.; *Carpodacus purpureus* Ridg. 168; Cs. 194.—Common. Arrives in March and early in April. Breeds on trees. Its eggs, green, with very dark brown spots, are laid early in June. A few birds of this species are found here during the winter.

77. Redpoll Linnet—*Linaria minor* Aud.; *Ægiothus linaria* Ridg. 179; Cs. 207.—Common in autumn and winter, and remains until April, when it departs for more northern regions. The notes of this species resemble those of the gold finch, which associates with it in winter.

78. Pine Linnet—*Linaria pinus* Aud; *Chrysomitris pinus* Ridg., 185, Cs. 212.—Common, especially in autumn. Some birds of this species are occasionally found here in winter. Breeds on trees, and as far south as Cumberland county, in April and May, lays four pale greenish eggs spotted with brown. The following description of a nest found in Cumberland county by Mr. J. C. Mead I quote from a letter received in October, 1879. "The pine linnets (*C. pinus*) were abundant here in the winter of 1877-78, and remained as late as May 6. April 2 I took a female containing eggs, one of which was nearly ready to be laid. April 24 I found a nest of this species containing four young birds. The nest was on the branch of a "hard pine" tree, four feet from its trunk, and twenty-five feet above the water of the lake over which the branch projected. The nest was loosely built of fine twigs, mosses, and rootlets, and received most of its support from the pine needles which grew out from the branch on which it was placed."

79. Goldfinch, "Thistle-Bird"—*Carduelis tristis* Aud.; *Astragalinus tristis* Ridg. 181, Cs. 213.—Abundant. Some birds of this species are to be found here throughout each winter. Breeds on bushes and small trees, lays five bluish white eggs with brown spots around larger end, in July. Period of incubation about fifteen days.

80. Snow Bunting—*Plectrophanes nivalis* Aud.; Ridg. 186; Cs. 219.—Irregularly abundant in autumn and winter. Usually in flocks, remaining until late in March, when all disappear on the flight to Northern breeding places.

81. Lapland Lark-Bunting or Longspur—*Plectrophanes lapponica* Aud.; *Centrophanes lapponicus* Ridg. 187; Cs. 220.—Occasional winter visitant. Not common.

82. Ipswich Sparrow—*Passerculus princeps* (Maynard) Ridg. 192, Cs. 225.—Not uncommon along the coast in autumn, but comparatively rarely seen in spring. The last one March 28, 1882, at Scarboro, Cumberland county. Mr. Andrew Nelson, Jr., shot a single specimen upon the shore of Back Bay in the city of Portland, in March, 1882. The Ipswich sparrow much resembles the common Savanna sparrow of New England, and has been given rank as a distinct species within a few years. It is somewhat larger than the species mentioned, and its general coloration paler. I have seen this sparrow in Maine in December when there was several inches of snow on the ground, and long after all the Savanna sparrows had gone south; and when it first arrives here in spring (March), the ground is often deeply covered with snow. It is quite probable that a few birds of this northern species pass the winter in Maine in seasons when the snow does not become very deep on the ground.

83. Savanna Sparrow—*Emberiza savanna* Aud.; *Passerculus sandwichensis savanna* Ridg. 193a; Cs. 227. Abundant, especially along coast. Arrives early in April. Breeds on the ground in May and June. Lays five or six greenish white eggs with brown blotches. Autumn migration lasts well into October.

84. Grass Finch; Bay-winged Sparrow—*Emberiza graminea* Aud.; *Poocetes gramineus*. Ridg. 197, Cs. 232. Abundant, arrives in April. Breeds on the ground; lays from four to six greenish white eggs, with brown spots, in June. Sometimes eggs are laid before June 1. Two broods commonly raised.

85. Yellow-winged Sparrow—*Emberiza passerina* Aud.; *Coturniculus passerinus* Ridg. 198, Cs. 234. Rare. Audubon mentioned the occurrence of this species as far north as Maine. George A. Boardman, Esq., informs me that he has procured two specimens here.

[TO BE CONTINUED.]

A LITTLE MORE BEAR.

HAVING followed the many dissertations in this journal upon the habits of our black bear, I feel myself bound to add a note of information concerning this ferocious (?) quadruped of the family *Ursidæ*, so far, he or she has been viewed from a wholly savage state, but having had the pleasure of raising a male cub from three months up, I can describe its habits most truthfully as the story is in this case "first handed."

I brought this youngster sixty miles from Rowlesbury, W. Va., in the heart of the Allegheny Mountains, from an old weatherbeaten fellow, who professed to hunt and raise a few potatoes on the side of a desolate slope. As we passed his ancient log house, we saw this animal chained securely to a hickory stake driven in the ground. He was rushing frantically up and down, tugging at his chain, and looking terribly frightened. Upon our approach he backed unceremoniously into a flour barrel, where he remained until hauled out. We negotiated for him, and had the satisfaction of placing him in our wagon after a hard contested fight.

From Rowlesbury he completed his journey in a box about four by three and a half feet, barred with hickory strips. But upon getting to Rowlesbury, we had to rush for a train, and instructed our teamster to ship Master Bruin to Cumberland, Md., next morning, where we would stop over night. Next day we received a box, well boarded up, and upon opening it found our charge, tied as to his four feet, and a most fearfully constructed muzzle on his nose. From here we had little trouble in shipping him to Pittsburgh, his ultimate home.

I built him a sleeping place on the "dog house" pattern, and chained him as before to a strong stake, around which he could circulate at will, and here I had ample opportunities to study him. From morning until night he would walk up and down a path, taking in about three-quarters of the circle, and never going past his beaten tracks. In taking this exercise his head was always beyond his chain, and I never knew him, with all his cunning, to attempt to slip his collar.

At five months his teeth began to grow, and, strange to say, he was toothless up to this age, but after the fangs appeared they grew with marvelous quickness, and at six months he had as fine a set of ivories as one individual black bear could well carry. He would eat cornmeal mush, upon which I fed him exclusively until his fifteenth month, and he evinced a perfect passion for apples, pears and chestnuts. For the latter delicacy he never failed to grasp me around the waist and try to crawl up to my head, frequently poking his snout in my coat pockets. I transferred his quarters, at ten months, to a box under the house and fed him regularly upon mush, morning and evening. If at six o'clock P. M. the sumptuous repast was not forthcoming, he would tug at the chain and moan like a young calf. No matter how hungry, I could not induce him to eat meat, cooked or raw, nor would he touch a potato in any shape. Every day he would be led from his quarters into the woods, and there he was perfectly happy, rooting around dead trees and darting his long tongue eagerly out at the swarms of black ant eggs. He ignored the ants, but never missed a nest of their larvæ. He was particularly fond of "snake weed" and gobbled it up.

When the time came for returning we would have a desperate fight, he tugging and I tugging—a veritable game of "nip and tuck." When he was unable to drag me in his direction, his rage knew no bounds, and he moaned loudly and struck frantically at every object he saw, gnashing his teeth together in a truly ferocious style. He had a wholesome dread of his master, and never attempted to attack him. Only once did he approach with hostile intentions, and at the time I was standing with my back to him, holding the end of the chain. He crept cautiously to within three feet of me, and making a spring, grasped me gently by the calf of the leg and beat a hasty retreat. This was probably intended for play.

Last September he broke loose and wandered unceremoniously into a neighbor's kitchen and frightened the cook into hysterics. She undoubtedly thought his Satanic Majesty had arrived in person. From here he adjourned to my house and upon the cook trying to capture him, he struck her a resounding blow on the nasal organ, bringing as healthy a flow of "claret" as Jem Mace himself could desire. For this escapade we banished him to a local museum, where he now pines, buried in fur up to his little piggish, wicked eyes.

Taking this bear as a sample of the tribe, I should pronounce them utterly unwilling to attack a man except upon extraordinary provocation; and even then it is doubtful, for their timidity is very great, and the first and ruling impulse is to make for a tall tree and shin up with remarkable rapidity. They are extremely cunning and droll, but withal not to be trusted and never to be wholly tamed.

E. P. HODGES.

WINTER NOTES FROM NOVA SCOTIA.

DEC. 9—Our winter is now closing in, and those harbingers of blinding snow storms in prospect, the snow birds, *P. nivalis* have arrived. On the 2d of this month I observed a few flying past the house, and on referring to my journal I found that on that precise date, I had on two separate occasions recorded their first arrival. From observations made in this province during the past twenty-two years, I am inclined to believe that this bird migrates from the North with the first heavy snow storm accompanied by high winds; in fact, "keeping company" with them. In no instance have I ever observed the bird at the commencement of winter, before the first fall of snow, nor have I ever seen it at the close of winter, unless some snow was visible on the ground. The only locality I have ever seen the bird in where snow was entirely absent, was in the Bermudas, where almost every winter, a few pay a visit, albeit, an unintentional one, to those distant semi-tropical isles of the ocean, in company with numbers of other feathered denizens of Northern America, which are blown out to sea, and hurried across the wild waste of waters in the vortex of some violent, revolving gale. They there frequent the most open and exposed spots, and look quite out of their element while feeding under the shade of the palmetto trees; but they soon disappear; for, yearning for the cool embraces of northern snow drifts, they launch themselves upon the current of some favoring northerly gale, and soon, no doubt, reach their desired haven. On the 4th of this month a very large flock appeared here, and according to the popular belief we are to have a severe winter in consequence. I have, however, found that this theory does not always hold good.

WILD GOOSE, *Branta canadensis*. Dec. 11.—A flock of about sixty passed over in a westerly direction up the valley, apparently steering for the Annapolis Basin. They were coming from the direction of the Basin of Minas. There is no doubt as to the fact that flocks of geese do winter in Nova Scotia, for on several occasions they have been observed on our shores, even as far north as those of Cape Breton, in mid-winter; and according to Barnston, (see "Swans and Geese of the Hudson Bay Territories,") they have been seen at that season frequenting the open current of the St. Lawrence, near Montreal, but he states also that such an occurance was rare.

CROW, *C. americanus*.—This bird does not appear to beat all inconvenienced by the heaviest snow storms, for I have often observed it making its way against the most violent gale; indeed, it appears to be even more on the move during inclement weather in winter time than when it is fine. Possible the extreme cold may tend to increase its ravenous appetite, which appears to be always ready for either fin, flesh, or fowl. Often in very severe frost it may be seen pecking away at the old bones on the rubbish heaps in the suburbs of Halifax.

SNOW.—Have any of your readers observed a somewhat curious circumstance occurring during a violent snow storm, when in some exposed situation, the snow will form into spherical masses of all sizes, from that of a bullet to a good sized ball, and keep rolling about, driven hither and thither by the fury of the blast. The phenomenon is not one of common occurrence here, but probably to be witnessed once or twice during the winter. J. MATTHEW JONES.

SNOWY OWLS.

THE snow owl is more abundant with us in exceptionally mild and open winters. Their migrations are entirely dependant upon their food supply and not upon the weather. I am now going to start a new inquiry. What has become of the ptarmigan? When I was a boy at school and quite a bird stuffer I used to get numbers of these birds every winter. Our markets and hucksters' shops were always full of them, but now, for a number of winters, there has not been one exposed for sale, and I am informed they are now extremely irregular at Quebec, where, in former years, they were abundant. This ptarmigan question will doubtless interest some of your readers. Very few snow owls this winter.

HENRY G. VENNOR.

MONTREAL, Quebec, Jan. 6.

"J. L. D.," of Lockport, N. Y., is very wide awake as a sportsman and naturalist—else he has wonderful luck in the interest of FOREST AND STREAM. Whenever I see his initials in your columns, my mind is prepared for an item of extraordinary interest to your constituency. The wild goose note, for instance, in your issue of Dec. 21, is not likely to be matched very soon. But I can just beat his four feet eleven owl report in the number for Dec. 14, and am very proud of my ability to do so. Over thirty years ago (that is giving a clue to my age, but since gray hairs appeared in my moustache I have become reckless), when my father lived on a farm in Pompey, Onondaga county, a comrade of mine drove his cutter to our door, called me out, and said that on the bare ground, in a field over on the main road, he had just passed a large, queer-looking bird that could be shot from a cross fence within a few rods of him. It did not take me long to load a rifle and get it leveled on that bird across a lower rail of the fence, after worming my way over an intervening snow drift without scaring him away. He measured fully five feet across the wings and was a beauty and a puzzle, until some book hunted up in the village library proclaimed him *Strix nyctea*. The capture was duly reported in a Syracuse paper and my father took off his skin and stuffed it with bran. "J. L. D." can appeal to him with perfect reliance as to that *one inch more*, for, at the age of nearly ninety-one, he would not fib for such a little thing as that. Snowy has been re-latinized since then, it seems, and no wonder. One must get up early in the morning and be awake all day to keep track of the changes in scientific names of our beasts, birds and fishes. For instance, the brook trout, which even the laity had come to know as *Salmo fontinalis*, must perforce have its front name altered to *Salvelinus*. H. H. T.

NEW YORK, Jan. 8, 1883.

ZEUGLODON, AN EXTINCT CETACEAN

THE editorial in FOREST AND STREAM of the 14th inst. on the sea serpent, reminds me of the skeleton of a zeuglodon, seventy feet long, which I obtained in the Eocene or older tertiary of Clark county, Alabama, many years ago. It was on the plantation of Judge Creagh, and at from one to six feet below the surface. The judge told me that when he first went into that region, those bones were so numerous on the surface of the soil as to be in the way of its cultivation. Hence, many of them were burned. Judging from these remains, he thought some of the animals must have been more than one hundred feet long. I had dug up a vertebral column, fifty feet long, when the vertebræ became displaced, and while we were searching for their continuation, I received a note from the Judge, stating that his man had, while plowing near his house, found a skeleton near the surface, which would be more easily obtained than the one we were after, six miles distant. We left the fifty feet and instead found a continuous vertebral column and jaw bones, seventy feet long. They were shipped to New York, and are now in the Warren Museum at Boston. I published two articles about them in *Silliman's Journal*, and also notices of them elsewhere. These attracted the attention of a Mr. Koch, a German, who went to Alabama and obtained a large number of the bones of several zeuglodons, took them to New York, joined the vertebræ, and made an animal 125 feet long, which he exhibited as the *Hydrarchus* or great sea serpent. The fraud was soon exposed, and the Koch collection of the bones of the zeuglodon is now in a museum at Berlin in Germany.

S. B. BUCKLEY.

AUSTIN, Texas, Dec. 26, 1882.

NORTHERN RANGE OF THE OPOSSUM.—Long Island City, December 30, 1882.—*Editor Forest and Stream:* In regard to 'possums on Long Island, mentioned in this week's issue of FOREST AND STREAM, I would say that two, male and female, were killed in Ravenswood this summer. They had been chased into a cherry tree by the dogs during the night, and remained there until shot. Several were also killed in Bowery Bay, or Steinway's during the spring. One female had ten young ones in her pouch. Mr. Everett Smith, in "Maine Bird Notes," states that the robin generally has five eggs in its nest. In my experience of birds' nesting, extending over about twelve years, I have seen but two or three nests containing five eggs, four being the usual number, at least in this locality.—'POSSUM.

Syracuse, N. Y., Jan. 4, 1883.—While out rabbit shooting on New Year's Day, I shot and killed an opossum about three miles south of Weedsport, on the New York Central R. R. A farmer told me that there was one killed there last year in the same piece of woods in which I killed this one. Where do they come from?—F. A. MOREHOUSE.

WOODSIDE, L. I., January 8, 1883.—There was an opossum killed near Woodside, L. I., winter before last, and another supposed to be in the same neighborhood. Early last spring I found one (which had at some time lost about half of its tail) lying dead about one hundred yards from my barn. It appeared to have been mangled by dogs. A short time after I heard of two having been killed at Bowery Bay, L. I., the skin of one of which, I was informed, had been given to Harry Hill, of your city, for mounting. I have lived here more than sixty years, but have never known of opossums being found here until about three years ago. Raccoons and gray squirrels used to be plenty here, but none of late years.—D. F. BRAGAW.

A SHARP TUSSLE.—Cleveland, Dec. 30, 1882.—*Editor Forest and Stream:* The morning following the cold snap of the 16th inst., I was surprised to see a couple of male cow blackbirds feeding about the house in company with the fast-growing pest, European sparrows. I would have thought but little more of this unusual circumstance had not a shooting friend on the 18th inst. brought me number of cow birds that he shot that day on a hedge row, in company with a flight of gray snow buntings (*Plectrophanes nivalis*). The weather at this time had moderated, averaging above the freezing point. A curious experience this same fowler had on that day. Passing along the south side of a wooded hill, his attention was attracted by the gambols of a pair of chipping squirrels. All at once one of them gave the usual cry of alarm and dodged into his burrow; the other mounted the upper side of an inclined tree trunk, and hardly reached ten feet from the ground before an active screech owl, hawk-like, in broad daylight, seized him, and struggling with his prey, fell to the ground. At this moment, to the surprise of my friend, a pair of red squirrels made their appearance and commenced an attack on the pigmy owl. A load of No. 8 shot from a Parker breech-loader finished the happy family. It is to be regretted that the fight was not allowed to terminate in the usual way.—DR. E. STERLING.

A SPARROW PLAN.—Troy, N. Y., Jan. 1, 1883.—*Editor Forest and Stream:* Apropos the sparrow crusade I would suggest the following: That each city infested by them should have a sparrow club or society which would make it a point of obtaining eggs in preference to the bird; which would give boys a chance to make money without the danger attendant on gunpowder in inexperienced hands, besides being more humane, and at the same time ridding us of the pests. Boys have a natural instinct for robbing bird nests, and when they find that they can combine pleasure with profit, they will leave the singing birds alone and go for the sparrows. In regard to the egg money, I should say that about six or eight cents a dozen would be enough to stimulate them to great achievements in the nest-robbing line. If the clubs should desire to pay bounty on the birds, I think that they offer more for females than for males, say two cents apiece for females and one cent for males.—C. B. S.

JAPANESE PHEASANTS IN OREGON.—Vancouver Barracks, W. T., Dec. 4, 1882.—*Editor Forest and Stream:* The Japanese pheasants which were introduced into Oregon four years since are known to have bred. Last week one was killed on this side of the Columbia River about a mile below Vancouver and the skin (a young female) has been mounted. Two birds were seen coming across the Columbia River—here nearly a mile wide—and being thought to be blue grouse this one was shot, the other, probably a male, escaped, so there is to-day at least one Japanese pheasant in Washington Territory. A covey of young birds were seen the past summer near where the importation was set free four years ago.—T. E. W.

Game Bag and Gun.

GAME SEASONS.

A comprehensive statement of the game laws of America will be found in the issues of this journal for December 7 and 14, 1882. Individuals and game clubs are requested to inform us of the enactment of new local laws and of changes that may be made in the laws of the several States and Territories.

A DAY WITH THE GROUSE.

THERE'S joy in brown October. Up through the alders the cock springs, a ruddy rocket, whistling like the merry jingle of silver sleigh bells. A snap shot into the alder top ahead, a feather floating down a woodland vista, "Hie on, fetch," and your victory is complete, as Dash comes running in, his mouth full with the red-brown beauty.

Out on the wide marsh your dog comes to a dead point by an oozy creek. "Scaipe! scaipe!" up flip a brace of snipe and stagger away in their drunken flight. Bang! bang! thud! thud! and you lift your hat after a glorious double shot, the west wind coos your brow and plays through your hair, and you thank God for life and health, keen eye and true hand, the blue sky and the bright sun.

Away in the woodlands is a sunny glade. The white clad birch, bride of the forest, covers the hill slopes. On the heights above towers the pine; below, where the brook tinkles down the run, nestles the alder. See! your pointer halts, snuffs, swings his nose in air, then crouching crawls up the hill side. At a thick clump of young spruces he points. Soon the tip of his tail wags in uncertainty, he sniffs to right and left, then warily crawls, step by step, through the thicket, his belly almost dragging on the ground, his foot falls soft and velvety as a cat's. You know the game and their tricks, and with both barrels full cock run round to the further side of the copse.

There is Dash's head peering out of the thicket, motionless, on full point. You carefully step forward. The great silence of the forest oppresses you. You can hear your heart beat. Whir—r-r-r-r-r-r! Like a peal of thunder it rumbles through the glen. Beyond a stunted fir a flash of brown and gray bursts into air. You fire a snap shot into the thick branches, and through an opening ahead down tumbles a grand old cock grouse, turning half a dozen somersaults in his slanting fall, and striking the leaf-strewn ground with so heavy a thud that he bounds into air again and rolls down the slope.

Aha! my friend. A joy fills your sportsman heart greater than victory over ruddy cock or wily snipe can ever give.

You have laid low the feathered king of the forest; shot him fairly and mantully, a good flying shot, over a dead point.

One day in early November I drove late and leisurely out of Portland, Maine, that "beautiful city by the sea" of which Longfellow has sung.

It was a glorious Indian summer day, the winds were asleep, the clouds at rest, a bright sun shone out of a clear blue sky and the maples and birches glowed red and gold among the evergreen woods.

In the straw behind the wagon seat nestled my good old pointer Dash, as staunch and careful a dog as ever drew on game. My horse struck a brisk trot and we rattled merrily along.

My object was a day's woodcock shooting, and I had reasoned myself into the belief that I should strike the last flight of this uncertain bird.

I soon reached the first cover, hitched my horse to the fence, whistled to Dash, and plunged into the alders and birches. Through the cover and back again did I hunt but never a scent of woodcock could Dash find. Two more covers we ran through, but they were silent and deserted as the first. The last flight of woodcock had gone south, and the birds I was in quest of were now furnishing sport to my companions in arms in Massachusetts and Connecticut.

In a level patch of woods Dash made game. By the stealthy way he crawled ahead, I knew he had struck a fresh scent of grouse, so I hastened and went on abreast of him.

At a bunch of alder bushes he stiffens into a point, and a moment after a running grouse booms into the air some thirty yards in advance. I fired quickly; down she tumbled and a moment after I heard her wings beating the death tattoo on the ground. Cramming in a fresh cartridge, and calling Dash to heel, I leisurely advanced to pick up my bird, when to my astonishment she rose and flew away as vigorously as ever.

My surprise was so great that I stood and gawked at her, and never thought of firing. She flew about a hundred yards and lit in some bushes outside the woods and close to a house by the roadside. "I'll have her now surely," thought I, so working Dash very close, not permitting him to range over twenty yards ahead, I advanced. Just where I marked down the bird, Dash suddenly comes to a stiff point. The scrubby bushes came about up to his breast, his head, back and tail were stretched out into one stiff line just above the bush tops.

Fearing the bird might run again I circled round ahead of Dash and then went on in the line of his point, but no game got up. Puzzled, I retraced my steps toward Dash. There stood my good old pointer, rigid as a statue carved from marble, pointing directly at me. I advanced slowly toward him. There crouched the grouse in the bush under his very nose. I put out my hand and picked her up without resistance. She had a fatal wound in her neck.

I drove on to a long strip of cover; through it ran a wood road. Dash comes to a point on my right, then a running grouse whirs up and flies across the wood road on a diagonal. I miss him with my first but tumble him with my second barrel, a ragged heels-over-head tumble, so ludicrous that I laugh outright.

On to the schoolhouse cover. I hunt this thoroughly, though a thick, disagreeable patch, but never a cock is there. At the further end, near the railroad, I lose Dash amid the thick spruces. I whistle to him in vain, then I call aloud. I hear a whimper and a spring within ten feet of me in the close cover, and the grouse he was pointing booms across an opening in front, a clear shot. I cut her down cleanly, while a great mass of feathers float in the sunlight and drift slowly down the vista.

I soon reach the great marsh and hunt up the runs for snipe; not a sniff of one is to be had. Dash soon leaves the wet run and hunts along a thin strip of scrubby pines that fringe the creek. He makes game and I follow him, just in time to miss a grouse that rises from his point in thick cover. Dash draws on a few steps and stiffens into another point. Up gets another grouse in the very thickest of the pines. I fire a snap shot more by ear than eye, but this is a lucky day and my bird falls stone dead. Now we work along the narrow strip of woods in quest of the bird I missed. Dash works slowly. He trots ahead, pauses, looks around, snuffs the air, runs ahead a few steps, stops, lifts up one fore-leg trembling, and then crawls on again. I keep abreast of him in the open creek. At the very end of the strip of scrub pines Dash stiffens out into a point. The next moment a noble grouse steps out beyond the furthest tree, and, taking wing, flies across the run like a duck directly over my head. Ah! what a rare open shot at this foxy bird! I fire, and he teeters down an inclined plane and strikes the wet rushy snipe ground, dead.

I drive on to Manson's, whose house sits on a rocky knoll that juts out into the marsh and overlooks the vast salty plain. Here I get a glass of milk, eat my lunch, and have a good rest while my horse is munching his oats. Driving home I stop and hunt a gamy-looking bit of woods. Dash strikes the scent of a grouse and works on this scent slowly and cautiously full quarter of an hour before he comes to a point. I keep some twenty yards to his right and abreast of him. The bird rises in front of Dash, his whir sounds like rumbling thunder in the still evening woods. He cuts across me from left to right. I catch but a glimpse of him through the pine tops and fire. A moment's silence, then "whack" off to the right. What was that? It sounded like some one striking a board fence with a club. I hasten in the direction of the sound. There is the board fence; there is Dash on a point, and there, just through the rails, lies the grouse wing-broken. A dainty little club was he to strike a fence with.

I drove home over the freezing ground tired and happy. My dog had found and pointed six grouse. I had shot them all over his point in eight shots. The best grouse shooting of my life. The six birds weighed eight pounds. The largest, an old cock full ruffed, weighed a pound and a half.

A few days after I dropped in on my friend W. S., whose popularity as Mayor of Portland is only equalled by his fame as a good fellow, a delightful conversationalist and a thoroughgoing sportsman. To him I recounted my day's sport.

"Six grouse in eight shots over points," he repeated, "the best shooting round Portland this fall, and you'll never do it again." And sure enough I never have.

I never did it before either, nor anything like it, although how many times I have fired eight shots at grouse without touching a feather I would not like to mention.

If a man can bag one grouse in three shots every day in the week, he is a crack shot, and can hold his own with anyone. One shot in five is good, and somehow long experience has taught me to have a respect for a man who can shoot a grouse flying anyhow, regardless of the number of shots fired.

One reason of my exceptionally good luck doubtless was that I felt fully up to shooting; brim full of life and health. Another equally important reason, I was able to take everything easily and leisurely all day.

But of one thing I am sure, and many subsequent days' sport have proved it.

A man can have good grouse shooting on the wing and over points almost anywhere in New England. The prime requisite is an old, thoroughly broken, cautious and staunch pointer. For the rest, keep well up with your dog, for the wily game will sometimes run and take to wing, just when your dog is coming to a point, utterly regardless of his feelings or your own. I well know that it is a great temptation to see a grouse sitting on the ground or in a tree, especially after you have missed a half dozen shots flying, but I am sure no sportsman shoots this noble bird sitting but he is sorry for it afterward.

Of course I do not speak of the grouse found in the deep woods of Northern Maine or Canada. There they are so tame that it is almost impossible to drive them to take wing, and the tourist is compelled to bowl over on the ground as many as he wants for the camp pot.

But anywhere in Maine, where cleared land is the rule, and forest growth the exception, where the cover is in small patches, along the runs and up the hill sides, and where the grouse is compelled to frequently take wing and make long flights from one cover to another, in such districts the sportsman, with his staunch old pointer, may have throughout our mellow autumn time as royal wing shooting as this continent affords, at the king of American game birds—the ruffed grouse.

MARSTRAND.

MARTHA'S VINEYARD HEATH-HENS.

A CORRESPONDENT, in a late issue of your paper, asks about "heth hens," or heath-hens on Martha's Vineyard. This inquiry has been answered by "S. C. C.," who evidently is in error as to location and birds. He will, therefore, pardon us if we try to set the matter right. In the year 1641 one Thomas Mayhew obtained from Lord Sterling a grant, the land now known as Martha's Vineyard and the neighboring islands. In 1642 he sent his only son, Thomas, a young man of 21 years, who had prepared himself for the ministry, to Martha's Vineyard, and he, with some others, settled in Edgartown and finally became their pastor. The elder Mayhew soon after came to Edgartown and became Governor of Martha's Vineyard and the adjacent islands. Some years afterward Gov. Mayhew sold the Island of Naushon (one of the Elizabeth Islands) to Waitt Winthrop. It remained in the Winthrop family some years and was afterward sold to a gentleman named Bowdoin, who was afterward Lieut.-Governor of Massachusetts. Mr. Bowdoin succeeded in getting a law prohibiting shooting on his possession except by special permission. This was fifty years or more ago and the law is now in force. The island (Naushon) has since passed through a number of hands and is now the property of John M. Forbes, Esq., of Boston. It is well stocked with deer, but we doubt if there are any heath-hens there now, although some were carried from Martha's Vineyard and placed on the island many years ago.

So we are led to believe that "S. C. C." did not land upon Martha's Vineyard but upon Naushon. Edgartown has for the past fifty years been, until the decline of whaling, a thriving whaling port, many ships being owned there and fitted for voyages all over the world. Now about the "heth"-hens. They are not the pinnated grouse or prairie chicken. They are a larger bird and lack the bags of yellow skin on the side of the neck which the male grouse invariably has. At present the heath-hen is found nowhere in the world except on Martha's Vineyard, and possibly on

Manchon. The birds are natives and have been there since the memory of man. They are a bird of very slow and short flight. Years ago when they were more plenty than at the present time, they have been seen to fall in the water while attempting to fly across the harbor of Edgartown, a distance of perhaps 300 yards. There are persons now living in Edgartown who have seen them fall and picked them out of the water, pushing a boat off to get them.

At the present time a good many are killed every year by persons visiting Oak Bluff, not that any one person succeeds in getting many, but a good many go after them "on the quiet" so that more or less are killed every year. The undergrowth on the island is, however, very thick and affords the most excellent cover, as in many places the growth is so thick as to preclude the use of a dog. It is not likely they can be killed off, even were there no law. In the summer the ground is hot and sandy and covered by huckleberry bushes, whortleberry bushes and blackberry vines to the height of three feet or more, and so interlaced as to make it impossible to use a dog. Quite often the birds are seen on the roads convenient to a thicket seemingly quite tame, allowing a team to pass quite near before taking flight.

The many miles of cover which they have, and the comparative scarcity of the birds, make it difficult to find them, although when a bevy is found, their destruction is easy, for their flight is an open one, and quite different from the shot one gets at an old partridge through the woods. The writer has never shot one yet, although he fears, were he to see one rise handy, if his gun were ready, the law might be broken. He has seen many that were shot, and knows the bird to be different from the pinnated grouse. Possibly their different food, climate and other circumstances may have combined to make them different in size and plumage from their relations, the prairie chicken. "HETH"-HEN.

BOSTON, Dec. 20, 1882.

[Our correspondent will have to produce stronger evidence than we think is at all feasible to convince ornithologists that the heath-hen of Martha's Vineyard is not the pinnated grouse.]

SNOW-SHOEING FOR MOOSE.

TOLD IN A FAMILIAR LETTER WRITTEN FROM THE CANADIAN BACKWOODS TO A FRIEND IN PERTH, ONTARIO.

Wild Duck Lake, Nov. 29, 1882.

Your letter was a long time in coming up here, as I only received it the other day. There is really not so much [illegible] of life in one unacquainted with it would suppose. I am living at the farm, and certainly our style of living is better than the average well-to-do farmer of Ontario, and we have some luxuries which you very seldom see in Toronto at this season. I don't think you often see tender moose steaks or fresh trout, pike or pickerel [illegible] we have them in abundance, and then we have [illegible] vegetables, etc.; and we have also a man [illegible] to keep house for us, so that on the whole we are very comfortable. Sometimes a fellow might feel lonesome [illegible] we receive the mail twice a week [illegible] the news of the outside world [illegible] that would interest [illegible] an account of a [illegible]

[illegible] I might as well tell you that this has [illegible] for hunting moose, as until a few days [illegible] single thaw of any consequence. No [illegible] is, as long as there is no crust [illegible] at such a pace as to soon tire a young and [illegible] hunter or even an Indian. A moose, if not [illegible] can go from ten to fifteen miles at a stretch when there is no crust; and when the [illegible] goes down to his knees in [illegible] his snow-shoes are extremely liable to [illegible] away him further. When the crust has not formed, the Indians usually shoot them by creeping up while the moose are enjoying a snooze, but this is a difficult and precarious way. It is not a very easy thing to do to advance noiselessly upon such easily roused animals as moose, and walking in such awkward things as snow-shoes, and unless you do, your chances of securing a moose are pretty slim. With this rather long preamble I will begin my description.

Two young Englishmen, friends of H., had expressed themselves as desirous of knocking over some moose, so Humphrey invited them up to spend a few days in the backwoods. One of them is rather a swell in his way—Captain S——; I suppose you have heard of him. The other, a Captain W——, of the Royal Engineers. S—— had never "roughed it" before. W——, however, had been on the B. N. A. and U. S. boundary survey, and had also shot moose in Nova Scotia, so he had had considerable experience.

They arrived on Saturday, and not to lose any time, we started the next morning, having first secured the services of an Indian to pilot us to the hunting grounds. I hope you will not be very much shocked at our going moose hunting on Sunday, for you know in the backwoods one day is the same as another. We walked about four or five miles out to the place where we expected to meet the moose; but after tramping round and round a hard wood hill, and thoroughly exploring every place that seemed at all likely to harbor a herd of moose, a halt was called, and when the different parties came in we had a "council of war" as to what was the best course to pursue. We at last agreed to take another direction and again we commenced tramping, but it was no use, not a fresh track could be seen anywhere. It was quite evident that the moose had been there in the fall, for all around us we could see where the twigs of the soft maple had been snipped off by the moose's sharp teeth. At last we gave up in disgust and returned home, leaving, however, the Indian to find out some fresh tracks, planning the next day to make mince meat of the moose.

Next morning, to our supreme disgust, it was raining "cats and dogs." However, we were not going to let rain or anything else keep us back; so snow-shoes were strapped on, and we again set forth, bound to conquer or die. W—— had sprained his foot the day before, so he did not accompany us. We started earlier this day, and also took some bread and pork and tea to make our dinner in the bush. We tramped along for an hour or two, and at length arrived at the fresh tracks the Indian had discovered the day before. The track was quite fresh and easily followed, as it looked something like a drain. Our guns were got in order and silently, as Indian like, we commenced following the track. Our party numbered six, two Indians, H——, S——, Newton and myself. Newton was the fellow who drove our guests up from Pembroke. He is a comical "cuss," full of fun and capable of standing any amount of chaff, and he got plenty of it. For the first mile or so we were too excited to make any fun, but when we reached the hard wood hill, for which the moose was making, and did not find our game, we were not so particular, and the "fun grew fast and furious." At this season (*i. e.*, March) moose are generally "yarded" up in hills where the soft maple grows plentifully, as that is their chief food in the winter. When this hard wood hill was reached and passed, and still no signs of the moose except their broad track, S——, Newton and myself, who were in the rear, commenced our little games, and the Indians were usually some distance ahead. Newton did not know much about snow-shoeing, so he was continually upsetting himself into the snow, and we, of course, were continually exploding into roars of laughter. You must remember that at this time it was raining hard enough to damp the spirits of almost anyone, and besides that, we were forcing ourselves through a thick balsam clump—and of all the things for upsetting the uncautious snow-shoer give me a thick balsam bush. However, notwithstanding the rain, bad snow-shoeing and the balsam bushes, we enjoyed ourselves thoroughly. Some one of the three was sure to be down pretty often, and whoever it was he was sure to get laughed at. When a fellow gets upset on snow-shoes he is never sympathized with; it is too comical a sight not to laugh at. Toward twelve we began to feel a little tired and began to wish the leaders would stop for dinner, and at last when we came to a tremendous cropper over a hidden branch we voted for a rest. After our rest we trampled on and soon overhauled the vanguard engaged in preparing our dinner over a roaring fire.

After we had stowed away a considerable amount of pork and bread, we started again. All that afternoon we walked steadily on, and at last we found fresh tracks made a short time before. Our chaffing was hushed "instanter," and silently we followed the dark form of the Indian, dimly visible through the rain. For about fifteen minutes we kept on, and then we found by the increased length of the stride of the moose and the deeper tracks he plowed that he had heard us and was now legging it like Old Boots for the devil knows where. We stopped and debated whether we would follow on or return home, but we were pretty well tired and it was getting late. The moose, too, had been traveling in a circle and was now on his old track, so that he would have the pull on us there. We reached home that night pretty well used up after about the worst tramp I ever had. We had not walked over 16 or 18 miles, but then the walking was so bad, especially a stretch on a lake of a mile or two on the way home. The wind and rain were in our faces and the snow so heavy that our snow-shoes seemed weighted with lead.

The next day we rested, and that night it froze and formed a crust strong enough to impede materially the progress of the moose. We started early, driving out to the shanty, nine miles, for breakfast. Leaving there about half past eight we tramped for two or three miles before we saw any tracks. We soon started two moose, and started after them with the intention of following them until we or they dropped.

The moose soon became separated, and we all followed one, which made for some hills close by, up which he went like a shot, we after him like wasps after an adventurous school boy. The country the moose made for seemed to be all hills and valleys, and as the moose kept a course right across high hills and deep valleys we were forced to follow, and consequently found it pretty hard work. It's awfully telling work going up a steep hill on snow-shoes. Going down is easy enough, for a chap has to take tremendous long strides to keep from going on his head. We had our usual amount of jokes, chaffing, tumbles, etc., etc., and altogether were as "merry as a marriage bell." It was three o'clock in the afternoon when we ran the moose down in a balsam swamp, and S—— dropped him with a bullet through the brain. It was after dark when we reached the shanty; we took supper there and drove home after walking rather more than twenty-five miles. Our guests left us the next day, and as the weather has not been favorable we have not been out since. That is the extent of my moose hunting in the backwoods of Canada.

There are plenty of partridges in the bush, and I expect some ducks in a few days, when the river opens. Fishing through the ice occupies a considerable part of my time. I think I have given you a pretty long account of my adventures, and as I suppose you are pretty well bored with the length of this letter, I will cut it as short as possible. Some men coming in from the shanty to-night brought the news that the bears are out in force around a deserted shanty. This week I intend having a lick at them. Yours,

J. M. H.

GUINEA FOWL AS GAME BIRDS.

YEARS ago, when a boy, the writer resided on a large farm in Western New York. At that time his father took considerable interest in the breeding and raising of "guineas." They were carefully tended during the winter, but when turned out in the spring would not associate with the domestic fowl or lay their eggs in orderly fashion in the henhouse or barns, but invariably sought some out-of-the-way and secluded place for laying, setting and hatching. When hatched, the good mother hen would beguile her brood to a neighboring patch of woods. Here they passed the summer taking care of themselves, and seldom appearing in the barnyard.

When needed for the table it became the writer's duty to seek them. This he usually did with the aid of a "yaller" dog and shotgun or rifle. When hurriedly pressed for meat he dispensed with the dog, and simply stalked and potted them, shooting them "on the wing or on the head, or on the tail, or anywhere he could," as the old nigger said about the quail. Paterfamilias, however, was rather careful of his guineas, and it was seldom that the writer received permission to go out and hunt them "for fun." When this permission was obtained, the "yaller" dog (most bull-terrier, the rest uncertain) was asked to assist.

This dog would run anything, whether on four or two legs, including squirrels, 'coons, woodchucks, skunks, stray hogs, cattle, partridges, guineas or tramps. When given to understand that we were after guineas, he would, on sighting them (he didn't appear to use his nose on feather), give full chase, and either flush them or tree them. In the latter case they were an easy prey; in the former they were frequently flushed beyond gunshot, and on a second approach would flush more quickly and take a longer flight. At the beginning of the season the gudewife was usually satisfied with the bag, but after they had been shot at for a few weeks they became quite wild and difficult of approach. How these birds would lie to a setter or pointer the writer cannot say, as in those days he knew of but one "bird dog" within a radius of twelve miles.

The foregoing is preliminary to the suggestion that some one who has the opportunity turn out in suitable cover a few pairs of these birds next spring, and then in the autumn seek them in proper fashion with setter or pointer. The experiment will not cost much, and it may succeed in giving us a semi-game bird, equal for sporting purposes to the semi-domesticated pheasant that our English cousins delight to slaughter. Who will try and tell us this time next year what they know of guinea-shooting? BRINDLE.

PENNSYVANIA DEER SHOOTING.

ON Wednesday, the eight day of November, which, by the way, was the day after the election of State officers, two of my brother sportsmen and myself concluded we better pack up and go up Salt River or to the wilds of Forest County on a deer hunt? We chose the latter, and accordingly packed our traps, cleaned up our rifles, and with a supply of provision enough to last a month, and our good dog Cliff as a catcher, we started, taking the early morning train on the Pittsburgh, Bradford and Buffalo Railroad for Marionville Station, about forty miles from our town. There we hired a team to take us to the old Buffalo farm, about five miles from the station. This was our old rendezvous, and here we have hunted together for a number of seasons.

We found deer plentiful and in good condition. Everything was in favor of the hunter, and up to the 14th of December we killed twenty-six deer. Thinking this enough for one season, and the snow being nearly two feet deep, we came out. The writer claims having killed the largest deer of all that were killed in Forest County; it was a male, and weighed, with the entrails out, 216 pounds. Mr. C. B. Hunt, of New York, was with us a week, and he killed a buck weighing about two hundred pounds, and all hunters who saw the deer agree that it had the largest and finest antlers of any ever shipped out of these woods.

Never before were there as many hunters on there as this season; they came from every quarter; hunters with their suits of duck, with many pockets (oh, what a noise the tripshin would make whipping on those suits), and rifles and guns of every description; the native with his long shooting rifle and the big-balled gun; the single breech-loader and the repeater.

The hunting, or open season, for deer, I think, is too long, running from October 1 to December 31. Two or three years of such slaughtering of deer as has been going on this season, will leave very few, if any. If I were to make an estimate of the number killed in this one county, I should put it at least at one thousand. I hope that the law makers of Pennsylvania will change this particular game law, and make the open season for deer commence November 1, and expire December 15th, thus giving us six weeks; and it's enough for any honest hunter. LAUGHING GWL.

ELK CITY, PA., December 29, 1882.

NOTES FROM WORCESTER.

THE bird shooting season just closed by law was closed practically the last week in November. It was a disappointment to some to be obliged to stop so suddenly, as partridges were quite plenty, and quail more abundant than for many years. But now that the season is over, all agree that it was a good thing that the snow came and cut off a month of the open season. Certain it is that we have a good supply of partridges and quail left over, and if they winter well, and a good breeding season follows, sportsmen can look confidently forward to good shooting in 1883. Last spring it was a common remark that there were more woodcock here than had been known for a long time. They were here in June with their young broods. Then came the long drouth, and the birds nearly all disappeared; that, however, did not trouble us much, for most of the sportsmen here care little for summer shooting, and it was generally believed that the birds had moved North, and would give us a call in the flight season.

The experience of several of our club went far to confirm this belief. One gentleman, who spent his vacation in Canada in order to avoid the "hay fever," had a perfect picnic with the woodcock. Several others, who went on short trips in the month of August, found most excellent cock shooting. We, therefore, looked for a good flight. The fall rains came and the covers seemed in excellent condition, but somehow the frosty nights failed to bring the birds, and day after day we beat over our best covers in vain. The birds didn't pass this way, and we have never been able to learn what route they went. We hope they will come and see us next year.

A good many of our club keep records of their shooting, and, as far as I have been able to get them, the figures show fully double the number of partridges as compared to last year, while in the woodcock column there is quite as great a falling off. The figures also show that it has been an unusually good year for quail.

For many years the spacious cigar and tobacco store of M. E. Shattuck, Esq., has been the rendezvous of the Worcester fox hunters, or rather the "Fur Company," as it is commonly called. Nearly every evening during the fox hunting season several of the comfortable arm chairs may be found filled with members of the "fraternity." A good many of the bird shooters also drop in here not then owing smoke, and linger a little just to hear how "the old dog took him away to the east'ard out o' hearin', and then after a while brought him back over that knob, and I shot at him just as he went behind a tussock and missed him," etc., etc.

The present fox hunting season has been of unusual interest, owing to the fact that two black foxes have been killed in this vicinity. The first one was killed about two months ago by Alvin Fisher of Rutland. It was thought to be a young fox, and was coal black except a few long hairs which were tipped with white. It was hand-somely mounted by Mr. Forbush, a local taxidermist, and sold to the Boston Society of Natural History for forty dollars.

The last one was killed on Christmas Day by Henry Locke, about three miles from the city hall on the road to Boylston, and was indeed a beautiful animal. While the color was precisely the same as the first one, it was much larger, and being killed later in the season, the fur was much better. There was some discussion as to the ownership, as Mr. Locke acknowledged that his dog did not start the fox. Some five or six men and about the same number of dogs were in the chase. All the dogs, including Mr. Locke's, came up on the dead fox. But as no one else had shot at the fox there could be no question about Mr. Locke's being the rightful owner under the rules which have governed the party for the past fifteen years. He has sold his prize to

Mr. Kinney, the local gun dealer, who will either have it mounted, or else have the skin tanned and placed upon a rug.

As the fox hunting season is a little more than half over, the score to date may be of interest to some of the readers of the FOREST AND STREAM. Mr. Kinney hunts this season with Mr John M. White, proprietor of the Tourtellotte House in Millbury, and they own together a splendid pack of hounds, six in number. Mr. White occasionally has a guest who wants to go out and see how the thing is done. The party have killed twelve foxes, nine of which were killed by Mr. White. The score follows:

John M. White and party, 12; John A. Slocum, 6; Leonard Rand, 5; Henry Locke, 4; John R. Thayer, 3; E. H. Smith, 2; N. S. Harrington, 1; Mr. French, 3; total, 36.

The club held a pleasant glass ball shoot on Christmas Day. Now that the hunting season is really over, the club will without doubt inaugurate the weekly shoots, and the club house at the lake will again be a lively place on Friday afternoons.

There has been much good weather the past month for fishing through the ice, and it has been faithfully improved by the local fishermen, and some big catches have been reported. Last Saturday, Dec. 30, a party of five went to the adjoining town of Grafton, and caught 131 pickerel, weighing ninety pounds. K.

WORCESTER, Mass., Jan. 1, 1883.

CARIBOU AT TIM POND.

HAVING received a letter from Kennedy Smith that the caribou had appeared on his pond, a friend and myself arrived at his house Friday evening, Dec. 22. Saturday morning Kennedy and his son, Edgar, started us off for the pond, which we reached about five the same day. After a good night's rest in one of his log huts, Edgar and I went down to the pond, where we saw some four caribou. We immediately started along the east shore, keeping well back in the woods. Owing to the great depth of snow we were four hours in getting around within shooting distance. Then I counted twenty-five on the pond. We tried to get a little nearer, and after half an hour's walk managed to get within a hundred yards of seven, all the others having left. We cautiously crept up to the edge of the pond, and after waiting about ten minutes in hopes the caribou would come nearer, I fired at a large buck. Before the others had recovered from their surprise I shot two more. They then started off and I fired the two remaining cartridges, killing two others, the last being 225 yards distant. I killed the five with five shots, using a Winchester Express, which holds five cartridges. I know that many of Smith's friends doubt the abundance of game at his pond, but if one can stand a little roughing and cold weather they will be warmly welcomed by "old Ken," as he is familiarly called, and they will be repaid by spending a few days with him during December. We saw many fresh tracks of deer, but the law coming on January 1 prevented my remaining. I have hunted caribou in Nova Scotia and New Brunswick, but advise all who wish success to go with Kennedy to his pond. E. W. DAVIS.

OUR CHICAGO LETTER.

[From a Regular Chicago Correspondent.]

THE game law, as far as concerns everything that can at present be killed, closes for this section of the country Jan 1. The boys will have nothing to fall back upon but club house pigeon shoots and the regular little entertainments they always give at the club houses at this season of the year. The only law now open about Chicago is that on ducks, and, alas, there are no ducks! The law closed on deer, quail, partridge, etc., in Michigan, Wisconsin, Indiana and Illinois, Monday. There are few of our hunters out now. Messrs. G. Newberry and J. J. Gore have just got back from a long stay about Emporia, Kansas, where they got plenty of quail. They had a pleasant time. J. Newton is at Centralia hunting, and Mr. Lawson Smith has gone to Tennessee about Hermit's Bay for ducks. E. T. Martin is at Fountain Bluff, in Lower Illinois, on the Mississippi River, duck hunting. He sends word back that in the marshes about that place there are plenty of mallards and teal, and that if the weather keeps open a while longer there will be more there yet. The feeding is fine. This is just a few miles above Cairo, and surprises the boys, who thought the ducks had winged their flight further south.

There was no trouble to amount to anything last week at the Tolleston Gun Club grounds, and in consequence there is nothing to send to the FOREST AND STREAM. By the way, Chicago sportsmen, happily, do not wait for their home papers to publish late news of local matters. The report of the Tolleston Club case, for example, which has not yet been published here, they may find precisely set forth in the FOREST AND STREAM, with the full opinion of Judge Feild, something like three or four weeks ago.

There is a little item that will interest the boys, but it must not go any further than the FOREST AND STREAM and its tens of thousands of readers. It would cause a worthy man to blush. This is a rarity for one of his ilk, but he does not like his name in print, connected with sportsmen's matters. This we think a false modesty. It never injures a good business man to be considered a lover of healthy recreation and sport. Well, now for the item. Mr Wirt Dexter, the well-known lawyer, is having built for himself and friends' use a fine, large hunting boat at New Boston, on the Mississippi River. This point is famous in the spring and fall for ducks. There is probably not a better hunting place in the entire West than New Boston Bay. The boat is to be a large cabin boat, little steam engine, screw propeller, and fitted out elegantly and thoroughly for hunting trips. It will be ready by spring, and Mr Dexter will open the season then by a long hunt. He has ordered everything necessary for fitting out this boat.

At the English Lake Gun Club grounds last Thursday, there was a pleasant party of sportsmen and members present and they had a fine shoot. They used up about 500 pigeons and then turned their attention to turkeys. At the the latter Messrs. Cantield and Mears carried off the honors. It was a successful shoot, though there were no medals up. Only sweep-take purses went that trip. There will soon be another match. Of the other shoots last Monday, Christmas day, there was a good one at Pullman and a sweepstake pigeon shoot at Grand Crossing. The Tolleston Gun Club held one of their *recherché* club shoots at their grounds Friday. They had wild pigeons and turkeys and it was a pleasant affair. It is never possible, however, to get any particulars of these events from the club members, so desirous are they of not seeing their names in print. There will be a grand ball, pigeon and turkey tournament New Year's Day, at Grand Crossing, under the auspices of John Watson and the Kleinmans. These veterans can always make a success of anything they put their attention to in the sporting line, and this will surely prove no exception. It will be the turn of the Mak-Saw-Ba Club boys to hold some sort of a festivity soon. This will about finish the rounds. The regular medal shoot of the South End Club occurred at Grand Crossing week before last and there was a large attendance of club members. The entries were fair, and in the medal shoot, pigeons, 28 yards rise, there were ten entries. M. J. Eich, A. P. Pond and H. Scott, got 11 birds out of a possible 12 and tied for first place. In the shoot-off Eich and Pond tied at five birds and twice at three birds. M. J. Eich won in the fourth tie shoot-off at the birds, killing them straight. The medal was formerly held by Dr. Hutchinson but now belongs to Eich.

CHICAGO, Dec. 29.

PROTECTION FOR QUAIL.

IN your paper of the 28th I see a letter from B. B. H., referring to the protection of quail on Robbin's Island. I have had quail shelters on my grounds for years past, and they have proved a great success. Mine are a little different from the ones mentioned. I had them built in letter A shape, sixteen feet long. They are made of unthreshed rye straw or corn stalks. I have the snow carefully swept away from the hut whenever we had a storm. Feed is strewn under the hut every two or three days, and the quail take to these feeding places at once, and come there regularly. But one thing B. B. H. has overlooked—that vermin of all kinds will find out these places as quickly as do the quail; therefore I have traps going around the shelters, and many an owl have we taken. I consider owls much more destructive than hawks; the latter you can shoot, but owls, since they are prowling around at night, are very much more destructive.

If all our sportsmen would only do something for the quail in the winter our shooting would improve, but, unfortunately, when the shooting season is over the majority never give the quail a thought.

Traps are most necessary and easily handled. Wherever we discover a killed rabbit, or mouse or bird we put up a trap, baited with rabbit; these make the best bait, and we always catch the robber. Vermin must be killed promptly; attention must be paid to game if sportsmen want to enjoy shooting. I am doing it, and have been very successful.

CROXTETH.

NEVERSINK LODGE, Orange County, N. Y.

THE NEW YORK ASSOCIATION.

THE annual meeting of the New York (City) Association for the Protection of Fish and Game was held on the evening of the 8th inst., at Angear & Croghan's, 69 Madison avenue, Mr. Benj. L. Ludington, Vice-President, in the chair. The report of the Treasurer showed a balance on hand after all expenses had been paid of $1,404.95. In addition to this the association has invested, in bond and mortgage, $6,500. Mr. Thomas N. Cuthbert, Secretary, read a letter from Mr. Charles Hallock, a member of the association, dated Palestine, Texas, December 21, in which that gentleman says: "I have had a few days' fine sport on the Rio Grande among the blue quail, in company with Major Sumner of Fort McIntosh. The eastern boundary line runs from Corpus Christi to Colorado Springs on the Texas Pacific Railroad. The Arizona and Mascena quail are found further to the southwest. The blue quail is, perhaps, larger than Eastern 'Bob White,' and is a very beautifully crested bird, which blends the colors of the Northern bluebird. His head was also tipped with dark spots on the breast and shoulders."

A letter from the president of the association, Hon. R. B. Roosevelt, was read, in which he says he will probably spend the winter in Florida, and that he and his companion, Mr. Green, will observe the habits of the fishes as far as possible, in the hope of learning something of the spawning of the bluefish and the striped bass. Mr. Abel Crook sent a communication to the association in reference to allowing venison from the West to be sold after Jan. 1. There was but little discussion of the question, which was referred to the committee on game laws. In former years the association has permitted venison to be sold in the city until February by declining to prosecute dealers, and so allowing much of the Western meat to be disposed of. This year they notified dealers that the sale would not be permitted after the legal time, and the absence of venison from the city markets shows the influence of the society. The Adirondack region was found to be contributing "Western" venison up to February, hence the change.

Mr. Fred Mather had been invited to talk about Adirondack fishes. He said that he had made a collection of them at the request of Mr. Verplanck Colvin, Supt. of the Adirondack survey in order to determine the number of species of fishes inhabiting the Adirondack waters, and to gain such facts as were possible as to their distribution and habits. The Adirondack region is not rich in the number of its species, owing to the elevation of the country and consequent coldness of the water. At the same time there are found there fishes—such as suckers, sunfish, etc.—which are popularly supposed only to inhabit warm waters. He had gathered many small fishes of no interest to anglers, but of great interest to the naturalist, and would send the collection, accompanied by a map showing their distribution, to the International Fishery Exhibition, which opens in London in May. Several members asked questions concerning some scientific distinctions between all fishes, which were explained in a manner that lightened the dry technicalities by a touch of humor. In concluding, Mr. Mather announced that though it was generally supposed eels did not exist in the waters of the Adirondack region, he had found them in several of the lakes.

Mr. Fayette S. Giles brought up the subject of the State Game Protectors, and asked Mr. Mather if he had not facilities for knowing something of their efficiency, and if so, if he would not give the association such information as he possessed. Mr. Mather replied: "From my connection with the paper devoted to field sports, I have had occasion to write to the Game Protectors and to read of their operations, and have watched their actions closely. Some of them seem to be of little use and others have been active. One in particular I know to have done excellent service in the Adirondack region, and to have spent his own money to prosecute offenders. This is W. P. Dodge, of Prospect, Oneida county. I never met him, and consequently have no personal bias in his favor. The appointments should have no relation to politics, and the force should be increased by good men, selected for their fitness alone."

The following officers were elected for the ensuing year: Robert B. Roosevelt, President; Benjamin L. Ludington, Vice-President; Thomas N. Cuthbert, Secretary and Treasurer; Counsel—Charles E. Whitehead; Executive Committee—Dr. Stephen A. Main, Dr. John W. Greene, and Alfred Wagstaff. A game dinner of oysters, terrapin and canvas back duck, followed, and many enjoyable things were said.

TEXAS GAME LAWS.

Editor Forest and Stream:

I note in your issue a request for advice of new game laws. The Texas law quoted by you has been amended by our Legislature so that the open seasons are as follows:

Deer, June 1 to Dec. 1.
Wild Turkey, Sept. 15 to May 15.
Ruffed Grouse, July 31 to March 1.
Quail, Sept. 1 to March 1.

Our game laws, however, exist, I am sorry to say, in name only, and are but little if any protection to game. Our lawmakers saw fit to exempt sixty nine counties, some of which are the oldest and most populous of the State, besides exempting all unorganized counties attached to same for judicial purposes, which gives a total of about 100 counties in the State that are exempt from any of the game laws. The exempt counties suffer as much danger during the closed season from hunters from adjoining counties as from local hunters; and the combined efforts of the two classes will soon extinguish the game. It is also a common practice for parties to kill game in unexempt counties and claim that it was killed in the adjoining and exempt county. Our law must be made to apply to all organized counties alike, and provide efficient game commissioners before it is of much use, as our civil officers take but little interest in the enforcement of such minor matters as they consider them.

SUBSCRIBER.

KINGSBURY, Texas, Dec. 27.

"IS AN AIR-SPACE DANGEROUS?"

WHILE I should never shoulder my rifle to shoot it with a ball away or apart from the powder charge, I will respectfully refer you to C. M. Wilcox's (U. S. Army) work on "Rifles and Rifle Practice," published 1859, New York, by D. Van Nostrand, 192 Broadway, pages 187, 188 and 189, describing the Swiss federal rifle. I will quote a part of a sentence: "The rammer is so made that it presses the ball down, but not upon the powder (thus leaving an interval) being arrested at the muzzle by a projection on the rammer, for that purpose at 2.9 inches from the head." The calibre 0.41 inch, length of ball 1.0039 inch, weight 257 grains, charge 62 grains. See page 181 as to the Austrian tige carbine. "The tige is used simply to support the ball, thus preserving an interval between it and the powder," etc. D.

SOMERVILLE, Mass., Dec. 16, 1882.

During my target practice with muzzle-loading rifles I have fired many bullets from the point in the barrel where the short guide starter left them, forgetting to ram them home with the long driver, but have never in a single instance bulged one. I used rifles weighing from ten to fourteen pounds, with about one hundred grains of Hazard's sea-shooting powder.

On the other hand, I have bulged a ten-pound rifle made by G. H. Ferris, of Utica, the bore of which was freed or enlarged toward the breech, so much so that the ball, after entering the muzzle some four or six inches, could be seated on the powder with a slight push with the driver; this I had made to fit the sharp pointed bullet I was using, that it might not bruise the point, but it did not fit well and would adhere to it and draw it back into the barrel, till the bore became narrow enough to disengage it from the rod, which in this case was about the middle of the barrel. I fired it from this point, and upon attempting to reload discovered the damage, which amounted to reboring the barrel.

Now the difference as I see it is this: The ball in the target rifle was left where the bore was narrowest, which the ball perfectly filled, leaving no room for the gas to escape by it, while in the rifle that was bulged the ball fitted so loosely as to allow the gas to escape by it, thereby bulging the barrel.

I do not believe it possible to bulge a rifle of ordinary thickness if the ball perfectly fits the bore. A. B. COBB.

ROCKLAND, Me.

It was something else than an air space that burst "Bullseye's" rifle. At the last Creedmoor shoot, 200yds., off-hand, two of the competitors made scores respectively of 121 and 120 out of a possible 125. Both gentlemen loaded as follows: 45-70 shell, 50 grains of powder, thin blasting paper wads, an air space carefully measured of ⅛ of an inch, and a 450-grain grooved bullet well lubricated. Guns and men still in good order. Let us have more light on this air space business. GREENHORN.

Concerning the bursting of shotguns by obstructions in the muzzles, Mr. W. W. Greener says in his book "The Gun and its Development," page 456: "It has always been taken as an axiom, that if the muzzle of a gun barrel be by any means plugged up with dirt, snow, or other matter, and the gun then fired, the barrel will burst. It has also been repeatedly asserted that a wad slipping a few inches down the barrel, or left from a preceding charge, would burst the barrel should it be fired before the impediment was removed. We have experimented to prove these assertions, and find them far from being true. Taking a light double breech-loader, with a very thin, but sound barrel, we placed a felt wad, ⅛ in. thick, six inches from the breech, and fired with ordinary cartridge. The wad was blown out, the barrel remaining uninjured. We next placed a wad at 12, 24, 28 and 30 in. successively, with the same result. The experiment we several times repeated in different guns, the wad at last being placed level with the muzzle, but, to our surprise, the barrel remained uninjured. We next plugged the muzzle with stiff mud for the distance of one inch; this resulted in one inch being blown off the muzzle. We afterward placed a plug of pulped paper two inches from the muzzle, and a concentrator midway in the barrel, but no bulging or bursting resulted. Now we are willing to own that we have attributed several burst barrels to wads slipping and muzzles becoming plugged up, but we shall be less liable to state these as causes in future. Barrels do sometimes burst in the most unaccountable manner, but from these experiments it appears that wads slipping will not cause them to do so as a rule, and plugged muzzles are not always attended with disastrous or dangerous results."

KENT COUNTY CLUB.—The annual meeting of the Kent County Sportsmen's Club, of Grand Rapids, Mich., at the office of Dr. Holmes last week, President Holmes presiding; the minutes of the last meeting, also those of the last annual meeting were read and approved. The annual report of the treasurer was certified to as correct by the directors and showed the receipts for the year to be $369.94 and the expenses for the same period $336.16. Cash on hand $33 78. The following officers were elected for the ensuing year: President, Dr. E. S. Holmes; Vice-President, Harry Widdicomb; Secretary, George W. Locke; Treasurer, W. H. Calkins; Director for five years, Mark Norris. The directors holding over are: L. D. Follett, for four years; E. M. Barnard, three years; Geo. A. Gould, two years, and J. C. Parker, one year. A petition to Congress relative to Yellowstone Park, presented by the president, was accepted, and all of the members present signed the same. A committee consisting of Follett, Horton and Richmond were appointed by the chair to draw up a programme for a series of medal shoots for the coming season. The president was instructed to appoint delegates to attend the meeting of the Michigan Sportsmen's Association at Detroit, commencing Tuesday next. A full delegation (six members) will probably attend, including the president. The meeting adjourned to meet in regular semi-monthly session Tuesday evening, Jan. 16.

CHATHAM, N. Y.—At the annual meeting of the Forest and Stream Club, held December last, the following officers were chosen for 1883: President, C. D. Hicok; Secretary and Treasurer, C. Harmon; Masters of the Scales, A. J Fellows, T. R. Burrows, William K. Burrows, C. D. Hicok and Neal Shufelt. Then followed distribution of prizes, which were as follows: Neal Shufelt first prize on black bass, he having caught one weighing six and one quarter pounds. Neal says, "if any man had told him, while he was fighting that bass, that he would weigh less than twenty pounds, he would have knocked him into the lake." "Old Ken" comes in for second prize on bass, his weighing five pounds six ounces. "The Old Vet" was somewhat crestfallen, to think that the youngest members of the club had "got away with his bundle," but he feels confident of success next season. "T. R." comes in for the prize on brook trout, by catching a seventeen ounce fellow, on a bumble bee, as he calls his black hackles He caught him in Pulver's, just below the Dominick Stamp, so called because a member of the club a few years ago had a hard fight with a very large trout, and after firing him out, as he supposed, reached down with his hand to take him in, when he gave a flop and swam under the bank, away from further harm. After the club adjourned they were highly entertained by "T. R." who gave them a "grand spread," after which followed cigars, pipes, and fish stories," then a vote of thanks to "T. R." for his generous hospitality.—C. H.

ARKANSAS NOTES.—Crockett's Bluff, Ark., Dec. 30.—Sporting, notwithstanding the vast abundance of game here has not been good, no good bags of deer have been made except by the old resident deer hunters, and they have not been so successful as usual. They all say that deer are as plenty here as for several years past, but that owing to the clear, bright, dry weather for the past three weeks it is almost impossible to get a shot. The deer are very fine and fat. This seems to be difficult ground for Northern hunters to work for deer. The quail were all driven into thick cover by the hawks, and went into the timber after mast early in the fall, therefore are hard to get. Water fowl shooting, mostly for mallard ducks, has been very fine. First-class legitimate sport on ducks, to wit, wing-shooting over decoys, has been hard to find, but when one gets a good place it is very fine—our visiting sportsmen killing 129 one afternoon, nearly all single and double wing shots. I have had some very fine sport on Wilson snipe. One resident "deer killer" killed six deer in two evenings' hunt. I sent one party of five over to the king of bear hunters, Maj. Bebo of Coahoma county, Miss., but have had no report from them as yet.—BYRNE.

A PHILADELPHIA "SHOOTER."—Philadelphia, Dec. 29, 1882.—*Editor Forest and Stream:* I have been surprised to find that among the gun houses here there is scarcely one private shooting ground or testing yard. It seems to me to be nearly as useful an appendage to a great gun house as a good hatchet is to the hunter and explorer—almost certain to "come handy" daily. In conducting some protracted experimental firing I have been delayed greatly because a suitable place could not always be had. Scores of Philadelphia readers, possibly, have some old shop or disused room, where some careful firing (to conclude my experiments would be permitted, in the interest and for the benefit of sportsmen in general. Will not some reader, willing to allow the judicious and prudent use as above of some old room or shop kindly send a note to me, care Jos. C. Grubb & Co., 712 Market street, Philadelphia? The matter, of course, is one of general interest.—W. McK. H.

THREE DEER KILLED AT ONE SHOT.—The deer season closed on Saturday according to law, and Mr. K. D. Smith, of this city, celebrated the event in a way that he will not soon forget. He and a party of four others were hunting on Youngwomans' Creek. About six miles above the mouth of the creek, and when a short distance from the members of his party, Mr. Smith spied three deer. He leveled his Spencer rifle and fired away, killing the three deer, a doe and two fawns, at one shot. Mr. Smith was only about forty yards distant when he fired the shot, the ball breaking the back of the doe, which stood a little ahead of the fawns, and striking the second deer back of the shoulder passed through and lodged in the neck of the third deer Two of the deer were about the same size, and weighed in the neighborhood of 100 pounds each.—*Lock Haven (Penn.) Republican, Jan. 3.*

HAWKS AND CROWS.—They have in Maryland an ingenious mode of catching hawks and owls. A pole is set up in the fields where chickens wander, and upon the top of it a steel trap without teeth is set and chained on. It is the most efficatious manner of getting rid of the thieves that you could conceive. On Gardiner's Island some time ago they tried Paris green on the crows, which are there in thousands. This sickened the sable cawers and they were thrown, twenty or more of 'em, upon the dunghill. Conceive the picture of trainer Savage watching them revive and git. I once made a very long shot at a goose who dropped to shot, and while I was dancing round in ecstacy, he rose grandly and left me sadder and wiser. I wring them a little now if they don't show shot holes.—T. M.

WHERE DID THEY COME FROM.—Marlboro, N. H., Dec. 31, 1882.—A short time since a friend of mine told me that there was a queer bird on his farm, which I soon made out to be a bevy of quail. There are twelve of them. I gave him feed for them and he has coaxed them within ten rods of his farm. I am bound to keep them through the winter if possible. About three years ago there were some quail imported and turned loose about eight miles from here. Can it be that these birds sprang from them? Game has been plenty for this section. There have been shot in this town over thirty foxes. Mr. Underwood beat the crowd on weight; he killed on that weighed 12½ lbs.—D. W. T.

A NEW TOLEDO CLUB.—The Toledo (O.) Liberal Shooting Club has been incorporated at Columbus, with a capital of $5,000, in shares of $100 each. The incorporators are George Spross, James Barrow, Aaron Bellamy, George Schueler, Florian Rheinbart, George Barrow, Edward Radbone, Sr., Edward Radbone, Jr., and E. T. Gertz. The club has leased 160 acres of marsh land in the North Bay, what is known as the Dusseau place, containing some of the best shooting grounds in the Maumee Bay. They are located between the Sulphur Springs and Guard Island, and are leased for 99 years. The gentlemen composing the club intend to build accommodations for themselves and friends for the season's shoot.

RICHMOND COUNTY ASSOCIATION.—The Game and Fish Protective Association of Richmond county (N. Y.) elected the following officers at their annual meeting held on Wednesday afternoon, December 27: President, Francis Endicott; First Vice-President, Thomas E. Gill; Second Vice-President, Robert W. Hopkins; Treasurer, G. D. L'Hullier; Secretary, George Endicott. Directors—J. H. Clark, Southfield; Thomas J. Conroy, Northfield; Peter Polworth, Westfield; Harry C. Jones, Middletown, Jeremiah Sullivan, Castleton.

TERRACE CITY CLUB.—Yonkers, N. Y., Jan. 5, 1883.—The Terrace City Sportsmen's Club was organized here Jan. 4, 1883, with the following officers: President, Wm. Bate; Vice-President, Jos. O'Brien; Secretary, J. W. Rushforth; Treasurer, John E. Rockwell. The club starts with twenty members, and hopes to do some good work in the way of enforcing the game laws in this locality the coming season.—J. W. R.

INDIANAPOLIS, Ind., Jan. 5.—Quail in this region quite plentiful this fall and good bags made. There are plenty of birds left over. I know of quite a number of full covies left over, and if the pot-hunters will only respect the law and let them alone we will have fine shooting next season. —S. H. M.

LONG ISLAND.—Port Jefferson, Jan. 8.—The duck shooting is very good here now, I go out three or four times a week and get from twelve to twenty birds each time. Coots and old squaws are very plenty.—W. H. R.

Sea and River Fishing.

"Venus. To passe the time in thy boate, canst thou devise any pastime?

Phao. If the winde be with mee, I can angle, or tell tales: if against mee, it will be pleasure for you to see mee take paines.

Venus. I like not fishing: yet was I born of the sea.

Phao. But he may blesse fishing, that caught such a one in the sea.

Venus. It was not with an angle, my boye, but with a nette."

—"*Sapho and Phaon*," *Act I., sc. 1.*

WINTER TALKS ON SUMMER PASTIMES.

IX.—SALMON AND SEA TROUT HAUNTS AND HABITS.

In those vernal seasons of the year, when the air is calm and pleasant, it were an injury and sullenness against nature not to go out and see her riches, and partake of her rejoicing with Heaven and earth.—Milton.

Salmon are a dainty fish and never resort to streams which, in their normal condition, are turpid or impure. Like trout, they must have clear, cold water, where there are rocks and riffs and pebbly bottoms, and pools scooped out of the river bed and flanked by rapidly flowing currents. I never took a salmon in absolutely still water, and very seldom on shallow rapids. The former is not natural to them, and when in the latter they are pursuing their upward journey and are not easily diverted. They rest in pools, and there is where the angler looks for them and expects to find them, and when found and they are in the rising mood, no sport has ever yet been revealed to human consciousness which is more kingly.

The best trout streams are simply miniature salmon rivers. But trout are unlike salmon in their habits in this: In the early season trout are often found on riffs where the water is both shallow and rapid, but later on, from the middle of July to the close of August, no experienced angler would expect to find them there in any inviting numbers. In these hot months, when the water has become tepid, they resort to the mouths of cold brooks or spring holes, and they need not be looked for elsewhere. But salmon are uniformly found, in August as well as in June, in pools. To be sure, when the water is well up, there are pools where there are only shallow riffs when the water is low. I have often taken fish at high water where I would not think of casting for them when the water was low. Hence one never comes to know a river so as to make the most of it until he has fished it at all its stages. But whether the water is high or low it is all the same; salmon rest in pools, and it is the merest chance if any are taken elsewhere. In these pools the water is not always to say deep, but it is always of greater depth than the water in their immediate neighborhood, and the full force of the current is ordinarily deflected from them by the rocks of larger or smaller dimensions, whose position has given the motion to the water which, in time, has scooped out these resting places for the kingly fish.

On all the rivers I have fished for salmon—and I assume it be true of all others—the best pools are almost always found just above some rough or heavy rapid. The fatigue involved in ascending these rapids make rest all the more welcome. The excitement in fishing these pools is intensified by the doubt which always follows a strike whether you will be able to kill your fish within the limits of the pool or whether he will rush down the rapids, and so compel you to follow him. In that case the chances are always against you, because, with all the skill of your canoemen, if you are in a canoe, or of yourself if you are on shore and the water renders wading possible, it is always questionable whether you can keep up with your flying fish. Besides, in rushing through a rapid full of rocks, there is always the chance that your line will get hitched, or, worst of all, that the fish may take it into his head to stop midway of the rapid, and thus, like a hunted deer, double on you and allow you to swoop past him, only to find out the fact when you have dropped into still water a hundred yards or more below the point where your fish is sulking. Under these latter conditions a hitched line is often the sequel; or, when it is not, you can only force back your canoe against the impetuous current to where your fish is sulking by the most herculean efforts. When that point is reached and you find your line happily free, you can only hope that he will start; and when he does start under such circumstances it is almost invariably down stream, with a rush, and you after him under such a pressure of excitement as renders you equally indifferent to danger and unconscious of fatigue. When the foot of the rapids is reached the fight is renewed, but you are master of the situation if you have shown ordinary skill thus far, and it is only a question of time—if you are well hooked—when the gaff will be called into requisition.

When you are casting from the shore and you are obliged to follow your fish on foot through even shallow rapids, you need to have all your wits about you, and to bring out all the highest skill there is in you first, to preserve your footing upon the slippery rocks over which you must pass, and secondly, to take care that your fish does not run faster than you do yourself, and so get out more of your line than you wish him to have. In this sort of fishing you have one advantage over the canoe, you need not move faster than your fish, and if he chooses to take a rest midway of the rapid, so can you. But it is an unpleasant time for a fish to sulk when you are waist-deep in the water awaiting his pleasure. I have more than once stood thus an half hour at a time, finding it impossible, by any skill at my command, to start the stubborn brute. Once I was dragged to the foot of a rapid which terminated in a deep hole, through which there was no way of passing but by a plunge and a swim. Of course, no one in such a contest would give up beat when a cold bath gave promise of victory. The provocation in this particular case was that immediately after the gamy fellow had compelled me to take this plunge he surrendered—coming up to the gaff so soon as I could reach a footing and give him the butt.

But these rapids tussles are glorious when the fish makes a straight wake for the easily flowing water below them. It is grand to stand up in your canoe when both fish and canoe move at equal lightning pace, and you are able to keep a taut line upon him every inch of the way. I have often had just such experiences, and the recollection of them still stirs the blood like the sound of a trumpet.

Sea trout show themselves wherever salmon are found, but not always simultaneously with them. In rivers where the salmon run begins in May or early June, you need not look for sea trout in any considerable numbers before well on into July. Intermediately they are found in tidewater at the mouths of the salmon rivers, and often in such numbers and of such weight as give the angler superb sport. Three, five and seven pound fish are not uncommon, and I have heard of them of even greater weight, but I have never myself taken one of over five pounds—two pounds less than a real brook trout, I once killed in the Rangeley waters, a beautiful fac simile of which was kindly painted for me by Dr. Otis, of New York, who was in camp with me at the time. There is no picture in my collection I value more highly.

Next to salmon fishing I know of no more exciting sport than angling for sea trout in waters where they reach their highest dimensions; for waters differ in regard to this fish as in regard to both brook trout and salmon—the weight of all fish being determined by the abundance and quality of the feed available to them. There are salmon rivers open to all comers for sea trout alone, after the salmon season is over, say from the middle of September on. I can imagine few things more fascinating than such an excursion. I know a river that you can strike fifty miles above its mouth, by an easy portage of six miles from the steamboat landing. To float down these fifty miles with the current, in a bark canoe, with such scenery on either hand as can hardly be excelled on the continent, is something which any appreciative angler might covet. It is a trip I have never yet found leisure to take, but affairs will go hard with me if I do not try it the coming season.

Like trout, salmon vary in size in different rivers. Why this is so is a mystery which I have not been able to solve. It cannot result from either the quantity or quality of food in the rivers, because it is assumed to be a settled fact that salmon are very light feeders—if they feed at all—in fresh water. Possibly the difference comes from the greater or less abundance of food found by the fish in their salt water rambles. Far-fetched as this conjecture may be deemed to be by those who are as ignorant of the subject as I am myself, it may, perhaps, after all, furnish the true solution; because, as the instincts of the fish always bring them back to the rivers where they were hatched, may not the same instinct keep them to their own feeding ranges when outside? If so, and if these ranges, like trout waters, vary in the kind and quality of food available, the fact will affect their weight. I simply state this as a hypothesis. If I am at fault, and if any one can solve the problem "by authority" or otherwise, I will be very glad to hear from him. Certain it is that those who have heard much about salmon rivers from those acquainted with them, have heard such phrases as these: "Yes, there are plenty of salmon in such a river, but they are small." In such another river we are told: "The fish are in moderate numbers and of fair size," and of others we are told: "The fish may not be as plenty as in some rivers, but they run large," and so on of rivers from one end of the coast to the other. In one where I have fished, a 35 pound salmon was not uncommon. The largest fish I ever landed weighed 39½ pounds, but I fought a fish for two hours which finally broke away and was taken next morning in a net nine miles below with my fly in his mouth, and he weighed 42 pounds. One gentleman, Mr. Spurr, of St. John, N. B., killed two 40 pound fish in the same river the preceding year. It was in this river, also, that General Arthur killed his famous 50 pound salmon, and where Mr. Dun, his companion, lost a fish after a long struggle, which immediately afterward floated into a net with the evidence of Mr. Dun's ownership in his mouth. This fish weighed 52 pounds.

These monsters were caught in the Cascapedia, a river in which forty fish that I took one season averaged 25¼ lbs., and five of these only weighed 11, 15, 17, 19 and 21 lbs. respectively. The Restigouche is almost equally famous

for its large fish, and the Metapedia and Merimichi used to be. In the rivers I have more recently fished the average of a season's catch will not exceed 18 lbs., and the largest I ever caught in my present river weighed only a fraction over 29 lbs.

But I trust no reader will imbibe the idea from what I have written that the sport of salmon angling depends upon the size of the fish. As a rule there is more lightning in a 12 lb. than in a 35 lb. salmon, and I have had more trouble killing fish of the lesser than of the heavier weight. They don't fight so long, but they are vastly more lively while they are fighting. The only fish I ever found it impossible to prevent running under my canoe so as to do me damage weighed but 11 lbs. The movement smashed my rod into several pieces, and I only landed him after the exercise of such skill and patience as excited the wonder and admiration of my delighted gaffer, and astonished myself.

I cannot call to mind the record of any salmon taken with a fly on this side the water larger than that killed by Gen. Arthur. But larger fish are recorded as having been killed with the rod in English and Scotch waters. One was taken last summer in the Tweed that weighed 60 lbs. An English earl is credited with one that weighed 69½ lbs. A Highlander, after an all-night fight, is said to have landed a 73-lb. fish, and Holland says a salmon was sold in the London market which weighed 83 lbs. When this was, or how taken, is not stated. I know Christopher North once declared he had killed a fish weighing "90 lbs. neat." But I make no account of that fish, because it was only caught with "a long bow," to serve as a climax to the Ettrick Shepherd's extravagant "fish stories," as given in Mackenzie's edition of the "Noctes Ambrosianæ," vol. 4, p. 83, 84:

SHEPHERD.—What creel-fu's [of trout] you mann hae killed!

NORTH.—A hundred and thirty in one day in Loch Awe, James, as I hope to be saved—not one of them under—

SHEPHERD.—A dizzen pun'—and twa-thirds o' them abune't. Athegither a ton.

NORTH.—* * * And poor Stevenson, mild and brave—now no more—with his own hands wreathed round my forehead a diadem of hetherbells and called me King of the Anglers.

SHEPHERD.—Poo! That was nae day's fishin' ava, man, in comparison to ane o' mine on St. Mary's Loch. To say naething about the count less sma' anes, twa hundred about a half a pun, ae hundred about a hail pun, fifty about twa pun, five-and-twenty about fowre pun, and the lave rinnin' frae half a stane up to a stane and a half, except about half a dizzen, aboon a' weicht, that put Geordie Gudefallow and Huntly Gordon to their mettle to carry them pechin' to Mount Benger on a han' barrow.

NORTH.—Well done, Ulysses!

SHEPHERD.—Anither day in the Megget I caucht a cart-fu'. As it gaed doon the road the kintry-folk thocht it was a cart-fu' o' herrins—for they were a' preceesely ae size to an unce—and though we left twa dizzen at this hoose—and fowre dizzen at that hoose—and a gross at Henderland—on coontin' them at hame in the kitchin, Leezy made them oot forty dizzen, and Girzzy forty-twa, aught; sae a dispute haen arisen, and of course a bet, we took the census ouer again, and may these be the last words I sall ever speak, gin they didna turn oot to be Fourty-Five!

And here is where Christopher's ninety pound salmon comes in:

NORTH.—The heaviest fish I ever killed was in the river Awe—ninety pound neat—I hooked him on a Saturday afternoon and I had small hopes of killing him, as I never break the Sabbath. But I am convinced that within the hour he came to know that he was in the hands of Christopher North, and his courage died. I gave him the butt so cruelly that in two hours he began to wallop, and at the end of three he lay dead at my feet, just as

"The star of Jove, so beautiful and large,"

tipped the crest of Cruachan.

SHEPHERD.—Hoo lang?

NORTH.—So beautifully proportioned, that like that of St. Peter's or St. Paul's you did not feel his mighty magnitude till after long contemplation. Then you indeed knew that he was a sublime fish, and could not but smile at the idea of any other salmon.

TICKLER.—Mr. De Quincey, now that these two old fools have got upon angling—

SHEPHERD.—Twa auld fules! You great, starin', Saracen-headed lang-shanks! If it werna for bringin' Mr. North intill trouble, by haen a dead man fund within his premeeses, deal tak me gin I wudna fracture your skull wi' ane o' the cut crystals.

After reading this dialogue, no one will doubt that Christopher North's ninety pound salmon was killed with "a long bow" instead of a Jock Scott. G. D.

THE SEA OF CORTEZ.

THE opening of a railroad to Guaymas, on the Gulf of California, has recently facilitated the introduction of sea food into the deserts of Arizona, New Mexico, Texas, etc., making quite a pleasant variety with the beef, mutton, bear, deer, antelope, wild turkeys, quail, duck, snipe, curlew, rail, and small game with which the interior abounds.

The gulf oyster is yet quite a study, as it comes in a perfect state of nature and is so impregnated with mineral substances that the effect is somewhat painful to the stomach. They are gathered in great quantities about the mouth of the Yaqui River, and sold in Guaymas by the Yaqui Indians for twenty-five cents per 100. A little further south on the estuaries of the Gulf they attach themselves to the shrubbery of the jungles, and are gathered by the natives in boats by cutting the jungles with machetes, frequently carrying more than a dozen oysters attached to one bush. This is called the raccoon oyster, for its climbing or adhering to trees.

The Gulf has been famous for the production of the pearl oysters since the Spaniards first explored it, and tradition says that in one year the yield was more than 800 lbs. of pearls, which were mostly sent to Spain.

In 1825, two English ships came into the Gulf equipped for pearl fishing, under the command of Lt. Hardy, R. N. (See his book.)

The Chinese will probably renew the pearl fisheries in the Gulf by puncturing the oyster until it creates a pearl, as they do at home. The oyster beds occupy the shores of the Gulf on either side for more than a thousand miles, and the climate and temperature of the water would seem favorable to their cultivation.

The green turtles from the Gulf are exhibited in the fish stores here weighing as much as seventy-five to 100 lbs., and the supply is abundant. The amusement of the native Indians at these monsters from the sea spread out on the sidewalks for sale, is comical. In the estuaries along the southern shores of the Gulf and on the islands, green turtles weighing from 150 to 250 lbs. can be easily obtained.

The fish in the Gulf of California are to many of us new species, and have not all been classified by scientific experts. Some years ago Prof. Zanthus made a report upon the fish of the Gulf, which was published by the Smithsonian Institution, in which he stated there were nearly a hundred species.

The Gulf of California is undoubtedly the Mediterranean of the Pacific, and on account of the salubrity of the climate and extensive shore line, will probably become famous for the most delicate flavors of fish.

It would certainly prove to be an interesting field for exploration, as it is in nearly a primitive condition, and would no doubt yield an interesting tribute to science or enterprise.

CHARLES D. POSTON

SOME PISCATORIAL SYNONYMS.

BY J. FRANCIS LE BARON, C.E. AND M.A.S.C.E., M.E.I., ETC.

Editor Forest and Stream:

Every amateur naturalist, and doubtless every angler, has been bewildered when collecting or traveling in a new and strange country, by the strange names given to the common fishes of the region. So strange and new are many of these names that until he has seen and handled the fishes that bear them he is often at a loss to properly place them, or to even imagine what kind of a creature they are meant to designate.

And here is where the advantages of a scientific nomenclature are apparent, it would be supposed, to anybody. Still there are numerous persons who will rail at the long Latin names they are too lazy to try and remember, and denounce the study and use of the Latin and Greek languages. It will be seen by examining this list that in many instances it is almost impossible to designate the fish intended without recourse to the scientific name.

The following list does not claim to be complete or exhaustive. That would be a virtual impossibility when nearly every region has a different name for the same fish, but it is hoped the few here presented will be of some value to the student and the sportsman.

In many cases I have added the Indian name of the fish and also the provincial Spanish in order to make the nomenclature as complete as possible.

I have given the most common name first generally and ended with the scientific name.

This paper is compiled from various sources, principally from the reports of the United States Fish Commission.

LIST OF SYNONYMS OF FISHES OF THE EAST COAST OF THE UNITED STATES.

Batfish, nosefish, *Malthe vespertilio* (Linn.), Cuv.

Common frogfish, mousefish, toadfish, devil-fish, of Bermuda, pescodor of Cuba, *Pterophryne histrio* (Cuv.), Gill.

Spiny boxfish, rabbit-fish, of Vineyard Sound, Mass., erizo, of Cuba, *Chilomycterus geometricus* (Linn.), Kamp.

Smooth puffer, tambor, of Cuba, *Tetrodon lævigatus* (Linn.), Gill.

Rough puffer, porcupine-fish, blower, swellfish, tambor, of Cuba, *Chilichthys turgidus* (Mitch.), Gill.

Trunkfish, boxfish, *Lactophrys trigonus* (Linn.), Poey.

Hogfish, filefish, *Ceratacanthus aurantiacus* (Mitch.), Gill.

Storer's filefish, flootfish, of New York, *Stephanolepis massachusettensis* (Storer), Gill.

European filefish, turbot, of Bermuda, *Balistes capriscus* Linn.

Tobocco trumpet-fish, unarmed trumpet-fish, *Fistularia tabacaria*, Linn.

American sole, calico, hog-choker, of New Jersey, coverclip, of New Jersey, spotted sole, of Massachusetts Bay, *Achirus linneatus* (Linn.), Cuv.

Toadfish, oyster-fish, flying-fish, of Florida (New York and Florida), sopo, Cuba, *Batrachus tau*, Linn.

Flying robin, murcielago, of Cuba, civetta de mare, of Naples, batfish, of Bermudas, *Dactylopterus volitans* (Linn.), Lac.

Lined sea-robin, flying-fish, of New Jersey, *Prionotus evolans* (Linn.), Gill.

Spotted sea-robin, rubin volador, of Cuba, *P. punctatus* (Bloch.), Cuv.

Web-fingered sea-robin, Carolina robin, *P. carolinus* (Linn.), Cuv. and Val.

Surgeon-fish, barbero, of Cuba, doctor-fish, of Bermuda, *Acanthurus chirurgus*, Bloch and Schneider. A West India species, occasionally occurs.

Angel-fish, of Bermuda and Halbrook, and spadefish, of west coast of Florida, isabelita, of Cuba, *Holacanthus ciliaris*, Lac.

The billfish, spearfish, *Tetrapturus albidus*, Poey.

Mackerel, caballa or cavalla, of Cuba, auriol, of France, wawwhunnekesuog, of the Narragansett Indians, Trumbull, *Scomber scombrus*, Linn.

Bonito, skipjack, of Boston, *Sarda pelamys*, (Linn.) Cuv.

American tunny, horse mackerel, of Massachusetts, albicore, of Rhode Island, *Orcynus secundi-dorsalis* (Storer), Gill.

Little tunny, albicore, alleterato, of Naples, mackerel, of Bermuda, *Orcynus alliteratus* (Raf.), Gill.

Spanish mackerel, spotted mackerel, bay mackerel, *Cybium maculatum* (Mitch.), Cuv.

Cero, black-spotted Spanish mackerel, kingfish, *C. regale* (Bloch.), Cuv.

Horsefish, jarabado, of Cuba, *Vomer setipinnis* (Mitch.), Ayres.

Silver moonfish, jorobado, of Cuba, *Selene argentea*, Lac.

Dotted scad, round robin, of Bermuda, *Decapterus punctatus* (Mitch.), Gill.

Big-eyed scad, chickarro, of Cuba, goggler, goggle-eyed jack, of Bermuda, *Trachurops crumenophthalmus* (Bloch.), Gill.

Buffalo jack, of Bermuda, jack, jackfish, of West Florida, crevalli, cojinua, of Cuba, *Paratractus pisquetos* (Cuv. et Val.), Gill.

Horse crevalli, jiguagua, of Cuba, *Caranxus hippos* (Linn.), Gill.

Short pampano, palorrieta, of Cuba, *Trachynotus ovatus* (Linn.), Gthr.

Pompano, of the South, pompy nose, of New Orleans, cavallé or crevallé, of South Carolina, *T. carolinus* (Linn.), Gill.

Pilot-fish, suckfish, of Holbrook, romero, of Cuba, *Naucrates ductor* (Linn.), Raf.

Bonito, of Bermuda, rudder-fish, *Hidatractus carolinensis* (Mitch.), Gill.

Squirrel, of Bermuda, matojuelo, of Cuba, *Holocentrum sogbe*, Bloch.

Salmon trout, spotted sea trout, of Southern Coast, spotted silver sides of Scott, *Cynoscion carolinensis* (Cuv. et Val.), Gill.

Trout, of Southern Coast, salt-water and gray trout, of Southern Coast, squeteague or squit, of New England, coumja, of Russia, shecutts or checutts, of the Mohegan Indians, chickwick, of Connecticut, weakfish, of New York, bluefish, of New Jersey, *Cynoscion regalis* (Bloch.), Gill.

Chub, of Norfolk, roach, of Virginia, spot, goody, of Cape May, Lafayette, of New York, *Liostomus obliquus* (Mitch.), De Kay.

Bass, red bass, sea bass, channel bass, of East Florida, spotted bass, of South Carolina, redfish, of Gulf of Mexico, red drum, of New Jersey, spotted bass, of Holbrook, *Sciænops ocellatus* (Linn.), Gill.

Kingfish, whiting, hake, of New Jersey, barb, of New Jersey, *Menticirrus nebulosus* (Mitch.), Gill.

Croaker, verrargato, of Cuba, *Micropogon undulatus* (Linn.), Cuv. et Val.

Bream, of Bermuda, chopa-banca, of Cuba, *Pimelepterus boscii*, Lac.

Scup, of Vineyard Sound, scuppang, porgy,* of New York, bream, of Rhode Island, fair maid, of Virginia, *Stenotomus argyrops* (Linn.) Gill.

Yelting, glass-eyed snapper, of Bermuda, *Lutjanus caxis* (Bl. Schn.), Gill.

Red grouper, grouper, of Holbrook, cherna de vovere, of Cuba, *Epinephelus morio* (Cuv.), Gill.

Black sea bass; sea bass of New York, black perch of Massachusetts; black bass and blackfish of New Jersey; bluefish of Newport; black harry, hannahills of New York (De Kay); black-will of Virginia; *Centropristis atrarius* (Linn.), Barn.

Charioteer; coachman of De Kay. *Dules auriga*, Cuv. et Val.

Striped bass of Eastern States; rockfish of Pennsylvania, etc.; missuckeke-ncquock of the Narragansetts. *Roccus lineatus* (Bl. Schn.), Gill.

Moontish; angelfish of South Carolina; three-banded sheep-head; three-tailed porgy. *Parephippus faber*,(Cuv.),Gill

Bluefish of New York and New England, except Rhode Island; horse mackerel of Newport and New Jersey; skipjack of North Carolina; greenfish of Virginia (De Kay); tailor of Maryland and Virginia; whitefish and snap mackerel (Young); *Pomatomus saltatrix* (Linn.), Gill.

Sucker; pega of Cuba; *Echeneis remora*, (Linn.).

Northern barracuda; sennet of Bermuda; *Sphyræna borealis* (De Kay).

Silver sides; friar of New England; *Chirostoma notata* (Mitch.), Gill.

Silver gar; billfish; *Belone longirostris* (Mitch.), Gill.

Skipper; saury; skipjack; *Scombresox scutellatus*; Lesueur.

Killifish; mummichog; *Fundulus pisculentus* (Mitch.).Val.

Big-eyed herring; matajuelo banco and scal of Cuba; *Elops saurus*; Linn.

Jewfish; tarpum of Bermuda; *Megalops thrissoides* (Bl Sch.); Gunther.

Thread herring; menhaden of Portland; shad herring of New York; *Opisthonema thrissa*, Gill.

Herring; sejd of Russia; *Clupea harengus.*

Herring of Southern States; alewife of New England; gaspereau of British provinces; spring herring of New England; aumsuog of the Narragansett Indians; kyack, blue back, alewife, sawbelly and eat-thresher of Portland, Me.; *Pomolobus pseudoharengus* (Wilson) Gill.

Tailor herring; fall shad; hickory shad; *Pomolobus mediocris* (Mitch.), Gill.

Devilfish; manta of Cuba; *Ceratoptera vampirus* (Mitch.), Gill.

Bishop-ray; obispo of Cuba; *Actobatis narinari;* Müll. et Henle.

Sting-ray; whip-ray; stingaree; *Trygon centrura* (Mitch.), Gill.

Torpedo; crampfish; numbfish; *Torpedo occidentalis;* Storer.

Winter skate; sharp-nosed skate; *Raia lævis*, Mitch.

Angelfish; shark-ray, monk-fish, monkey-fish, kingston, fiddle-fish of Europe; little bull-head shark of New York; *Squatina dumerili*, Lesueur.

Mackerel shark; dentuda of Cuba; *Isuropsis dekayi*, Gill.

Atwood's shark; man-eater of Maine; *Carcharodon atwoodi* (Storer) Gill.

Fox shark; thresher, swingle-tail, sea-fox, sea-ape; pezzono of Cuba; pesce pavone of Naples; *Alopias vulpes*, (Linn.) Bon.

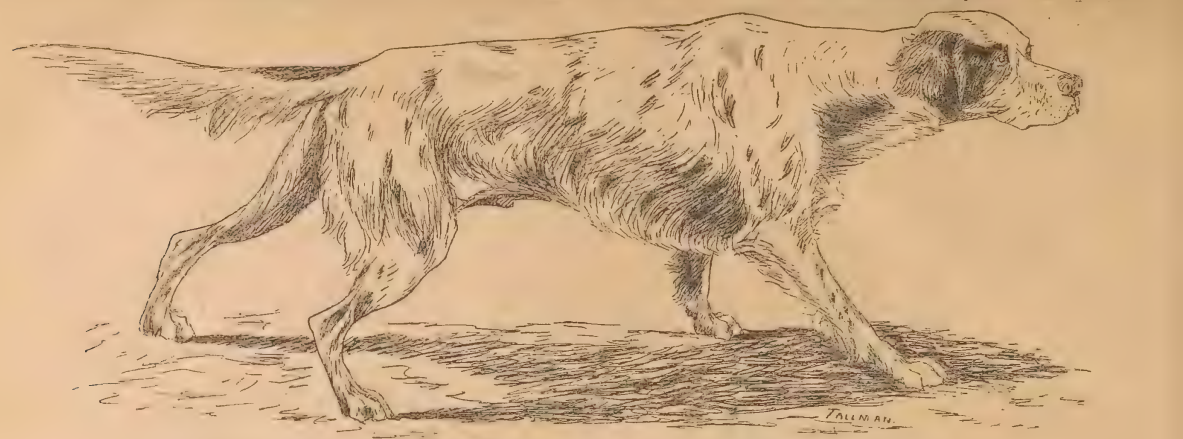
Hammer-head shark; corunda of Cuba; magnosa of Naples; *Sphyrna zygæna* (Linn.), Müll. and Henle.

Tiger shark; alecrin of Cuba; *Galeocerda tigerinus*, Müll. and Henle.

Salmon; siomga and losass of Russia; *Salmo salar.*

Smelt; korioushka of Russia, *Osmerus eperlanus.*

Cod; treska of Russia; *Gadus morrhua.*



Flounder; kambala of Russia; *Pleuronectes platessa et P. flesus.*

Sturgeon; belouga of Russia, and redfish; *Acipenser huso.*

*Not to be confounded with the porgee, pogy or menhaden.

AN ANGLER'S CAMP.—At the International Fisheries Exhibition to be held in London this year, there will be, in the American department, an angler's camp, which promises to be one of the most striking features of the United States exhibit. It will be equipped with all the modern appliances for the comfort and convenience of the angler in the woods. It is a portable house, 10 feet by 14 feet, and will have one end open to allow of an inspection of the interior. In the house will be arranged articles which have been sent by several persons, and a full collection of all things used by anglers is desired. Prof. Goode will be glad to receive suggestions or material to make the camp complete. So far he has the following articles: W. T. Sherman, folding cot with mosquito net, etc., canvas camp chair, Dunckiee's camp stove, camp table, Roebuck's head net, stone pocket filter, combination of jack and lamp, Ray's patent sunshade, minnow pail, American shanty pocket hammock, tin basin, plates, knives and forks, Ferguson's water-proof and preservative for boots, Plumb's improved tar and oil for insects, Plumb's Insect Repellent, Conroy & Bissett's "Anglers' Companion for Salt and Fresh Water Fishing," Crosby camp hatchet. We have recommended an Adirondack boat with neck-yoke for portages, rods, etc., landing net and gaff, creel and pack-basket.

WHERE THE TARPUM SPAWNS.—Jacksonville, Fla.—It affords Dr. Kenworthy pleasure to inform Mr. Fred Mather that he has discovered the spawning grounds of the tarpum. The locality is within six miles of this city; they spawn in May and June and will take a cut bait. If some of your angling friends wish to tackle streaks of greased lightning, tell them to try tarpum fishing. Your trout, black bass and salmon fishing is "all in my eye and Betty Martin," when compared with landing a tarpum.—C. J. KENWORTHY.

MR. C. FRED. CRAWFORD'S BLACK, WHITE AND TAN ENGLISH SETTER DOG "FOREMAN."
Divided Second in New Orleans Gun Club All-Aged Stake, 1882.

SALMON ANGLING IN MAINE.

THANKS to the fishculturists, there is a prospect of having some salmon angling nearer than the British Provinces, in the course of a few years. That salmon are now taken with the fly on Maine rivers is a fact not widely known. We extract the following from the report of the Commissioners of Fish and Game of that State for the year 1882:

The run of salmon for the year is reported good; large in numbers, but the average small in size. In the Dominion of Canada the run has been small, and at the usual period for taking them with the rod and fly on their most popular fishing resorts, they were unusually scarce, and the sportsmen returned home discouraged and disappointed. Later in the season a run of very good fish was reported, and those fortunate enough to be present met with good success. With us on the Penobscot, the run was both early and late, even down to October, when very large fish were daily seen at the water-works dam. Several fish were taken during the season in tide water below the dam, on both fly and bait, by anglers, and gave fine sport and created much excitement and enthusiasm among fishermen. The summer's drouth has been very severe and long-continued, not broken even at the present date of Nov. 20. The late run of fish have had but a poor chance of making their way to the spawning grounds. We hope these oft-recurring drouths, increasing in frequency with the wanton destruction of our forests, will lead to some legislation upon the subject, and call the attention of our lumbermen to the supply of water as dependent upon the preservation of our forests. At least let us have stringent laws checking the gross carelessness of sportsmen and poachers in leaving camp fires unextinguished.

On the Dennys River the run of salmon has been unusually good and many fish were taken on the fly by anglers. Quite a revival has taken place since the local residents begin to realize the value of a costless production thoughtlessly destroyed. Mr. Lincoln, with his usual enterprise and public spirit, has constructed a salmon hatchery, and the commissioner will most cheerfully supply all the salmon ova that the house will accommodate.

The great drouth of the season impeded the transit of the salmon to their spawning grounds on the upper sources of the river, and many fish were dipped in nets by public-spirited citizens below the dams and transported to the water above where they had a clear course. We anticipate a bright future for the beautiful village of Dennysville. Mr. Benjamin Lincoln attributes the increased run of salmon of the last two years to the contribution of salmon fry made to this river in 1876 and following year.

On the Presumpscot, at its sources on Crooked River, a very great number of unusually large fish have been taken by the poachers for the two or three last years. The exceptional size and number of the fish has given increased incitement to the nefarious practice of spearing on the spawning bed. The very remarkable size of the fish and their unwonted number, warrant the conclusion that they are sea salmon planted by us in the head waters of the river at Norway and other tributaries of Sebago in the past years. The first salmon fry were planted in the Presumpscot in 1875. A large fish of thirteen pounds was taken below the dam at the outlet of Sebago last June with hook and line. A man named Paul is now under arrest for spearing a fish weighing twenty-four pounds on Crooked River the middle of October. Several others have been arrested for spearing fish and there are also many other cases which will be prosecuted in due course. We feel warranted in the conclusion that most of these fish are results of our planting sea salmon, not only from the reasons we have assigned above, but from the added fact that we have now a series of right good fishways on the Presumpscot River from Cumberland Mills to Sebago.

On the Saco River we have planted many thousand young salmon within the last two or three years, at the earnest solicitation of the leading and influential citizens of Saco and Biddeford, who have been petitioning in the long past for fishways, which inadequate means have compelled us to defer until prior claims of an earlier date had been attended to. At the earliest opportunity this year surveys were made and plans furnished by Mr. Harry Buck, Engineer, and fishways ordered to be built by the owners and occupants of the several dams. After due notices had been served upon the respective parties, hearings held, and all the requirements of the statutes duly complied with, much to the surprise of the commissioner his decision has been appealed from, and the constitutionality of the law of our own State denied. We hope for a favorable decision of the people's rights at an early day.

"ROACH" FISHING.—Philadelphia.—Roach fishing is now in season here. I know some very enthusiastic anglers who regularly follow it in winter. Uncle Thad Norris used to be fond of it. Very small hooks are used, and these, snooded on bristles, are fastened, a half dozen in number, to a fine line about three inches apart; a light, pliant rod, and an ounce sinker being used, and small wood-worms for bait. When nothing else in the shape of fish is in season, the angler can have amusement even through the ice in the shelter of some dock or wharf. Roach at this season of the year are solid in flesh, and make a good pan fish.—HOMO.

POSITION OF THE REEL.—In reply to C. L. Jordan, in FOREST AND STREAM of December 28, I will only say: For the style of fishing that he aims at he is right in having the reel in front of his hand, and especially with the reel that he uses. This is the style used in heavy sea-fishing for striped bass weighing from twenty-five to fifty pounds. Dr. Henshall, like all Southern and Western anglers, believes in, and uses heavy tackle, and for those who like that style it is good enough. The trouble with Mr. Jordan was that he had a reel that needs to be checked with the thumb placed on a trout rod and then wondered who ever devised the placing of the reel behind the hand. He asks "how can you cast a minnow *à la* Henshall with the reel behind the hand?" I can only answer that "you can't." That style requires the reel in that position, but for fine fishing a stiff trout rod with the reel behind the hand is desirable to those who prefer science to main strength. I hope that we now understand each other and that Mr. Jordan will eventually work up to the point of using finer tackle and getting more sport.—FLORIDIAN.

Fishculture.

THE FISHERIES EXHIBITION AT LONDON.

OUR readers know that Congress has made an appropriation for the great International Fisheries Exhibition to open in London next May, and that Professor Baird, the United States Commissioner of Fish and Fisheries, has been placed in charge of the American exhibit. In a circular the Professor says: "Preparations for the exhibition are already in progress, and there is no reason why it will not be possible during the months which remain before the opening of the exhibition to provide for a display which shall do great credit to the extensive fishery industries of this country. In order to accomplish this result it will be necessary to secure the cooperation and aid of all persons interested in fishing, fish-culture, the fisheries, and the related industries. I cordially invite correspondence, therefore, from any persons having articles suitable for exhibition, or willing to suggest plans by which the display of the United States may be rendered more effective. Two classes of articles will be carried to London for exhibition, viz: First—Those which make up the collective exhibit of the United States. Second—Those which are entered for competition.

"In the collective exhibit will be shown, in a systematic and synoptical manner, illustrations of our marine and fresh-water animals of economic value, together with the apparatus and methods of their capture and utilization, and the commercial, scientific, social, historical, and legislative aspect of the fisheries. It will include the most striking features of similar exhibits made by the Fish Commission in the Philadelphia Exhibition of 1876, and the International Fishery Exhibition, at Berlin, in 1880, together with many additional ones never previously attempted. The major part of this display will be borrowed from the collections of the National Museum in Washington, but it will be necessary to secure a considerable number of new objects. I wish to reserve the right of placing in this department such of the private exhibits as can there be shown to the best advantage, it being the understanding that these are not to be excluded from competition. When objects are purchased to fill gaps in this exhibit, it will be with the definite understanding that they cannot enter into competition, and that the name of the person from whom they were obtained will not be mentioned on the labels, or in the catalogue.

"It is considered especially desirable that the department of competitive exhibits shall contain a very complete representation of the various food preparations of fish—canned, dried, pickeled, smoked, etc.—there being a constantly increasing demand in England for goods of this description, shipments to that country amounting, in 1881, to more than $2,000000, in addition to the very large exports to other parts of Europe and to the European colonies in the east. Manufacturers of boats and boat-fitting, angling apparatus and costumes, and other similar articles, are also urged to contribute. Medals in gold, silver, bronze, and diplomas of honor will be awarded by a jury of experts.

"I am prepared to act, both in this country and in London, as the representative of individual exhibitors, and to attend to correspondence relating to applications for space, etc. Goods to be exhibited, if delivered in Washington, Philadelphia, or New York, will be carried to London and installed at the expense of the government; special arrangements may be made for the return of articles at the close of the exhibition.

"The exhibition—which is under the patronage of the Queen of England and the presidency of the Prince of Wales—will be opened on the first of May, 1883, in buildings now being erected in the Horticultural Gardens at South Kensington, and will continue for a period of six months."

FISHCULTURE IN MICHIGAN.

AMONG the notable fishcultural establishments in America may be reckoned that of the United States Fish Commission, at Northville, Mich., in charge of Mr. Frank N. Clark. Mr. Clark and his father were the pioneers of fishculture in Michigan, and the present station was established by the former in 1875 as a private enterprise. The Northville hatchery lies about a mile west of the depot, and really occupies but an acre or two. The grounds have a somewhat steep but beautiful incline to the south, the large spring which supplies the water necessary being eight feet above the hatching house where it is first used. Before entering the hatching house the water is run into a reservoir or open pond, 15x150 feet, for cooling purposes. The hatching house is an ordinary one-story frame building, 30x60 feet, fully sixty feet of which length is used for the treatment of the eggs after they have been taken from the fish.

The eggs of the brook trout are hatched by placing 3,000 of them on a tray made of a wooden frame with wire netting bottom, about 7x12 inches in size. Six of these are placed one above another in a wooden box, open at the top, and with perforated bottoms, and cold water allowed to run through it day and night. The water is at a constant temperature of 36 or 37 degrees, and the time required for brook trout eggs to hatch is 100 days; whitefish require 20 days longer. For the sake of convenience these hatching boxes are, at Northville, placed end to end, 50 in a row, and three rows side by side on an inclined table. At present only about 60 boxes are in use, giving a total of 1,000,000 prospective wigglers. Of course many of the eggs come to nought, and these must be carefully picked out with tweezers deftly handled by young women employed at 75 cents a day. In doing this the trays are carefully removed from the boxes and placed on a table by the window, where the strong light readily reveals the white eggs and those covered with a fungus growth, either of which would soon communicate their imperfections to the others, and, like a rotten apple in a barrel of sound ones, destroy the entire lot.

At first and for a few weeks afterward the eggs look like so many well-formed peas. Gradually two little black spots—the eyes of the coming fish—appear. A little later the egg, if held up to the light between the thumb and finger, seems but a transparent, black-spotted bit of hard, jelly-like substance. After hatching, and as soon as the fry are ready to feed, the trout are placed in ponds adjoining the hatching-house, of which there are seven, each 24x50 feet, with a water depth of 18 inches at the head and four feet at the foot. At the head of each pond is a narrow sluice way with a water gate, through which, when permitted, the fish may pass from one pond to the other. Each pond is occupied by fish of a certain age.

The treatment of whitefish eggs differs from that of brook and California trout in that they are placed in glass jars 5x12 inches, and the water introduced from below escapes from the top, so that the eggs—which are considerably larger than those of the trout—are kept constantly "boiling," a process that brings the bad eggs to the top, when they can easily be removed. Of these jars there are perhaps 200 at Northville.

The whitefish eggs used there are all secured by agents at fisheries at Put-in-Bay and elsewhere on the lakes, who go out with the fishermen to their nets and operate on such fish as they may select. It is proposed, however, so to pen up the whitefish that may be selected and own them as a part of the stock in trade, the same as with trout, at the hatchery. The number of eggs now on hand at Northville is as follows: Whitefish, 20,000,000; brook trout, 600,000; lake trout, 300,000—which numbers will be increased next spring by the addition of 200,000 California trout eggs. Of the whitefish eggs 5,000,000 are now being prepared for shipment to different States and to Germany and other parts of Europe, the latter in exchange for fish and eggs sent to the United States.

All fish eggs are counted by being measured in a druggist's "graduated" glass, experience having shown such method to be correct enough for all practical purposes. Of fish now in the ponds there are 10,000 brook trout, fry or minnows and 3,000 one to four years old; 15,000 California trout fry and 1,500 one to four years old; besides 500 lake trout and 1,700 land-locked salmon. The last two lots were secured as an experiment, and will probably not be kept.

Much is being made at Northville of the California or rainbow trout, the first of which was brought from the Golden State by Mr. F. N. Clark a few years ago. They are distinguished from the brook or speckled trout by a straight band of rainbow colors extending along the side and gradually fading out at either end. They are much tamer than the brook trout, Mr. Clark having hatched them in McCloud River, California, and caught them with his hand. They grow very much faster than the brook trout, as shown by comparative specimens now being prepared for the international fish exhibition to take place across the Atlantic this year. It is proposed to make Northville the national headquarters for breeding this fish, and within a few years to have enough stock to produce 10,000,000 eggs a year.

Some attent on is also being paid to the cultivation of land-locked salmon and wall-eyed pike, the eggs of the former being got from Grand Lake stream, Maine, and of the latter from St. Clair River. Another very important item in the

MR. D. C. SANBORN'S BLACK, WHITE AND TAN ENGLISH SETTER DOG "COUNT NOBLE."

Divided Third in New Orleans Gun Club All-Aged Stake, 1882.

Northville work is the introduction of the German carp, all of which are hatched in the national carp ponds at Washington. So far 25,000 to 30,000 have been "planted" in Michigan. There are now 3,000 on hand at the station, many of which will be distributed in the spring.

Mr. Clark expects to send out in the spring about 20,000,000 whitefish for distribution in the upper portions of lakes Huron, Superior and Michigan. Alpena has about twice as many whitefish on hand for similar distribution.

As already stated, the Northville hatchery was begun and for some years continued as a private enterprise. In 1881 the United States Fish Commission rented the property and it has since been under its control, Mr. Clark being in charge. The "plant" is worth $10,000, and last season the production was: Whitefish, 22,500,000; brook trout 200,000; California trout and lake trout, each 100,000. Last fall a whitefish hatchery was built by the government at Alpena, costing $1,500. This station will have a capacity of one hundred million whitefish eggs. This fall only 210 jars were fitted up, and these contain 42,000,000 eggs.

REPORT OF THE MAINE COMMISSION.

THE Commissioners of Fish and Game of Maine have made their report for 1882. They call attention to the fact that when the Department of Fisheries had the game of the State added to its charge, no additional provision was made for the increased care, time and expense. Fish wardens were made game wardens, but no appropriation was made for more than doubled work and outlay. Under the present law $1,500 is allowed for the payment of all the wardens. As the fish wardens are now game wardens, this sum is to be divided among them all. On the present list of commissioned wardens there are fifty-one persons. At the last session of the Legislature, by an oversight, the usual appropriation of $1,500 for wardens was omitted. An appropriation of $5,000 a year for the two ensuing years was made, or $10,000 in toto. From this is to be deducted salaries of wardens $3,000, leaving $7,000 for expenses of Grand Lake Stream Works for landlocked salmon eggs, for Penobscot salmon eggs at Bucksport and Orland, for hatching eggs and distributing the progeny, for distributing black bass, holding hearings, making surveys for fishways and all its attendant expenses, inspecting rivers and ponds, defending suits before county commissioners, trial justices and county courts, and for employing detectives in defense of the fish and game laws. Every dollar that has been expended for the enforcement of the game laws has been just so many dollars taken from the protection and propagation of fish. The fisheries department has been sacrificed to the exact amount deducted for the protection of the game and the enforcement of the game laws. The commissioners say that "the two departments are inseparable by nature, and can never be economically administered as distinct offices. Every poacher unites the two. The salmon poacher is the river wrecker, the lumber stealer, the deer poacher, the trout poacher and occasional horse thief. Let the question be met openly and squarely. If we are to have charge of the two branches of the State property that united is of more direct benefit to the commonwealth, and brings more wealth into our midst and divides it more equally among all the people than any other interest, then make the requisite appropriation for its proper conduct, and the rigid enforcement of the laws. Do either this, or abolish it at once promptly.

"The great money value of the fish and game to our State should make it a subject of fostering care and protective legislation.

"The point to be considered is how to make the most of this great State interest. So soon as our trout fishing commences in spring, all our best localities from Moosehead to Rangeley are infested by men fishing for the markets of neighboring States. Most of these men are from other States, who are reaping a crop for whose cultivation, propagation and protection they have not been taxed for, or paid one cent. We do not know what the net profit may be on fish thus taken, but there is one fact ever present before us, that these men bring nothing into the State, while every pound of trout thus taken is five dollars robbed from the people of the State. We believe five dollars is less than the minimum cost of every pound of trout taken at Moosehead or Rangeley or Grand Lake stream by our summer visitors, or our own anglers. It is the same with the products of our forests and fields, in the matter of our game. It is difficult to obtain legislation commensurate with the requirements of the evil. The laws are framed with such criminal negligence, or else so skillfully tampered with and emasculated by some interested friend to poaching, that it is almost impossible to convict under them. We can now recommend but one remedy, viz: that a rigid law be passed forbidding the exportation of any of our game or game fishes from the State. Allow citizens of other States to come here and enjoy all the privileges of our forests and streams; to participate in reaping the crop that we have protected and cultivated, but demand that it be consumed on our own soil. If such a law can be constitutionally framed so that it can be enforced, this most difficult question will be solved, and we can exterminate the pestilent poacher whether in the garb of gentlemen or professional pot-hunter.

"We think no fishing with nets of any kind should be allowed above tide water. Hook and line, with fly or bait, should be alone permitted. A moment's reflection will teach that, if the same methods and freedom to fish above as on tide water are tolerated, the result will prove the utter destruction of all the fish that enter the river.

"There has been distributed this season Penobscot salmon fry in the different rivers as follows, viz.:

Penobscot River	300,000
St. Croix River	207,000
Machias River	25,000
Kennebec River	200,000
Androscoggin River	209,000
Presumpscot River	140,000
Saco River	60,000
Total	1,192,000

"Our work in planting land-locked salmon has been amply repaid to us this year in the exhibition of most gratifying results at Moosehead, at Enfield, and at Rangeley. At Moosehead they have been captured on the fly, from time to time, for the last two years. At Enfield, fish estimated at most exaggerated weight, were seen on the spawning bed this year, but in all probability fairly estimated by one accustomed to judge correctly of the weight of fish in the water, fully equalling ten or twelve pounds. At Rangeley considerable numbers have been taken by anglers for several years past. In Rangeley Lake alone, over fifty of two pounds weight and over were taken by anglers last June. More or less were also taken in the lakes below. Quite a number were seen by the commissioner on the spawning beds in Rangeley stream in October, some of them very large and estimated by him and others at not less than ten or twelve pounds. All this is the more encouraging, as it indicates that we shall be enabled in the early future to take spawn at Enfield and Rangeley for the further stocking yearly of these waters. It must be borne constantly in mind by our Legislature, that a given field of water or earth will but produce food sufficient of fish or wheat for a given number of persons. The waters of Maine are now fished by a large population from all the United States. How many, our railroad officers and your hotel keepers will inform you. Our fields must be yearly planted and sowed for the mouths that the natural production is not sufficient to feed. When the very inadequate supply of means in resources to procure the ova to stock the very wide area of waters, we are expected to plant, is borne in mind; when it is remembered that the fair supply of fish fry to one acre is set down by experienced fishculturists at 5,000 to one acre of water, or 1,000 one pound fish, the pleasure experienced by us in our success with our meagre resources will be participated in by all our brother commissioners."

FISHCULTURE IN ENGLAND.

AS we have before stated it is proposed to form a National Fisheulture Association in England, and the following circular, dated Crown Buildings, 188 Fleet street, London, Dec. 15, 1882, has been issued:

Knowing that you are interested in the subject of fisheulture, we beg to ask if you will kindly attend a meeting under the presidency of Edward Birkbeck, Esq., M.P., which is to be held at three o'clock on Wednesday, 20th December, 1882, at the Fishmongers' Hall, London Bridge, kindly lent by the Worshipful Company of Fishmongers for the occasion.

The object of the meeting is to form a National Fisheulture Association of Great Britain and Ireland. We feel sure you will agree with us that such a society is wanted, and has an immense field open for it. At present all British effort in fisheulture is individual effort, and not only do the public generally know little of what is being done, but our fisheulturists themselves are often quite ignorant of what other laborers in the same field are doing; as proof of this, we may mention the difficulty we have experienced in getting the names and addresses of fisheulturists, and we are aware that there are many whose names we have failed to obtain.

We know from experience that in this country an increasing interest is being taken in fisheulture and fish farming of all kinds; in other countries, including our own colonies, fisheultural societies are doing most valuable work. In view of these facts, and also of that Great International Fisheries Exhibition which is to be opened in London next year by her Majesty the Queen, it is unquestionably most desirable that such a society as we have referred to should be formed. It will, of course, be in no sense a commercial undertaking, but purely a scientific society, established on the simplest and broadest foundations, viz., to promote the interests of inland and sea fisheulture of all kinds in the best way possible.

Further details will be explained at the meeting. The following gentlemen have promised to support the movement: The Marquis of Exeter, Sir James Gibson Maitland, Bart., Mr. E. Birkbeck, M.P., Lieut.-Col. Custance, Mr. C. L. Buxton, Mr. T. J. Mann, Dr. Francis Day, Mr. Greville Fennell, Mr. Francis Francis, of the *Field*, Mr. C. C. Capel, Mr. J. A. Youl, Mr. H. Ffennell, of *Land and Water*, Mr. William Senior, of the *Daily News* and *Bell's Life*, Mr. J. P. Wheeldon, of the *Yachting Gazette*, and many others.

Will you kindly inform us if it will be convenient for you to be present at the meeting; or if you cannot attend, we should be glad to hear from you that the movement has your good wishes.

W. OLDHAM CHAMBERS,
Hon. Sec. Norfolk and Suffolk Acclimatization Society.

"PIOUS JEEMS" ON DOGS AND TRIALS.

Editor Forest and Stream:

Your letter of December 20 asking me to "give your readers the benefit of my experience by laying before them my views regarding field trials and the dogs that participate in them," has received my careful attention, and as it is a subject of so much interest to so large a number of sportsmen, I fear it may excite more newspaper controversy than I wish to engage in, so I will say in the beginning, on no account will I be drawn into any controversy. My opinions are the result of my own experience, and I have nothing to gain in forcing them on the public. I have no particular strain of dogs to advertise, as I have none to sell. I have been forced by facts to give up many of my preconceived opinions of sporting dogs. I will say, if I find I am wrong, I am not so wedded to consistency as to remain in ignorance rather than confess a change of opinion.

I have attended most of the field trials, either as judge or spectator, held in the United States, and was at one time a warm advocate of the point system. A long experience as judge has forced me to change my opinion and give my preference to the heat system.

There is a certain element of luck pervading all field trials. In the point system this element especially predominates. I never yielded my preference to the heat system until I had, when acting as judge under the point system, been compelled by the rules to award the prize of merit to the sorriest dog in the race. Having acted as judge a number of times under the heat system, I have never yet seen a dog win a first prize that was not fairly entitled to it. As this question has been discussed so often in the columns of all the sporting journals, I do not propose to bore your readers with it further, but lay it away with the old bores who for years worried us with muzzle-loader vs. breech-loader—as in my early youth was discussed flint and steel vs. percussion locks—all of these old ideas have been settled and forgotten, and as far as I am concerned I have consigned the point system of judging in field trials to the same grave.

Every new field trial is an improvement on the last, as points of difference arise which require alterations of the rules. These are always remedied when brought to the attention of the clubs. The most absolute necessity for the success of field trials is to secure the services of practical sportsmen who are competent to judge. This may seem an easy matter, as it is but natural to suppose that a good sportsman is a judge of a good dog. Yet I have seen some good sportsmen who were crack shots, and devoted much time to field sports, who had very poor ideas of what was necessary for a field dog. A dog that has no style nor system in ranging and quartering often gives a pot-hunter a great many shots, but such a dog cannot win on a field trial. I do not think any of our clubs have their standard on style as high as it should be; for the reason that the winners in field trials are the sires and dams of future generations of sporting dogs, and the sire that has the prepotency to impart his perfections to his offspring

is the most desired, as nothing adds more to the pleasure of the sport than the graceful attitudes of the dogs. And the sportsman who gives more attention to his game bag than his dog will never make a competent judge on a field trial.

No gentleman is fit to judge in a field trial who does not naturally love dogs. If his heart is not so imbued with a love of the canine race that he is willing to bear abuse, vituperation and slander for this love, he should never judge in a field trial. The object of field trials is not sport, but the development of the sporting dog. And a judge must never pay any attention to sport while judging. I think it is in exceeding bad taste for a judge to kill a bird, or in any way allow his mind to be diverted from the dogs that are under judgment. A sportsman who has never yet killed a field trial cannot expect to be competent to judge correctly before he learns by experience. Judges require to be educated to judge, as much as the trainer to handle dogs. And I would advise all clubs conducting field trials to select at least one experienced judge, and on no account select a judge who has never witnessed a field trial. There are exceptions to this rule; some men are *nascitur non fit*. In this class I may be permitted to mention Mr. Elliott Smith, one of the judges in the Eastern Field Trials at High Point, N. C. The clubs choose judges, as they do handlers and dogs; and as the old ones cannot serve always, they must prepare others to take their places.

I think I should be allowed to write very freely on this subject, as I sacrificed all my fall and winter sport, up to this time, to act as judge for the Eastern Field Trials Club, and the New Orleans Gun Club. And while I was devoting my energies to developing the sporting dog, my hunting companions at home were having a royal time in a camp hunt on the Tombigbee, but if my services contributed anything to make those trials a success, I have no regrets.

The next question that comes up is the dog. I am so often asked which is the best of all the varities of sporting dogs. A knotty question to answer. At my feet, as I write, on the hearth rug before a big wood fire, lie two pointers, a Gordon and a Llewellin setter, all beauties and perfect types of their kind, but the truth must come, and I answer the question with a sigh, for here I have had to give up a hobby. Here I must confess to a change of opinion, for I have always thought the pointer the best dog in the world, but the records of field trials is against that opinion, and in spite of my early love for the pointer, I am compelled to say, that when the pointer meets the red Irish, he carries a more level head than the Irish and wins; when he meets the Gordon he carries less lumber and wins over the Gordon, but when he tackles a Llewellin he meets his fate, I confess it with a heart pang. The pointer is the best dog in the world, except the Llewellin setter. The question then arises, why have I arrived at such a conclusion? Go to the records of the field trials, and in nearly every stake you find the Llewellin first and the pointer second.

Take the Eastern Field Trials two years ago when Gladstone and Sensation struggled so hard for first in the All-Aged Stakes. Sensation is a grand dog, but the Llewellin Gladstone was his superior. Take the Eastern Field Trials at High Point in November last. Croxteth, a magnificent pointer, swept the field with the head of a conqueror until he met the Llewellin setter Loudon, and he, too, found the Llewellin invincible.

Take the National Kennel Club Trials for years and the Llewellins have invariably won most of the prizes. Take the Summer Trials of '81 and '82, even in the extreme South, where the pointer ought to win, the first prizes have been captured by the Llewellins.

Why is this? After mature deliberation I believe I have solved the problem. A quarter of a century ago the pointer was the best dog in the world. He is better adapted to a southern climate than the setter; he can stand heat and thirst better; he goes unscathed through cockleburrs and beggarlice, which are very annoying to the setter, but he has degenerated of late years.

The Southern sportsmen generally lost their fortunes during the late war, and were unable to keep up their kennels as they did in former years, and as the setter was better adapted to a colder climate, the pointer was discarded by Northern sportsmen. A hundred dollars have been spent in the development of the setter, both in England and America, for one on the pointer during the last twenty years. The setter has had all the advantage. And as the Llewellins have had more money spent in their development than any other class, they have gone to the front, just like the race horse. At one time Virginia was a leader in breeding race horses, even Alabama, Mississippi, and Louisiana produced some famous winners, but the old Metarie course at New Orleans has become a Golgotha, while Saratoga and Long Branch can vie with Louisville and Lexington in developing the thoroughbred. The whole thing in a nutshell is, the wealth is in the Northern States, and it takes money to develop blood in horse or dog.

I still believe the pointer can be bred up again, and will be, when the Southern planter is rich enough to make the experiment. There are but few good pointers left. The old roughhaired pointer was a game dog, and the velvet-haired, thinskinned, shivering bench show beauty that is offered for breeding sires will never bring back the dog of which we sang from the Potomac to the Gulf, "Old Virginny never tires." I love the old pointer, and intend to do what I can to restore him, as I would a lost art.

The Gordon setter is a beauty on the bench, but he has been bred after the Stonehenge model, and he now carries too much lumber to compete either with the pointer or Llewellin.

The red Irish always were and always will be a failure in field trials, because they are never what sportsmen call level-headed, with the exception of the Campbell strain of red Irish, which is imbued with a considerable quantity of native blood. I know of no good ones.

Of the Laveracks I have little to say, as I think their crowning glory is that from them came the Llewellin.

I have heard it remarked very often at field trials, "It is no use to compete for prizes, the judges will award them to the Llewellins, anyhow." What a miserable lot of judges the clubs must select, if they do such things. Will not the croaker who reads this pause and think for one moment? Is it not possible that some honest man may sometime be selected to act as judge? Look the thing squarely in the face, and don't you think you will have to give it upas I did, and acknowledge that the Llewellin is the best dog; *ergo*, he is bound to win?

I hear some say the dogs of to-day can not endure as much as they could twenty years ago; that, too, is a mistake. They are better than they ever were, but twenty years ago we used muzzle-loaders, and our dogs rested while we were loading. Now we give them no rest in the field. It is not so hard to account for the cream in the cocoanut as some persons imagine; it only requires a little thoughtful observation to learn where most of our difficulties lie.

I hope this is a satisfactory reply to your letter. If any of your readers are benefited by the result of my experience and observation, I can assure them I am amply repaid for my trouble. If they see cause to differ with me, I have not the slightest objection. If I am wrong, I am very sure they will have to find proofs elsewhere than the field trial records.

While you are discussing my letter, I will be busy popping away at the quail, making up for lost time. While I am having a good time, may you have the same, is the wish of

PIOUS JEEMS.

LOCHINVAR, Miss., Dec. 26, 1882.

STRAYED SETTERS FOUND.—Found, two red Irish setter dog pups, about half grown. Owner can have same by calling, proving property, and paying expenses. Address AGENT, P. O. Box 312, Grand Haven, Mich.

THE WASHINGTON BENCH SHOW.

AS the dates are now fixed (Feb. 20, 21, 22 and 23) and the building secured for this show, the work of getting out the premium lists will at once be begun.

The Rink, where the show will be held, from the description given of it, is the best adapted building in the country for a show of this kind. Assurances from the owners of some of the best dogs in the country have already been received to insure of its being a success.

There is no doubt that this will be a capital place to dispose of dogs.

The élite of the Washington society will no doubt attend the show in large numbers, as special invitations will be sent to the President and members of Congress to attend the show.

Washington's birthday occurs during the week of the show, thus affording exhibitors and visitors a grand opportunity to see the capital in all its glory.

OTTAWA BENCH SHOW.

THE sportsmen here are very enthusiastic over the show, and all exhibitors will receive a very cordial welcome to the capital city of Canada. Parliament will be sitting during the show; this will afford a good opportunity to see the grand government buildings. The following railroads have agreed to carry dogs free when they are accompanied by their owners or caretakers: Grand Trunk Railroad, Canadian Pacific, Utica & Black River Railroad, New York Central, Central Vermont Railroad, Buffalo, New York & Philadelphia Railroad, Buffalo, Pittsburg & Western Railroad Company.

The American Cocker Spaniel Club have decided to offer $10 cash for the best cocker spaniel exhibited, to be judged according to the club's standard. Entries will positively close on the 15th of March. Two more special prizes have been contributed, one by the Montreal Dog Fanciers Association, of a very fine silver cup for the best Yorkshire terrier exhibited, another silver cup by F. J. Boswell, Esq., for the best matched pair of Gordon setters, dogs or bitches.

CHAS. LINCOLN, Superintendent.

OTTAWA, Jan. 6, 1883.

KENNEL LAMENESS.

WITH the fall of the leaf, and the cold, foggy atmosphere of November, may very well come those preliminary signs of a lameness that is so insidious in its nature as to have baffled the faculty up to the present time, both in determining its cause, or in deciding for it a permanent remedy. It is considered to be a rheumatic affection, but that is a particularly wide term, and there are certain proofs that it is attributable to some local influence specially accessible to the constitution of the dog. A low, damp dwelling place near a river, or adjacent to badly or totally undrained land, may account for ague and rheumatism in man, and it has been clearly shown that persons inhabiting such quarters, or having much to do in meadows or marshes, may not be subject to any ill effects at the time, but, as if some poison is inhaled into their systems, they will suffer years afterward from rheumatic complaints.

There is nothing of this kind, however, to be traced in connection with dogs, as those accustomed to hunt in water, or under constant exposure to weather, frequently live the longest, and are exempt longer than others from the maladies that have a tendency to creep upon old age. Moreover, it has been proved that kennels built in low situations between hills have entirely escaped visitations of kennel lameness, and when built upon the most perfect principles, on high ground, such as one would choose for the sites of houses, the hand of ill luck has suffered the marked degree from kennel lameness. The late Mr. Assheton-Smith discovered this at Tedworth, as his first kennels were built on the summit of a hill, and in accordance with Mr. Smith's ideas, no expense was spared to insure the comfort of the hounds. Within a few months of the kennels being occupied, however, an extraordinary number of the hounds got this shoulder lameness, and it so happened that some of them so placed *hors de combat* were located in some old barns building by the hill. Here they got well again almost directly, and the fact was so palpable after repeated trials that the present Tedworth kennels were built on the site of these cowsheds, and from thenceforth there was no more kennel lameness.

The same thing exactly occurred to Lord Portsmouth's pack at Eggesford, the old kennels, on a fine commanding site, at this time affording healthy accommodation as cottages for the Earl's retainers, but the hounds in habit kennels built in a bottom where the building is often enough hidden in fog.

Those who have closely watched all the results of kennel lameness will easily form an opinion that the expense of the above change of kennel accommodation, involving several thousand pounds, was very well applied. The fine pack of hounds of which in his day Assheton-Smith could boast, and the grand pack now at Eggesford could not have been established under circumstances associated at all with the epidemic called kennel lameness. It is really a malady that goes further than merely incapacitating dogs from work, or making them permanent cripples, as a good many could show that breeding has been greatly influenced by the outbreak of the malady in a kennel. Dogs hitherto prolific sires have become quite the opposite after being laid down with this lameness, and it has not been until their usual going and gait has been thoroughly restored that they have got back seemingly to their full powers. Bitches have been far more influenced still be the malady, and it has been shown that in some foxhound kennels, where the disease has been specially marked during a season, a majority of the bitches have missed, although consorted to strange sires. The seasons have been rather extraordinary of late years with regard to bitches not breeding. Three years ago, during the winter and spring, a great number of bitches missed, and many of them bred later in the summer. Last season the same deficiency was remarkable during the early part of the year, and the complaints were frequent from both masters of hounds and owners of smaller kennels. It was also a remarkable season for kennel lameness, and one can easily recollect that it was a very changeable season. There were short spells of very cold weather, followed by almost unnatural mildness, interspersed with a good deal of rain or damp. There is no changing this state of things, and as for kennel lameness, although there are certainly remedies to relieve a patient, and to practically patch him up for service, there is no getting at the actual cause, or the exact condition of the atmosphere, that brings about the results we have mentioned. The only thing is to endeavor to rule the constitution of the animal so as to make it unchangeable to all atmospheric influence.

It must be apparent to most people that ordinary dogs running about are never seen to suffer from kennel lameness, and a great many people have had to lament the fact that breeding never fails when it is left to ordinary opportunity or accident under circumstances of the dogs being unguarded. It matters not what sort of season it is, old-fashioned winters, or the modern changes, a certain class of breeding never fails, and it is only seen to do so among those that, to coin the term, we artificially take care of. Breeding animals more than others are specially looked after, successful stud dogs are too valuable to be let run about, or, for the matter of that, any dogs of value, and bitches, during certain seasons particularly, are kept very close prisoners. Very rightly they are kept under lock and key, and, during three weeks' confinement, are just let out in a yard perhaps once a day, but very few are properly exercised. It would be a great deal of trouble for servants to lead them about for two hours, and a good many servants of the present day would not obey such orders, even if laid down as strict kennel rules. Indeed, is it not a fact too well established that half the prize and valuable dogs of this country are confined the greater part of their lives without anything approaching personable out-of-door work or exercise?

One of the best authorities on kennel matters was a Master of hounds, who lived about forty years ago, namely, Mr. Hodgson, for many years Master of the Holderness, and for a couple of seasons of the Quorn. It was said that there was no better huntsman than Mr. Hodgson, but that in the kennel he was supreme, and he prided himself specially that he could prevent hounds having kennel lameness, no matter what kennels they inhabited, his opinion being that a predisposition of the complaint was brought about by hounds being permitted to lie inactive on their benches for many hours, and his plan on non-hunting days was to have them turned off their benches once or twice for two hours, and in the winter, when the evenings were very long, to have them so disturbed by moonlight. Here is a proof that an experienced observer put down a very serious dog malady as caused by long stretches of idleness, and it must have been remarked by all dog owners that after a dog has been sleeping for some hours he rises with his limbs, in a measure, set, and for a second or two, until he shakes himself, he moves with a lame gait.

This is not at all noticeable in dogs in regular work, as a pointer, setter or terrier in working condition, invariably jumps up sharp, and he will coil round and sleep at any time, just like a dog will that is always running about. To be kept in confinement is an unnatural state for dogs, and, therefore, complaints such as kennel lameness, or many other more pronounced diseases, can easily be ascribed to such treatment. It would be useful, we feel sure, for dog owners to consider this subject, and if they have been unsuccessful in breeding, or in having their dogs go wrong, they might try to remedy existing evils by qualifying the necessary amount of artificial treatment in the management of a kennel with a large addition to the routine of exercise.—*Kennel Gazette.*

THE MOTHER BEAGLES.

I HAVE two little beagle mothers. The grand dame had four little beagle puppies, the daughter only one. I have the two mothers in baskets each side of the fire in my sitting room. The one of the four little ones died, then the beagle grand dame had her eye on her little granddaughter, and was most anxious to get it into her basket to make up for the little one that she lost. Her daughter thought otherwise. Whenever the young beagle mother got out of her basket, the grandmother would jump immediately in and take possession of the little grand puppy, cuddle and caress it until the little mother came back, then relinquish it at once without the least dispute. This little one was very whining and fretful, although a very fine puppy. Then it took sick and died. Then there way commotion in the camp, for after it was taken away, the daughter would jump into her mother's basket and lay siege to all three of the little puppies, and would not take nay; but they did not fight. The old mother would then make room for her daughter, and take a share in their nursing. Now the three little puppies have the blessing of two mothers. It is really astonishing and amusing to watch the manœuvres of those two little beagle mothers.

I am astonished that ladies do not take more to little beagles. I would never have another lap or field dog after knowing the beagle. The beagle is a most delightful pet and companion, either for the field or parlor. It is such a useful little animal, for they are death on the jack rabbit and are very affectionate, but require warmth; and I do no think them very long lived—about eight years; not much longer. The father of the puppies is a little black and white tricolored beagle that was presented to me by an English gentleman. He is a most pugnacious little dog and a perfect Nimrod in the field. He has run himself almost blind, for he never will stop running until he is made to. He is now about seven years old and begins to show age; has quite lost one eye, so I will not let him hunt any more, only when he slips out.

I cannot tell how he escaped the contagion of last October. We lost then six beautiful foxhounds and four beagles with the distemper, which disease was the most virulent of its kind. This distemper raged all through Virginia. Everything that could be done was done to save the dogs, but to no avail. One beautiful and favorite foxhound was perfectly cold three days before it died. I never could have believed that there could have been so much differing among the canine race. They were all nursed and cared for as much as if they had been Christians. Nearly all our neighbors lost their hounds and other dogs at that time. Now hounds are very scarce in Virginia and there are scarcely any beagles at all to be got for love or money.

Old Rattler, too, is a singing dog. It is most extraordinary; if he be asleep, and I begin to sing, in a moment he is up, puts his fore feet upon my lap, opens his mouth, and pitches his voice to the very highest key. At first I thought it uncommonly strange. The next time I saw his old master I mentioned the circumstance to him. He said yes, indeed, he could sing, and always began to sing his little dog's song when any one began to sing. I thought at first it brought back some old memory to the poor little beagle. It appears not, he is a singing dog. The other beagles do not sing like him, but often commence to howl and make a perfect

F. E.

PRINCE WILLIAM COUNTY, Virginia.

A COSTLY BITE.—A dog belonging to Joseph Schwartzer having bitten the son of Michael Powers, the latter procured on Saturday, in the Yorkville Police Court, an order to kill the animal. The dog not having been found, the owner was summoned to appear in court. He pleaded through his lawyer that the dog never having bitten any one before, he should not be held accountable for this, the first offense. Justice White said that a similar occurrence had once cost him a large sum. A dog he formerly owned bit a boy, and the lad's father obtained a judgment for $1,000 damages. In this instance, also, it was the dog's first offense. By advice of his counsel he appealed the case, which was finally decided against him. In the meantime the expenses attendant on the legal proceedings had, together with the original judgment, reached the sum of $3,500. He advised the defendant to carefully avoid becoming involved in similar difficulties, and discharged him upon his promising to find the dog if possible and kill him.

DOG PICTURES.—*Editor Forest and Stream:* Your enterprise in furnishing not only the earliest and most reliable reports of all events in the dog world but with them such admirable pictures of bench show and field trial winners has won for the FOREST AND STREAM the warmest praise among men from all parts of the country with whom I have conversed. Your illustrations are wonderfully well done, considering the promptness with which they appear. Having won the confidence of dog owners by your intelligent, candid and impartial field trial reports, may you continue to be as now, "always ahead and never behind."—CANIS (Chicago, Ill.).

A VALUABLE DOG KILLED.—Whitestone, L. I., Dec. 25.—That the brutes of this world as well as the fools are not all dead yet, you will not deny after reading what follows. My dog a noble setter in the prime of life, of fine proportions, active, staunch and true, lies here in my dining-room swathed in rags and cloths, riddled through the thighs with No. 2s, the penalty of trespassing upon a neighbor's grounds, where a bitch of very doubtful pedigree, owned on the prem-

ises, was in a condition calculated to attract every dog in the vicinity. The fences encircling the forbidden grounds were in a most dilapidated condition, with apertures nearly large enough to admit of a cow passing through. My poor Shot! He was but thirty feet ahead of me when he turned from the public road, and passing through a hole in the fence, trespassed—actually trespassed—upon my neighbor's property, meeting there a murderous fire from an old musket, at eight yards "rise," which will probably result in his death. The shooting was done deliberately, in my sight, but so quickly that I was powerless to hinder it. His was a quiet nature, unoffending, beloved and petted by all, a good one in the field, of fair pedigree, and withal could do his share of tricks about the house. Should he die I firmly believe that mine would be as clear a claim for damages as ever man had against man in the courts of law. The above are the unbiased facts. What think you?—A. C. W.

EASTERN FIELD TRIALS CLUB.—A meeting of the Eastern Field Trials Club was called for last evening, but as twenty-five members (a quorum) were not present, it was postponed until Tuesday the 16th inst. The Board of Governors met and elected the following gentlemen: John B. Marston, J. H. Kershow, F. C. Hoe and J. P. O'Neil. The following names were proposed for membership: L. B. Wright, L. C. Clark and D. T. Worden.

PINK B.—We last week published Pink B. as winner of first in the N. A. K. C. Derby and New Orleans Gun Club Derby. It should have read second in both the Chicken Trials and N. A. K. C. Derby, and first in the New Orleans Gun Club Derby.

Rifle and Trap Shooting.

RANGE AND GALLERY.

SO'TON, Jan. 6.—Despite the storm to-day, several riflemen assembled at the range at Walnut Hill to commence the regular matches for the month. The day was a fair one for shooting. Below are the best scores, all at 200yds.:

Creedmoor Match.

A Duffer	5	5	5	5	5	5	5	5	5	4—49
J A Cobb	5	4	5	4	5	4	5	5	5	5—47
J B Thomas	5	4	5	5	5	4	5	5	4	4—46
A J Carter	4	5	4	4	5	4	5	4	5	4—44
T J Barker	5	5	4	5	4	4	4	5	4	4—44
T Everett (mil)	4	4	4	4	4	4	3	5	4	4—40
C A Jenks	4	3	5	4	4	4	4	4	4	4—40
E J Turner (mil)	4	3	4	4	4	4	4	4	4	4—39
C H Best (mil)	5	4	5	4	4	3	4	4	2	4—38
S C Stubbs	4	4	5	4	4	4	4	4	4	2—38

Rest Match.

A Duffer	9	10	10	10	10	10	10	10	10	10—99
D A Rothe	10	10	9	10	10	8	10	10	10	10—97
S Wilder	10	10	10	10	10	7	10	9	9	10—95
W A Stiles	9	8	9	10	10	10	10	7	10	10—93
A J Carter	8	8	8	10	8	10	10	10	8	10—90
T J Barker	10	9	8	8	9	8	8	10	9	7—86
C H Best	8	6	10	8	9	10	9	9	7	6—82

Decimal Match.

A C Adams	10	10	9	7	10	8	6	8	8	8—85
A Duffer	10	5	9	7	10	10	9	8	10	7—85
H A Carter	10	5	10	7	9	9	10	9	6	8—83
D A Rothe	10	6	7	9	6	9	8	9	7	9—80
S C Stubbs	10	7	9	8	10	7	8	6	5	5—74
J A Cobb	10	8	4	6	8	5	9	7	7	3—61

GARDNER, Mass., Jan. 3.—At the last meeting at the Hackmatack Range of the Gardner Rifle Club, the inch ring and Creedmoor target combined was used; distance 200yds., off-hand. The following is the score:

	R. C.	It. C.	Totals.
G F Ellsworth	47	48	182 95
J S Wedge	42	47	89 93
A Mathews	81	46	92 46	167 92
W C Loveland	77	44	72 44	149 88
G O Goodall	77	43	69 43	146 86
F Underwood	62	44	70 45	132 89
C Shumway	58	43	59 44	117 87
F Parker	58	43	56 43	114 85
W Amsden	53	43	55 42	113 85

WORCESTER, Mass., Jan. 4.—The winter series of matches at Pine Grove Range, under the auspices of the Worcester Rifle Association, took place to-day. It was sharp and frosty, the wind at 9 o'clock.

The three matches and the prizes are as follows:

Match A, Creedmoor target.—Conditions, 200yds. Position, standing. Rounds, ten. Any rifle within the rules. Entries unlimited at fifteen cents each to members; to non-members, first entries each day, thirty cents; re-entries, fifteen cents. Prizes to be won on the aggregate of each competitor's best five scores, to count in the order made. Rifles with military or open sights to be shot without cleaning during each score. Military rifles allowed seven points, and other rifles with open sights five points, on the aggregate of five scores. Competitors to be handicapped.

Match B, Decimal Target—Conditions and prizes same as in match A, except that military rifles are allowed eighteen points, and other rifles with open sights thirteen points, on the aggregate of five scores.

Match C, Decimal Target, at rest—200yds. Rounds, ten; rifle and position, or rest; any rifle within the rules; entries unlimited at fifteen cents to members; to non-members, first entry each day thirty cents, re-entries fifteen cents. Prize to be won on the aggregate of each competitor's best four scores, which must be made on four different match days not over one score to be counted that is made on the same day. Rifles with military or open sights to be shot without cleaning during each score. Muzzle-loading rifles, using round or conical bullets, to be allowed eight points, military rifles thirty points, and other open-sighted rifles twenty points on the aggregate of four scores. Match to be shot on Massachusetts decimal target. Prizes same as Match A.

The records made to-day are as follows:

Creedmoor Target.

Stedman Clark	4	5	4	4	4	5	5	4	5	4—44
S N Morse, Jr	5	4	4	4	5	4	5	4	4	4—43
F Johnston	4	4	5	4	4	4	4	4	5	4—42
Re-entry	4	4	5	4	5	4	3	4	4	4—41

Stedman Clark	10	9	10	9	9	10	10	10	9	10—96

CONLIN'S GALLERY.—Corner Thirty-first street and Broadway. The 19th annual shooting tournament will be opened at this gallery on Monday, January 15, 1883. The public and especially all marksmen are invited to call, see the prizes, read the conditions and participate in the contest.

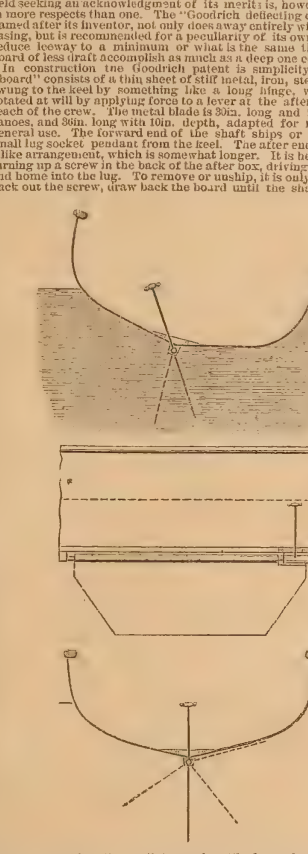
THE TRAP.

EAST WAREHAM, Mass., Dec. 25, 1882.—Second match of the Gun Club; 50 glass balls each; 18yds. The sum of each five shots is given:

B F Mananon	5	4	3	4	4	4	4	4	4	3—39
E F Mananon	4	5	4	5	2	4	1	3	4	4—36
R H Pratt	3	1	0	3	1	0	2	5	5	1—21
H B Griffeth	5	3	5	2	4	2	4	2	4	2—33
W S Griffeth	2	4	3	4	4	3	4	0	4	3—31

J. C. W.

A POULTRY SHOOT.—The annual poultry shoot of the Seppenfeldt Rifle Club was held Dec. 29. Following scores at a 12-ring target, 2¼in. ball, out of a possible 120, were made:



E Holzmann	117	G Messerschmitt	99
C Rein	115	D Hermann	99
J Luft	115	W Balz	98
J Zimmerman	112	J D Dillenburg	98
J Schutz	110	J Krause	95
W Seppenfeldt	108	B Wragge	95
H Gunther	108	W Wenz	90
J Hilzer	107	J Morghe	90
J Rein	106	H Rendheim	89
H Elbsen	101		

Yachting and Canoeing.

NEW CENTERBOARD FOR CANOES.

AN efficient centerboard is a boon to the canoeist. All boards of a fixed pattern are, however, more or less in the way, and so irksome is the casing found in long cruising that much as a board is to be desired, it is often discarded altogether, the room being begrudged by the paddler who feels the necessity of claiming a hinder self all there is of that commodity in the very straight quarters to which every canoe must plead guilty. The "folding board" overcomes this objection to a great extent, hence its popularity of late and a description of the application in these columns not long ago. Much genius continues to be expended upon boards for canoes as an adjunct which will enable the traveler to utilize his sail on the wind or even in a heading breeze is so certain of approval and wide introduction that the stimulus for invention is not at all wanting. Canoeists in America are now counted by the thousand, and this swingeing of the blades make fresh converts so fast that a bid for their favor means a trade destined to expand without limit. The latest candidate in the field seeking an acknowledgment of its merit is, however, notable in more respects than one. The "Goodrich detecting centerboard," named after its inventor, not only does away entirely with all inboard casing, but is recommended for a peculiarity of its own intended to reduce leeway to a minimum or what is the same thing, make a board of less draft accomplish as much as a deep one could.

In construction the Goodrich patent is simplicity itself. The "board" consists of a thin sheet of stiff metal, iron, steel, or brass, swung to the keel by something like a long hinge, which can be rotated at will by applying force to a lever at the after end, within reach of the crew. The metal blade is 30in. long and 9in. deep for canoes, and 36in. long with 10in. depth, adapted for rowboats and general use. The forward end of the shaft ships or points into a small lug socket pendant from the keel. The after end passes into a like arrangement, which is somewhat longer. It is held in place by turning up a screw in the back of the after box, driving the forward end home into the lug. To remove or unship, it is only necessary to back out the screw, draw back the board until the shaft drops out

of the forward lug, then pull forward until clear of the box also. What keel is cut away is fully compensated by the stiffness of the shaft when the screw is turned home. To control the angular position of the blade, a lever is introduced inside the canoe. The top of the after box has an opening with a forked slide slipping over the slot. This slide is pushed clear, the lever then stepped into the middle hole of three in the shaft end. If the board is to be kept upmuch, draw to the forked slide, so that the prongs grasp and hold the lever up and down. Leakage is prevented by having the shaft closely fit in the box. When so nipped, the blade is vertical, the same as is the case with an ordinary centerboard, and in this condition the canoe is prepared to sail in light airs, or before the wind, as it is impossible to trice up the blade. Being small, very thin and with sides as smooth as go wish to finish them, no appreciable resistance will be experienced, while the boat is always ready to come by the wind in a moment, without the bother of looking after the pennant.

When down it acts as a steadier oil the wind, especially if the water be lumpy. When heeling to a press of sail or in beating up against the wind, the angle of the blade may be changed quickly to suit the demands of each tack. This is effected by shoving back the forked slide, and then pushing the lever up to windward, retaining it there by a small hook and eye supplied for the purpose. When going about, throw off the hook while in wind, push lever over to opposite side and hook again. Until well settled down to the work, it is best to keep the lever approximately as desired by bearing against it with the knee of the foot. Should half the angle be sufficient, the lever may be allowed to come back till it takes against the outer edge of the little sliding cup. When the board is to be got rid of temporarily for paddling or to clear a shoal, it is turned clear up under the bottom, as shown by the dotted line in one of the cuts, by taking hold with the lever in one of the outer holes of the three in the shaft. Few canoes are anything but a "straight out" for nine inches from the center, so the board will lay quite snug in this position; and should it offer any resistance on account of a rise to the floor at the forward end, jamming the water between the bottom and the board, it will be so trifling as to be inappreciable in ordinary practice, though possibly it might serve as a scapegoat for some defeated racing paddler to shift his failure in a spruce contest, to his own satisfaction at least. But the canoeist is not a blue water cruiser, and it is seldom a few strokes will not land him on the beach, where the board will serve to empty the inboard altogether, if he finds himself in for a long buck against a nose-ender. The lever may have a fore and aft hinge an inch or so above the box, so that, after setting the blade, the upper length can drop down flat on the bottom boards. The shaft is fitted in the two end bearings tight enough to require so a force to turn, so that in moderate sailing it will retain an angle without fastening the lever inside. This is of some value in boxing about in doubtful waters, since striking a rock or gouging the bottom will turn the board up out of harm's way if the lever has been previously unshipped.

That such a board is simple, light and very efficient there can be no doubt. Whether it would in any way affect steering in an irregular manner or not we cannot say. If it does, a little experience will probably familiarize the crew on this head. One objection is likely to present itself, and that is the rigidity of the blade in striking objects fairly end on. The ordinary board will fly up into the case, but the one under consideration would not yield unless by "trumping." Those who have used this novelty seem to have escaped such a result, and only extended practice can tell whether this one liability to damage is enough to counterbalance other evident advantages. Considering how easily the blade can be straightened out if bent, and how it will escape by elastic yielding, the objection is probably not a very serious one in so light a boat.

This new board is made by Thos. Kane & Co., 139 Wabash avenue, Chicago, who make a specialty of its introduction, supplying it fitted to all their boats for $10, and to them all inquiries should be addressed.

YACHTING IN SAN FRANCISCO.

ALTHOUGH the season for yachting was over some time since, and but few of the whitewinged fleet are on commission, it behooves us at this time to take a hasty backward glance to see what has been accomplished by this, one of the best patronized, locally, of our out door sports.

Take it all in all the season was not a satisfactory one by any means. One of the clubs had no annual regatta and that given by the other was not by any means first-class. The small yacht regatta was the best attended of the year, but even that was not up to the one given last year.

The truth of the matter is, there ought to be only one club here. There are not enough yachts for two; and what is more to the purpose, there are not enough yachtsmen. Three-quarters of the people who go yachting are not yachtsmen at all, as they know nothing about handling a boat under sail. One club could prosper and progress, but the rivalry of two does no special good to the amusement. Both of them are weak in some particulars.

We are told, however, that there are elements which will not mingle and that there will be two as long as the leading spirits now controlling the respective destinies of the clubs remain with them. The worst feature of our local yachting is here hinted at. There seem to be several factions in the clubs, the rivalries of which affect the "cause" to its disadvantage. Our oldest club is specially afflicted in this way, so that instead of being as prosperous as it should be under other circumstances, it does not advance. The differences should be healed as soon as may be, and mutual concessions urged, that the club itself should be able to take the position it really merits by its age and experience.

As to building of yachts some little of this is going on. Two fine large yachts are being built in this city, and one smaller one; and two small ones are in course of construction in Oakland. These will materially add to our fleet, and more are talked of. And this is the great encouraging feature, since the old boats will be bought by other people and more persons will join in the sport. A few of the old hands are dropping out and new blood is coming in, so that the yachting will not languish for want of enthusiasm.

There is no place in the world where yachting has the advantages of the weather we have here. For seven or eight months we have steady regular trade winds, which insure passages, and we seldom have drifting matches where races are spoiled. True, our sailing grounds are somewhat limited in extent, and there is a taint of sameness. Btu the old hand will find many places to go which are pleasant to him, and he is always sure of "getting back," something which cannot be said counted on in other parts of the world where winds in summer are variable and light. We have to deplore the decline of small yachts among us as these furnish the yachtsmen for big ones. There are no small yachts in either club, and the tendency is now all to large ones. The owners of small yachts find they cannot keep time with the big ones in the cruises, and the time allowances give them no show in racing, so they become disgusted and want larger yachts or none. Therefore, the twenty-five and thirty foot boats have decreased in number and no new ones are being built. It seems to be agreed that thirty-six to forty feet is the smallest practicable size. The eighty and ninety-foot yachts do not form or help up the yachting interests of the East like the smaller ones because they cost too much to run. In a short time the owners become sensible of the constant expense, and the yacht is not as much used as would be one of less dimensions.

We hope for better things next season because the yachtsmen seem to recognize the fact that there must be greater harmony among them if their favorite amusement is to prosper. If some of the more energetic will take the matter in hand and break up the cabals and factions that exist, and take hold of the interest in earnest, there is no doubt that a better record will be made next year. More cruises, more races, less bickering and talk will bring the sport to the front. —*San Francisco Breeder and Sportsman.*

MR. LAWTON'S VIEWS.

Editor Forest and Stream:

My attention has been called to a letter written to your paper by your yachting editor.

It certainly amuses me very highly to find Mr. C. P. Kunhardt criticising dogmatic imperativeness, self-contradictions, or method of argument.

If I have interfered with any presumptive right of his to be dogmatically imperative, or self-contradictory, or if I have made use of his methods to transgress the rules of fair discussion, I have done so inadvertently and shall endeavor to leave it to him to monopolize such things in future. As to having "in my mind's eye" Mr. C. P. Kunhardt as an authority on yachting measurements, the mere mention of such a presumption should be a sufficient answer to the thought.

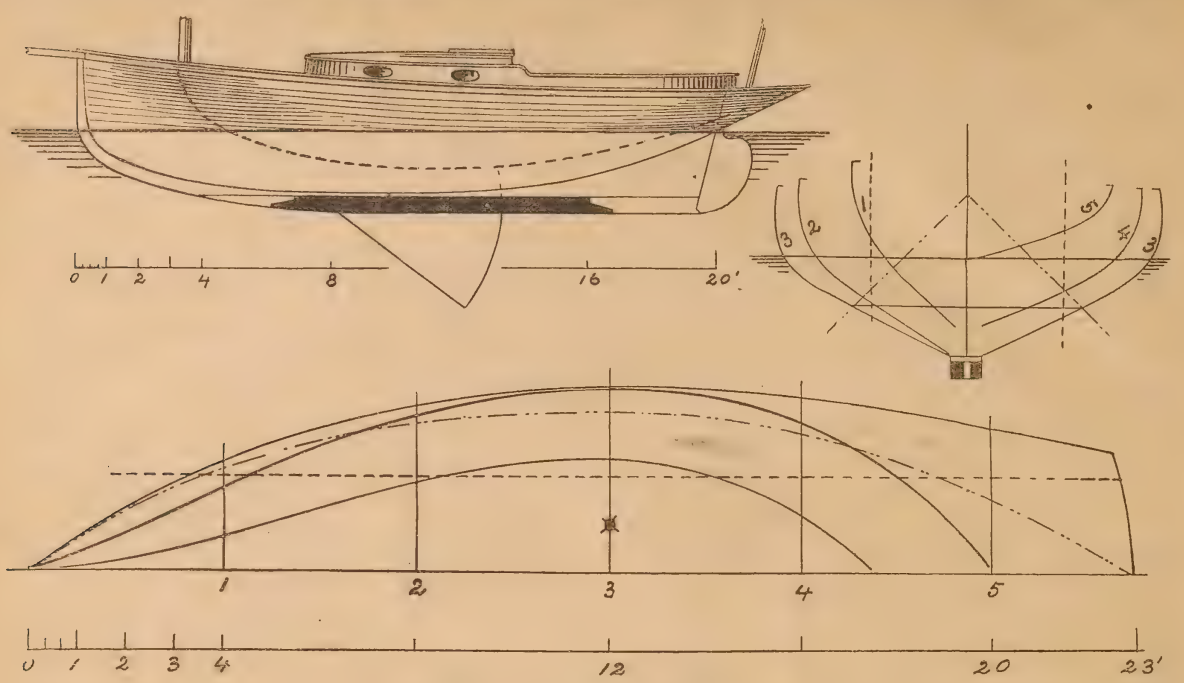
What pretensions to being an authority on that subject he can have, who for some time past has persistently advocated, and continues to advocate in the columns of the FOREST AND STREAM, a rule of measurement which has the approval of no authority on the subject, that is unqualifiedly condemned by Mr. Dixon Kemp, Mr. Colin Archer and those of others too numerous to mention, that as favored by him is in use nowhere and never likely to be adopted in any club or association, I am at a loss to comprehend.

The sources of information and knowledge are open to every one the opportunities for extended experience have occurred to very many.

His assumption of superior information, knowledge and experience in relation to yacht measurement, and the crediting himself with the discovery of the defects of the various modifications of models, rigs and customs, is as ridiculous as his assertions are untrue that my experience has been limited to drifting on the Sound or that I have ever been in favor of traps.

In conclusion let me add that I freely and frankly agree with him in one particular, that I have much to learn, and it is a pity that he differs with me in not thinking that he has as well. As to teaching, when I desire to be instructed as a pupil, I will certainly seek more reliable sources of knowledge than the gentleman who advocates exploded theories and assumes to have nothing to learn and everybody to teach. NEWBURY D. LAWTON.

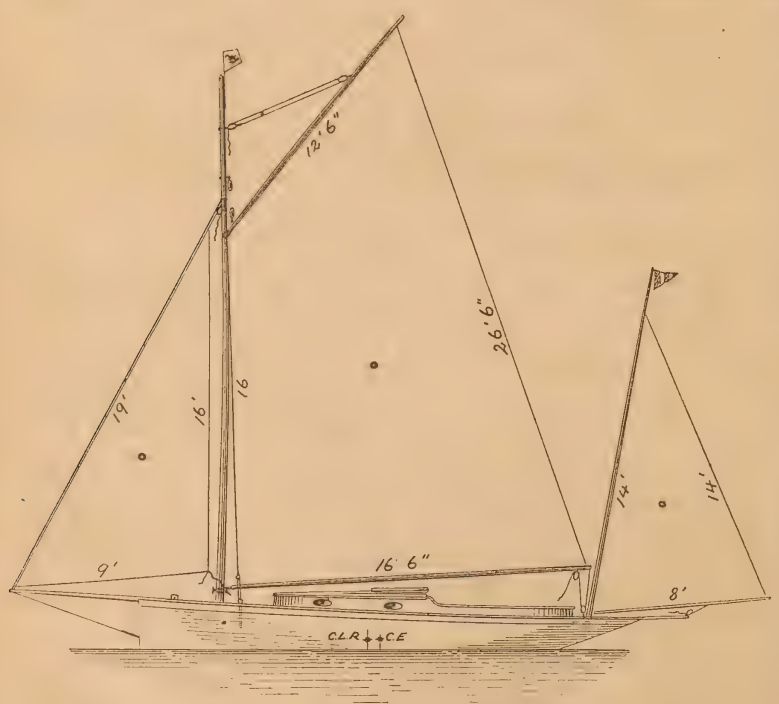
NEW YORK, Jan. 5.



TIME ALLOWANCE.

Editor Forest and Stream:

Allow me to suggest a basis for time allowance that does not seem to have occurred to any one else, and which is not only simple but fairer than even a rough and ready estimate for the philosophically accurate bulk measurement, "weight of rig," or, in other words, *all* the propulsive power, not the fallacious sail measurement. With steamers, the fairness of this is obvious. Suppose half a dozen yachts were fitted with their boats to fit uniform engines, they would soon find out which form gave the best results, and could handicap in regattas with vessels of different size according to horse power. Why should not this work with sailing craft? True, one man might use heavy canvas, taper spars, and very cold arrangements generally, and another might go in for light finish, packthread shrouds and all that sort of thing. Still, each could suit himself, and the difference could not be so great that model would not become, as it ought to be, the main factor of success. One thing would happen anyhow, the bloldheaded cheesebread work and useless gear of all kinds, including the fiendish popgun. And, on general principles, I fancy "machines" and "toys" would "evolute" out of existence, and the sail locker would not be crowded with such a variety of fancy kites.



Certificates of weight of rig should be deposited at headquarters of each club, and any changes duly made known. MELL.

NEW SHARPIES.—Mr. Clapham has in hand at his yard, Roslyn, L. I., two Nonpareil sharpies. One of 31ft. over all, with 7ft. 6in. beam, to be schooner rigged. Built in best manner and of extra finish, decks being laid in strips of pine and walnut alternate, 1in. wide each; cockpit and cabin, oak with mahogany, cherry and ash; draft, without board, about 3in. The second one is 40ft. long, with 10ft beam and 15in. draft, without board; yawl rig; cabin, 14ft. 6in. long, finished in varnished hard woods. The same builder is overhauling a 60ft. sternwheel launch suitable for Southern bayous or very shoal waters.

"GANNET."—SINGLE HAND YAWL.

Designed by MR. H. W. EATON for MR. OLIVER ADAMS, Larchmont Y. C.

CRUISING RIG OF "GANNET" YAWL.

THE YAWL GANNET.

SINGLE hand sailing and the cause of small yachts generally, has started on an incipient "boom," which is hailed with pleasure by all persons imbued with a real yachting spirit, and which is certain to blossom into a healthy fashion, as the advantages of regular yachts over open machines are more fully understood. Always in the van in promoting those features of the sport which are praiseworthy in their tendencies, FOREST AND STREAM has lent its aid in the furtherance of the construction of the small, safe yacht as distinct from the treacherous and useless machine, and while other contemporaneous publications are still rubbing their eyes and trying to make up their minds which way to jump, we are glad to find that quite a class of single-handers have already been ordered from the builders, and that several are already so far finished as to afford an idea of their adaptability by actual inspection. The lines of some have already been published in these columns. This week we add the plans of another very likely looking candidate for popular favor in the shape of the new yawl Gannet, built by Wallin & Gorman, of South Brooklyn, for Mr. Oliver Adams, Larchmont Y. C., from designs by Mr. H. W. Eaton, Seawanhaka Y. C.

The Gannet differs from the other examples in being a combination of the keel and centerboard types, and is therefore especially interesting to many who object to the draft of a keel and the smaller beam of a deeper boat. It is very difficult indeed to make a successful combination of the two types, as those who have attempted that kind of work know full well. Anyone can produce a centerboard craft and plaster lead underneath calling her a combination boat, but to devise a cross which shall possess the good qualities of either extreme, and a minimum of their undesirable peculiarities is a different matter. Such attempts have generally failed, because the originator found it impossible to divorce himself from pre-conceived preference for one of the two extremes. Thus the predominating features would in one case be those of the usual shoal trap, with a trifle outside weight and the cat or sloop rig. She would still remain open to all that is urged against the trap, and possess too little of the excellence of the opposite style in the way of an offset, or she would be narrow and deep like the cutter breed and then completely spoiled by being minus the benefit of a keel and low ballast, a board being substituted, without rhyme or reason, only as a claim to represent a combination of the two evil types. The underlying qualities which really ought to receive consideration in place of the mere garb or shape visible to the eye almost always have escaped proper attention.

In the Gannet, however, the work of an experienced hand is plainly visible. In this yawl it is evident that the best performance for all round work in connection with certain definite stipulations, such as safety, room, stiffness, small draft, and handy rig, has been thoroughly studied and digested before giving instructions to the builder to go ahead. In her outline or in some especial respects the Gannet may not be fully in accord with our own predilections, but that does not blind us to the fact that we have never seen a more successful blending of the two types, bearing in mind the service her owner intends to put her through. She is such a vast improvement upon the usual style of small boat and must be found so much more satisfactory than the open machine, be she cat or sand bag caricature, that the wonder is such boats have not been built in large numbers heretofore without waiting for FOREST AND STREAM to give them prominence before the public, and it will be equally as great a wonder should the Gannet and others of her class fail to instigate the launching of a very large fleet of similar boats in the near future.

For family sailing, cruising in the Sound, and for the rational enjoyment of life afloat the Gannet cannot fail to appeal forcibly to the great mass of expectant yacht owners who hold aloof for want of the means or inclination to build large craft, under the impression that small boats can never be anything else but nasty, wet, treacherous and generally useless open machines of the catboat order, costly for their size and worth, requiring large and impracticable crews to sail with any success as sand-bag shifters, and extremely dangerous and unsatisfactory when sailed by one person. Of all ideas ever evolved in the nautical line, the catboat is notoriously the "wettest" ever floated. She is also next to worthless in rough water, and totally unfit for family purposes. She is at best but a racing tool which, even in skillful hands, is abnormally liable to fill or turn petticoat up, and even while on her proper legs requires incessant watching as the price of life, and always exasperatingly cavorts on her helm in all but mild to moderate winds. She has no stowage or accommodations, and a day's cruise in the thing resolves itself in a soaking jacket and nothing "made good," or else a toast in the broiling sun and late hours to make home moorings for want of overnight accommodations. To induce family sailing in such traps is braving risks and the crime of manslaughter. No person of sense at all conversant with the character of such boat will venture out without serious misgivings, which spoil what enjoyment there might otherwise be in the sail. With their canvas reduced to something what they can carry with tolerable exemption from a capsize in untoward circumstances, such boats lose all their speed and weatherly qualities and become wretched failures in every respect.

That a solution to the question "How to build a small boat which shall possess the attributes of a large yacht in all respects, limited only as to power by her small tonnage," has not before this met with a favorable response can only be attributed to the prevailing creed that it was useless to expect anything more from 15, 18, 20 or 25ft. than already achieved in the typical catboat trap which are the cause of annual loss of life and narrow escapes, keeping hundreds away from ownership on account of the dread for the danger supposed to be a necessary accompaniment to sailing in small boats. Many a one has told us how, in his younger days, he longed to get afloat, but was prevented by older heads on the plea of the inordinate risk not commensurate with the gain in health and instructive experience. At this day there are great numbers of people in whom the ambition to yacht has been smothered and driven out of their constitutions for the reason that their inclinations to intelligent muscular exertion have been steered into other channels in days of yore when they were not yet their own masters.

How many thousands of Americans, young likely hands at sheet and halliards, are there not, who, though living with all the enticements to yacht almost beneath their bedroom windows, could not, to save their souls, tool a mudscow under tow, to whom all the absorbing delights, the free exercise of brawn and spirit in a manly bout with the elements on salt water are a sealed book and much more—even a positive scare. They are trained in ignorance of their loss until apathy and a long nurtured blight of the water renders them sterile ground to even the most insidious pages of yachting FOREST AND STREAM spreads before them every week. Not for them, not if they know it. They care not to parboil nose and cheek, nor do they hanker after the gymnastics dusty weather affords, much less do they tingle with joy at the prospects of the asnen breeze which the stern necessity of reaching home and mamma exacts of the woebegone catboat athlete who must get home by night lest he be left nowhere to nothing to stay there.

But with the introduction of the cutter and the diffusion of "cutter principles," a new era is now fortunately dawning, and that the paradise on earth which yachting in small boats holds forth, shall be partaken of by the great masses, by the thousands who now would as soon think of tight-rope dancing as of cruising in a cat or sand-bag delusion, all that lies within the power of FOREST AND STREAM shall be done, and that, judging by the signs of the times, will not be altogether in vain.

The small yacht, not the machine, is now on the eve of general introduction. Those who are so situated as to debar them from the use of a regular keel cutter will find in the Gannet a compromise worthy of detailed attention.

In her we have safety, absolute safety with a moderate rig, and possibly even with racing sticks showing far greater area of sail than Mr. Adams has selected. The Gannet combines the great stiffness of the American sloop with much of the safety of the cutter. She has 8 feet beam on a load line of 20, which is quite as much as given to the beamiest of traps, and she has besides depth enough to insure large accommodations for a couple of hands. Her cockpit is roomy enough for four, five or even six. It is shoal, but deep enough for "comfort." She may be knocked down ever so often, but will

not fill, as the water will not pass over her cabin door sill. She has a large area of deck forward to hoist and attend to the ground tackle, more than the average open cockpit boat can display. She has low bilges, and can lie on the mud without harm or inconvenience to those on board. She has a board which gives her practically all the room to be claimed for any centerboard trap on this score. But she has her limitations. She will ride most gracefully where it is out of the way. She has an easy body, which makes her easy on her helm. She may be caught out with ladies or children on board, and can house them as required to ride out a sort of under a lee away from home. A meal can be prepared instead of under shelter, and stowage for articles of clothing and provisions, and the numerous necessities of a protracted cruise find an appropriate place in her ample quarters.

She is always ready for tripping and a voyage of a week. She is a far drier boat than the flat iron trap, and easier in her behavior in rough sea water. She is a full fledged, completely furnished floating home, which the catboat is not and never can be. She is shipshape, and not an outrage to the sailor's profession. She is able under all circumstances, and offers many things for sport, and it is debatable to all the variety of conditions every yachtsman is subject to, even when off for only an afternoon's sail about in near by stretches. She is enough of the sloop in type to possess all that blue ribbon fancy, price or mechanical sport can claim to favor, and the big draft and sail she is cutter enough to lay claim to a very fair share of blessings of the deep keel ship. Finally, quality for quality, and with like outfit, she need cost no more than the popular exaggerations, since no more material, a smaller rig, and very little more labor and bullin is demanded in carrying out the Gannet's proportions.

As to rig, you may give her the dimity you most fancy and yet not destroy what has just gone before. Rig her as a sloop or cutter if you think you can better please your satisfaction. If you are doubtful on that point give her an equivalent and a little over in the outfit of a yawl, and but little, if any, speed need be lost in light weather with big top sail and balloonery as you choose. If you are not particular as to speed, but care more for boxing about with the comfort of your estate and marbap a rising sprout to look after, rest content with the very snug proportions the accompanying plans have been given, which, if undersized for what the boat can very well carry, exactly serve the purpose of many a person more anxious to enjoy in secure pair of oars the enchantments of cruising than that of engaging in fierce st life for a bauble in the satisfaction of racing ambition boil ing over at fever heat.

Remember that with three strakes down the yawl rig takes no slack from sloop or cutter, and that is the strong point always taken and the want less of the provincial mind; that with the jib on a boom there is not a string more to vex or perplex than in the primitive catboat; that for landmess an I am ever ready state to meet squalls, drive under reef to rag pull without varying your course and keeping her going; that the disputation to all rigs is open to all sorts of sailing, the yawl is queen of all rigs yet presented for consideration. You may live through seasons of tempestuous weather and never touch a reef. You may unbend or lock up the mainmast and let your yawl sail herself to all intents without danger into the mysteries he ought to be master of at sea. And should you be absent from home, with instructions to keep the mainsail in the gaskets, the most timid and gentle of maidens may pull off, and with the yachtsman, gardner or shipbuilder to do any heavy heaving to clear from the storiures, she may sail to her heart's content with a veil for the sun, and return bright, refreshed, invigorated with the day spent a thousand old better than if old away in yawning about the piazzas, or killing time lost to earthly surroundings in the mystic realm of adventures of the improbable heroes of abstract literary concoction.

The Gannet was built by Wallin & Gorman in their best style of workmanship, and is in every way a sup rior production. Some little details, such as square bulls at the capstan and bowsprit heel, a style of finish, but in these the builders have followed ruling custom, while in some respects their style shows an advance upon ordinary con truction. The material is sound all through, well put together, and also of the proper kind, and as far as an inspection can show, they have faithfully carried out the models of Mr. Eaton. We believe Mr. Gorman is one of the few yacht builders in this city who really understand "laying down" and "taking off," and who can be relied upon to produce a yacht an accurate copy from a set of lines on paper. Many builders pretend to be familiar with the art of the model loft, but they often rely upon their eye and a guess to get her "about so," as ninety-nine owners out of a hundred could not detect the difference anyway.

The Gannet is built with oak keel and frame, pine plank and ceiling, and hackmatack knees. Her house and cockpit are especially pleasing in outline, all neatly finished in yellow pine, varnished, with trimmings, rail, doors and sliding companion of mahogany. The decks are laid in narrow white pine, varnished, and there is a great improvement upon the hideous and lubberly plan of slobbering them with blues, yellows or greens, giving an aged appearance to a boat scarce a week out of the shop, and exasperating to a person of taste with considerati n for the fitness of things. Below, the cabin is also fitted in bright, yellow pine, and the floor of the cockpit is a continuation of the deck in this respect. A fresa, smart, agreeable impression, and a yacht like nobiness is the result. The cockpit, it should be mentioned, is long aft, with an elliptic round, bringing the rudder head inside. This is possible by destroying the lockerage deep room aft on account of the long overhang, without which the boat would lose materially in the accommodations she possesses. Sails will be of John M. Sawyer's best make.

DETAILS OF GANNET YAWL.

Length over all	23 ft.
Load water line	30 ft.
Beam	8 ft.
Draft without centerboard (aft)	2 ft. 6 in.
Draft with board down	4 ft.
Outside ballast (iron keel)	1000 lbs.
Inside ballast, iron	2500 lbs.
Sail hoist (length)	7 ft.
Cockpit (length)	6 ft. 6 in.
Head room in cabin	4 ft. 6 in.
Height of cockpit floor above load water line	6 in.
Companionway (length)	6 ft.
Depth of hull	3 ft. 6 in.
Freeboard amidships to sheer plank	1 ft. 6½.
Height of rail	4 in.
Area in mainsail	275 sq. ft.
Area jib	70 s. ft.
Area mizzen	56 sq. ft.

Gannet will be launched with the early spring tides and fly the Larchmont club mid water reverie in Sound waters, where no doubt she will soon find con enial company with numerous new single hand boats yeastlake in build for fall appointments.

FROM THE PACIFIC COAST.

Editor Forest and Stream:

I was taught an have followed vessel building for many years. Being a great student in my profession, so soon as my attention was called to the all-cast iron goi g on in the Coast and Stream, I subscribed for the pres nt Vol. XIX, and sent for the previous volume, suppo ing I should find the beginning of the cutter and sail-making discontroversy. On receiving Vol. XVIII., I found an index to Vol. XVII., in which I find the beginning as I suppose, commencing with the 24th page of the issue of Aug. 10 of that year. That is why I now send for Vol. XVII. While I am not prepared to indorse all you advance in favor of the cutter, I am free to admit you make an excellent showing. The most objection, to my mind and experience, to cutters of the Maggie type, is in the extreme narrowness of beam, not the depth.

That deep and narrow vessels will beat wide and shoal vessels in outside heavy weather and bumpy water I think certain.

I like your paper very much. It is valuable and very interesting to me, but I cannot afford to have one word lost. The party who put the sheets in so careless, that the reading matter is occasionally pasted together, as you will see in two numbers returned for your inspection,

I notice on a number of your drawings the scale is omitted. I judge from the nature and manner in which you write, that you assume to make FOREST AND STREAM a teacher, an authority on yachting and nautical matters in general. With the scale on the drawings we can find if you are correct, and we shall have faith in FOREST AND STREAM, and accept its authority in such matters.

SAN FRANCISCO. D. C. M. GOODSELL.

[For the absence of scales upon several occasions the blame rests with the pho o-engravers, who occasionally follow their own judgment in omitting from the original what they consider of no consequence. The cutt r-sloop contro ersy, or rather the "question of type," had its origin with FOREST AND STREAM five years ago. From the modest beginning of an occasional paragraph this bat le of types has been fought up till it is a prominence overshadowing all other issues before the yachting public in America. The cutter has been lifted from obscurity and has built of mi ds a opposition to a widespread popularity which has already influenced a marked departure from former customs in yacht modelling and which in due time is destined to completely change the build and rig of American yachts and also to further materially the growth of a class of yacht sailors among yacht owners.]

CRUISE OF THE ACTEA.—This schooner, Mr. David Sears, Jr. Boston, arrived at that port Dec. 24, after some extended cruising in European waters. She left Boston May 15 with twelve hands, the owner, Mr. Charles Longfellow, and Mr. James Barker. Arrived at Cowes after a passage of 21 days. Then cruised to and the Channel ports, and left for Brest Sept. 1. The Portugal coast, Cadiz, Gibraltar, Morocco, Madeira, Cape Verde Isles were visited in turn, and the trades next taken across to Havana, where the schooner arrived in fifteen days. From that port she sailed for New York, reaching here Dec. 24. The Actea is 101ft. over all, 92ft. load line, 22ft. beam, 9ft. 6in. hold and 11ft. draft. Built in Maine in 1859. Sails by McManus & Son, of Boston.

HANDICAPS.—"The air is alive with rumors of handicap schemes and cruising races, one and all of which must end eventually to lower the standard of crews, cap ains, and yachts. It is, indeed, highly improbable whether any theory of handicapping can be successfully applied to the racing of yachts, and wars are attempts are made to introduce them they have swindled into sweepstakes, lotteries or fiascoes, more suited to a carnival than worthy of the name of a port. If so much improvement were ever attempted, it will encourage only contests between inferior vessels, while it will retard and aim a serious blow at class racing, the most important and vivacious racing men have for years aimed at and which is the only basis upon which true merit can be arrived at."—*London Field.*

TRITON.—This Herreshoff built schooner has been sold by G. A. Thayer, A. Y. C., to Mr. S. C. Griggs, Jr., of Chicago. She has been hauled out at Pier Richmond, E. R., preparatory to her making a voyage to New Orleans, where her new owner spends the winter. Next summer she will round Nova Sco ia and cruise in Lake Michigan. The Triton was built ten years ago by the Herreshoffs, of Bristol, is 70ft. over all, 61ft. load line, 19ft. beam and 7ft. depth. Custom House number 145,635. Sails by Sawyer.

NEW SLOOP.—Wallin & Gorman have turned out a new sloop of the usual type for New York owners. She has been shored up along side the shop before receiving the finishing touches. Length on deck 31ft., on load line, 32ft.; beam, 11ft. 6in.; depth, 4ft. 6in.; draft without board, 3ft. 6in.; mast above deck, 38ft.; topmast, 15ft.; boom, 31ft.; gaff, 19ft.; cowspret out board, 10ft.; jib on foot, 22ft.

NEW DESIGNS.—A. Cary Smith is at work on a number of new plans. Besi le the schooner building for Vice-Com. Hovey, Eastern Y. C., at Poillon's yard in Brooklyn, Mr. Smyth has on his board three sloops, 75, 65, and 50ft. load line. Also a 70ft. schooner, for Benton owners, to be built of iron, a large new schooner not to be built till next year, and several smaller boats.

THE HUDSON RIVER Y. C.—Have elected the following officers for 1883; Commodore, Joseph Sti ger; Vice-Commodore, T. Adler, Jr.; Treasurer, R. V. Pruyn; Secretary, E. S. Wilson; Measurer, Con. Roth; Steward, Charles Hufnagel; Board of Trustees, J. T. Muller, Dr. Dio Lewis, William Hembles, William Buchanan and R. V. Freeman.

RACING ON THE THAMES.—Racing large yachts is rapidly on the decline in England, especially on the Thames. The cost and trouble is such a heavy item. It is even proposed to limit prizes to yachts not over 50 tons, on the grounds that small vessels afford the best sport, even 3-tonners coming in for a large share of the prize money.

ALUMINIUM.—The recent discoveries by which the production of this metal has been reduced from $3.00 per ton to $30 bids fair to bring about its adoption for the sheathing of yachts, for stays, rods, block straps, etc., as it is much stronger, and lighter, and less destructible than the best steel or composition in use.

DAUNTLESS.—This schooner, Mr. C. H. Colt, N. Y. Y. C., was last heard from at Malaga. While crossing Biscay on the passage from Bordeaux to Gibraltar, she struck into a heavy gale, carrying away boats and staving in bulwarks, also losing light head gear. She was a very long time making the passage.

LOUISA.—This schooner, having been purchased by Com. John A. Barnes, from Mr. N. P. Rogers, will be fitting ship of the New Bedford Steamboat Co. next season. Length over all, 90.5ft., on the line, 76.4ft., beam, 15ft., depth, 4.6ft. Built in 1867 by Youmans, of Newport, and rebuilt in 1878.

SOUTHERN CROSS.—Mr. R. Dudgeon, of Locust Valley, L. I., has purchased this schooner from the estate of the late John A. Monsell. She is 73ft over all, 65 on the line with 18ft. 3in. beam, 7ft. 9in. deep and 6ft. 2in. draft without board. Built by Decker, South Brooklyn, in 1880.

HAZE.—This schooner has been bought by Mr. T. Hogan, A. Y. C. She will be thoroughly overhauled and receive new canvas by Sawyer in time for early spring. The Haze is 97ft. over all, 59ft. 6in. load line, 17ft. 5in. beam, and 6ft. 9in. deep.

AMERICUS Y. C.—Have elected for officers for 1883: Commodore, Albert Komp, Jr.; Vice-Commodore, Henry G. Ackerman; Secretary, William Rassloch; Treasurer, Eugene Jerolamon; Steward, R. Brearley.

DEANE.—Mr. A. Komp, Jr., has purchased the open racing boat, George B. Dean, and will match her as a member of the Hudson River, East River, Americus, Knickerbocker and Larchmont Y. C.

PERSONAL.—Mr. John Harvey left for England by yesterday's steamer. He will return shortly to finish designs in hand and to superintend the construction of several new cutters.

NEW SLOOP.—Wallin & Gorman, South Brooklyn, are to build a sloop 37ft. long, 14ft. beam, and 4ft. 10in. hold. They have under way also several sand-baggers.

NEW JERSEY Y. C.—Will lay down ways capable of hauling out yachts 50ft. long, for the sum of $3.00, in time for next season.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. W., Lanshg.—We don't know you. See notice at head of this column.

J. B. B., Wallingford, Conn.—Duck shooters generally use No. 6 shot, although at this time of the year many of them use No. 4.

T. H., Hamilton, Ont.—1. "Hill on the Management and Diseases of the Dog," price $3. 2. "Training vs. Breaking," price $1. We can send them. 3. Write to E. & C. Von Culin, Delaware City, Del

H. L. D., St. Clair, Pa.—1. We will exchange on receipt of book and postage. 2. Yes, provided both numbers are worn. 3. Price of "Outer Cheek List" is $3. It is not at all a popular work, much less so than his "Key to North American Birds," and that much less so than his "Furbearing Animals."

WHITE HARE.—Gildersleeve's Landing, Conn.—1. Will the great northern hare thrive in a well-wooded town fifteen miles south of Hartford? 2. Will it be likely to remain near the spot where first liberated? 3. When would you liberate what month? Ans. 1. No doubt it would. 2. Probably. 3. Early spring.

SANCHO PANZA.—Mifflin town, Pa.—What kind of a dog is the best for hunting rabbits? A friend of mine has as fine bred beagles as there are in the country, but they do not care to go into briers and brambles to drive out or start up the rabbits. When a rabbit is started the beagle is no doubt as good as any other, but some times I think it necessary in order that the dog should be a perfect rabbit dog. I have a dog that the mother was a full-blooded setter and the father was a hound, and he will chase up two rabbits to a beagle's one while they are fooling around on an old track. My dog will find the rabbit and start him up. Ans. We have seen a cocker spaniel trained to work with beagles, and for a starter he filled the bill exactly.

BROOKLYNITE.—In reading books on angling I find much said in regard to the Long Island trout, and I should much like to try my hand on them some day. Can you tell me if there is such a thing now obtainable within easy access of Brooklyn, say to start in the morning and be back in the evening; if so, where, and how can I get there? I am under the impression that there are yet a few trout streams, but that the fish is not only scarce, but not accessible owing to the streams belonging to private parties. Ans. There are still plenty of trout on Long Island, but most of the streams require a permit to fish on them. There are some trout to be had about Smithtown, Patchogue and Freeport in streams open to the public. On the South Side are many streams in which good fishing may be had by paying for the privilege.

"When cleanliness, prompt action and general therapeutic results are desired, BENSON'S CAPCINE PLASTERS are masters of the situation. They easily excel all other external remedies." So writes an eminent Western physician. For local rheumatism, torpid liver, sciatica and bronchitis they have made a brilliant record. Beware of imitations. "Capcine" on in each. All druggists. Price 25 cents. —*Adv.*

New Publications.

KNOCKING ROUND THE ROCKIES.

Mr. Ernest Ingersoll has made a good deal of his experiences in what used to be the Far West, and from his prolific, and very pleasantly handled pen, have flowed newspaper letters, magazine articles, books, and scientific reports in considerable numbers. His last work, "Knocking Round the Rockies," published by Harper Bros., is a collection of sketches, which have appeared either in the magazines or the newspapers within the last six or eight years. Many of those therefore who read this beautifully gotten up book will recognize among the matter contained in it, old and almost forgotten friends of earlier days.

As might be imagined from what has been said, "Knocking Round the Rockies" treats of a very wide range of subjects. It describes Indians, "hog-hunting," camp life, mining, and half a hundred other novel things that attract the attention of the new-comer in the West. Scattered all through the book are prettily told incidents in natural history. These topics are in themselves interesting and Mr. Ingersoll's style is always so pleasant, that his writings may well serve to pass away an idle hour.

The mechanical execution of the book is very beautiful, and it is profusely illustrated with full-page engravings of a very high degree of excellence. It seems rath r a pity that some of these engravings should depict such entirely "fancy sketches" as the combat between the buffalo and the bull elk, because they cann t fail to give to people who know nothing about the subject ideas which are entirely erroneous. The same may be said of the picture of the antelope killing the rattlesnake, though this is not so glaringly bad, for an antelope might possibly take it into his head to kill a rattler in the manner depicted, and if he attempted it might succeed in doing it, while it is inconceivable that the male elk and buffalo should have a combat, and with the result here shown. On the other hand, many of the pictures are extremely true to life, and in all cases the execution is very beautiful. The delineations of some of the scenes of travel and of camp life are very faithful.

CAMPS IN THE ROCKIES.

Under this title Messrs. Charles Scribner's Sons have published an extremely entertaining little book, by Mr. W. Baillie Grohman. "Knocking Round the Rockies" and "Camps in the Rockies" have in common only the two points that they treat of the same section of country, and that they are both made up of letters that have already appeared in type.

Mr. Baillie Grohman's book is written from the standpoint of a man who has not forgotten that when he went into the mountains he was a "tend rfoot," and there is thus a freshness and a charm about his narration of scenes and circumstances that is very delightful. There are so many people and things in the West that are strange to Eastern eyes, but which seem so commonplace to the mountaineer, that he never thinks of them, that it is refreshing to find a book in which all such little details are set down

The ludicrous side of travel in the mountains is described with a great deal of humor, but this humor is always light and graceful, and never approaches the border line of coarseness to the "old timer." Some of the most amusing touches in the book, however, are quite unconscious. One of these is where the author tells us of having shot a big horn, and going up to it to measure its large horns, was knocked back by the animal which had been only "creased." He had no means of stopping the escaping ram, for as he naively says, "My rifle I had left behind at the place I had shot from." The idea going up to one's game without a rifle is certainly a very comical one. A somewhat similar occurrence is narrated on the occasion of meeting a grizzly while catching grasshoppers for a fishing bout.

This frankness is one of the principal charms of the book. At the same time no one who has passed through a long experience of life in the mountains can read this book without at once seeing that the author is a man of keen perception—one who accumulates experience very fast. He does not have to be shown a thing half a dozen times before he learns it, and we doubt not that he has acquired more experience from his three years in the mountains than most men would learn in a dozen. "Camps in the Rockies" is a very entertaining book, and, on the whole, very true to nature. The author's style is agreeable, and his method of treating the subject is well chosen. In an appendix to the book he gives some very useful information to those who are ignorant of life in the West, as also some interesting notes in regard to cattle raising.

FISHING IN AMERICAN WATERS.

A new edition of this work by the late Genio C. Scott, has been published by the American News Company, New York. There is so much that is good in this work that it is a source of regret to see that a new edition has been issued with all the imperfections of the old one. If Mr. Scott had lived he would have corrected these most glaring errors because he was a progressive man who would have taken advantage of the wealth of fish lore which has appeared in print within the past ten years. He certainly would not have allowed the statement on page 25, wherein he declares the whale and porpoise to be fishes, which was written before he had access to works on natural history to appear. As a salt water angler Scott is good authority. Not so good on fresh water fishing; and on the classification of fishes his writings will only lead the novice astray. His illustrations of fish are not good, especially their mouths, and in the matter of fins one more or less does not seem to matter, as in the smelt. To our young anglers we would say, read Scott for his fishing alone and you will find him very thorough, especially in sea fishing. The American News Company have issued the book on good paper, and in handsome shape, but they should have had it carefully revised and, at least, might have given us the game laws of New York from a later date than 1867. The price of the work is

Mr. E. T. McCord, of Charlotte, N. C., says an unknown exchange, has for years made a business of collecting 'possums, which he sells during the Christmas holidays. He started on Thanksgiving Day for the mountains to collect a drove of 'possums. He arrived at Davidson College with 123 'possums, which he drove along the road as though they were so many hogs. He camped at Davidson College last night, securing his drove by means of poles, having tied 'possums to the pole. He keeps three dogs barking all night, and these keep the 'possums so frightened that they hold a firm grip to the poles with their tails until the sun is up. This is the first time he has ever attempted the experiment of driving 'possums like cattle, and during the whole journey he has lost only two, one of which escaped by falling through a bridge.

FACT AND FANCY.

California is not generally considered a cotton State, yet one plantation in Sonoma county this season yielded 40,000 pounds from 225 acres.

Dilworth, Porter & Co., of Pittsburg, are reported to be about completing arrangements for the manufacture of railroad spikes, on an extensive scale, out of Bessemer steel.

A German war correspondent wrote from Egypt that the Highlanders could be excused for despoiling the fellahs of their trousers, as their own costume is unsuited to a fly-producing country like Egypt.

The semi-centennial of the Baldwin Locomotive Works occurred recently. The employes of the works observed the anniversary by attending performances at different theatres, tickets having been furnished by the firm.

The railway carriage works of the London & Northwestern Railway Company at Wolverton were burned on November 25th. The loss is £100,000. Three hundred persons are thrown out of employment.

Hole-in-the-Day, a Chippewa Indian, and son of the famous chief of that name, started out on a lecturing tour in Minnesota. His first audience yielded him $2.50, and that ended the venture.

The dining cars upon the Northwestern Railroad are said to have conspicuously written across their bills of fare, "No orders from the wine-list filled while passing through Iowa." So no man can take a drink between Illinois and Kansas.

BUT A MOTHER-IN-LAW'S BEATS THEM ALL.—A curious experiment was recently made at Paris to determine the power of a crocodile's jaw. The animal was fixed on a table with its upper jaw connected with a dynamometer. An electric shock caused him to give a sudden snap, 308 pounds was marked on the instrument, and it was calculated that the contractile force of the muscle causing the movement was 1540 pounds. The muscle of an ordinary sporting dog showed 360 pounds.

A SEA DOG.—A schooner rounded to at some distance from its wharf at Bath, Me., the other day, and while the lookers-on were waiting for a boat to be lowered and rowed ashore with a hawser, according to the natural order of things, they saw something very different. A dog sprang from the schooner into the river, swam to the wharf with the end of a line in his mouth, and when the hawser to which the line was attached had been hauled in and made fast, swam back to the schooner, seized a rope that was flung to him and was drawn on board

An Ontario sportsman fell into a Quebec trap a day or two ago. Dr. Weagant, a Cornwall dentist, invited some friends to shoot game near Dundee, and in the excitement of the sport followed his quarry from Ontario into Quebec. Here the game was out of season, and Mr. Weagant was had before the magistrate and fined $40 and costs for shooting within the Quebec boundary, and $5 for shooting within the close season.—*Toronto Globe.*

A Dog and his Tail fell in a Dispute as to which should Wag the Other. An itinerant Wasp passing that Way casually Remarked: "Speaking of Tails, reminds me that I Possess one which May possibly be Influential enough to Wag you Both." This fable Teaches that ten cents worth of Dynamite is a bigger man than a Church Steeple.—*Denver Tribune.*

In Austria 1,027,620 head of ground game were shot in 1880, incinding over 900,000 hares, 42,000 deer and 27,000 rabbits. Of feathered game 992,346 head were shot, including 717,000 partridges, 84,000 quail, 78,000 pheasants. 43,000 wild duck and 25,000 woodcock and snipe. Nearly 22,000 foxes, 12,000 weasels, 6,000 martens, 2,300 badgers, 165 wolves, 65 lynx, and 25 bears are included in the report. In Galicia the largest number of bears and wolves were killed; in Tyrol and Vorarlberg 2,000 head of chamois fell, in Styria 1,673 head, and in Salzburg 1,055 head. Bohemia returns 380,000 hares and over 400,000 partridges.—*Evening Post.*

The latest sporting joke comes from Yorkville. Two gentlemen from that classic suburb, eager to distinguish themselves in the battlefields of the backwoods, left a few days ago for a point fifty miles north of Madoc. Being anxious to secure a few skins as trophies of their prowess, they engaged the services of an Indian to lead them to the haunts of the bear. After a few hours' plodding they discovered bruin lying in the cleft of a rock some distance above them, and at once began a rattling fusilade. After firing away two boxes each of Winchester cartridges, their full stock, our heroes determined to procure a further supply, and wait until morning for reinforcements. Imagine their astonishment next day to find their target to be nothing more than a log of wood covered with a bear skin. The Indian was not present the second day, and was not to be found afterward.—*Toronto Mail.*

THE 'POSSUM MUST COME DOWN.—South Carolina farmers are asking the Legislature of that State to inquire into the destruction of valuable timber by opossum hunters. The Gainsville, Ga., *Eagle*, however, thinks that no remedy can be found. "There are," it says, "some things in this world that defy all rules, regulations and enactments, that overleap all barriers and laugh at all obstacles. Aggregate together a hungry 'nigger,' a sharp axe, a yelping dog, and the 'shine' of a 'possums eye, and you have got a combination that legislation will not affect, that the church is powerless to control, and that courts and juries, judges, jails and penitentiaries are unable to overawe. If that tree were mahogany and it involved the whole universe in civil war and blood ran a foot deep in the streets, that tree must come down all the same."

A STORY OF A SWORD.—On Thursday, while tearing down a portion of the residence of Mrs. Faustina Pacetti, preparatory to making repairs on the same, L. T. Canova found a sword hidden away between the rafters of the roof. Upon making inquiries in relation to the same he learned that the sword had been concealed in the place where he found it for perhaps seventy-five or eighty years. The story attached to it is interesting, and we give it as we learned it from the lips of Mr. Canova: It would appear that one evening, while Florida was yet in the possession of Spain, a grand ball was given, at which was gathered the élite of the city. One of the ladies present was noted for her beauty, and her hand was eagerly sought after by the officers of the garrison for the many pleasant dances. Owing to some misunderstanding, she became engaged to two of the caballeros for the same dance. The consequence was a quarrel, which resulted in the cessation of the music through the cutting of the strings of the instrument. Hot words and insulting language passed between the officers, and the two repaired to the open streets and engaged in a duel, in which one of them fell. The survivor, dropping his sword, fled precipitately from the spot. One of the racetti family, a boy of some four or five years, witnessed the encounter, and, running out, picked up the sword and carried it into the house. Not wishing to be called upon as witnesses, the parents of the child concealed the sword and kept all knowledge of the same from their neighbors. Thus the old blade has been in its place for upward of three generations.—*St. Augustine (Fla.) Press.*

In a description of Kentucky 'possum hunting, Mr. J. W. Eggleston says in *Outing:* But the supremely ridiculous begins when the dogs get to seeing evils. It is nothing but nervousness on the part of the dogs, but it makes them cut some strange capers. They run ahead of everybody, frightened pitiably, with tails tucked and hair on end, whining and crying till their fear becomes contagious and a human panic ensues graphic enough to delight a Cruikshank. Every darkey tries to get in front, and their ashy hue (the only paleness they can parade) and their starting eyes are ludicrous enough to a cool person. They will sometimes throw away everything and never stop till safe in some cabin. Some localities are popularly believed to be the peculiar abiding place of these "evils." One piece of pines near here is called nothing but "the Evil Pines," and though safe enough in daytime no darkey would go there at night though it were known to be full of 'possums. 'Possums are carefully kept in boxes for weeks and fed on vegetable food only until fat, and this process is not omitted even when they are caught fat, for they are known to be omniverous and they might have lately eaten "dede folks." 'Possum meat is really good to those who can digest it, resembling Charles Lamb's famous roast pig, but is more delicate in flavor, and, what particularly pleases the negroes, is far more greasy. One of our Masonic lodges located in Manchester is called 'Possum Lodge, from a tradition that while still surrounded by the forest a 'possum was once found in the hall and regularly initiated. From time immemorial on the 27th of December they hold a feast which all Masons attend who can, for rare is the feasting and great the conviviality. An address is always made to the 'possum, who occupies the place of honor and who, with many others like him, furnish the principal meat.

For Throat Diseases and Coughs, BROWN'S BRONCHIAL TROCHES, like all other *really good* things, are frequently imitated. The genuine are sold only in boxes. Brown's Bronchial Troches will relieve Bronchitis, Asthma, Catarrh, Consumptive and Throat Diseases. *They are used always with good success.*—*Adv.*

WHAT WILL THE WEATHER BE TO-MORROW

POOL'S SIGNAL SERVICE BAROMETER

OR STORM CLASS AND THERMOMETER COMBINED,

WILL TELL YOU!

It will detect and indicate correctly any change in the weather 12 to 48 hours in advance. It will tell what kind of storm is approaching, and from what direction—**invaluable to navigators. Farmers** can plan their work according to its predictions. **Saves 50 times its cost** in a single season. Has an accurate thermometer attached, which alone is worth the price of the combination. This great **WEATHER INDICATOR** is endorsed by the most eminent Physicians, Professors and Scientific men of the day to be the **BEST IN THE WORLD!** The Thermometer and Barometer are put in a nicely finished walnut frame, with silver plated trimmings, etc., making it a beautiful as well as useful ornament. We will send you a sample one, *delivered free*, to your place, in good order, on receipt of **$1**, or six for **$4**. **Agents** are making from $5 to $20 daily selling them. *A trial will convince you.* Order at once. **It Sells at SIGHT!** Just the thing to sell to farmers, merchants, etc. Invaluable to everybody. U. S. Postage Stamps taken if in good order, but money preferred. **Agents wanted everywhere.** Send for circular and terms. Address all orders to **OSWEGO THERMOMETER WORKS,** (*Largest establishment of the kind in the World*) **Oswego, Oswego Co., N.Y.**

We refer to the Mayor, Postmaster, County Clerk, First and Second National Banks, or any Business house in Oswego, N. Y.

Write your Post Office, County and State plainly, and remit by money order, draft on New York or registered letter, at our risk.

This will make a Beautiful and Very Useful Present.

READ WHAT THE PUBLIC SAY ABOUT IT.

I had Pool's Barometer works as well as one that cost fifty dollars. You can rely on it every time. CAPT. CARR, S. FOSTER, Ship "Twilight," San Francisco.

Barometer received in good order, and must say that the instrument gives perfect satisfaction in every respect. It is neatly made and wonderfully cheap at ten dollars. GEO. E. PARMELE, M. C. R. R. Office, Detroit, Mich.

Pool's Barometer has already saved me many times its cost, in foretelling the weather. It is a wonderful curiosity and worth five times the price. F. J. ROBERTSON, Milwaukee, Wis.

BEWARE OF WORTHLESS IMITATIONS. None genuine without our Trade Mark, and Signature of J. A. POOL, on back of Instrument, as below:

J. A. Pool TRADE MARK.

Every Instrument **warranted** *Perfect* and *Reliable*. Size, 8½ inches long, 3¼ wide. If not satisfied on receiving the Instrument, return it at once and we will refund your money. Please state where you saw our advertisement.

NOTICE.—$2.00 each is the regular retail price for above instrument, but being desirous of introducing them and securing good agents, we offer for a short time to deliver "a sample one" free to any address on receipt of only one dollar, or 6 for $4.00. Order at once. It's just the thing for a Christmas present.

DOG TRAINING;

—BY—

S. T. HAMMOND, KENNEL EDITOR OF FOREST AND STREAM.

FOR SALE AT THIS OFFICE. PRICE $1.00.

FOR TOWN AND COUNTRY.-1883.

The year now drawing to a close has been with the FOREST AND STREAM one of most gratifying progress. Early in the year by an important mechanical improvement, the typographical beauty of the paper was greatly enhanced; and in August, with the beginning of the tenth year of publication, it was

Permanently Enlarged to Twenty-eight Pages.

There has been an equal growth in other important respects. The patronage accorded to this journal by the intelligent reading public has never been more cordial than it is at the present time. Sustained thus heartily, the publishers are prepared to maintain in 1883 the FOREST AND STREAM prestige as the

Representative Field Journal

of this country, at once entertaining, useful and influential. As the exponent of the highest types of field-sportsmanship the paper will be adapted to the tastes of all men who use the rod and gun as means of pleasure and recreation. Broad in its sympathy with all that is legitimate in field sports, free from any entangling alliances with cliques, having no interests to serve save those of its constituents, and never hesitating in its criticisms of whatever may be inimical to these interests, the FOREST AND STREAM'S highest ambition will be to preserve in the future the approval won by its course in the past. It will persist in its efforts to awaken in the public mind a fuller appreciation of the importance of the proper protection of game in the breeding season, and of due moderation in the destruction of game at other times. This it considers a matter of prime importance, not so much to the man whose wealth and leisure enable him to make extended tours to favored game countries, as it is to that already very large and constantly increasing class of business and professional men, whose favorite relaxation from the routine of employment is found in brief vacation trips to the woods and fields and brooksides.

The enlarged form of the FOREST AND STREAM enables its editors to present each week in the several departments a large and varied supply of reading. In the columns of

The Sportsman Tourist

Will be found sketches of travel and sport. Coming from many different writers, and widely separate parts of the country, these sketches always have the charm of novelty, and they are sure to be read with interest by sportsmen, because their writers see things through sportsmen's eyes, and describe them from the sportsman's standpoint.

Natural History.

This department will not deal with fossils nor with the monsters of African jungles. Quite on the contrary, it will treat of the animal life of land and water in our own country, the habits and ways of American fur, fin and feather, in which American sportsmen are presumed to take an intelligent interest.

Game Bag and Gun.

In addition to the numerous accounts of hunting and shooting excursions, necessarily varied and interesting—as such accounts must need be—these columns will be found of special value to amateur and veteran alike, because of the frequent interchanges of experience in all matters pertaining to game and shooting.

Sea and River Fishing.

The angler will find in the pages of the FOREST AND STREAM the best angling literature of the day, in quantity more than is contained in all other publications put together. This journal has inaugurated a series of angling tournaments, the initial meeting having been held in the Central Park of this city; and it is believed that others of equal success will follow in other years. Meanwhile, the man who loves to go a-fishing may find in the FOREST AND STREAM all the year around a great deal that must be to his liking.

Fishculture.

The columns devoted to this important subject furnish a complete resumé of current achievements and progress in this important work.

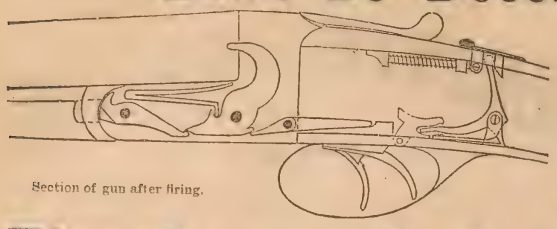
The Kennel.

This department has won the confidence of dog owners. Its reports of field trials, bench shows and other events are recognized as impartial, honest, and the most able published. The recent series of papers by its editor, entitled "Training vs. Breaking," have been published in book form, and have had a very large sale. Other papers of equal importance will be published from time to time.

Yachting and Canoeing.

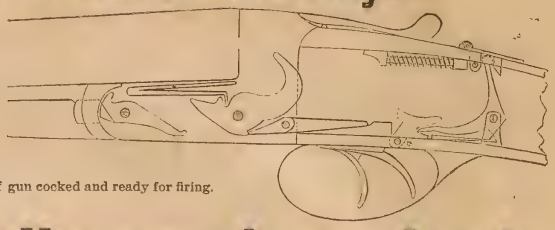
The editor of this department being a practical naval architect, and thoroughly familiar with every branch of the subject, will continue the same intelligent treatment of yachting and canoeing that have already won for the FOREST AND STREAM esteem and confidence.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.



We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each, and the files constitute a library of permanent worth. Eighteen such volumes have already been published. We furnish handsome file binders (price $1.25) which hold twenty-six numbers.



Subscriptions may begin at any time. Per year, $4; $2 for six months. Remit by post office money order, draft or registered letter. Give name, town, county and State. Address

Forest and Stream Publishing Co., 39 Park Row, N. Y.

Don't Be Deceived or Led Astray.

Section of gun after firing.

Section of gun cocked and ready for firing.

The Anson & Deeley Hammerless Lock,

AS MANUFACTURED BY

Westley Richards & Co., London, Eng.,

HAS NO EQUAL!

And is the only hammerless gun in the market that is absolutely faultless, being simple, durable, and possessing those wonderful shooting powers, combined with that indescribable symmetry and beauty so characteristic of Westley Richards' product.

Every desirable feature is found in this gun. Superiority of Material and Workmanship. Absolute Safety in Handling. Without Comparison in Durability and Simplicity.

Shooting Qualities Unsurpassed.

The following letters from prominent sportsmen cover the ground exactly:

J. Palmer O'Neil, Esq.:

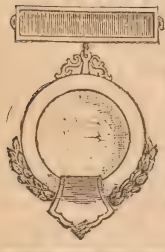
CLARKSVILLE, Tenn., March 20, 1882.

My Dear Sir—The Westley Richards Hammerless Gun I obtained from you has been the admiration of all my friends. I consider it much the best Hammerless gun, and recommend all sportsmen who can afford the luxury of a perfect gun, to buy a Westley Richards Hammerless.

Respectfully, PATRICK HENRY.

J. Palmer O'Neil & Co., Pittsburgh, Pa.:

BURLINGTON, Iowa, Sept. 20, 1882.



Dear Sirs—The Greener and Westley Richards guns arrived safely yesterday A. M., and in the evening I took them both out and targeted them. I like the Greener better for only one reason, and that is it fits me a trifle better. But the Westley Richards made by far the best target, so I have concluded to keep it and return the Greener. The Westley Richards is certainly a little beauty, and makes as fine a target as I ever saw. One of my friends who is a great sportsman went out with me, and before the trial made all manner of fun of the "pop gun," even while he admired its graceful shape and elegant workmanship. But the result of the trial rather surprised him. He shot against the Westley Richards, his 11lbs. Daly loaded with 5 drams of powder and 1¼oz. of No. 7 shot, while I used 3¼ drams of powder and 1¼oz. No. 7 shot. At 30, 40 and 50 yards I beat him badly in distribution and penetration. At 60, 65 and 70 yards fully equalled him. And the difference at 75 and 80 yards could hardly be noticed. I am much pleased with the gun, and as soon as I become a little more accustomed to it I have no doubt my shooting will be greatly improved. I shall take pleasure recommending the Westley Richards Hammerless Gun.

Yours truly, GEO. H. TOUSEY

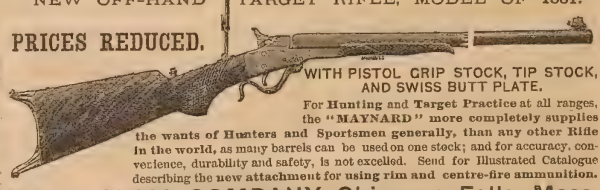
A SPECIALTY.



Special designs furnished on application free of charge.

The Maynard Rifles and Shot Guns.

NEW OFF-HAND TARGET RIFLE, MODEL OF 1881.

PRICES REDUCED.

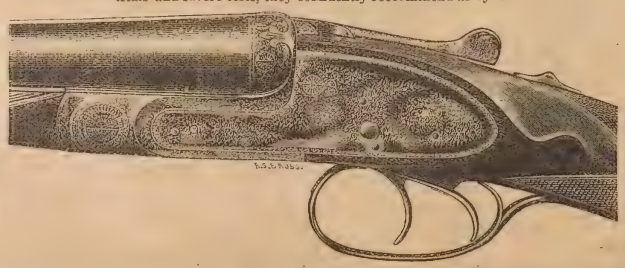
WITH PISTOL GRIP STOCK, TIP STOCK, AND SWISS BUTT PLATE.

For **Hunting** and **Target Practice** at all ranges, the **"MAYNARD"** more completely supplies the wants of **Hunters and Sportsmen generally**, than any other Rifle in the world, as many barrels can be used on one stock; and for accuracy, convenience, durability and safety, is not excelled. Send for Illustrated Catalogue describing the **new attachment for using rim and centre-fire ammunition.**

MASS. ARMS COMPANY, Chicopee Falls, Mass.

NOTICE.

JAMES PURDEY & SONS,



Late of 314½ Oxford Street, London, W.,

Gun manufacturers, by special appointments to Her Majesty the Queen, H. R. H., the Prince of Wales, and the most noted shots of Europe, give notice that they have removed to a new and large manufactory erected by them, and their address now is

AUDLEY HOUSE, SOUTH AUDLEY ST., LONDON, W.

They take this opportunity to inform American sportsmen that they have patented **A NEW REBOUNDING HAMMERLESS GUN,** which, after the most careful practical trials and severe tests, they confidently reccommend as by far

THE BEST AND ONLY PERFECT HAMMERLESS GUN MADE.

Its advantages are STRENGTH, SIMPLICITY, SAFETY AND FREEDOM FROM MISFIRES. JAMES PURDEY & SONS will only make one quality of gun for the United States, viz.: THE BEST. Guns take about five months to make, and can be ordered direct from the makers, or through the agencies of SCHUYLER & DUANE, 180 Broadway, New York, and JOS. C. GRUBB & CO., 712 Market street, Philadelphia.

N. B.—Messrs. Purdey & Sons are prepared to sell the rights, or grant a license (subject to certain conditions) for the sole manufacture of this gun in the United States.

No suit like this. Send for description to

FITS A Leading London Physician establishes an Office in New York for the Cure of EPILEPTIC FITS. From Am. Journal of Medicine.

Dr. Ab. Meserole (late of London), who makes a specialty of Epilepsy, has without doubt treated and cured more cases than any other living physician. His success has simply been astonishing; we have heard of cases of over 20 years' standing successfully cured by him. He has published a work on this disease, which he sends with a large bottle of his wonderful cure free to any sufferer who may send their express and P. O. Address. We advise any one wishing a cure to address Dr. AB. MESEROLE, No. 96 John St., New York.

N. M. MUZZY

45 South Canal Street, Chicago, Ill.

Of the old firm of HITCHCOCK & MUZZY and MUZZY & CO. in 1852.—Having increased my facilities for the business of reaming out gun barrels, I beg to offer my services to those owning guns of unsatisfactory shooting qualities. My system is peculiarly my own. I leave no shoulders, and will guarantee my cylinder boring to shoot more even than by the old choking system, in every instance. I invite special attention to my method, and the most satisfactory testimonials will be furnished when desired. Guns can be sent, and will be delivered by express.

CONSUMPTION.

I have a positive remedy for the above disease; by its use thousands of cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy, that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer, Give Express & P. O. address. DR. T. A. Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1. The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free owner's risk.

It is our aim to make sportsmen feel "at home on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

Climax Gun Cleaner.

FIG. 1

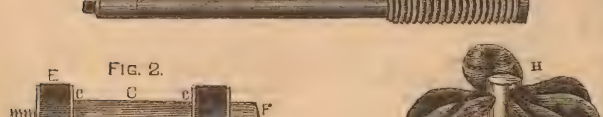

Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

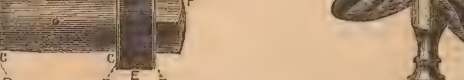

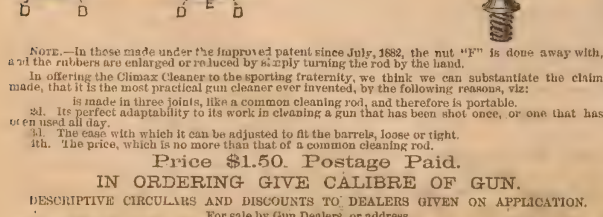

FIG. 2.

NOTE.—In those made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

In offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

1st. It is made in three joints, like a common cleaning rod, and therefore is portable.

2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.

3d. The ease with which it can be adjusted to fit the barrels, loose or tight.

4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

DESCRIPTIVE CIRCULARS AND DISCOUNTS TO DEALERS GIVEN ON APPLICATION.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb canisters.

Dupont's Eagle Ducking.—Nos. 2 (coarse) to 3 new; burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest Packed in 6¼ lb. kegs and 1 lb. canisters

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

TO NEW SUBSCRIBERS.

In consequence of an unprecedented increase in our subscription list this month, the very large editions of January 4 and 11 have been exhausted, and many new subscribers are still waiting to receive them. We are now printing extra editions; and meantime beg the indulgence of our patrons.

THE PEOPLE'S PARK.

THE "Improvement" Company, which tried to seize the people's pleasure ground, has somewhat modified its demands. A new form of lease has been drawn up by Mr. M. L. Josslyn, submitted to the "Improvement" Company for its approval, and sent to the Senate. The "Improvement" Company expresses itself satisfied with the modified form of lease, but the Senate has not yet given its opinion on the subject. This new form of lease does not give to the intending lessees any such privileges as, with the assistance of Mr. Merritt L. Josslyn, they had hoped to secure for themselves by the original lease. The latter, if it had been railroaded through in its original form, would have given them imperial powers within the boundaries of the Park. It would have made this reservation a big stock farm for the "Improvement" Company. The public would have had to humbly ask permission to enter its own Park, and would have had to pay heavy fines to the temporary proprietors before this privilege had been accorded them. Thanks to the vigilance of Senator Vest these enormously valuable and wholly illegal privileges have not been granted, and we trust that no more will be given to this "Improvement" Company than any other company or responsible individual may obtain.

The present form of lease differs from that of last summer in reserving to the Government the right to lease other portions of the Park to other persons, and in omitting the feature with reference to stage lines or other means of transportation, leaving that a matter for subsequent arrangement. It leases one section at the Great Geyser Springs, and one-half a section at each of six other designated places, making four sections in all. The rental is fixed at $2 an acre per annum. The rates of charges for entertainment and for all other services rendered to tourists and guests are to be subject to the approval of the Secretary of the Interior, as are the plans of the hotels and other structures to be erected upon the leased lands.

The promptness with which these monopolists have abated their demands shows more clearly than anything else could have done, how well they knew the full measure of the outrage which they purposed to commit on the long suffering people of this country, and the weakness of their position from a legal standpoint. Alarmed at the storm of indignation at their purposes and methods, which they saw gathering before them, they have retreated from their position, but they have not gone far enough. They still purpose seizing the most interesting localities in the Park. They demand a section at the Great Geyser Springs, which we take to mean the Upper Geyser Basin, and over this square mile of territory they will hold absolute sway. No tourist can camp upon this land, nor can he pasture his animals there, nor get water from the river or any spring, without a permit from the lessees. He will have to pay, unless he goes to the "Improvement" Company's hotel, a pasturage fee, a water fee and a ground rent for the space occupied by his camp, of so much per diem.

The Upper Geyser Basin is the most wonderful of the localities in the Park. It is here that Old Faithful, the Grand, the Giant and Giantess, the Beehive, and half a hundred other marvellous geysers are situated. Every one who visits the Park must go there, and should be allowed to do so freely. There is comparatively little grass in the Basin, for a thick deposit of the mineral, geyserite, covers the ground, and campers will require the privilege of freely using what there is.

If the monopolists are allowed to select all the best sites in the Park, and to hold such large tracts of land as a section, or even a half section, it is clear that they can make such arrangements as will practically shut out from the Park all others who may desire to erect hotels there. If there is no competition the visitors to the Park must expect to be fleeced.

Of the extraordinarily high-handed proceeding of these bold speculators, in entering the Park, erecting their sawmills, cutting the timber and slaughtering the game, it is difficult to speak with moderation. Their impudence in giving out a contract for 20,000 pounds of wild meat, after all the balderdash that they have talked about protecting the game, must excite the contempt of everyone.

There is no doubt whatever that these men are in fact and in law, trespassers upon a Government reservation. Had any such action taken place on a reservation under the control of the War Department, the troops of the United States Army would long ago, and very properly, have expelled the intruders, and suits for damages would have been instituted against them. But with the Interior Department things are managed differently. The trespassers ought to be ejected from the Park without delay, and there is little doubt that heavy damages could be collected from them for the destruction which they have already caused to Government property.

We hope most earnestly that the bill introduced by Senator Vest may receive speedy attention and become a law of the land. It cares for the interest of the people, and protects them from all monopolistic land-grabbing schemers. In caring for the people, it cares for the game and the fish, and thus deserves the most cordial support of every citizen. A number of important game protective associations, among them the Cuvier Club and the Michigan State Association have substantially endorsed it, as has also the press at large. We trust that it will pass.

The matter should receive immediate attention, and the law should be passed during the present session, in order that it may be out of the power of the Secretary of the Interior, or any of his subordinates, to consummate this lease or to make others by which the rights of the people to this magnificent section may be seriously imperilled. Let the people look to it, and strive by every means in their power to let their representatives understand how deep is the interest which they take in this matter.

That the FOREST AND STREAM was the first newspaper in the land to see the enormity of this job, and to raise its voice against this cool and barefaced attempt to appropriate the people's property, is naturally a source of satisfaction to us. At the same time we cannot claim any special credit for the course we have pursued. It is the duty of this journal to do all in its power to protect the interests of the people, to guard against any invasion of their rights, and to sound the note of warning and alarm when these rights are threatened. That we were the first to see what this proposed lease would accomplish, proves simply, either that we were more alert than our contemporaries, or else that we have special knowledge and special sources of information which they, none of them, possess. What we have said on this subject has not been without effect, we are happy to say, and we have faith to believe that the representatives of the people at Washington will, by passing Senator Vest's bill, earn for themselves the lasting gratitude of the whole Nation.

AN IMPORTANT PARK ORDER.

SPURRED on by the interest devoted to the Park by Senator Vest, the Secretary of the Interior has issued an important order to the Superintendent of the Yellowstone National Park. The text of this document, which we give below, will rejoice the heart of every man throughout the land who is far-seeing and intelligent enough to appreciate the importance of preserving from utter extinction the noble game with which, in some few localities, the grand old Rocky Mountains still teem. The order, which has not been published before this, and which it gives the FOREST AND STREAM great pleasure to lay before the public, reads as follows:

DEPARTMENT OF THE INTERIOR,
WASHINGTON, January 15, 1883.

The Superintendent of the Yellowstone National Park:

SIR—The regulations heretofore issued by the Secretary of the Interior in regard to killing game in the Yellowstone National Park are amended so as to prohibit absolutely the killing, wounding or capturing at any time, of any buffalo, bison, moose, elk, black-tailed or white-tailed deer, mountain sheep, Rocky Mountain goat, antelope, beaver, otter, martin, fisher, grouse, prairie chicken, pheasant, fool-hen, partridge, quail, wild goose, duck, robin, meadow lark, thrush, goldfinch, flicker or yellow-hammer, blackbird, oriole, jay, snowbird, or any of the small birds commonly known as singing birds.

The regulations in regard to fishing in the waters of the Park are amended so as to prohibit the taking of fish by means of seines, nets, traps, or by the use of drugs, or any explosive substances or compounds, or in any other way than by hook and line.

All cutting of timber in the Park, except upon special permission from the Department of the Interior, is prohibited.

You will please see that all persons coming within the limits of the Park are notified, so far as possible, of these regulations, and that they observe the same.

You will report to this Department any infractions of the regulations. Very respectfully, H. M. TELLER, Secretary.

This order, if enforced, means protection for the game, and is from all points of view most highly to be commended. The prohibition against the "killing, wounding or capturing at any time," of the species mentioned is absolute; and, while it may not all at once wholly prevent the killing of these animals, its moral effect can scarcely be overestimated.

It is not too late, if this order can only be enforced, to preserve the game of North America within this Park in such numbers that there may always be had in the country surrounding it, good hunting for all who may desire to have the satisfaction of killing in moderation these noble species. The additional assistants to the Superintendent of the Park, called for by Senator Vest's excellent bill, with the aid of the troops which the Secretary is to be authorized to employ, will have no difficulty in carrying into effect this order, and in promptly expelling and bringing to justice any who may attempt to violate its provisions.

The contract for the 20,000 pounds of wild meat reported last week as having been made, will now, we think, scarcely be filled from the game within the Park limits.

THE MICHIGAN ASSOCIATION MEETING at Detroit, last week, of which a full report will be found elsewhere, was a most important one in its bearing upon the future usefulness of the society. It is hoped that the committee, to whose care the matter of legislation was committed, may be successful in their efforts to secure a State game warden. Such an officer is greatly needed, the work already done by the society's agent, Mr. Higby, having given ample demonstration of the good to be accomplished in this way. The proposition to prohibit spring shooting received the indorsement of the more progressive delegates, and the legislative committee were given the option of incorporating provisions to this effect in the proposed amendments if it can be done without detriment to other interests. We congratulate the State of Michigan that its game and fish interests are in such good hands.

THE CUVIER CLUB of Cincinnati is one of the largest and most influential game associations in the world. The admirable report prepared by Hon. Thos. A. Logan and read at the annual meeting of the club, possesses a more than local interest, and it gives us great pleasure to lay it before the readers of FOREST AND STREAM.

THE SOUTHERN NEGRO, as some of our correspondents have told us, is not so much of a game destroyer as he once was. This is interesting and gratifying intelligence; we should be much pleased to have the observations of our Southern readers on this point.

FISHING IN HOMER'S DAY.

FISH in Homer's day constituted but an unimportant article of food, and that in common use only among the lower classes of the people. It is never found at all upon the tables of heroes in camp nor of princes at their homes. The flesh of domestic animals, particularly that of the ox, supplied the meat of the laborer in the fields and the banquet boards in the palace. Their flocks and herds constituted the chief wealth of both Greeks and Trojans. This is to be taken in evidence of their having previously led a pastoral life, as well as their depending largely upon the grazing of their lands in Homeric times. That fish did not appear upon the tables of the Grecian heroes at Troy could not have resulted from ignorance of their use, nor of the art of taking them, for the camp was close upon the shore, and only a league or so below the Hellespont, which the poet speaks of as abounding in fish. (Il. IX., 360). The neglect of fish as an article of diet on the part of the higher classes can be accounted for only upon the supposition that they were esteemed unfit for food. The only instance in Homer where we find direct mention of fish as food is when the companions of Odysseus are reduced to the greatest straits just before they adopt the fatal counsel of Eurylochos and devour the oxen of the sun.

One month incessantly blew the south wind and not any other,
Rose thence forward no wind save only the east and the south winds.
Long as my comrades had store of bread and wine that is ruddy.
So long restrained they their hands from the oxen, although they were hungry.
But when indeed our supplies had utterly failed from the vessel,
Then by necessity driven they fell upon game that was lawful:
Fishes and birds as well—whatever chance brought to their dear hands,
Using hooks that were bent;—for hunger was gnawing their stomachs. (Od. XII., 325-332.)

Earlier in the course of his ten years' wanderings had Odysseus and his men experienced similar straits through stress of weather, which confined them for twenty days upon the desert island of Pharos, just off the mouth of the Nile and in the Bay of Alexandria; and in the same way did the men relieve their distress.

Now all provisions had failed, and the hearts of my comrades had fainted,
Had not a goddess divine taken pity on me and preserved me.
Child of a sovereign lord—of Proteus, old man of the waters—
Eidothea: for perchance had I greatly moved her compassion.
Roaming about by myself she found me apart from my comrades.
All the time strolling were these along by the shores of the island,
Fishing with crooked hooks; but hunger was gnawing their stomachs. (Od. IV., 363-369.)

The poet describes minutely the art of the angler in a comparison he introduces to show how the monster Scylla seized six of the crew of Odysseus as they sailed past the dreaded Charybdis. He paints the angler creeping to the extremest point of a projecting rock, and with light rod casting the baited hook to the little fishes to take them through treachery.

Just as a fisherman casts with his rod from a ledge overhanging,
Throwing enticing bait to deceive the delicate fishes,
Letting down into the sea a bit of the horn of a wild ox.
Jerks from its house and its home the fish he catches—now gasping,
So were these, breathless from fright, snatched off and dashed to the ledges. (Od. XII., 251-255.)

The allusion to the bit of ox horn may prove puzzling to the disciple of Izaak Walton if he has not also read Homer with especial care. Another passage in the poems, however, makes it pretty plain that what the poet had in mind was a casing of horn inclosing the line just above the hook to prevent the cord being cut off against the sharp teeth of the fishes. The loss of the hook would, in those days, prove a misfortune of serious magnitude. In the last book of the Iliad, Homer tells how Priam ransomed the dead body of his son. He represents Zeus declaring that some messenger of the gods should visit Thetis and induce her to persuade her son to give up Hektor's body and receive the offered ransom.

He spoke: and with foot of the blast-wind Iris to carry the message,
Midway between the isles of Samos and Imbrus the rugged,
Plunged she into the sea: the waters around her were troubled.
Just like a plummet of lead the goddess sank to the bottom,
Lead at the end of a line that runs through a casing of ox horn,
Downward goes on its way bearing death to the ravenous fishes. (Il. XXIV., 77-81.)

The use either of nets for taking fish or of snares for birds is alluded to where Sarpedon warns Hektor to beware that he be not taken by the enemy as if in cords of linen all enclosing. (Il. V. 487). In the Odyssey there is plain mention of this mode of fishing where the poet tells how the suitors lay piled in heaps when slain, for he compares them to heaps of fishes, which the net of many meshes has dragged from the hoary sea out on the dry sand, and there desiring the water they lie dying in the hot sun.

Searched then Odysseus his house to see if yet of the suitors
Any were hidden away escaping the doom which impended,
Covered with blood and with dust he saw every one of their number
Lying in heaps as they fell and piled up like so many fishes,
Which from the hoary sea hauled out on the beach of an inlet.
Fishermen drag in the net with woven meshes: but all these
Gasp for the waves of the sea as they lie in the sand at its margin.
Now has the shining sun destroyed the lives of the fishes;
So then the suitors in heaps were lying one over the other. (Od, XXII., 381-389.)

Of the use of shellfish and of the method of taking these Homer makes mention but once, and that by way of a jest. When Hektor's charioteer was killed and fell headlong from his chariot, Patroklos, seeing him, quaintly remarked that this man would supply a large family diving from a ship into the fish-abounding sea for oysters, even if the water were very rough.

Heavens! why, bless me, the man is nimble! how easy he plunges!
Really, if he had his home by a sea abounding in fishes,
Many a mouth would he fill—this fellow diving for oysters.
Overboard from a ship would he plunge, although 'twere rough weather,
After such fashion now from the car he gracefully plunges. (Il. XVI., 745-749.)

But Homer affords us ample evidence that the fisheries were early prosecuted in the water surrounding Greece. When the suitors had been slain at the palace of Odysseus, the bodies of such of the dead as belonged to Ithaka were carried out for burial, while those that belonged in cities at a distance were sent home by fishing craft plying among the islands and along the coast of Epirus, a circumstance which abundantly proves that this industry was actively carried on in these waters at this early day. Soon as Odysseus had inflicted terrible punishment on the insolent princes:

Fame, the swift bearer of news, went everywhere through the city,
Telling the odious death, and the bitter fate of the suitors.
Forthwith, hearing the news, men hurried from every quarter
Wailing and groaning aloud in front of the house of Odysseus.
Forth from the palace they bore the dead and they buried them singly.
Those who had come from abroad they sent every one to his city.
Fishermen carried these home, having put them on board their swift vessels. (Od. XXIV., 413-419.)

ISAAC BASSETT CHOATE.

NEW YORK GAME LAWS.

SPEAKER CHAPIN, of the New York Legislature, has appointed as a Committee on Game Laws the following gentlemen: Messrs. Johnson, of Westchester (chairman); Bulmer, of Queens; O'Connor, of Chemung; Schermerhorn, of Columbia; McManus, of New York; McCarren, of Kings; Scott, of Livingston; Helm, of Oswego, and Locke, of Warren.

Several of these members we know to be intelligent gentlemen, who are fond of going shooting and fishing, and we understand that a number of them are members of game protective societies. We have no reason, therefore, to doubt that they will do the best that they know how. We had hoped that the name of Mr. James Geddes, of Syracuse, might have been included in this list, but it has been omitted, and no doubt Mr. Geddes's work outside will be effective and unceasing.

It will be interesting to observe just how careful and intelligent a consideration shall be devoted to the important subject intrusted to this committee's care. We have taken occasion, more than once recently, to set forth pretty plainly our views on the subject of any general change in the laws. The trouble with these statutes is not in their provisions, but in the fact that these are not enforced, and are, in many sections of the State, for all practical purposes, a dead letter. If the laws which we now have are not respected, it seems folly to enact more stringent ones, and we feel sure that the wisest course would be to concentrate all effort on the obtaining an increase in the number of our game protectors and a liberal appropriation for paying them for their work.

There are, however, several much needed alterations which deserve the earnest consideration of the Legislature. One of these, and the most important, is the abolition, without exception, of spring shooting. Neither ducks, nor geese, nor brant, nor Wilson's snipe, nor bay birds of any kind, should be shot after February 1. Their return to their breeding grounds in spring should be free from molestation. Many of the species are already paired before they leave us in spring, and all the destruction that goes on at that season tends to lessen the number of birds which will visit our bays, beaches, and meadows when the autumn once more brings around the shooting season. It is strangely inconsistent to protect certain birds after January 1, and to permit others to be slaughtered as long as they can be found. It may be said that it is only the migrating species that are allowed to be shot in spring, but what of that? Why should they be killed just as they are about to reproduce their kind, any more than the quail or the ruffed grouse? Moreover, some species of ducks, as well as the so-called English snipe, frequently breed with us.

The truth is that the killing of game in spring is just of a piece with the whole policy of our government and our people on this subject up to the present time; that is, it is inconceivably short-sighted and stupid. Even to-day, after all the efforts that have been made to arouse interest in the subject, the man who has any intelligent comprehension of the proper methods to be pursued in protecting game is just about as rare as a black fox. Almost everything that has been accomplished in this direction is the result of private effort, which has had to struggle against an appalling amount of ignorance and prejudice.

How to stop the jacking or fire-hunting of deer in the Adirondacks is a difficult problem and one which may claim a little attention from our game clubs. This practice is carried on almost entirely in the close season, and is, therefore, really already forbidden by law, though not in explicit terms, as we think it should be. It is a most destructive method of hunting, and the shot that kills the old doe carries death also to two tiny spotted fawns.

Another change, which is strongly to be recommended, is such a modification of the section relating to prosecution for trespass, as to allow the owner or lessee of property to announce his intentions to keep the shooting or fishing of his land from the public by advertising such intentions for three months in the county papers or by personal service of notice in addition to the signboards now required by law. This is rendered necessary by the fact that as things stand at present it is often very difficult to successfully prosecute a trespasser.

In another column will be found a letter touching on several of these points from a gentleman well known for the active interest which he takes in game protection. His recommendations deserve the careful attention of those who propose to submit bills for action by the present Legislature. His suggestion that each club should contribute a small sum of money toward a fund for additional pay of game wardens is certainly deserving of consideration. It would be likely to have the effect of inciting these officials to greater efforts, and, besides this, would give each club member a personal interest in the doings of the wardens for his section, which could scarcely fail of being of advantage to the cause.

LIFE SAVING AND FOWL SHOOTING.—We have heard for a long time complaints that the men employed at the life-saving stations scattered along the coast, do a great deal of injury to the shooting, by their continual hammering at the fowl which resort to the localities near these stations. Many, indeed most, of the men employed in the Life Saving Service are old bayman and gunners, good shots, and well acquainted with the habits of fowl. These qualifications, say those who complain on this subject, render them very destructive to the birds, the more so because they are within easy reach of the shooting grounds, and have abundant time on their hands to indulge in their fondness for gunning. If these men confine themselves to killing fowl at proper times and in proper places, if they shoot only during the hours of daylight, and do not disturb the birds upon their feeding grounds, no one can with any color of justice complain because they kill many more birds than most sportsmen are able to. But if, as is said to be often the case, they harry the birds continually, putting out batteries on their feeding grounds, and shooting the fowl at night by means of lights and with big guns, it will certainly be in order for that department of the government which has charge of this service to issue an order limiting, or even entirely prohibiting, the use of firearms by the crews of these stations. On many accounts we should be sorry to see this done, but we know that there are some stations where the privilege of shooting is grossly abused. The pay of this service is wretchedly insufficient, the life a lonely and often a hard one, and we should regret to see the amusements or privileges of the men curtailed. But they should, for their own as well as for the public's sake, exercise some moderation in their shooting. The time has come for protecting our fowl by every possible means, and this is one of them.

The Sportsman Tourist.

NIMROD IN THE NORTH.

BY LIEUT. FRED'K SCHWATKA, U. S. ARMY.

II.—Shooting Among the Seals and Sea-Horses.

THE reader will remember that our winter camp was in the northern part of Hudson's Bay, among the Iwillik Esquimaux. The name I-wil-lik is derived from the Esquimau word *iceiwick* (a walrus), and signifies the walrus-eaters, that being among these people the principal source of food. Among them were a few Netschilluks, or seal-eaters, whose original homes had been with the great body of their large tribe on and near King William's Land in the Arctic Ocean. Thus living among the seal and walrus-eaters, I had occasion to see and hear much concerning the habits of and hunting adventures with these curious amphibious animals that supplied them with their daily sustenance.

The walrus, or as he was anciently called and is still sometimes dubbed, the morse or the sea-horse, (the *Trichechus rosmarus*, Linn., of scientists) may be popularly described as an immense seal, with upper canine teeth prolonged into huge tusks. The weight of the walrus can be easily remembered as a ton, although that may be slightly in excess of the average. They attain a length of from fifteen to eighteen feet, and a circumference around the fore-flippers of about half these amounts. These fore-flippers are about two feet long and capable, when expanded, of covering considerable area, and forcing them rapidly through the water when propelled by their short stout arms. They also use these to protect and carry their young and wounded comrades. The inside of these paws is covered by a horny cuticle that would make one think that they were hard workers, but evidently subserves the purpose of protecting their palms while slapping them around over the rough ice in their bunglesome gait. Some have claimed that they have the power of suction in their flippers, like the house-fly's foot, and that in this manner they readily climb upon the huge ice cakes where they are so often seen, especially in the Arctic summer, but I do not think this has been proven.

The walrus flippers, when properly cooked, are considered a great delicacy by the Innuits, as the Esquimaux call themselves, and I must say that to those who have habituated themselves to their diet in whole or in part, their judgment is good. They cook them by simmering them all day in the half-boiling water in their rude stone kettles over their peculiar native lamps, and when thus prepared, leaving out a slight walrus flavor, they could not be told from pickled pig's feet served hot.

The form of government of the Iwilliks—if they can be said to have any—is a sort of communism; but to the slayer of a walrus is accorded the head, one fore and one hind flipper above the share which is apportioned to any that may come along and help slaughter the animal, or even to those shiftless beings who appear in time to help drag it into the village near by. Even again when it reaches the village it may undergo another subdivision, for the refusal corner of an Innuit's heart is rounded off with the most abounding charity.

I have spoken of the walrus flavor, and this is almost

identical with that of the coarser clams, from which bivalve in North Hudson's Bay he derives his main subsistence, and for procuring which his villainous-looking tusks seems specially designed. I think I cannot better describe the walrus flavor than by citing the unpoetical illustration of tough Texas beef, marbled with fat, soaked in clam juice. I think the two would be so near alike that it would take an Esquimau to distinguish between them. To many this meat seems to be extremely repulsive, but much of this abhorrence lies in the imagination and can be overcome in the same way that is done with the frog-hater, who eats them as ricebirds and then resembles Oliver Twist in his further actions.

The flesh of the walrus is protected by a thick blanket of fat, or "blubber," which allows it to resist the constantly cold waters of the Arctic seas, and this blubber yields nearly a barrel of oil, and this, with its tusks and occasionally its hide, makes it a constant victim to the avarice of the human race. Its tusks are the most distinguishing feature, their ivory whiteness showing plainly marked against its dark, swarthy breast. They are from one to two feet in length when fully grown, and weigh about five pounds (bringing about twenty-five cents a pound in the ivory markets), one side being often longer than the other. Whenever this is the case the shorter is usually the heavier, thus equalizing the weights. I think this would indicate that the morse is not inclined to use the tusks equally in digging for clams, or any other continuous labor with them, being, so far as his tusks are concerned, right and left handed, so to speak.

The tusks are used as weapons of defense and offense; and, according to some, the walruses have closely contested conflicts with the polar bear above, and the narwhal beneath water. I think the polar often attacks the smaller ones and succeeds in killing them by a powerful blow from his paw, or by stunning them in this manner, and completing their destruction afterward, for the bear is cunning enough to crawl right on top of and kill the common Arctic seal, the most wary animal in these regions, and he could therefore easily do so with the stupid sea-horse. Still I think the larger ones, lying so close to the open water as they usually do, and weighing fully twice as much as their opponent, ought to make a successful defense until they could dive beyond his reach. Some give Bruin the credit of being smart enough to take a large stone or block of ice between his paws and converting himself into a catapult to use it to crack his victim's thick skull by a blow from a distance, especially where he is favored by positions of altitude as precipitous cliffs, or the perpendicular walls of icebergs.

The contents of the stomach of a walrus, consisting mostly of crushed clams, is one of the highest delicacies of the Innuits, but I was never starved long enough to partake of this natural clam chowder while living in these regions, although enjoying that at home.

Captain Hall, when in this same country and on a walrus hunt, concluded from the fact that rarely any part of a clam shell larger than a dime is found in the sea-horse's stomach, and also finding at various times a single shell close by a walrus hole (or aperture in the ice where the brute sticks its head through to blow or breathe), that the walrus digs but one clam at a time from the bottom of the sea, and then comes to the surface to blow and eject the shell. When I first heard of this clam diet of the walrus, I thought there would be no trouble in obtaining them on some of the sand beaches I had seen near camp, but I soon found that if I wanted clams I must take them second-hand, *à la Innuit*, from the walrus. The shore ice in North Hudson's Bay forms to about six or eight feet in thickness, and there is an average rise and fall in the tide of about fifteen feet; so for about twenty-five feet below high water mark (where the clam is supposed to be happiest) the shore is frozen solidly some distance into its component earth or sand, and no clam with sufficient regard for comfort will be found nearer than eight or ten feet of the surface at the lowest tides.

Most of the autumn of 1878 was occupied by my party in surveying the illy-charted northern shores of the bay, Colonel Gilder and the two men whiling away a portion of their time in short excursions with the shotgun and rifle, but an accurate census of the fauna, taken before and after these expeditions, like the continually tempestuous weather of that season, would have suffered no change. Colonel Gilder was, however, on the 16th of December, a little more successful, having bagged two walruses on an island about twenty miles distant, and brought their tusks back as trophies. I therefore determined to try my luck at the same sport, and combining business with pleasure, finish my survey of the coast to the eastward. I started on the 19th with Frank and a boatload of natives, but the day after proved squally and tempestuous, and on reaching the island where the natives were camped—about ten miles from the walrus island—it suddenly turned very cold, and my Esquimaux hunters could not be induced to proceed further. Here we remained during three days and nights of bitter cold weather, when my northern friends determined upon a homeward journey back to the mainland in order to build their *igloos* or winter snow houses, as the ice was forming rapidly, and it was now altogether too cold in a sealskin tent (*too-pik*) to remain there comfortably. I was fairly remunerated, however, by completing my survey in that vicinity, and on the 23d started homeward. The slush ice that always forms on salt water just before it freezes, and that closely resembles loose snow thrown into the water, retarded our progress considerably whenever we neared the land, and warned us in unmistakable language that our long polar winter was near at hand. Reaching the mainland I had a fair shot at a huge walrus's head, whose owner had crawled upon a small granite tip of rock near the shore, but striking him in the upper jaw, he quickly bade us adieu, leaving a long streak of opalescent grease on the surface of the water to mark his subaqueous course. A walrus's carcass floated ashore a few weeks after that not far from the scene of my bad shooting, and Toolooah and other Innuits believed it to be mine, although it was worthless for anything except dog feed. By the custom of the country, however, it belonged to the man who found it, limited by the rights of possession already explained, and I did not even take the trouble to look it up and ascertain, especially when I heard of the prodigious number of wounded walrus that must have been swimming around in Hudson's Bay just before this one appeared which was thrown up on the beach.

By the 1st of February in '79, the few Esquimaux that had been clustered around my permanent camp on the mainland had moved over to Depot Island, three miles distant, it being more available for walrus hunting in the icefloes, which season was then just commencing, and for the first time among these savage sons of old Boreas I was brought in contact with one of their superstitions that caused me no little annoyance. When the reindeer hunting season is over, some time from December to February, depending upon the locality and season, and nearly all the meat resulting therefrom disposed of, the walrus and seal come into the Esquimau market and completely exclude the reindeer, which from that date becomes forbidden fruit. The Innuit who has relinquished reindeer meat tears down his old *igloo*, or snow-hut, and builds a new one, as he must not eat walrus or seal, or work on sealskin clothing in an *igloo* where the now discarded reindeer has been eaten or clothing made from his hide. The contrary rule is also good, for all work on reindeer clothing must cease as soon as the new *igloo* is made their habitation.

So far is this superstition carried that upon one occasion, several years ago, so Ah-mow, a trustworthy Iwillik Innuit, informed me, when about one-half of the natives then living in Iwillik (the Repulse Bay of white men) had commenced their reindeer Lent, the walrus and seal suddenly became very scarce owing to severe protracted northern winds holding the ice floes well off the shore. The remaining half of the natives still had a plentiful supply of reindeer meat, but "what was one man's meat was another man's poison," and the first portion had nearly starved in devotion to their religion, alongside of the far more esteemed reindeer meat, when a lucky change of wind saved them from breaking this Innuit commandment, or perhaps from starvation. Shortly after their establishment at Depot Island their walrus and seal hunting was amply rewarded with success, but I found it impossible to secure any for myself or for dog feed while I lived in my present *igloo*. If I would only build another, which they besought me to do, even on the site of the present one, they would bring me plenty. Natives came over daily but brought no walrus meat, nor touched the reindeer meat of those few that remained. Providing that we took our dogs to Depot Island they would be fed generously, and this method was finally adopted, to the satisfaction of all parties, the natives doing all the work. This superstition is founded on the belief that there exist two gods, antagonistic to each other, one ruling the seas and all that in them is, and the other the land and with its beasts and birds, and they appease their respective divine jealousies by holding true allegiance to only one at a time, discarding the other completely for the while.

The pursuit and capture of the walrus is generally undertaken with the spear and sealskin line and very much resembles the killing of a whale as now practiced by our whaling ships. It must be remembered that the walrus is always found near the open water, simply crawling, upon a cake of ice, or the edge of the shore ice, and never going further from the water than is necessary to secure a comfortable spot to lie in, for the sea is his refuge in case of danger. He is a clumsy animal on land or ice and his defense there is not at all proportionate to his strength. He is nearly always near enough the ice edge so that one good lurch of his huge carcass will throw him into the water.

The native hunter, when he has descried the large beast on the ice-foot, crawls slowly and noiselessly on him, keeping out of sight as much as possible, in which he is greatly aided by the rough hummocks of ice and the fact that his lazy lubberly prey is generally about half asleep, especially if it be a fine sunny day. When sufficiently near, which depends upon the nearness of the walrus to his refuge place—the open water—with a few lightning like leaps the agile hunter is alongside with the point of the walrus spear deeply bedded in his victim's tough sides and ready to pay out the thirty-foot line that he has had wound around his arm or neck, as the sea-horse slides into the open water in his attempt to escape. Now comes the tug of war! It requires the skillful and united strength of two active hunters to manage the line or the walrus will pull it away or cut it off clean over the sharp edge of some projecting ice hummock before they have worried him out sufficiently to kill him with a lance. Pulling in the line rapidly as it slackens or paying it out with a steadily increasing resistance, until the beast is so exhausted that he may be pulled alongside and dispatched by a well directed thrust from their sharp lances.

The use of firearms, wherever the Esquimaux have been able to obtain them, has much simplified the second act of this tragedy, as the hunter then has but little trouble in dispatching his game immediately after he has fastened to him with the harpoon and line, and while he is yet in his most desperate struggles to escape. Where walrus are not numerous, and consequently make such short excursions that almost the merest movement is sufficient to throw them into the water, the shot from a gun cannot be wholly relied upon, for, unless instantly fatal, which requires better shooting than can be usually done under such cold, uncomfortable circumstances, the huge monster rolls into the water and sinks to the bottom, where he dies and remains until the gases from putrefaction brings his carcass to the surface. Wherever they congregate in immense herds, as in the Arctic seas inside of Behring's Straits, or as they used to be in the Spitzbergen seas before the whalers thinned them out, they can be shot like so many tame sheep upon the great ice cakes, where they crawl out to bask in the sun, for the first to crawl upon the ice are crowded back a considerable distance by the newcomers, and so on, until they are forced a long way off from the water's edge, and there fall victims to the rapid rifles of man, when surprised.

The above explanation of a hunt supposes that the hunter has approached over ice and on foot, which is the case when the ice-floe is large enough or the walrus has perched upon the shore-ice. When he is on an isolated cake of small dimensions or a small island, he is approached by several persons in *kiaks* (their small skin canoes) and instead of holding on to the line, a large air-tight and inflated sealskin about the size of a half barrel is attached to its end and thrown over as soon as the harpoon is fast. At first the strength of the walrus is sufficient to drag this float under the water for three or four minutes, but the intervals rapidly become shorter, and in less than half an hour he is towing it along on the surface of the water, and the active hunter watches his opportunity to pierce him with a lance or shoot him through the head or neck. Nearly all those killed in the summer are thus obtained. During July and August in 1880, while on Depot Island, many walruses were thus captured. At the highest point of the island a convenient monument of stones was built and over this my army signal telescope was placed, while hardly five minutes would elapse before some one, the small boys especially, would be looking through it, scanning the drifting ice-pack for five or six miles on either side. As soon as one was discovered the alarm would be given through the village and several would put off in their *kiaks*, and whenever the chase was near by I took my position at the telescope and viewed its exciting incidents.

The mother will fight strenuously in defense of her young, and the latter cling tenaciously to its maternal defender, so that success in obtaining either is always rewarded with the other. During very cold weather the walrus only remains a short while on the ice at any one time before retiring to the water to warm his tough hide, and if a young one be captured alive it is almost impossible to keep it so, owing to the cold nights which soon kill it.

There are very few instances indeed where this animal has been seen alive in menageries far from its native clime. In Baffin's second Arctic (1613) voyage, we see quaintly recorded that "our generall went on shoare this afternoone, and killed foure deere, and brought a young morse alive with him aboord." When near Spitzbergen on this same voyage he sent some men ashore to get a piece of driftwood discovered on the beach, and says, "Wee caused the men that rowed the shallop to towe a tree after them. Nowe, when wee had put off a little from the shoare, there came five or six morses swimming hard by us and about us; some of them coming so neare the sterne of the bote that we called for our launces purposing to strike them. They would, divers times, laie their teeth upon the tree which we towed (as it were scratching the wood with their teeth), but wee still rowed awaie, and at length they left us. Then we passed through a great deals of small ice, and sawe upon some pieces, two morses, and upon some, one."

It is dangerous to wound one of these animals when in a boat far from land, as instances are not wanting where they have retaliated effectually by tearing the boat's sides to pieces by their huge swinging tusks. Many of the Iwilliks and kindred tribes wear mourning for departed ones upset and drowned by the angry wounded walrus.

The hide of the walrus is from an inch to an inch and a half in thickness, and covered sparsely with short bristles. The young walruses are quite dark in color, but gradually turn lighter with age, until the oldest are of a decidedly light grizzly hue. The thick hide used to be taken by walrus slayers to make a heavy porous leather, but I think its usefulness has passed. By cooking it for a day or two in their perpetually simmering kettles, it becomes somewhat friable, and is so eaten by the natives, those of the northern coast of Western Greenland being very fond of it. I did not find such a desire for it among the Innuits in Hudson's Bay. When eaten raw or uncooked it is simply equivalent to rubber belting of the same thickness, and it must be cut in small enough pieces to be swallowed at once, as the teeth will make no more impression than on the substance named. Add to this that the stout, bristly hairs makes one imagine that he is cutting up and eating a wire hair-brush. As the author had to live on it for five days, his observations are of the most practical character. It is never used, even by the natives themselves, in this manner, until they are driven to it, and even after the rancid oil is consumed with which they could have cooked it.

It is not a useless material, however, by any manner of means. Their dogs, to whom they owe more than any race of people owe to their domestic animals, must be provided for, and in the walrus hide the native sledgeman finds the most portable dog food known to the Arctic regions. This animal is not fed oftener than every other day, even when food is at its maximum abundance, and when traveling on a long journey, where space and weight upon the sledge has to be economized, he is not fed oftener than every third or fourth day if walrus hide (or *kowe*, as they call it) is given. Thus provided, the Esquimau dog will stand a good journey for a month or two without material or visible loss of flesh or strength. He may pick up a little refuse here and there, but it will be a microscopical percentage on the regular diet. The *kowe* is generally packed along in large pieces about two by three feet, and when fed to the dogs is cut up into strips about one or two inches wide (this will make them square, as this is the thickness) and from a foot to sixteen inches long. These the dogs swallow, and the natives tell me that it takes them two days to digest it, which surprised me in regard to the power and rapidity of the digestive organs of these camels of the cold, for I thought nothing less than a quartz mill or aquafortis bath could handle it in such a short time.

The dangers in walrus hunting are much more numerous than one would imagine from such a clumsy animal, although the most conspicuous ones are indirect, such as being drowned after the *kiak* is upset, for the Esquimau, in his waters of ice, is a stranger to the art of swimming. Another danger is being packed out to sea on the ice while an unfavorable wind is blowing off shore, or a current is setting out. Still, I know of two ugly-looking wounds made by direct contact with their tusks, and one case of death reported by a native which I believe.

About a month before we started from Hudson's Bay on our sledge journey, Ikquecsik, a first-rate walrus hunter of mine, attempted to make up my deficit in oil, with which the party was to start, and of course was untiring in his efforts to do so without regard to weather. One day, while on the outer edge of the floe with another Innuit hunter and his brother, a mere boy, with a strong off shore wind, the piece on which they were watching broke off and floated away to the southward in the storm. They were prisoners on their jail of ice for three days, at the end of which time they were landed about fifteen miles away from the island and made their way home on the sledge, which they had had with them all the time. They had not suffered much material discomfort, having built themselves a warm snow hut on the floe alongside a high hummock, and they killed a walrus, which happened along, giving them plenty of food for themselves and their dogs, while a lamp was made from his tough hide and wicking from a piece of cloth and the *igloo* reasonably warmed. The large sledge was placed on end resting against the walls of the *igloo* and the top slat used as a perch for a lookout to watch for a change of wind and the land.

These driftings out to sea on the ice are not unusual, and nearly every once vigorous hunter, in his old age, can tell you of a personal incident or two of the kind during his life. They are not half as dangerous as one would infer, the most critical times being in the late spring when the ice is getting rotten, and a heavy storm is liable to break it to pieces. One old Iwillik in his younger days while walrussing on the ice floe near Whale Point on the western side of Roe's Welcome, was carried far out to sea by a storm. Here he subsisted for fifteen days on what he captured, when the wind carried him to the large island just south of Southampton Island, and he found refuge among some strange natives, whose language he could hardly understand, and who owned no dogs nor sledges, but who nevertheless took the kindest care of him, as is the universal Esquimau custom. He had to wait among them until the next summer when they took him to Repulse Bay in their *kiaks*, which were so frail

that they would not attempt to cross the Welcome, and, once among a branch of his own tribe, he made his way back to Whale Point after an absence of nearly a year, all his friends having long since believed him dead, and his wife having effectually played the Enoch Arden trick on him.

There are so many varieties of seals with different habits that the hunting of these creatures differs considerably according to the kind. The ook-jook, or great seal, is an immense fellow and weighs probably a half or a third that of an average walrus, measuring often ten feet in length. Their capture does not differ considerably from that of a walrus, although probably a greater proportion of them are captured by the *kiak* and float method than in any other way. It is not plentiful in any part of the Arctic seas, that is, it never congregates in herds or shoals as is the wont of other species, but is always seen singly or in pairs. On the western coast of the Adelaide Peninsula, jutting into the Arctic Sea, is the country of the Ook-jook-liks, or great seal-eaters, and there they are reported to be very common.

The hide of this seal is of the utmost importance in the Esquimau economy, its skin being the only one considered fit for making the hunting lines already described as used by the *kiak* men and others in harpooning seal and walrus, for it may be truly said that their very life depends on this line, which is wound around their neck, running out easily, rapidly, and without knots or entanglements when pulled by the harpooned animal. By some natives it is called the "thong-seal." Its thick skin is always used to make the soles of the sealskin boots and slippers, and before it is sewed on it is rendered absolutely impervious to water by being chewed for two or three days by some of the old women of the tribe. It then looks like finely grained leather.

On the 23d of July in '78, while off the eastern entrance to Hudson's Straits, I had my first view of a "bladder-nose" seal wallowing around on a small piece of ice about a mile away and evidently enjoying himself to the full extent of his limited habitation. It seemed to be about two-thirds the size of the ook-jook, some seven or eight feet in length. His unshapely head, which he kept constantly swaying to and fro in the air, looked not unlike that of a horse with a large nose bag on, and from which peculiarity he derives his unpoetical name. At a distance this inflation looks as if it was on his nose, but is really on his forehead. His sealship fell a victim to the rifles of a neighboring whaler, waiting like us for the ice pack to open. It is the most pugnacious of all the seals (a really harmless species of animals), and when irritated by wounds or close pursuit, it will turn ferociously on its pursuer, splashing him with water and snapping at him spitefully. By some the hunting of the "bladder-nose" in a *kiak* is considered dangerous sport.

The "saddle-back" seal is the one pursued by the sealing ships in the Spitzbergen and Newfoundland seas, and going in immense shoals, is caught in great quantities by simply sending a party on the ice and knocking them over the heads with clubs. Their skins are used principally in making kid gloves, about two-thirds of which are derived from this source, so I understand, the other third being supplied by the monkey skins of Brazil. The only inference left is that the name of these gauntlets must be taken from the animals that wear them and not those from which they are derived.

There are migratory seal visiting some parts of the Arctic, but not with sufficient certainty to depend upon them for food and so forth, at all periods and all districts. The west coast of Greenland is the especially favored one. The *kassigiah*, or fresh-water, or spotted seals, are not very numerous, and are generally found in the mouths of rivers and secured by shooting them with a rifle. They are beautifully spotted, the blotches decreasing in size and intensity from the back around to the flanks. They are in prime condition in Hudson's Bay about August. Those of Hudson's Straits seem to be the finest in the Arctic. The *kassigiah* skin is often seen in civilization made into shopping-bags, valises, etc.

The seal *par excellence*, in Esquimau land, is the *neta-chuck* or common seal. Its skin is used for making boots and slippers, for summer clothing, for covering their *kiaks* and for making their tents. It is one of the most reliable sources of food, and the oil forms the greater share of that used by the natives. Its pursuit varies with the season. During the winter time, and when the ice is at its thickest and covered with drifts of snow, the common seal works its way through the ice by a hole just large enough to admit his body, and then makes a dome in the snow whose apex is cut through by an aperture about the size of a quarter of a dollar, which is called its "blow hole," and through which it breathes when it visits these places.

This snow dome, with its little aperture, is called *igdlo*, and even an Esquimau hunter would be likely to pass one without notice, as nothing shows on the surface of the snow. The native, however, has a powerful ally in detecting them. This is the keen scent of his dog's nose; and when once found he sits down by it with the point of the harpoon at the "blow hole" and waits until he hears pussy blowing, when he thrusts it through, impaling the seal upon its barb and worrying it out and killing it as described with the walrus. The hunter may have to wait only an hour or so before one blows, but cases are on record, when in times of famine and great scarcity of seal, where they have sat for two and three days immovable at one seal hole.

Joe told me that after sitting at one of these holes all night he went to sleep and tumbled over backward off the block of snow he had cut for a seat, and which did not awaken him at the time, but when he did come to he was paralyzed with fright at beholding what he took to be a polar bear staring him square in the face, but which a closer inspection in the gloom revealed to be one of his legs standing straight up and swathed in its huge hairy clothing. In the spring the snow melts on the ice and the water drains off. The seal then come out on the ice to bask in the sun and warm weather and then the hunter crawls upon them until he gets close enough to shoot them through the head. Should the seal look up, the hunter remains motionless or imitates the action of the seal. To kill a seal in this way is the best test of huntsmanship in the Arctic, as the animals are then unusually wary. When, in the summer, the ice has broken up, they are pursued in the *kiak* with harpoons.

All of the above are known as "hair seals," their skins being of but little value except as some form of leather. The "fur seal" is never hunted by sportsmen, being monopolized in his home in Behring's Sea by companies with exclusive charters for his killing. From them we get our sealskin sacks, muffs, gloves and caps with which we are all so familiar.

[TO BE CONTINUED.]

Natural History.

THE BIRDS OF MAINE.

With Annotations of their Comparative Abundance, Dates of Migration, Breeding Habits, etc.

BY EVERETT SMITH.

86. Sharp-tailed Sparrow—*Ammodromus caudacutus* Aud. Cs. 240, Ridg. 201.—Common. Arrives in May. Frequents meadows and marshes near the coast. Breeds on the ground. Lays from four to six eggs, greenish white with brown spots, in June.

87. Swamp Sparrow—*Ammodromus palustris* Aud.; *Melospiza palustris* Ridg. 233, Cs. 243.—Common. Arrives in March and April. Breeds on the ground. Lays five greenish eggs, white with brown spots.

88. Lincoln's Sparrow—*Pœcæa lincolni* Aud.; *Melospiza lincolni* Ridg. 234, Cs. 242.—A regular migrant. Arrives in May, and quickly passes to the north and east. Possibly a few breed in Maine. This species was found breeding in Labrador by Audubon, and he named it in compliment to his companion, Thomas Lincoln, Esq., of Dennysville, Me., who procured the first specimen described. This species much resembles the common song sparrow next named, but may readily be distinguished by the absence of the dark breast spot which is so conspicuous upon the latter.

89. Song Sparrow—*Fringilla melodia* Aud.; *Melospiza fasciata* Ridg. 231, Cs. 244.—Abundant. Arrives in March and early in April. Breeds, usually on the ground and low bushes, commonly two broods. Lays five dull whitish eggs, spotted with brown. The first complement laid in May.

90. White-crowned Sparrow—*Fringilla leucophrys* Aud.; *Zonotrichia leucophrys* Ridg. 206, Cs. 276.—Common migrant. Arrives in April. No record of breeding in Maine. Mr. Harry Merrill reports a bird of this species taken near Bangor, "July 27, 1880." An unusual occurrence, as the species is rarely found here in summer, and not abundant at any season.

91. White-throated Sparrow, "Peabody Bird."—*Fringilla pennsylvanica* Aud., *Zonotrichia albicollis* Ridg. 209; Cs. 275 Common; arrives in April and early in May. Breeds usually on the ground; lays four or more greenish white eggs, with brown spots, early in June. This bird is locally known as the "Peabody Bird" on account of the final notes of its familiar song, which may be thus syllabled: *I—see—you, Peabody, Peabody, Peabody.* Mr. J. C. Mead shot a male specimen during a severe snowstorm, December 22, 1879. This bird was in company with a small flock of tree sparrows. The thermometer recorded twenty degrees below zero the day previous. I observed a specimen at Scarboro, Me., April 6, 1882, with a small flock of purple finches. Both the birds cited were here at unusual dates.

92. Tree Sparrow—*Emberiza canadensis* Aud.; *Spizella montana* Ridg. 210; *Spizella monticola* Cs., 268. Common; abundant during migrations, and birds of this species are commonly found during winter. Arrives early in April.

93. Chirping Sparrow, "Hair Bird"—*Emberiza socialis* Aud.; *Spizella domestica* Ridg. 211, Cs. 269.—Abundant. Arrives in April and early in May. Breeds; two broods; lays four or five green eggs with dark brown spots, in May and June. This bird is sometimes termed the "hair bird," because its nest is usually composed in part or entirely of hair, such as is shed from the manes and tails of horses, domestic cattle, etc. The young birds of the first brood usually fly before July 1.

94. Field Sparrow—*Emberiza pusilla* Aud.; *Spizella pusilla* Ridg. 214; *Spizella agrestis* Cs. 271. Common. Arrives in April and early in May. Breeds; two broods. Lays four greenish white eggs with brown spots, in May and June.

95. Blue Snowbird—*Niphæa hyemalis* Aud.; *Junco hyemalis* Ridg. 217, Cs. 261.—Abundant. Arrives in March. Sometimes found here during winter. Breeds on the ground; probably two broods each season. Lays four white eggs with brown spots, in June. The spring song of this bird is sweet and low, similar to that of a canary bird, but softer, with a trill like that of the song sparrow interpolated.

96. Domestic Sparrow — *Fringilla domestica* Linnæus (1766); *Passer domesticus* Cs. 192.—Abundant in many of the cities of Maine. Breeds in bird houses erected for its use, also on cornices of buildings, among house vines, etc. This species was first introduced to North America by the late Thomas Amory Deblois, of Portland, Maine. The few birds then imported (1858) bred in the vicinity where liberated (corner of Park and Congress streets, Portland city), but after a few years had elapsed none were seen. Other birds of the species were at various times subsequently brought here and liberated, until their increased numbers have now assured their permanency in Maine. Their presence has materially lessened the numbers of our native insectivorous and song birds once frequenting the cities, and these sparrows have become a nuisance in some respects. In the month of January, 1879, I shot a sparrow of this species in a country village in St. Maurice county, Province of Quebec, Canada—probably a straggler from the city of Montreal or from Quebec. Now that the practice of feeding these sparrows has in a great measure subsided, they are really doing a little good. But their merits are exceeded by their demerits.

97. Fox Sparrow—*Fringilla iliaca* Aud.; *Passerella iliaca*, Ridg. 235, Cs. 282.—Abundant during migrations. Arrives in March and April. Not known to breed in Maine.

98. Indigo Bird, Indigo Bunting—*Spiza cyanea* Aud.; *Passerina cyanea* Ridg. 248, Cs. 295.—Common in Western Maine. Breeds on bushes or small trees. Not very common east of the Kennebec Valley, and rather rare in the Penobscot Valley and further east.

99. Tohee Bunting, "Chewink."—*Pipilo erythrophthalmus* Aud., Ridg. 237, Cs. 301.—Common on the plains in Western Maine, in the Saco Valley, and east to the Kennebec Valley. Rare further east and almost unknown east of the Penobscot Valley. In N. O. C. Bull., April, 1882, Mr. Montague Chamberlain has reported a specimen "shot by Mr. J. Belyea at Irishtown, New Brunswick, May 8, 1881, and now in the collection of the Nat. Hist. Society of St. John, N. B." Arrives early in May. Breeds on the ground, eggs dull white with purple brown spots and blotches, laid in June.

FAMILY ICTERIDÆ: ORIOLES, STARLINGS, BLACKBIRDS, ETC.

100. Bobolink—*Dolichonyx oryzivorus* Aud., Ridg. 257, Cs. 312.—Abundant. Arrives in the middle of May. Breeds on the ground, and lays five or six dull white eggs with brown and drab spots, in June. The following record of spring arrivals of this species, extending through a period of forty-five consecutive years (excepting the years 1806 and 1816) is of interest in showing the remarkable regularity of the arrivals of birds at their breeding places each succeeding season. This record was compiled from observations made in the town of Warren, Knox county, Maine, by Cyrus Eaton, A. M., D. Dicke, 2d, and others. When the notes of the observers differed, the earliest date was selected for this record:

1805	May 18	1828	May 12
1806	—	1829	May 15
1807	May 14	1830	May 15
1808	May 18	1831	May 11
1809	May 16	1832	May 10
1810	May 12	1833	May 18
1811	May 11	1834	May 10
1812	May 11	1835	May 18
1813	May 17	1836	May 11
1814	May 17	1837	May 11
1815	May 17	1838	May 13
1816	—	1839	May 13
1817	May 19	1840	May 13
1818	May 19	1841	May 12
1819	May 14	1842	May 16
1820	May 14	1843	May 15
1821	May 16	1844	May 10
1822	May 13	1845	May 12
1823	May 12	1846	May 13
1824	May 14	1847	May 15
1825	May 12	1848	May 10
1826	May 10	1849	May 14
1827	May 15	1850	May 15

The extreme variation of the dates of arrivals during all this period was but nine days. The earliest date May 10, the latest May 19.

The following list of arrivals at Paris Hill, Oxford county, Me., are from the notes of Messrs. Samuel R. Carter, and Jarvis L. Carter: 1860, May 14; 1861, May 12; 1862, May 17; 1863, May 11; 1865, May 9; 1866, May 11; 1867, May 15; 1877, May 17; 1878, May 15; 1879, May 15; 1880, May 16; 1881, May 20. Earliest date May 9, the latest May 20.

101. Cowbird—*Molothrus pecoris* Aud.; *Molothrus ater* Ridg. 258, Cs. 313.—Common, except in easternmost part of the State. Arrives in April. Gregarious. Polygamous. Makes no nest, but distributes its four or five eggs in the nests of small birds, and imposes the duty of incubation and rearing the young upon the parents of another family. The nests of warblers, thrushes and other birds are subjected to this imposition. The eggs are usually laid early in June, and are white, entirely covered with reddish or grayish-brown dots. The cowbird sometimes alights upon the backs of cattle, but is not often seen to do so in Maine. The pastures are the favorite resorts of this bird while here.

Although sometimes arriving as early as March, and seen here as late as November, it is not a constant summer resident in any restricted locality. It habitually shirks the labor of rearing its young, and leads a Bohemian life, wandering where fancy leads, or when a lack of its favorite food impels.

102. Redwinged Blackbird—*Agelæus phœniceus* Aud., Ridg. 261, Cs. 316.—Abundant. Arrives in April. Breeds, on bushes in swampy places. Lays five or six leaden-gray eggs with irregular streaks and blotches of very dark brown, in May and June.

103. Meadow Lark—*Sturnella ludovicianæ* Aud.; *Sturnella magna* Ridg. 263, Cs. 320.—Common in Western Maine. Arrives in April. Breeds, on the ground, and lays four or more eggs, white, with light brown spots. Not common east of the Kennebec Valley, and almost unknown east of the Penobscot Valley. Much less abundant in western part of the State now than twenty years ago, when birds of this species were to be found congregated in numbers on the meadows and marshes during the autumn migrations, which occurred in September.

104. Orchard Oriole—*Icterus spurius* Aud., Ridg. 270, Cs. 324.—Rare. Apparently only occurs as an irregular visitant. This species has been reported by Mr. Boardman as occurring at the eastern boundary of the State, but "rare." It is of only rare occurrence in Southwestern Maine, and there has been no instance within my knowledge of its breeding here.

105. Baltimore Oriole, Golden Oriole—*Icterus baltimore* Aud.; *Icterus galbula* Ridg. 271, Cs. 326. Common in Western Maine, and east to the Penobscot Valley. Very rare in the easternmost part of the State. Arrives early in May; breeds usually on elm trees, attaching its hanging nest to the upper drooping branches. Lays four or five eggs, pure white with brown spots and lines, in June. This bird of bright plumage and pleasing song is well known because of its habit of frequenting cities and gardens, where it renders good service by eating vast numbers of the insects that destroy the foliage of fruit and elm trees. The presence of the domestic sparrows in the "Forest City" of Maine (Portland), failed to avert, or in any great measure to check the worm pest that has, within a few years, ravaged so many of our fine elm trees. But it is worthy of note, that immediately following the increase of those worms, there was a marked increase in the abundance of the orioles in this city, attracted, no doubt, by the abundance of their favorite food, and it was unusual to see these birds feeding anywhere except on the fruit of elm trees. Alighting on the slender branches of the elms, they would peer under the leaves and rapidly pick off the worms there found. The number of worms consumed at a meal by a single oriole seemed marvelous. By watching one of these orioles while thus feeding, with the aid of a good field-glass, I was able to make a fair estimate of worms consumed.

Following the noted increase in abundance of the orioles there was a marked mitigation of the worm nuisance, and it may be well believed that these birds were active agents in producing the change. The worms which destroy the foliage of the elm trees are, unlike many insects, present and active throughout a period of many weeks, so that some trees, stripped of their early foliage, put forth a new growth the same season, only to be destroyed by the same cause, and this resulted, in some instances, in the death of the trees whose vitality was thus exhausted. By an estimate based upon actual count, the numbers of these worms consumed in a single season by one pair of orioles and their progeny could only be expressed by many hundred thousand.

106. Rusty Grackle—*Quiscalus ferruginens* Aud.; *Scolecophagus ferrugineus* Ridg. 273, Cs. 331.—Abundant in localities. Arrives in March and April. Breeds, on trees, and lays in May from four to six pale greenish eggs, blotched with purple and brown. I have observed this species congregated in large flocks as early as July, apparently preparing to depart for the South. During the breeding season the male may often be seen strutting on the ground, with tail partly spread and the central feathers depressed, so that

its under side is very convex, and the tail then appears as if shaped like that of the next named species.

107. Boat-tailed Grackle—*Quiscalus major* Aud., Ridg. 277, Cs. 334.—I observed a pair of grackles of this species at Second Lake, Washington county, Maine, August 1, 1877. Their appearance so far north and east astonished me, and I might well have doubted my senses at first, but I spent nearly a half day in the proximity of these birds, with the best possible opportunity for close observation, and with my familiar knowledge of the species and of their characteristic notes and habits, identification was rendered certain. They seemed to be quite at home, and evidently had been in the same locality for some length of time; perhaps since spring. When first approached a great outcry was made, such as is unrivaled by any other grackle. Yet the birds did not attempt to escape, but frequently flew within four or five rods of myself and companion, occasionally alighting on the reeds at no greater distance from us. Any unusual stir on our part would produce a great apparent commotion on the part of the grackles, and after one of their characteristic outbreaks of cackling remonstrance at our intrusion upon their retreat, they would fly about as if to reassure themselves, by a close inspection, of our peaceful intentions.

108. Purple Grackle, "Crow Blackbird"—*Quiscalus purpureus* Aud., Ridg. 278b., Cs. 335.—Common. Arrives in April. Breeds often in colonies on trees. Lays four or more eggs of a greenish hue, marked with blotches and irregular streaks of brown. Although here a shy bird, I have known a pair of this species to nest on one of the few pine trees within the city limits of Portland, and it is not uncommon for them to breed in cities. The rusty grackle is sometimes termed "crow blackbird," as well as this species. The purple grackle is the larger of the two, however, and better entitled to such a name.

FAMILY CORVIDÆ: CROWS AND JAYS.

109. Raven—*Corvus corax* Aud., Cs. 338; *Corvus corax carnivorus* Ridg. 280.—Not uncommon; resident. Breeds, usually, on high trees. The eggs are green, profusely blotched with brown, and resemble the eggs of the common crow, which are but little smaller than those of the raven, although the latter is a much larger bird. Authors of New England bird lists have generally referred to the raven as rare, but it is a common resident in Maine, although nowhere abundant. I have observed the species at various times in Scarboro, but it is more common further east. In 1876 I saw some young fledgling ravens, which were taken on the coast from a nest in a tree on one of the islands of Washington county. Mr. Harry Merrill informs me that "Mr. N. C. Curran, of Bangor, killed twelve ravens in one week with poisoned fox bait at Isle au Haut, Maine." The handsome glossy, blue-black plumage of the raven in winter becomes to a great extent a dirty-brown in summer.

110. Crow—*Corvus americanus* Aud.; *Corvus frugivorus* Ridg. 282, Cs. 340.—Abundant. Arrives in March. Some are to be seen throughout the winter, especially on the coast, where they are rather abundant during mild winters. Breeds usually on coniferous trees. The eggs vary much in color, and I have some with various shades of green and of blue for the "ground color." There are usually four or five green eggs profusely blotched with dark brown, laid in April and May.

111. Blue Jay—*Garrulus cristatus* Aud.; *Cyanocitta cristata* Ridg. 289, Cs. 349.—Common. Abundant in some localities. Some remain throughout each winter. Breeds. Usually nests on bushes and lays five eggs of an olivaceous tinge spotted with brown, in May. The blue jays of Northern New England are usually of a rather suspicious nature that makes them somewhat wary of man. But I once found a blue jay's nest so close by the side of a highway over which passed daily stage-coaches, as well as many less noisy vehicles, that I could see the bird setting upon its eggs as I drove by without pausing. In some localities where unmolested, the jays of this species are as indifferent to the near presence of man as is the robin or bluebird.

112. Canada Jay—*Garrulus canadensis* Aud.; *Perisoreus canadensis* Ridg. 297, Cs. 359.—Common in autumn and winter, except along the coast in the southwestern part of the State, where it is rarely to be found. Mr. Luther Redlow, of Portland, shot a jay of this species in the town of Scarboro, October 15, 1880, a rare occurrence in that locality. The Canada jay is locally known by various names, and in Maine as "moose bird," "meat bird," or "pork bird." These names have been given the bird by hunters and lumbermen, because of the birds' habit of boldly visiting winter camps in the woods, and without fear helping itself to the meat that may be hung about the camp. The name "moose bird" was thus applicable a half century ago when moose meat was much more common in Maine camps than at the present time. The bird is now more often tempted by pork than by moose meat. The French Canadians name the bird "Pee," on account of its familiar note, which is rather weak for a jay.

[TO BE CONTINUED.]

INTELLIGENCE OF THE CATBIRD.—Albany, N. Y.—One day last June as I was sitting on the bank of the Hudson River, fishing, a catbird flew down, and lit on a stone near where I was sitting. She commenced squalling and flying about frantically. She would fly to a bush close by and come back and fly around my head screaming loudly, as if she wished to induce me to go with her. At last she acted so strangely that I got up and walked to the bush where the bird was flying in and out. As I approached it I saw a snake about a yard long, crawling swiftly up a branch toward the bird's nest, which contained four eggs. The bird would fly down and peck the snake, and then back to her nest. I could not strike the snake without striking the nest at the same time, so I ran to the house for my Flobert rifle. When I got back the snake had one of the eggs in his mouth. I shot him several times when he dropped the egg and crawled into the bushes. I put the egg in the nest and then went back to my fishing. I found my line all right and on it a good sized bass.—BERT TITUS (twelve years old).

THE RATTLESNAKE AS A SWIMMER.—In a late number of FOREST AND STREAM some one inquires about the swimming powers of the rattlesnake. They often cross Mosquito Inlet, East Florida, against strong tides, and I have seen one killed in the middle of Halifax River, where it is a mile wide, swimming as strongly and boldly as a true water snake could have done. Moreover, it faced its pursuers boldly, and made straight for the boat till stopped by a blow with an oar. I have seen the racer or coach whip snake, killed under the same circumstances. Those salt water bays and sounds are so infested by sharks that one would think the chances for a snake to get across would be small.—S. C. C.

FACTS AND FANCIES OF ORGANIC LIFE.

I CANNOT willingly consign to perdition even a sparrow without a hearing. The fact that the birds were brought to a land they knew not of, against their will, certainly entitles them to this much at our hands; although, from present appearances, they seem destined to prove the greatest nuisance we ever imported. Propositions come up on every side to ameliorate the coming evil, and a war of extermination seems imminent.

While all this is being done, a close observer might perhaps have seen one of the doomed birds, sitting demurely on a twig, raise his right foot, pretending to scratch his nostrils, with a look which plainly said, "What do you propose to do about it?" For one, I propose to do nothing. The birds are here; they have come, like the Normans, to help us fight a fictitious enemy (the worms), and now, from the expressed anxiety, we seem in greater danger than were the Saxons in similar circumstances. We may heap invectives, but they fall as harmless against birds as the snowflakes fall on their backs in winter; we may set the whole population to killing; it may retard, but will not prevent their increase. It becomes us then not to get frightened nor angry, but to look the matter squarely in the face, as peradventure it may not prove so disastrous as present fear indicates.

On the first intimation of their coming, inquiries among native farmers of Great Britain brought out the fact that sparrows were miscellaneous eaters, feeding on grain, seeds, insects and worms, grain largely preponderant. Said one: "I have seen a strip a rod wide across a ten-acre field of rye, left by the reapers as containing no grain, all eaten by sparrows which lived in a hedge along the border of the field." Our present aim is to show, from what they have done in other countries, what they will be likely to do here, where circumstances are different.

When the first birds were turned loose, houses were built and provisioned for them, the question of their ability to provide either (in perfect keeping with the whole project) not having been considered. A second brood filled the boxes to overflowing, and the younger birds were obliged to seek lodgings elsewhere. This they did with true squatter impudence, filling crevices in architecture with decaying vegetable matter, occupying thickets of ivy, in fact, every chink and crevice which afforded even a partial covering overhead. As a last resort they took possession of an old robins' nest, piled on it sticks, straws and grass a foot high, with a hole in the side like a squirrel's or hornet's nest—a nest not built by any other bird on the continent. Here was indeed a new and strange departure—one which demanded investigation. Consulting early English history, it was found that this canopied nest was the one built by the sparrow in its wild native state; in other words, the nest it was taught to build by the Creator, when the first pairs were placed on the earth.

That they will not prove an unmitigated nuisance in this country is a fair inference from the different circumstances under which they must live. Our country is indeed a large one. We could hide Great Britain in it beyond the search of a tax-gatherer. Our hundred-acre fields of corn and wheat, with no hedges, (the safest place on the earth for breeding small birds) will scatter the sparrows broadcast over the land, the barbed wire fence, the fence of the future, affording no exclusive protection. Consequently they must take their chances with other birds. They must furnish their quota of food to the rapacious birds and animals according to numbers, thereby allowing more of our native birds to live.

That they are one penny of benefit in destroying worms is as yet problematical, to say the least. Once in ten years, perhaps, certainly but once since the sparrows were brought, there was in this vicinity an advent of worms. They seemed to come all at once, every leaf on our elms and maples was swept off, while the great meadows opposite the city were as bare of foliage as in midwinter. The worms disappeared as suddenly and mysteriously as they came. The trees in two weeks were again covered with leaves, greener, brighter, fresher than before, having grown faster than in early spring. Once in the time I saw a sparrow hammering at a worm, while our native birds, even from a distance, came in great numbers while the feast lasted.

We may, I think, sleep quietly while the sparrows live on. They can have no exclusive privileges here such as the hedges of the old countries afford, but must, as I said before, take their chances with other birds. They unquestionably drive away from our dwellings more beautiful birds and of sweeter song; but they certainly enliven our streets in winter, when all other birds are absent; they cultivate kindness of heart in those who place crumbs for them on the window sill in stormy weather. They swarm in our Union Depot, feeding on bits of food thrown out by passengers who eat in the cars during their short stop at midday, while in the trusses above they find secure resting and nesting places; steam, steam whistles, smoke, and coal gas alike disregarded. It must be acknowledged, however, that in one sense they are here a nuisance, and the moving crowd often receive marks of their utter carelessness for those below. The consequences are, now pitiable, now ludicrous, and sometimes "tearful" in effects. I think it was during the past year that an old fellow, somewhat given to pointed expressions, was hurrying along the platform, when—"spat"—something struck his hat. Stopping suddenly, he took off the "tile," looked at it, then, looking upward, got as far as "Dam!" when one eye was closed by a second discharge from the same battery. Instantly shutting the other eye for safety, he blindly let off a terrific volley of oaths, the largest the language permits, while a laughing crowd added aggravation to his calamity.

But to return to this canopied nest. The bird has taught us a lesson not small in itself, nor insignificent in its bearing on the great subject of evolution in organic life, a subject which, under the utmost stretch of human research, has as yet made no progress toward a philosophic solution. Here the bird driven to extremities has gone back to a form of nest it had never seen, and which its progenitors had not seen or built in perhaps a hundred generations; a demonstration of that great and immutable law of recurrence strangely overlooked by even thinking men. It is to this law alone that organic life owes both harmony and perpetuity, and without it all would become chaos.

The fact that the first appearance of individual life was or is a cell, or according to the schoolboy philosophy of Concord a "protoplasm," is no proof that life in the aggregate commenced in the same manner; this unimpeachable law of recurrence proves, if it proves anything, that every form of individual life, appearing, if you please, as a cell or protoplasm at first, had each its path marked out by the Creator, and guarded by laws of form and organization immutable as God himself.

Look at the varied improvements in domestic animals under fostering care and intelligent culture. Our horses, our cattle and sheep, our hogs, and domestic fowls, or, turning a leaf in this book, our dogs. The original type remains in each, while in all the essentials of life we have made a new creature, more beautiful, more serviceable, ministering in a thousand ways to our pleasures and our necessities, as the originals could not do. This is real progress, development with a purpose, an evolution which we can see; we have only to fix the colors and the picture is complete. But this we are not permitted to do. That is a prerogative the Creator has not delegated to human hands, and in wisdom has He withheld it. We can make new breeds, new varieties; we are allowed to improve on what He has thus blocked out for us; but even this can only be accomplished by the most rigid seclusion of each to his own, and the selection of the fittest in the transmission of life. The moment the fostering hand is withdrawn the great law of recurrence takes charge, varieties are all merged in one, and that one takes the back track inevitably. Our horses become less fleet and docile, our short horns thin and less symmetrical, our beautiful and intelligent dogs gaunt, ragged and wolfish, our bantam, with head and tail meeting over his back, becomes again the drooping jungle fowl, our swine—well—just read again that hog story in the FOREST AND STREAM of Dec. 1, 1881.

What would men do, or rather what would they not do under present greed for possessions, if allowed to control the laws of life. Look at their only successful attempt at intermediate creation, the unnatural union of the horse and the ass, a human project entirely. I blush with shame, whenever I see one, that civil life allows the creature to exist. Not one thing can the mule do that the horse will not do better; his whole value lies in the single quality of endurance. He will bear more beating, starvation, and general abuse than any other domestic animal living; and hence, as I said before, ministers more directly to man's greed for money. But I have gone far astray from the sparrows, it is a wayward propensity, a love to "paddle the bark canoe" among and over "Facts and Fancies in organic life." Facts, the record of what is, and is done; Fancies, the philosophic conclusion from their consideration. The field is broad; eternity cannot, will not exhaust its interest; it is our privilege to gather lilies, it is our duty to gather lessons of instruction as we float along. B. HORSFORD.

SPRINGFIELD, MASS., January, 1882.

CONCERNING THE ENGLISH SPARROW.—Can people who are annoyed by the sparrow, trap him? We have a gray parrot, who among many accomplishments can imitate a whole bevy of the little nuisances, who have filled every house ivy in town and driven Jenny Wren and her husband clean away. We have not seen a wren for years. I wonder if the article "Small Birds" and "Snow Birds" on the hotel bills of fare is not our friend; I am sure I hope and pray they may all be eaten.—T. M. (Philadelphia).

Camp Fire Flickerings.

"That reminds me."

APROPOS of Nevada, I cannot permit this opportunity to escape to expose the diabolical proclivities of one of your correspondents, who had evidently got himself into a scrape and wished to drag in as many of your readers as possible. When I was residing in that State, some three years ago, I was fortunate enough to secure a specimen of the glossy ibis, the first I had ever seen; and being at a loss to classify it, I sent the head and one wing to your correspondent, Mr. Newton Dexter, whom I knew to be something of an ornithologist as well as taxidermist. The return mail brought me an exhaustive account of its natural history, but said nothing in regard to the edible qualities of the bird. Shortly after I read an article in your columns from a Western contributor, who had not only shot a glossy ibis, but had cooked and eaten it, pronouncing it the most delicious morsel he had ever tasted. To say that I was unhappy hardly fills the bill. I was wretched to think that I had not cooked that ibis, and had lost a sensation I might never again have an opportunity of experiencing. Several months afterward, to my great delight, I succeeded in killing another, it being the only one I had seen since shooting the first.

Now for a feast such as Delmonico himself could not duplicate. I took the prize home, dressed it carefully, and turned it over to my wife, admonishing her to serve it up in her best style, finishing off my injunctions with a few careless off-hand remarks concerning its great rarity, the delicious quality of its flesh, etc. Then I hastened out to invite in my friends. All of them were on hand punctually at the dinner hour — the postmaster, Wells-Fargo's agent, and several other distinguished characters. Had the bird been large enough, I should have prepared a feast for my guests of glossy ibis alone, but as the tid bit would make but a few mouthfuls for each one, I had been obliged, sorely against my will, to add a couple of spring chickens. Every plate, however, received its portion of the rare bird, and each guest immediately transferred a piece to his mouth—and that was about as far as it got with most of them. One or two, with exquisite good breeding, attempted to surreptitiously secrete it in their vest pockets, and one or two others may possibly have kept it down long enough to get out doors. How did it taste, did you say? Well, my dear reader, I have never eaten crow, but, for all that, I prefer crow, and take the chances; and I have never ceased to sigh for the scalp of the wretch who wrote up that article on the glossy ibis for the FOREST AND STREAM. FORKED DEER.

SAN FRANCISCO, Cal.

James C——, a genial son of Erin, is fond of shooting, and the best manufacturer of mid-range hyperbole that I ever saw. He will tell a story elaborately frescoed with improbabilities, and every corner decorated with impossibilities, with an air of pursuasive sincerity that would cause a man to hate himself for presuming to doubt it. He says "the first sugar hogshead he ever saw reminded him so much of his mother's churn that he shed tears." One day a hawk alighted near the house and his son took the gun, crawled within gunshot, fired and missed.

"Why didn't ye kill the howck?" queried the father.

"The gun's no good," answered the junior James.

"Ye'r a liar, Jamesie, it's yew that's no good. Ye can't tell me anything about that gun. Sure, I've known her since she was a pishtol." F.

Game Bag and Gun.

WHAT THE PEOPLE THINK.

Editor Forest and Stream:

I enclose a clipping from the Bozeman *Avant Courier*, the leading Montana newspaper, containing a letter from a trustworthy correspondent from the Upper Yellowstone:

"The Park Improvement Company have a sawmill in operation at this place, getting out lumber for a 600-room hotel to be built here next spring, and I am creditably informed that Mr. E. Haupt, Superintendent of the N. P. I. Co., has let a contract for twenty thousand pounds of venison, at five cents per pound, to supply his men. He has some eighty or a hundred now at work, and is going to feed them on elk, deer, mountain sheep, and bison, killed in the Park, as it is cheaper than beef.

"It is a 'Park Improvement Co.' doing this, and I suppose they consider it an improvement to rid the Park, as far as possible, of game—thus they who have means to get other meat encourage in this way the destruction of what little game there is left, for the sake of a few dollars (very few) profit to themselves."

The recommendations of Gen. Sheridan I heartily endorse, although I am of the opinion that a "mounted police," selected from old mountaineers and men familiar with the country would be far better than soldiers to protect the Park from intruders. Before the National Park Improvement Co. and the North Pacific R. R. Co. get through building and improving the National Park, pretty near all the large game will be killed off or driven off. There never ought to be a railroad inside the Park limits—good roads and trails are sufficient. One good hotel each at the Geyser Basin, Yellowstone Lake and Mammoth Hot Springs, are all that is required. If the contract between the Government and the National Park Improvement Co. should be declared valid by Congress, all sportsmen and tourists traveling through the Park would be at the mercy of the National Park Improvement Company. According to the agreement the company would get 640 acres at each plot, which would take in all the best camping places, meadows, water and timber, and a sportsman or tourist could not camp anywhere near a prominent place with his outfit, unless he pays the National Park Improvement Co. for the privilege of camping on their plot, and pasturage fee for the saddle or pack horses. The National Park Improvement Co. would have everything their own way, in fact control everything in the Park. I only hope that Congress will investigate the affair and act accordingly.

AN OLD HUNTER AND TRAPPER.

BOZEMAN, Montana Territory, Jan. 4

Editor Forest and Stream:

It has afforded me great pleasure to see that the FOREST AND STREAM was the first, as it was for a considerable time the only, paper in the country to protest against the bold attempt of a few speculators to rob the people of the United States of their National Park. The independence and fearlessness of your course cannot be too highly praised, and that it will be appreciated by the people at large I cannot doubt. Thanks to the FOREST AND STREAM and to Senator Vest, it seems likely now that the Park will be reserved for those who really own it.

But does it not seem as though the great wrong lies back of anything that has yet been brought forward? If the United States Government chooses to deed over to me, or to anyone else, all its public lands for one dollar, am I to refuse it? The Government acts through its servants, and suppose the Secretary of the Interior, or in his absence Mr. Merrit L. Josslyn, chooses to make over to me a big block of the public land, you cannot reasonably expect me or any business man to be virtuous enough to refuse the opportunity to make an enormous profit. It appears to me, therefore, that the fault in all this matter lies with the law which permits (1) the Secretary of the Interior to be absent, and (2) which permits a subordinate to make such an enormously important contract.

Of course it is clear enough that in making this particular contract the Government officials largely exceeded any powers granted to them under the acts of 1872. We can all see this now that it has been pointed out to us, but this point might easily have been overlooked, and the lease made, and then where would we have been?

I cannot too heartily congratulate you on the splendid stand that you have taken. R. H.

CHICAGO, Ill, January 14, 1883.

Editor Forest and Stream:

I am so filled with admiration of your plucky and manly fight for the People against the Yellowstone Park grabbers, that I cannot withhold some demonstration of applause. The Scriptures are not my best hold (I wish they were!; but somewhere therein it is said that when the hands of Joshua weakened, the outsiders stepped in and held them up, that Israel might gain the impending battle. Although there are as yet no signs of your "weakening," yet the labor alone might prove too great for you; and should that time come there are millions of sturdy hands ready to brace you up to the good work you have undertaken—to save Israel's people from the Philistines.

I hardly know which is the Joshua, you or Vest. But whoever holds up his hands in the interests of the People in securing the great National Park intact, the pleasure ground of the world, will have the admiration and applause of all generations for all time.

In your issue of January 11, you have given the grabbers terrific sledge-hammer blows. Hammer away, and the people will say, Amen. X.

CLEVELAND, O.

Editor Forest and Stream:

Your fearless exposure of the shameless attempt to grasp the very heart and soul of the incomparable Yellowstone Park, is one of the most creditable things done lately by any American periodical. You may be sure that the full measure of the impropriety and unapproachable impudence of this bold "grab" has not yet begun even to be realized by the people—the real owners of the wonderland in question. I can scarcely think, among the scores of unsavory speculations which occur to me, of one evidencing a greater amount of "cheek" than this one; and these men may rest assured that, even if they do succeed in thus cheating the people, vengeance will be visited upon them in some suitable shape by an outraged public. Let every voter write to his Congressman in vigorous protest against a scheme which is saturated with impropriety and iniquity.

W. MCK. HEATH.

PHILADELPHIA, Pa., Jan. 9, 1883.

A HOLIDAY HUNT.

WHAT HAPPENED AND SOMETHING WHICH DID NOT HAPPEN.

WITH us, in this far off southland, there is a full realization of the fact that—

"Christmas comes but once a year,
And every darkey has his share—"

of whatever joys can be had during the gala season. With him the banjo and the fiddle make all the instrumental melody which his soul requires, and bacon, and greens, and corn bread, and whisky meet the demands of his internal physical system, while a flaming necktie of gorgeous colors and red-top boots afford the apparel most suited to his fancy. Indeed, the African is a happy race, especially when freed from those cares which the light of education always brings along with it. For money nine-tenths of them have no use, except to gratify the demands of appetite as some attractive object meets the eye, and, in consequence, it is an exceptional case, when an increase of worldy goods takes place. Although it has been more than fifteen years since they were declared to be free, few indeed are else than "mere livers from hand to mouth." On such a day as Christmas the towns are black with them, and the retail groceries, which sell crackers, cheese, sardines, oysters, toys, ribands, gew-gaws and whisky, do a thriving business by getting all the cash, which is the result of many a day's labor, from these thriftless descendants of Ham. "The loud laugh, which speaks the empty mind," is heard on every hand, the popping of firecrackers jars on the ear, the whisky yell gives variety to the confusion, and all is fuss and din. Verily, I am glad the time comes but once a year. Indeed, if I were emperor of all the earth, and possessed of unlimited power, I should devote myself to the inauguration of several reforms for the benefit of my subjects, and among them would issue my ukase declaring death, "without benefit of clergy," or any other benefit, against all the manufacturers of Roman candles, firecrackers and other devilish inventions which disturb the quiet of towns and do no good whatever.

In part to get away from the sort of noise which made my house lose all its quiet, on Tuesday, the 26th, Jim LeG. and I got into a buggy with our hunting luggage, called up Don and Branch, gave the word to "The gray mare Meg—a better never lifted leg," or, if you prefer it, because the name of the nag is thus preserved—

Weel hitched on to gray mare Molly,
We split the mud—we did, by golly,

and made our way to the hospitable residence of our friend, P. N. S., who lives in the "Fork," about eighteen miles from our home. Inasmuch as Tom, our host's "eldest hope," who knew our inclinations, told the family that he was sure we would be there that night, we found a capital supper ready for us, to which, after a brief interval at the fire, we proceeded to do ample justice. On our route, for lack of time, if for no other reason, we failed even to enjoy the lovely scenery, which is spread out as we rise the hill on which Ed. Ingram lives, and which displays the broad bosom of the Pee Dee, dotted with many islands, and the far distant hills of Stanly and Montgomery counties. We take but a glance at the site of the old blacksmith shop, the slab bottom and the tanyard, where, in other days, the hunter placed himself to intercept a fleeing deer, as he was making his way to the river to escape his pursuers. It is getting nearly sundown, when we pass the old barn, the center of a once famous turkey range, and twilight had come when we crossed Smith's Ford of Little River, on whose bank, a few miles above, I first saw the light of Heaven, and from whose waters, when a boy, I have drawn many a beautiful fish. Two miles more, and we saw the cheerful light of our place of rest, and found what I had already described, as well as that hearty, but unpretending welcome which is shown to every one who enters the grounds.

"The cheerful supper done," we went back to the parlor and ranged ourselves around the sparkling fire, ready to engage in such conversation as might spring up, and make our arrangements for the morrow's hunt. Tom being a "merciful man," and acquainted with the prandial capacity of my dog Branch—for B. is sound in stomach as well as in limb and wind—went out in the meantime with a bountiful supply of corn bread, and soon came in reporting that the little exercise he had had did not seem to have weakened the dog's appetite. Don, also, had his supply of scraps, and having been raised a gentleman's dog, got a small portion of pork for his share. Being satisfied ourselves, and knowing that our dogs had feasted royally, we discussed all sorts of things, indulged in anecdote, "cracked of horses, ploughs and kye," inquired how our host's carp ponds were doing, what Christmas festivities had enlivened the neighborhood; and were congratulating ourselves upon having escaped "the maddening crowd's ignoble strife," when the sound of a darkey's accordeon and hilarious chorus of darkey throats, gave painful evidence that we were still within the bounds of that sort of civilization. Still we managed to keep up our "discourse" until the hour came, when my habits required that I should bid entertainers and entertained my best wishes for a happy night. I slept well, disturbed only by the suggestions of a stomach rather heavily laden, and the whining of a setter pup, which I had brought up as a present to my friend Bishop Crickett, of Saint's Rest, who lives just across the Pee Dee, and whom we expected to breakfast with us the following morning.

After all the family got together, before breakfast next day, a suggestion was made that, as their Christmas had not quite ended, it might not be disagreeable to partake of a glass of egg-nog. The motion was duly seconded, and passed *nem. con.*, and we were regaled with "as good a article of them kind of sperrits" as was ever fixed up for the enjoyment of the human palate. The "flavoring extract" was obtained by a distillation of the fermented juice of the peach—which, by the way, is unsurpassable for Thomas and Jeremiah—Tom and Jerry, if you like—or that mixture of sugar and whipped cream called syllabub. And then that little tinkling sound was heard which indicated that hot Java and biscuit and butter and "sassengers" and "chicken fixings" and chitterlings were not far off; and we also partook of that. Then, having made arrangements to send our horse and buggy up to Smith's Ferry, we went down to the river, not over a quarter of a mile off, to see if its bottoms contained any of the birds we had come to kill. In a short while the elegant form of the Bishop, astride of his mule, was seen approaching, and close by his dogs, Jack and Palmetto. The prelate and I took the bank of the stream, while Jim LeG. and Tom went along the margin of the foot hills.

We found that birds were scarce, and when we reached the ferry our bag consisted of only ten birds, while the other party had succeeded in getting more than twice that number. Late in the afternoon, after Tom had left us, we were hunting a piece of sedge and some adjacent ditch banks; Jim gave notice to Saint Martin—the Bishop—and me that Don had found a covey on the opposite side of the ditch. Being an agile man, he had easily leaped it, and told us to go below and cross. We were ready enough to do so, and going to the bank of it, and inspecting its size, upon the same principle that governs

"The dog who by instinct turns aside
When he sees the ditch too deep and wide,"

it was deemed prudent to seek another crossing place, so we went further down and soon found a hog ford, which gave us the safe means of getting to the game side of the drain. When we got over, we saw Don on a full stand, with Branch behind him. LeG. was within ten feet, and he requested us to remain where we were, for the birds would fly that way, and we could get a shot. Of course our reply was that we had no idea of being hit by him for any such chance, and had no special aspirations to make him our target. We started to approach, and before we had gone five yards, we heard his gun, then saw the flying covey and heard his second barrel. The truth of history compels me to say that no bird stopped. Then he called to us to come up, for there were more birds. That we did not credit, and so we stood still. Pretty soon he had about a half dozen more on the wing, and he got one with each barrel. We then pursued the first part of the covey, which had lighted on the side of a large ditch, and the Bishop and I got one each. Coming back, LeG., who is a capital shot, and an industrious hunter, told me that he knew where one had settled on the side of the first ditch, and, as he had had four chances, I could take it. And I did take it, adding a bird to my bag. Going in pursuit of the others, I got another shot, wounding, and LeG. another, killing. Then the Bishop got a crack, which he missed, because of the thick brush through which the bird was flying. We then twitted LeG. on his flushing the covey when we were getting to him, and then learned from him that as we were approaching, he saw what he took to be a huddle of birds in the head of a side ditch, and thinking he could get a half dozen at one pop, he fired into—a bunch of leaves. And then we berated him soundly for his unsportsmanlike conduct in more respects than one, and announced our purpose to try him before a court-hunting that night upon his "grave crimes and misdemeanors against the law, in such cases, made and provided." And that night, at his mother's house, where we are always welcome, we put our threat into execution, convicted him, and suspended judgment on condition that he would afterward put himself upon his good behavior.

The next day we found still fewer birds, and succeeded in getting only about thirty, notwithstanding a laborious day's tramp. Night found us under the same hospitable roof, where we got the egg-nog. The Bishop, who had lost his Palmetto bitch, having to go back a mile or so to find her, reached the house almost half an hour after we did. He told us that he found her lying cosily down at the place where we took our lunch, doubtless expecting us to return in time to give her another bait of scraps. During the day the bitch had sorely tried the Christian philosophy of her handler by swallowing instead of retrieving a bird which the Bishop had shot. But the prelate, knowing full well that "he who spareth the rod spoileth the child," applied the sanction of the law by giving her "many stripes" for her misdeed.

We stayed all night, and my clerical friend, who had not sought, the night before, to get a divorce *a mensa et thoro* from me, but shared the couch with me, complained so much of my unfortunate habit of snoring that our host placed him in a separate apartment. Next morning, at an extremely early hour, I heard a knocking at the outer door of my room, which was on the ground floor, and connected with the parlor, and recognizing the familiar voice of my former bedfellow, I emerged from the warm bed and "took him in."

He apologized for the disturbance, alleging as a reason that he was anxious to make an early start for home, to avoid, if possible, the "nursed wrath" of his "dame," which might grow too "warm" for him if he failed longer to make an appearance, and had inadvertently left his hat in the parlor. Then he apologized for his having deserted me, and told me, with a sorrowful voice, that in doing so he had "jumped from the frying-pan into the fire." "How is that?" said I. "Did Tom or Jim LeG. open their nasal batteries on you?" "No, no—far worse than they could do." "What calamity, my dear friend, has befallen you?" "Why, that infernal He. Gines came in from a dining party in the neighborhood at Squire Willy Smilers, and was put in bed with me. In a little while he opened all the vials of his accursed cacophany, and kept emptying them upon my already shattered nervous system, so that I could not sleep a wink. Yours is as the 'music of the spheres' or the soft, soothing tones of the Æolian harp, compared with his. He plays on the Chinese gong, diversified with that peculiar puff of a locomotive toiling up grade with a long train of box cars behind it. I won't do so any more. I'll stick to you hereafter; your harmonies shall be my lullaby." My sympathies were enlisted in his behalf, and I freely forgave him for his offense.

After breakfast, we sent our buggy about a mile down the road toward home, and we took the fields lying on the river, to see if we could not find some birds to take home with us. We got up several coveys, did some good and some very poor shooting, bagged eighteen, and the hour came when we must ride. The morning had been rather clear, but about twelve, "the gathering storm" looked ominous, and we had sixteen miles of muddy road to travel. Having a top buggy and a good blanket we thought we could stand anything which might come, and so Molly was told to lessen the distance. After going about three miles, some small white drops began to fall, and in a few minutes they came "fast and furious" driving in our faces, and making the homeward journey anything but a pleasant recreation. But as the face of nature was covering itself with a dark veil, we entered our portals, hung up our wet blanket to dry, went close to the blazing wood fire, and were grateful that we not only had a home, but were enjoying some of its comforts. Our good wife—I have one, and some people say she is at least good enough for me—told me she was glad I had come, for she had invited several of my friends to come up that night, and do me the honor of eating some birds—but as I did not reach home in time, she was obliged to resort to some of the contents of her larder to supply the repast, and when the guests came, she would show me what she could do when she set her head to it, in the way of furnishing victuals to hungry people. I asked her if it was

possible that anybody could be foolish enough to turn out on "sic a night," when

"a child might understand
The De'il had business on his hand."

"Why," said she, "one of them, the preacher, is already here, and the Doctor and Brother Duffrey and Mud were never known to lose the opportunity of getting a good meal."

She was right. They braved the storm, and in a short while we had "our legs under the mahogany," and did ample honor to the culinary skill of the Madam. She was happy when she saw that we managed to worry down a full portion of the viands. The Doctor, Bro. Duffrey and Mud gave ample evidences of their approval of the repast. They always do.

WELLS.

ROCKINGHAM, N. C., Jan. 1883.

A NEW YEAR'S SCREED.

PUT them away—the multitudinous breech-loaders and the numberless rods. Let us take in a retrospect.

The season for fishing and hunting has (legally) closed. I have hunted none and fished but little; but I have been in position to see and criticise the doings of all outers, anglers and hunters who infest the waters and mountains of the upper Susquehanna. I rise to remark—and I defy criticism—that they are all alike, "gentlemen sportsmen" and native "hoodlums"—trout hogs and human deer wolves.

I took in a week at the last end of the trout season, catching only so many as could be used daily—sometimes not so many—and I did not strike the man who had failed to save the ultimate trout. As for myself and the Scribe, I think we were exceptional. We caught what we wanted from meal to meal, and sometimes "went short" on trout. What then? We did not suffer for food. We had the grand old forest, a model camp, a bed of hemlock browse, fresh strewn every night, the song of the hermit thrush, the cheery to-whoo of the horned owl, the weird cries of the night birds, that neither Wilson nor Audubon ever knew or understood; we had our midnight smoke of plug and kinnikinnick; we read poetry and possessed our souls in peace.

We saw that the trout, though doing their best to keep the supply up to the demand, had failed utterly. A reasonable draft by reasonable men, might have left them a chance. But the industrious trout hog had beared the market. He, the T. H., despised law and fair play. When the bright spotted water kelpies would not take his worms, grubs and lures, he resorted to lime and dynamite. And the gentleman sportsman was not above buying the trout so slaughtered, and taking them home, as, perhaps, his own catch.

Later in the season he, the G. S., invaded the "Northern Tier" of Pennsylvania rather numerously. He came from the cities and large villages of New York and Pennsylvania, and he came prepared for slaughter. He has not been known to let a deer pass that he could kill by dint of ball or buckshot. The camp might be flush of venison, more than could be used; but all the same he turned out eagerly and early in the morning, and waged war against bucks, does, and fawns, ruthlessly and indiscriminately, to the last of his outing.

And you will notice that in recounting the events of the hunt afterward, it is the man who succeeded in getting the greatest number of shots and doing the most murder, who is the king pin of the party and most jubilant of all, while the luckless wight who has been in camp for a week or more without getting a shot, goes back to his city muttons feeling desolate and dispersed, although he may have been fed on venison to repletion, and have had the half of a deer to take home. Why, what did he come hundreds of miles for, at much expense and trouble, if not to hunt? And, if he is to get no shot, why bring a gun into the woods at all?

That is how he puts it—with some show of logic, too.

It may be answered that, so long as a fair supply of game is secured, it is of no consequence who makes the shots, though it behooves every man of the party to be prepared.

As for me, I prefer that the deer go to some other man's watchway. I am not hankering to dress a deer on a cold day, and then pack the saddle two or three miles to camp, with the addition of a couple of unruly hounds to tow through shin-hopples and laurel-brake. I have been there too often.

And the best hunter does not get, nor want, the shots. He it is, who takes the Gentlemen Sportsmen out in the early morning, placing them like so many stoughton bottles on the runnings they would never find for themselves, and then make a long wearisome detour with the dogs to drive the deer. It does not take a skillful woodsman to sit on a log and wait, or hit a deer with buckshot at twenty-five yards.

And the G. S., like the native market hunter, is never content with less than the ultimate deer.

I have read carefully all that the FOREST AND STREAM has had to say on the destruction of game; I have made my own observations. Taking a calm retrospect of the past season, with the present outlook, I express my conviction that the game "must go."

The English sparrow has come to stay; also the Heathen Chinee. But the game must go. Briefly, I will give a few reasons. In the far West there are thousands of "skin-hunters"—men who will ruthlessly shoot down our grandest game (buffalo and elk) for the trifle that the skins will bring in market, leaving the carcasses to rot on the ground. These men are the most daring plainsmen in existence. Personally fearless, crack shots, and reckless of life, they are hard to suppress. I never knew one who didn't deserve a halter—but I don't know how to apply it. As to laws and game wardens, they are of no account. One of these Rocky Mountain lambs said to me, less than a year ago: "Yes; send us out a few game wardens. We'll tie 'em up in camp and make 'em useful." I think they might do it.

Coming nearer home, what of our deer and smaller game? I can say with truth that I know of no party who has let up or spared so long as a deer could be killed. As a fair sample I will give the result of one hunt made by Capt. A. E. Niles, of the Regulars (on the retired list), and three others. They hunted on the branches of Young Woman's Creek, about the dividing line of Potter and Clinton counties, and killed twenty-two deer and three bears. They used the meat of two deer, brought home half a deer each, and sold the rest in New York. The Captain took in a Parker shotgun and a Remington rifle; "Hank Schaft" a three-barreled Baker; the others, double barrels, rifle and shot. Few deer escaped them. The Captain and I are hunting chums of thirty years' standing. I felt free to interview him regarding the hunt, and the talk was something like this:

MYSELF—"I hear you have had big luck, and I'm sorry to hear you have been shooting for market. Am told you fellows shipped sixteen deer to New York."

CAPTAIN—"Well, what of it? Would you want us to leave the venison in the woods to rot?"

M.—"No. But you had no right nor reason to kill it. When you had all you could use with a reasonable amount to bring home, couldn't you let up?"

C.—"See here, you cynical old humbug, we go to the woods to hunt. The nights are fearfully long, the days short. Are we to slouch around camp all day doing nothing?"

M.—"Well, it's a mighty poor woodsman who cannot start out on a bright autumn morning, take in a quiet day's tramp, prospect for runways, the feeding grounds of deer, go to the highest peaks, and look over a mountain panorama that no pen can describe, and come into camp at night just tired enough to induce healthy appetite and sound sleep."

C.—"Oh, you are a woods crank. You let a doe pass you without a shot when the camp is starving for venison. If all men were like you it might keep the deer. But one man can do nothing."

That is the argument: If I don't do it some one will—the pickpocket's logic. Go on, my good fellows, exterminate the game. You are safe to do it. And a fallow deer will be a rare sight for your grandchildren.

The game is being destroyed at a fearful rate all over the land. I quote a few brief notes from FOREST AND STREAM: From Maine, Bangor region, total four hundred and eight carcasses of deer. One hundred and fifty on the Beaver River, North Woods, New York. Deer-wolf in the Ottawa region kills seventy-four deer in ten days. The most destructive slaughter I ever read of. All for market. The G. Sportsmen, "Ed. Gillman * * and friends * * have been sending down from ten to sixteen deer per day." Again, "E. H. Gillman and two friends * * killed nearly fifty deer, etc." How about game protection and gentlemen sportsmen?

I look over the pages of the sporting papers and I count up nineteen advertisements of parties, who with costly "plants" are making first-class guns—breech-loaders, of course. What are all these guns for? Who is to use them? In addition to these, are at least four leading houses in England which are sending the finest guns to our shores for sale. The cheap Belgian guns come over in shiploads, and whatever you may say, they shoot about as well as a high-priced Parker or Greener. Each and all are too destructive.

Then we have the dogs! Ah, yes! Here is a strong point for the destruction of game. A man cannot follow a deer or bird by his nose. But a dog can. And thence we have "field trials," and dogs that are reported as selling at the price of a decent sized farm. It is a most laughable humbug. It will do to place with the price of nightingales' tongues in ancient Rome, or the modern prices of Asiatic fowls at $300 the trio, said fowls not being as worthy as the old barnyard dominick.

I own to-day the best barrier in Northern Pennsylvania. I should think him well sold at $15. I paid $5 for him. My friend Capt. Niles had the largest, the most stylish and most reliable pointer I ever saw—on ruffed grouse and woodcock. He offered him to me as a gift. I wouldn't have him; I had as lief take charge of a horse. Why should we imagine a vain thing? Dogs and cats are the cheapest and most easily propagated of all domestic animals. The cat can assist in decimating rats, the dog in destroying game. Just why the dog should attain a value of $1,500, while the cat is not worth fifteen cents, is one of the things I can't find out. There never was a dog on four legs that was worth $100. As to the highfalutin nonsense of "pedigree" on pointer or setter, put that with the Dutch mania on tulips, when a single bulb sold for $5,000 (an onion being just as valuable, intrinsically).

I have seen scores of these high-bred dogs and have not been favorably impressed by them. They seemed to me rather too royal—subject to king's evil, which we rough woodsmen call, in a horse or dog, poll evil. There was mostly something the matter with them, and their owners were constantly consulting books and questioning sporting papers anent dog ailments. Some of them were wonderfully trained to show off in the field, but they seemed too well broken—broken in spirit so to speak, and lacking the vim and *elan* of a hunting dog, going through their performance rather like a trained poodle.

They did not gain by comparison, in the field, with our lively little liver and white English setters, or the taller Irish red. (I don't like the latter; too rangey; too much "git up and git.") For the consideration and disapproval of modern "handlers" I will summarize our mode of training at that time (about '45–46). We used just three syllables or sounds. A sharp, rough y-e-a-k brought the dog to heel; a sibilant sound between a hiss and a whistle started him out to range, and the word "go" meant retrieve. Of course he was taught to stand staunchly and not to chase. If a pup did not stand on birds instinctively at three months of age we drowned him as worthless. It took but a few lessons—during leisure hours—to make a good business dog.

There was, at the time of which I speak, and in Lockport, N. Y., a breed of small, compact, tough black pointers. They were the best dogs of the pointer kind I have ever seen, and I have seen them nowhere else. They needed very little training and less breaking. They were natural pointers. I cannot say if they are extant now. But, if they are, I will back them against any of the vaunted strains that figure at bench shows and field trials. I never knew one of these dogs to sell for more than $15; oftener for $5. But it is well for dog sharps and trainers that there are fortunate fools who have more money than brains, and who can be inveigled into the hundreds on the price of a dog. But I only started in to say that, in the extermination of game, the faithful dog is a leading element. I know whereof I speak; I see that the bottom is bound to drop out of this boom on bench shows and field trials. There is no call for this business. I know that these costly investments in "gun works" are certain to end in financial disaster; and I am glad of it. There are guns enough to-day, in first and second hands, to finish up the game in Europe and America, from snipe to buffalo, if another gun were not made in fifty years.

As for the muzzle-loader, shot or rifle, that is a thing of the past. Why? Don't you know, my fellow woodsmen, that, if each and all of us were restricted to the use of a single-barreled muzzle-loader we should still be able to kill quite as much game as we have a decent right to? Is it needful, right or expedient, that we bring the most destructive implements of modern invention to bear on the fast disappearing game of the land? Are we weir-wolves?

I can answer for one old woods loafer, who will never again shoot the mother doe or her bright-eyed fawn, or raise any gun against even the buck, save the old, single-barreled, hair-triggered muzzle-loader that has been his favorite for thirty-six years. If a man has one fair shot at a deer and misses, it is a point of honor to let the deer go. I am afraid I stand alone, but I hope not. I like to believe that there are men who can take their vacations like humane gentlemen.

I occasionally strike a partner who, when camped at night amid the grandest forest surroundings, does *not* produce a greasy deck of cards and propose a game of euchre by firelight. I had a partner last summer who could read—by memory—"Tom O'Shanter," "Address to the Deil," and a dozen other of Burns's poems; with the "Ettrick Shepherd's" "Kilmeny," and any amount of Milton, Byron and Tennyson. And he was a quiet man; not a pedant. Such a man is beyond price in the woods. I hope to have him for a partner on a rather extended cruise in the Adirondacks next summer. For it is not true, as has been alleged, that I always choose to go alone in the woods, and am by nature a hermit.

Only—the average man that you strike in the woods is such villainous company.

I could give my notion of an effective game law. But, *cui bono?* As John Hay says, "I end this as I did begin." The game must go.

NESSMUK.

JANUARY 1, 1883.

EXPERIENCE WITH THE GROUSE.

BUSINESS engagements have had urgent claims on my time during the past two months, and have prevented me from going out into the field with gun and dog until the Christmas holidays came, which gave me a few days of liberty, and which I improved by going to Northern Vermont to see the "old gent," and get some ruffed grouse shooting. I was warmly received by the "old gent," who carries his seventy-one years and one hundred and ninety-seven pounds weight well, but was told that I had come too late for sport, as he had no hound to run foxes or rabbits, and as there was this season no mast, gray squirrels were scarce; and he continued, "Since you got the boys to begin shooting at partridges on the wing, they have driven them away from here."

"Do you think that shooting at partridges while on the wing frightens them away?" I inquired.

"Yes," he answered. "You let a parcel of boys go into a piece of woods, and when they flush a bird bang away at it, then follow it up, flush and 'whang' away at it again, and soon the birds will leave for more quiet quarters. Up to two years ago we had plenty of partridges in any of the woods about here, and now you may travel all day and not see more than one or two birds, which fly as though they were scared out of their wits." As the "old gent." had now been thoroughly warmed up, he continued: "If you only shoot wild birds, you can't in a whole season kill more than one-half or so of the partridges that are in a piece of woods. The first day you may make a good bag; then they get shy and wild as crows, and it's work to get a shot at them after the dog has put them up. But if you go out with your setters that understand their business, before the birds have once been flushed they will lie to your dogs, and you can walk right up to them, and if you are a good shot it is easy to hit them when they get up.

"You know the Newton Woods? well, I used every fall to get fifteen or twenty birds there, until last fall. Henry ——— (a crack grouse shot) came here and went there one day with his setter and killed fourteen birds, and then the boys pitched in there and in a week there wasn't a bird left in the woods, and there hasn't been one seen there this season. Henry came here in October and we drove away over to the Hurlburt Woods, where there had been no shooting done, and I went in on the north side of the road and Henry on the south side, and my Rover put up seventeen birds and treed five, which I shot. Henry flushed fourteen and he killed nine, and claims that he had-hit the other five. About a week after that I went over there again, and on the north side of the road I flushed eleven birds, but as they were wilder than when I was there before, I only got two. I went all through the woods on the south side of the road, where Henry had been, and only saw one bird, which flew as though the Old Nick was after him. Since the boys began wing shooting they are blazing away at every small bird that they see, which makes it a good thing for the storekeepers who have ammunition to sell; but it's a bad thing for us old fellows who like to have game near home."

Here I interrupted him with the remark that I had often seen him shoot snipe and woodcock on the wing, and had also known him to bowl over with a rifle bullet many a fox and rabbit that were going at full speed before the hounds.

"Of course, of course you have," he replied. "Different kinds of game require to be hunted in a different manner. It's the only way that you can hunt woodcock or snipe here, and it requires a quick eye and steady nerves to stop a running fox or rabbit with a single bullet, but I don't call it anything for a man to do who spends weeks 'whanging' at glass balls and potatoes to go out and poke a big bird like a partridge up from under a dog's nose, then hit it with a charge of fine shot. The only sport I can see in it is in watching the dog working and seeing the skill that he uses to draw up to his game. It's more sport to me to creep up within range of a very old bird that has 'treed' than to shoot him afterward."

The "old gent." stopped to go down cellar and draw a mug of cider, and did not renew the subject when he returned.

I have known this old gentleman to perform one feat with a rifle that I have never seen equaled, that of shooting muskrats that were swimming in the creek in the evening when it was too dark to see the sights on his gun.

The next morning I started for a large body of woods where formerly there were dozens of grouse, and only saw during the entire day a single bird, and that flushed wild. The next day I went in another direction and at night had in my pockets two gray squirrels, which were the only game that I saw. The third day I tried the bottoms along the creek, where I picked up a couple of cock grouse, both old birds, but of unusual color; of one the general ground color was a bright silvery gray, and the other a dark reddish brown. These two birds, with a plump raccoon that my Norfolk spaniel found and drew out of a hollow stump, made up my entire bag for this day's sport.

This Norfolk spaniel is a sort of Jack-at-all-trades, and my everyday companion. When out with a setter or after ducks I use him for a retriever, and when used alone after woodcock or snipe I can make him range slow or fast and close, and in cases of emergency can use him to run any four-footed game from a rabbit to a moose. He is as light, active and gamy as a terrier, with almost human-like affection and intelligence. These are the general characteristics of this breed of spaniels, which makes them highly prized by those who know and possess them.

To-day myself and son, a "chip from the old block," aged

fourteen years, drove into another town where a friend wi'h his hound gave us fine sport rabbit-shooting. My son with his sixteen-bore bowled over a rabbit that was running at full speed through the swamp, while his daddy saw him and went two better. Our friend fired from all positions, from the top of a brush fence, off a tall stump, kneeling down in snow, etc., but only made the hare fly and stimulated the hound to more rapid exertions. STANSTEAD.

MONTREAL, Canada, Dec. 30.

THE CUVIER CLUB.

AT the annual meeting of the Cuvier Club, of Cincinnati, O., the following report of the Trustees, prepared by Hon. Thos. A. Logan, was presented:

The Trustees of the Cuvier Club, as successors to the former Executive Committeee, submit their annual report.

The year which has just closed has been one of such unbroken prosperity to the Club, that but little is to be said beyond the mere statement of its progress. It is seldom, indeed, in the history of any institution that its career is so entirely successful as to become almost monotonous. Yet such is the fact with the Cuvier Club. From the day it first sprang into organized and corporate existence nothing has occurred to impede its steps, or to obstruct its well being and well doing. Upon the contrary, it has met with unvarying favor from the press, who have published and applauded its work; and from the public, who have indorsed its aims and objects; and from its members, who have heartily cooperated in every effort to maintain its reputation and to increase its usefulness.

We have upon our roll the names of over nine hundred members, all of whom are in good standing, and are efficient and esteemed associates. During the year there have been changes, as might have been expected. Some have removed from the city, others have been continuously absent, and a few have resigned. But notwithstanding this, the membership is now greater than at the beginning of the year, and the average is increasing constantly.

An unpopular or an unworthy Club could not make such a showing as this.

All the appointments and arrangements of the Club house are completed, and the Trustees confidently assert that nothing is now wanting, within the capacity of the premises, to fulfil the promises heretofore made in this regard. The rooms are commodious, light, airy and cheerful; finely furnished and fitted with every known appliance to enhance the comfort and promote the enjoyment of the members.

This is fully recognized and daily appreciated by all, and is a source of pleasure to the Trustees.

The finances of the Club are in a healthy and gratifying condition, and our real estate is rapidly enhancing in value.

The subject of the game and fish laws, while they will be separately considered, go hand in hand together in importance, and constitute the main principle of our association. The Trustees, at the outset, before discussing other features, desire to make an official denial of a statement which was extensively made to the effect that the Club, at the last session of the Legislature, used its influence actively in behalf of a bill to prohibit the killing of quail in Ohio for a period of years.

The statement was contradicted publicly at the time it was made by the Corresponding Secretary in a manner which should have been sufficient, and which was approved by the Trustees. But it was repeated so persistently as to convince us that it was prompted by an unfriendly and improper motive.

The Trustees, however, are glad to be able to say that the law now upon the statute book prohibiting the killing, having in possession or exposing to sale of any of the game therein enumerated, during the close of season, originated with this Club, which exerted every effort, by the appointment of special committees and otherwise, to secure its enactment. It was enacted, and has been, also through the efforts of the Club, tested and enforced, and is now, so far as we know, respected and obeyed, in this vicinity, at least. The Executive Committee on Game have been diligent and impartial in asserting its enforcement, and will continue so. The Club will emphatically sanction their course, and render them thanks for their labor and vigilance.

FORMATION OF PROPRIETARY GAME CLUBS.

The proper legislation in regard to the game of the country and its strict enforcement is not only becoming of more consequence daily, but it is likely to be beset with a complication which has not heretofore arisen, and which now arises because, principally, of the absence of such legislation heretofore, or the lack of its enforcement.

The need of outdoor relaxations and pastimes is becoming recognized in all our business circles, and among these pastimes none stand in higher repute as a health-giving occupation than field sports. So that in addition to the question of food supply we have now the question of health supply. The pot-hunter and the merciless depredator have to a large extent so depopulated the country of game, in many sections, as to render its pursuit a futile undertaking. They have defeated the passage of laws when they were able, and unfortunately in too many instances, they have proved themselves to be entirely able. They have disregarded laws whenever they could be sure they would not be prosecuted, of which, unfortunately, they were too often assured, and have slaughtered indiscriminately, either from motives of gain or mere recklessness. A public sentiment supported them generally up to the time when the influence of clubs like this produced a better sentiment; and the feeling prevailed that the enactment and enforcement of game laws was an invasion of their private, personal rights and liberty, up to the time when this and similar clubs made it manifest that the license accorded to them was an invasion of the rights of the general public.

The game which the clubs have purchased at their own expense and turned out to restock the depleted country, has in many instances shared the fate of its predecessors, and been ruthlessly destroyed. And added to all this, the land owner has constantly asserted his rights of ownership in a manner so wholly repugnant to the rights of sportsmen that bitter hostility has ensued between them.

Out of this state of affairs, and from the increasing desire to enjoy field sports uninterruptedly, and backed by the increasing wealth of the country—together with the feeling that the sportsman can also become a landed proprietor, and as such deny to others those rights and privileges which were denied to him—has come the new aspect to which we referred. It is the formation of game clubs by sportsmen who purchase the land, and establish the strictest proprietary rules, which they enforce by a private police. Such clubs are multiplying at an astonishing rate. They are established in the East, in the West, and along the whole line of our seacoast, as well as upon our inland lakes. They have bought immense tracts of land for such purposes, and are buying and consolidating wherever practicable.

These parties, by purchase, become the proprietors of the soil. They become the absolute owners of all game which is reduced to possession by them on their soil. They forbid all unauthorized entrance upon their grounds, and prosecute for all infringements of their rules.

Exclusive possessory rights have been announced and sustained by several of the highest judicial tribunals, with the Supreme Court of Ohio among the number. The doctrine of exclusive possession upon one's own land, and also upon the waters which cover the land, has thus been fully affirmed.

It is evident, therefore, that so far as the features and consequences of such organizations extend we are rapidly drifting into the English theory and system of ownership and preservation of game. In fact, one of the leading sporting newspapers has not hesitated openly to advocate that system.

The Trustees do not hesitate to declare their opinion that the English system, with all the obnoxious laws necessary to maintain it, is not in consonance with the spirit of our institutions, and they do not desire to see it engrafted upon our country if it can be avoided. There is one way in which its further spread can be prevented, and probably only one way. And that is for all the people at large to become earnest assistants of all clubs like the Cuvier Club, and aid them by personal and moral support, and with pecuniary assistance if needed. The Cuvier Club does not need the latter assistance.

If through such clubs game laws can be strictly enforced, game will again become plenty, and all who will, rich or poor, may enjoy the pursuit of it. If through such clubs the land owner can be brought to acknowledge and permit the qualified right of entry of the sportsman, and the sportsman can be brought to conform to the proprietary rights of the landlord, the pursuit of the game will cease to be attended with the controversies which now nearly always ensue.

The result will be that, with a land teeming with game, and with its proper pursuit made pleasant and successful, the markets will soon be filled with game food at the cheapest prices.

If, however, this cannot be brought about, the reverse will follow. The proprietary system will soon become universal and permanent. The preservation of game will become a private affair, the pursuit of it will be a special and costly privilege, and its supply and price will be at the caprice of a few, to the detriment of the many.

As an illustration of the excess which may be produced by careful preservation, the Trustees copy the following statement from an English paper: "The great bag of the year has been made at Croxteth, where the proprietor and his friends killed 7,674 head in five days, averaging 1,279 head for each of the six guns. Of these there were 5,343 pheasants and 1,250 hares. The wildfowl made no small item in this enormous bag—140 wild ducks, besides snipe."

When the money value alone of this yield is considered, and the fact that if it had been in this country it would have been distributed among the people, it furnishes an irrefutable argument for preservation, which land holders would do well to remember.

THE NATIONAL PARK.

The depredations of the pot-hunters, who are actuated by gain to indiscriminate slaughter, are not confined, by any means, to the settled States, or to the smaller game, but they extend to our National domain and to that great, grand game, the perpetuation of which should be the care and the pride of every American.

Lieutenant-General Sheridan upon November 1, 1882, made a report to the War Department of his last visit to the National Park and to the Yellowstone River. The report gives a graphic description of the country, and an appalling picture of the wanton destruction of the game. We would be glad to reprint the whole, but confine ourselves to the following quotations:

"I regretted exceedingly to learn that the National Park had been rented out to private parties. The place is worthy of being a National park, the geyser phenomena and the Yellowstone cañon having no parallell in any Nation. * * It has now been placed in the hands of private parties for money-making purposes. * * * The game in the Park is being killed off rapidly, especially in the winter, and that, even last winter, in and around the edges of the Park, there were as many as two thousand of these grand animals killed, to say nothing of the mountain sheep, antelope, deer, and other game slaughtered in great numbers. I would like to see the Government extend this Park to the east as far as a north and south line through Cedar Mountain. This would be due east about forty miles, at the same time placing the southern boundary of the Park at the forty-fourth parallel of latitude, which would be south ten miles. * * * This extension would not be taking anything away from the people, as the territory thus annexed to the Park can never be settled upon. The game is now being driven toward the Park, and if we keep out the skin hunters the game would naturally drift to where it could find protection. * * *

"I respectfully make an appeal to all sportsmen of this country, and to the sportsmen's clubs, to assist in getting Congress to make the extension I describe, thus securing a refuge for our wild game."

The Trustees herewith submit an appropriate resolution, and request the Cuvier Club to be the first to respond to this appeal, and hope that their action may be followed by every club, by every sportsman, and by every citizen in the country. [This resolution was printed in our last issue.—ED.]

THE FISH LAWS.

The work of our State Fish Commission during the past year has been extensive and gratifying. The streams have been restocked in every direction. About one hundred thousand black bass fry have been placed in different localities, carp and trout have been successfully planted and arrangements are being completed to plant from fifty to seventy-five million whitefish fry.

The President of the Cuvier Club, who is one of the Ohio Fish Commissioners, is now actively agitating the calling of a convention, whereat shall be prepared a code of laws which shall embrace the whole matter, and be adopted by all the States abutting upon and contiguous to our inland lakes. All that has been said as to the game laws applies equally well to fish preservation. But this further may be said: The preservation of fish is far more popular and more desired than that of game. Possibly because the angler with his rod does not roam as does the hunter with his gun, and possibly because a different rule of ownership is supposed to apply, the land owner is not as averse to one as to the other.

The Government has lent the sanction of its name and power to fish preservation, and nearly all the States appoint Commissioners to further the object; so that the outlook as to the fish is much more gratifying than as to its kindred subject, the game.

But we would respectfully suggest that the Federal Government could do more than it has yet accomplished, if it could take the lake fisheries under its own jurisdiction.

It seems to us that the various States touching the lakes might well cede to the Government jurisdiction as to all matters arising within their borders, pertaining to the preservation of the lake fisheries, and in return therefor the Government could, by the employment of its revenue agents and cutters, greatly enhance the productiveness of such fisheries. Or, upon the other hand, if the Government would not assume this responsibility, if it would cede to the several States the requisite jurisdiction of the lakes for such purpose the same result might be accomplished by the necessary legislation and appropriations from them.

In England the subject is considered one of the first importance, and meets with every attention from the Government. An International Fisheries Exposition will be held in London next May, and the United States is expected to be thoroughly represented.

The Trustees desire especially to return the thanks of the club to its constant friend, D. H. Merritt, Esq., of Marquette, Mich., who at every recurrence of our annual, unfailingly becomes a contributor thereto.

The report of the custodian shows a large increase in our collection. It is not too much to say that this collection possesses features of interest which are not surpassed by any museum in the country, and which cannot be found in many which outrank it numerically. The mounting and arrangement have been accorded much praise from critical visitors.

The library is growing in volumes, and its well-filled shelves are a great attraction to the reading room.

The Trustees are certain that the satisfaction which they feel in the present condition of the Club, will be shared by every member of it, and also by every person not a member of it, who is aware of its views and principles. Its future, which they have heretofore predicted, which prediction was supposed to be but the outburst of enthusiasm, is being more than realized, year by year; and, therefore, finding themselves so well supported in their belief, they renew and enlarge every anticipation they have previously made as to its merits and its mission.

L. A. HARRIS, A. W. GAZLAY,
H. C. CULBERTSON, HENRY HANNA,
JAS. GORDON, P. E. ROACH,
J. M. DOUGHERTY, GEO. W. SMITH,
Trustees.

THOS. A. LOGAN, Corresponding Secretary.

The following officers for the new year were then elected: President, Col. L. A. Harris; First Vice-President, H. C. Culbertson; Second Vice-President, A. W. Gazlay; Third Vice-President, H. Hanna; Trustees, M. Work, Jas. H. Doherty, Geo. W. Smith. These officers were nominated by the committee appointed for that purpose, of which John Eagan was Chairman.

Colonel Harris, on re-assuming the Presidency of the Club, made some able congratulatory remarks, thanking the members for the renewal of the honor, and giving encouraging words for the future of the Club.

On motion, February 7 was fixed as the day for the annual reception of the Club, to which, by a unanimous vote, it was determined to invite the attendance of ladies.

NEW YORK GAME LAWS.

Editor Forest and Stream:

I take the liberty of addressing you on the subject of the game laws and making a few suggestions as to what I think we require in this State. I have had quite a deal of experience both at bay and upland shooting, and make these suggestions from facts that have come through this personal experience.

In the first place I do not think it well to undertake to revise the entire game laws, as was attempted last year. There are too many local interests to be looked after. There is one thing, however, that should be done, and that is, to stop the spring shooting of all bay birds, geese, brant, ducks and snipe. Strange as it may appear, this last-named bird is not mentioned in the present game laws. Against this proposed change the argument may be used, "Why do this in New York when none of the other States have done it, and the people of those States will reap the benefit of our failure to kill the birds in spring." But Canada has, I believe, already passed such a law, and I am prepared, on good authority, to say, that if New York does it this year all the other coast States will do likewise at the next meeting of their Legislature, after New York has led the way.

Another matter that I think needs attention is the section relating to prosecution for trespassing for purposes of hunting and fishing. The present section merely calls for signboards of a certain size, etc. I would suggest that the publication in the county paper for three months of each year, or personal notice, should be added to the section, as it is impossible to prosecute any person successfully under the present section.

One thing further, I think it would be well to have at least two more game protectors appointed, one for New York county and one for Long Island. New York is the place of all others in the State where a game protector is required, according to my ideas, as I think, if our market was well watched and the sale of fish and game out of season prevented, there would not be the inducement to break the laws, as there would be no market for the fish and game. These three very important matters I would submit to the Committee on Game Laws of the State Sportsmen's Association, and sincerely hope they will be the only changes proposed at this session of our State Legislature.

We have a very good committee on game laws appointed by our worthy Speaker of the Assembly, all gentlemen sportsmen, who, I think, will understand the requirements of the fraternity.

Now, outside of laws, I would suggest that each fish and gun club in this State shall contribute annually $25 or $50 toward a fund, to be equally apportioned between the game protectors as an extra compensation for their services. I think this would make us all interested and be quite an incentive to the protectors to attend to their duties properly. Begging pardon for taking so much of your space and hoping to hear of good results from this, I am

AN UPLAND AND BAY SHOOTER.

BROOKLYN, N. Y., Jan. 11, 1883.

MICHIGAN SPORTSMEN'S ASSOCIATION.

THE eighth annual meeting of the Michigan State Sportsmen's Association convened in the Audubon Club parlors, Detroit, on the evening of the 9th inst., with the following club delegates in attendance:

Bay Point Club, Erie—Messrs. A. J. Keeney, J. S. Hilton, Levi Morrin, Harry Conant, Horace W. Avery.

Lake St. Clare Fishing and Shooting Club, Detroit—Messrs. W. C. Colburn, E. O. Durfee, L. L. Barbour, S. R. Woolley, L. W. Tinker.

East Saginaw Game Protection Club—H. D. Mershon, J. R. Livingston, Hosea Pratt, Vincent Kindler, W. B. Mershon.

Central City Sportsmen's Association—S. E. Rogers, C. W. Higby, G. H. Mann, N. W. Brinkhart, Frank S. Clark.

Detroit Hunting Club—Stephen H. Ives, George H. Parker, J. W. Winkler, John Balknap, John H. Bissell.

Kent County Sportsmen's Club, Grand Rapids—L. D. Norris, H. Widdecomb, J. C. Parker, L. D. Follet, G. W. Locke.

Point Mouillie Shooting Club, Detroit—E. H. Gillman, E. S. Barbour.

Battle Creek Sportsmen's Club—E. C. Nichols, N. A. Osgood, Eugene Harbeck.

Bay County Sportsmen's Association—Chas. C. Fitzhugh, C. F. Gibson, Benj. Whipple, Benson Coukley, D. H. Fitzhugh.

North Channel Shooting Club, Detroit—F. A. Baker, E. F. Conely, R. D. Robison, Geo. M. Savage, Julius Hess.

There were also present several individual and visiting members, who took part in the deliberations of the association.

Dr. E. S. Holmes, of Grand Rapids, who has held the office of President since 1876, addressed the association as follows:

GENTLEMEN OF THE MICHIGAN SPORTSMEN'S ASSOCIATION—

The warning and suggestive hammer to make us in this occasion will occupy your valuable time but a few minutes. The retrospect of the year now brought to a close, is, on the whole, gratifying to us as game protectionists and sportsmen. Many, perhaps all of us, have enjoyed the pleasures of an outing on the placid lake, the home of the bass, by the clear, rippling stream, where the trout or grayling challenge to a friendly duel; in the stubble and thicket, where the colin and ruffed grouse test the skill of the snap shot; in the marsh and rice fields and scrub oak, where the wild duck's rapid flight sends the life blood bounding through the sportsmans' veins; on the wood and meadow, where the snipe and "scape," or the toothsome woodcock booms a plea for life; among the alders and in the openings, where the timid hare shows the white flag, or in the grand old woods, loaded with oxonized, rejuvenating air, where the lordly deer whistle defiance to the sportsman. Those who have enjoyed these innocent, noble and ennobling pastimes have been repaid tenfold for their expense of time and money in health, recreation and rest from the harassing cares of business. They have also recognized a very gratifying fact, viz., that notwithstanding the large increase of sportsmen and their greater skill in the use of the rod and gun, there is a large increase in the number of game animals. We do not claim all the credit for this increase, for the work of the Fish Commissioners has done much in one direction and favorable weather very much in another.

But I submit that these and all other favorable influences, unsupplemented by the work of the Michigan Sportsmen's Association, could never have produced such glorious results as have greeted the sportsmen of Michigan the past season. Thousands and tens of thousands of dollars in value in food derived from wild animals have been given to the people of this commonwealth by our efforts to secure respect for and obedience to the game laws. Railroads have had thousands of dollars added to their yearly business, and guides, boatmen, and hotel keepers have handled thousands of dollars they never would have seen but for the efforts of this association.

But this money value of our work is really the least important. The preservation of field sports has rescued thousands from the enervating, demoralizing influences of fashionable summer resorts, and made them acquainted with the hygienic benefits to be derived from a temporary freedom from the trammels of fashion, and a communion with nature upon the broad bosom of her beautiful creation. These, and other good results of our organization, which I have not now time to mention, should induce us to renew our zeal in the work so auspiciously commenced, remembering that the price or game, as well as health, is eternal vigilance.

What duties you should ask the Legislature now in session to make any material changes in the game and fish laws, remains for you, gentlemen, to determine. I would suggest the propriety of securing the open season for all species of game hunted with the gun or rifle as uniform as possible. I think it would be a great improvement to have the open season for woodcock commence on Sept. 1. It would save a great many half-grown August grouse and colin. It is worthy of consideration whether it would be advisable to have the open season on all land game commence and end at the same dates, and, as near as may be, uniformly with contiguous States. It seems to me that it would be better to have the open season for deer alike in all parts of the commonwealth, and that it should commence on Sept. 1. It is unfair to our Wisconsin neighbors if deer can be killed on the Michigan side of an imaginary line fifteen days in advance of their open season, and if there be any valid reason why deer should killed any earlier in the Upper Peninsula than in the Lower, I have never heard it. It would be a reasonable compromise and a great benefit to all parties to make the open season for deer uniform, and on Sept. 1. It would also be an improvement to extend the open season for grayling to the end of the deer-shooting season. The grayling is a spring spawning fish, and is in his best living in the fall. This would give deer shooters the vicinity of grayling streams an opportunity to conscientiously add to their camp cuisine a course of grayling.

Leaving the moral aspects of the question entirely out of view, there is hardly anything that we could so effectually promote the protection of all kinds of game as the prohibition of hunting and fishing on Sunday. This is a question that will bear, and should receive, full, calm and dispassionate discussion.

The non-export laws have been assailed in other States, and pronounced unconstitutional and void. It is possible that a similar decision may be rendered as to ours at no distant date. Forewarned, forearmed. Would it not be well to be casting about to see what other legislation can be secured that will so effectually protect our game, the constitutionality of which can not be questioned? Without expressing any personal opinion on this occasion, I earnestly request you all to take this subject into serious consideration.

There are various reasons why the Michigan Sportsmen's Association would be more potent, if it were a chartered institution. I therefore suggest that steps be taken at this session to accomplish this object. To this end I submit herewith a blank form for organization under one of the general laws of this State enacted for such purposes, for your consideration.

As I announced at the last session, your executive committee procured the services of a fish and game warden and missionary, in the person of Cyrus W. Higby. Although funds were not furnished by the sportsmen of the State sufficient to keep him in the field all the time, the general good was accomplished, and every dollar used in this way was well spent. The railroads were liberal with him, furnishing passes or reduced rates, thus enabling him to do much more than he otherwise could. For a full account of the important work done by this officer I refer you to his report, which will be laid before you. It has been done to show the need of an independent State fish and game warden, with full police powers, to be appointed by the Governor on the nomination of this association, and to be paid by the State. He should also have power and be required to appoint deputies where necessary, with similar powers, who should receive the same fees as sheriffs for like services. Whatever else may be done or left undone at this session, I sincerely hope that the necessary measures be commenced to secure the appointment of such an officer. For, however good our game and fish laws may be, without the necessary means for their enforcement they become a dead letter. As I remarked last year, the "problem before us to-day is, how can we enforce the game and fish laws—or, as I would prefer to put it, how can we secure respect for and obedience to them?" I know of no better way than the one above proposed. And unless a better one be suggested, let us do all in our power to secure the appointment of a State fish and game warden. The money expended for this purpose would be repaid to the people, not to future generations only, but every year a hundred fold.

You have all, probably, read Lieut.-Gen. Sheridan's report of his summer trip to the Yellowstone Park, and his recommendations for the enlargement and government of that wonderful land, so as to make it a grand preserve for the animals that are being so rapidly exterminated by ruthless slaughter. He also recommends that sportsmen throughout the country use their influence to secure desirable objects. In compliance to this request I have prepared, and submit herewith a petition to Congress, asking for the necessary legislation to accomplish these ends, which I hope this association will endorse.

And now, gentlemen, allow me to express the sincere and honest gratitude I feel for the many honors you have conferred upon me, for your forbearance of my errors and short comings, and for your enthusiastic zeal in the good work for which this association was organized. Again I ask for my successor the same consideration and cordial support I have so uniformly received at your hands.

Mr. Toms stated that a bill had been prepared prohibiting duck and other fowl shooting from submerged boats or other forms of batteries. Upon this the Legislature will be urged to act favorably. He moved that the president and secretary of the association be instructed, and the presidents and secretaries of all State clubs be requested, to officially petition the Legislature to pass the bill, and his motion prevailed by an unanimous vote.

WEDNESDAY'S SESSION.

John H. Bissell, of Detroit, submitted a copy of a bill that is to be submitted to the Legislature, prohibiting fishing with nets in the American waters of Lake St. Clair and contiguous waters during the months of March, April, May and June of each year, and asked the association to recommend its passage. He added that he had the assurance of Ontario sportsmen that if Michigan should pass such a law, they will endeavor to do the same.

The bill, after considerable discussion, was so amended as to permit the netting of sturgeon and wall-eyed pike at all times, and was then referred to the legislative committee.

C. W. Higby, of Jackson, from the Committee on Game and Fish Laws, reported in favor of the appointment of a game and fish warden by the Governor, upon recommendation of the State Association, his salary to be paid by the State, and of a reward for the killing of owls, hawks, foxes, skunks and other predatory birds and animals. The warden should have power to appoint one or more deputy wardens in each county in the State, upon recommendation of the county clubs. With this system practically in effect, it would be but a few years before our forests and fields, and lakes and streams would produce a bountiful supply of healthful and nutritious food for the people. On the other hand, if the destruction of fish and game is allowed to go on for three or four years more, as it has in the past, these sources of food supply will become nearly or quite exhausted. He recommended that the laws be so amended as to make the having in possession of any fish, fowl, bird or deer in the close season, excepting the first eight days thereof, be prima facie evidence of illegal killing. Referred to the legislative committee. Frank N. Clark, of Northville, read an interesting paper on "Fish Food and Food Fishes," which was listened to with marked attention. It will be found in our Fisheulture columns on another page.

Letters of regret at inability to attend the meeting were received from a large number of prominent sportsmen throughout the State. From others the following is selected because of being widespread in its applicability:

EAST SAGINAW, August 15, 1882.

Frank N. Clark, Northville, Mich.:

DEAR SIR—A deep interest in game and fisheulture and protection in our forest and inland waters, prompts me to write you. I feel it to be the duty, as I should be, pleased to aid the Chairman of the sportsmen's league by information, advice and experiment in increasing and protecting the fish and game supply of our State.

Some ten years ago a few gentlemen procured some speckled trout and a few land-locked salmon from Canada, and planted them in some of the streams tributary to the Tobacco River, in this county. I understood that the institution over which you preside has since stocked numerous streams and small lakes in the same region. They have lived and increased—at least, the trout have—for I have caught quite a number during the past three years, of all sizes, from six to over sixteen inches in length—the proceeds of our first planting. I fear the course the inhabitants are pursuing will soon exterminate them, as they catch them with nets, in and out of season, drive them into bags from their spawning grounds, and destroy the dams, which, by the way, have no fishways, catch them through the ice, and in any and all ways to get them, at any and all seasons. There will doubtless be little, if any, increase in the future, under such circumstances. Some principle in their disposition seems to prompt them to return and capture all the good nature during the breeding season. They slaughter more deer while the helpless fawns are by the side of the dams than at any other season. Every summer night the lakes and rivers are dotted with their torches, and the frequent reports of firearms betray the wanton and cruel butchery. More fish are probably speared upon the spawning beds than are caught in all legal ways.

During a recent business trip north and west of Saginaw, mostly in Clare and Gladwin counties, I found an earnest desire, amounting to an intense hankering, for eels. Now, if there is anything still unsolved about the time or manner of the reproduction of its species, as far as regards the eel, it can be ascertained by planting a few in Clare and Gladwin counties. If a female eel lays an egg, you can bet they'll catch her at it. They allow nothing to spawn or breed in peace, except vermin. They know all about when, where and how all other fishes spawn. They have investigated with spear, torch and net, until it is a very smart fish that can lay an egg and get away into deep water to hatch it again alive.

There seems to be no encouragement to plant any speckled trout salmon, California or Rocky Mountain trout, or, in fact, any game fish. Better give them eels; they suit their complexion to a shade. They have perfected a night hawk fishing apparatus, little inferior to advertising, if protected by statute at certain seasons. It is a pity that alligators cannot be acclimated!

But I digress. Eels are their present fancy. They want something they can hunt nights! Send 'em eels; they are just hungry enough. They have netted the speckled trout upon their spawning grounds until they are about exterminated, and they hope to see to it that they don't get the start of them and increase again.

They are having a little more trouble in getting rid of the black bass, pickerel and pickerel, but they will, in time, clean them out. They say a blue-gill sunfish is better than a trout anyhow, and not half the trouble to catch. I saw a man in the cars, whose woolen wampus was so full of deer hair that he had to scratch himself constantly, who told me that in view of a sweet, sylvan, secluded lake whose bottoms was "more'n twenty foot of clear mud, and I just know eels would live there and git fat."

I told him to write to you, but he could not remember quite certain whether he could write or not; he had been so busy nights since the 1st of June catching deer "for scientific purposes" that he had neglected his evening school. If he applies to you, try and send him some eels.

In order that they may be able to give their time more fully to the subject, would it not be well to encourage the extermination of deer, and introduce the wild boar from the Black Forest of Germany? Should it not prove a success as a game animal, it would be good company for the inhabitants. I will only add in conclusion, that I hope you will find it convenient to send them some eels.

Yours piscatorially, A. H. MERSHON.

R. P. Toms, Esq., the well know attorney, of Detroit, submitted an opinion regarding the "Mutual Rights of Sportsmen and Landowners," which is of considerable interest as between sportsmen and non-hunting landowners, and also in its exposition of the relations existing between the public and those persons who have leased lands for the sole purpose of hunting upon them. The paper entire is as follows:

MR. PRESIDENT AND GENTLEMEN OF THE MICHIGAN SPORTSMEN'S ASSOCIATION—

Some days since I received from our worthy president notice of my appointment on the last end of a committee, to whom had been assigned the duty of making a report on "Trespass Laws and the Mutual Rights of Sportsmen and Landowners," and that it was important and essential to the dispatch of business that I should be present at the opening of the session, and prepared to submit a report when called for, and that he had a right to and did expect me to present my report. Shortly after this official notification, I received from our most worthy secretary a unique announcement of the annual meeting, and impelled by his earnest exhortations, and without consultation with the chairman of the committee, and without waiting even for the interesting papers by lady sportsmen," I obey orders and report that:

Trespass in the limited and confined sense in which we consider its relation to sportsmen and inclosed premises is well defined. The mere entry by a sportsman upon such land, without permission of the owner (except in pursuit of noxious animals) is a technical trespass no matter how inconsiderable the damage may be. The owner of land has the right to retain for himself the sole use and occupation of his property, and any entry thereon, contrary to that right, and especially if accompanied by express prohibition, is a trespass for which the trespasser is liable to respond in damages. The common law recognizes two kinds of damages, actual and exemplary. The trespassing sportsman is always liable for the actual damages resulting from his unlawful entry upon inclosed and uninclosed land, and if the trespass be accompanied by circumstances of aggravation (as for instance with the use of insulting language toward the owner, or if it be in disregard to a plain warning) then the law steps in and compels the wrongdoer, in addition to the actual damages, to pay for the same, which is imposed as a punishment for the willfulness of the act. The amount imposed as a penalty is left to the common sense of a jury (if they have any) who are to take into consideration all the surrounding circumstances, and to give their verdict in reference thereto.

But while the law considers that a wilful act of trespass should be especially punished, on the other hand it does not absolve the sportsman who inadvertently, in the zeal of pursuit, enters upon another's land. The fact of the trespass remains the same, and the landowner, therefore, is entitled to recover his damages, but is confined to the actual loss he has suffered.

At the common law it was not a misdemeanor to hunt upon the lands of another. Our statute, however, has changed the common law rules, and makes it unlawful to hunt upon inclosed lands of another without the permission of the owner, and any breach of this law is punishable by a fine of not less than $5 nor more than $20 and the costs of prosecution, and unless the fine be paid the offender is liable to imprisonment, not less than five nor more than thirty days. Therefore the sportsman who trespasses upon inclosed land is not only civilly responsible to the owner for damages done, but is criminally liable to fine and imprisonment.

This law ought to be amended so as to make it the duty of the landowner to post upon his inclosed lands or to give actual notice to the sportsman before the latter shall be liable to such fine.

The landowner has not an absolute property in the "game" which is upon his land, and therefore if a sportsman, even while trespassing, succeeds in killing a wild animal he becomes its absolute owner, as being the first to reduce it to possession, and the landowner cannot recover, as part of his damages, the value of the game. The only property that he has in the game to his land is the exclusive right of hunting it, and this right, of course, ceases the moment the game passes beyond the limits of his land.

If a hunter starts and wounds game upon his own land, and it passes partially wounded to his neighbor's territory, the former has no property in it unless he acquires it and he has recovered it by possession. And if, before he succeeds in doing so, a pot-hunter captures the game the latter has an absolute right to it. I hope, however, that no sportsman will ever be guilty of insisting upon this rule of law, especially if it be in strict accordance with the well-settled American rule that whoever first reduces wild animals to possession and subjection becomes the absolute owner, no matter on whose land they are captured or killed.

It is the settled law here that everyone has an equal right to pursue and kill wild animals, and that law still holds good in our country, subject only to the restrictions that may be imposed by statute law for the due preservation of game. The statute laws enacted for this purpose respect the rights of the owners of the soil, and give no authority to enter upon land without the owner's permission. They have been adopted, not to please any one class of persons, but simply to prevent the extirpation of game. And the severer the restrictions imposed by them, and the more strictly they are enforced, the better will the sportsman and landowner be pleased.

It is somewhat interesting to trace the old English law in regard to hunting, and to note the difference between that and the law at present in force in this country. In ancient times the king reserved the forests and game upon all lands at his liberty to hunt in them without the sovereign's authority, on pain of a heavy pecuniary forfeiture, although at the same time freeholders were free to pursue game upon their own lands. No one but landowners could then become sportsmen, and they only upon their own grounds.

The new doctrine, however, arose after the Norman conquest, and the right to hunt such wild animals as were termed "game" was then considered to belong only to the king, or to such as were authorized under him. This was in harmony with the feudal principle that the king was the ultimate proprietor of all the lands in the kingdom, and hence that the exclusive right of pursuit of all game vested in him as such owner. This royal right was exercised with extreme rigor, and effectually took away from landowners their ancient right of pursuing game on their own lands. The laws by tyrannical kings and presents grew up through the so-called forest laws, under which the killing of game within the king's forests became a capital offense. In this respect the English laws did not differ much from the laws of France and Germany, which at one time were quite as severe and harsh.

The very hardship of these laws was the cause of their reformation, for the people became so oppressed by them that they united in forcing from the king partial relaxations of their rigors, so that gradually the more favorable feudal rights appeared. And even as late as the present century no person in England had the right to kill game except he who had a derivative right from the king. Finally, however, a law was passed by which any person was allowed to purchase the right to kill game upon his own land, or that of another with the owner's permission; and thereafter no sportsman needed qualifications of birth or estate, which had previously been essential.

In our country we find no trace of the old England doctrine, and there has never been a time here when all persons possessed equal rights. And not an equal right to pursue game, subject to the restrictions already noticed.

The rights of the sportsman and the landowner to game are equal, as neither is the owner. The landowner, if a gentleman, will allow the sportsman to hunt at his own sweet will, and will not order him off the premises in a rude and vulgar manner. And on the other hand, if the sportsman be a gentleman (as every true sportsman is), he will respect the rights of the landowner while hunting over his lands, and will not trespass upon his inclosed grounds for hunting

Prohibiting the spring shooting of ducks, for the reason that they are driven from their breeding grounds.

Prohibiting the shooting of ducks between sunset and sunrise, for the reason that they are driven from their feeding grounds.

Making the having in possession of game out of season, prima facie evidence of the killing, and throwing the burden of proof upon the owner, that it was killed in season.

The English sparrow was excluded from the list of protected song birds. In the present law, sparrows (not the English pests) are protected. A close season for pigeons to cover the nesting period (March 1 to June 15 suggested).

Placing male and female dogs upon an equal footing as regards taxation. The present tax is one dollar for dogs and three dollars for bitches.

Prohibiting fishing in interior streams for three years after brook trout have been planted therein.

Prohibiting the spearing and shooting of fish, excepting mullet, suckers, sturgeon and redsides, in the Lakes and Detroit and St. Clair rivers.

The penalty for violation of the game laws was fixed at not less than $10 nor more than $50. It is now $50.

In the evening the visiting members of the association and many invited guests were entertained by the Detroit members with a banquet at the Michigan Exchange. Edwin F. Conely presided, and the occasion was one of rare enjoyment. The tables were well supplied with such game as is obtainable at this season of the year, and were rendered very attractive with flowers and ornamental pieces appropriate to the occasion. The following were the regular toasts and responses:

"Welcome Michigan Sportsmen, to Detroit." Edwin F. Conely declared that no one was more welcome to the city of Detroit than the sportsmen of Michigan, and no one could welcome them with more heartfelt cordiality than himself.

"The Michigan Sportsmen's Association." President E. S. Holmes said that when the Kent County Sportsmen's Club chose delegates to the Detroit meeting he took especial pains to have a toast speaker among them. He is not present, however, and the speaker had accomplished nothing by strategy and foresight. Dr. Holmes spoke at considerable length of the early history of the Michigan Association, declaring that it had two fathers—the Kent County Club and the Audubon Club, of Detroit.

"Detroit." Mayor W. G. Thompson said if he were to be again elected Mayor of the city, of which there is no probability, since he suppressed the "James Boys," he would sit down some rainy day and compose a response to the City of Detroit. No man more enjoys the fruits of the chase than himself, and he could prove it to the entire satisfaction of any one who will give him an invitation to a game supper.

"The North Woods of Michigan. How we shoot our deer and other people shoot our dogs." E. C. Nichols said he had learned the true secret of deer shooting, and that is to be there when the deer goes by. As to the shooting of dogs, he had never started for the woods without being informed that dogs were not allowed to run deer, and yet he had never had a hound shot. If there is any sport in deer hunting, it is not in still-hunting, but in hunting with hounds.

"Legislation—What has been accomplished toward game protection, and what is yet to be done." G. F. Gibson said he could respond to that toast in few words. What the Legislatures of the past have done, everybody knows. What the Legislatures of the future will do, the Lord only knows.

"The Rhinoceros—His habits and appetite. What legislation is needed for the protection of this new and valuable game bird" G. W. Latimer said he had been figuring up, and found that his minnows, since he joined a fishing club, had cost him $11 each, and each fish he has caught, $32 each.

The following poem, contributed by a Chicago lady, was then read:

THE DELIGHTS OF NATURE.

Busy, throbbing, growing city,
Marching with a giant's stride,
Pause and rear a stately marble,
To the victims of thy pride.

Victims to thy stately honors,
Victims to the love of gold,
Let the sculptor 'grave it deeply,
Home and happiness were sold.

View it, statesman, merchant, scholar,
Wasting bone and blood away,
Lined and whitened ere the season
Half is spent of life's fair day.

Fading eyes now bending closer,
O'er quotations, bonds and stocks,
On thy bags sits blear-eyed folly
Waning heritage to mock.

Hear the voice from polished granite:
Spare thy youth, thy strength, thy heart,
And in needless, ceaseless labor
Dare not thou to kill a part.

See the picture nature gives thee,
Wafting forth her od'rous charms:
Balmy forests, brushy meadows,
Held in her extended arms.

Chase the stag o'er sloping hillsides,
"Noble monarch of the glen,"
Mark the rich blood's dancing globules
Into life's renewers; then,

Bend his antlers lower, lower,
Nature cries, "he must be slain,"
Luscious haunch the feast shall gladden,
Say not he has died in vain:

Or 'midst windsighs, stripping branches,
Heron hunt 'mongst rush and reed,
Prairie chicken, quail and plover,
Surely sport to meet thy need.

Canvas-back and green-head mallard,
Feed, where feathered beauties sing,
With the swiftly coursing teal-duck,
Take them, huntsman, on the wing.

Or, pass on, where placid waters
Filled with myriad finny life,
Quiet, healthful sport afford thee,
Soothing change from city's strife.

Noble game as in the forest,
Thou canst find beneath the wave,
Deem the time not lost to seek it,
Thou thy health must also save.

Sit when evening's sky stains purple,
Or at morning's crimson dawn,
Note through clear transparent water,
How the fish each other fawn;

Spin thy reel and wait thy venture,
Speckled trout, or tiger bass,
Angler, land a plucky black one
'Ere the chances from thee pass.

Hook the pickerel, swiftly darting,
With the graceful wall-eyed pike,
German carp will soon be thriving—
Hardy, too, as one would like.

Heed a word—'tis said quite wisely,
Hold line taut—yet hold it light,
And two rules must ne'er escape thee,
Silence keep, and well from sight.

Hast thou watched in vain for large game
Since thy hook gave first its plunge?
Do not weary, ev'ry angler
Catches not a muscalonge.

Game bag flat, with naught to boast of?
Bravely take an ill-timed sneer,
Every well and favored marksman
Levels not a sleek-skinned deer.

Thou art richer, wiser, stronger,
For these brief relaxing spells,
And the voices of thy dear ones,
Shall seem sweet as Easter bells.

—BROWNIE, (Chicago, Ill.)

THURSDAY'S SESSION.

The committee on credentials, in reporting a large list of applicants for individual membership, submitted for honorary membership the name of Mr. C. B. Reynolds, of the FOREST AND STREAM, who was unanimously elected.

Upon the subject of disposing of the offal of fish, Messrs. Clark and Dewey spoke in favor of an enactment requiring fishermen to impregnate the eggs of whitefish they may catch in their nets with the milt of the whitefish and commit it to the waters. Mr. Dewey said he thought the fishermen would willingly comply with such a law, and Mr. Clark said he had long followed this practice. It takes but a few moments of time, and may result in a large increase of food fishes. He has thus impregnated and thrown into the river 15,000,000 eggs the past season. The recommendation was concurred in.

C. C. Fitzhugh, from the committee on Sunday shooting, reported in favor of a law empowering officers to arrest Sunday shooters without a warrant and hold them until Monday for examination. The true inwardness of this action is not found in the excessive morality of Michiganders, but in the fact that daylight Sunday morning finds the roads leading from every large city thronged with boys and young men of every nationality and condition of life going out for a day's shooting. Each one has an old army musket, price $1.25, or an arm of about the same value, and a majority have cur dogs. The woods and marshes within a radius of ten miles are thick with them all day long. They go out to shoot, and shoot they do at every living thing they see that has fur or feathers. The legislative committee will include this recommendation in its bill and petition.

The secretary read a letter from Munising, detailing violations of the game laws in that vicinity. Hunters from Pittsburgh and other places go there as early as August and shoot deer for their skins only, killing them in great numbers, leaving the carcasses to rot on the ground.

H. B. Roney, of East Saginaw, wrote suggesting that the modistes be requested to make "sparrow-brown" a fashionable color. Then the ladies will want sparrows for their hats, and the fate of the little pests will be sealed.

The next annual meeting was fixed for the second Tuesday in January, 1884, at 7:30 o'clock in the evening, and Jackson will be the place.

ELECTION OF OFFICERS.

The association then proceeded to the election of officers for the ensuing year, with the following result:

President—E. S. Holmes, Grand Rapids.
Secretary—Wm. B. Mershon, East Saginaw.
Treasurer—N. A. Osgood, Battle Creek.
Director for four years—S. E. Rogers, Jackson.

The association then adjourned *sine die*.

JOTTINGS FROM JERSEY.

AN item is going the rounds of the press to the effect that the West Jersey Game Protective Society has ordered 1,500 pairs of quail from Tennessee, to be distributed in the five lower counties of the State. We do not vouch for the truth of the report, but gladly repeat it as the first evidence of the year in favor of the existence of the organization.

Snowy owls seem to be on your mind, and we notice that they have been caught in lower Burlington county this winter. If they were trying to get away from cold weather they did not go far enough, for this morning (January 12) the mercury stands at zero, and we have a foot of snow.

Last week I saw a large flock of skylarks on a cornfield in Monmouth county. In December blue heron and brown quak or bittern were shot in Mercer county, forty miles from the sea. On December 19, a gentleman driving along the public road near Hightstown saw what he thought was an English snipe fly ahead of him. Soon afterward he noticed in the roadside hedge a small hawk which appeared to be unable to rise. He left his team and gave chase to the hawk, which attempted to get away with its load, but finally dropped its prey and escaped. He picked up the victim, which proved to be the snipe, still warm, but with its skull crushed and eyes picked out. "Does the gray snipe stay in Jersey so late?" was the question I asked of Squire Vannest, whose meadows on the Millstone are their favorite feeding grounds. He replied, "Yes, sir; the snipe that come on my meadows in the fall never go away except in the game bag. If I go out and start a dozen and kill three, I know I will find nine next time if I don't go until Christmas. They won't move on." Being a little incredulous, he gave me as a clincher this: "Why, if you will come down to my place I'll show you as lively a swarm of musquitoes to-day as you ever saw in a Barnegat salt meadow. The season has nothing to do with it if they like the neighborhood."

Last week I was talking with Hart Hight, the well-known trainer and shooter of Monmouth county. He says that my reports in regard to the number of quail left over are correct, and that, with anything like a fair winter, there would be plenty of quail in that county next year. He knew of seven large bevies in a half mile, and found many bunches that had not been thought of in November. He gave as his opinion that there would be no more winter to hurt the quail; but by this time he is, no doubt, satisfied that he was in error on this point.

A neighbor of mine, who keeps a store, has a strange night watchman on duty. It is a common screech owl, which somebody turned loose in the establishment a few weeks ago. During the day the bird remains quietly in some nook, generally unknown to the proprietor or clerks, but at night comes out and takes charge of the concern.

A few days ago a lad brought us a very handsome specimen of the white mole. We notice that it is much larger than the common varmint, and the fur seems to be much finer, longer and heavier. Is it an albino or another species?

Mr. G. Forman Taylor, of Colt's Neck, has just returned from a trip to Kansas. He reports plenty of all kinds of game in that State and was so completely charmed with the splendid quail shooting that he vows he will never "descend" to hunting in New Jersey again. Yet, if he lives, you will find him and some of Old Sancho's progeny on the meadows after woodcock on July 2, 1883, though the mercury stands at 100. We know him. A.

NEW JERSEY, Jan. 12, 1883.

[The mole was no doubt an albino.]

WORCESTER, Mass., Jan. 12.—The Worcester daily *Spy* of to-day has the following: "Officers from Maine have been in the city the past week looking after Worcester parties who, it is claimed, were engaged in moose shooting there last summer. Worcester gentlemen were included in two parties who went into the Dead River country last summer after trout, and during their fishing one of the parties is reported to have killed a moose, and the members are said to have lived like kings, if kings can be imagined to enjoy themselves among those persistent Maine woods' pests—black flies—on moose steak and trout. In this party was a lawyer, who finds occasional relief from his professional cares with his fly rod. The landlord with whom they left their luggage on entering the woods sought to secure patronage for himself by sending an account of the moose shooting to the FOREST AND STREAM, where it fell under the eyes of the Maine authorities, and they are trying to secure evidence against the sportsmen. Of the doings of the other party, in which were some half a dozen Worcester gentlemen, the Maine authorities know but little, and, if they shot a moose, they have kept the story of the shooting to themselves. In this party were manufacturers, lawyers, and a prominent United States official, but the investigation thus far fails to establish a case against them. The penalty is a fine of $100. Two other Worcester men, who saw a moose in the Maine woods last summer, are feeling much better in the belief that the animal is still living than they would be over recollections of choice moose steaks and anxiety about the movements of Maine officials." [The *Spy* is in error in saying that the landlord sent a letter to the FOREST AND STREAM. The letter was addressed to another party, and our mention of it in issue of August 10, 1882, was simply to expose the nefarious practices of its writer.]

THE VIRGINIA SNOWSTORM.—Richmond, Va., Jan. 15.—On Tuesday and Wednesday last, the 10th and 11th, there occurred the heaviest snowstorm ever seen in Virginia since the memorable winter of 1857. The snow now covers the ground on the level to a depth of twenty inches. It has been fun for the darkies, but death to the game. An examination made this week of the three markets of Washington, D. C., Alexandria, and Richmond, Va., has shown me an unprecedented amount of game for sale, by the sable brother, generally, chiefly of rabbits and partridges. Not only have the countrymen turned out for a general battue to capture and kill all the fur and feather that are rendered fearless and weak by hunger, and who leave a plain trail in the snow; but the cities have disgorged their vagrants to assist in the nefarious work. I noticed on a trip from Alexandria to Richmond, at every wayside station, couples and gangs of Africans, armed with old army muskets, on their way, and preparing to beat every covert in the country and track every squirrel, old hare, and quail, and shoot them on sight. I fear this winter will prove fatal to the quail and that the few that are left will be exterminated, unless, indeed, they have sense enough to migrate. I will wager my Greener against an old flint-lock that there is hardly a negro cabin in the backwoods on whose table cannot be found the following *menu*: Ashcake; spare ribs; rabbits, fried; snowbirds, do.; partridges, do., and a jug of turpentine whisky—the latter obtained at the nearest crossroads store by a trade for half the butchered game.—CHASSEUR.

MICHIGAN GAME NOTES.—On our recent deer-shooting trip to the Manistee region we found some bears, but there being no snow, we could not track them. I saw a good many marten's tracks during the last days I was there. One of our party went to a lake in the vicinity of our hunting ground and found that quite a number of beaver were there. We did not go prepared to trap game. I saw the tracks of two otter on the bank of the Manistee, and I have no doubt if we had been prepared we might have caught considerable fur. Ruffed grouse were quite plenty in some localities, but no quail. The law against killing deer in the water is not regarded in any section where I was. At Houghton Lake deer were driven in and pursued with boats and shot or clubbed to death. Two deer were shot in the Manistee one morning by one of the party who were camping on the east side. Another case, a man from near Syracuse, N. Y., shot a buck in the river and wounded him badly, but did not get it. The man whom we boarded with shot the buck the next day, and when dressing him we found the Winchester ball with which he was shot the day before.—STILL-HUNTER (Palo, Ionia County, Mich., December 23, 1882).

Escanaba, Mich., Jan. 10.—Deer all (or nearly all) left for the South through the month of November. I have not seen any deer or tracks since Dec. 10. Wisconsin will have to change the time of killing deer or have none left in a few years. When they run short we will be in the same fix here.—A. F. Y.

INDIANA.—Spirit Lake, Iowa, Jan. 6.—We are having rather a rigorous winter with some snow, but not enough to injure next year's chicken crop as yet. They are quite plenty, with now and then a flock of quail.—A. A. MOSHER

AIR-SPACE IN RIFLES.—This morning I received a note from a friend, from which I extract the following: "Last summer while at S—, I saw some tame pigeons flying around my father's place. My brother told me to take a shot. I stepped into the house and grabbed my gun, which, by the way, had at the muzzle two tightly felted corks. Not noticing these at the time, I placed two shells in the chambers. Just as I stepped outside the birds were passing over, I fired, killed no bird, but thought my whole head was gone. After thinking for a while what made my gun kick so, I noticed one cork in the left barrel. Then I knew that I had shot the other cork out, but it injured nothing. It was my Lefever hammerless." *Per contra:* Last summer I was present when a gun burst in the hands of a friend. In this case it was absolutely certain that there was no obstruction in the barrel; the cartridge in this instance had been loaded by myself and contained 3¾ drams of ducking powder. The gun was labeled "Wm. Moore & Co.," which is not the name of a maker, but simply a trade name. An examination of the ruptured barrel disclosed the fact that the metal at the seat of rupture was little thicker than the paper on which I write. Beware of cheap and bogus guns, especially if you are a—GREENHORN.

Portland, Me., Jan. 12.—Reading the different articles upon this subject in FOREST AND STREAM, I am reminded of a case that came under my own observation a few years ago, where a member of the Maine Rifle Club had the barrel of a fine long-range Wesson rifle spoiled by blowing a rag from it which had come off the cleaning rod about fifteen inches from the breech. Being unable (as he thought) to remove it otherwise, he inserted a cartridge and "fired it out." The result was that the barrel was bulged at the point where the rag rested, and a new one had to be procured.—G. L. BAILEY.

Bellows Falls, Vt., Jan. 9.—I see in your paper the question, is air-space in rifles dangerous? I should say yes. I experimented that way some years ago with a very heavy barrel and fired about one hundred shots with the ball up from one-eighth inch to one inch without injury to the rifle. I have left the bullets within two inches of muzzle and fired them out without injury but my advice is not to try it, for unless your barrel is very heavy and strong you won't find all of the pieces.—B.

I have on several occasions fired a Springfield Military B. L. rifle with a cork in the muzzle, and have seen others do the same. have also seen them fired many times with an oiled rag in the muzzle; and I never saw any bad result from it, nor does it seem to seriously affect the shooting.

DEER AND NUMBER NINE SHOT.—*Editor Forest and Stream:* I see that your correspondent "Wells" says he doubts the statement I made of a deer being killed here with No. 9 shot, etc. Now I will reiterate that statement, that the said deer was killed with No. 9 shot a little over twenty yards, measured distance, four drams of powder, and one and one-fourth ounces shot. Col. V. J. Shipman offers to send his sworn statement before justice that the above is correct. He is the man that killed the deer. The shot not only penetrated the hide, but the ribs also. The deer was running broadside, a little quartering, bearing off. Yours for truth—KNICK.

WHITE DEER. — Pittsburg, Pa.— *Editor Forest and Stream:* Some time last year I noticed a publication in your paper which gave the names of several parties who had shot white deer, and every one who had killed one had met a violent death. Now, on December 28, 1882, Lloyd Loudermilk shot a white deer on Winding Ridge, one mile from Selbysport, Garrett county, Md. We will anxiously await the result of the above.—R. T. C. S.

Sea and River Fishing.

"Shorthose. May't rain above all almanacks, till
The carriers sail, and the King's fishmonger
Ride like Arion upon a trout to London!"

"God. I will give thee for thy food
No fish that riseth in the mud;
But trout and pike, that love to swim
Where the gravel from the brim
Through the pure streams may be seen;
Orient pearl fit for a Queen,
Will I give, thy love to win,
And a shell to keep them in;
Not a fish in all my brook
That shall disobey thy look,
But, when thou wilt, come sliding by,
And from thy white hand take a fly.

Gloria. I thank thee, honest Satyr. If the cries
Of any other, that be hurt or ill,
Draw thee unto them, pr'ythee do thy will
To bring them hither.

—*Wit Without Money* (1639).

WINTER TALKS ON SUMMER PASTIMES.

X.—SEVERAL RELEVANT TOPICS.

Forced from their homes, a melancholy train.—*Goldsmith.*

I FIND the following paragraph in a fairly-written book, printed in England fifteen years ago, with this title, "Chiploquorgan; or, Life by the Camp Fire in Dominion of Canada and Newfoundland, by Richard Lewis Dashwood, XV. Regiment."

"We were much surprised and disappointed at the paucity of salmon on our way up the Cascapedia, and when we reached the FORKS only succeeded in killing two after several day's fishing. We therefore came to the conclusion that the river as regards salmon was a myth, and decided to return to the sea."

This visit was made in July, 1862. "The Forks," where barely two salmon were killed, are about fifty miles from the mouth of the river, and "on his way up," Col. Dashwood and his companions passed a score of pools where I have killed many scores of salmon, and which no one now-a-days with any sort of skill could fish without being amply rewarded for the time and toil required to reach them.

The "paucity" experienced by this party in 1862 can not be attributed either to their want of proficiency or to their ignorance of the habits of the fish, for the Colonel was an old salmon angler, having fished all the best salmon waters of the "old country," and was accompanied by a gentleman as noted for his skill as for his eccentricities. Nor could their ill luck have resulted from their want of knowledge of the locality of the pools, for some of them are so conspicuous that any "wayfaring man, though a fool," could not have made a mistake. Or, if these gentlemen could have possibly overlooked them, their Indian guides would have been sure to point them out, for I have always found them quite as anxious that their employer should have "luck" as he was himself to make a good score.

To what then could this "paucity of salmon" in this long famous river be attributed? Making all due allowance for any want of skill or knowledge or application on the part of these gentlemen, I am inclined to attribute their disappointment to the fact that the salmon were not then in the river in any such numbers as they have been since, and for this reason:

Twenty years ago that river and all others were open to all comers, whether with net, rod or spear, and because of this fact it had not only been thinned out, but by the merciless way in which the fish were hunted in season and out of season—in the estuary, in the pools and on the spawning beds—they were given no opportunity to multiply. By this persistent slaughter, continued for years in all rivers accessible to the salmon purchaser and packer, the kingly fish in the lower Provinces would very soon have shared the fate of their predecessors in the Upper Canada waters and in our own rivers on the south shore of Lake Ontario and the St. Lawrence. For it is not simply from far-back tradition that we know that salmon were once abundant in these Lake Ontario tributaries. I have myself (when a lad) seen canoe loads of salmon brought into "Little York," now Toronto, by the Indians, who had captured them in the rivers "Humber" and "Credit" at the head of the lake.

A venerable gentleman of Keesville (Mr. Arnold, now deceased) once told me that in 1818, he had purchased a salmon freshly caught at Oswego for a "York shilling," and that for several years afterward they continued to be taken in great numbers in that neighborhood. And you may remember that Mr. Weed was moved by the recollections awakened by the account I gave of "my first salmon," to publish in the *Tribune* some years ago, the account of his capture of a salmon in Onondaga Creek, near the present site of the city of Syracuse. He then lived in that neighborhood. One night he observed the flashing of bright lights along the creek, and on going out to see what was up, he found a party of Indians with spears and clubs, killing salmon as they were trying to force their way over the shallows of that stream. It was then and there, borrowing a spear from a friendly Indian, he killed *his* first salmon. To us of to-day this fact seems incredible. Nevertheless, that incident was but one of a thousand like it occurring in the shallows and pools of all the streams which then made their way, unobstructed by milldams or other barriers, to the lake.

But for these obstructions, supplemented by choking sawdust and poisonous chemicals, many of these streams would have continued to be what they once were, the chosen resorts and spawning beds of this favorite fish, whereas now, not a salmon, except at one or two points, where they have been or are being artificially propagated, is seen in any river between Montreal and Hamilton. I would not complain of this if it had been a square question between progressive industry and the extermination of the lordly salmon; but we now know that, in many rivers, their extermination was not necessary to the development of industry. If the milldams had been constructed so that the fish could have surmounted them (as is easily practicable), salmon would have continued to ascend the streams, and would still be found in waters from whence they have been driven by the erection of these impassable barriers. Although the Dominion government is endeavoring to undo the mischief already done, I fear it will take many more years to replenish than it did to deplete these once prolific salmon waters.

A year or two before this developed "paucity" of the Cascapedia and other rivers of the lower Provinces, having learned by experience that it would be too late to lock the stable door after the horse was stolen, stringent laws were passed by Parliament to protect the fisheries in all waters under government control. But, unfortunately, while the original laws contained sundry useful provisions, they were fatally defective in that all persons were "forbidden to fish for, capture or kill fish by means of spears, except only the Indians." This exception rendered the law practically nugatory. The deadly spear had been the chief cause of all the mischief, and so long as this permission continued it would be impossible to bring the rivers (in the neighborhood of localities where the speared fish could be exchanged for rum and tobacco) back to their original status. This spearing clause was still in force in '62, when Col. Dashwood made his trip up the Cascapedia, and to that fact may be attributed the then "paucity" of the river as he found it. Soon afterward, spearing even by Indians was strictly prohibited, and as a result the river became in a few years the most noted on the continent; and it will so continue, unless the recent riparian rights decision shall work as mischievously as many believe it will.

I made my first visit to the Cascapedia in '74. At that time the stringent fishery laws—including the prohibition against spearing by Indians as well as by all others—had been in force for eight or ten years, and, however it may have been before, it certainly was not then true that "the river as regards salmon was a myth." Its waters were teeming with the lordly fish, and their capture afforded all the excitement and sport any reasonable angler could desire. Whether at the "Sheddon Pool," ten miles, or at "the Forks," fifty miles above the mouth of the river, fish were found in satisfactory numbers. But I had other proof than that furnished by Col. Dashwood that it had not always been so. Mr. Best, an intelligent *habitant*, who occupies the last house on the river (ten miles from the bay), and who has lived on the river for thirty years, told me that the fish were never so abundant as they then were; that they were far more numerous than ten years previously, and were increasing in numbers every year. In asking him how he accounted for the increase, his response was, "A strict guardianship and no more spearing by anybody."

But something more is necessary to keep up the supply, even though the recent riparian decision shall not work the mischief apprehended. The nets at the mouths of the rivers should be raised for two or three instead of one day in the week, to enable a larger number of fish to reach their spawning beds. Now that every pool on every available river is persistently fished, a much larger percentage of immigration is necessary to keep up the supply. If this is not secured, even with the otherwise effective protective laws, there will be inevitably a rapid diminution of salmon available to either seine or fly.

But the sea-trout will remain, whatever may become of the salmon; and they are next of kin to that noble fish in habit, weight, flavor, and every game quality.

Until within a very few years not many anglers on our side of the line were in the habit of "going for" salmon. Even so recently as ten years ago a "Yankee" was seldom seen on the best rivers. But they have of late multiplied twenty-fold, and if they do not now they soon will constitute a majority of the "simple wise men," to whom the gentle art has become irresistibly fascinating; and the fact is not altogether agreeable to our English cousins, whatever our Canadian neighbors may think of it. The London *Field* gives expression to its displeasure thus:

"The principal rivers are leased by Americans, to whom money is no object. When they take a fancy to a particular river, there is no mistake about it, they will have it."

And the *Field* only speaks the simple truth. The New York Club, of which President Arthur, Mr. Vanderbilt, Robert Dun and a score of other wealthy gentlemen are members, paid a fabulous price for the best portion of the Restigouche, and Mr. Blossom and his associates were almost equally liberal in the price they paid for the lower twelve miles of the Cascapedia. These are, by all odds, the best rivers in the Provinces. Other first-class rivers will be, if they have not already been, similarly secured "by Americans, to whom money is no object." And the opportunity to do so has been greatly facilitated by the recent riparian decisions. Previously, the government officials had supreme control, and they were not always indifferent to the solicitations of their home friends. Leases, like kisses, often went by favor, as more than one American bidder has had occasion to know. But individual owners are not likely to forego a good offer from a "Yankee" to accept a poorer one from a "Kanuck." The result will be a more equitable distribution of leases and permits and an increased influx of American anglers. So be it. Men who have money to spend for coveted enjoyments can expend it for nothing more healthful, harmless and exhilarating than in the delightful pastime of angling for salmon. G. D.

FISHING IN SAN FRANCISCO BAY.

WE are having a regular snowstorm to-day, Dec. 30, something with which we are very rarely regaled in this section of the country; the sidewalks are already covered to the depth of about an inch, and numbers of people of both sexes are vigorously engaged in the pastime of snowballing. Woe betides every teamster, horse car driver as unwary pedestrian who attempt to pass certain corners particularly adapted or devoted to that sport, and the crash of breaking windows and shattered glass doors occasionally breaks in upon me as I sit writing in a room fronting on Mission street.

Until the last week the weather, however, has been delightful with us, and the opportunities for successful hunting and fishing jaunts have not only been numerous, but have been improved to the utmost by many of our local sportsmen. Heavy bags of canvas-backs, mallards, sprigtails, and green-winged teal are frequently brought in, and the fishing in the bay is better than it has been for many years. Hearing glowing accounts of the sport furnished by the submarine denizens that frequented the vicinity of Goat Island, located near the middle of the bay, and not far from the route followed by the steam ferryboats that ply between here and Oakland, four of us whom I will designate as Harry, Bob, George and the undersigned, determined to pay them a visit at the first opportunity, which occurred about a week ago.

Now, "Forked Deer" does not, unfortunately, claim a place among those elegant and accomplished scientific anglers, who write so charmingly of the deftly thrown fly, the lordly salmon and the gamy, gorgeous trout, although he has caught a few of both of those splendid fish by the very primitive appliances in vogue along the frontier; a fairly successful manipulator of the shotgun and rifle, his piscatorial experience was chiefly acquired in early youth in yanking out bullpouts and suckers, with a rig generally consisting of a beanpole, to which was attached a portion of his kite string, with a ring hook and angle worm at the lower end, and a lead sinker and a "bob" like one of the buoys outside the Golden Gate, located at suitable distances up the line. As we expected to use a rig something after this style in our Goat Island trip, I have deemed this explanation necessary in order to forewarn those who only find pleasure in the split bamboo and the braided silk with its feathered lure, so gaudy but so deceitful, occasionally, to both fisher and fish.

We set sail early one beautiful morning from the Market street wharf in a Whitehall boat with a small leg-of-mutton sail. The bay, lightly ruffled by a gentle breeze, was dotted over all its broad expanse with sailboats, yachts, cutters, merchantmen, coasters and war vessels. We dashed merrily over the sparkling waves, breaking up the long lines of gulls, pelicans, surf ducks and loons that lay off the shore in thousands. Arriving at the island we drew the boat up upon a little pebbly beach, laid bare by the receding tide, and proceeded to prepare our lines and bait, which had been thrown helter-skelter into the boat in our hurried departure from the city. The lines we employed were so different from the bungling affairs I used years ago on the Narragansett, and were, moreover, so perfectly adapted to their intended use, that I cannot refrain from briefly describing them even at the risk of imparting no news to your readers. On the extreme end of the line was a lead sinker of half a pound weight, necessary in this instance on account of the strong tide. Ten inches above it, tied in the middle at right angles with the line, was a brass crossbar about six inches long, with an eye at each end, from which proceed two guys or stays that met and were fastened to the main line about four inches above the bar, and which served to keep it in position. Two hooks were then fastened to pieces of milliner's wire about six inches long, and one tied to each eye of the crossbar, so that when the sinker just touched the bottom the bait hung three or four inches above. The advantages of these lines are as follows: They seldom tangled, held the bait not only in the most inviting position, but also where the fish could be most certainly hooked, were exceedingly sensitive to the bite of the smallest fish, and finally by having the line below the bar a little weaker than that above, we were able to retrieve the line with the loss of only the sinker when entangled on a rocky bottom.

Arrangements having been perfected, we pushed out from the shore about fifty yards, and, casting the anchor, proceeded at once to business with hooks carefully baited with bits of salt herring and a kind of "thousand-legs" worm found abundantly on the mussle beds. Our lines had not been in the water more than five minutes before a yell from George and an excited movement in the bow of the boat, where he was

sitting, caused us to turn our heads in that direction just in time to see him land in the boat a huge crab, the size of a soup plate, which, upon being disengaged from the hook, started at once for the stern, snapping viciously at every boot with which he came in contact. Order was soon restored by a vigorous kick, that laid his crabship up for repairs during the remainder of the voyage, and as the biting now became fast and furious each one soon had his hands full attending to a single line. Harry led off with a silver perch; Bob followed with a rock cod; and George, after several unprofitable bites, hauled in a villainous-looking monster, with a mouth and gullet like a catfish that had swallowed the hook down, by actual measurement, to within three inches of the end of his tail. This lively work continued about an hour, when we found, as the tide gained strength, the fish began to bite less freely. Although late in December the sun shone so warmly that some of us were in our shirt sleeves, and all began to be thirsty. George, from his breast pocket, produced a dark bottle of peculiar shape and strange device (a ferocious-looking cat rampant), which he said contained a superior quality of Florida water. The rest of us, remembering the worthy example of glorious old "Kingfisher," refused to imbibe, and, pulling in the anchor, started for the shore, intent upon finding one of those springs so seductively described by him in his "Camp of the Kingfishers." But, alas for good intentions, nary a spring "showed up." Not even a puddle of fresh water rewarded the most diligent search, and we returned to take a dry lunch on board, after satisfying the inner man with an ample supply of ham sandwiches, sardines and French rolls, finishing off with a dessert of oranges.

We anchored off shore again upon a soft bottom and opened up with flounders. For the benefit of my Nevada friends, who are not acquainted with this marine production, I will remark that if they can imagine a horned toad, minus its legs, and enlarged to the size of a dinner plate, with its natural caudal appendage replaced by a fish's tail set on flat instead of edgewise, they will have a very fair idea of a flounder. A very little flounder fishing served to satisfy us—it was too much like pulling up submerged crockery—and we swept round to the south end of the island, where we found several boats anchored and the fish biting lively. We cast anchor and took a hand in the sport for a short time, but finding the fish running much smaller than those at the north end, we soon pulled out and returned to our original position where the rock-cod and sea-pearch of two varieties were still biting quite freely.

While thus peacefully engaged we were suddenly startled by the roar of heavy artillery from Fort Point, near the entrance of the harbor, and as we were gazing in wonder and astonishment at the unexpected interruption, a cloud of smoke burst from the embrasures of the fort on Alcatraz, only a couple of miles distant, and the thundering reverberations from her heavy guns went rumbling over the Sancelito hills far to the northeast. A few moments later and the cause of all this commotion was explained, as the white hull of the British gunboat Comus appeared from behind the island and steamed rapidly to her anchorage, bearing the Princess Louise and the Marquis of Lorne on their return from Vancouver.

As the sun dipped toward Lone Mountain a lively breeze sprang up, dashing the spray over the boat and calling into requisition our coats that had been discarded early in the day. As Bob attempted to pass George's coat, the tail accidently came in violent contact with one of the thwarts, a crash of glass followed, and a stream of yellow liquid coursing along the bottom of the boat proclaimed the fact that another deposit of the "superior quality of Florida water" had come to light. Still further investigations revealed a third bottle in the opposite pocket, probably put in to balance well, a bonanza which George, in disgust at the strict temperance principles advocated by the rest of the party, had determined not to uncover; evidently George knew to a dead certainty before he started, that there were no springs on Goat Island.

By three o'clock in the afternoon we had taken sixty pounds of fine fish, and pulling in our lines, we hoisted sail and went skimming rapidly over the waves toward the city, drawing up to the wharf before sunset, a tired, hungry and sore-fingered crowd, but well satisfied with our day's excursion to Goat Island. FORKED DEER.

SAN FRANCISCO, Dec. 30, 1882.

THREE WEEKS IN THE MAINE WOODS.

SEPTEMBER 8, 1882, was the time set to meet friends at Worcester, Mass., to go thence to the Maine woods, and as I walked into the Union Depot at 7:30 A. M., I was greeted by three gentlemen, who, with one exception, I had never met before. This trio was headed by one of the oldest and most successful anglers in the States. Tall, broad-shouldered and of great muscular powers, but noted for his kindly Christian qualities at his home in Ridgewood, N. J. Next in line was a medium-sized gentleman of modest mien, but with a merry twinkle in his eye, which speaks volumes to one who loves jollity and good humor in camp, and knowing he was an editor, and from Goshen, N. Y., I at once put myself on my best behavior for fear of a "whack" in his paper. Last, but not least, was an aged veteran from the same town, who, being endowed with great command of language and much experience, was requested to take charge of the party, he (modestly) accepted the title of Colonel Redfield, and we were at once ordered to take the cars then in waiting.

Just as were entering the cars, Mr. C. A. Waite, general ticket agent of Worcester & Nashua R. R., stepped up and invited us to take seats in the palace car through to Portland, Maine. We had a most pleasant and enjoyable time until we arrived at Bryant's Pond Station, on the Grand Trunk R. R., then a drive of twenty-one miles in a new Concord coach, drawn by four splendid roaders, owned by Tuttle & Perkins, and two as good whips as ever drew rein.

At 8 P. M. we were safely landed at Andover, Maine. After a good night's rest and a most excellent breakfast, such as Mrs. A. Thomas well knows how to prepare, we then took a buckboard for the twelve mile ride to the foot of Wilokennebacook Lake, where we found one of the small steamers, owned by the Union Steamboat Company, in waiting for passengers from Andover. This company are deserving great credit for their endeavors to please, and accommodate the traveling public. After steaming across two of those fine lakes and up through the narrows, we at last step ashore, near the Upper Dam camp landing for a few weeks' stay.

After a day of preparation, and looking over the fishing grounds, we settled down to business. In two or three days the trout commenced to run up, and for a week or so we had most excellent sport. My friends took about the same number of fish that I did, but I kept the record of none, except those which I caught. For the benefit of those who enjoy such reading or may wish to go and do likewise, I will give my experience of one, and the best day's fishing for heavy trout, and at the same time state that all the fish I took in two weeks time were caught with a large dark-winged "Montreal" salmon fly, "grisley king," and "Jock Scot," and I esteem them the best killing flies for the Rangeley Lake waters, in the month of September.

It was on the morning of the 15th that I carefully anchored my boat, midway of a long pool, and on one side of the rapid water that ran through it in the Androscoggin River, just below the Upper Dam Camp. Mr. Reynolds soon put in an appearance, and dropped anchor some sixty feet below me, on the same side. Immediately after Mr. Eli Cutting, the Andover guide, dropped anchor fifty feet directly opposite, on the other side of the pool.

I had taken one fish of three pounds weight when the sun came creeping up and over the mountain tops, its bright rays glimmering on the water. Hardly expecting a very heavy fish to rise in the bright sun, I became careless and was leisurely casting down and across the current when my stretcher fly was gobbled, and with such a "yank" that the rod was doubled to a half circle before I raised my finger from the line. Then, with a mighty rush, like an arrow from a cross bow, he started down stream. The old click reel sung out its peculiar whir-r-r-r-r so pleasant to the angler's ear; but the ledges and the boat below; they must not be reached. Now for a test of my new ten-ounce split bamboo. Will it stop him? The pressure is put on; both hands now grasp the butt, and, as the fearful strain comes on, it creaks and quivers like a ship in a heavy gale of wind. But the trout has for once found his match, and he is compelled to turn aside and head up stream just in time to clear the boat below. He sticks to the rapid water yet, and the mottled line fairly hisses when it cuts through the rushing current as he flies across and toward the boat opposite. The noble rod is good for it, and he is once more foiled. Now for a rest of five minutes; well, rest away, old brave, for the rush that is sure to come, but I feel that with proper care I am master of the situation. Ha! What trick is this! A dive for my anchor rope! I will not be caught so, and I pull up anchor with one hand, and hold it with my teeth, as he passes under the boat. Now for the first time I see the monster, as the rod forces him toward the surface on the opposite side. The tension on rod and line is so great, that the boat swings half around, as the fish flies across the pool into deep water. Another sulk is attempted, but a few vigorous taps with my knuckles on the butt of the rod, and another "circus" is started. My friends in the boat see his little game and generously give me room, when I force the fight for the next ten minutes, and his trountship is "winded," and lays gasping on top of the water. Mr. Cutting passes the landing net under him, and he lays in the boat. What a beauty! A male fish, twenty-seven inches long, and pulls the scales down almost to the eight pound notch. I time the fight, and find just twenty-six minutes taken to kill my fish. I view with pride my new rod, and mutter to myself, "Yes lost!" with a light rod; as it is, his spotted hide will grace my office, and just over it shall hang the pliant rod that won the victory.

Later in the day, in the same place, I fought another battle of the same character, the result of which was the landing of another male trout, that pulled the scales down below the six-pound notch, and as I looked into my fish car and viewed their great golden sides, I said: "Three speckled trout in one day of seventeen pounds weight is enough," and shouldered my rod and started for camp.

A few days later my friends found it necessary to return home, and with a fine lot of trout, ranging in weight from two to six pounds each, they bid adieu to the fraternity in camp and started for New York, with the avowed intention of returning again next June to have another season of pleasure with the finny tribe that abound in the headwaters of the Androscoggin River. Soon after their departure there appeared in camp two young men, both genuine sports of the rod and reel persuasion, that had been camping at Kenebago Lake for two weeks, but had now come down to occupy a small log camp near the upper dam landing, that was partially built for our benefit by some warm-hearted friends from New Jersey. These young men, one a "sprig of the law," the other "young Nimrod," and both "eighteen karat fine" fellows, reported plenty of small trout at the Kenebagoes, and the finest mountain scenery around the Rangeley Lake country.

In two or three days we had an addition to our party of a gentleman about fifty years of age, who answered readily to the name of "Esq." In passing it may be proper to say that he is a better lawyer than fly-fisherman, but a handier or jollier man never camped in the Maine woods. Soon after the Esq. came into camp, he and the writer had occasion to visit a neighboring camp in the evening. As we were on our return home, traveling a narrow, rocky path in the woods, an episode occurred that I never shall forget. He was "on his walk," he said, as he struck a tremendous pace, when, "Ugh!" was all I heard, and peering ahead in the darkness I discovered the "Esq." standing bolt upright on his head with feet playing like drumsticks in the air. The scene was so ludicrous, and the idea of his showing off to an audience of one completely upset me, and I dropped in my tracks and roared until I could hardly hold myself together.

A few nights later I got terribly stirred up again. Early in the morning hours we were aroused from our slumbers by loud growls and a "swish" around our camp, with a clatter on the roof and a heavy tumble to the ground of some heavy animal. "Sprig of the law" whispers in bated breath, "For heaven's sake what's that?" All is still, but, "O my!" "What a smudge," "Whew!" and such like expressions came in smothered tones from under the bed quilts. As soon as it was light we discovered our friend Mop, a spaniel dog belonging to the Upper Dam camp, had come down on a visit, and had chased a polecat around and on to our camp roof, tumbled off himself, but the "cat" stayed long enough to make it sure that he had "been there."

These are specimen bricks of eight days' time spent, sandwiched in with fair fishing, and, to sum up as a whole, we voted it a good time. "Sprig of the law" took several good-sized trout, the "Esq." took one of four and one of five pounds, and "Nimrod" several heavy fish; the largest tipped the scales at six pounds.

I intended to spend one day with Capt. Fred Barker on his stream and at Camp Bemis, but the great blow of three days duration prevented my enjoying that pleasure, but most of the very stormy weather was spent at Upper Dam camp, or hotel, and just here I must say a few words about this pleasant place. The buildings have been greatly enlarged, and refitted throughout, painted both inside and out, in shades of olive, with scarlet trimmings; two large fire-places in the sitting rooms, surrounded with handsome tiles, and cozy arm chairs, very suggestive of comfort, and a broad piazza extends across the whole frontage, making it one of the finest and most desirable camps in the Maine woods.

While in camp it was my good fortune to make the acquaintance of several gentlemen sportsmen, among whom were Messrs. Ames and Lawrence of Boston; State Senator Ross of Willimantic Ct., Mr. Cotton of Lewiston, Me., and law partner of U. S. Senator Wm. P. Frye; Stewart and Rosenberg of New York, and other genial good fellows. What a pleasure it is to meet gentlemen and sportsmen of the highest class in the dark forests, and on the pearly streams!

The time having come when I must return home, I started out one day before my chums broke camp, as I wished to spend one day near Andover before making the final start. So on the 29th of September some fifteen ladies and gentlemen boarded the little steamer and started down the lakes. As we neared the landing, Capt. A. J. Farrar inquired if any passengers wished for dinner at the hotel, which had just been completed at the arm of the lake. Nine answers in the affirmative produced the same number of whistles from the steamer as signals to the hotel, and judging from the most excellent dinner, the soft hair matresses, the abundance of trout in that vicinity, and with such a pleasant landlady as Mrs. Farrar, I think it safe to recommend it as a capital place to spend a few weeks' time.

Coming out on the buckboard it was my good luck to ride out with Mr. George Woodbury, a conductor on the Knox & Lincoln Railroad, Maine. It took me just two minutes to cipher it out that he was "my man" for a tug at brook fishing the next day, and our plans were soon laid. The next morning we might have been seen bouncing out of Andover on buckboard headed toward the mountains. Five miles' drive brought us to a halt, as the road ended here.

Slipping on light rubber boots, we took our fish baskets and plunged into the forest. Our instructions were to go northwest until we got tired, then go a few miles further; but the party that told us so did not know his men. On and on we traveled until we struck a tiny little stream, which we concluded must be the one, as it was the only one heading down through the "notch" in the mountains. We learned afterward that we went to within a mile or so of C. Pond, and three miles further than we should have gone. We retraced our steps to the gorge between the mountains and began to fish.

I have been a-fishing off and on for some thirty years, but I never had a better day's sport or a more genial companion in all my life than on this same day. The stream was low and the trout were gathered in long clear pools, their size ranging from two to five ounces. For three and one-half hours did we transfer the red and golden sided little beauties from this cold spring brook to our baskets, and where we took ten we left a hundred. As the sun was fast sinking behind the lofty rugged mountains through which we had just passed, I said, "George, how long do you propose to keep this thing up?" Said he, "You just wait a minute, until I take these two large ones out. See here, look off in there; there are hundreds of them; how can we leave them?" But we at last reluctantly leave the brook and speed on our way homeward. What was the number of our catch, did you say? Well, two hundred and forty-three trout and many very small ones thrown back into the stream again when first taken; and this day's sport is registered as the best of all my life for brook fishing.

As we drove up to the hotel at Andover that night in high glee, we found the teams just coming in from the lakes, bringing the "Esq.," "Sprig of the law," "Young Nimrod," of Putnam, Conn.; Mr. Hatch and daughter, of Boston; the old veterans Powell and Blood, of Chelsea; the Hon. Mr. Parrish, of Norwich, Conn., and several other friends, who gave us a hearty greeting as with a spanking gait and colors flying we swung around to the hotel stables and unloaded basket after basket of our spotted treasures. The next morning two stage loads of ladies and gentlemen left the quiet little village of Andover for our homes in several different States, and all with the feeling that it pays to spend a few weeks on the clear streams that abound in the old Pine Tree State.

E. T. WHITMORE.

PUTNAM, CONN., Jan. 5, 1883.

HOOPSNAKES AND TROUT.

SOME weeks ago I was much interested and amused at the hoopsnake, snaik, or sneak question so spiritedly carried on in the columns of FOREST AND STREAM. Press of business at the time prevented me from whooping. When we look at the varied productions in animated nature, with at times a freak thrown in, think you it would cost the old dame any great effort to turn loose on the world a hoop-sneak, with a sting in the tale? Some one (I forget who) has said the animal kingdom, whether crawlers or walkers, have their prototype in some one of the human family.

A few evenings ago, in company with a retired British trooper, who has seen much service in the East Indies, the conversation turning to snakes, my friend related some wonderful stories of hairbreadth escapes and miraculous cures of persons squeezed, twisted, bitten and stung by the many different species of the venomous reptiles, all of which he was familiar with, having had them for comrades in the bivouac, in the hotly contested field and on the silent night march.

To me the incidents related, when not horrifying, were interesting and instructive; one in particular got attached to the point of my pencil, which I will now try and rub off. It referred to the double-headed snake. I suggested that nature might have got off one of her practical jokes, and turned off a monster, solitary and alone. The trooper stoutly asserted they were a separate species, although not very numerous; he had frequently heard of them by natives and comrade troopers; he had himself seen and killed two of them, at different times and places, the natives showing great honor and fear at the deed. The specimens referred to were about twelve inches long, with a head at either end of the body. They are considered and classed with the most deadly of the snake family.

Now, Mr. Editor, does it not seem strange to you, in that far-off land of shade and darkness, they have all these reptile blessings spread broadcast over the land, and here in our own America some of your correspondents, aided and abetted by your natural history man, will not allow us a contemptible little hoopsneak, with a spike in its tail, when we know they are to be found even here in Massachusetts, under the shadow of our own Mount Tom? Strange, isn't it? Nevertheless true. They are particularly fond of brook-

trout, a species of fish inhabiting the brooks which rush and tumble and then peacefully wimple round the base of the old mountain.

The last time these hoopsneaks were seen was in the early part of last trouting season, when three or four of them rolled out of Holyoke on hoops, with the sting under their feet. They rolled over the mountain to a brook where the trout are fair to behold and delicious to taste—the sting was thrown into the brook and pursued the trout with unrelenting fury, striking large and small alike until the last fish lay pale in death. When in the act of gathering and smiling over their victims, preparatory to rolling home, they were surprised by an old Hoosier of a farmer, who threatened them with a switch of the law, which so scared the hoopsnaiks they were glad to purchase silence at a cost of $200, when they rolled off the scene wiser if not better sneaks.

CON UNDRUM.

HOLYOKE, Mass.

MY FIRST FLY ROD.

REMINISCENCES OF THE RANGELEY LAKES.—II.

THE next season was the summer of 1873, and three of our number were at Middle Dam, each now provided with a fly rod and to make our first cast with the fly. We began modestly, as is befitting beginners. My rod was a five dollar one, ash butt and second joint, with lancewood tip, of nobody-in-particular's make. For reel I had a common brass, and on it twenty-five yards of regulation braided silk, with a six-foot gut leader, and two flies, stretcher and one dropper. The dropper, however, before long was discarded, as it was work and sport enough to land one trout at a time where you were liable to strike a fish anywhere from one to five pounds.

Now came the business of learning to cast the fly. Is there anything more amusing than the awkward work a beginner makes of it? He is told to use only the forearm and wrist, and let the rod do the work. But at the very outset is the difficulty. How is he to get the fly out on the water? He swings his rod, strikes out full arm's length, and lets his body follow as far as forward bending will allow, and yet the fly falls but ten or a dozen feet away. Then he withdraws and casts again, and finds that his leader is in a snarl around the tip. When this has been cleared and he casts again and is perhaps rewarded with a rise and a momentary straightening of the leader, he delays a second, that the victim may have a chance to securely fix the hook in his jaws, and then draws in with certain expectations—expectations, alas, always disappointed in such a case. An unreeling of another yard or two of line, and another vigorous wielding of the rod as though the line were a hemp rope, and a sudden bringing of all to a stand with a broken tip and a fly caught somewhere behind. It is laughable—not to the poor beginner himself. He hopes no eye other than the most friendly and sympathizing is on him in that moment. I find by the record that I got along safely till the evening of the fourth day, when "Went out to river (Rapid River) at 3:40 and fished down the further side till 7:05. Caught four, the last about one pound, and broke tip to rod." The record of a broken tip is against me three times more in that eleven days. The record, too, of trout taken is a lean and unsatisfactory one for the most part.

The last day of the eleven, however, made amends. We had determined to have a good day of it, trout or no trout, and asked Asa Frost—who does not remember the reign of Asa at Angler's Retreat for good and a "God bless him" in those days?—to put us up a dinner. We all three took the path direct to the pond in the river, as the widening out of Rapid River into a little lake—the Alamandabagog—is called. And here let me enter a protest against the disuse of the old Indian names, especially in the case of Wilokennebacook and Molechunkamunk. The term Rangeley, from the eccentric man who first attempted a settlement on one of them, the Oquossoc, may well be applied to the series, but why call any of them the Richardson? Richardson, as I understand it, was only a man who carried on lumbering operations on the lakes forty or fifty years ago, and no reason in the world exists why his name should usurp those of Wilokennebacook and Molechunkamunk. Will not Capt. Farrar attend to this in his next edition of the "Guide Book?" Let all the old names stand: Umbagog, Alamandabagog, Wilokennebacook, Molechunkamunk, Mooselucmeguntic, Cupsuptic and Oquossoc. They are a thousand times better than "Upper and Lower Richardson," etc.

Our intention was to take boat there, cross to the outlet, fish down toward the Umbagog, take dinner somewhere down the river, and make our way back as luck and pleasure should dictate. Reaching the pond I said to the member of the party who had developed the most skill with the fly—for the sake of a name I will call him the Duke of Brunswick—"Going to throw a fly here?" "No, rod's limbered up; guess 'tisn't worth while to unlimber yet." "Then I will," and as I had brought my rod along without "limbering up," I took my stand on the favorite rock and made my best efforts. My "Montreal" fell in the quick water perhaps fifteen feet away. The broad side of a noble trout gleamed in the light, showing the gold and vermilion, and buckle went the rod and whiz went the reel. No such fish had before risen to fly of mine, and in my haste and anxiety to secure him I struck hard—too hard—for snap went the tip and off went the fish. "Aha," said the Duke, "if that's the state of things I guess I'll unlimber," and before I could reel in and repair damages, he was on the rock and fast to a big trout, which, after ten minutes or so of smart contest, was brought to the net. It weighed three and a quarter pounds. Meantime I was in order and speedily again was my Montreal seized by a sturdy fellow, who buckled the rod and made the reel whiz. This time I was more self-possessed—began to feel more that I was a fisherman and this was business—and giving him the butt with care, and reeling in and letting him run by turns as seemed necessary, in due time I had my three and a half pounder in the net. A little larger he was than the Duke's, and that was glory enough for me. These first were our largest, but we remained there more than an hour, as long as the rising continued, and succeeded in landing ten or a dozen from half to one and one and a half pounds in weight. Covering them up safely from sight and sun we left them for our intended trip.

We rowed over to the outlet, left boat, and following the shores or leaping from rock to rock in the foaming rapids, fished to a point somewhat below where the Oxford Club Camp now stands, with fair success, till the inner man declared that it was time for dinner. Returning to Lakin's Camp, a cabin on the high shore of the river about half way down the carry, with a veranda across its front—it is now in ruins—we located ourselves in the shade of the veranda, and while the Duke and I spread out the bounties of Asa's provision, "Happy Jack," as some one had dubbed the third of our party from his general good nature and genial spirit, went for water to the spring. And now came an hour which I never recall without laughter. We had no other fluid than the pure spring water, but the clear air, the success of our sport, the perfect physical condition of our bodies from the rest and recuperation of the previous ten days, and the exercise of the morning, altogether, put us into a hilarious state. The Duke and Happy Jack loaded stories and nonsense, *ego* and Jack's little boy of twelve, who was along, putting in a word here and there, but chiefly coming in in the chorus of laughter. As I say, no other stimulant was present than the cold food and pure spring water, but a passer by, if there had been one, would have supposed the champagne was flowing freely. The next morning we took our leave. Barney toting a handsome lot of trout for us on his back, which were duly packed in ice when we reached Upton.

This was the first campaign of my first fly rod. I pass over others, to the last. The rod did me annually good service, either in my own hands or the hands of a friend, for after a second campaign my desire for a split bamboo made it my second rod. It landed for me the largest trout I ever caught (4¾ lbs.), at the same old place, the Pond in the River, and I believe after the first season I never broke either of its tips again. It now lies at the bottom of Lake Mooselucmeguntic—peace to its ash and lancewood—and it was to tell how it came there that this rambling story was begun.

For the vacation of '81 I had planned with a friend a trip to the King and Bartlett ponds of Eustis, Me. Just before setting out I persuaded a New York friend, who was rather under the weather, to join us and make a trio. After a pleasant ten days with friend Hutchins at K. & B., New York, I made a detour from our return way to the Rangeleys and tried the camps of friend Barker at Bemis, on Mooselucmeguntic. The next morning after arrival we proposed to try the lake, and pushed off in a boat soon after breakfast for the purpose. The boat, however, proved leaky—so leaky that, after a few lengths from shore, we put back and called for another. They had all been painted the day before, and were not dry. "But here's a birch. Take her." "New York, are you used to a birch?" "No." "Then we won't take it." "Oh, no danger," says Frank; "Captain Barker's man in charge. You are used to a boat, and she's stiff. You'll go all right."

In boyhood I did know something about a birch, but had not been in one since, and as to taking one now with a friend at one of the paddles who had never seen a canoe before, or certainly had never been in one, I objected. As this, however, was our only chance for the morning, and Frank was confident and New York had no hesitation, I yielded, and we took our places, New York with the chief paddle astern, and I in proper position on the bottom forward. Now, if we had been directed to make our first essay with the canoe up to the blue water in the mouth of the Bemis stream, it would probably have been all right. We should probably have had a pleasant paddle and brought ourselves, or rods and some trout, all home safe, but it was not so to be. Instead, we struck a bee line across to the southwest shore one mile distant. We did it readily and with increasing confidence in our ability as canoemen. Then we paddled up the shore a mile and a half, throwing a fly here and there without success, and back again. Thus far all right, only once or twice, when I had changed my position from sitting on my haunches to a seat on the cross piece, I had thought we came pretty near spilling out.

On reaching the point opposite the camp, we put away directly for it, and were about a hundred yards from the shore, and rocking pleasantly on the little sea which a smart breeze from the southeast had raised, when I found the canoe making rather too strong a cant to the leeward. "Look out, New York," shouted I, "we shall be over;" and while the words were still in my mouth we were over, I making a handsome plunge backward into the water, and New York—well, I don't know what kind of a plunge he made, but he made it. The canoe immediately righted, but full of water. Luckily I had my paddle in hand, and my bamboo had been so placed that it was not thrown out, and the only remaining article I had to look to was my rubber coat, which was within reach, and made safe. Laying hold of the side of the canoe I supported myself and looked after New York. "Paddle safe?" "Yes." "There's your rubber coat afloat." He seized it and got it on board. "There's your pipe off there"—it was a briarwood and so did not sink—and out he struck for it and made a rescue. "Where's your rod?"—my own old first rod which he had been using. "Don't know; see it afloat anywhere?" A fly rod with brass mountings and a nickel-plated reel with fifty yards of line on it would no more float than a cannon ball. "Isn't it in the canoe?" "No."

He was trolling and paddling at the same time, and when he went over the rod went over too, in twenty or more feet of water. "Then it's gone. What shall we do now?" There was no possibility of getting back into the canoe, that we could see; though possibly it might have been done by bailing out each end with our hats, and then carefully crawling in over the end, if we had thought of it. We did not think of it. "Shout and see if we can't raise them at the camp." One mile off, though in sight, not much hope of making anybody hear. Still, we tried it; yelled for help with all the lungs we had. We waited a little; clinging to the canoe; but seeing no signs that any body had heard us, we made up our minds that we had got to work out our own salvation. "Well, New York, what do you think of it?" "Got to get ashore ourselves, I guess; if we get there at all." "Well, put yourself 'round on the other side of that end, so that we can keep the canoe right side up, and we'll try it." New York's end was the stern before the capsize as we were leaving shore; now it was the bow. He put himself round, and throwing his left arm and leg into the canoe, he was thus back to the shore, face to me, and had his right arm free, and managed to make use of his paddle, while I at the other end, held on with left hand and swam with right hand and legs.

When this arrangement had been effected and we had begun vigorously to work, I looked for the nearest point of the shore. It seemed a long, long way off. Then I looked at New York. The ludicrousness of the situation struck us both. He laughed and I laughed—and then we laughed again. "How about the wives at home; what would they think to see us now?" "Well, they would be a little frightened, I suppose." Then we discussed the reason of the upset. I thought New York did it, while New York was not conscious of any action on his part which could have caused it, and rather thought I was up on the crosspiece. I stood to it that I was not on the crosspiece, but where I ought to be, in the bottom. I thought so sincerely at the time, but I am inclined now to believe my friend was in the right. About fifteen minutes' work brought us to land, and after the canoe had been emptied and we were about to embark again, we saw a boat coming from the camp to rescue, and we decided to wait and take the steadier craft. This was the last of my first fly rod.

MONATIQUOT.

ANGLERS AND ARTISTS.

HOW seldom we see a satisfactory illustration of an angling scene! In the January number of *Harper's Magazine* is a woodcut illustration of Shandon Bells. It represents a man wading a river and playing a three-pound trout, which is making a leap. The landscape, the water, and the dark, rainy sky are admirably done, the figure of the angler is well designed and drawn, the leap of the fish is natural, but the artist has given the rod a curve which must have left it when the fish went into the air as represented—the strain being removed the rod should be straight. The artist has drawn about forty or fifty yards of slack line meandering about the river, at the end of which the fish is leaping. I have never seen a salmon, a bass, or a trout leap except at the end of a taut line—the fish runs to the end of the line and then leaps. The lady fish of the Florida coast, *Albula conorhynchus*, will leap on a slack line, and in fact is in the air half the time after it feels the steel, but I have seen no other fish do it.

In the same number of the magazine is a fine wood cut taken from "Highways and Byways," by Gibson, representing trout fishing. A tangled wood, through which soaks a stagnant stream. A rail fence crosses the stream, on which is seated, over the water, a rustic fisherman, his pole thrust into a thicket of brush, which, supposing a fish silly enough to approach the man on the fence, would effectually prevent the pole being raised. Indeed, the fisherman evidently does not expect a bite, for he is not attending to his business, but is gazing over his shoulder at the reader.

Some time ago, I think in the same magazine, was an article on "Salmon Fishing in Canada," in which was a cut showing three persons in a bark canoe just about large enough for one, and one of these was a woman, standing erect and casting for salmon. A bare-footed Indian might so balance himself, but a lady in high-heeled boots and a tight dress, never, even were she so well-balanced a person as the Governor-General's wife.

As there are artists, like Brackett, who can draw fishing scenes correctly, why should incompetent ones be employed?

S. C. C.

ECHOES OF THE TOURNAMENT.—The echoes have not gone round the world yet. The last one has just been received from Gallatin county, Montana Territory, in a letter to Mr. Harry Prichard, who won in the champion contest for single-handed fly-rods. It says: "Have just read your letter in FOREST AND STREAM of Nov. 2. By your communication I see you can cast your flies eighty-five, and even ninety feet. Good cast! Come out and see me next season and I will give you the very finest fishing you ever had. Beside, I will show you some of the handsomest scenery you have ever seen. I can assure you that you can land seventy-five pounds in one day of the finest trout swimming. They will average not less than one and one-quarter pounds all through. You shall also have some good shooting—deer, perhaps an elk or two, grouse, antelope and some other game. I will guarantee you will enjoy your trip, and I will make you acquainted with a friend who, I think, I can pit against you to cast for distance and for execution. We will supply you with everything you need, rods, reels, flies, guns, everything. And this invitation from a stranger is all because I want to see you cast ninety feet. It is all in good faith, too, and we will be the best of friends; have a good time all to ourselves. We have the finest fishing in the United States, I think, and only sixteen miles from the Crow Agency. Will take great pleasure in visiting the Agency with you, and showing you over our sporting grounds."—E. C. CULVER.

THE TARPUM.—For some time I have been seeking information regarding the tarpum of Florida, believing from what I saw of them when there some years ago and what I have heard and read that they would give very fine sport for anglers, using tackle similar to that used for striped bass. Several times Dr. Kenworthy has given us reports of his attempts to capture them, and on one occasion he speaks of their "cutting his line with their scissors-like jaws." (?) What kind of a mouth have they? Mr. E. R. King, of Crystal River, in answer to inquiries on my part, says they have a mouth like a trout (presumably black bass) and have no teeth. His information was obtained by the examination of two which had been captured by his son Eli and a Mr. Sharp of that place. These tarpum were captured with a lillie iron at night with a jack light; the first one weighed 150 pounds and carried the boat about five miles; according to Eli's story the second weighed less and ran a shorter distance with the boat. The scales of these fish, two of which I have, show a bright silvery surface where exposed to the water in use, and measure 3⅜x2¾ inches; according to the lap there would be five thicknesses of scales covering the fish, giving a wonderful armor for protection. I notice in the FOREST AND STREAM a report of the National Museum. They speak of the tarpum as plentiful along the Gulf, but were unable to get a specimen. If there was any way to preserve the fish until delivered safely to them I could guarantee to have one sent them most any time before April 1, from my friends at Crystal River. If the capture of this fish could once be demonstrated to be a success with rod and reel, there would be plenty to try it, but the general idea seems to be that they cannot be thus captured. Should I again visit Florida I shall try and prove the contrary.—A. B. DODGE. [The tarpum has bands of villiform teeth, *i. e.*, slender, bristle-like teeth, which are crowded together in bands, or patches, as in the perches, bass, etc. In this fish these bands are found in the jaws, on the vomer, tongue, palatine and pterygoid bones, and on the base of the skull.]

THE ANGLER'S CAMP.—*Editor Forest and Stream:* In regard to the equipping of the Angler's Camp for the London Fisheries Exhibition mentioned in your issue of Jan. 11, permit me to say that the commission was given to Messrs. Conroy & Bissett and placed in my hands, and I believe that the camp is complete in every respect. The articles recommended by you were included and also a great many more not mentioned in your paper, including tent with portable bamboo poles, steel wedge and rope for dragging in fire logs, rack for packing blankets, etc. The two latter very ingenious and useful, suggested and loaned by Mr. Jos. Willetts. Camp bag of rubber cloth, camp kettles, portable

chairs, lounges, and many other articles too numerous to mention, even to canned provisions furnished by Messrs. Thurber & Co., and Hecker's prepared flour of different kinds. A Stranahan portable boat was furnished by Frank Holmes. Major McAlpin, hearing of the camp, kindly sent some magnificent specimens of tobacco. So, you see, the camp is pretty complete. There is also a mysterious stone jug with a corncob cork, but what that is for nobody seems to know.—W. HOLBROOKE.

CANNING SMALL WEAKFISH.—A company is erecting at Pennsgrove, N. J., which is situated on the Delaware River shore opposite New Castle, Del., a canning establishment for the packing of fish. There is a prospect now for the utilization of the immense catches of "trout," a local name for small weakfish in Delaware Bay, which are yearly made below Bombay Hook. Last year so many were taken in seines they became a drug in the market, and instead of being shipped to Philadelphia were hauled away by the farmers near the fishery for manure. Sturgeons' roe, doubtless, will also be put up (caviar), quantities of which is shipped from this country to Europe.—HOMO.

Fishculture.

FISH FOOD AND FOOD FISHES.

[Read before the Michigan Sportsmen's Association by Frank N. Clark.]

BY request of our honorable president, I present the following on "Fish Food and Food Fishes:"

To begin with, I must beg you to overlook all signs of hasty preparation and insufficient statement, for the time I have been able to devote to this object has been exceedingly meagre and my ordinary duties have been unusually pressing. I cannot, of course, be expected to give anything like an exhaustive treatment of so broad a topic, for the briefness of time allowed one, and the lack of personal ability would preclude succes in such an attempt. I shall, therefore, ask your attention to only a very few facts, which my observation and experience have taught me relative to this matter; and my remarks refer only to two species of fish with which you are all familiar—our brook trout and whitefish.

I need not inform you that the question of fish food has not always received from the majority of fishculturists the attention its importance would seem to warrant. It has been too much taken for granted that nature would furnish all that was needed, without any assistance from art, and the consequence has been that fish planting has not always afforded the large results that might otherwise have been obtained. On this account also the attempt to enlarge the habitat of some of our most valuable food fish has, in some instances, proved a failure. Fish cannot live without food, and it is therefore simply folly to pursue a course of indiscriminate distribution without any consideration or thought bestowed upon the nature and extent of food supply. The very first question to be settled, when it is contemplated planting fish in new waters, is to determine whether nature in that locality has already furnished a sufficient amount of food sustenance. This can be approximately determined by a variety of experiments which scientists have already tried and found successful. If the proper food is not found in the body of water where it is desired to plant fish, then the first thing to do is to transplant the food from other waters. That this is wholly feasible has been proven by numerous experiments, and to illustrate this fact you will please allow me to refer to my own observation and experience.

Near the Northville hatchery is a narrow stream, fed largely by springs, to which the water supply of the hatchery is also tributary. In the spring of 1884 I planted in this stream about 25,000 brook trout fry. Judging from a similar experiment I had made in planting trout in a stream at Clarkston, I had no doubt that I should obtain fair results in this instance also, but like many others in similar circumstances, I neglected to take into account the most important factor in the whole problem. With the most careful and painstaking examination in the fall, I was unable to discover that any trout whatever existed in the stream. My experiment seemed to be a flat failure, but at once surmising the cause, my father, the late N. W. Clark, who was at that time associated with me in fishculture, went to Clarkston and obtained some water cress, which grew there in abundance. In the roots and fibers of this plant there were innumerable numbers of the fresh water shrimp (*gammarus*). The amount of cress first brought was small, but in subsequent trips more was obtained and planted in one of the spring creeks that supply the stream already referred to. The following spring we planted more trout, and in the fall of the same year I found a few trout near the spring creek where the cress was planted. Since that time the cress has grown till it has become abundant. The gammari have increased and so have the trout, until to-day we have a first-class trout stream.

From this experiment it is easy to be seen what the conditions are for successfully planting trout in streams where they do not now exist. It is evident, also, that the gammarus is one of the varieties of food upon which they naturally subsist. In our nursery tanks at the hatchery I have also tested their liking for this food, and have seen trout fry, not over one inch in length, devour a gammarus nearly half as large as the fry itself. While referring to our success in raising trout in the above mentioned stream, it is worth stating that during the spawning season this fall, over 300 trout were, in three weeks' time, taken from the outlet of our trout ponds, whither they had run from the stream. These fish varied in length from four and one-half to eighteen inches. We obtained eggs from about a quarter of the females thus taken, another quarter not being ripe, and the remainder having already spawned. It is safe to say, however, that we could have obtained no such results as these if we had not first planted the gammaris as food for the trout. The California trout thrive equally as well on this species of food, and quite a number now exist in this same stream.

The question of hatching whitefish and planting in the months of February or March is one that has received considerable discussion, and about which there is great variance of opinion. Some very knowingly affirm that the necessary food does not exist in the lakes at that season of the year, and their theory is that the development of the proper food cannot take place until spring influences have had a chance to warm and vivify the dormant crustacean germs existing in the water. In addition to this, it is maintained that fish hatched so early in the season, must necessarily be premature. Both of these statements, however, are manifestly theoretical, and need more demonstration than they have yet received, before they can be accepted as proved facts. There is not time now for any extended argument, either pro or con, but with reference to the first matter I will simply state that the latest investigations of scientists show pretty conclusively that the earliest food of the whitefish consists of the smaller species of entomostraca, which exist in the waters of the great lakes at all seasons of the year.

In the spring of 1881 I instructed Mr. Bowen, my assistant at the hatchery, to take some of the whitefish hatched the 1st of March and see if they could be raised by artificial feeding. The experiment, if it proved successful, would assist in determining whether the fish when hatched early in the season were premature. Indeed, it would demonstrate conclusively that they were not premature, since it would be reasonable to suppose that premature fry could not be raised by artificial feeding. By successive trials Mr. Bowen at last hit upon the right food, and the fry could be seen to eat of it freely. This artificial process was continued during the summer until August 1, when, as the result of the experiment, we had young whitefish in our hatchery six inches in length.

In regard to the food for grown whitefish, it can be safely said that it is by no means a mystery. Certain varieties of the crustacean family have been singled out, and beyond dispute shown to be their natural sustenance. There are certain lakes where the whitefish have been found for a great length of time. In Higgins's Lake, Roscommon county, they have, perhaps, always existed—at least practically so—since we know of no time when they have not been found there. In Elizabeth Lake, Oakland county, they seem to have flourished for thirty or forty years, having been brought there in hogsheads from near Mt. Clemens, on Clinton River.

Many other inland lakes might also be named where the whitefish have abounded for a great length of time, but they are already well known to you. The important fact to be noticed with reference to all of these waters is that the great numbers of fish which they have so long contained proves that they also contain a very abundant existence of food supply. Now it is certainly a very practical question to ask, why are not the same facts observable in lakes where the nature and quality of the water are in all respects equal? Is it because they have been drained by overfishing? If this had been the case, we would have probably been able to discover some signs of the previous existence of the fish in these localities; an occasional straggler would here and there be found. But it is well known, on the other hand, that there are lakes in every respect adapted to the existence of whitefish, so far as the extent and character of water are concerned, and yet no signs of their existence are discoverable. Now, manifestly there is but one conclusion to draw from this fact, and that is that nature has either failed to furnish the requisite food for the maintenance of whitefish in those waters, or else the fish germs have never been planted in these localities. In my opinion, therefore, there should be a most thorough scientific examination of all such waters with the purpose of enlarging the habitat of the most valuable commercial fish of our great lakes—the whitefish. It should be found out if the proper food is indigenous to such lakes, and, if not, whether it can be made to flourish by transplanting.

We have now reached a stage in the development of pisciculture science when we should look for larger results than simply come from restocking the old lakes and streams with their natural fish. New abodes should be sought out, in order that food fishes of the most valuable varieties may be brought more abundantly within reach of the masses of the people. I believe it would be a paying investment for this or any other State containing as many beautiful inland lakes as the State of Michigan, to engage the services of scientists with this purpose in view, whose duty it should be to acquaint themselves thoroughly with the character and adaptation of all desirable waters to suit this purpose.

The problem of hatching chiefly the fish to which I have referred is already here, and the cost has been reduced to very low figures in proportion to the amount of work done. It is therefore time that some practical measures were adopted to make the benefits as universal in their application as possible. Of course, such measures as I propose would be attended with considerable expense, and it is possible that any extended effort in this direction might prove a failure. It may be that experiments and researches will prove the Swiss and Norwegian waters to the present purpose of restocking the old lakes and streams to which these fish are found to be indigenous, but I can see no reason why we should come to this conclusion at present. On the other hand, I believe that, so far as experiments show anything in this direction, they give us everything to hope for in the attempt to enlarge the natural range of important commercial and sporting fishes, and thus furnish results that shall compel universal recognition of the great importance and benefit of pisciculture science.

Dr. Parker, of Grand Rapids, added that he had cut open hundreds of whitefish, and is entirely satisfied that they subsist almost exclusively upon minute shellfish, and unless the waters of a lake are abundantly supplied with shellfish, it is useless to plant whitefish in its water.

CARPCULTURE.—A little work has just been published entitled "Carp and Carpculture," by Milton P. Peirce, of the Pennsylvania State Board of Agriculture. It comprises forty octavo pages and is illustrated with cuts of ponds, many of which are new. The introduction tells us that "it gives the foreign methods of carpculture and finally the elaborate improved American methods, which will supersede all others." The price is 81. Capt. Peirce still seems to think that the Chinese were the first to advance in fishculture, although no man can show what they ever did in what we call by that name. The author is a hydraulic engineer of many years' experience, and therefore his hints and plans for the laying out of ponds should be of great value. He claims that carp should not be fed at all until nearly ready for the table, but should be left to forage on the aquatic plants. The work is a very good one, but we cannot share the author's enthusiasm on the carp, especially when he rates its value as food above the shad. He is evidently in earnest, however, and his work is quite a readable one, being enlivened with flashes of egotism that lend a charm to the dryer details.

The Kennel.

FIXTURES.

BENCH SHOWS.

January 9, 10, and 11, 1883.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden, Conn.

February 20, 21, 22 and 23, 1883.—Grand International Bench Show, Washington, D. C. Chas. Lincoln, Superintendent, Office, Skating Rink, Washington, D. C.

March 26, 27 and 28, 1883.—Dominion of Canada Kennel Club Bench Show, at Ottawa, Canada. Charles Lincoln, Superintendent.

April 3, 4, and 5 1883, Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters whelped on or after January 1, 1883, close February. 1, 1883. Chas. Lincoln Superintendent. C. B. Elbin, Secretary.

May 8, 9, 10 and 11, 1883.—Westminster Kennel Club, Seventh Annual Bench Show, New York City. Robt. C. Cornell, 51 William st., New York City.

Owing to the illness of the Kennel Editor many communications are deferred.

SPANIEL CLASSIFICATION.

IN June last I alluded to some of the anomalies of classification and entries that were noticeable in connection with the bench show of 1882. I again invite attention to the subject, in order to provoke discussion, and thus ascertain what may be the views of those chiefly interested in the matter. It may be taken for granted, I think, that the Westminster Club are desirous of so classifying these breeds of dogs that similar varieties and strains shall be judged together, so that the same scale of points can, with propriety, be applied to all entries in a given class. This is hardly the case at present, either in the over or under twenty-eight pound dogs. As regards the former (over twenty-eight pounds), the present writer has no suggestions to offer, but with respect to the latter, commonly spoken of as "cockers," he cannot but feel that a rearrangement of the classes would give increased satisfaction to all interested either as breeders or amateurs in this interesting and useful dog.

At the last show all cockers were entered in three classes, viz.: "Class 56—Cocker spaniels other than black, under 28 lbs. Class 58—Black cocker spaniels, under 28 lbs., and Class 59—Spaniel puppies (any color), under 12 months." The arrangement that I would propose would be the creation of four additional classes, making seven in all, and arranged as follows: (*a*) Spaniels under 28 lbs. (black or black and white), (*b*) Spaniels under 28 lbs. (liver or liver and white), (*c*) Spaniels under 28 lbs. (other colors than those mentioned), (*d. e. f.*) Puppy classes to correspond with the above, (*g*) A class for Irish water spaniel puppies. Class (*c*) as above would include the tri-colored dogs, and also the lemon and whites, of which one occasionally meets with a handsome specimen. To this arrangement we can conceive of but one objection, namely the additional expense to the kennel club, which, we believe, would be fully made up by the increased number of entries. The writer would personally enter three, possibly four dogs, and there are many owners of good dogs who would probably do the same, but who do not care to exhibit under the present classification. If there are other objections to this plan I trust that they will be presented in your columns.

GREENHORN.

FIELD RECORDS OF RED IRISH SETTERS.

I BEG to take a few exceptions to some of the assertions of "Pious Jeems" in your issue of the 11th, just at hand. He takes the liberty of pitching into a breed I love, and I take the liberty of defending that breed.

"Pious Jeems" in his letter says: "The red Irish always were and always will be a failure in field trials, because they are never what sportsmen call level-headed, with the exception of the Campbell strain of red Irish, which is imbued with a considerable quality of native blood, I know of no good ones." I suppose that when he excepted the Campbell strain, he remembered the victories of a certain red dog of Mr. Campbell's over the great Llewellin Gladstone every time they have ever met, and never every pointer or setter against him, and I'm glad he did, for the sire of that red champion, most famous of all the Campbell strain, a dog never defeated in a single stake or match, is now by my side, and he is red Irish too, to the manor born. In answer to the libel of "Pious Jeems" as quoted above, permit me to quote the following from the kennel editor's report of the field trials at High Point, where "Pious" judged: "Fourth Series.—As we approached the end, each successive heat was watched with absorbing interest. There were now but five left in, four setters and one pointer, each had won three heats, and *conclusively shown by their performances* that in no event could the honors of victory, by any accident or freak of fortune, be unworthily bestowed. Many good ones had dropped out, but there were none left in the race who were *undeserving* that appellation," etc. The italics are mine. Yet two of those four setters were red Irish, and their sire lies by my side as I am writing this.

They did not get a place, it is true, but they proved themselves at least good ones, or they could not have defeated the dogs they did under the judgment of "Pious Jeems." Quite a difference between the assertions of "Pious" and the report of FOREST AND STREAM.

He says he does not know of any good Irish setters. Well, he is us see. As he, of course, speaks from his field trial experience, so will I that will Judge Bliss. Where two dogs divide a prize equally they get equal honor. Well, the invincible London divided second at Opelousas with the Llewellin Foreman, and this same Foreman was beaten at High Point by an Irish red under "Pious's" judging, too. What was the matter? Didn't an Irish setter prove a good one that time? Foreman is called one of the grandest field dogs of the country, and I have no doubt he is, but still an Irish dog had a "level head" enough to down him at High Point.

What was the trouble with the Llewellin Bessie, that she fell before an Irish setter at High Point? She must have been a good one in 1881, for she was second in the N. A. K. Club Derby, at Grand Junction, Tenn., in a class of which it was said "the best of the Derby runners would have had but little trouble to have defeated the aged dogs, with a few exceptions, which ran in previous trials," and for the proof that she was a good one in 1882, I refer you to the trials at Fairmount, Minn., in September, when she divided equal third with Gertrude and Count Noble. Again, the English setter Pollux, winner of the Eastern Field Trial Derby of 1881, was beaten at High Point by an Irish setter, and yet the man who judged at High Point says he knows of no good Irish setter. Now either those Llewellin setters were "duffers" and their field trial winning records prove they were not, or else "Pious Jeems" wrote in haste and unthinkingly in his libel on their conquerors.

Have Irish setters always been failures at field trials?

I can prove by the records, and answer most emphatically, no; again showing that that gentleman must have written without due consideration of his subject.

How much of a failure at Memphis, in 1876, when the Brace Stakes were won by a Llewellin and an Irish red? How much at Hampton, Iowa, in 1877, when the second prize in the Puppy Stakes was won by an Irish red, and the famous Gladstone was displaced to say nothing of the third prize winner being strongly imbued with Irish blood? The sire of that second prize winner is by my side, and I bred the sire of the winner of third.

How much of a failure at Sauk Center, Minn., in 1878, when first in the Champion Stakes was won by an Irish red, and the second prize winner had quite a dash of Irish blood through his sire, who was bred by me? How much of a failure at the Eastern Field Trials of 1877, when the second prize in All-Aged Stake was won by an eighteen-months old Irish red, whose sire looks up at me and asks with his deep brown eyes, "What is the matter with 'Pious Jeems'?"

How much of a failure at the Eastern Trials of 1880, when first in Puppy Stakes was won by an Irish red, whose grandsire I can put my hand on this very minute? How much of a failure at Robin's Island, in 1881, when two Irish reds defeated all their competitors for the Members' Cup of the Eastern Field Trials Club, and one being withdrawn, the other won it? How much at Grand Junction, Tenn., in the Penn. S. F. T. A. Members' Stake, when the first prize was equally divided between an English setter and an Irish red?

Did having a red Irish for his sire prevent a certain red dog from bowling over all competitors in the Champion Stake at Nashville in 1877? or from dividing first prize with a Llewellin in same stake, at same place in 1878? or again, did it check his winning a match race of two days from sun to sun, over the champion of all the famed Llewellins? After shooting over that English "crack," day after day, among the quail in Tennessee about two months before that match, I did not believe the dog stood in America that could vanquish him, and yet, even he fell before a dog whose sire is—*mirabile dictu*, an Irish red.

And when the Puppy Stakes at Nashville, in 1877, were won by Gladstone, was the third prize winner in same stake a failure because her sire was an Irish red? In 1882, at Fairmount, Minn., did not an Irish red divide fourth prize in the chicken trials Derby, and another Irish red get same position in the All-Aged Stake? At High Point no Irish red got placed in the All-Aged Stake, though they shut out many a field trial winning English before they fell, but in the Derby an Irish red divided third. Now, I don't see how the assertion of "Pious Jeems," that "the red Irish were always failures at field trials," can stand for a moment against the field trial record.

That the Irish have not won so many prizes as the English is true, and I do not wonder at it, for they have not had one-

tenth the money spent upon them, neither have they been run in any such numbers, still, generally they get a prize and the records show that, now and then, an Irish nose has been poked clear to the front.

Let "Pious Jeems" or any man look over the field trial records in America, the number of each breed run in each trial and the winners in proportion to the number, and he will find that the red Irish hold no place to be despised. In his letter he says: "Go to the records of the field trials and in nearly every State you will find the Llewellin first, and pointer second." Now with all due respect to "Pious Jeems" and that grand dog—the English pointer—I beg to insist that the records in America don't show any such thing, and if he had carefully looked them over he would hardly have written as he did. The English setters of the various strains have won the field's share; they have had more chances, for go where you will either to a show bench or a field trial, and you will find they far outnumber any other breed.

Go to the field trial records, "Pious," and point out to me the pointer dog that stands ahead of the old red Irishman at my feet as a sire of field trial winners. I believe he leads any pointer in America, and the records prove it. Now, this is just the truth of the whole matter; the pointer is a grand dog, so is the English and the Gordon; yes, and the merry Irish red. There are good and bad of all races, as well of dogs as men. I have attended field trials, have seen good and bad of all breeds, have entered Irish reds and won and lost, and propose to enter more at the proper time without fear of any other breed on earth; and if "Pious Jeems" judges, my heart will not grow faint either, even though he damns the breed. I will show him that the Irish reds will not be failures in the future, as the records now show him they have not been failures in the past.

I love and believe in the breed; and no man ever knew me to weaken on their worth or beauty; and so with the best of wishes for "Pious Jeems" among the quail, while I'm in a snow-bound land, I'll close these desultory records of Irish reds. MONT CLARE.

CLAREMONT, N. H., Jan. 13.

"A VALUABLE DOG [NOT] KILLED."—Whitestone, L. I., Jan. 11.—*Editor Forest and Stream:* In to-day's FOREST AND STREAM appears a communication from this place signed "A. W. C." I am the "neighbor" referred to. For days my house, or rather the cellar, had been made a pandemonium with dogs seeking my pedigreed bith -yp. None of these dog visitors had been invited, and they were vicious, illegal trespassers, as a broken window-sash, several panes of broken glass, eight pots, valuable plants ruined, parsley bed entirely wrecked, and an extra butcher's bill for the week ending with A. C. W.'s dog's adventures, will bear silent but truthful witness. I had poured volleys of rice and barley into th horde of dogs (mostly of the mongrel breed) without effect; and on returning home the night in question, and finding that our cook had been attacked by a "big white dog" in the cellar, I made up my mind that rice and barley were a trifle too thin for the business in hand; so I charged an imported single-barrelled fowling-piece with a teaspoonful of No. 5 shot, and made up my mind to give the next canine visitor a Christmas Eve reception. And I did. "My poor Shot," as his owner calls the dog, prepared to enter the forbidden cellar, but seeing me, he bolted across our grass-plat, and when at about nine yards "rise" from me, I put a sample of No. 5's into the fleshy part of his port after thigh. Poor Shot got shot. His owner was passing on the sidewalk at the time, and he ran in terribly excited. When I found I had wounded his dog I sorry and apologized to him, and with the aid of a medical gentleman we examined the dog, found that he was more scared than hurt, and at once I ordered a half dozen yards of new burlaps brought, laid the dog on it, dressed his wounds as tenderly as if he were a child, and then the doctor and myself carried poor Shot to his master's barn, laid him on the floor; again dressed his wounds, left a bottle of valuable balsam with his owner, and asked permission to treat the dog until his recovery. Next morning we went over, dressed the wounds, and three days after the shooting the dog, "poor Shot," not finding a "dilapidated fence" to bar his entrance to my kitchen, actually invaded it in his endeavors to make love to Miss Gyp (that's my dog's name). The cook brushed Shot out with a feather duster. "Poor Shot" still lives, as does the "Good Shotter."—B. S. O.

FIELD TRIAL WINNERS.—So constant has become the demand upon us for pictures of the more noted dogs of field trial record that we have prepared a series of those which have appeared in our columns. These drawings are from the pencils of well known artists, and are highly praised as likenesses by those who are familiar with the animals delineated. They are also very spirited and lifelike, and almost every sketch will recall to the sportsman some point made by one of his own dogs in the past. As one of the chief pleasures of upland shooting lies in watching the graceful and intelligent working of the well-trained dog, so there is no picture that can more delight the sportsman than a good one of a good dog. Such pictures we are now enabled to furnish at a very moderate cost, and, as will be seen by a reference to the advertisement, the list includes many of the best dogs that have recently carried off the honors in a field trial race.

FOX-TERRIERS AT AUCTION.—Admirers of fox-terriers have an excellent opportunity for securing prize-winning stock at the sale on the 24th inst. The sale will take place at the American Horse Exchange Building, corner Broadway and Fiftieth street, and under the management of that concern. This is a sufficient guarantee that the animals will be true to catalogue representations, and that the sale will be without reserve and to the highest bidder. In our Kennel advertising columns will be found further particulars, with names of the fox-terriers offered, and catalogues may be had by addressing the general manager at the Exchange.

WESTMINSTER BENCH SHOW.—The Westminster Kennel Club has engaged the Madison Square Garden, this city, for its next annual bench show, May 8, 9, 10 and 11.

Rifle and Trap Shooting.

SUGGESTIONS FOR THE MATCH OF 1883.

Editor Forest and Stream:

SIR—I wish to record a protest against much that I have seen in indiscriminate condemnation of rifles, ammunition and team *in re* the late International Match. I have looked in vain for a single word in praise of the excellent rifle used by most of us (the Hepburn-Remington), and believing as I do that we lost the match with better rifles than were used in winning it, I will attempt to state the causes which, in my opinion, led to our overwhelming defeat. That we would in any case have been beaten is most likely, owing to the greater experience of the British Team, but I think we would have given them a pretty close contest but for the condition of things I will assign as the cause of our troubles.

So far as guns or ammunition were in fault, the very thin patches on our bullets was by far the most serious defect. They were utterly unfitted for use in the moist and foul barrel of a military rifle. Whenever we had during the practice prior to the match a supply of thick patched bullets, we did good shooting. On Sept. 1, and again on the 9th, I used suitable bullets as a test, and made a total of 96 at the long ranges on each occasion. On the first day of the match I also had thick patched bullets, while on the second day we used a new lot (all we could get) patched "extra thin," and this alone lost us in my opinion more than a hundred points.

I have a lot of cartridges given me on the field by Capt. Godsal, of the British team, and will describe them: The powder charge is 88 grains, equal with their lighter bullet to 91 or 93 with ours; patch, medium thickness, as strong as parchment, thoroughly water-proof, and embedded half its thickness in the bullet, so that the fibers of the paper are pressed into the metal, hence it never slips; the bullet is harder than ours; the inside of the reduced part, of the Berdan shell is not smooth as glass and as perfectly cylindrical and uniform as the bore of the gun; the powder is confined by an oil-saturated felt wad, upon which is placed a thick disc of soft lubricant; then another wad and the whole pressed firmly together, making an air and waterproof joint; the bullet is then inserted about half its length into the shell, upon which it exactly fits; everything is of the best, and careful painstaking accuracy and perfect uniformity are shown in every detail. This is simply perfection compared with our ammunition, and in this alone is sufficient reason for our defeat, more than sufficient to account for the superior accuracy of the British weapons.

Since the match I have obtained thick patched bullets, load my cartridges as above described, but with 90 grains sea shooting powder, and I believe, even with this imperfect rifle, I have a rifle with beat any English rifle ever made. I expect to be a member of the International team of 1883, and would be more than pleased to use this same, much-abused rifle (the one I used in the late match).

During our November and December Saturday practice, I have made, under the match conditions, at two, five and six hundred yards the following totals: 95, 96, 96, 99, 100 and 95; the latter in a most trying wind, and with the advent of spring and good weather will most certainly improve even upon the foregoing, and will undertake to make any English rifle eat dust day to-day at 96 points at either long or short range. I would not undertake anything of the kind with the English rifle.

Now to the defects of our ammunition. First, the shell is one size too large; the want of uniform thickness, and its smallest at the mouth so that a wad which is introduced with great difficulty is yet too small when pressed down upon the powder to make a gas tight joint. Then the bullet is too soft; is not held centrally pointed by the shell, expands or upsets too much by the shock of firing, and is sometimes driven out of the patch, the latter are of all grades of thickness, or rather thinness, and the bullets are not uniform in size.

Each writer upon this subject seems to have a prescription of his own for the team of the next match. Some rifle, some ammunition, improved ammunition, etc., being the delightfully vague and general remedy most in favor. (The second item is a desideratum.) The only thing specifically noted as an improvement in ammunition is a reduced powder charge, and from this I most cophatically dissent.

For long range shooting force is as desirable as accuracy, and the theory that large powder charges foul the gun more than small charges is exactly the reverse of the truth. In my Hepburn the 75-grain charges foul the gun more and more quickly than the 96 grains, which I use at all ranges, and without cleaning the gun during a day's shooting.

In armory practice with the Springfield rifle, with round ball, and 7 to 10 grains powder, the gun becomes more foul with seven shots than with thirty with service charges. This I proved again and again, and if, as I understand by the imperfect description of the new guns now being tested, the shells hold but 75 to 80 grains powder, with the 550-grain bullet, I wish now to predict defeat in the next match. No other cause will be required, there is material enough in this item to insure another five-hundred point lead.

To sum up: If experiments shall be made in perfecting a cartridge (one that will hold 100 grains of powder beside wads, lubricant, etc.) something like that used by the British team, and adapting it to a well-made American rifle, and get the gun and ammunition in the hands of would-be contestants for places in time to allow of thoroughly learning the good and bad points of both, there need be little fear of another Waterloo for American marksmen. No match using a grain twist rifle, other things being at all equal, can win another

INTERNATIONAL MATCH.

ANNUAL MEETING N. R. A.

THE eleventh annual meeting of the National Rifle Association was held on the evening of the 9th inst., in the officers' room of the Seventh Regiment Armory, in this city. About fifty members responded to the urgent call of the secretary. A quorum was presided, and after roll call delivered his annual address, referring to the year 1882 as having been more prolific of military results than any previous period in the history of modern rifle shooting in this country.

It is with feelings of gratification that I call your attention to the fact that the late meeting between the English Volunteers and the National Guard has been productive of all that was sought to be attained.

By this match public spirit has been aroused; the apathy of the National Guard has disappeared, while eager interest and determination to excel has taken the place of indifference. Nor need we inquire, at any length, into the causes of our defeat in the late match. Briefly, they were:

1. Insufficient time to properly organize the team and conduct its practice before the butts.

2. Lack of experience among the members of the National Guard at the long ranges.

3. The vast superiority of the arms and ammunition of the British Volunteers over those furnished us by the American manufacturers.

4. The heavy handicap imposed upon us by the conditions of the match.

To our own team and its leader the thanks of this association are due. Calm and patient under defeat, they ever sustained the character of gentlemen and soldiers, and were worthy of the name of Americans. With the result of the match we now have no further concern but to profit by the lessons taught by the defeat. We must come us to take a leaf from the note-book of our late adversaries, and by energetic and suitable preparation, strive for victory in the forthcoming return match at Wimbledon. As far as practicable, steps have been taken to organize an efficient team, but success can only be assured by earnest, indefatigable, persistent effort. The time for preparation is full short, and we appeal to the public, the press and the riflemen of the country to come to our assistance in the work of selecting and sustaining a team, harmoniously organized, creditable in its personnel, and competent to compete with our British cousins on their own ground.

Col. Cowperthwait, treasurer, reported a total receipt for the past year of $13,499 with a balance of $1,534 from 1881. The expenditures had been $7,398.96, leaving a balance for 1883 of $1,931, and the association out of all debt.

The secretary presented a resumé of the work of the directors for the past year showing that seventy-nine matches had been shot during the year, the total prize list of $10,041.00.

After a brief report from Col. Gildersleeve upon what had been done in the matter of the match of 1883, an election of directors was held, resulting in the choice of Col. John Ward, Col. J. G. Story, Col. Rodney C. Ward, Gen. Geo. W. Wingate and Frank. T. Donaldson for three years, Col. G. E. P. Howard and J. H. Brown for two years, and L. V. Sone for one year.

The Board of Directors did not fully organize, and after some talk a committee of five were appointed to nominate a president. If possible, Gen. Grace will be induced to serve. Gen. Wingate was chosen vice-president and Col. Cowperthwait and Gen. T. Seabury respectively Treasurer and Secretary.

RANGE AND GALLERY.

FINE GALLERY WORK.

DURING the past week there has been some fine shooting done at the Mammoth Gallery, Boston. Mr. J. Merrill heads the list in the all-comers' match, and has also won the extra prize of $20 for making eight consecutive bullseyes. The following are the scores to date:

All-Comers' Match.

J Merrill	46 47 47 48 48—236	O K Bartlett	43 44 43 43 44—218
J Francis	44 44 45 46 47—226	J A Small	41 43 43 42 44—212
M A Pollard	44 44 46 45 46—225	L Wood	40 39 40 42 42—203

Amateur Badge Match.

J H Bird	43 44 44 44 45—220	W A Appleton	40 40 41 42 42—205
A B Wilson	42 43 42 45 45—217	M R James	40 40 40 40 40—200
W B Williams	41 41 42 42 43—209		

James S. Conlin, at his gallery, corner of Broadway and Thirty-first street, opened his Nineteenth Annual Tournament on Monday last. There are prizes by the score, and matches will be open for all manner of specialists in target work. Revolver practice has taken a strong hold on the popular fancy, and many new records are making.

There seems to be no end to the various styles of marksmanship called for by gallery practice. Some excel at stationary objects, while other marksmen do comparatively better at moving objects. Among the fancy shots tried are the following: Driving nicks; lighting parlor matches; shooting the ashes from a cigar; hitting wooden balls, swinging at the word; wheeling and firing at the word; glance shot, hitting an iron plate fixed on the wall, and breaking a glass ball suspended ten feet from the point aimed at; hitting postage stamps; splitting cards placed edgewise to the shooter; hitting the edge of a penny; driving a hole through a three-cent piece; demolishing clay pipes; shooting at and hitting single F and No. 5 shot suspended by a thread; hitting the spots of a playing card; hitting wafers made small and large seals; hitting the center of a cross (X) marked on the board; shooting at a line——marked on the target; shooting through the ring of a watch; shooting through a seal ring; hitting musket balls suspended by a string at the word and stationary; shooting a pistol cap from the neck of a bottle; hitting pipe stems; exploding 22-100 cartridges; shooting cartridge shells from a wire.

The weapons used are almost as varied as the objects fired at. Of course small calibers are the rule, and among the makes of 22-100 calibre rifle and pistol are the Ballard, Remington, Stevens, Allen and Maynard. The new Winchester 32-100 caliber is also a great favorite.

The pistols of single barrel are fine samples of workmanship, and include Stevens's, Wesson's and Tranter's 22-100 caliber; old English, French and Belgian dueling pistols, with those old time pacificators known as saw handle dueling pistols.

The revolvers are taken out of well-made stock and embrace the Smith & Wesson 32-100 and 22-100 caliber, the Colt navy and army, and the English Tranter.

The paper targets enable the finest differentiations to be made in cases of disputed ability and embrace the Creedmoor targets proportionately reduced from 200 to 1,000 yds. to the range of gallery; Ready Measurement target, three sizes, 1, 1¼ and 2in. bullseye; Teaser target, red and white; General target, red and white; Captain target, in all colors; Ten Spot target, composed of hearts, diamonds, clubs and spades; the Righy target; the Man target, reduced from 200yds. to gallery distance.

BOSTON, Jan. 13.—At Walnut Hill to-day a goodly number of people gathered to participate in the rifle shooting, and, notwithstanding the wind blew very strongly, some good sport was had although the scores were low. Mr. "Duffer" made an elegant 97 in the rest match and in the decimal match a fine 88. The following are some of the best scores:

Creedmoor Match.

J B Fellows	4	5	4	4	5	4	5	5	5	4—45
A Duffer	4	5	4	5	4	4	5	5	5	4—45
F Dwight	4	4	5	5	5	5	5	4	4	4—45
J B Thomas (mil)	5	5	4	5	5	4	4	4	4	4—44
J A Cobb	5	5	4	5	4	4	4	4	4	4—43
D A Atkins	5	4	5	4	5	4	4	5	4	3—43
B T Inness	4	3	4	5	4	5	4	5	4	4—42
C Weston (mil)	4	4	5	4	4	4	4	4	4	4—41
W C Francis (mil)	4	4	3	5	4	4	4	4	4	5—41
J Ready (mil)	4	4	4	5	4	4	4	4	5	4—41
F Lavis	5	4	4	4	4	4	5	4	4	4—41
J A Curtis	5	4	5	5	5	3	4	3	5	4—41
A J Atkins	4	4	4	3	4	5	4	4	4	4—40

Decimal Match.

A Duffer	10	7	8	10	9	10	10	10	8	6—88
H L Lee	10	10	9	8	9	10	9	9	9	6—87
A G Adams	10	10	10	7	10	8	10	8	8	5—86
A J Atkins	10	8	6	9	10	9	7	8	10	8—85
L A Hart	9	10	10	10	5	8	8	5	6	8—79
R Davis	8	4	6	9	8	8	6	7	8	10—74
F Dwight	8	4	5	5	5	6	6	5	9	2—61

Rest Match

A Duffer	10	10	10	10	8	10	10	10	9	10—97
G W Whitcomb	9	9	10	10	10	10	9	10	9	9—96
C A Hudson	10	7	9	10	7	10	10	8	10	10—91
F Silvestre	10	9	10	9	6	10	7	10	10	7—88

The following are the prize winners as officially announced in the matches which closed January 1:

Rest Match.—First, F. J. Rabbeth; second, J. B. Fellows; third, Lewis Saunders; fourth, C. W. Hinman; fifth, J. N. Frye; sixth, S. Wilder; seventh, C. A. Hudson; eighth, G. W. Bullard.

Decimal Match.—First Class.—First, F. J. Rabbeth; second, G. W. Bullard; third, J. N. Frye; fourth. C. W. Hinman; fifth, O. M. Jewett; sixth, L. L. Hubbard; seventh, E. J. Cram; eighth, R. D. Archer.

Decimal Match.—Second Class.—First, D. F. Bryden; second, F Wallace.

Victory Medal Match.—First, L. L. Hubbard, gold medal; second, H. G. Bixby, silver medal; third, E. F. Richardson, bronze medal.

WORCESTER, Mass., Jan. 11.—At Pine Grove Range to-day was the second meeting of the winter series. There was a light wind about 12 o'clock by the dial. The following scores tell the story:

Creedmoor Match.

Stedman Clark	5	4	4	4	5	5	4	5	5	4—45
C Arthur	4	4	5	5	5	4	4	4	4	4—44
H T Farrar	4	5	4	4	4	4	5	4	5	4—43
A L Rice	4	4	4	5	4	5	4	3	4	4—43
Re-entry	4	5	5	4	5	3	3	4	4	5—42
J Williams	4	4	5	3	5	5	4	4	4	4—42
F Wesson	4	4	3	4	4	5	5	4	4	3—40

Decimal Match.

Stedman Clark	9	8	9	8	5	4	8	6	6—69	
Re-entry	5	8	8	10	9	9	10	8	9	8—82
J N Morse, Jr	7	8	7	9	6	6	7	8	7—71	
Re-entry	4	10	5	5	5	8	8	10	8	7—70
C Arthur	8	6	6	4	9	10	7	8	7	6—69
J Williams	5	8	9	2	6	8	7	7	5	9—65
H Emery	5	5	9	6	4	7	1	10	5	2—54

Decimal Match—Rest.

J N Freeman	9	10	8	4	7	8	10	10	10	6—82
J Williams	9	8	8	7	7	6	8	10	6	4—76

GARDNER, Mass., Jan. 10.—At the last meet at Hackmatack Range only three members of the Gardner Rifle Club shot for a record. The distance was 200yds., off-hand, the inch ring and Creedmoor target combined being used:

	R.	C.	R.	C.	Totals.
G F Ellsworth	87	46	94	46	181 92
G C Goodals	73	43	71	43	144 86
A Mathews	76	43	66	42	142 85

THE TRAP.

CLEVELAND, Ohio.—The Mystic Gun Club held their regular monthly shoot on Christmas day. Ten clay pigeons, twenty yards rise. Below is the score:

S. S. Thompson	1	1	1	1	1	1	1	1	1	1—10
H. G. Stubbs	1	1	1	1	1	0	1	1	1	1— 9
H. T. Higbee	1	1	1	0	1	1	1	1	1	1— 9
Henry Corning	1	1	1	1	1	1	0	1	1	1— 9
James Porter	1	0	1	1	1	0	1	1	1	1— 8
George Baker	1	1	0	1	1	1	1	1	1	1— 8
S. S. Smith	1	1	0	1	0	1	1	1	1	1— 8
R. H. Suskin	1	1	0	1	1	1	1	1	1	1— 8
H. L. Bell	1	0	0	1	0	1	0	1	0	1— 5
Louis Mayer	0	0	1	0	1	1	1	0	1	0— 5

Thompson won first.

Ties on second, miss and out: H. G. Stubbs, 4 (no cap on the cartridge of 5th), W. T. Higbee 3, Henry Corning 3. Higbee won second.

Ties on third, miss and out: Porter 3, Baker 1, Smith 2, Suskin 1. Porter won third.

Match shoot: Ten glass balls, 18 yards rise, Card's trap: Porter 7, Thompson 10, total, 17. Higbee 10, Stubbs 7, total, 17.

Second shoot, 5 balls: Thompson 5, Porter 5, total 10. Higbee 4, Stubbs 5, total, 9. Porter and Thompson won.

Thompson received a Victoria gun case and box of rubber stamps for best average. Higbee received a 4¼ lb. keg of powder and a box of cigars for second best.

WORCESTER, Mass., Jan. 2.—The Woodland Gun Club went out to their range to day. The time was spent in shooting glass balls. Out of a possible 5 balls the following number of balls were broken: H. F. Rice, 25; C. A. Parker, 18; F. H. Fuller, 28; John Arien, 24; C. L. Macomber, 17; John Tongas, 16; A. L. Gleason, 20; M. D. Gilman, 27; L. R. Hudson, 25; E. L. Newcomb, 19.

PUBLISHER'S DEPARTMENT.

All who drive, sportsmen, travelers and gentlemen generally, should read what G. W. Simmons & Co. say of the dogskin jackets they are selling so many of at this season.—*Adv.*

Like a beam from the sun BENSON'S CAPCINE POROUS PLASTERS go straight to the spot. Prompt, powerful, pure, they subdue pain at once. All other external remedies are sluggish and weak in comparison. Benson's are the latest product of the most careful study and experiment. For rheumatism, neuralgia and all painful affections. All druggists. Price 25 cents.—*Adv.*

I conceive of nothing in true sportsmanship necessitating a pandering to or development of any of the degrading or brutalizing elements of human nature, but rather an ennobling and purifying influence, coming from a closer observance and a better knowledge of nature in all her beautiful and harmonious manifestations.—*Extract from a private letter.*

Yachting and Canoeing.

AN EXPERT'S INDORSEMENT.

Editor Forest and Stream:

In this city, and in all places located on the Delaware River where yachts exist, FOREST AND STREAM is "an authority." With me, yachting has been a life-long study as a profession and a pleasure as a pastime. I have frequently been called upon to decide what might be termed knotty questions, and since I have learned to understand FOREST AND STREAM I have invariably referred to that paper to strengthen those opinions, or to seek further enlightenment which has been brought about by its many intelligent writers, as well as by the science of its *practical* yachting editor.

I cannot see why one authority should be vitiated by not entirely agreeing with others, or why a newspaper, whose influence reaches to the antipodes, should not be quoted as the very best authority. FOREST AND STREAM could never have obtained its circulation except on its merits as an authority. I can say knowingly our ablest marine architects and sound practical yacht sailers agree with you on the measurement question. Everyone knows you have sought hard enough to make it clear to the most sceptical and longest-eared.

R. G. WILKINS.

PHILADELPHIA, Pa.

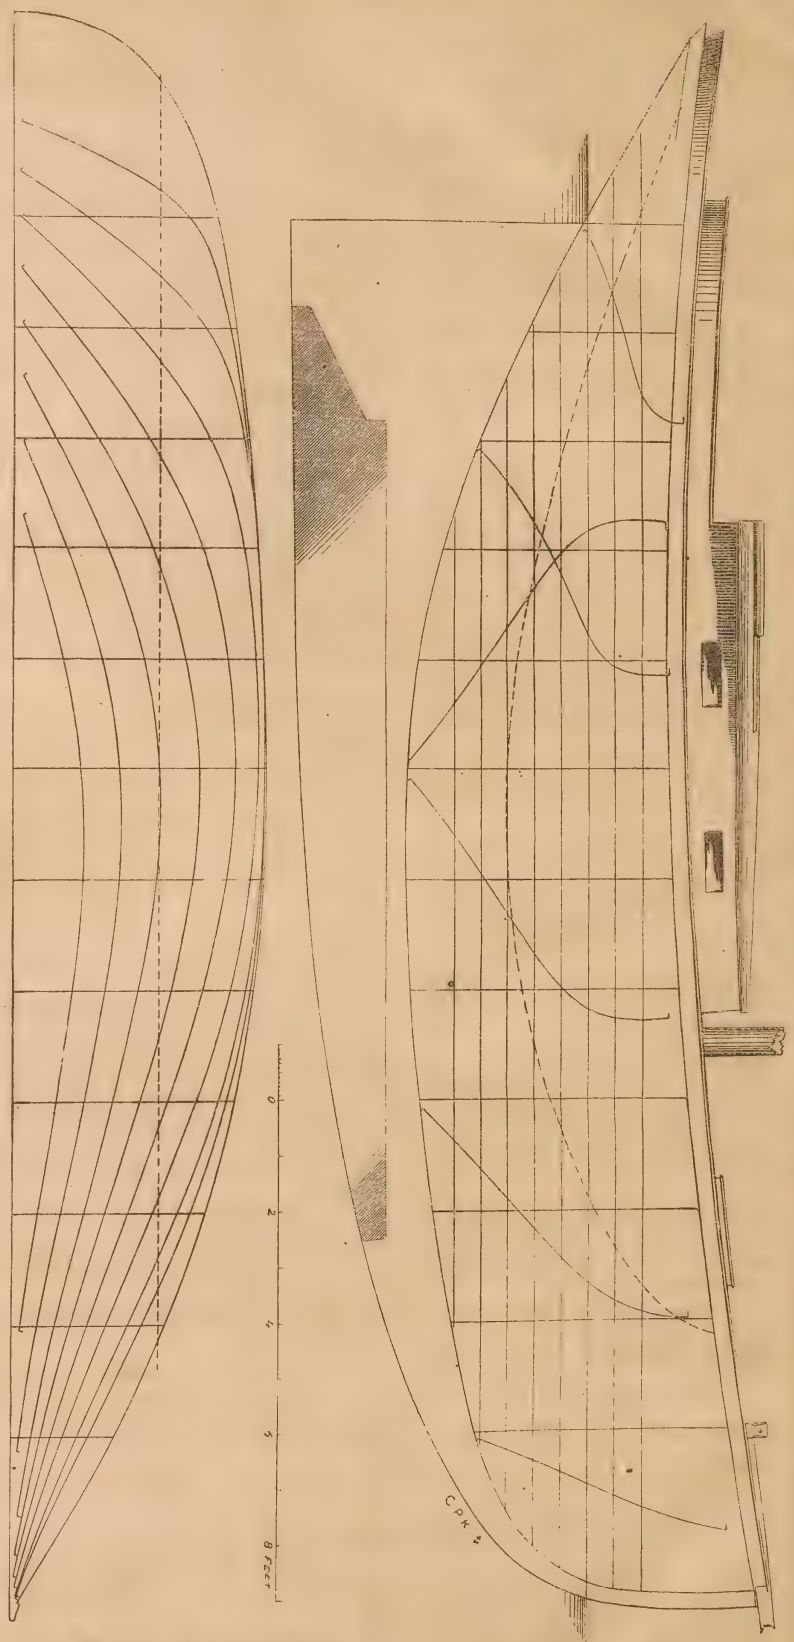
[For the above expression of recognition and others of similar tenor which have been offered by complaisant critics, our obligations are due. As Capt. Wilkins truly says, the circulation of a paper is the best evidence of its "authority."]

NEVA.

IT is quite probable that without the organized efforts of FOREST AND STREAM, and without the appearance of imported cutters in our waters, we would by gradual approaches have landed in yachts of the cutter type, just as we have already done, though the process of conversion to new ideas would have been very slow and almost imperceptible in its various stages. Yachting interests, like those of the commercial marine, are extremely conservative, and no sudden jumps ahead can be expected unless forced through offensive proselyting operations or brought about by hard facts such as we were taught by the advent of cutters of the fashion from abroad. There was, however, an undercurrent only slightly felt at the surface, but which in time was certain to bring about a radical change in a faith which had been tenaciously clung to long after its usefulness had ceased. Shoal drafts, light displacement, traps, and clumsy rigs were naturally indigenous to the smooth and confined waters upon which yachting in America took its origin. Those who lived along the river bank or placid bay never turned their thoughts to regions beyond their view. Builders supplied what their limited experience and primitive conceptions of yachting dictated, while owners, freshly recruited from the counting-house and parlor, were not over anxious to be caught too far away to wade or swim ashore in the event of accidents they were taught from their first lesson up to believe not only absolutely inseparable from the sport, but even indispensable to the full realization of its enjoyments.

These pristine ideas, growing into steady habit, became the fixed foundation upon which the later superstructure has been erected. A certain creed, a blind devotion for a collection of dogmas and everlastingly contemplating the past instead of looking into the future, gave birth to a faith so firmly rooted by the prejudices of custom, that nothing short of a miracle and some new apostle, tough enough to suit the desperate nature of the occasion, could hope to make an impression deep enough to force a change to a new basis as a timely acknowledgment that the world moves in yachting circles just as well as in other walks of life here below, and that if we knew it all in the past, there was plenty more to learn with the changed aspect affairs have assumed with the ripening the sport of sailing has undergone through increase in age. Under such circumstances, modifications in the practice of construction and a more thorough appreciation of the dignity the sport might assume could only come to us slowly, very slowly and by degrees, and what has been brought about during the three or four years past under high pressure, would have stretched out over a decade or two, had the drift of things been permitted to work out their salvation unaided. That we should have eventually arrived at much the same goal is hardly to be doubted. It required only enough coaxing, with a little occasional baiting in others, to overcome the peculiar aversion to keels and outside ballast. What at first seemed like a Herculean task with no prospect of a successful ending, soon began to rush along swimmingly with irresistible force.

About four years ago the keel was in very bad repute and outside weight was classed as a chimera of a long-eared animal, while the cutter, pure and simple, never, no never would such a despicable conception of an unbalanced mind float in American waters. Water would sooner run up hill, so one remnant of the flood delivered himself in print. This was scarce four years ago. Now, how things have changed! Even the orthodox, who proposed diving in their old-time belief, crawl out here and there with a good word for the innovations, cautiously keeping a hole for retreat in reserve by fiercely proscribing all beyond a limit so well stretched that they feel they are betting with loaded dice for a while to come. But the change from the centerboard sloop to the cutter spanned a far greater gulf than from four to five beams and then to six, and who will undertake to prophecy that having shown ourselves capable of swallowing the camel we will strain at the gnat. With cutters in our waters, living sermons on their merits, will it be long ere we prize at full value the merits of narrow beam for seaworthiness, economy and comfort? Startling as the thought of five or six beams may still seem to some, FOREST AND STREAM is confident the day is not far distant when a modern "narrow beam" will pierce the last vestige of prejudice as easily and completely as Madge in her day punctured the "sailing over the water for speed" chapter in the musty folio of yacht building tradition. But in relation to narrow beam we have other articles under way, so we need pursue this line no longer here.



Before the camel had been swallowed straws were showing how the wind was about to blow. While the trap in her most dangerous deformity still held high carnival in metropolitan waters and was worshipped as the golden calf of the guild, Boston had been buffeting lustily with the sea in many a race outside the harbor and had to take the weather as it came on long cruises to off-shore isles and away down East in search of the world's end along the rocky fiords of the Pine Tree State. Boston sails most of her yachts with Corinthian caliber at sheet and wheel, and what was lacking in experience gathered from a seafaring life was fully made up in brains and quickness of perception. Amateurs though her Corinthians were, they soon discovered something out of joint between the centerboard dish and the doughty deeds of little yachts they read so much about in foreign publications. Were these all a myth or was the fault with their own boats and themselves that they failed to respond as yachts of much less tonnage were known to do abroad?

In this quandary they found a tight bower in FOREST AND STREAM, and unwilling at first to accept in full all its preachings, they resolved to essay by a system of gradual approaches. Keel first, a little weight outside; more; then all. A few inches more depth, a foot more, several feet more, until their draft exceeded that of the cutter. Double lifts in all sorts of half-way modifications, with the mast going aft all the time, and headsail now something like standard in cut. Masts docked a trifle, then boldly cut down; housing topmasts, short at first, sprouting skyward next. Booms and hoist shrink away, and heads spread accordingly. Even flowing foot mainsails, reefing bowsprits and square headers are seen in the fleet, and finally, as for the cutter in all her glory—well, she is already too common to excite especial attention. It is easy to infer where all this must lead us eventually, or we would be impervious to the logic of events. But great beam or narrow beam, it is an undeniable fact that much good sailing, safe sailing, fast sailing and any quantity of sport can be got without subscribing to FOREST AND STREAM principles in advance of the times, and that at this day there flourishes in Eastern waters a very numerous fleet of wholesome big-bodied vessels, closely akin to the genuine cutter in all respects save in the matter of beam. They have the depth, more than the draft, the outside weight, the rig and outfit of the blue bloods among yachts, and if their beam might be restricted, and bilge eased in consequence, accepting the cutter as our standard, these Boston yachts are nevertheless a model in all the elements of their design compared to the shoal centerboards now hauled out to rot, and fortunately no longer in good grace in the East, neither among owners nor the people who once upon a time made a living by their building.

In healthy yachts like Neva, of Boston, no one need hesitate to take up permanent quarters, to ship for the season, sail where and when he listeth, so far as any danger from innate trickiness or dubious stability of form is concerned, and in point of room, accommodation, and that "comfort" due to ability in jumpy water, the Neva class holds out inducements irresistible even to a New York sandbag devotee, and which make converts to sound principles by a single glance down the hatch.

As a very fine representative of a very popular class, we have this week produced the lines of the Neva for inspection, and add the following description as of interest:

Neva was built for Mr. George G. Granger, of Boston, in the spring

NEVA" CUTTER.—MR. GEORGE G. GRANGER, BOSTON.

of 1881. In model she is rather more taking than others of the type. A fine easy bow, with high side and no hard flare, swelling into a bold and well-proportioned midships, running off in a clear run, make up a whole quite pleasing and more agreeable than the naked dimensions would lead one to expect. She was one of the first of the kind, and many wise shakes of the head did the local sharps indulge in when they saw 1,100 lbs. of iron go underneath the keel in shape of a shoe, and when her owner fixed upon the cutter rig, pitying grimaces from the critic squad invested the innovator with a weakness in the upper story.

Since then the critics have lived and learnt and gone and done likewise. Ballast inside at the time of launching was 5,400 pounds, the total displacement being seven tons. With this stowage she proved herself easy and manageable in a sea as well as dry compared to sister boats. In 1882, her owner decided to change the rig, and increase the amount outside to 9,350 pounds, with 3,550 pounds stowed in a length of 8ft. inside. Spars, rig and trim were preserved. In her new form the Neva was found materially stiffer and no noteworthy difference in her behavior at sea was recorded. The addition outside involved an increase of 2½in. draught, bringing it up to 5ft. 5½in., a figure since exceeded by other Boston yachts of no greater length. Neva has not been raced, though in strong winds she has made an excellent showing. Her rig is little more than a jury for racing in light to modern breezes, as cruising was kept in view when striking in her spar plan, the lower sail area being only 725 sq. ft.

DETAILS OF NEVA.

Length over all	29 ft. 2 in.
Length on load line	25 ft.
Beam moulded	8 ft.
Depth, deck to top of keel	5 ft.
Draft, greatest	5 ft. 5½ in.
Least freeboard to planksheer	1 ft. 6 in.
Lead keel, depth amidships	1 ft. 7 in.
Lead keel, length	17 ft. 6 in.
Lead keel, width on top	3½ in
Lead keel, width on bottom	2 in.
Lead keel, weight	3,350 lbs.
Lead ballast inside	3,550 lbs.
Total ballast	9,900 lbs.
Displacement	7 tons.
Mast, 1ft. 6in. from bow, over all	35 ft.
Mast, diameter at partners	7 in.
Main boom, egg section, 3x6in	24 ft.
Gaff, egg section, 2½x4in	15 ft.
Topmast, 3½in. diameter, above cap	9 ft.
Length of mast doublings	4 ft.
Bowsprit outboard to stayhole	9 ft.
Hoist of mainsail	30 ft. 6 in.
Foot of mainsail	34 ft.
Head of mainsail	11 ft. 6 in.
Leech of mainsail	31 ft.
Staysail on foot	12 ft.
Staysail on leech	26 ft.
Jib on foot	11 ft.
Jib on leech	24 ft.
Area, lower sail	725 sq. ft.
Length of cabin trunk	9 ft.
Height of side aft	1 ft. 3 in.
Length of cockpit	6 ft.
Height of rail with cap	2¾ in.
Copper water tanks	60 gals.

There are two deadlights in forward bulkhead of trunk and a twenty inch circular scuttle to the forecastle. The water tank under the cockpit is piped to draw water in the forecastle; lockers and pantry below are especially convenient in arrangement of detail. Cabin is finished in cherry and pine polished, the cockpit in cherry. Cabin cushions of hair, covered with brussels. Cabin table supported by four shifting legs, which can be quickly unscrewed and stowed away. It is made of cherry with nickel-plated fastenings. The steering gear consists of iron wheel and quadrant, with cog and ratchet to set it. The deck is completely covered, being given to extensive housing. Galley, side lights, Fresnel riding light, liquid compass, etc., and a full line of supplies. The yawl is whaleboat shape, eleven feet long and owing to sharp ends can be stowed inboard with less trouble than a spare transom. The ground tackle consists of two Trotman anchors, 50 and 75 lbs. Cables, 55 fathoms of 2¾ in manilla and 40 fathoms of 3¼ in. Standing rigging ⅜ in. galvanized wire; blocks 4 inches Bagnall and Loud patent brass bouched with lignum vitæ shells. Lower sails of 10 oz. duck. Hull and fastenings particularly strong. Keel of 4 in. siding, frames of oak sided 2½ in. and moulded 3 in. at floor and 2 in. at gunwale; deck beams 8x3½ in.; plank yellow pine 1¼ in. thick; deck and house top 1¾ in. double, with tarred paper in a layer between.

TERRIBLE MESS.

OUR English cousins are in a very bad way. Their new yachts are to0 fast for the old ones. Natural enough, and Englishmen ought to congratulate themselves accordingly. But then there are "vested interests," and they are bound to pop up with a "here we are again," and all sorts of presto change rules, the sole object of which is to thimblerig the fast ones out of their well-earned winnings, for the benefit and delight of the tubs of the fleet. Thus we have a proposition for a "second Y. R. A. rule of measurement," a sort of porous plaster to draw part of the prizes aboard ancient vessels of the staid and comfortable old school order, by choking off the great "nature row beam" of the day, and with a patent back-acting measurement device compel them to stand and deliver, or keep away from the course. Then we have other proposed medicine of a cathartic order with which the modern craft is threatened, emanating from no less a source than Mr. Baden Powell. This plan is to "allow" a certain proportion of beam to length, the limit set at five in a perfectly arbitrary manner, all longer yachts to be blackmailed for daring to be longer and better boats.

The proposition is, of course, acceptable to short boats, providing they have a five-beam and over to race against. A five-beam will take regular time and a special superadded dose of charitable pap from a five-and-a-quarter-beam, "by divine right," we suppose, as it would be difficult to assign any other right. But should the same five-beam tackle a four-and-a-half, the former, one night imagine, would, on like principles, be made to concede to the shorter, wider yacht, an amount in proportion to what was demanded from the five-and-a-quarter as above. She does nothing of the sort, but under the proposition gets the full benefit of her extra length, "authority" having decreed everything eminently proper up to five-beams, but an inch beyond that a taxable transgression. Talent must be in a bad way indeed, if measurement is to revolve itself into such out-of-hand patchwork. And pray why ostracise everything beyond five-beams? Whatever sin there be in still narrower boats has already been committed in five-beams and much under. Why proscribe what people want? What is the matter with six-beams that it should be pounced upon by organized pillage?

Some of the finest yachts in Great Britain are over five beams in length, and if form were left alone to develop itself by the process of natural selection, it is quite probable that a great many more six-beam yachts would be built by deliberate preference. Ask Mr. John Harvey for the best proportions and he will not hesitate to give his experience as strongly in favor of six-widths "for cruising, for fishing, for anything." If somebody does not like the proportion of five, another will jump up and want to stop all proceedings at four, still another at three beams and so on. Who is to be the judge in the matter? A third strike at the flyers is, however, much more likely to recoil upon the would-be assassins of the narrow beam, than to accomplish what they seek. It is contemplated to measure by sail area and length, a meaningless concoction, devoid of logical basis and sure to put a premium upon the narrowest boat. This rule might have been excused in America as a stepping stone toward better boats, but in English waters it is indefensible. So between all this and innumerable wild handicapping schemes, a desperate attempt is made to cast the fast yachts in the bonds of the past, and but for existing Y. R. A. enactments, the times ahead would look blue indeed for the modern racing cutter.

PROGRAMME OF THE NICE REGATTA.

FIRST DAY.—TUESDAY, MARCH 27.

Sailing Races (under the Rules and Regulations of the Yacht Club de France).

PRIX DE NICE (Yachts of 30 tons and above).—First prize 6,000fr. and gold medal, second, 2,000fr. and gold medal, third, 1,000fr. and silver-gilt medal, fourth 500fr. and silver medal; yawls computed at three-fourths, schooners and lateen rigs at two-thirds of their real tonnage; distance, 25 miles.

Yachts from 15 to 30 tons.—First prize, 2,500fr. and silver-gilt medal, second 1,250fr. and silver medal, third 800fr. and bronze medal, fourth 500fr. and bronze medal.

Yachts from 5 to 15 tons.—First prize 1,500fr. and silver-gilt medal, second 800fr. and silver medal, third 400fr. and bronze medal, fourth 200fr. and bronze medal.

Yachts from 2 to 5 tons.—First prize 1,000fr. and silver medal, second 500fr. and silver medal, third 200f. and bronze medal, fourth 100fr. and bronze medal.

For Yachts under 2 tons.—First prize 400fr., second 200fr., third 100fr., fourth 50fr.

Naval Long-Boats (French crews supplied by the cruising squadron of the Mediterranean).—First prize 200fr., second 200fr., third 100fr.

Long Boats, equipped for sailing bounds.—First prize 150fr., second 100fr., third 50fr.

Long Boats, equipped for fishing.—First prize 150fr., second 100fr., third 50fr.

SECOND DAY.—WEDNESDAY, MARCH 28.

Sailing Races (under the Rules and Regulations of the Yacht Club de France) open to all classes.

Prix d'Honneur.—First prize 3,000fr., second 1,500fr., third 1,000fr., fourth 500fr.; distance 25 miles; steam racing; under rules and regulations of the Cercle de la Voile de Paris.

Prix de Monte Carlo.—Steam yachts of 30 tons and upwards, register tonnage.—First prize 6,000fr. and gold medal, offered by the Minister of the Navy; second 2,000fr. and silver medal, offered by the same; third 1,000fr. and silver-gilt medal, offered by the Cercle de la Voile de Paris; fourth 500fr. and silver medal, offered by the Cercle de la Voile de Paris. Distance 50 miles.

Miniature Regatta (reserved to models).—First, sailing races; First series, models yachts measuring under 62 centimetres; second, model yachts measuring from 62 to 85 centimetres; third, model yachts measuring from 85 centimetres to 1 metre 25 cent., race open to all series, allowance computed at 25 seconds by series. Secondly, steam racing. Thirdly, boats actuated by springs. In each race a first, second, and third prize in specie will be awarded.

THIRD DAY.—THURSDAY, MARCH 29.

Rowing Races (under the Rules and Regulations of the Rowing Club de Paris).—Yole gigs, funnys, outriggers; amateurs only admitted to compete.

Prix de Monaco (for four-oars with coxswain).—Distance 3,000 metres. First prize 5,000fr. in specie or object d'art of that value; second 2,000fr. or object d'art; third 1,000fr. or object d'art; fourth 500fr. or object d'art; fifth 250fr. or object d'art.

Prix de la Mediterranée (pair-oars with coxswain).—Distance 2,500 metres. First prize 1,500fr., or object d'art; second 700fr. or object d'art; third 350fr. or object d'art; fourth 250fr. or object d'art; fifth 100fr. or object d'art.

Prix du Pailloa.—Sculling race, distance 200 metres: First prize 500fr. or object d'art; second 300fr. or object d'art; third 150fr. or object d'art; fourth 100fr. or object d'art; fifth 50fr. or object d'art.

Ships' steam launches; First prize 400fr., second 300fr., third 200fr., fourth 100fr. (distance ten miles). Men-of-war's crews supplied by the Mediterranean Squadron).—First, long boats (twenty pair of oars): First prize 500fr., second 250fr., third 150fr. Second, Boats (eighteen rowers): First prize 300fr., second 150fr., third 100fr. Third, Whale boats (seven rowers): First prize 200fr., second 100fr., third 50fr. Yacht yoles (four rowers): First prize 150fr., second 100fr., third 50fr. Boats from commercial vessels (four rowers): First prize 100fr., second 50fr., third 25fr. Fishing boats (six rowers): First prize 100fr., second 50fr., third 25fr. Pedoscephes: First prize 100fr., second 50fr., third 25fr. Boats rowed by ship boys: First prize 80fr., second 40fr., third 20fr.

Canoes (with one amateur paddler). Extreme length, 6 metres 50 centimetres; extreme width, 90 centimetres.—First prize 400fr., second 200fr., third 100fr., fourth 50fr.

Conditions.—A minimum of seven competing crews is indispensable for the crew finishing fifth to receive any award; of six in order for the fourth crew to receive any prize; or five to ensure the bestowal of the third money; and finally, of four in order that the second award be given. In case of a walk over, the prize will be integrally paid over, provided the course be satisfactorily covered. The entry money is fixed at 1 per cent. of each first prize. Admission free to all races of which the first prize does not amount to 500fr. Inscriptions close, at the Secretariat du Comité des Regates, Nice, on March 15, and must be written on the special forms obtainable on application, as are also copies of the rules under which the meeting will be held. Yachts admitted only to races of which the awards are declined to craft of their tonnage. The decisions of the committee cannot be appealed against, it being stipulated that the competitors, in sending in their nominations, accept their jurisdiction and renounce having recourse to that of the law tribunals.

We learn from good source that Mr. Colt proposes to enter the Dauntless schooner, N. Y. Y. C., now in the Mediterranean. Her racing spars and sails have been shipped. She will sail in the first match, Tuesday, March 27, for the Prix de Nice, a purse of $1,200 and gold medal. The chances of landing this big swag are excellent, indeed, if there is anything like breeze enough for such a big one. Dauntless will have it much her own way. There is nothing, so far, to meet her. A promiscuous lot of French and Italian hybrids of no great account will not give the American any trouble unless in a drift or light puffs, and there seems at present little chance of any English cracks turning up for the occasion. The Nice regattas have heretofore been so badly managed, and conducted so much on the "greased pole" and exhibition plan, with such crass innovations upon regular racing customs, that English yachts fight shy of subjecting themselves to the management of a French committee. This year, however, Y. R. A. rules will be recognized, and it is to be hoped such liberal prizes will not go begging for want of good starters. We should like to see Dauntless and Celonia or Miranda in a bout to windward, but there is no prospect of such a contest. By the way, as long as Mr. Colt is on racing bent, why did he not seize a better opportunity while in Channel ports? Perhaps he had not then made up his mind to race, and perhaps the business was a little too breezy for the New York idea, or did a friendly turn with some of the British cracks create an appreciation of the adage that "Discretion is the better part of valor."

MR. LAWTON'S VIEWS.

Editor Forest and Stream:

A statement in Mr. Lawton's reply last week seems to demand notice to prevent misapprehension. Whatever solace Mr. Lawton derives in citing Mr. Kemp and Mr. Colin Archer as opposed to bulk measurement, is equally shared by myself, since Mr. Kemp is also opposed to measurement by length as proposed by Mr. Lawton, while Mr. Archer, never very positive in favor of length, has so far receded as to enforce the Sea wanhaka sail rule as preferable. But Mr. Kemp, not long ago, in comparing the performances of two yachts in the London *Field*, distinctly insisted upon starting with bulk as his basis, ignoring difference in length, his examples being a long, narrow and a shorter, wider yacht, both of the same volume to outside lines. I am not looking for like endorsements from any source, if I were I should not ask for a stronger and more honest judgment than the free acknowledgment of Mr. Kemp that a fair comparison between two different models must be based upon equal bulks. As a race is a comparison of performances, the ground Mr. Kemp took in favor of the equity of a bulk standard applies with equal force to the issue of a contest dependent upon the same qualities he had under consideration, however much he may think it politic to countenance some artificial substitute for use in match sailing.

C. P. KUNHARDT.

GANNET.—Concerning this yawl, the *Herald* of Wednesday last says: "A very excellent little centerboard yacht of the single-handed cruiser type has just been completed by Messrs. Wallin & Gorman, of South Brooklyn, for Mr. Oliver Adams, the corresponding secretary of the Larchmont Yacht Club. The boat is only 23ft. 6in. in length over all and of 8ft. beam, and yet has a roomy little cabin 8ft. in length, with 4ft. 6in. headroom in it. When ballasted to the proper water line with 3,500lbs. of iron, about one-half of which will be bolted to the keel, the extreme draught will be about 2ft. 6in. and the least freeboard about 18in. The cockpit floor is built high above the water line, and is bright, as is also the deck. The yawl rig will be tried, as the boat is intended only for pleasure sailing and cruising. This little ship is really a curiosity in its way, as it is surprising how much room and comfort can be obtained on such meagre dimensions in such neat shape and seaworthy form with moderate draught." We may add that the above quotation shows an intelligent appreciation of the good points a small yacht should possess. The *Herald* is not slow in recognizing merit, even though displayed in a style of boat representing a variation upon old ideas.

ROYAL CANADIAN YACHT CLUB.—The annual ball of the club, Jan. 12, proved in every way a notable affair, and drew to the Horticultural Gardens the elite of Toronto and neighborhood, including the members of the club, officers of the army and navy, the consular corps and the professions. The ball room was elegantly draped with flags and banners, and the names of the yachts of the fleet variously illuminated. The credit of the tasteful decorations belongs to Capt. Geddes. Music was furnished by the Tenth Royal Grenadiers, and dancing was kept up till early morn.

NEW YACHTS.—Stoddard, of Newport, is building a deep sloop for Mr. S. Cary Smith. Length on load line, 27ft.; beam, 10ft. 10in.; length, 42ft. 6in.; draft, 5ft.; freeboard, 22in.; cabin has 5ft. 3in. head room. Cockpit with cabin door sill at deck level; short boom and long gaff. Evidently the yachting world is moving in accord with the lessons in these columns, even in matters of detail. Sails for this boat by Lapthorn & Ratsey, of Cowes, England.

SEAWANHAKA YACHT CLUB.—At the regular annual meeting the election resulted as follows: Comodore, F. C. Lawrence, Jr., of the Vixen sloop; Vice Commodore, Archibald Rogers, of the Bedouin cutter; Rear Commodore, W. W. Tompkins, of the Vivid sloop; Secretary, M. R. Schuyler; Treasurer, R. B. Simonds; Fleet Surgeon, John M. Woodbury, M. D.; Regatta Committee, Louis P. Ward; Francis O. De Luce, Alexander H. Stevens, Walter H. Snydam and S. Nelson White.

YONKERS Y. C.—Have elected the following officers: Commodore, A. J. Prime; Vice-Commodore, C. T. Mercer; F. Captain, T. W. Post; Secretary, William Thompson; Treasurer, John Nesbit; Measurer, D. Murray; Steward, W. H. Veitch; Trustee, Frank Ford.

NEW SINGLE-HANDERS.—Mr. Clapham is to build three single-hand Nonpareils 25, 28 and 30ft. long. He is also getting out plans for a 60ft. Nonpareil, schooner or yawl rig, to be built at Cleveland, Ohio.

MEDUSA.—The spar plan of Mr. Dexter's new 30-ton cutter, 54ft. loadline, is as follows: Mast, deck to hounds 36ft., main boom 47ft., gaff 29ft., bowsprit outboard 26ft., topmast, fid to sheave 32ft.

ANOTHER CUTTER.—Smith, of South Boston, is to build a cutter 60ft. long, with 15ft. beam and 9ft. 6in. draft, the model being furnished by the owner. She is to be off by the middle of May.

NEW NONPAREIL.—Mr. Clapham has the keel laid and frame up for a 62ft. Nonpareil yacht for a New York gentleman. Also busy with a number of models and plans for various parts of the country.

NEW CUTTER.—Mr. A. Cary Smith is at work on the design of a cutter 32ft. load line. To have wide keel, 3400., molded, similar to the keel of the Wasp, illustrated in this journal Dec. 14.

ANSWERS TO CORRESPONDENTS.

M., Hastings, Iowa.—1. Where and at what price can I get Henshall's "Book of the Black Bass?" 2. What make of reel is best suited for bass fishing, fly and bait, and should it be placed on the rod in front or back of hand? Ans. 1. We can furnish it; price three dollars. 2. Those who use bait alone prefer a bass reel in front of hand. For both kinds of fishing use stiff trout rod with click reel behind the hand.

The Combination of Ingredients used in making BROWN'S BRONCHIAL TROCHES is such as to give the best possible effect with safety. They are widely known as the best remedy for Coughs, Colds, Throat Diseases and Asthma Troubles. Price 25 cents a box. —*Adv.*

The Inventors and Only Manufacturers of Genuine "MIST COLOR" *LEADERS, of which Seth Green says: "I have tried them and found them to be the most perfect I have ever seen."*

Prices are per dozen. All highest quality selected.

Kynoch's Patent "Perfect" Brass Shells

MANUFACTURED BY

Kynoch & Co., Birmingham, Eng.

These shells are made of extra fine thin pliable metal, with reinforced base. Use either Winchester or Wesson primers. Can be reloaded as often as any of the thicker makes. **Cost only about half as much.** Weigh less than paper shells, and in consideration of their reloading and other advantages, are really cheaper than the paper. They also shoot stronger and closer, and can be loaded heavier, as inside diameter is nearly two gauges larger. They possess a great advantage over all other brass shells, as owing to the thin metal they can be closed (as represented in cut) by simple use of the thumb or fingers, and straighten out to original shape when discharged. These goods have already gained a wide and favorable reputation in Europe, and in the opinion of many prominent sportsmen will soon supercede to a great extent the old style of both brass and paper. **Samples** will, upon application, be mailed (without charge) to any sportmen's club or dealer, and prices quoted to the trade only. For sale in any quantity by gun dealers generally, or in case lots only (2,000 shells) by

HERMANN BOKER & CO.,
SOLE AMERICAN AGENTS 101 & 103 Duane Street, New York.

We also carry a large stock (at all seasons) of Kynoch's regular thickness brass shells, adapted to the Berdan Primer. Price materially lower than the American make of same quality.

MANUFACTURING JEWELER,

Medals and Badges

A SPECIALTY.

Special designs furnished on application free of charge.

[ESTABLISHED 1869.]

UNITED STATES CARTRIDGE COMPANY,

LOWELL, MASS.

Our paper shot shells are made with great care upon new and improved machinery, and the paper is subjected to a process that renders the shells waterproof, pliable, and capable of withstanding large charges of powder without bursting, and are reloadable from four to ten times, if desired. They also keep their smooth shape stiff, inside and out. We offer them as equal, if not superior, to any other makes, and warrant them in the full sense of the word.

PAPER AND BRASS SHOT SHELLS.

"The *Decorator and Furnisher* is not only the most imposing, but is certainly the most artistic publication and the very highest in merit that has yet seen the light here."—[N. Y. Com. Adv.

The Decorator & Furnisher

AN ELEGANTLY PRINTED AND ARTISTICALLY
ILLUSTRATED MONTHLY JOURNAL,
TREATING OF THE
Decorating and Furnishing of the Interior of the House.

Giving twenty-four to thirty pages of original reading matter from the best known and most popular writers upon these subjects in this country and in Europe, also ORIGINAL DESIGNS FOR ALL KINDS OF HOME ADORNMENT AND ORNAMENTATION, Furniture, Carpets, Tapestry, Pottery, Fresco and Panel Painting.

A Richly-Colored Plate of Designs for Fresco and Panels.

"The *Decorator and Furnisher*, a New York monthly, the designs and sketches of pieces of furniture, ceilings, whole furnished rooms, ornamentations, etc., in which are among the finest we have seen of late, even in Paris. The publication is evidently one of great promise, and cannot fail to be justly appreciated by our countrymen at home and abroad, as well as by European experts in the line it is addressed to. The first number is a piece of high art, and a splendid specimen of typography."—[American Register, Paris, Dec. 9, '82

"It is a paper calculated to give ideas, suggestions and valuable designs to all those interested in the decoration and furnishing of the house."—[Washington (D. C.) Republican.

"It is well and abundantly illustrated, and the October number contains a large colored plate showing designs for ceilings."—[N. Y. Tribune.

"Established as a well edited and useful periodical."—[N. Y. Times.

"America possesses nothing that lives in the same atmosphere. * * * It is already standard."—[Boston Times.

"Contains contributions by men of established reputations."—[Evening Post (N. Y.).

"It certainly deserves success, for this first number is altogether admirable in illustration and in matter."—[Christian Advocate.

"It promises to be one of our most valuable special journals."—[Independent.

"It is calculated to meet the wants of people engaged in the fascinating business of fitting up a house."—[Springfield Republican.

"The publications which minister to the decorative arts in this country are many, and, generally speaking, of a high order of merit; but there is scarcely one of them which can quite compare with the new trans-Atlantic periodical, the first number of which is now before us."—[The Building World (London).

Subscription $4.00 per year. Single Copies 35 Cents.

A patent binder to preserve the numbers accompanies each subscription.

FOR TOWN AND COUNTRY.—1883.

FOREST AND STREAM

A JOURNAL OF THE ROD AND GUN.

The year now drawing to a close has been with the FOREST AND STREAM one of most gratifying progress. Early in the year by an important mechanical improvement, the typographical beauty of the paper was greatly enhanced; and in August, with the beginning of the tenth year of publication, it was

Permanently Enlarged to Twenty-eight Pages.

There has been an equal growth in other important respects. The patronage accorded to this journal by the intelligent reading public has never been more cordial than it is at the present time. Sustained thus heartily, the publishers are prepared to maintain in 1883 the FOREST AND STREAM prestige as the

Representative Field Journal

of this country, at once entertaining, useful and influential. As the exponent of the highest types of field-sportsmanship the paper will be adapted to the tastes of all men who use the rod and gun as means of pleasure and recreation. Broad in its sympathy with all that is legitimate in field sports, free from any entangling alliances with cliques, having no interests to serve save those of its constituents, and never hesitating in its criticisms of whatever may be inimical to these interests, the FOREST AND STREAM'S highest ambition will be to preserve in the future the approval won by its course in the past. It will persist in its efforts to awaken in the public mind a fuller appreciation of the importance of the proper protection of game in the breeding season, and of due moderation in the destruction of game at other times. This it considers a matter of prime importance, not so much to the man whose wealth and leisure enable him to make extended tours to favored game countries, as it is to that already very large and constantly increasing class of business and professional men, whose favorite relaxation from the routine of employment is found in brief vacation trips to the woods and fields and brooksides.

The enlarged form of the FOREST AND STREAM enables its editors to present each week in the several departments a large and varied supply of reading. In the columns of

The Sportsman Tourist

Will be found sketches of travel and sport. Coming from many different writers, and widely separate parts of the country, these sketches always have the charm of novelty, and they are sure to be read with interest by sportsmen, because their writers see things through sportsmen's eyes, and describe them from the sportsman's standpoint.

Natural History.

This department will not deal with fossils nor with the monsters of African jungles. Quite on the contrary, it will treat of the animal life of land and water in our own country, the habits and ways of American fur, fin and feather, in which American sportsmen are presumed to take an intelligent interest.

Game Bag and Gun.

In addition to the numerous accounts of hunting and shooting exeursions, necessarily varied and interesting—as such accounts must need be—these columns will be found of special value to amateur and veteran alike, because of the frequent interchanges of experience in all matters pertaining to game and shooting.

Sea and River Fishing.

The angler will find in the pages of the FOREST AND STREAM the best angling literature of the day, in quantity more than is contained in all other publications put together. This journal has inaugurated a series of angling tournaments, the initial meeting having been held in the Central Park of this city; and it is believed that others of equal success will follow in other years. Meanwhile, the man who loves to go a-fishing may find in the FOREST AND STREAM all the year around a great deal that must be to his liking.

Fishculture.

The columns devoted to this important subject furnish a complete resumé of curren achievements and progress in this important work.

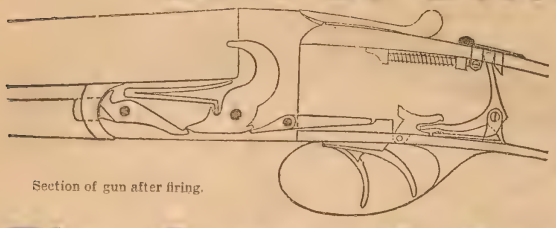
The Kennel.

This department has won the confidence of dog owners. Its reports of field trials, bench shows and other events are recognized as impartial, honest, and the most able published The recent series of papers by its editor, entitled "Training vs. Breaking," have been published in book form, and have had a very large sale. Other papers of equal importance will be published from time to time.

Yachting and Canoeing.

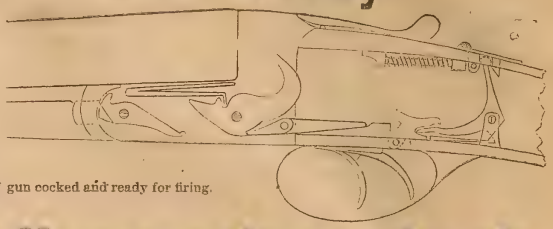
The editor of this department being a practical naval architect, and thoroughly familiar with every branch of the subject, will continue the same intelligent treatment of yachting and canoeing that have already won for the FOREST AND STREAM esteem and confidence.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.



We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each, and the files constitute a library of permanent worth. Eighteen such volumes have already been published. We furnish handsome file binders (price $1.25) which hold twenty-six numbers.



Subscriptions may begin at any time. Per year, $4; $2 for six months. Remit by post office money order, draft or registered letter. Give name, town, county and State. Addres

The Anson & Deeley Hammerless Lock,

AS MANUFACTURED BY

Westley Richards & Co., London, Eng.,

HAS NO EQUAL!

And is the only hammerless gun in the market that is absolutely faultless, being simple, durable, and possessing those wonderful shooting powers, combined with that indescribable symmetry and beauty so characteristic of Westley Richards' product.

Every desirable feature is found in this gun. Superiority of Material and Workmanship. Absolute Safety in Handling. Without Comparison in Durability and Simplicity.

Shooting Qualities Unsurpassed.

The following letters from prominent sportsmen cover the ground exactly:

CLARKSVILLE, Tenn., March 20, 1882.

J. Palmer O'Neil, Esq.:

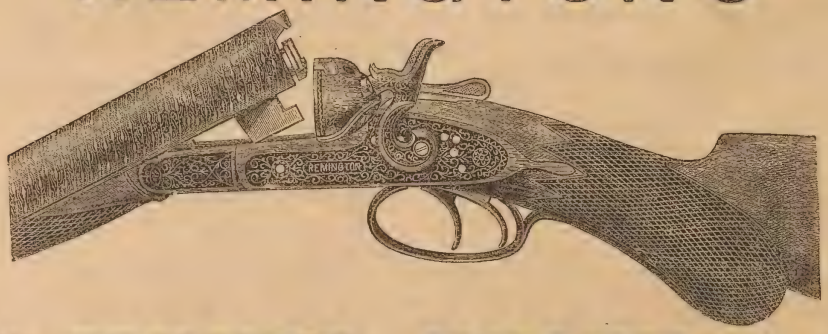
My Dear Sir—The Westley Richards Hammerless Gun I obtained from you has been the admiration of all my friends. I consider it much the best Hammerless gun, and recommend all sportsmen who can afford the luxury of a perfect gun, to buy a Westley Richards Hammerless.

Respectfully, PATRICK HENRY.

BURLINGTON, Iowa, Sept. 20, 1882.

J. Palmer O'Neil & Co., Pittsburgh, Pa.:

Dear Sirs—The Greener and Westley Richards guns arrived safely yesterday A. M., and in the evening I took them both out and targeted them. I like the Greener better for only one reason, and that is it fits me a trifle better. But the Westley Richards made by far the best target, so I have concluded to keep it and return the Greener. The Westley Richards is certainly a little beauty, and makes as fine a target as I ever saw. One of my friends who is a great sportsman went out with me, and before the trial made all manner of fun of the "pop gun," even while he admired its graceful shape and elegant workmanship. But the result of the trial rather surprised him. He shot against the Westley Richards, his 11lbs. Daly loaded with 5 drams of powder and 1¼oz. of No. 7 shot, while I used 3¼ drams of powder and 1⅛oz. No. 7 shot. At 30, 40 and 50 yards I beat him badly in distribution and penetration. At 60, 65 and 70 yards fully equalled him. And the difference at 75 and 80 yards could hardly be noticed. I am much pleased with the gun, and as soon as I become a little more accustomed to it I have no doubt my shooting will be greatly improved. I shall take pleasure recommending the Westley Richards Hammerless Gun.



Yours truly, GEO. H. TOUSEY

WHAT WILL THE WEATHER BE TO-MORROW

POOL'S SIGNAL SERVICE BAROMETER

OR STORM GLASS AND THERMOMETER COMBINED,

WILL TELL YOU!

It will detect and indicate correctly any change in the weather 12 to 48 hours in advance. It will tell what kind of storm is approaching, and from what direction—**invaluable to navigators. Farmers** can plan their work according to its predictions. **Saves 50 times its cost** in a single season. Has an accurate thermometer attached, which alone is worth the price of the combination. This great **WEATHER INDICATOR** is endorsed by the most eminent Physicians, Professors and Scientific men of the day to be the **BEST IN THE WORLD!** The Thermometer and Barometer are put in a nicely finished walnut frame, with silver plated trimmings, etc., making it a beautiful as well as useful ornament. We will send you a sample one, *delivered free*, to your place, in good order, on receipt of **$1**, or six for **$5**. **Agents** are making from $5 to $20 daily selling them. *A trial will convince you.* Order at once. **It Sells at SIGHT!** Just the thing to sell to farmers, merchants, etc. Invaluable to everybody. U. S. Postage Stamps taken if in good order, but money preferred. **Agents wanted everywhere.** Send for circular and terms. Address all orders to **OSWEGO THERMOMETER WORKS,** (*Largest establishment of the kind in the World*) **Oswego, Oswego Co., N.Y.**

We refer to the Mayor, Postmaster, County Clerk, First and Second National Banks, or any Business house in Oswego, N. Y.

Write your Post Office, County and State plainly, and remit by money-order, draft on New York or registered letter, at our risk.

This will make a Beautiful and Very Useful Present.

READ WHAT THE PUBLIC SAY ABOUT IT.

I find Pool's Barometer works as well as one that cost fifty dollars. You can rely on it every time.
CAPT. CHAS. B. HODGES, Ship "Twilight," San Francisco.

Barometer received in good order, and must say that the instrument gives perfect satisfaction in every respect. It is really made and wonderfully cheap at two dollars. GEO. B. PARSONS, M. C. R. R. Office, Detroit, Mich.

Pool's Barometer has already saved me many times its cost, foretelling the weather. It is a wonderful curiosity and works to perfection. F. J. ROSSTERVER, Milwaukee, Wis.

BEWARE OF WORTHLESS IMITATIONS. None genuine without our Trade Mark, and Signature of J. A. POOL, on back of Instrument, as below:

J. A. Pool TRADE MARK.

Every Instrument **warranted** *Perfect* and *Reliable*. Size, 9½ inches long, 2½ wide. If not satisfied on receiving the instrument, return it at once and we will refund your money. **Please state** where you saw our advertisement.

NOTICE.—$2.00 each is the regular retail price for above instrument, but being desirous of introducing them and securing good agents, we offer for a short time to deliver "a sample one" free to any address on receipt of only one dollar, or 6 for $4.00. Order at once. It's just the thing for a Christmas present.

Rare Birds and Animal Skins Bought and Sold.

Large Stock of Groups, Birds, Deerheads and Glass Cases.

Climax Gun Cleaner.

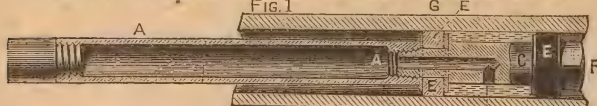

Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

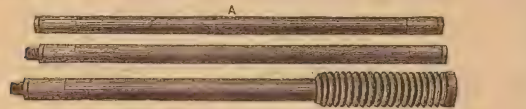

FIG. 2.

NOTE.—In those made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

In offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

1st. It is made in three joints, like a common cleaning rod, and therefore is portable.

2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.

3d. The ease with which it can be adjusted to fit the barrels, loose or tight.

4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

DESCRIPTIVE CIRCULARS AND DISCOUNTS TO DEALERS GIVEN ON APPLICATION.

For sale by Gun Dealers, or address

N. M. MUZZY

45 South Canal Street, Chicago, Ill.

Of the old firm of HITCHCOCK & MUZZY and MUZZY & CO. in 1852.—Having increased my facilities for the business of reaming out gun barrels, I beg to offer my services to those owning guns of unsatisfactory shooting qualities. My system is peculiarly my own. I leave no shoulders, and will guarantee my cylinder boring to shoot more even than by the old choking system, in every instance. I invite special attention to my method, and the most satisfactory testimonials will be furnished when desired. Guns can be sent, and will be delivered by express.

CONSUMPTION.

I have a positive remedy for the above disease; by its use thousands of cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy, that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer. Give Express & P. O. address. DR. T. A. SLOCUM, 181 Pearl St., N. Y.

The Hazard Powder Co.,
MANUFACTURERS OF
Gunpowder

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot-guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest or water shooting it ranks any other brand and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFFG, FFG and "Sea Shooting" FG in kegs of 25, 12½ and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard *Rifle* Powder of the Country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city or wholesale at our office.

63 PINE STREET, NEW YORK.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ¼ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 87 Beaver St., N. Y.

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

ANGLERS' CASTING TOURNAMENT.

New York, Oct. 19, 20 and 21, 1882.

The Leonard Rod Won Every First Prize

When in competition. For distance it surpassed all competing Rods 15 feet.

A Leonard 4½ ounce rod cast 82 feet, exceeding by 6 feet the longest cast of other makes of rods of any weight.

The Leonard was the only rod used in the tournament that was awarded the highest possible score for both accuracy and delicacy.

Prizes and winning rods can be seen at

ANSWERS TO CORRESPONDENTS.

With its compact type and in its permanently enlarged form of twenty-eight pages this journal furnishes each week a larger amount of first-class matter relating to angling, shooting, the kennel, and kindred subjects, than is contained in all other American publications put together.

TO CORRESPONDENTS.

WE must again remind our correspondents, and we think that this is about the one hundred and seventy-third time that we have done so, that all communications, editorial and business, must be addressed to the "Forest and Stream Publishing Company." Letters addressed to individuals connected with the paper often fail to receive attention, and in such cases the writers feel that they have been neglected. There is usually good reason for such silence, however. Thus it has frequently happened that one of the editors or some one in the business department has been absent from the office for a month or two at a time, and during this time his personal mail has remained unopened. Our correspondents, therefore, of whatever class, will save themselves and this office much trouble by addressing their communications to the Forest and Stream Publishing Company, New York, N. Y.

ADIRONDACK FOREST PROTECTION.—A bill has been passed at Albany prohibiting the sales of State lands in the counties of Clinton, Essex, Franklin, Fulton, Hamilton, Montgomery, Safatoga, St. Lawrence and Warren. There were abundant reasons for the passage of this bill. The foolish and ruthless destruction of these timber lands has very materially affected the great and important water supplies of the State, to say little of the destruction of the attractions of the Adirondacks, and still less of the attendant killing of game. Just how far the improvident waste of forest lands in this country will be carried is something that the next generation will know more about than we do, and they will suffer from it in proportion.

THE PRESENT NUMBER closes the Nineteenth Volume of the FOREST AND STREAM. The index will be published next week.

THE PARK SAVED.

THE following letter has been sent by the Secretary of the Interior to Senator Vest:

DEPARTMENT OF THE INTERIOR, Washington, January 18, 1883.

Hon. George G. Vest, U. S. Senate:

DEAR SIR—I have Mr. Langford's letter addressed to you, and by you referred to me. I have determined not to take any action in the matter of the lease to Messrs. Hatch & Co. until Congress shall take action on your bill; at least not until the close of the session. If no action should be taken on the bill, I shall feel inclined to execute to them a lease in strict accordance with the views expressed by your committee in the report made to the Senate.

I have issued an order prohibiting the cutting of timber without special authority from the Secretary, and prohibiting the killing of game within the Park.

I trust you will procure the early passage of the bill so that it may pass the House.

Very respectfully, H. M. TELLER, Secretary.

Mr. Langford's letter is herewith returned.

This ends the fight. The grabbers are defeated. The people's rights are to be protected. The Yellowstone Park is not to become a second and greater Niagara. The indications are now rather that it will be a place where one can go and have a delightful summer jaunt, stopping at a hotel if he likes, or if he prefers it, camping wherever his desires may lead him.

We trust that no one will forget for a moment that the redemption of the Park is due entirely to Senator Vest, who has on this, as on other occasions, shown himself in the broadest sense a true friend to, and representative of, the People, and an uncompromising enemy of all jobs and monopolies.

We said over a month ago that it was clear that there was an inner history to this matter, and the event has proved that we were right. Whether all the secrets of this ring will ever be brought to light is doubtful, but enough has been developed to make it appear that some of the officials of the Interior Department have, under certain circumstances, more power in their hands than they can safely be trusted with. Any extended comment on this point is superfluous to those who have carefully read the history of the attempted land grab as recorded in these columns.

A number of curious facts have lately come to the surface through the investigations of Senator Vest; facts which show very clearly the true relations to it of certain individuals whose names have been prominently connected with the scheme; facts which are creditable to some of the parties and very much the reverse to others. One of the most remarkable features of the whole business is the readiness with which Mr. Merritt L. Joslyn appears to have lent himself to the plans of the "Improvement" Company, in direct opposition to the instructions of his superior officer.

A week or two since, Senator Vest introduced a resolution, which was agreed to, calling upon the Secretary of the Interior to send to the Senate all correspondence and papers relating to the leasing of the Yellowstone Park. Accordingly last week the papers were sent in the Senate and an examination of their contents tells a curious story, so curious that we recount it here.

On April 28, 1882, Secretary Teller wrote to Mr. P. H. Conger, the superintendent of the Yellowstone National Park, inclosing a list of applicants for hotel privileges within the Park, and making inquiries as to the responsibility of the parties named. In the course of his letter he said:

> Applicants should be informed that under the law no lease can be granted for a longer term than ten years. You will also inform them that leases will not be transferable without the assent of the Secretary of the Interior, and that, if improvements are not made on the lands within eighteen months of the approval of the leases, the leases will be canceled. No lease will be given covering lands containing any of the natural curiosities or mineral springs within the Park, or that will in any way prevent free access to such curiosities or springs. This instruction in relation to the springs is deemed proper to procure to all the full enjoyment of the medicinal waters and to prevent a monopoly in their use, but it is not intended to prevent the granting of leases for lands in close proximity thereto. As the law authorizes the Secretary of the Interior to grant leases for building purposes in "small parcels of ground," no application will be entertained for leases of more than twenty acres in any one contract, and where the land desired is in the immediate vicinity of the principal attractions of the Park the location should be confined to such parcels of land as will reasonably accommodate the buildings and the necessary surroundings proposed by the leases.
>
> The following are the terms fixed by the department for the leasing of the ground within the Park, subject to such modifications as may from time to time be desirable: For tracts not exceeding five acres, $10 annually; for tracts exceeding five acres and not more than twenty, $1 for each additional acre over five.

This letter shows plainly just how the leasing of plots was regarded by the head of the Interior Department, and makes it clear that had he been in Washington at the time, no such contract would have been made as was entered into by his subordinate, or such monstrous form of lease considered as was intended to be made.

General Brisbin's application for the right to place a steamboat on the Yellowstone Lake was made July 12 and granted July 27.

Now comes the Hobart-Douglass application which has caused all this pother. This letter was backed by one from Senator Windom, who recommends the applicants as responsible, and further says that he will call upon the Secretary of the Interior shortly in regard to the matter. The letter of Messrs. Hobart and Douglas was submitted by Mr. Teller to Superintendent Conger. It did not take this gentleman long to see what the plans of this modest "Improvement" Company meant. He says briefly but to the point that the applicants "ask to cover entirely too much ground," and further gives it as his opinion that before long the franchises asked for will be very valuable, and that the public would not bear very patiently the transfer of all these privileges to a single corporation. Mr Conger's judgment on this point shows him to be a person of discernment.

It was shortly after this that, during Secretary Teller's absence from the Department, Mr. M. L. Joslyn, who may be supposed to have been informed of all that had been done in this matter, made the attempt to hand over the Park to the Improvement Company. Incidentally a letter has come out which was addressed by General Brisbin to Congressman Belford, and by him turned over to the Secretary of the Interior with the request that it may receive early attention. It bears directly on the grab of the "Improvement" Company, and on another little monopoly, which might be, if confirmed, a profitable one.

General Brisbin had been granted the right to put his steamer on the Yellowstone Lake, but hearing that the Improvement Company were also to put boats on this sheet of water, he became alarmed and wrote as follows:

FORT KEOGH, M. T., Sept. 25, 1882.

J. B. Belford, Denver, Col.:

MY DEAR BELFORD—Your letter of the 17th is received. Since writing under date of August 21, I have received a letter from the Honorable Secretary of the Interior, of which I will send copy. While I am very thankful to him for his concession, it hardly covers what we asked for. My application asked for the right to build a steamer to navigate the Yellowstone Lake for the pleasure of tourists and such additional steamers from time to time as might be required to accommodate the traveling public. The grant is for one steamer alone. A syndicate composed of Mr. Hobart, of the Northern Pacific Railroad; H. T. Douglass, of St. Paul, and some New Yorkers, notably Rufus Hatch, claim that they have cut under us and have secured the right to put on all the additional steamers for the next ten years, together with all sailboats. I am to be "allowed" to run one steamboat. These fellows claim to have hogged the whole Park, with all rights, privileges, immunities, ordinary and extraordinary. They are to build hotels, put on stages, and do all things. If you don't like the fare and charges at one of the company's hotels you can go to another kept by the same fellows and be charged the same and be given the same fare.

This extraordinary grant does not come from our good friend, Secretary Teller, but from the "assistant secretary," whoever he may be. We have a rule in the army that a commanding officer being temporarily absent from his command, an officer who succeeds him in command shall not grant favors, etc., but shall confine himself to the discharge of merely routine duties. This would be a good rule to adopt in the departments of Washington. This Assistant Secretary of the Interior during the temporary absence of his superior, Judge Teller, takes advantage of his absence to sign away the Park. It went slick. However, we do not care, provided the right to navigate the Yellowstone Lake by us is respected. I will address a letter to these men respectfully requesting that they concede this right to us, and if they do not accede to it we will upset the grant.

I wrote Judge Teller for a copy of the authorized lease granted the syndicate by his assistant secretary, and on receipt of it I will send it to you with my remarks. Meanwhile, will you see the Secretary and advise with him? Ask him to grant an absolute right to navigate the Yellowstone Lake for a term of years for the accommodation and pleasure of tourists. That is the application on file in advance of all others, and that, no doubt, is what Judge Teller intended to grant me.

I cannot find language to express the importance of this matter. Next year 30,000 tourists will be in the Park and 100,000 annually thereafter. The navigation of the Yellowstone Lake for ten years is worth $1,000,000 to the holders. Does that express it sufficiently? Do anything, do everything, Judge, to secure this right. I am very anxious, so write me again as soon as you have seen Judge Teller.

Yours truly, JAMES S. BRISBIN.

This letter is certainly a very amusing one from all points of view. General Brisbin knows very well how valuable the Park is, and being partly in the good thing, he is evidently afraid that the "Improvement" Company will prove too powerful competitors for him. He therefore gives his opinion on their methods and on those of the Interior Department with delightful frankness.

It is hoped that Senator Vest's bill will come up in the Senate within a few days, and we have the strongest reasons for believing that when it does come up, it will pass. We hope to see it become a law before the close of the session.

NEW YORK GAME LAWS.

THERE was introduced into the New York Assembly, by Mr. Townsend, January 15, a bill (No. 8) amendatory of the Game Laws of the State. The bill, which we understand is fathered by a number of the most important and faithfully working protective clubs in Central New York, has very many excellent features. We turn to a consideration of its provisions, commenting on them as we proceed.

Section 1, of Chapter 584 of the laws or 1879 is amended so as to forbid the killing or chasing of deer, the possession of "any jack or other device used in floating," the sale of deer or fresh venison, and the use of dogs, excepting only during the months of September and October. This is certainly a good law for the deer, and will, if enforced, be of great benefit in the way of protecting them. It will be unwelcome to the still-hunters and to those who like to kill the weak and feverish deer of July; but, as we have said before, if our game is to be protected, every class of hunters should be willing to make some sacrifice for the general good.

Section 4 of the same chapter forbids the shooting of fowl, plover and bay birds between the first of April and the first of September, except in the waters of Long Island, where none shall be killed between April 1 and October 1. This change is also to be commended as a step in the right direction, but is open to objection in one or two respects. We should be glad to see the words "Wilson's, commonly called English, snipe" interpolated in this section, since the bird is not anywhere mentioned by name, and is quite as much entitled to protection as any other that flies. This section, however, will receive the severe criticism of those who enjoy bay bird shooting. Ordinarily the first flight of bay birds takes place late in July, and, although it is usually unimportant, there are still many who count upon it. For the benefit of the beach bird shooters, however, the open season for birds of this group should begin August 1. The section should read something like this:

No person shall kill or expose for sale, or have in possession after the same has been killed, any wild duck, goose, brant or coot, in any of the waters of this State between the first day of March and first day of September, except in the waters of Long Island, upon which waters none of said birds may be killed between the first day of March and the first day of October, etc., etc., and no person shall kill or expose for sale, etc., etc., any Wilson's snipe, commonly called English snipe, or any plover, or rail, commonly called mudhen, or gallinule, commonly called water chicken, or any bay or shore birds between the first day of March and the first day of August, etc., etc.

Section 9 is amended to forbid the killing of woodcock and gray or black squirrels, except during the months of September, October and November. A most excellent and wise provision.

Section 10 is amended so as to forbid the killing of ruffed and pinnated grouse, except during the months of September, October and November. This is also a wise amendment, and one which will prevent in many localities the killing off of all the "seed" partridges.

Section 11 forbids the netting or trapping, or having in possession after they have been netted or trapped within the State, any wild pigeon, grouse (of any kind) or quail. Also an excellent change, and one which may remedy present abuses.

Section 13 as amended by Section 3 of Chapter 584, laws 1880, is altered so as to forbid the killing of robins, meadow larks or starlings, except during September, October and November.

Section 14 is amended so as to forbid the killing of small birds by any one who does not possess a license from some responsible natural history society. Not more than five specimens of a kind can be taken within any one year. A similar provision we advocated last year to protect the small birds from the taxidermist and milliner.

Section 15 is amended to forbid the use of "trap or snare, or net or birdlime," or poisoned food against protected game, or the possession of birds' eggs, except under the restrictions of Section 14.

Section 18 is to be amended so as to forbid the taking of trout except by angling, or the taking, at any time, of trout, salmon or land-locked salmon through the ice, except in waters wholly private.

Section 19 will forbid the taking of any California trout, brook trout, or salmon trout or land-locked salmon less than five inches in length or the selling of smaller. It also forbids the taking of any of these Salmonidæ from the State waters, for the purpose of stocking a public or private pond. It should, however, be lawful to do this during the open season. That is, if it is legal to take them to kill, it should also be permitted to capture them to keep alive. The remaining amendments, so far as they concern the fish, consist chiefly of special provisions with regard to different localities, but Section 23 forbids in general the use of nets and other devices, not hook and line, for taking any fish, and persons finding such nets or other devices are authorized to destroy them.

To Section 31, fixing the bounty on wolves, panthers, etc., is added a clause offering a bounty of fifty cents for hawks and owls. An excellent provision.

Section 34 of the existing law is by this law repealed and a provision substituted obliging any one to give testimony as to the commission of offenses under this act, even if it incriminates him or her, but providing that such evidence shall not be used against him or her in any civil or criminal proceeding.

Section 36 is amended so as to permit the selling of hares and rabbits during the month of February, of woodcock, ruffed grouse, pinnated grouse and black and gray squirrels during the month of December, and of fresh venison during the month of November, provided the seller proves that the game was killed during the open season, and also provided that he files with the nearest State game protector an inventory and report of all the game so had in possession or for sale, stating the species and number thereof, together with the proof that it was lawfully taken.

Section 41, which in the existing law is the enacting clause, forbids catching of fish by shutting off or drawing off the water in which they live.

As will be seen from the above quotations and remarks, Assembly bill No. 8 contains a number of most excellent provisions, which deserve the hearty approval and support of the sportsmen of this State. The gentlemen who drew it have endeavored to put their amendments in such form that they will excite as little opposition as possible, and have asked for what they think that they can get rather than for all that they want. If it should become a law, it cannot fail to do a great deal of good, providing, always, that it can be enforced.

The subject of additional game protectors is one that must receive attention. Long Island and the New York markets are now left to take care of themselves, instead of being closely watched, as they should be. We cannot too strongly impress upon our readers that the best way to prevent the illegal killing of game is to prevent its illegal sale. When this is done, the battle is more than half won.

THE LOSS OF THE STEAMSHIP CIMBRIA.

AS usual after a disaster, tinkers and quacks turn up by the score with all manner of advice as to the necessity of still further complicating the "Rule of the Road" at sea with intricate signaling devices. In the desire to be foremost in pressing a cure for accidents which must forever remain possible while the high seas are threaded by the vast fleet of large and fast steamers modern civilization has called into being, the real issue is lost sight of completely. The "Rule of the Road" is the outcome of long experience. It is explicit and plain and calls for no surplusage of detail, which would simply serve to bewilder and increase the chances of misunderstanding and mistake in the few seconds which generally bring about the crisis. The rules are not at fault, accidents are due, not in consequence of their observance, but can invariably be traced to a failure to comply with their precise, but ample directions. No matter what the system of signaling or communicating intentions may be, some people will be stupid, others will be reckless, some become confused; and often has it been noted that no two will exactly agree as to the source of sound, the color of a light, the period of a flash or the distance at which an object is discerned. Physiologists are well aware of the deception practiced upon our senses in moments of excitement or intense expectation, and the unreliable service they render us in critical periods. It may be taken for granted that accidents, especially collisions in a fog, are destined to occur in spite of all precautions adopted or yet suggested.

The gist of the problem is then not so much how to prevent collisions at sea, for that has been provided in the rules established, but how to prevent the wholesale loss of life after the catastrophe which sends the vessel to the bottom in a few moments.

Steamship companies have tenaciously clung to the use of so-called lifeboats which have time and time again been proven next to useless for the saving of life. They have exhibited a stubborn conservatism which is beyond our understanding. Only under the most favorable circumstances, with smooth sea, disciplined crew, brave officers, and above all, ample time, can a steamship's boats be relied on to save the majority of passengers and crew. Such a combination of favorable conditions does not occur once in ten times. This is well enough known to every seaman, and yet steamship companies provide for an isolated case and take most desperate chances in all the nine remaining, idly deluding themselves with the belief they have done all that ingenuity can possibly devise for the safety of the lives committed to their care, when the most casual or superficial consideration of the chances must reveal on the spot to the most ordinary intelligence the perfect absurdity of trusting to boats to escape from a rapidly sinking vessel. Impracticable to launch, filled to swamping, smashed like egg shells against the vessel's sides, and capsizing with their topheavy loads, it has always been to us inexplicable that experienced men and the law could place reliance in what are so obviously faulty in conception and wretched shams in practice.

The saving of life through effective measures is a question so simple and so elementary that it is disgraceful to the age to send steamships to sea without adequate provision, infallible in its working.

All steamers have more or less deck houses and superstructure. Carry iron beams across these, turned down to the rail, much like the framing of a light hurricane deck. On top of these lay large rafts, flat, and wide, and uncapsizable. Construct them with a number of hulls, subdivided in compartments to prevent destruction if pierced by a falling spar or wreckage. Let one of these be placed over the quarter deck, another amidships and a third forward. Let them be two-thirds the width of the steamer's deck, and some fifty to seventy-five feet long each. Have broad ladders and other means of easy access, so that a multitude can be driven up like sheep; step a light rail or reeve a life line about the whole, and provide suitable means for instantaneous detaching. Keep provisions impervious to air and water, and spirits and signals in cans, bags, or other suitable receptacles. Sails, oars, medicine chest, etc., can find ready lodgment in the structure. The whole will cost no more than the worthless boats, will be light in weight, out of the way, and can be utilized in many respects in the economy of every-day life on board. Detail cool men to the necessary stations. Now let the vessel be struck and sinking threatened. Drive the passengers aboard the rafts, and as the vessel takes her last reel before disappearing, detach, and the raft with her precious burden floats clear. It will support all who can find room to stand, and the whole question of rescue is then reduced down to surviving the exposure necessarily entailed by the disaster. Gear likely to foul should of course be cut away while there is time. Elaborate the idea as you wish, and the worst of extremities would leave open a very good chance for life for those now ruthlessly sacrificed to crude, clumsy and impracticable contrivances left us from the Middle Ages. There is nothing new in these suggestions. All the more reason why the law should step in to arouse steamship companies from their lethargy, and force the adoption of plans at once simple and effectively answering the needs of the case.

"NON-CLEANING" RIFLE MATCHES.

IT is very likely that one of the near changes in the shooting rules at Creedmoor will be one making non-cleaning, except between ranges, compulsory. The British National Rifle Association have adopted such a rule and there is much to be said in its favor. There certainly is nothing more artificial than the style of shooting by which the Palma matches were fired. There was an accurate reduction of the conditions under which each shot was fired to the same level and thus followed the long strings of bullseyes, to which we have become accustomed. It was thought impossible to have entire accuracy, unless every minor point was duly looked after; and doubtless this was true; but there is no reason to think that with changed arrangements of rifle and ammunition good scores would not result, even under the non-cleaning rule. If such a result follows, then a great advance will have been scored; for certainly there is far more value in the conclusions reached in a non-cleaning match than in any of the old style small-bore contests. Those trials seem to have brought out about all the points they were capable of developing. They were of great value in pointing the way to something better. It is a more natural step to first try rifles and bullets and powder under the simpler conditions of a clean barrel at each shot than to strive for accuracy with the impediment of a dirty barrel.

One of the first effects of these non-cleaning conditions will be to direct attention to the explosive used. Low grade powders leave a heavy but soft residuum in the barrel, while the quick burning compounds, high priced and carefully made, do not leave so much, but they are more inclined to cake hard. Weather, too, has a very marked influence in this connection, and this makes it necessary to take with some allowance reports of work done by new guns in this cold weather, when judging what they will be able to accomplish on a hot, parched range in midsummer. In modifying the charge to secure good results with the debris of one round lying in the way of the next, it is more than likely that the whole question of explosives may be so overhauled that a revolution in ammunition will be brought about. There are hints of such a coming change, and in trying to reduce the evils of our present powder system to a minimum it is not at all unlikely that some new explosive may find its way to the front.

There needs more careful estimates of the relation between powder charges and the work they do. Where a 550-grain bullet has put behind it charges of powder running all the way from 80 to 110 grains, it is manifest that the bullet starts on its way under various conditions as regards upsetting and initial velocity. What those conditions are for various charges and for differing degrees of hardness of bullet is purely a matter of the most arbitrary conjecture on the part of the majority, if not all, who go to our ranges to shoot. It is certain that if all the powder is burned in each case the force is very different, and if it be not burned then it is just so much foreign and worse than useless matter, cumbering the cartridge shell and then the rifle barrel.

So long as cleaning out after each shot was permitted, these were trifling considerations. We could afford to be wasteful when that waste did not act as a direct clog on our efforts for good scores, but it will not pay to use extra large powder charges, when the surplus in each charge means a point off the record of the next shot.

It may be a question open for fair debate whether it is wise for our National Rifle Association to make a cast-iron rule on the subject of dirty matches. It is worthy of a fair trial, and for certain classes of matches open only to military men, and to be shot with military rifle, the rule ought

certainly to prevail. There are certain civilian marksmen who may prefer the cleaning out after each shot, and it might be better to have the non-cleaning provision inserted in the conditions of numerous matches, rather than have an inflexible general rule passed on the subject. The Amateur Rifle Club at its annual meeting decided to have such a match put on its lists of competitions; and with or without any special legislation on the subject it would seem to be the duty of the Directors of the National Association, for the furtherance of rifle practice, to give this non-cleaning feature a full prominence in the work at Creedmoor during 1883.

WHO OWNS THE GAME?—We have been asked the meaning of a sentence in the report of the trustees of the Cuvier Club, published in our last issue. The sentence is this: "The doctrine of exclusive possession upon one's own land, and also upon the waters which cover the land, has thus been fully affirmed." We do not believe that the writer of the report means to assert that the owner of a piece of land has "exclusive possession" of the game on that land, for such a doctrine is in direct opposition to the established principles upon which game laws are established. He probably means that the owner of the soil has virtually exclusive possession of the game by reason of his power, if he avails himself of the trespass laws, to keep all other men off from the soil. The game, wherever found, is public property until it is reduced to possession by capture in a legitimate manner, no matter whether the captor be the owner of the soil or not. It is high time that this principle should be well understood. If the captor of the game be a trespasser, he can be punished for that offense, but it is important to notice that the law inflicts the penalty not for the killing of the game, but for the trespass. We do not hesitate to say that in our belief the only satisfactory solution of the much-vexed game protection question will be found in the rigid enforcement of suitable trespass laws.

SCOTLAND'S FISHERIES.—In another column we print a very valuable communication relating to the fisheries and fishculture in Scotland. It is gratifying to see that not only in Scotland, but all through the British Islands, there is an awakening on the subject of fishculture. They have led the world on fish protection, but in propagation they have been far behind, and are just beginning to realize it. The appointment of Mr. Archibald Young as Inspector of Salmon Fisheries carries an assurance to fishculturists all over the world that Scotland has the right man in the right place, and if he has proper support in the way of appropriations, there will be no retrograde movement. We are informed that Mr. Young will make an inspection of the Scotch salmon fisheries in the course of next year, which will be followed by a report to the new fishery board. There has been no inspection since 1870, when the late Mr. Frank Buckland and Mr. Young carefully examined all the salmon fishings in the river and on the sea coasts, and in the following year published a report on the effect of recent legislation on the salmon fisheries in Scotland, which contains the latest and fullest official account of these fisheries.

OTTAWA BENCH SHOW.—Everything is looking well for a big show at Ottawa in March. The premium list contains over $1,200 in the regular classes and about $800 in the specials—thirty-eight in number—some of the latter being for English and American dogs only, this as a courtesy to visitors from England and the United States. The club has secured a magnificent building, the Drill Hall, well lighted both night and day and ventilated by skylights in the roof. The hall is built of brick, floored with plank, and is 85 x 185 inside, without a post, pillar or obstruction of any kind.

AN EXCEEDINGLY FRIGID TEMPERATURE.—One of the projectors of the Yellowstone Park "Improvement" Company's attempt to seize the National Park is said to have remarked, last September, "We'll get it, boys; it's a cold day when *I* get left." Well, come to think of it, it has been pretty cold during the past few days; and, according to the latest despatches from Washington, the indications are that the mercury may touch a still lower figure before spring.

NIAGARA FALLS.—The Niagara Falls Association issue a pamphlet relating to the preservation of the Falls, with a petition for legislation on the subject. The petition should receive the signature of every citizen of the State of New York. Copies may be had upon application to the Secretary, Mr. J. B. Harrison, Franklin Falls, N. H.

MEN OF MODERATE MEANS who want to preserve for themselves the opportunity of getting a few days' shooting per year without paying a small fortune for it, ought to be specially interested in seeing to it that the game laws are enforced. So much of the best shooting country is being captured by proprietary clubs, that sportsmen outside of these clubs may well view the situation with alarm

THE MARION'S PUMA, mentioned by Mr. John Easmond in his story of the shipwreck of the Trinity, is to come to the Central Park Managerie, this city. The animal is said to be as tame as a kitten.

OUR READERS are earnestly requested to give us early information of all proposed game law amendments, which may be brought up in the respective States and Territories.

The Sportsman Tourist.

AROUND THE COAST OF FLORIDA.

BY DR. J. A. HENSHALL.

First Paper.

ABOUT the middle of December, 1881, my wife and I arrived in Jacksonville, Florida, on our way to Indian River. Proceeding to that model hotel, the Windsor, we were at once made comfortable by the débonair Orvis, who has that happy, peculiar and inborn faculty of making every one feel at home. Here I found my friend Jordan, of Texas, who had arrived several days previously. The weather was warm and pleasant, and Jacksonville never looked more lovely. The grand old water oaks along the streets never looked so stately, while the gardens were never more profuse of bloom, nor more redolent of fragrance. I found your genial correspondent, Dr. C. J. Kenworthy (Al Fresco), as busy, as courteous, and as enthusiastic as ever.

We left Jacksonville with regret, and embarked on the little steamer Volusia, on which I had made a trip to the head waters of the St. Johns, three years before. Of course I was at once at home with her versatile and ubiquitous master, Capt. Lund, who never seems to sleep, and who seems to be in every part of the boat at one and the same time. Our sail up the St. Johns was made exceedingly pleasant by the company of Mr. N. H. Bishop, the famous canoeist, and his wife, of Lake George, N. Y.

Arriving at Salt Lake, two hundred and seventy-five miles south of Jacksonville, we found the old wooden tramway, connecting Salt Lake with Titusville, a thing of the past. Its pine rails were decayed, its rolling stock had vanished, but its motive power, "the mules," stood calmly and meditatively, harnessed to "thimble and skein" wagons, wagging their ears and whisking their mop-like tails in the same old fashion, as who should say: Railroads may come and go, but we go on forever. As soon as the boat landed, a man hailed me from the wharf house, whom I recognized at once as my old cracker friend, Tom Sellers of Sebastian River.

"Hev you got that long range gun with you this time—ah?" asked Tom.

This was in allusion to my twelve-gauge Parker, with which I had killed a deer on the Sebastian, three years before, at considerably more than a hundred yards.

"Yes, Tom, but the least said about that the better. I have already incurred the everlasting displeasure, withering scorn and virtuous condemnation of the Great American Big Bore and Intensely Practical Still-Hunter for that unlucky feat, and I don't intend straining my gun by any more such shots."

Eight miles of sandy road through the pine woods brought us to Titusville, where we were warmly welcomed by Col. Nichols, of the Titus Hotel. Titusville was but a shadow of its former self. I missed its leading spirits. Col. Titus was dead; S. J. Fox had gone to pastures new. Oh, Ichabod! Ichabod! Its streets were deserted, several of its stores burnt down, its long pier dilapidated, and its railroad crumbling away.

"What is the matter with Titusville?" I inquired of a boatman leaning against a fence whittling.

"Rockledge has got the bulge on us," answered he, without looking up.

The hotels, however, are still alive, and the stores of Messrs. Dixon, Moore, Weger and Smith still keep up a good show of business. But I missed the old-time bustle and excitement of "Sandpoint." Mr. Weger and his son are doing all in their power to promote the welfare of the place; the former was erecting a new store building, or "block," and the latter had founded a weekly paper, the *Florida Star*. Much is expected from the new railroad, now in course of construction, from Palatka to Indian River. The Lund House is well-kept by Mr. Carlisle, and the Titus Hotel was never so ably managed as it is now by Col. Nichols, formerly of the Windsor of Jacksonville, and the Kimball of Atlanta. Titusville will always be a favorite resort for the sportsman on account of its contiguous hunting grounds.

I found Capt. Strobhar's schooner Rambler, in which we were to make our cruise around the peninsula of Florida, not quite finished in her cabin accommodations, but which were being rapidly pushed to completion by her energetic skipper and the available force at his command. However, with the pleasant company of Mr. and Mrs. N. H. Bishop, Mr. and Mrs. B. A. Mayor, of Austin, Minn., Mr. C. L. Jordan and other guests of the hotel, the time passed pleasantly. There was a party of young men from Cazenovia, N. Y., that had gone into camp just above the village, where they were building a boat while waiting for their leader and guide, Mr. Card of "rotary trap" fame. Capt. Burnham, of Cape Canaveral Lighthouse, was over for a few days with his fine sloop Oceala. I found that the quality and accommodations of the boats of Indian River were vastly improved since my visit three years before, and that my prediction in reference to the introduction of the sharpie had been verified. Skippers Hammon, Bowers, Hendrickson and Richards have now fine boats of this model of from seven to ten tons, which are admirably adapted to these shallow waters.

Among the guests of the hotel was an English naturalist, whose daily occupation was the collecting of bird skins. His room was a chamber of horrors to the servants, who had a decided antipathy to arsenic and other "pizons," and the peculiar odors of his apartment. The last straw was piled on, one day, when he brought in several turkey buzzards; there was then great danger of his being "boycotted" by the entire retinue. He said to me one day:

"I could get more birds ye know, if I had a boat, ye know; but I cawn't sail myself, ye know, and I cawn't abide these blarsted boatmen, ye know."

There is a resident taxidermist at Titusville, Mr. Scrimageour, who is a genius in his way. He had some really fine specimens of mounted birds and mammals. He had just returned from a hunt in the scrub, where he killed five deer and a panther. While I was in his shop a woman and a boy brought in a fresh panther's skin for sale; the boy had shot it. Mr. S. had a stock of the best fishing tackle for Florida waters that I had seen. His trolling baits were not the insufficient pike or pickerel spoons usually sold, but substantial squids, and heavy block tin spinners revolving their entire length on large and strong single hooks, such as are required for the large marine fish of these waters. Being an old New York angler, he knows what to provide for the wants of sportsmen in Florida.

The day before Christmas we went to Rockledge, twenty miles down the river, and were most hospitably entertained by Mr. Wilkinson, formerly of Richmond, Va. Mr. W. has purchased the orange grove and buildings formerly owned by Mr. Hatch, and has erected a fine roomy hotel, and though not entirely completed, we were nevertheless made quite comfortable. In the evening there was a Christmas tree for his pretty grandchildren, and a bonfire on the lawn.

The scene was a beautiful and romantic one; the long tongues of flame leaping upward, the myriad of sparks sailing through the broad green fronds of the palmettoes, and the whole reflected and intensified on the placid bosom of Indian River formed a spectacle both pleasing and grand. But even with the accompanying salvo of small arms, it was difficult to realize, on so balmy and pleasant a night, the air heavy with the fragrance of flowers and foliage, that it was a "Christmas" jubilee. But, nevertheless, when the fire had burned down to a bed of glowing coals and embers, and we retired into the house, the benison of Tiny Tim found an echo in our hearts: "God Bless Us Every One."

Rockledge had improved very much since my last visit. The orange groves were all now in full bearing—new houses, several stores, and a schoolhouse had been built, and a wooden tramway was being constructed to Lake Poinsett, the head of navigation on the St. Johns, and but three miles distant, to which point a steamer made three trips a week from Sanford, connecting at the latter place with the DeBary line for Savannah. The produce of the lower country was being shipped by this route, and supplies brought back—all of which explained why Rockledge had "got the bulge on Sandpoint." Rockledge is remarkable as being one of the very few places in Florida where the people are not anxious to sell their homes. Her people are prospering and value their orange groves too highly to sell them even at extraordinary prices.

I would here caution the public against the many land agents and land swindles in Florida. Millions of acres of the poorest pine, scrub, and swamp lands are being extensively advertised in glowing colors and at low prices, but which are not worth the taxes paid on them. Beware of the man or company whose lands are represented to be high, dry, and rolling, and located in the "heart of the orange belt," and which are offered at ten or fifteen dollars an acre. It is all a delusion and a snare. There are good lands in Florida suitable for the culture of sub-tropical fruits, early vegetables, etc., but they are not advertised for sale and cannot be bought for a song. Good wine needs no bush. Good land in Florida, like good land in any other State, does not go begging for customers and always commands a good price. Where there is one acre of good soil in Florida there are a thousand acres of worthless land so far as the culture of semi-tropical products is concerned. I feel constrained to say this now, from what I have seen in that State, and on account of the many blighted hopes, disappointed ambitions, and impoverished purses to be laid up against the land swindlers, petty and grand, of Florida.

We spent Christmas Day (Sunday) very pleasantly at Rockledge with old friends, and on the next day sailed for Eau Gallie, where we arrived after nightfall and found a Christmas hop in progress at 'the college," in which we participated and had a most enjoyable time. There was a Christmas tree with a present for each guest. Bethel Stewart, of Merritt's Island, was the recipient of a large "gopher" (land tortoise) which had been swung up to one of the lower limbs of the tree. My present was a half-dozen roasting ears of green corn. Think of it—Christmas and green corn! We acknowledged the corn, however, and mingled in the mazy.

The next day we set sail for San Sebastian River, passing Melbourne on Crane Creek, and stopping a short time at Turkey Creek, where Charles Creech is still living in the cabin on the bluff, though he had taken unto himself a helpmeet since my last visit. We had a fair wind to Sebastian and sailed up to our old "Cabbage Camp," just above the mouth of the North Prong, a short distance above Mr. Kane's cabin on the main river. Here we jumped two deer within a hundred yards of camp. Jordan and I took the dingey and our shotguns, and knocked down several ducks

We saw a large flock of coots, or mudhens, near the point of a small mangrove island, rounding which, they rose at forty yards, when we discharged two barrels each and picked up twenty-four coots. The skipper carried a dozen to Mr. Kane's family, while Jordan and I proceeded to dress the remainder. I gave him his choice, to take off the feathers or dress them; he chose the latter. I had the feathers off of twelve coots before he had drawn three, and this is how to do it: Chop off the wings close to the body with a hunting knife, attach a loop of twine to the limb of a small tree, engage the head of a coot in the loop, make a circular incision around the neck, through the skin, then pull the skin with both hands down to the tail, where it is severed at one cut of the knife, cut off the legs at the tarsal joint, and the coot is ready for drawing, washing and the pot. The coots of Florida are very fat, the skin slipping off readily, and with the skin goes the oily, fishy flavor. When prepared in this way and baked brown, coots are nearly as palatable as ducks, and are really preferred by the natives of that State.

One day my wife was left alone for a short time aboard the Rambler, which was moored close to the bank, to which a gangplank extended She was engaged in pressing ferns and wild flowers, when a noise in the scrub attracted her attention. Catching a glimpse of several large, black objects, her first thought was "bears;" they were moving toward the boat. She is of delicate frame and nervous organization, but "true grit." She succeeded in throwing the gangplank overboard, and then procured a pail of hot water from the galley, and prepared to give them a warm reception. But her fears were soon quieted as three of Kane's long-legged black hogs emerged from the scrub.

In the afternoon my wife and I went fishing. I took an eight-ounce rod and black-bass tackle that I had been using that morning up the creek, and rowed out into the bay abreast of Kane's cabin. I put on a golden shiner some six inches long for bait, made a cast or two, when I got a tremendous strike. The reel hummed like a buzz-saw, and the fish took twenty yards of line before I could check him. I found then that I had caught a Tartar. He towed the boart around as I played him, but occasionally would make another fierce rush and take many yards of line. My wife was an anxious and excited spectator of the contest, for the fish was a very heavy one and my tackle light. The little rod bent nearly double under the undue strain, but at last I had him under control, within fifteen feet of the boat, where I held him until he was exhausted. Finally, after some twenty minutes had elapsed, I had him alongside. I had no gaff hook, and no way to land him. I took the snell of the

hook in my left hand and found that the hook was firmly imbedded in the angle of his jaw, the shank standing out at right angles. I stroked his golden sides as he lay calmly on the surface without moving a fin. It was a redfish of fully thirty pounds. I then tried to insert my hand under his gill-cover, when he gave his head a sudden flirt, broke the hook in my hand and slowly sank toward the bottom. I heard a deep sigh, turned my head, and saw my wife with clasped hands gazing with longing eyes at the slowly disappearing mass of red gold.

"It's too bad to lose him!" said she.

"My dear, we don't want him. I only hope he may live to give some brother angler as much sport as he gave me."

We spent two more weeks on Indian River and its tributaries, going down as far as Fort Capron and the inlet opposite, and had many delightful experiences, fishing, hunting, shooting and collecting curious and marine specimens, and feasting on fish, game, oysters, crabs, turtle, oranges, bananas, guavas, etc., etc. As this was but an experimental or trial trip of the Rambler, we returned to Titusville. Mr. and Mrs. Bishop departed for Lake Worth, and Mr. and Mrs. Mayor and my wife returned to Jacksonville and the North.

We now began our final preparations for our cruise around the coast to Cedar Keys. Many of the boatmen on the river did not believe we were serious in our intentions, as a voyage around the peninsula had never been undertaken by any boat from that section. They were quite confident that we would proceed no further than Jupiter, or Lake Worth. Strange to say, though, there was not one to offer his services to sail the boat on this "big voyage," while for a run down to Jupiter a dozen would have offered, whose knowledge of seamanship, from their own account, was adequate to the circumnavigation of the globe. The Lake Worth boatmen, however, who made occasional trips in the summer to Key Largo and Key West, were not so incredulous, but looked upon the enterprise with doubt and suspicion, and forebodings of evil and disaster. But our ardor was not to be dampened, nor our enthusiasm quenched by any amount of blue water; and if the Rambler held together, we had a crew that would not desert her.

The Rambler was a small schooner, thirty-four feet in length, ten feet beam, and drawing two feet aft; the bottom was half round, with a good clean bow, and stern cut away somewhat like the sharpie. She was strongly built, a good sailor, with a clean run, though rather slow with cruising rig, but a dryer boat never plowed salt water. The cabin was quite roomy, eight by fifteen feet, with four and a half feet head room. The crew consisted of the "Squire" and "Jack" of Connecticut, "Buck" of Texas, the "Skipper," myself, and "Cuff." Cuff was the Skipper's dog, a cross between setter and hound, and a good all 'round dog on deer, turkey and quail. The Skipper was to sail the Rambler as far as Jupiter, at the foot of Indian River, where I was to take command and sail her by chart, compass and dead reckoning down the Atlantic coast to Key West, thence up the Gulf coast to Cedar Keys. As I fully described Indian River and the country below in the FOREST AND STREAM several years ago, I will not devote much space to that section in the e papers.

At length, on the morning of January 16, 1882, with a southeast wind and close-hauled, we departed from Titusville. As we went bounding along, Jack, who frequently "drops into poetry" when the occasion is fitting, stood upon the cabin roof and melodramatically exclaimed:

"Once more upon the waters! yet once more!
And the waves bound beneath me as a steed
That knows his rider. Welcome to the roar!"

His friend, the Squire, more matter-of-fact, and somewhat slangy, said: "Oh, take a tumble, and give us a rest!"

But Jack, with the spirit strong upon him, and with "the poet's eye in fine frenzy rolling," continued;

"I am as a weed,
Flung from the rock, on Ocean's foam to sail
Where'er the surge may sweep, the tempest's breath prevail."

"Well, my fine Jimpson weed, we're coming about, and if you don't step down and out the foreboom will fire you overboard like fat off a hot shovel," remarked the Squire, while the Skipper sang out:

"Avast, there; belay your jaw-tackle and come aft! Hard a-lee!"

Jack, in duty bound, tumbled aft.

We passed in succession Addison's Point, Pine Island, Jones's Point, Rocky Point, City Point, Oleander Point, and were soon abreast of Rockledge. That night we made San Sebastian River. We sailed up to the forks, then poled up the South Prong three or four miles. The following day Buck killed a yearling buck with his little 38-cal. Winchester.

The streams on the east coast of Florida are usually narrow and deep, with perpendicular banks, allowing a boat to lay close alongside. Our schooner was thus moored, with bow and stern lines, close to a big cypress tree, the stream being not more than thirty feet wide. Within fifty yards, on the high bank, were the poles and deer-skin scaffolds of a recent Indian camp. Squire had a wholesome fear of Indians, whom we heard were now in the neighborhood on their annual winter deer hunt.

Just above the Rambler the stream made a detour in the form of a loop, turning back on itself, so that for a short distance, near the schooner, the stream flowed inopposite directions, separated by a mere strip of land, but five yards in width at its narrowest point, and where there was a small connecting branch of water. The boys supposed the water to which this branch led to be a bayou or pond; but one day I discovered the true nature of it, and found that the loop or bend was upward of half a mile in extent. The banks being high and densely covered with trees, bushes and vines, completely hid the schooner from the view of anyone passing along the parallel portion of the stream. I mentioned this peculiarity to Jack one day, who requested me not to "give it away," as he had now an opportunity to "play it" on the Squire, who was then out in the pines hunting with Buck. Jack had been nursing his wrath to keep it cool for some time. For the next hour Jack and the Skipper were closely closeted in the cabin, their brains big with some scheme. They constructed a very passable figure of the body and head of an Indian—a stuffed calico shirt with outstretched arms, and the head surmounted by the peculiar turban worn by Florida Indians. This was carefully stowed away for future use.

That night the Skipper was telling of a small lake, formed by an expansion of the stream a mile above, which fairly teemed with black bass ranging from ten to twenty pounds in weight. Of course this was all pure fiction, but it served its purpose, for Squire, who was a zealous fisherman, was at once deeply interested. The Skipper described the place so minutely that he could not miss it. The next morning at bat Squire had a great desire to kill a deer, so he started up the river alone in the Waif, the dingey, with a good supply of fishing tackle. He spoke of taking a gun, but Jack dissuaded him. He was no sooner out of sight around the bend in the river than Jack and the Skipper took their guns, rifles and pistols, and the Indian dummy, got into the Daisy, a Stranahan canvas boat, and proceeded to the "cut off," passing into the upper stream half a mile ahead of Squire. They hauled their boat into the saw-grass in a sheltered cove not more than fifty yards from the Rambler, and waited for their victim. He was not long in coming, for he was anxious to reach the famous lake. Rowing along, admiring the sub-tropical beauties of the stream, the clumps of cabbage palms, the green bay thickets, the moss-draped water-oaks, the profusion of vines and climbing shrubs, and impressed by the awe-inspiring and death-like stillness of stream and forest, he approached within fifty yards of the ambush. Suddenly; Bang! Bang! Bang; Pop! Pop! Pop! Ping! Ping! Ping! belch forth the guns, pistols and rifles of Jack and the Skipper, accompanied by a series of the most diabolic, demoniac and unearthly yells, screams and screeches that ever issued from human throats, while the Indian dummy was raised aloft above the saw-grass, its arms waving wildly, and its body dancing and swinging about in a perfect frenzy of rage. Whang! Pop! Bang! went the guns. Wough! Wough! Whoo-oop! Ya-hoo! screamed the boys.

But the Squire, his eyes staring wildly at the whirling dummy, ducking his head at every bang of the guns, and the perspiration streaming down his face, was going down the river at a rate that even Hanlan would have envied. Then was heard from the saw-grass the most startling, surprising and indescribable sounds imaginable: snorting, choking, sobbing and groaning. It may have been the smothered cachinations, or suppressed hysterical laughter of Jack and the Skipper, but I rather think it was the Indian dummy that had worked itself into a fit.

Squire returned to the schooner, which he found deserted, for Buck and I hid ourselves in the deepest recesses of the woods the moment the dummy was taken so bad. He searched the cabin thoroughly, but not a gun, pistol, or other weapon could he find. He then sat down on deck to rest, with the tiller by his side, keeping a sharp lookout. It was not long, ere looking up stream, he saw the Indian dummy paddling a canoe around the bend, and one or two others with him, partly hid, but also paddling furiously. One more reassuring look and Squire "lit out" for the piny woods. I will here drop the mantle of charity on the scene, but this, while shutting out from view the actors, could not subdue the sulphurous odor which pervaded the atmosphere for the rest of the day, permeating the pine woods and hamaks, and diffusing itself along the surface of the river.

Natural History.

To insure prompt attention, communications should be addressed to the Forest and Stream Publishing Co., and not to individuals, in whose absence from the office matters of importance are liable to delay.

THE BIRDS OF MAINE.

With Annotations of their Comparative Abundance, Dates of Migration, Breeding Habits, etc.

BY EVERETT SMITH.

FAMILY TYRANNIDÆ: FLYCATCHERS.

113. Kingbird, Tyrant Flycatcher—*Muscicapa tyranna* Aud.; *Tyrannus carolinensis* Ridg. 304, Cs. 368.—Abundant. Arrives in May. Breeds; nests on trees, frequently in orchards and near houses. Lays from four to six yellowish white eggs with purple and brown blotches, in June. Deservedly a favorite bird with the farmers. A pair of kingbirds will not only give warning by their chattering outcries of the approach of a hawk or crow to the vicinity of their nest, but they will boldly attack any rapacious bird that ventures near, and by their pestering, drive away the would-be robber of poultry yards or birds' nests.

114. Western Kiugbird, Arkansas Flycatcher—*Muscicopa verticalis* Aud.; *Tyrannus verticalis* Ridg. 306, Cs. 370.—Accidental straggler from the Western States. A single specimen reported as taken in Maine. (Henry Bryant, M. D., in "Proceedings Boston Soc. Nat. Hist., X, 96, 1865.) This record mentions the specimen as received from Plympton, Me. There is no such town in this State, and the nearest to the name is Plymouth, Penobscot county.

In regard to this record of this specimen, Mr. B. A. Purdie says (Bull. Nutt. Orn. Club, Sept., 1876, p. 73) the bird was "shot at Eliot, Me., by Mr. George E. Brown."

115. Great Crested Flycatcher—*Muscicapa crinita* Aud.; *Myiarchus crinitis* Ridg. 312, Cs. 373.—Common in Western Maine. Rare east of the Kennebec Valley. Arrives early in May. Breeds usually on high trees, lays four or more eggs, buff with purple lines and spots, in June. This species has been a regular summer visitant for many years in the vicinity of Portland city, where it breeds, but the birds are never abundant here. Quite common along the southwestern border of the State every summer.

116. Phœbe Flycatcher, Common Pewee—*Muscicapa fusca* Aud.; *Sayornis fuscus* Ridg. 315, Cs. 379.—Abundant. Arrives early in April. Breeds, usually on timbers of bridges, sheds, etc., also upon rock ledges. Nests in May, and lays from four to six pure white eggs, rarely slightly spotted. Two broods each season.

117. Olive-sided or Cooper's Flycatcher—*Muscicapa cooperi* Aud.; *Contopus borealis* Ridg. 318, Cs. 380.—Common. Arrives in May. Breeds on trees, and lays four or more yellowish white eggs with brown spots, in June. The eggs much resembles those of the kingbird in form and coloration, but are about one-third smaller. While in company with my friend Nathan Clifford Brown, at Cape Elizabeth, June 26, 1882, I found a nest of this species with four eggs, upon a fir tree twelve feet in height, in an abandoned pasture sparsely overgrown with young trees. This nest was compactly built of twigs and neatly lined with gray tree moss such as grew upon the tree, and was placed upon the end of a lower branch eight feet from the ground.

118. Wood Pewee Flycatcher—*Muscicapa virens* Aud.; *Contopus virens* Ridg. 320, Cs. 382.—Abundant. Arrives in May. Breeds on trees, lays four or more eggs, cream color with reddish brown spots, which form a ring around larger end of the egg.

119. Yellow-bellied Flycatcher,—*Muscicapa flaviventris* Aud.; *Empidonax flaviventris* Ridg. 322, Cs. 388.—Common, but nowhere abundant. Arrives in May. Breeds; lays four or more eggs, white with reddish spots, in June. Mr. N. A. Eddy has given me an interesting account of a nest with four eggs, found June 13, 1880, at Little Deer Island, Penobscot county, Me. "This nest was on a large root that formed a sort of shelf in under a low stump. It was composed of a mass of dead leaves, pieces of decayed wood, evergreens, ferns, birch bark, and mosses, arranged in form and appearance much like the nest of the pewee, (*S. fuscus*) and lined with fine roots and grasses. Diameter 2,12 inches, depth 1.0 inch; eggs (.65x.50), white with numerous reddish spots over the whole surface, and forming a ring about the greater end."

120. Traill's Flycatcher.—*Muscicapa traillii* Aud.; *Empidonax pusillus traillii* Ridg. 325a; *Empidonax traillii* Cs.385.—Common. Arrives in May. Breeds on trees and bushes; lays four or five yellowish white eggs with reddish brown spots, in June.

121. Least Flycatcher.—*Muscicapa minima* Aud.; *Empidonax minimus* Ridg. 326, Cs. 387.—Common. Arrives early in May. Breeds on bushes and trees; lays four pure white eggs. Frequents cities, gardens, and open lands in the vicinity of houses more commonly than other flycatchers of the same genus.

FAMILY TROCHILIDÆ: HUMMINGBIRDS.

122. Ruby-throated Hummingbird—*Trochilus colubris* Aud., Ridg. 335, Cs. 409.—Common. Arrives early in May. Breeds, on trees, the nest usually made on a branch in such a manner as to appear part of it. The internal dimensions of the nest of this diminutive bird are about an inch in depth and barely more in breadth. The eggs are pure white, without gloss, .50x.35 inches. In the summer of 1877 (August) Mr. A. Parker caught a male hummingbird of this species at Boyd Lake, Piscataquis county, Me., and kept it alive by feeding with sugar dissolved in water. After two months' confinement in a room, it became so tame that when liberated it was easily recaptured. By presenting the finger the bird would leave its perch and alight upon it. This bird was afterward presented to Frank D. Pullen, Esq., of Bangor, to whom I am indebted for a detailed account of this incident. The beautiful pet was kept in confinement for many months, and was finally killed, accidentally, by a dog. It would be no difficult undertaking to keep a number of these birds in a conservatory of flowering plants, and their presence would add much to the beauty and attraction of such a place. The birds can be captured by the aid of an insect net, or attracted within a room or enclosure by means of flowers displayed.

FAMILY CYPSELIDÆ: SWIFTS.

123. Chimney Swift, "Chimney Swallow"—*Chætura pelasgia* Aud., Cs. 405; *Chætura pelasgica* Ridg. 351 —Abundant. Arrives in May. Breeds; usually in colonies, in chimneys or hollow trees. Occasionally birds of this species affix their peculiar nests to the inner walls of the deserted cabins of lumbermen. Lays four white eggs, in June. The swifts often arrive in spring from the South in large flocks of many hundreds of birds together. And I have observed a colony of hundreds occupying a single chimney of a dwelling house. It was interesting to note the regularity with which these birds assembled at twilight every evening. After repeated circlings and incessant twitterings, continued oft.times for half an hour, and when all appeared to have reached home from the wanderings of the day, the descent into the chimney was made with great precision. This was accomplished by a gradual closing of the ranks of the birds while continuing their extremely rapid flight in a horizontal circle directly above the chimney. When the descent began, this circle of birds assumed the form a huge black hollow tunnel or cone with its inverted apex entering the chimney, and barely a minute then elapsed ere all the birds were housed for the night.

FAMILY CAPRIMULGIDÆ: WHIPPOORWILLS, NIGHTHAWKS.

124. Whippoorwill—*Caprimulgus vociferus* Aud., Ridg. 354; *Antrostomus vociferus* Cs. 397. Common in restricted localities. Arrives in May; breeds on the ground, lays two eggs, yellowish white with purple and brown spots and lines over whole surface. This bird, unlike the next species, is strictly nocturnal or crepuscular in its habits, remaining in seclusion during the open daylight, but actively seeking its food during the evening and early morning, and at all times during moonlight nights. It seeks its insect food much upon the ground, and frequents the gardens about farmhouses for this purpose. I have noted the presence of this bird within a half dozen miles of Bangor, but not further east. Mr. Boardman reports it, however, near Calais. I have never known of its occurrence in the close vicinity of Portland, yet have commonly found it within twenty miles west of this city, as well as in other localities in Maine. The species is very local in it habits, not only in selecting its breeding places, but I have known the birds to visit the same spots night after night, going from one to another with the greatest regularity, so that I knew just where to find them at dusk, midnight, or early morning.

125. Nighthawk—*Chordeiles virginianus* Aud.; *Chordeiles popetue* Ridg. 357; *Chordeiles popetue* Cs. 399.—Abundant. Arrives in May. Breeds on the ground, usually forming a depression if on light soil and slightly lining it with grass. But often no appearance of a nest is seen where the eggs are laid. It not infrequently breeds on the flat, graveled roofs of buildings in the cities. In June lays two eggs, drab, with fine dark streaks, giving them a gray marbled appearance. Diurnal as well as crepuscular in its habits, and seeks its food (insects) chiefly, if not solely, in the air. It is on the wing at all times during moonlight nights, and is quite active during the daytime also. In the stomach of an adult male nighthawk, shot at Fryeburg, Oxford county, Me., July 7, 1882, I found an ichneumon fly, a black cricket, about twenty small grasshoppers, and many small, hard insects, all freshly devoured. The bird was taken at noon of a bright sunny day.

FAMILY CUCULIDÆ: CUCKOOS.

126. Black-billed Cuckoo—*Coccyzus erythrophthalmus* Aud., Ridg. 388., Cs. 428.—Common. Arrives in May. Breeds, usually on bushes; lays from four to six pale greenish blue eggs in June. There is an old refrain which states that "the cuckoo is a bonny bird, it sings in the night." And it is true that the peculiar notes of the cuckoo are heard during moonlight summer nights, as well as at all times of the day.

127. Yellow-billed Cuckoo—*Coccyzus americanus* Aud., Ridg. 387, Cs. 429.—Rare. Probably not a regular visitant. Mr. Boardman has procured but two specimens in Eastern Maine, during a long series of years of collecting. I have taken a single specimen in Western Maine (Cumberland county).

FAMILY ALCEDINIDÆ: KINGFISHERS.

128. Belted Kingfisher—*Alcedo alcyon* Aud.; *Ceryle alcyon* Ridg. 382, Cs. 423.—Common. Arrives early in April. Breeds, in holes made by itself in banks or cliffs. Lays from five to seven pure white eggs, in May and June. The kingfishers are to be found everywhere along our coast, and throughout the interior about the lakes, rivers, and even very small streams. It remains in the autumn until the streams are frozen over, and it has been asserted that occasionally these birds have remained, on the coast, throughout the entire winter. I have at various times observed them in Maine within the limits of every month excepting January and February.

FAMILY PICIDÆ: WOODPECKERS.

129. Pileated Woodpecker—*Picus pileatus* Aud.; *Hylotomus pileatus* Ridg. 371, Cs. 432.—Not uncommon in densely wooded regions, but not found on the coast. Nowhere abundant in Maine, and rarely more than two or three found together. Resident throughout the year, and no doubt breeds here, although the discovery of its eggs has not been reported. This is the largest of the northern woodpeckers, and is locally known by the lumbermen and hunters by various names, as "cock of the woods," "red-headed woodcock," "black woodcock," etc. The pileated woodpeckers are found far north in Canada, and are widely distributed through the United States. I have found them more abundant in Virginia than elsewhere, and in favorite localities, have observed as many as five adults upon a single tree together. A rare occurrence, even where these birds were so abundant as in the locality referred to. This species, as also every species of woodpecker found in Maine, usually lays its eggs in a hole excavated by the bird with its bill in the trunk of a tree, most frequently such a one as is dead or partially decayed.

130. Hairy Woodpecker—*Picus villosus* Aud.; Ridg. 360, Cs. 438.—Common. Resident. Breeds. Lays from four to six smooth white eggs. Woodpeckers of this species are most commonly observed here during the late autumn and in the winter, when they frequent orchards, groves of maples and other deciduous trees, and the pastures or ravines overgrown with alder bushes. Not so abundant as the next named species.

131. Downy Woodpecker—*Picus pubescens* Aud., Ridg. 361, Cs. 440.—Abundant. Resident. Breeds. Lays six white eggs, in June. This diminutive facsimile of the hairy woodpecker is the most common species of woodpecker in Maine, as it is also the smallest.

132. Black-backed Woodpecker.—*Picus arcticus* Aud.; *Picoides arcticus* Ridg. 367, Cs. 443.—Common in Northern and Central Maine. Resident, and undoubtedly breeds. Of the two species of three-toed woodpeckers, this is the most common. Its favorite haunts are tracts of forest through which fires have spread and partially killed the trees. I have never found them abundant anywhere in Maine, but in various localities in Canada it appears to be the most common species, and I have there seen a dozen specimens within a quarter mile radius. The black-backed woodpecker frequents the coniferous trees, such as spruce, fir and hackmatack, from which it procures its food in the usual manner of woodpeckers, and I have never observed a single instance of this bird alighting upon any other than coniferous trees. Its favorite food consists of the soft flat worms, white with brown heads, of an inch or less in length, which it finds imbedded in the trunks of living trees such as are above mentioned. Upon a single occasion only have I observed this woodpecker alight upon a tree absolutely dead, and even then not in search of food, but only as an available resting place after a long flight across fields. Its flight, when protracted, is very undulating, but rapid, and the course through the air is a series of vertical curves, each similar to such as is described by a bullet shot from a rifle. Upon the ascending or first part of each curve the wings beat so rapidly as to produce a rolling sound, so loud as to be heard at a distance of two hundred yards or more. A good imitation of this sound may be produced, by drawing one's fingers rapidly across round wooden fence slats of one inch diameter, placed two or three inches apart—a mellow roll, unlike either the whistle of a duck's wings, or the whir of the wings of a grouse. Upon the descending, or latter and shorter portion of each curve of flight, the wings are closed, and are therefore then silent for a moment. The cry of this bird, easily recognized as that of a woodpecker by any person familiar with the family habits, is a harsh rattling scream, that ends in a sort of chuckle produced by a unison of the rattling notes. This woodpecker is very tame, and appears to be quite indifferent to the presence of a human being. I have approached within fifteen feet of one, and retired without disturbing the bird in the least, although I was evidently observed.

I remember upon one occasion trying in vain to alarm one by repeated blows with the butt of my rifle upon the trunk of a spruce tree of nine inches diameter, while the bird was on the tree barely twenty feet above. Although so common in certain localities, yet I have seen no more than two together upon one tree. All the specimens of the black-backed three-toed woodpeckers procured by myself have been marked with white upon a few of the longest soft feathers of the back, and upon each was found the obscure line of white extending backward from the eye, and which is exposed by slightly parting the feathers. The males have a large crown patch of orange or lemon yellow; crowns of females of a bluish black like the rest of upper parts.

133. Banded Woodpecker—*Picus hirsutus* Aud.; *Picoides tridactylus americanus* Ridg. 368.; *Picoides americanus* Cs. 444.—Not common. Probably resident and breeds. The banded three-toed woodpecker appears to be nowhere a very common species, and my observations of its habits have been more limited than of the black-backed species, from which it may easily be distinguished by the smaller size, and white bands across the back, in both sexes. This woodpecker is of a more retiring and suspicious nature than the preceding species, and it is partly on this account, as well as from the fact of its habitat being the dense evergreen forests, that so few are observed. I once endeavored to procure a specimen with aid of a revolver pistol, after having watched its movements for a long time. It would not permit so near an approach as the two black-backed woodpeckers in whose company it appeared to be, and my presence produced a watchful restlessness that prohibited a still shot. After following and shooting at this bird a second time it left the vicinity, although its companions manifested no concern at the reports of the pistol.

134. Yellow-bellied Woodpecker—*Picus varius* Aud.; *Sphyrapicus varius* Ridg. 369, Cs. 446.—Common. Arrives in April. Breeds. Lays from four to six pure white eggs in May and June. This species often remains quite late in the autumn, but I have not known of its occurrence here in winter. It is here sometimes known as "sap-sucker."

135. Red-headed Woodpecker—*Picus erythrocephalus* Aud.; *Melanerpes erythrocephalus* Ridg. 375, Cs. 453.—Rare visitant from the South. In the autumn of 1877 this species appeared to be not uncommon in Western Maine, and several specimens were killed in Cumberland county. Its occurrence here is now apparently less infrequent than formerly, and possibly a few may breed here. Mr. Luther Redlon observed one in Portland May 25, 1879. Mr. Manly Hardy shot one as far east as Machias River, in Washington county, and writes me that it was "the only one I have seen alive in over forty years' traveling in Maine woods." A specimen was killed near Newport, Me., and one at Bangor, Me., in the spring of 1881, Mr. Hardy informs me.

A specimen was shot by Mr. Warren Noyes in the town of Gilead, Oxford county, early in the month of June, 1881. I observed three adult males in a grove of oak trees near Portland city, April 3, 1882. The woodpeckers of this species are not such habitual peckers of wood as are many others of the same family, but feed principally upon nuts and fruits, although insects are also eaten. In the stomachs of several specimens taken early in spring, I have found the undigested contents to consist solely of small bits of the kernels of acorns. Soft-shelled nuts, such as acorns and beechnuts are readily opened by these birds, and appear to form their chief food in some localities when other food is less abundant.

136. Golden-winged Woodpecker—*Picus auratus* Aud.; *Colaptes auratus* Ridg. 378, Cs. 457. Abundant. Arrives early in April. Breeds in tree holes, hollow posts, etc. Lays from five to seven eggs, glossy white, of a rosy hue when fresh, in May and June. This woodpecker, or "yellow-hammer," as it is locally termed in Maine, is the most beautiful of all our woodpeckers, as well as the most common species in Maine. It frequents cultivated lands rather than dense forests, is fond of fruit, especially cherries, but like the robins, with which it associates during migrations, seeks its food upon the ground more frequently than upon trees. Mr. Edward Tucker has given me an interesting account of a nest of this species, which he found in Kennebec county, Maine, which was used to his knowledge, for five consecutive years, although eggs were taken from it each year. "Each year the birds would make the hole a little deeper, and the last time I visited it the hole was over two feet in depth. One season twenty-nine eggs were taken from it, from three to six at one time. Of the last six eggs taken, one was but half the size of the others." This species is migratory, and associates in considerable numbers previous to departure in the autumn. None are found here in winter.

[TO BE CONTINUED.]

STRANGE SEA MONSTERS.

WE have received for publication, from Prof. Spencer F. Baird, of the United States Fish Commission, a letter from an officer of the Navy, giving some observations made by him on the coast of Massachusetts in 1878. The occurrence is of special interest in connection with the recent article in these columns on the "Sea Serpent," and we trust that further details from Captain Hawes may be had before long. Captain Platt's letter is as follows:

U. S. NITRE DEPOT, Malden, Mass., Dec. 21, 1882.

Prof. Spencer F. Baird, U. S. Commissioner of Fisheries, Washington, D. C.:

Dear Sir—Your letter of the 5th came to hand some time ago, and my reason for not writing sooner is that I was

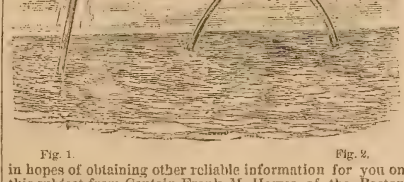

Fig. 1. Fig. 2.

in hopes of obtaining other reliable information for you on this subject from Captain Frank M. Howes, of the Boston & Baltimore Steamship Company. Captain Howes, in 1876, in almost the same location saw not only one, but three of these monsters—two small and one large one. They were

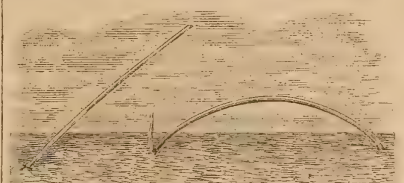

Fig. 3. Fig. 4.

all close together and near his ship. Captain H. has promised to give me his report, and when I get it I will send it to you

It is with pleasure that I give you my experience with the sea monster.

On August 29, 1878, while in command of the coast survey schooner Drift, we were about five miles north of Race Point, Cape Cod, Mass. Weather calm. We were drifting with the ebb current. At about 1:30 P. M. I observed at a distance of not more than two hundred yards from us a very singular object come right up out of the sea. I took the marine glasses and looked at this object. It must have shown at least twenty-five or thirty feet out of water almost upright, and about as large as a barrel. This object looked smooth and of a dark brown color. I could see no eyes nor mouth. There was some water pouring out of the top. While I was looking at this it curved and went down. (See rough sketch marked 1—2).

In about a half-hour later the same thing again came up at an angle of about 20° with the horizon. It ran its length out of the water at least thirty-five or forty feet. It being much nearer us, I had a good look of several seconds at it through the marine glasses. Its color and general appearance was about as first seen. I could discover no eyes nor mouth, nor anything looking like them. I think at this time something must have alarmed it, for it made a graceful curve and started off; but just as it was going down a long, sharp fin came up (see sketch 3—4). The monster moved off with very great speed, leaving a heavy and well-marked wake after it. This wake could be seen a long time after.

I here beg leave to state that I have told you just what I saw, and leave the matter with you to decide what it could have been.

I am quite used to seeing whales and know positively that this was not one. I hope you will pardon delay for reasons given. Also please excuse rough drawings.

With the greatest respect, I am, very respectfully, your obedient servant, ROBERT PLATT, Master U. S. N.

In connection with the above report the following is of great interest: We learn that in 1869 Mr. Charles Junkin, one of the topographers of the U. S. Coast Survey, while engaged in hydrographic work near Matinicus, off the coast of Maine, observed, at a distance of about half a mile, what he supposed to be a ship's mast, sticking straight out of the water, and inclined at a moderate angle to the surface. This soon disappeared, leaving a great swirl in the water, such as would be occasioned by the submergence of some large mass. Nothing of this kind was again observed in the course of a continued sojourn in the neighborhood, and the existence of any wreck in that spot was stoutly denied.

STRANGE HAWKS' NESTS.

IN a recent issue of the FOREST AND STREAM there appeared a short article by Mr. Boardman, descriptive of the nest of an eagle found in Northern Dakota, the peculiarity of which was that it was constructed largely of buffalo ribs. It may not be without interest in this connection to call attention to the fact that these curious pieces of bird architecture are by no means uncommon throughout the prairie region of Central Dakota. Several such nests came under the notice of the writer while engaged in that part of the country last summer, and a number of others were reported from neighboring localities. One in particular of those examined may be worthy of special note.

One day, while upon the unbroken prairie, at a point far remote from timber or tree-like growth of any kind, the line of travel chanced to pass close by a huge boulder that had been strangely dropped here all alone in time long past. On its elevated and nearly flat top, there was visible a large mass of material, which at once suggested the presence of a nest of some kind, and upon close inspection this proved to be the case.

A nest it was, or rather what had done duty as a nest, for there was little about the mass that would call up the picture usually suggested by the expression bird's nest. Except for the somewhat suggestive shape, it was much more like a rubbish heap in the variety and character of the material piled together. A large part of the heap consisted of bones, not only the buffalo ribs mentioned above, but also numerous shoulder blades, leg bones, etc., of the antelope and other animals. The size, and particularly the shape of some of these, must have made them rather awkward "sticks" to convey any distance. The skeleton nest thus formed, was rendered more habitable by filling in, and smoothing off the angles, with bunches of turf, weed-stalks, reeds, rushes and such other debris as could be picked up on a treeless, brushless plain. Among the mass of stuff that had been brought together was one object which appeared rather strange in such a place; namely, a large butcher knife. It was sticking carelessly in the side of the nest, and seemed to suggest that even the birds of this Western country might be possessed of the almost universal desire to go about with a bowie knife conspicuously displayed in belt or breeches.

This nest had been abandoned some little time, as it was the latter part of July when it was discovered. Another found a short time before, containing one young bird, was built almost entirely of buffalo ribs. The usual situation seemed to be upon the ground, or upon flat rocks upon the tops of the high hills or "buttes," that are such conspicuous and curious features of the topography of some parts of the Missouri River region.

The most common species of hawk noticed, and the one that was apparently the builders of many of these bone nests was Swainson's (*Buteo swainsoni*), though it is more than probable that the red tail and other hawks of this region have the same habit. Why such material is made use of, is very apparent and needs no comment. The bones become so light and dry from long exposure to the weather, that they are not such bad material when employed in the building sites necessarily selected here as might at first be supposed.

T. S. ROBERTS.

ZUÑI POTTERY.—Hartford readers of the article in the current number of the *Century* by Frank H. Cushing, entitled "My Adventures in Zuñi," will be greatly interested in a collection of odd pottery now on exhibition in the show window of T. Steele & Son's jewelry store in that city. These curious wares are made by the Zuñi Indians of New Mexico, among whom Mr. Cushing has spent several years of his life in scientific research. The goods are in the form of animals, bowls, cups, saucers, idols, etc., and are of a dull, red color, decorated with designs of birds, trees, and striped in white and black or other colors, as may have suited the Indian's fancy. The circumstances under which its present owner came into possession of the pottery are interesting being the result of a friendship engendered through the mellowing influence of a camp fire, while on a fishing and hunting trip in 1863. "My companion, whose company I enjoyed on the Lakes," writes Mr. Steele, "finally settled in Albuquerque, New Mexico, 200 miles southwest of which town dwell the Zuñi Indians. For twenty years we have continued to correspond with one another, but not once during the entire time have we ever met. I shouldn't know him if he came into my office this moment, but we put our thoughts on paper in as familiar a manner as if we parted yesterday. We are exchanging something or other all the time, and this Zuñi pottery is the latest."

SNOWY OWL.—Phœnix, Oswego County, Jan. 8, 1883.—Charles Patchet shot a snow owl to-day measuring five feet one inch from tip to tip, and weighing five pounds. Mr. P. has also captured two foxes this winter.—WILL SMITH.

THE LITTLE SPOTTED SKUNK.

Editor Forest and Stream:

I am going to give my experience on the subject of skunks in Southwestern Kansas and Colorado, for though what I am going to say is a well known fact among stockmen and campers on this part of the frontier, yet I have never seen it mentioned in a paper. There are two distinct kinds of skunks here—the large striped variety, which is harmless, and if one bites a man in the night when he is camping out, as they occasionally do, the bite is harmless. The other kind is about half as large as the other, is spotted—not striped—does not smell as strong as the large species; won't run from man or beast, can climb a tree, and when he bites a man, the man is as good as dead from hydrophobia. I have personally known of twenty deaths from skunk bite within ten years in a radius of one hundred miles from the southeast corner of Colorado.

A man will lie down to sleep on the ground or in his blankets. He is awakened by a bite on face or hand, and when he sees the spotted skunk he is ready to settle up his affairs. I have known the piece cut out and the wound burned with a hot iron. That man felt no ill effects for six months, and then his companions had to lasso him and tie him to a tree. He was wild, and tried to bite. He died two days after. The way campers generally avoid them when they have no tent is to make the bed on a wagon sheet, and tuck it in after they get to bed, over head and all. Fortunately the spotted skunk is scarce everywhere. Can you tell me the scientific name of the gentleman? I have seen but one this year.

W. J. DIXON.

CIMARRON, Gray County, Kan., Jan. 5.

[The whole subject of hydrophobia from skunk bite has been very fully treated of in FOREST AND STREAM, Coues's Fur Bearing Animals, and in Merriam's Vertebrates of the Adirondack Region (Trans. Linnean Soc., vol. I.), and the conclusion reached by those best fitted to judge is that there is no more danger from the bite of a healthy skunk than from that of a healthy dog, but that the bite of a rabid skunk is as dangerous as that of a dog similarly diseased. We have known of the popular impression in the West with regard to the fatal effects of skunk bite for many years, but have never heard until recently that the little striped skunk (*Mephitis* (*Spilogale*) *putorius* L.) was universally fatal. This species is not, as was formerly supposed, confined to the Southwest, but occurs in Florida, Georgia and South Carolina, and perhaps considerably further North.]

THE WEIGHT OF QUAIL.—Nashville, Ill., Jan. 15.—In a copy of your excellent journal, recently, one of your correspondents spoke of having killed twenty-two quail that weighed nine pounds, or over six and a half ounces each, and thought they were exceedingly large. Quail have been more plentiful in our neighborhood this season than I ever knew them before; and on the afternoon of Dec. 23 Dr. Westerman of this place and myself killed eighteen quail that weighed nine pounds two ounces. I did not think they were extra large; but the Doctor insisting that they were, we weighed them with the above result. I killed several between that and New Years that weighed a half pound each. We have some fine shots here and they have made it very lively for the birds this season.—G. B. B.

DIURNAL HABITS OF SHORT-EARED OWL.—A correspondent in last number of FOREST AND STREAM mentions the snowy and hawk owls as the only ones strictly diurnal. I think the short-eared owl (*Asio accipitrinus*) should be added to the list. This bird used to make its appearance here in great numbers every winter, but of late years it is rarely, if ever, met with. I have seen four and five at a time hunting in the same field for mice, so tame and unconcerned as to pass to and fro within a few feet without noticing me. They hunt at all hours of the day, but I have never met with one abroad after sundown.—DR. E. STERLING.

YES, IF THE PARK IS STOLEN.—The rapid development of the West threatens the extinction of the buffalo, and there is no romance in Western sentiment that considers his preservation. It is contended that the animal does not fit into practical American civilization, and that his skin is pretty much the only thing of value about him—and that implies a dead buffalo. Whole droves are being slaughtered in Northwestern Dakota for the hides, and it is reported that about one thousand white hunters are employed in the slaughter. The noble animal bids fair ere long to cease to be a landscape feature of the prairies, and to go the way of the mammoth and the mastodon. The Western reasoning is that one thousand cattle can feed on every bunch grass prairie that now sustains a thousand buffaloes, and that buffalo meat is worse than that of the leanest steer. So the buffalo must go.—*Sun* (*Jan.* 21).

TENNESSEE NOTES.—On the day of Gov. W. B. Bate's inauguration a live eagle of large size was set at liberty from the dome of the capitol, but he did not avail himself of his captor's privilege, and this singular fact gave rise to an investigation as to the reason. This resulted in finding attached to the poor bird's body notes, letters and cards bearing predictions as to the future in our National and State politics in such numbers as upon being weighed were found to exceed the weight of the bird. "Can't get the emblem of American liberty to start off with such a cargo if allowed to choose for himself," as an old fellow standing by remarked, "leastwise hereabouts.—J. D. H."

OPOSSUM ON LONG ISLAND.—Woodside, L. I., Jan. 22.—In regard to opossums I have to report that one was killed about two weeks ago in my brother's backyard, at 124 Rutledge street, Brooklyn.—D. F. BRAGAW.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN: Three fallow deer, *Cervus dama*; 1 ree skunks, *Mephitis mephitica*; one gray ichneumon, *Herpestes griseus*; three red-headed ducks, *Fuligula ferina*; two white-winged doves, *Melopelia leucoptera*; two quail, *Ortyx virginianus*; five rattlesnakes, *Crotalus horridus*, and one pine snake, *Elipophis melanoleucus*; received by purchase. One northern fox squirrel, *Sciurus niger cinereus*; two prairie dogs *Cynomys ludovicianus*; one red fox, *Vulpes fulvus*; one porcupine, *Erethizon dorsatus*; one black-handed spider monkey, *Ateles melanochirus* three opossums, *Didelphys virginiana*; one black bear, *Ursus americanus*; three gray squirrels, *Sciurus carolinensis*; one tayra, *Galictis barbara*; one wood thrush, *Turdus mustelinus*; one barn owl, *Strix flammea*; one red-winged blackbird, *Agelaus phœniceus*; one great horned owl, *Bubo virginianus*; three reed birds, *Dolichonyx oryzivorus*; one American widgeon, *Mareca americana*; one red-tailed hawk, *Buteo borealis*; one herring gull, *Larus argentatus*; one screech owl, *Scops asio*; one barred owl, *Syrnium nebulosum*; one pied-billed grebe, *Podilymbus podiceps*; one blue and yellow macaw, *Ara ararauna*; two horned lizards, *Phrynosoma douglassi*; four alligators, *Alligator mississippiensis*, and three water snakes, *Tropidonotus fasciatus*; received by presentation. One elk, *Cervus canadensis*; one zebra, *Bos indicus*; and two ring doves, *Turtur risorius*; born in the garden.

Game Bag and Gun.

To insure prompt attention, communications should be addressed to the Forest and Stream Publishing Co., and not to individuals, in whose absence from the office matters of importance are liable to delay.

WHAT THE PRESS THINKS.

ONE by one the different newspapers are waking up. It required some sharp punching to start them from their lethargy, the use of some vigorous language to make them understand that, under the guise of a simple lease of a portion of the public domain, a gigantic fraud was contemplated on the American people. Now, however, the press has awakened to a realization of the purposes of the Yellowstone National Park Improvement Company, and is taking a hand at the game. For a long time Senator G. G. Vest, of Missouri, and the FOREST AND STREAM, kept up the fight quite alone, but the subject has become, as is quite natural when we consider its importance, a popular one, and strong reinforcements are constantly pouring in.

We are heartily glad of it, and welcome with cordial warmth each addition to the ranks, and although this paper led the attack on this iniquitous job, it is quite willing to take its place among the rank and file, if officers more able or better informed can be brought to the front. It is amusing and flattering to find our esteemed contemporaries in the East and West cutting up the editorials which we have written on the subject to make "original" ones for their own columns, to read over again all the points which we have made against the steal, and find nothing new said on the subject, and often our own language reproduced almost without change. This is rather funny, but not at all annoying. We do not care who gets the credit for starting and carrying on the fight, so long as it is carried on with vigor and the grab prevented. This appears now to be assured, and we hope that the fight is over and the victory with the people.

We have space to reproduce only a few of the comments which are every day appearing in the public press in reference to the attempted donation of the Yellowstone Park to the speculative "Improvement" Company. It has been a long time since any similar scheme has received such universal condemnation by the press and the people. As our readers will see in another column, the danger of the seizure of the people's Park appears to be over, but it is well that the projectors of the scheme should be watched until Senator Vest's bill is passed. These men are daring and shrewd, and we may feel assured that they will not permit so fat a thing as this to slip through their fingers without a struggle.

We append a few comments from papers of all shades of opinion. This is what they say:

[New York Commercial Advertiser, Jan. 18.]

The FOREST AND STREAM, which has been making a plucky fight against the proposed Emigrant Road monopoly, points out an order just issued by the Secretary of the Interior, forbidding absolutely the killing of game, mammals and birds, in the Park; the taking of fish save by hook and line, and the destruction of timber. The editor of the FOREST AND STREAM, who is thoroughly familiar with the Park, thinks that it is not too late, if this order can only be enforced, to preserve the game of North America within this Park in such numbers that there may always be had in the country surrounding it good hunting for all who may desire to have the satisfaction of killing in modern theories.

[Distiller and Brewer (St. Louis) Jan. 15.]

From a true sportsman's point of view it is earnestly to be hoped that Senator Vests' proposition for the preservation of Yellowstone Park may become law. The *ferœ naturæ* of our continent are disappearing so rapidly that we shall soon lose the last of them unless such a sanctuary be afforded them. The plains, the home of the North bare of buffalo, moose, elk, and other deer, antelope, mountain sheep, etc., would be almost denaturalized, and we therefore wish the Missouri Senator every success with the bill.

[New York Herald, Jan. 21.]

Secretary Teller is unique in the determination to make no leases of ground in Yellowstone Park for business purposes pending legislation. The report that Assistant Secretary Joslyn thinks the Interior Department can make any leases it chooses in case Congress does not act in the matter should be sufficient to urge Congress to prompt and careful legislation. Mr. Teller's points in his letter of last April to Mr. Conger, Superintendent of the Park, that no applications for tracts of more than twenty acres would be entertained and that "no lease will be given covering lands containing any of the natural curiosities and wonderful springs within the Park or that will prevent free access to such curiosities or springs," should be embodied in whatever legislation may occur.

In the papers sent the Senate in obedience to a resolution passed a few days ago there does not appear any report on the unauthorized work already being done within the Park limits by persons who expected to monopolize everything worth seeing. Why not? Has the department no information on this subject?

[New York Times, Jan. 20.]

The flavor of jobbery which has made itself felt in connection with the leases of the most desirable portions of the Yellowstone Park which have been made under the authority of the Interior Department is not dissipated by the production of the correspondence on this subject. The Secretary of the Interior and the superintendent of the Park were of one mind in regard to the expediency of confining any leases made to very small portions of the domain and of carefully maintaining the Government control over the natural features which have made the famous Yellowstone region worldwide. And yet, in the absence of Secretary Teller, his subordinate, Mr. Joslyn, proceeded to execute leases for seven tracts of land, containing 640 acres each, and including the springs and the great natural curiosities. This seems a very curious way of conducting public business and one which is admirably calculated to excite suspicion. The letter sent to Mr. Belford by Gen. Brisbin, who received the privilege of running a steamer on the Yellowstone Lake, is a very instructive contribution to the correspondence, showing, as it does, that this enterprising officer valued the privilege of carrying passengers on the Yellowstone Lake for ten years at $1,000,000, and that while full of indignation over the "hogging" of the Park by the Hotel Company he was entirely prepared to let their lease stand if they would agree not to interfere with his privileges. The Senate will find fresh arguments for immediate action on the bill reported by Senator Vest in the curious and interesting series of letters sent at their demand by the Secretary of the Interior.

[Harper's Weekly, Jan. 20.]

Mr. Schuyler Crosby, the Governor of Montana, has written an interesting letter to Senator Vest, a member of the Committee on Territories, concerning the Yellowstone Park. This reservation consists of nearly four thousand square miles, and contains some of the sublimest scenery in America. The same causes which make its scenery sublime, and have thus rendered it a safe refuge for the great game which has almost disappeared from the plains, make it almost useless for any other purpose than that of a National Park, for which it has been wisely reserved. There is very little arable land in it, and if it were left open to settlement, it would not be settled. What would happen would be that it would be overrun by "skin-hunters" and "bag-hunters," whose only aim is to kill the greatest head of game in the shortest time, and who would in a few years exterminate the great game of which the Yellowstone region is now almost the only asylum.

That is precisely what Congress meant to prevent in reserving the region as a park, and that, it seems, is what is likely to happen in spite of the reservation, unless Congress takes some further action. This action is urged by the Park provides that the Secretary of the Interior shall provide against the wanton destruction of game, and against its capture or destruction for purposes of profit. The game laws of the Territory of Montana are strict enough, if they are properly enforced, to secure not merely a continuing, but an increased supply of great game, although the game laws of the other Territories contiguous to the Park leave something to be desired. Nevertheless, General Sheridan, in his report for 1882, declares that during last Winter not less than two thousand elk were slaughtered within the Park, either wantonly or for their skins.

Governor Crosby joins General Sheridan in recommending that the limits of the Park be extended to the eastward. He also urges that the game within the Park itself be protected absolutely. He also suggests that an engineer officer be detached to report to the Secretary of the Interior or Superintendent of the Park, with power to call upon the troops when it is necessary to enforce the Park regulations. By these means it is hoped that the overflow of game from the Park will secure a constant supply to the sportsmen of the adjacent Territories.

All this seems very sensible. On the other hand, a company of speculators has been formed, which has applied to Congress for a lease of the whole domain. The object of these persons is, of course, to make the largest possible amount of money out of the Park in the shortest possible time. That object is altogether inconsistent with the purpose of preserving the Park as a public pleasure-ground for us and for posterity, which animated Congress in reserving it from settlement. The lease would be sure to result in spoliations and desecrations from the effect of which the Park would never recover. The application of the speculators ought not to be considered for a moment.

[Knickerbocker (N. Y.), Jan 17.]

The Yellowstone Park comprises thousands of square miles with an incomparable wealth of the picturesque in forest, mountains, geysers, streams, canyons, with a variety of animal life not found elsewhere on this continent; in short, a magnificent domain, unequalled in extent and beauty by any other equal range of territory in the world. Notwithstanding that this grand expanse is declared the property of the United States, and is placed under the special guardianship of a Government department, aided by a United States military commandant, it is a stamping ground for marauders who deface its beauty and slaughter for pelts, or else a hunting ground for foreigners who visit the far West with no other object than the reckless destruction of great game, miscalled sport. In either case the extermination of the wild animals is the final result.

The necessity of taking some steps for the protection and preservation of our national domain is just now brought up in Congress, and questions on the subject are in order. Every American whose soul is not wholly given over to money grubbing takes pride in the National Park. But, alas! no one of the persons to high authority have taken any pains or exhibited much interest in its conservation. The chief use to which the Park has been officially put is as a hunting ground for army officers, with a little surveying and setting out of roads. These roads are as yet on paper. But a use has been found at last for the National Park, and it will be cared for.

* * * * * * *

Mr. Rufus Hatch went out West last summer. Mr. Hatch is a man who, when he walks abroad, keeps his eyes open and looks about him. Mr. Hatch saw that the National Park was a good thing, and that we were not using it, so when Mr. Hatch came back from this land of delight he reflected long and thoughtfully on the great waste to which we Americans, in our wealth of opportunities, are sometimes prone. This neglect of chances was painfully manifest in the National Park. Here was a region, the like of which does not exist on the face of this earth, all going to uselessness, absolutely spoiling for want of a little brain work and manipulation. Mr. Hatch mentioned his ideas casually to a few friends, among whom were: Mr. Roscoe Conkling, General William Jon. J. B. Houston, Elijah Smith, Hugh Hastings, Joseph H. Huntington, Judge Fullerton, A. N. H. Carpenter, E. H. Goodman—just two or three lawyers, capitalists and railroad men—with an artist or two to give an esthetic touch. Mr. Hatch is nothing if not esthetic, and these gentlemen all looked at the Park through Mr. Hatch's binocular, and agreed that there was a good thing ahead.

After a while Mr. Hatch's Western trip and the Eastern consultations developed into a scheme. A company has been formed, which company has put itself in communication with the right men in Washington, and now there is a prospect of the Park being turned to good account. In some countries such domain would be preserved by the government, even if at the expense of a little official jobbery and a brigade of park keepers. In fact, we have a legal and near-by illustration in our own Central and the Philadelphia Fairmount parks. But in the case of the United States national property the first thing to be done is to make money out of it, usually with a liberal percentage of public good as schools, or public works of some kind. Mr. Hatch and his friends have gone a step even beyond the railroad dodge. Railroads are under obligation to serve the public, though they take their time in doing it. The National Park company is under no obligation at all. In the first place, they have secured a lease of desirable building plots for the ostensible purpose of erecting hotels; next they get free pasturage, then free timber, and at the end of their term they are to be paid for all their improvements (!). The hotel privilege is in itself a fortune; the free pasturage is of incalculable advantage for stock raising; the timber cutting—well, that's immense; and the final indemnity and reimbursement let in a whole flood of claims.

How, even in this prodigal Congress, such a scheme of iniquity could be known and suffered to live passes comprehension. The company has already got to work, and anticipating favorable legislation is acting boldly and openly without authority cutting down timber and exercising all the rights of ownership. The leases are, it is said, ready for submission to Congress; but if the matter is judiciously managed there is no hope for redress or efficient revision in Congress. The only hope is that President Arthur will refuse his assent to a bill. It is to be presumed that a bill will have to be passed to give away the national property, although it is possible that the matter rests with the Secretary of the Interior, who has only to submit his decisions to Congress for registration.

GAME IN KENTUCKY.

EARLY in the fall I inquired of every farmer, over whose fields I am permitted to shoot without restraint, as to the quail crop, and not one had seen a bevy. Extending investigations to more remote localities I was led to oil and carefully stow away my old gun where I expected it to remain untouched till hawks begin their spring campaign.

The blow of old John's untimely death last summer was materially lightened by the prospect of no field work this winter had he lived. A sporting acquaintance whom I casually met in November, informed me that birds were plentiful, and I'm glad that I made good a promise to bring over my unbroken three years old pointer that I had given up as a hopelessly headstrong flusher—for I have enjoyed some of the finest sport I ever had and developed the best field dog I ever owned. The only bird dog in the county, since old John's death, that setting afire with the whip, blistering with a strap, and screaming that would "put to blush" an asthmatic calliope, had failed to make back, and whose infatuation with the chase was set down incurable, till the second dose within five minutes, administered from the shotgun, brought him to repentance. Still he wouldn't hold a point long enough for me to always get in range, and he had been decided the worst pill in the box, and reduced to the ranks with the squirrel and 'coon dogs. Every brother who has run short of trained dogs and watched with solicitude the development of a promising youngster can appreciate the affectionate exultation with which I caressed that dog when in open field he first stood a single bird till I passed him and walked it up, and repeated it on four more, all of which came to bag.

It was our good fortune to blast the hopes of more than one netter, by catching the bevys they had been watching on the other fellow's farm, and one morning we enjoyed two hours' sport marking down and bagging the larger parts of two bevys, which took wing after netters had set for them and had them on the run. The forays of city hunters in past years have caused many a poster's erection, and the boom of a shotgun and flash of the spotted dog bring runners over many farms to warn off the sportsman.

Permission was invariably cheerfully granted us, with assurance that neighbors are always welcome. "Them city chaps, who, not satisfied with what they can kill, hire fellows to net for them, and trap for them—any way to get 'em—and take all the birds they can kill and buy, home, to sell and have cooked, are the ones we mean, and they can't hunt on my farm." A visiting party a year ago put in a Sunday within earshot of a church, where a revival was in progress; and they were from Lexington, 'twas said.

I have weighed several quail this season. Three, a cock and two hens bagged from same bevey, weighed 23¾ oz.—8,

8, 7½. A cock from another bevey scaled 8 oz.; 5 to 6 oz. heaviest weight of the average birds.

The ducks dropped in passing, apparently in railroad style—twenty minutes for dinner. I saw very few rabbits. But two or three deer have been killed. Have heard of but little hunting of large game. Bear signs plentiful in the mountains, but the bear hunters have died or grown so old that dogs are no longer trained for the chase in our county. I think our close season for game begins Feb. 1, instead of March, as per list published by FOREST AND STREAM, if I am not mixed. KENTUCKIAN.

MILL SPRINGS, Ky., Jan. 15, 1883.

GUINEA FOWL AS GAME BIRDS.

YOUR article in the last number of FOREST AND STREAM and the communication of "Brindle," on the adaptability of the guinea hen as a game bird, were of great interest to me. I have long held the opinion that they were well worthy of a trial, and that such a trial would prove successful. I will give you my reasons for thinking so.

About thirty years ago—I am no chicken—while shooting over a friend's farm in New Jersey one fall, I met his foreman, who told me that one of their guineas had stolen her nest and raised a large brood of chicks, which he could not get back to the farmyard. Such being the case, he suggested that I should shoot as many of them as I could. I thought nothing of this at the time; but one day, on the same farm, while beating along a large buckwheat stubble for quail, with my two dogs, a setter and a pointer, we came to some rough pieces of grass at the top of the field, adjoining a heavy piece of woodland. The setter made a full point, backed at some distance by the pointer—a sight which always gladdens the heart of a sportsman; I stepped up to the pointer, expecting to flush a bevy of quail. Nothing stirred. I advanced to the setter, when up went a guinea fowl. I thought of old Harry's guineas, and turned the bird over at about twenty yards. At the report of my gun a full dozen more arose and made straight for the cover. I killed a second bird, and when these were recovered I followed them up and killed five more, all over points. I could have killed more of them if I had wished to do so. Subsequently I tried them again, and they gave me as good sport as any game birds I had ever shot. They lay well to the dogs. Sometimes I had a quail in the grass as well as in the woodland. One bird, I remember, my pointer found in the open stubble, and although I walked close up to the dog, I did not see the bird until it rose.

I have thought of this occurrence many times, and have mentioned it to some of my sporting friends. I have no doubt that these birds would prove a valuable acquisition to our game birds.

If the gentlemen who have spent so much time and money in introducing the useless little European quail, would turn their attention in another direction, and make the most of the means we have at our own doors to insure our supply of game, I think they would receive a better reward for their liberal and unselfish efforts; or if they must import game birds, why not try the English partridge, a hardy bird and one that would be more likely to prove a success?

NATH'L WINKLE.

"Brindle" writes a nice story on guinea fowl in yours of the 11th. I have tried the experiment to make game out of guineas; but it will not do. They are too domestic; and will not lie well to a dog, as they run too much. With spaniels it is somewhat better, but even then they make no shooting. The writer has turned them loose in the spring. They never go further than a quarter of a mile from the farm buildings. Unless looked after they will produce but very few young, as vermin of all kinds prey upon the eggs and chicks. In the fall they will come home to roost regularly, and be with the other barn fowl. According to my idea, as far as the sport of shooting them is concerned, it is none. One might as well have a dog run up a flock of hens and bang away at them. Better buy a few quail and put them out and look after them properly. CRONTETH.

NEVERSINK LODGE, Guymard, N. Y.

MOOSE IN MAINE.

Editor Forest and Stream:

I send the letter of a well-known hunter and guide to you without comment.

Maine is the natural home of the moose, and deer of this species were probably as abundant thirty years ago in the region of which Mr. Darling writes as anywhere on the continent. They are not yet extinct here, and are undoubtedly more common now than ten years ago. Still, the tourist need not keep out of our woods for fear of being bitten by them. They are less commonly encountered than "moose flies." A few are killed here each year, but the facts concerning their capture are seldom made public. If a good "caller" could be obtained among our guides or Indians familiar with Northern Maine, one might go for this great game in autumn with a fair chance of success, such as can be had nowhere else in the United States. Caribou and the common or Virginia deer are also found in the same region.

Of the former abundance of moose here a good tale is related by Mr. A. J. Darling, who writes:

"About thirty years ago I used to hunt a great deal, and almost the whole year round. I went mostly with my brother, whom you well know. One spring, after we had finished hunting moose and deer in this section on the headwaters of the Union River, we heard of moose away up the east branch (of the Penobscot River), so we fixed up a small kit and started, thinking we would kill about three moose before we came back home. We went up as far as Katahdin Pond at the foot of the old mountain, and stopped there at John Bosnard's camp.

"We struck back and found where there were moose, and did not stop until we were the means of killing fifteen moose, spending a little over three weeks. While there we heard of moose being very plenty at the head of Aroostook River, and the next winter we started for that region. Of course it was about the middle of February when the snow was deep and the beginning of crusting.

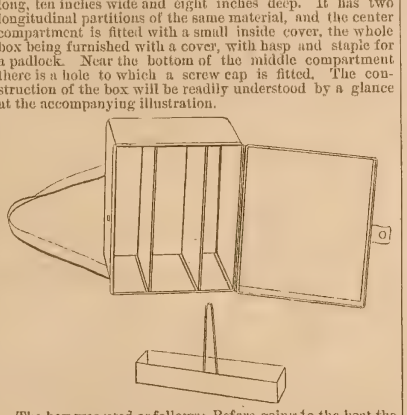
"We were gone between five and six weeks, and killed forty moose, and got them out. The following winter we went up there the first of February and built a small camp, and killed sixty moose, besides a nice lot of furs. While there I went through to the Mausauges where I found a camp of twelve St. Francis Indians and stopped all night with them. They were killing moose for their hides, and living on moose meat, and for tea, steeped birch buds. We got all our moose out by the way of John Goddard's tow-road, (the late John Goddard of Portland).

"After I came home my brother made a trip to see those Indians, and found them skinning out, having their winter as well as spring killed moose to dry and press, and take home as soon as the lakes and rivers opened. He also found that the twelve had killed an average of fifty moose to a man, or about six hundred moose in all. These Indians lived entirely on moose meat, and took all the dried meat they could to their families when they went home, leaving the rest to rot in the woods.

"After this the St John Indians and the French and Yankee hunters from all directions followed in their footsteps, and in about three years it was of no use to go there any more for moose.

"Some ask, what becomes of all the moose? Why, 'the wolves' get them, of course. There has been so much laid on the backs of the poor wolves that I don't expect to live long enough to see one in Penobscot county again."

The story of the twelve Indians getting six hundred moose in one winter suggests the query, whether a portion of the number were killed with the bow, (not cross-bow.)



EVERETT SMITH.

A PORTABLE ICE-BOX.

IN September, 1881, I passed two days at Lazaretto rail shooting, reaching home on the evening of the second day. On examining my birds on arrival I found that those shot on the first day were spoiled by the heat.

Resolved not to be caught in that way again, I had a small ice-box made in the manner presently to be described. In September, 1882, I again spent two days at Lazaretto, but with the aid of the box brought home all my birds in good condition.

The box is made of galvanized sheet iron, twelve inches long, ten inches wide and eight inches deep. It has two longitudinal partitions of the same material, and the center compartment is fitted with a small inside cover, the whole box being furnished with a cover, with hasp and staple for a padlock. Near the bottom of the middle compartment there is a hole to which a screw cap is fitted. The construction of the box will be readily understood by a glance at the accompanying illustration.

The box was used as follows: Before going to the boat the center compartment was filled with ice, one of the others with bottles of beer, and the other one with lunch and more beer. These rail pushers require about one bottle per bird, I find, and so one bottle was taken out shortly after starting in order to make room for the first bird. As fast as the birds were shot they were placed in the side compartments, and when the tide was over we had the box partly full of birds instead of bottles. On reaching shore the birds were transferred to the ice-house. The following day the box was used in the same manner. Just before starting for home the ice compartment was replenished and the two days' birds placed in the outer ones, and I reached New York with the game in perfect condition.

On another occasion, desiring to use live bait in bass fishing, I had a small tray made to fit one of the side compartments. The tray had a bent wire handle and a perforated bottom. The middle compartment was filled with ice, the one having the tray with water and minnows, and the third compartment with lunch, etc. When bait was wanted, I opened the box, lifted the tray, which brought up all the minnows and none of the water, so the selection was easily made. The lunch was removed and stowed in the boat, leaving a compartment empty for the reception of such fish as were caught.

The cost of the box, exclusive of straps, was $3.50. The box may be carried in a large shawl strap, or better, by straps riveted to the sides, or may be locked and sent by express, or as baggage. On one occasion, I filled the box with ammunition and stores, on my way to Long Island. The baggage-master refused to receive it, unless I would certify that it contained wearing apparel. I satisfied his scruples by opening the box and transferring to it a pair of socks that I took out of my valise. I give this as a hint to those who travel with their guns in gun cases, which sometimes baggage-masters refuse to check. H. G. P.

WILDFOWL AND GAME CLUBS.

Editor Forest and Stream:

In your issue of the 18th inst. the communication from "An Upland and Bay Shooter," and your editorial, "New York Game Laws," are the best views I have lately seen on the important subject of game protection.

Many of my friends who have shot wildfowl in the West during the past ten years have lately joined coast shooting clubs, while others who have shot on the coast all their lives are frantically inquiring for shooting grounds in the West, because the coast is all "gunned out." It is the same old story throughout the country.

Every man and boy, who can afford it, owns one or two breech-loaders, and every half-grown boy owns or borrows some kind of blunderbuss or old musket; then the Life Saving Stations have crews composed almost entirely of bay gunners, who shoot day and night.

I formerly shot on a marsh in the South, where I had very good luck killing black ducks, but three years ago a Life Saving Station was erected near the marsh, and I have since spent many many days watching my decoys in the vicinity of that station and only bagged one duck!

Our Canadian friends allow egging vessels to be fitted out to gather eggs of wildfowl on the coast of Labrador. This, it appears to me, is even more destructive to game than spring shooting on our coast.

Many of my friends are giving up shooting in disgust. They visit the shooting grounds and spend their time and money and often return without a feather. I have often had this experience myself. Even the clubs that own thousands of acres of land complain of the increasing scarcity of game, but to organize a club and enforce strict by-laws in regard to early morning and late evening shooting seems now to be the only way to secure a few ducks.

When every foot of shooting land in the country is gobbled up by clubs, the pot-hunters who have done their utmost to drive away game, and have shot in season and out of season, will find that they are left out in the cold.

O. B. S.

CALIFORNIA DOGS IN THE MANGER.

THE shooting season in California is pretty well advanced. It opened on the 15th of September, and will close on the 15th of March. With the exception of deer and doves, the open season for all kinds of game is embraced by these dates. Owing to the mild character of California winters, our sportsmen have better opportunities for indulging in field sports than do those on your side of the Rocky Mountains. The "rainy season" in the coast range and on the plains of the Sacramento and San Joaquin valleys extends from about the 1st of October until the 1st of May, and there is seldom a day between the opening and closing of the hunting season when one cannot shoot with perfect comfort. The ducks stay with us until the last moment,—and the shooting is about as good on the last day of the season as in November. Quail can, of course, be hunted at any time during the season, but they are generally thinned out toward the last, and it requires new broods to restock the grounds most accessible to the cities, for there is a perfect army of shooters abroad every Sunday. San Francisco turns them out by the hundreds on Saturday night and Sunday morning of each week, special trains of cars leaving the city at four o'clock A. M. on Sundays, expressly for the convenience of gunners. There are localities in the hills, however, where the quail have such protection from hunters, that their extermination will probably never be accomplished, even through the facilities afforded by breech-loading guns and blue-blooded dogs.

But it must be that the quails have even worse enemies than man, for I know of a ranch within ten miles of this city, some 20,000 acres in extent, on which the birds have been pretty well protected for the last six or eight years, and I believe there are less of them there now than when persons were permitted to shoot over it. This ranch borders on the American River, and there is plenty of bottom land with good cover, and wooded ravines throughout the rolling ground, the live oaks along which afford excellent hiding places for the birds. The number of quails shot on this ground within the last few years has been comparatively few, wherefore I think the skunks, coyotes, hawks, etc., have been getting in their work among them.

And here let me say I have always noticed that wherever persons are allowed to shoot often the quails increase in numbers, as the presence of hunters keeps off the "varmints" that prey upon the birds, while the latter are generally smart enough to avoid the skill of the gunners. I believe that if persons were permitted to hunt over the grounds I have referred to, in a very few years there would be thousands of quails where there are now dozens. For the California quail, while it is more than a match for the average sportsman, is at the mercy of its other enemies. If I owned a 20,000-acre tract of this kind, on which I desired to have the quails multiply, I would at least keep a few hounds on it to run off the coyotes and wildcats, and have somebody shoot the hawks and jaybirds.

Strange as it may seem, these coyotes and wildcats (and occasionally a gray wolf) are killed in the brush along the American River, within two miles of this city. A sheep ranch covering 44,000 acres begins almost at the outskirts of the city, and adjoining it are two others of 20,000 acres each. On these great ranches there are not three families, the whole being given up to bands of sheep and a few cattle. These sheep are what attract the coyotes and wolves; and yet the owners thereof are doing all in their power to keep hunters off these grounds, on which there is considerable game—ducks, snipe, quails, etc. One proprietor even scatters poisoned meat over his fields for the purpose of killing the dogs of hunters, and many valuable animals have been lost thereby. This practice is pursued on the Norris Grant, whose owner is worth many millions of dollars; and because he is thus wealthy nobody seems to be willing to go to the courts to test his right either to arrest anyone for trespass, or to spread poison thus promiscuously about the fields. There is a law on our statute books making it a misdemeanor for any person to hunt on "inclosed" grounds, but this ranch is not inclosed on all sides, and the owner has no legal right to drive anybody off it. The trouble is that no person of ordinary means feels like dancing attendance on the courts for months for the sake of testing the law. Hence arrests have been made, and in some instances fines imposed. It is the old story of wealth and aristocracy seeking to keep the iron heel upon the necks of the poorer classes; and it is a disgrace to California that such immense landholdings should be permitted. Every thousand acres of this land would support from five to eight families, or say 500 families altogether, and each would have a big farm to itself. These 500 families would bring considerable trade into this city, whereas now the few sheep herders thereon are supplied by their employer from San Francisco.

I did not intend, when I started this letter, to drift into this subject, but now that I have done so I will mention another phase of the land-monopoly business as it affects sportsmen. A couple of men own one tract of land in the San Joaquin Valley some sixty miles in extent. Much of this has been inclosed, and, of course, they have a right, under the law, to keep hunters off the land thus fenced. Within their inclosures are said to be thousands of antelope, to which they have really no more claim than the humblest and poorest citizen. Neither have they any use for the antelope. They are too infernally picayunish to purchase guns themselves for the purpose of having a little sport, and too mean to permit anybody else to shoot the game. Some day they will probably have the antelope killed off for the market to add a few dollars more to their $50,000,000 or $60,000,000. The law ought not to protect any such extent of country from the operations of sportsmen. No field of more than 100 acres should be exempted from the pursuit of wild game; and if unimproved ground even that limit should not hold good. It is getting so now in this State that one has to go a considerable distance into the mountains before losing sight of the "No Shooting on these Grounds" placards posted along the roadways.

Our Legislature convened to-day, and it is expected that

several important amendments will be made in the game laws, and some of the existing provisions made more stringent. The State law now declares that deer shall not be killed between Nov. 1 and July 1 of the following year, but in the mountain counties little or no heed is paid to the law; and in some of them the supervisors have undertaken to "boss the job," by giving permission to shoot deer during the close season. You see, the snow drives the deer down into the foothills, and there are men who are mean enough to go out and slay them, notwithstanding the poor, half-starved things are breeding, and consequently not fit to eat. Then, we shall probably have re-enacted the law against the killing of does at any season, which expired last year; and possibly trout-catching will be prohibited for a couple of years at least. What is needed more than anything is one or more game constables to visit different parts of the State, and see that offenders against the law are brought to justice.

The State Sportsmen's Association has, by its committee appointed for that purpose, drafted a series of amendments to be offered during the present session, and they are all good ones. The State ought to make a small appropriation for the purpose of introducing the Eastern quails here, and also prairie chickens. Our vast stubble fields would furnish excellent cover for them, and we need a greater variety of game birds. At present we have nothing but our quails and snipe.

Several parties here have young dogs that are down with the distemper, and I am advising them to follow the advice given by Mr. Hammond, the kennel editor of your excellent journal, and that is not to dose them too much, but to assist nature, by simple means, in working off the disease. A number of really valuable dogs have been killed by stuffing them with all sorts of medicine, and a little experience of this kind ought to be enough to cure any person of the practice, even though it doesn't cure the dog. OCCASIONAL.

SACRAMENTO, Col., Jan 9, 1883.

THE AIR SPACE.

Editor Forest and Stream:

In connection with the discussion of air space in barrels of firearms, I send you the following "Ordnance Notes, No. 117," relating to swollen barrels in service small arms. It is dated at the National Armory, Sept. 6, 1879, and reads:

"Every rifle and carbine made at this armory is fired at least five times with the service cartridge besides three proof charges, viz: 280, 250 and 80 grains of powder and a heavy bullet, respectively. There have besides been many thousand cartridges fired in testing experimental guns and cartridges. In all more than 1,000,000 of cartridges have been fired since 1870, and in no instance, so far as can be ascertained, has there ever occurred the bursting or swelling of a barrel at or near the muzzle. From these facts I think it may be safely inferred that a swollen or burst muzzle in service must result from some obstruction. A report of a trial made by Capt. Greer at this armory, herewith inclosed, shows the effect of firing the service rifle with different kins of obstructions placed in the bore at the muzzle. Signed, J. G. BENTON, Colonel Ordnance, Commanding."

This is Capt. Greer's report: "National Armory, Springfield, Mass., Sept. 5, 1879.—Sir: In accordance with your instructions to ascertain, if practicable, from what causes the swelling of the muzzle of the service rifle results, I have the honor to submit the following report: Two condemned barrels were taken at random from a lot turned in from the field. Eight or ten rounds were fired from one of them, rags of various sizes having been inserted in the bore a little below the front sight, without affecting the barrel the slightest. Sand next having been inserted in the muzzle, the barrel was shaken so as to remove all but a few grains which adhered to the fouling; the piece was then fired. This was repeated several times without swelling the muzzle. The barrel was then run into wet sand and the bore nearly filled for about an inch and a half. After firing in this condition the barrel was found swelled at the muzzle precisely like those that have been received from time to time from the field. Several pine plugs, from six to eight inches in length, were then prepared of a size to fit the bore closely. The second barrel was fired twice with the plugs driven in dry about one-half their length, twice driven in wet, and twice driven in dry, but afterward swelled by steam both inside and outside, without injury to the barrel. The inclosed air probably forced the plugs out before the bullets reached them. A plug was then split in two to represent a broken tompion, the air being free to pass by the plug. It was thought the bullet might wedge on the remaining side of the plug, but the barrel was found uninjured after the shot was fired. Occasionally the cup-anvil of the Frankford service shell has been found in the barrel after firing. It was thought possible that one of these might become wedged in the barrel and cause the swelling. To test this question, an anvil was driven down squarely across the barrel, just opposite the front sight. The piece was then fired, without injury to the barrel. A second anvil was driven down to the same position, but obliquely to the axis of the bore. No damage resulted from the firing. A long wad of cotton waste was then wet and rolled into a spiral and forced down the barrel several inches by the ramrod. The piece was then fired, when the barrel was found swelled a little beyond the wad, which was probably carried forward a few inches before the bullet wedged upon it. It would seem from these trials that swelling at the muzzle is caused chiefly by sand at that point, rags, etc., being blown out, but that rags lower down may cause a swelling at some point between their position and the muzzle; that the use of tompions is less hurtful than heretofore supposed, and finally, that swelling, not being easily produced, is the result of negligence in not seeing that the bore is free from obstructions. Very respectfully, your obedient servant, JOHN E. GREER, Captain of Ordnance, U. S. A."

You will bear in mind that musket barrels are possessed of much greater strength than those of shotguns. That Mr. Greener filled such barrels at the muzzle with two inches of clay and then fired them without injury, I do not believe.

Experiments of that nature have recently been made with our musket barrels, and they burst in almost every instance. Of course it would be almost impossible to burst the barrels of some of the heavy target rifles, there being so much metal. The results of the most recent tests have not yet been published, but they serve to show, as this report indicates, that sometimes the barrel is injured by what seems the slightest of causes, and at other times, when injury is expected, none apparently results. As I at first wrote, "we don't know very much about 'air spaces,' but on general principles consider them dangerous to the gun," and with the shotgun, I would also include the man who holds it, when air spaces exist.

I inclose some notes taken from a board of survey at Springfield Armory in 1882. You can hardly bring this under the head of "air spaces," but it is just as well that your readers should know the danger to rifles from so simple a cause.

Whether or not the same danger exists for shotguns I much doubt, that is, from the sand alone. That there is danger when the obstruction is greater, I have no doubt. Time and again barrels may stand a given test which they were not made to stand, and again may give way at the first trial. Consequently, it is necessary to always be prepared for the worst.

I have almost constantly handled firearms for some twenty-five years, since a boy, have seen many strange things in connection with them, both guns and cannon, and the more I see of them the more I am convinced of the old woman's saying, that "Guns are dangerous things, even without lock, stock or barrel." Vose, of ours, tells of a man during the war, who took two barrels upon which to set his kettles for cooking—one of them went off (of course, not loaded) and shattered his ankle.

The notes by Col. Buffington, as follows:

"A barrel received from field with a swollen muzzle was cut off back of the swell, the muzzle was then pushed into wet sand, and the gun was discharged, using the service cartridge, resulting in a swollen muzzle.

"A second similar gun barrel was taken, the swollen muzzle cut off, the gun fired, the end thrust into dry sand, and fired again, with no perceptible swelling; it was then fired twice more, with the consequent increase of fouling, the muzzle end resting in dry sand dust, as might easily happen at target practice from carelessness, then it was fired again, and the muzzle found to be swollen.

"All experiments tend to prove that an obstruction in the bore, particularly sand, will cause a swelling of the barrel.

"This swelling never takes place when firing the service cartridge, when there is no obstruction in the bore.

"Within the past eight years there have been proved at the Springfield Arsenal, over 450,000 barrels, with the following charges: One charge, 280 grains of powder and 500 grains of lead; and one charge of 250 grains of powder and 500 grains of lead, and there has never been an instance of a barrel swelling near the muzzle. Such swelling only occurs when there is an obstruction in the bore, particularly when it is sand." S.

WASHINGTON, D. C.

In the "Report of the Chief of Ordnance for 1879," p. 263, Capt. John E. Greer reports on certain experiments with small arms as follows:

"In accordance with instructions to test the liability of a rifle barrel to rupture, owing to the bullet not being entirely down to the powder charge, I have the honor to submit the following report:

In order to insert the bullets from the muzzle it was necessary to slightly reduce them in diameter.

The shells were loaded with the usual charge of 70 grains of powder, which was prevented from escaping from them by pasteboard wads, an open space of about half an inch still remaining.

Two shots were fired with the bullets just reaching the front of the shells, or 30 inches from the muzzle, and two at 25, 20, and 15 inches, respectively.

After each round the barrel was carefully examined; no signs of swelling or yielding in any manner were visible.

The pressures as indicated by the pressure-plug are given in the following table:

Distance from muzzle.	30 in.	25 in.	20 in.	15 in.
	Pounds.	*Pounds.*	*Pounds.*	*Pounds.*
Pressure per square inch.....	17,750	9,000	5,500	4,100
	16,250	6,500	5,250	4,000
Mean.....	17,000	7,750	5,375	4,050

The pressures obtained with the bullet crimped in the shell in the regular manner were about 27,000 pounds.

It would seem, therefore, from these results, that instead of an air-space between powder and bullet being a source of danger to the barrel the bore is relieved from strain, owing to the larger space in which the powder gas is permitted to expand."

Editor Forest and Stream:

I have had considerable experience in rifle shooting where the ball has not been sent home with the rod, and although these firings were not experimental, the results answer the question in your paper as to the danger of an air space, and with perfect satisfaction to me, as far as rifle barrels are concerned.

When a boy of ten years I began shooting with an old Kentucky rifle of extreme length, while my balls were all too large for the gun. This was remedied by reducing one diameter with a knife until it would fit the bore tight. Next, an iron rod was applied, and with the assistance of half a plowshare in the hand of a negro boy who always participated in my sports, was driven to within ten inches of the powder, resting there because the rod was not long enough to send it home. This manner of loading was carried on for about two years, when my father witnessed the performance and deprived us of both rod and gun. The rifle was never injured, and is now in the hands of a friend, who holds it on swan, eagle and hawk with deadly effect.

At the battle of Gettysburg my gun (a Springfield rifled musket) became so foul that the ball (conical) stopped half way down the barrel. I pounded upon the rod with a stone without moving it; and then discovered that I was unable to withdraw my rammer. I at once fired ball, rod and all at my "vis-a-vis" on the Federal side, who was about seventy or eighty yards away, without any injury to the gun, and I sincerely hope that I failed to hit my target.

A short time ago I carelessly fired a tight plug from the muzzle of a .38 Wesson, since which I have killed a number of swan and ducks, and ranging at from 100 to 300 yards, showing that the accuracy is not impaired. R. M. D.

TALBOT COUNTY, Md.

Editor Forest and Stream:

A few weeks ago, while hunting quail with Messrs. Jas. McCullough and John Smith, of Illinois, in pushing a tight shell into my gun, a 12-gauge 30-inch breech-loader, I must have stuck the muzzle of the gun in the ground. The dogs being then on a point I did not take time to examine, but flushing the bird fired at it, and as it was something unusual was surprised to find I had missed so fair a shot. I found when I went to reload my gun that two inches of the muzzle on the right hand barrel had been blown away and the rib between the barrels curled up like a watch spring, half way down the barrels. The left hand barrel, upon examination, was found to be plugged with mud for about two inches, but was uninjured. I had my gun repaired, and now, although only twenty-eight inches in the barrels, it shoots as good, if not better than before.

G. B. B.

NASHVILLE, Ill.

THE ILLINOIS GAME LAW.

THE matter of greatest interest here now to sportsmen, and which also affects game dealers as well, is the game laws of the State of Illinois. The annual meeting of the Sportsmen and Game Dealers' Association was held here Thursday, at which this matter was fully discussed. The meeting occurred in the Produce Exchange, main hall, and there was a big attendance of members present. To dispose of routine matters first, we will state that the annual election of officers occurred first, and resulted in a re-election as follos: President, Col. E. S. Bond; First Vice-President, Charles E. Felton; Second Vice-President, George E. Sloan; Third Vice-President, R. B. Organ; Secretary, George F. Norcom; Treasurer, C. H. Tebbetts; Executive Committe, Dr. F. B. Norcom, Charles E. Kern, S. H. Turrill, J. C. Ender, T. D Randall, and Fred. M. Smith.

After an approval of the report of the secretary and treasurer, the discussion of the amendment to the game laws of this State followed. It will be remembered by your readers that last December a committee was appointed to form a game law, and they met and passed an amendment to the law, which extends the time for selling wild game to Feb. 1. The old law closes all the selling Jan. 1. Why this amendment should have been passed by the committee is one of the seven wonders of the hunting world. The petition or bill thus amended was then sent to Springfield, our State capital, to be passed upon by the Legislature. Now the game law runs out Aug. 15, consequently the shooting begins on the instant, and holds until Dec. 1, when the law is again in force and the open season closes. This settles it that sportsmen must stop shooting game Dec. 1, yet dealers are allowed to sell till Jan. 1, and by the new amendment until February. The idea is to stop shooting and selling at the same time. By this law pot-hunters are virtually offered a premium for bagging game, and game dealers a temptation for buying this game and selling it, during two months—December and January, when gentleman sportsmen are barred out of all the pleasure of hunting.

When the law is up, August 15, the chickens are so young and tame that the pot-hunter can slip up and knock them over with a club or a stout stick, thus causing useless slaughter. The dealers in Chicago actually received loads of game last season that spoiled before it reached the game dealers. This must be stopped. Now the dealers are in favor of having a law that shall hold from Feb. 1 to Sept. 1 for all wild game, making the killing and selling the same dates.

Your correspondent had a conversation with L. L. Crocker, formerly a member of the State Legislature, and an ardent sportsman, and he said that it was impossible to get such a law passed, owing to the opposition of the members from the southern portion of the State, where game matures earlier, and where the pot-hunter abounds; they must go slow, and get one amendment at a time.

This is all nonsense of course. Even supposing game does mature earlier in the southern part of the State. The birds killed there spoil before reaching this city, which is the market for game. A common game law for all parts of the State should be passed. The meeting of sportsmen and dealers appointed a committee to again look after this matter of a change in the State game laws, and they will report next week.

A meeting of the Chicago Sharpshooters' Association was held on the North Side in their regular hall last Wednesday night. There were fully thirty member present. The reports of the outgoing officers show that the assets of the association were $76,591.78, liabilities $11,976.98, net assets $64,614.80, which consists of eighty acres of land just west of Kensington, one of our best suburbs, a large hall, gymnasium, bowling alley, shooting ranges, and a ballroom. Everything is satisfactory in the club, and they now number fully 200 members. The election of officers resulted as follows: Ambrose Andree, President; John Kirchoefer, Vice-President; Henry Reitz, Comptroller; August Zschuppel, Treasurer; Oscar T. Matthai, Secretary; George Kersten, First Shooting Master; Otto Hoef, Second Shooting Master.

There is absolutely a lamentable dearth of news about this neck of the woods. No hunting, no trap shooting, and most of the boys at home attending strictly to business. Therefore the valuable FOREST AND STREAM will have to be content with this meager letter.

BARNEY BUTTS.

"SO Barney's dead," said country store lounger number one, giving a jab to the stick he was whittling.

"Yes, the old man's gone at last," said lounger number two, shifting his quid and directing a stream of tobacco juice "dead on" to the box of sawdust made and provided for just such emergencies.

"Well, he was a big hunter; the bears 'll rest easier now he's gone," put in lounger number three.

"If it's Barney Butts you're talking about," said Tubbs the stage driver, "he ain't dead."

"I know he is," rejoined number one.

"When did he die," asked Tubbs.

"Dead and buried last week; and never another bear 'll he skin," said lounger number three, making another bulls-eye on the sawdust box, and flushing from it about a million flies.

"But I know better," insisted Tubbs.

"How do you know?" came in chorus from the three.

"Because I seen him myself yesterday." And the letters having been sorted, Tubbs flung the mailbag on to the red box-coach, elevated his own ponderous self to his perch, gathered up the reins, huddupped his team, and rattled off down the street, while the loungers three were left to complete their rounds at the sawdust box, the only dust, by the way, they will ever be likely to raise in the world.

The subject of this conversation, which was overheard by the writer last October in a little mountain village of the Catskills, was old Barney Butts, the famous bear hunter. Mr. Butts died at his house in East Windham in the second week of the following December, 1882, aged nearly eighty-three years. He was one of a number of men living in that wild country who spent much time in hunting the large game which is to be found in the mountains. From a notice of his life, contributed by Mr. I. C. Butts to the Windham *Journal*, I extract the following particulars:

"Barney Butts was born in what is now the town of Jewett (then Windham) about one mile from Hensonville,

on the road leading to Hunter, in March 1799. He removed from the place of his birth on the Sherman place near the 'Jennie Notch,' in the town of Windham. After residing there, and at several places in the immediate vicinity, he built what is now called the 'Summit House,' at East Windham, owned by Abbott Lamoreau, his son-in-law, where he died, having resided there thirty-five years. He married Eleanor Loomis of Windham, who died about seven years ago. Mr. Butts was a man of strong physical build, his parents were noted for their longevity, both having attained the age of one hundred years. He has a sister now living in Windham, who is at least ten years his senior. Mr. Butts was a noted hunter and trapper and was familiarly spoken of as 'Barney Butts, the bear hunter,' he having captured over one hundred black bears, having three in captivity during the past summer at one time, which were chained in the rear yard of the 'Summit House,' and were quite an attraction to city guests. During the fall while Barney was confined to the house by sickness, two escaped, having broken their chains during the night. One of them had been in captivity about four years, and had become so tame that it would take an apple from Mr. Butts's teeth, or put its arms around his neck and kiss him. The bear was killed near the Round Top about two months after its escape.

"Mr. Butts was the owner of a horse which he always rode on his hunting trips. Fences, stonewalls, ditches and fallen trees were no obstacles in his way. He has ascended High Park on horseback since his eightieth year, and set and attended to his traps. About eight years ago, while covering a trap with leaves, on the mountains, he accidentally sprung it, and its sharp spikes passed through his hand, holding him fast. This would have discouraged a man with ordinary pluck, but he, with no assistance but such as nature provided, went to work and after a faithful effort removed his hand from the trap and walked to his home, where a surgeon was summoned, the wound was dressed, and the sufferer made as comfortable as possible under the circumstances. He has often captured three bears in a single day, having tracked them to their den. The number of wildcats which can trace the cause of their demise to his hands, would be nearly as large as that of bruin. The last wolf ever exhibited alive in Windham, was about fifty years ago by Barney Butts. While living in 'Jennie Notch,' he, one morning, started after his horses in the lot, and when he returned he had two wolves. He also found and cut over five hundred bee trees. He had always lived within a radius of six miles of where he died, hence he was well known by all who had ever visited the Catskills. The history of these mountains was as familiar to him as any historian who ever attempted to describe them by pen. Although studying the habits of the savage denizens of the forest (second nature to him), he did not neglect his fellowmen, as his genial nature, kind hospitality and never-failing generosity will attest in the remarks of gratitude to the acts of his life by his neighbors and acquaintances."

MEAT-HAWK.

DUCK HUNTING ON CRYSTAL RIVER.

CRYSTAL River is a small town in Florida, situated at the head of a beautiful stream of water bearing the same name. The river is about ten miles long, and empties its waters into the Gulf of Mexico about thirty miles south of Cedar Keys. The stream is fed by springs of clear, soft water which boil up out of the ground in numerous places, some of them so large and powerful that a boat is rowed up to them with difficulty. The water is beautifully clear, and multitudes of fish can everywhere be seen disporting themselves in its depths or leaping from its surface. The banks of the stream are lined with live oaks, magnolias and cabbage palmettoes, the two former being draped with long festoons of the Zilandria or Spanish moss. The finest of fish are to be taken in great numbers from this stream, and at its mouth the sportsman will find high ground along the banks, where he can camp and have on his bill of fare every day in the week, fish, oysters, wild turkey, deer, duck, snipe and a host of birds with whose names the writer is not familiar. But it is not of the fish that I wish at this time to write, although a disciple of old Izaac would find here a wide field for the exercise of his art.

Business called me to this town. Being limited as to time, and wishing to guard against being tempted to make a protracted stay, I took with me no firearms except a No. 44 Smith & Wesson revolver, Russian model. Business being dispatched, the morning after Christmas found me on the wharf at the head of the river, eying with the instinct of a sportsman the flocks of ducks that were everywhere to be seen swimming and feeding. I thought regretfully of the breech-loader at home, and sought to content myself by trying the birds at long range with my revolver. This was not satisfactory to me, although it undoubtedly was to the ducks. After a little inquiry at one of the stores in town, I succeeded in borrowing a muzzle-loading shotgun of the style that I used to shoot when I was a boy, and held my life more lightly than now. The thing was loaded. It was loaded in both barrels, and an examination with the rod showed that she carried five fingers. Now, I consider five fingers altogether too much for a man or a gun, and as I could not draw the charge, I was about to abandon my hunt, when a gentleman with true Southern politeness offered to discharge the piece for me. He did so without any damage to himself or the piece, and securing the services of an experienced boatman, Mr. William Reed, whose name has already figured in the columns of the FOREST AND STREAM, and is familiar to Southern sportsmen, I embarked for a trip down the river. The fun began before we were a hundred yards from the wharf.

"Do you see those two ducks dead ahead, Mr. Reed?"

"Ay, sir."

"Pull for them straight away and I'll try them on as they rise."

The boat glided noiselessly over the clear water under the skillful motion of the oar until we were within easy range of the birds, but they were loth to take wing and strove, by rapid swimming, to escape. Being crowded they at last left the water. "Now's your chance, sir," said Reed. Bang, bang went the old double-barrel, and one of the ducks splashed into the water while the other went screaming on its way. "That was not my fault, Mr. Reed, I covered that bird," said I. Mr. Reed was silent. He had probably heard gunners make similar remarks before.

We pursued our way down the river, adopting the same tactics, rowing boldly for the birds and firing as they took wing, and though there were frequent misses there were hits enough to fill our boat with a goodly supply of birds. At last my powder horn was empty—one little charge was all I could extract. This I wadded carefully and reserved for a choice wing shot. Soon we rounded a point in the river. In the bend there were hundreds of ducks feeding but forty yards away, an old drake and his mate were quacking in the grass. As the boat forged ahead they sprang into the air and flew dead away into the wind.

"They were too far for this charge, Mr. Reed." "Ay, sir, but see he's coming back." And so he was. With neck outstretched and flapping wings, he came down the wind directly for us. At thirty yards he shifted to the right and tried to pass us at twenty yards. Snap, fiz-z, b-ang, went the old double barrel, loth to do duty, and down came the drake stone dead, making the water splash as he tumbled heels over head into the river.

Here is a royal place for sportsmen. Game is to be found in unlimited quantities. If the hunter wishes to camp, the banks of the river are high and dry near its mouth, and the climate is so mild that but little shelter is required. At the head of the river good hotel accommodations may be had of Mr. G. T. Willis, who is a gentleman that knows how to make strangers feel entirely at home. Mr. Wm. Reed, mentioned above, has been for the past nine years engaged in piloting hunting and fishing parties about the Gulf coast. He can be hired for a moderate sum to take charge of parties of sportsmen. His address is Crystal River, Hernando county, Fla. Should any of the readers of FOREST AND STREAM visit this delightful stream, I trust they will give through the columns of this journal a detailed account of their experiences.

B. F. MARSH.

OHIO, January, 1883.

GAME BIRD IMPORTATION.—Messrs. Charles Reiche & Brother have had two hundred pair of English pheasants and a large number of English hares and partridges consigned to them, all for the stocking of Mr. Pierre Lorillard's large game preserve in Monmouth county, N. J. The same firm have received an order from the Fisher's Island Sportsmen's Club for one hundred and fifty pair of Western quail, a lot of prairie chickens, English pheasants, hares and partridges. The Messrs. Reiche are also exporting to Germany three hundred pair of Western quail.

BRANT SHOOTERS will be interested in the advertisement elsewhere of a club house season ticket for sale.

Sea and River Fishing.

To insure prompt attention, communications should be addressed to the Forest and Stream Publishing Co., and not to individuals, in whose absence from the office matters of importance are liable to delay.

"You see the ways the Fishermen doth take
To catch the fish; what engines doth he make?
Behold! how he engageth all his wits;
Also his snares, lines, angles, hooks and nets;
Yet fish there be, that neither hook nor line
Nor snare, nor net, nor engine can make thine:
They must be grop'd for, and be tickled too.
Or they will not be catch'd whate'er you do."

—*John Bunyan.*

WINTER TALKS ON SUMMER PASTIMES.

XI.—THE GAME LAWS—ANGLING MISHAPS—SEA AND BROOK TROUT.

He who has once experienced the fascination of the woods-life never escapes its enticement. In the memory nothing remains but its charm.—WARNER.

Our local coterie were in council a few evenings since, nominally to devise means to render such aid as was practicable to secure an amendment and more general enforcement of the existing game laws of the State, but really for a promiscuous confab upon the subject of angling in general. The game laws were conceded to be imperfect, but less so than the slip-shod way in which they were enforced. Every species of fish and game are ruthlessly pursued out of season and by prohibited devices. This is true not alone in regard to remote waters and ranges, but also in regard to lakes and streams in populous neighborhoods. And this state of things will continue until the general public shall reach a more just conception of the material value of well-stocked waters in all sections of the State. As a partial remedy, an increase of the number of game constables was suggested. The necessity for this is conceded by those in authority, and if, in addition, those who appreciate the importance of game protection shall exert their personal influence to secure a thorough enforcement of the law in their several localities, something effective might be accomplished. At a few points in the State there are organized associations, one of whose purposes is to prosecute offenders. Some of them have rendered good service, but they are not generally efficient. Their members are ordinarily busy men, who have no leisure to give personal attention to the frequent violations of the law by the poachers and pot-hunters of their neighborhoods. If these several organizations could or would, for a year or two, employ some one to give his entire time to the detection and prosecution of offenders, they would learn to fear if not to respect the law, and good results would follow.

Our own State is not an exception to the prevailing vandalism. Not only do these violators of the laws of nature and of man deem all game their rightful plunder, but they persist in bagging it at all seasons and by any device. This is as true on the vast plains of the great West as within the borders of civilization, and is as persistently practised on the recently stocked salmon waters of Maine as in the over-fished lakes and rivers of the Adirondacks. Public sentiment is being gradually educated up to the proper standard upon this subject and it will ultimately reach a point when it will serve as a moral check upon all classes of the community, but meanwhile nothing but the terrors of the law and the enforcement of its penalty will act as sufficient restraints upon its habitual and persistent violators.

"If all has not been done that is desirable," said one of our number, "something has certainly been accomplished by the discussion of this subject within the past twenty or thirty years. I remember when sportsmen—not professional poachers or pot-hunters—did not deem it unsportsmanlike to string set-lines in the lakes and rivers of the North Woods to swell their 'count.' This practise has, I believe, been generally discarded, except by the low-down riff-raff, who have no more idea of what is legitimate in the practise of the art than an Esquimau has of the principles of algebra.

"I once met one of these fellows on the North Branch of the Moose River a great many years ago. We saw him set his line at a point famous for the number and size of the trout, which seemed to make it their headquarters. He supposed himself unobserved, of course, and retired to his shanty sure of a good haul in the morning. I was in camp with Dick O., whom most of you knew as 'a fellow of infinite humor,' and as muscular as he was witty, and as fond of fair play in angling as he was 'down on' all poachers and pot-hunters. When it was suggested that we make a midnight raid upon the trap set by our neighbor, Dick dissented, with the remark that 'he would make him a visit early in the morning, give him due notice of his purpose, and cut his line before his eyes.' I offered to accompany him, but he declined my services and proceeded alone to perform his righteous office. I watched him on his mission, observed him talking to the poacher, and saw him stoop down at the edge of the water, as if to cut the line. A tussle followed, and in less than a minute 'something dropped' in the water, and it wasn't Dick. The issue was the capture of the set-line; and, after due explanations, apologies, and sundry soothing appliances, a treaty of peace was signed, Dick was forgiven, and the poacher promised 'never to do so no more.'"

"Was that the season I met you fishing under water?"

"'No more o' that, Hal, an' you love me.'"

"Why not? It was certainly nothing to your discredit, and I have had a many hearty laugh since, at the remembrance of it."

"Tell us about it, D."

"Well, it was something like this: I was wading and casting down the North Branch with results entirely satisfactory, when I reached the borders of a rather deep pool, into which the waters swept with a velocity which rendered it extremely difficult for me to keep my footing. Anxious to reach a shaded spot in the pool, which required a long cast, I lifted myself up upon a slippery boulder to the more certainly reach my objective point. I succeeded, as I expected, in raising a large fish, but in striking, my feet slipped from under me, and I glided into the flood as cleanly and as arrow-like as a saw log dips into the water below the chute. I was not aware that anyone was in the neighborhood, until I heard a roar of laughter as I emerged from my bath to swim ashore. That's the whole story; I saw nothing laughable in the adventure then, although I have often since smiled in thinking of it."

"No, gentlemen, that is not the whole story, begging my friend's pardon. After he made his plunge there was nothing to be seen of him or of his belongings, but his rod, and that was held as erect and as artistically as if he was playing his fish from the rock from which he had slipped. The line was kept taut, and the tip of the rod bent as gracefully while the angler was submerged as when he regained his footing. It was a fine illustration of the ruling passion, and I was as glad as if I had done it myself, when our friend landed a three-pound trout as the result of his judicious manipulation under difficulties. By the way, D., did you ever find your hat?"

"Yes, half a mile below, and none the worse for the journey. But since you have begun to 'tell tales out of school,' I have a mind to give you a Roland for your Oliver."

"Let's have it; let's have it," from all sides. "Bob will not object."

"Not I, for I am sure nothing can be said about my angling adventures which will not redound to my infinite credit."

"We had been leisurely floating down the Raquette on such a day as rendered one quite indifferent to any past or any coming event except the going down of the sun. It was just such a day as one would like to have last forever. As we floated, we cast hither and thither, from no special desire to get a rise, but simply that our well-balanced rods might share in the inexpressible felicity of those who wielded them. It was well on in the afternoon when we touched the head of the long rapids near the Oxbow—in old times one of the best points for large trout, and plenty of them, on the river. My friend here was the first to get a rise, and was doing his best to land him at the head of the pool. But the fish and the current combined were too strong for him, and while both guide and angler were more intent upon the fish than upon their surroundings, the boat floated sideways against a projecting treetop, and was upset in the twinkling of an eye. The water was rather more than shoulder deep; but before I could cross over to help him, my friend had reached terra firma, while the guide was swimming with the current to overtake his boat. It is proper to say that Bob kept his temper, although he lost his rod."

"I remember those rapids very well," said another of our number, "but I have not visited them since the Raquette waters were planted with pickerel by a Long Lake vandal, whose name I have forgotten."

"But I haven't. It was Lysander Hall, who had often served as my guide, and an excellent guide he was—quick, intelligent, obliging and better acquainted with all the by-paths of the wilderness than any guide I ever had, except George Morse, who was killed in the war, and over whose remains Gen. Spinner caused to be erected a fitting record of his patriotism and courage."

"No matter what he was in all else, in thus polluting the Raquette waters, Hall committed a crime for which there was no law to mete out to him fitting punishment. The grandest trout waters in the State are deteriorated for all time. But, as I was saying, I remember those long rapids very pleasantly, and except at Setting Pole, I enjoyed swift water fishing nowhere else so well. Since I last visited them I have done something in the way of killing sea trout, and I seldom cast in the swift waters where they are found without being reminded of the rapids on the Raquette."

"Are not the fish even more alike than the waters they inhabit?"

"At first I thought the fish not only alike in appearance, but alike in fact. But I have since changed my opinion, and now believe them to be quite distinct from our brook or river trout, but of course, of the same general family."

"In this," I replied, "you are at odds with some of the best writers."

"I know that very well, but I know also that I am in agreement with others, and where doctors thus differ I have tried to decide for myself, not by any scientific investigation—although I have done a little of that—but by a close observation of the haunts and habits of the fish. Some of the salmon and sea trout rivers I have fished are fed by numerous small tributaries which are full of brook trout, and when coveting a mess, as we often did, I knew just where to find them. I have one special brook in my mind which projected its cold, pure transparent water into the river with such force as to preserve its identity for some distance. Whenever I cast within the radius of this distinctively marked brook water I would take clearly marked brook

trout ranging from a quarter to half a pound, but if I cast beyond this line so much as a half dozen yards I would have no brook trout response. When the clearly defined river water line was reached, the dainty fish seemed to halt as surely as if they had run their heads against a stone wall. But, by extending my cast beyond the outflow of the brook, I would receive prompt responses from what I believed to be sea trout. On placing them side by side the difference in their appearance seemed to me to be something more than the difference caused by the difference of the water in the two streams. But both are beautiful fish, but, in such a side by side comparison, the sea trout is discovered to lack the rich lustre and golden beauty of his more dainty cousin."

"Just," I added, "as you will find the tiny fry you see in the little spring rivulets which empty into a trout lake to be more beautiful in form and color than the larger fish you find in the larger waters."

"It was long a question," my friend rejoined, "whether pickerel and muscalonge were not identical. Now we know that they are different fish, and yet they resemble each other quite as closely as sea and brook trout. Among all the trout I have taken in salmon waters I never saw one that bore an exact resemblance to the trout I have taken in real trout brook waters, or that leaped from the water to the fly with the same vim which distinguishes the large brook trout in our own northern lakes and rivers. I have no wish to be dogmatical upon this subject, but I shall hold to my opinion all the same."

"I do not care to argue the question with you," was my reply, "but I am not convinced. I agree with you in this, however, that, except salmon, I know of no fish that affords better sport to the appreciative angler than sea trout ranging from three to eight pounds in weight." G. D.

WALL-EYED PIKE.

IT does not seem to me strange that the wall-eyed pike has received so little notice by those who report the pleasure they get in taking game fish. In our Cedar River the wall-eyed pike abound and grow to considerable size. I have seen them often of eight and ten pounds weight, and for table use they are not easily excelled. Their flesh is white and firm; they are without fine bones, and they have a flavor that is fine enough for the most particular taste. But when we put them among game fish they must take their place near the close of the list.

They do not take the bait generally with any amount of determination, and when one is known to have taken the bait, it must have plenty of line and must not be struck until it has had time to swallow the bait and digest the hook, and then the chances are not more than even that it is hooked; and now comes the only fun in the operation, for it will make one run and then give up, and one can get as much sport in landing a white sucker, as this beautiful fish. In fishing for them, I use live bait (minnows), plenty of line and a heavy rod, but have known a few to have been taken with an artificial bait, though live bait is considered the best generally. Now let me say something in the way of protest in the manner that these and other fish are being killed in our river. Night spearing with a lamp torch is a favorite mode with many of taking these fish, both in and out of season, and the nature of the pike is such that when once seen from the boat can generally be struck, and if not, by patient watching can soon be seen again, and then do not make long runs, as they are not swift fish "on foot." It makes their capture most certain, more especially as during the best spearing season they are full of eggs or spawn. I have known pike to be taken this way that had a pound or more of eggs in them, and this is not only true of the pike but of the black bass, rock bass, perch, pickerel, etc., etc., and also of the non-game fish such as suckers, white and black, redhorse, buffalo, etc.

Some of my friends will say, why don't you quit it yourself? Well! I will when the rest do, and yet as much as I love this sport I would gladly give it up if some way could be brought about to stop it altogether. My personal experience in this matter gives me a chance to see the damage done to our fish interests, and the general decline in numbers and quality of our best fish. The true way of taking fish with the rod has lost much of its attractiveness because of the yearly wholesale slaughter of our gamiest fish. Might not these facts be placed before our State fish commission for consideration, and have restrictions placed upon the capture of fish in this manner, and insure to us for the future a supply of fish that would make the heart of the angler rejoice.

Nature has done her share for us in giving us a beautiful river, a natural home for fish, water clear and swift, banks covered with trees and bushes, bottom lined with rocks and white sand, and abounding in the purest of springs.

WALL. E. PIKE.

CHARLES CITY, Iowa.

SALVELINUS OQUASSA AND FONTINALIS.—Charlestown, N. H., Jan. 20.—I cheerfully acknowledge the mistake I made in my answers to Herr von Behr, in calling the larger trout of the Rangeley lakes *"Salmo oquassa,"* and I beg to apologize to Mr. Geo. Shepard Page for having said anything that might detract from the well-earned glory of his exploit of catching what I should call, if I were not afraid of making another mistake, the largest *fontinalis* that was ever seen. I knew that one of the trouts of the Rangeley lakes was *Salvelinus oquassa*, and I confess that I got the two mixed up, and did for a time cherish the impression that the larger trout was the *oquassa*, and the smaller, *fontinalis*. Anyone, however, who has been through what I have for the past few years in trying to keep track of the bewildering changes in the names of the Pacific Coast Salmonidæ, has, I think, some excuse for sufficient temporary aberration of mind to confuse the two trouts of the Rangeley lakes. It is related of a man who was traveling in France in the unstable times of that country, that he stipulated with his landlord that a boy should rap on his door early every morning, and inform him what the form of government was on that day. We had on the Pacific Coast for a long time a very similar feeling about the names of that distant branch of the salmon family, and its effect on the mind was demoralizing. I finally acquired the habit of feeling sure that the true name of any specified fish was not the name we had been calling it. This appears to have been an adequate reason for revising the names of the two Rangeley trouts. I was sorry at first that I made such a mistake, but as it has brought out three or four most interesting and excellent articles on *Salvelinus oquassa*, perhaps, after all, it has done more good than harm, and I will venture to say that many of your readers now know more about *Salvelinus oquassa* than they ever did before—and all in consequence of my stupid blunder.—LIVINGSTON STONE.

THE TROUT STREAM.

CONCEIVED in cavern deep of earth and stone,
Where midnight darkness reigns and all is still,
Save trickling drops, that, oozing from the ground
Like evening gath'ring dew on grass and herb,
Fall from the vaulted roof with trickling splash.
No ray of sun, no beam of moon, or star
Looks down into the depths, to mark the track
Designed by nature it should flow henceforth,
As outward to the light it gropes its way
Through sand and shale, or fissures in the rock.
Impell'd by unseen force, it breaks the crust,
Yet sealing up its tortuous channel's mouth,
And wildly in its new found libert y,
Leaps from the mountain side a living spring
Of sparkling water, from which crystal fount
A tiny streamlet, trembling on the brink,
Leads down the gorge, 'mong rocks and fallen trees
And boulders large, which, prone amid the stream,
By their huge bulk resist the current's force,
And break the seething mass of dashing spray,
As tumbling down to foaming gulf below—
The woods resound the roaring of its fall.
Thus on, adown a darksome course it runs,
'Midst shade so dense of cedar cool and sweet,
Delaying not, as fain some ugly log
Would dam the purling brook by its sad fate,
Or tree-top languish in its narrow bed.
With noiseless gliding through the swamp it steals,
O'er sunken leaves, and snaky-looking roots,
'Twixt miry borders, edged with thorny brush,
And creeping vines that clamber up the trees.
Thus far alone, but with a friendly voice
It greets the merry rills that tumble in
From neighboring springs, to swell the tiny flood,
And sleep upon the bosom of its tide,
As hand in hand the mingling waters flow;
Emerging now, the lonesome shade it leaves,
Where sighing winds and whispering zephyrs wake
Strange midnight echoes through the forest gloom,
And daytime seems but evening gloaming come.
Thence out across the fields, beneath the sky,
In smoothly flowing stream, twixt banks of green,
Winds gracefully its silvery length along—
Now wid'ning out o'er shallow pebbly beds,
Light rippling music trembles on the breeze,
Nor dies away, but floating down the stream
It leaps from rift to rift in gladsome play,
Through deep'nd channel, narrow'd in its bounds
By stony walls, that rise on either side.
The swift and silent current bears its way,
To where the branching alder lowly droops
Above a sunny pool, where eddies whirl,
And laughing, slip away along the bank,
O'ershelving made by roots of branchless stub,
That stands in solemn silence, looking down
Into the pearly depths, as if to scan
What fishes leaping, show their silvery scales,
Or rise to catch the luckless summer flies.
The stream flows on, nor slackens yet its pace,
Through meadows green, and fields of waving grain:
On past the woody slope, where tow'ring pines,
At early morning catch first glimpse of dawn;
Across the roadway, or beneath the bridges,
Where kine come down to drink, or teams to cross,
As homeward or to village bound they go.
The bare-foot urchin, on his way from school,
Wades fearlessly across from bank to bank,
With splashing footsteps, through the miry clay,
Nor minds the wetting should he chance to fall.
With cautious step, and skillful turn of wrist,
The tireless angler wields his pliant rod,
And deftly casts upon the ripple's crest,
Or sweeps across the deep dark pools for trout,
Unconscious of the day's fast-speeding hours,
Till sun, reclining in the western sky,
By lengthen'd shadows, stretching tow'rd the hills,
And golden sunset, shimmering in the air,
Remind him that his holiday is spent.
With far off look, he sees the silv'ry stream
Meand'ring slowly tow'rd the distant lake,
But dares not linger, so reluctant turns
His footsteps homeward with a well-filled creel.
The thrush on elm-top trills his evening lay,
In flute-like notes that captivate the ear;
Cool soughing winds come creeping down the gorge,
Foretelling dampness, and perhaps a storm;
Low mutt'ring thunder echoes from the cliff,
And lightnings flash along the sunset sky;
The raindrops patter on the forest leaves,
And midnight darkness closes all the scene.

CANANDAIGUA, N. Y. C. T. MITCHEL.

GAMENESS OF LAKE TROUT.

THE loss by "Monatiquot" of his fly rod as told in FOREST AND STREAM of Jan. 18, reminds me of a similar experience of my own at Second Connecticut Lake last season. Like his, my ill luck was also with my first fly rod, an eleven ounce ash and lancewood. Amasa Ward, the guide, and I were fishing for "lunge" or lake trout at the mouth of Beaver Inlet. It was in the last week of September. The line storm had just passed over and had raised the lake about two feet above its usual level. We had fished the lake from inlet to outlet with fly and with bait, by casting and by trolling. But in vain, all legitimate angling allurements known to us had been tried, but not a fish could we coax. This had been going on for three days. I believe, however, I did one morning, catch a speckled trout of about a pound while fishing for minnows. I was using about four feet of line on as many feet of switch, standing on a log at the boat house, when the rascal nearly jerked me into the lake before I sufficiently recovered from my surprise to return the compliment. Other than this the fish had beaten us. Amasa said they had taken to the woods, and advocated a pursuit of them with clumbers and clubs. He held however, that sometime in the course of twenty-four hours they must take food, and if we might happen to be around just when they fell that way, we should stand a chance of getting a few. I had perfect confidence in Amasa. What he didn't seem to know about fin, fur or feather appeared to me not particularly worth knowing, so by his advice, we pushed over to Beaver Inlet about half an hour before sundown. We anchored the boat directly across the mouth of the stream, with a weight at each end, over a clean swept, gravely bottom and in about five feet of water. We both used fly rods, casting with minnows.

Precisely as the sun dropped behind the hemlocks that fringed the shore came a smart jerk upon my line followed by a whizzing reel. A whole municipality of air castles constructed in the smoke of my pipe curling lazily upward were tumbled to ruins instanter. I knew it was a "lunge" from his somewhat loggy movements and bull-like strength and fighting tactics. I had been told that the lake trout were inferior as game fish, but I want no better fighters than they proved themselves that night. Amasa said they were unusually lively. I had landed my fish and was adjusting my bait when Amasa became engaged. I took up the net to assist him, first throwing my bait overboard and laying my rod across the boat. The commotion made in netting Amasa's fish so rocked the boat that before I could prevent it my rod slipped over board. Having landed Amasa's fish we turned our attention to my rod. We could see it lying on the bottom at right angles with the length of the boat, its nickel-plated reel being just discernible through the roily water. How to get it was the question. We tried rod and net, but no use. It eluded all attempt to lift it; and while we looked, oh, horror! it began to move. The bait on the other end had been taken, and the thief was making for the middle of the lake. Alas, thought I, that my first fly-rod should come to such an ignoble fate. To lie and rot on the muddy bottom of Connecticut Lake, the scorn instead of the terror of the finny tribe. But I determined not to lose it without remonstrance, and energetically clapped the hoop of the net upon its butt above the reel. It checked the scamp, but I trembled. I determined not to lose the rod, however, if I had to go overboard after it. Amasa picked up a minnow rigging that lay in the bottom of the boat, and as luck would have it, he caught my line at the first cast. Gingerly he followed the line to the tip, drew the rod to the surface, and handed it to me. The fish was still fastened. He had been good enough to assist the operation by sulking, but a persuasive tension roused his temper and I had a beautiful set-to with him for about fifteen minutes. When landed he pulled the scales down to three pounds. He was the heaviest of exactly a dozen fish which we took that night.

Perhaps this experience has been paralleled; certainly it was a very unusual one, and that rod, however it may rank beside future finer ones, will always be cherished as a memento of that night's experience. We each caught six fish, the dozen aggregating something over twenty-five pounds. The battle continued about two hours. The twilight faded into darkness and the moon rose over the tree tops. A large part of the time it was so dark we could not see to use the landing net, and could scarcely distinguish the rods in our hands. Finally, to cap the climax, we each hooked a fish about the same time, and after some lively work to keep them clear of the anchor line, we managed to land them, and consigning them to the car, we pulled up weights and steered for Uncle Tom's. R. FIELD.

LOWELL, Mass.

A TRIP FOR BLACK BASS.

MY brother and myself, two as devoted lovers of the rod and reel as one often meets, boarded the fast express on the Lake Shore road one Friday afternoon, and in an hour were chatting cheerfully with mother at the amply spread table, having been carried the thirty miles that separated my home and Cleveland in just forty-five minutes. After satisfying the inner man with such food as only a mother can prepare for most welcome sons, we withdrew to the sitting-room and over our segars, while we carefully prepared our tackle, talked of the coming morrow, the stream to be fished, and of the many things which, in joyful anticipation of a fine day's sport, can only suggest themselves to the minds of such as Charlie and I. Having most carefully prepared everything, we retired for the night, not to sleep peacefully, however, but to dream of the strike, the leap fatal to some part of the tackle of the unwary angler, and of the thrilling events which crowd themselves into an excited mind bent on a glorious day's fun.

At about 4 o'clock in the morning I was awakened by my mother's voice calling me, and, giving Charley a dig in the ribs, I sprang out of bed followed by my companion, and we were soon enjoying a good cup of coffee preparatory to our start. We had about seventy-five of the prettiest minnows that ever graced a bucket, kicking and struggling among themselves in the pail, and I cannot possibly see how a bass could let one of those brown-backed chubs wiggle under its nose without trying him a whack.

We arrived at the river after the sun was well over the tree tops and the fog was rolling up from the surface of the river in dense clouds. I was ready first, and with a long cast, while my line was dry, I dropped my minnow squarely in a most inviting spot where the water gurgled and curled gracefully over a stump partially hidden by the overhanging bank. When the minnow was about eight inches from the water a bass of about one-half pound weight made a desperate break for it, but so great was his eagerness he missed it, and, describing a curve, fell in a somewhat awkward position on his side, but lightning was not quicker than his disappearance beneath the surface again. My minnow struck the water lightly and the current bore it inward under the bank, and when passing the stump I felt a violent jerk, and, taking my thumb off the reel, away he went with a velocity that made my nerves jump and called into play my every faculty, for I soon perceived I had hooked a veritable monster. After running about eighty-five feet he turned and went for that hole again and nearly succeeded, too, for, although I hung on for all I was worth, he kept on, but by a quick deflection of my rod tip I led him by it and started him across the river. After a long, fierce battle, enlivened by two or three desperate leaps, I landed him and had the satisfaction of seeing him pull down 4¼ pounds on my pocket scale.

Charlie had been likewise engaged, but his fish run somewhat smaller, but he evened things up by landing two to my one. Many times since that day have I caught that fish over again, and the thought of it will make me fairly quiver as I again see him now in the air shaking that hook fiercely, and again in the water; off he goes with a rush only to repeat his antics, until the landing net is slipped under him, and his last chance is forever gone. Thus it went on, and at two o'clock, when we stopped for a lunch and a smoke, we had twenty-two, all told, ranging from four and three-quarters to one and a half pounds. We took a vote and decided we had done well enough, and after unjointing started for home, where we were met with joyful congratulations, for mother and the rest are always glad when we are

successful. Around the evening lamp after supper, we showed them all just how we did it, going through all the details to a most appreciative audience.

We came back to the city on the early morning train with some of the nicest fish for our friends who, I am sure, if they saw this article would know whence it came. Many, many times have I thanked my lucky stars that I was born with an innate love for out-door pastimes, for often when business cares and troubles crowd thick and fast over my pathway, the thought of how I took a monster bass, together with all the pleasant varied surroundings of the time and place will flash into my mind and I catch the fish over again, and with a much lighter heart and pen I attack my work with renewed vigor and with the mental resolution to have another trip just as soon as I can get away. HUGH, JR.

CLEVELAND, O.

FISHING THROUGH ICE.

FISHING through the ice is at its meridian, and the boys are enjoying it hugely. We hear of many good strings and occasionally see a good string from our local waters. The best I have heard of was brought to town on Saturday, December 30, by some of the boys who visited the Ox-bow near Northampton. The pickerel were magnificent fellows, but the twenty-pound pike was the admiration of all, and has caused many inquiries for bait by those who were too lazy or too careless to put in a supply.

The Ox-bow, so called from its shape, is an old bed of the river, the Connecticut River Railroad cutting it off from the river, but leaving it open at one end; it is a safe retreat for the finny tribes in times of high water, and when once in they have no desire to return to their once turbulent home, but bask and feed in the still waters of the bow, where they afford good sport in both summer and winter fishing; the fisher having his choice between suckers, bullheads, perch, eels and pickerel, with an occasional pike thrown in for variety's sake.

I have found it a source of much pleasure in summer fishing, and have carried away some good strings after a day's watching of the tip-ups. The raising of the bloody flag has charms that will relax the stiffened joints, and assist in a spurt for the prize at the lower end of the line.

THOMAS CHALMERS.

HOLYOKE, MASS., January 10.

TENNESSEE FISH NOTES.—I had brought myself to believe that the fish law passed by the Legislature of our State two years ago was becoming popular and being practically enforced. Though the appearance of two huge wagon-loads of "jack fish," caught from the Harpeth River in a series of traps and offered for sale openly upon the public square of this city at three and four cents per pound, has shaken my faith amazingly. Was there ever a more infamous outrage perpetrated upon a civilized community? At least one thousand pounds of the gamest fish of these waters slaughtered in this brutal manner by a thing styling himself man, and publicly huckstered among respectable, law-abiding citizens. The law as passed laid no restrictions upon legitimate angling, or even the trot line; nor did it hamper the commissioners with restrictions upon giving farmers permits to seine the streams for fish with which to stock ponds. Yet, with all the leniency displayed, and in the face of the beneficial working of the law, vandals are permitted to defy it and rob the people of one of the most delightful and exhilarating of all field sports, to say nothing of depriving them of their rightful supply of delicious food. Such men as these robbers must be brought to justice, and the fish commissioners are the persons to do it. They should be prosecuted and punished, and not only them, but any person or persons buying their ill gotten goods. Our local sportsmen should organize an association, and invite to it the dealers of fish in the city, and between themselves form a covenant, and down cry these fiends. Refuse to purchase the fish, and punish every trespasser. This has been done successfully in other States, why not here? The past two years of very partial protection has demonstrated the fact that with the laws strictly enforced, every stream in the State would soon be teeming with an abundance of fish indigenous to them, and consequently everybody could have as much as they could eat, though as matters seem to be going, in the same time it would take to replenish the streams with fish, not one will be left. As the FOREST AND STREAM has always advocated protection, and been ready to frown down upon vandalism as practiced against game and fish, I feel it a duty to the community at large to inform the people through its columns of this dastardly act, hoping that the notice will bring forth expressions of disgust editorially, and from private sources.—J. D. H. (Nashville).

PHILADELPHIA NOTES.—The fearful condition of the water of the Schuylkill River is now attracting the attention of the authorities of our city. Philadelphians are becoming alarmed, and can hardly drink it. An investigation shows that a considerable portion of the noxious impurities contained therein comes from the gas works at Manayunk, Norristown and Reading. At Manayunk quantities of tar oil escape into the river from both public and private works, more from the latter than the former. At Norristown the gas waste products flow into the river, and the sewage of the growing towns on the line of the Schuylkill enters the stream freely. We have long known that these impurities have driven fish of all kinds from the river, and even the shad caught in the Delaware a short distance from where the Schuylkill flows into it, taste of the gas tar. Now, however, the nuisance has become a dangerous one, and our population becoming alarmed, attention is drawn to the subject. It is high time.—HOMO.

STRIPED BASS UNDER THE ICE.—A great many large bass are now being sent to market from towns along the Hudson River from Croton Point up to Newburgh. They are taken in nets which are hauled under the ice, and the bass being in a semi-torpid condition do not readily escape. It appears to be the habit of some of the large striped bass to remain in salt water all winter, while others seek the rivers where the water varies from brackish to fresh.

A VALUABLE CATFISH.—Jacksonville, Fla.—Why don't some of your fishculturists secure some of our channel cats and introduce them into some of the deep sandy lakes of the North? They are the cleanest fish in the world, are never caught from our docks, and range from one to ten pounds, generally from four to seven pounds. They are good biters and excellent fighters.—AL FRESCO.

ALEWIVES IN LAKE ONTARIO. The New York *Times* says: "Dr. Tarleton H. Bean, of the Smithsonian Institution, puts at rest the question whether shad are found in the lakes, due to planting. The mistake has been to confuse the branch alewife (*Clupea vernalis*) with young shad. The former are found in the lakes, the latter not. How the branch alewife got into Lake Ontario, Dr. Bean thinks, arose from the fact that some of the eggs of the alewife were mixed with those of the shad when attempts were made to place shad in those waters. But in some cases, as in Cayuga and Seneca lakes, it is believed that the alewives have come there through the water courses. Canals offer passages through which these fish might have come, and Dr. Bean and Mr. Mather both favor the idea."

TENNESSEE NOTES.—Sixteen bills are at present before the Legislature for the purpose of having the game and fish laws annulled. This seems cruel, though from many quarters I hear that the people are dissatisfied; they claim the laws to be oppressive, legislation in favor of the rich against the poor, and all such stuff. They will be gratified, no doubt, and one State will be soon depleted of those two delicious articles of food. Live quail are being brought into market and sold openly (bagged, of course). Since my last, two or three wagon loads of fish have been sold here (seined). Our fish commissioner says nothing and does less, perhaps because he knows there is no use making a row. Altogether, Tennessee is getting in a queer way.—J. D. H.

Fishculture.

To insure prompt attention, communications should be addressed to the Forest and Stream Publishing Co., and not to individuals, in whose absence from the office matters of importance are liable to delay.

IMPREGNATING SALMON EGGS.

MR. Livingston Stone, of the United States Fish Commission, in charge of the salmon breeding ranch on the McCloud River, California, made an interesting series of experiments to test the best method of impregnating salmon eggs, in September last. Fishculturists know that eggs and milt taken under the same conditions from different fish often vary greatly in the percentage of impregnation obtained. Therefore while Mr. Stone's trials are of value, they should, in order to determine the point sought, have been repeated many times. Mr. Stone writes from Cold Spring Trout Ponds, Charlestown, N. H.:

The following experiments were tried at the U. S. Fishery, California, this fall, with salmon eggs. All the eggs and milt were taken as usual in a dry vessel.

NATURE OF EXPERIMENTS.	No. of Eggs Taken.	No. of Eggs Picked out.	No. Eggs Impregnated.	Per cent. of Impregnation.
1.—Eggs remained in pan 1 minute before milt was put on	2,500	338	2,162	.864
2.—Eggs remained in pan 2 minutes before milt was put on	3,000	952	2,048	.682
3.—Eggs remained in pan 3 minutes before milt was put on	3,600	542	3,058	.849
4.—Milt remained in pan 1 minute before eggs were added	3,600	923	2,677	.743
5.—Milt remained in pan 2 minutes before eggs were added	3,100	711	2,389	.77
6.—Milt remained in pan 3 minutes before eggs were added	3,000	1,838	1,162	.387
7.—Canada process*	25,000	1,360	23,640	.945
8.—Eggs taken from dead fish	2,500	2,400	100	.04
9.—Eggs washed immediately after milt was put on	3,000	3,000	Fail.	———
10.—Milt 18 hours old when used	3,000	3,000	ure.	———
11.—Milt 48 hours old when used	3,000	3,000	"	———
12.—Spawned in pail altogether at one time	25,000	4,151	20,849	.834

* Taking the eggs and milt in the usual way in a pan, and as soon as they are well mixed together, pouring them into a pail till the pail is filled. This method saves pans and makes one pan do for a day's spawning.

LIVINGSTON STONE.

[It will be seen that the "Canada Process" yielded ninety-four and one-half per cent., while the eggs from the dead fish brought only four per cent. We hope that Mr. Stone will continue these experiments and that others will try them and report the results.]

SCINTILLATED EGOTISM.

Editor Forest and Stream:

Having myself had a little editorial experience I know full well that this special class of egotists have an unquestioned right to select their own headings, but I will ask as a special favor that you allow the above to stand over this communication. Thanks for your excellent notice of my humble monograph on carp and carpculture. "Flashes of egotism" was superlatively good, but, my dear Mr. Editor, read the first paragraph of the introduction and you will observe that you are off soundings with unutilized canvas; and you will now observe that I am following foreign methods in referring to the notice, for here I am at the charming end of same.

You don't "enthuse" worth a c—rpinoid. Well, wait two or three years till Commissioner Blackford begins to have in his Fulton Market tanks carp raised and prepared for market according to the egotistical plans laid down in my pamphlet. If then you don't think them equal to shad just plank them. For one, I don't "enthuse" over palate-tickling shad bones, planked though they be. I am fond of poultry, but when killed for table I don't care to have them drowned, though it would be just as sensible as to take fish out of the water and leave them to smother and die. The day is not far distant when more fish than butcher's meats will be consumed by our people, and the mass of these fish will be carp. The mass of your readers will not forget this little egotistical prophesy.

And now a few words about egotism. It is perfectly legitimate for a "self-made man" to feel proud of the job. If a man makes two blades of grass grow where but one grew before, he is called a benefactor. If a man devises methods whereby two pounds of superior food can be grown where but one grew before, or whereby tons can be raised where none was raised before, and tells others how to do it, he is an —egotist! Persons who originate rather than imitate expect this kind of fame; hence their happiness.

You don't seem to take much stock in Chinese fishculture, although we can show by the writings of ancient travelers in the "flowery kingdom," as well as by their own history, that they were adepts in the business thousands of years before scriptural allusions to the business in Egypt, some of which date back about twenty-six hundred years. See Isaiah, xix, x. (You can borrow a Bible just in at the *Observer* office). By the way, I am in correspondence with prominent parties in China upon the subject of carpculture and may be able at some future time to give the FOREST AND STREAM some interesting points from there. Egotistically yours,

MILTON P. PEIRCE.

PHILADELPHIA (117 Market street), Jan. 20, 1883.

SCOTCH PRIZE ESSAYS.

THE promoters of the International Fisheries Exhibition held in Edinburgh in April, 1882, offered upward of £300 for prizes for essays on a variety of subjects relating to fish and fisheries. After a great many essays were sent in, and after careful consideration, a certain number were selected as most deserving of the prizes offered. Of these twenty-nine were chosen for publication, and the volume containing them is now ready. The following summary will afford some idea of the variety and interest of the subjects discussed in the volume refessed to: "Harbour Accommodation for Fishing Boats on the East and North Coasts of Scotland," "The Different Methods of Oyster Culture," "The Fish Supply of Great Cities; with special reference to the best methods of catch and packing, and of distribution, and other means calculated to facilitate the delivery of the fish in good condition for market," "The Best Means of Increasing the Supply of Mussels for Bait," "The Natural History and Migration of the Herring," "The Salmon Disease," "The Breeding and Rearing of Fresh Water Fish," "The Utilization of Fish Offal," "The History and Statistics of the Herring Fishing in Sweden and Norway," "Whale Fishing Among the Faroe Islands," "The Species of Foreign Fish Most Suitable for Introduction into British Rivers and Waters." One of the prize essays is in French. Its author is Mr. Matthey and the title of his essay is, "Sur la Pêche de la Truite à Vallorbes (Suisse, Canton Vaud)." It is to be hoped that these essays will prove interesting and instructive not only to the vast number of persons in Europe and America directly or indirectly connected with the fisheries, but also to the general public who, by means of such exhibitions as that recently held in Edinburgh, are becoming more alive than they used to be to the great natural importance of the fisheries, and to the possibility of improving and developing them by careful superintendence and judicious management.

FISHCULTURE IN IOWA.

FISHING will probably be good next season, especially for silver, or striped, bass. They were put into Spirit Lake by Hon. B. F. Shaw several years ago. A great many were caught last year, averaging about two pounds each. In hauling my minnow net I caught large quantities, sometimes as many as eighty at a haul, all of one size—about five inches long. Of course every one was hustled back into the water as quick as possible. They are game to the last gasp and will try a rod to its utmost extent.

A great many fish are being taken this winter through the ice, and I am sorry to say there is no law to prevent it. There will undoubtedly be taken out of these lakes this winter not less than one hundred tons, principally pickerel, bass, and pike. It is a shame—but such is the fact—the people here are killing "the goose with the golden egg," sure.

I am doing what I can to keep the lakes stocked, but it is discouraging, and at the same time these vandals are the loudest in condemning the fish hatchery. Consistency is a jewel, which they certainly do not possess. I have now in process of hatching 750,000 whitefish eggs, 750,000 Lake Superior trout, and 250,000 siskowits, all from Lake Superior. They are doing splendidly and I never have a finer lot. I use lake water drawn through tiling, and have four feet head. There is all the water I want—in fact, it is without limit, as I have over twenty square miles to draw from. I will give you the results of my hatch in the spring. A. A. MOSHER,

Assistant Commissioner.

SPIRIT LAKE, IOWA.

REPORT OF THE COLORADO COMMISSIONERS.

WE have the biennial report of Mr. Wilson E. Sisty, Commissioner of Fisheries of Colorado, for the two years 1881-82. It includes a record of the progress in fishculture in the State and will be found more satisfactory than previous ones because there have been more means furnished the Commissioner to work with. In November, 1881, a hatchery was built and in December the first lot of eggs consisting of 100,000 brook trout ova were received from Plymouth, Mass., and placed in the troughs. A few rainbow trout eggs were afterward added. Over ninety-nine per cent. of these eggs are reported to have hatched and the fry distributed. A growth of eight inches is stated as the average of these fish. Carp were received from Prof. Baird and are doing well. Black bass and "croppy" were also added. Fourteen deputy commissioners have been appointed whose duty appears to be the enforcement of the laws, and several prosecutions for violation of the fishery laws are reported and the fines, amounting to $123, have been added to the resources of the commission. This is a very good showing for a State so young where ideas regarding the observance of fish and game laws are not supposed to prevail to any great extent.

THE MASSACHUSETTS COMMISSION.

THE seventeenth annual report of the Commissioners of Inland Fisheries, for the year ending December 31, 1882, is before us. From it we learn that fishways have been completed this season at Ipswich Mills, at Willowdale, and at the dam of C. J. Norwood. Arrangements for putting in a fishway at the dam of Ripley Bros. may be made next spring, and this, if carried out, will open the Ipswich River its whole length. Others will be put up in different portions of the State; those now in operation are reported to be working well. A report of the fish seen at the Lawrence way is given, with dates, and among the fish passing we notice alewives, suckers, chubs, lampreys, shiners, eels, shad (one), black bass, salmon (twelve).

One hundred thousand land-locked salmon fry were distributed, but the demand was greater than the supply. Some forty-seven thousand brook trout were also sent out. A million shad were hatched and liberated at North Andover. Salmon spawn from Bucksport, Me., and Plymouth, N. H., were received, and 454,983 fry placed in the headwaters of the Merrimack River. Carp were also distributed, and the commissioners regret that in many cases they were turned into ponds that were unsuitable.

The appendices give a list of fish commissioners, a list of ponds leased to private persons for terms of years, the legislation relating to ponds and fisheries during the year, the returns of weirs, seines and gill nets, and tables showing the catch of fish at the different fisheries for the year 1882.

CARP FOR SOUTH AMERICA.—Last week Prof. Baird sent, through Mr. Blackford, a lot of carp to Bogota, via Kingston, in charge of Mr. Decerro. These fish, like those sent to Quito last year, will have to be transported over the mountains on the backs of men. Those taken to Quito are doing well and growing finely. Mr. Decerro also took out some trout eggs from the hatchery of Mr. F. N. Clark, Northville, Mich., but it is doubtful if they will stand the tropical journey, or if they would live in that climate if hatched.

CARP LECTURES.—The State Boards of Agriculture of both Pennsylvania and New Jersey are taking an interest in the development of carpculture. Capt. Peirce, the official fishculturist of the Pennsylvania board, addressed that board and the Legislature upon the subject on the 25th inst., and is to address the New Jersey board and the Legislature on the 6th of February, at the State House, Trenton.

CODFISH.—The taking of codfish eggs has been begun by the U. S. Fish Commissioner at Mr. Blackford's, Fulton Market, New York. The bad weather during the past week has prevented many fish from arriving and therefore but few eggs have been obtained. A codfish was taken in the Hudson River about Newburg, last week. They seldom come inside of Sandy Hook.

SCOTLAND'S FISHERIES.

[By our Regular Edinburgh Correspondent.]

A VERY important act has recently come into operation for the management and regulation of the fisheries of Scotland. It is entitled "The Fishery Board (Scotland) Act, 1882," and was passed through Parliament in August last. The new fishery board created by this act is to have the powers and duties of the Board of British White Herring Fishery, which is declared to be dissolved, and is to take cognizance of everything relating to the coast and deep sea fisheries of Scotland and take such measures for their improvement as the funds under their administration not otherwise appropriated may admit of. The board is also to have the general superintendence of the salmon fisheries of Scotland and to have the powers and duties of commissioners under the Salmon Fishery Acts, the office of the former commissioners having now terminated. There are three paid officers connected with the board—a chairman, an inspector of salmon fisheries and a secretary. Among the nine unpaid members are the sheriffs of Aberdeen and Argyle, and the sheriff of Caithness, Cosney and Zetland, and Sir I. R. G. Maitland, Bart., whose piscicultural establishment at Howretown, near Stirling, is by far the largest in Great Britain, is also a member.

The value of the fishings placed under the management and control of this new board is very great. In 1880 the gross yield of the herring fishery in Scotland was 1,475,600 barrels, which, at twenty-five cents a barrel, gives £1,842,000 as the annual value of the fishery. In that year the number of fishing boats in Scotland was 14,751 and of fishermen and boys 47,431, while the estimated value of the boats, nets, and lines used in the herring, cod, and ling fisheries was £1,288,598, being an increase over the preceding year of 294 boats and of 929 fishermen, and an increase of £47,819 in the estimated value of boats, nets and lines. Then, the salmon fishings in Scotland are worth about £300,000 a year, and the hook and line fisheries for cod, ling, haddocks, etc., and the crab and lobster fisheries are also of great importance; so that the value of the property which has been placed under the superintendence of the new fishery board is certainly upward of £2,500,000 a year. The only fishing which does not appear to have been placed under the control of the board is the trout fishing. This is a great pity, as at present there is no annual close time for trout in Scotland, so that they may be destroyed during the spawning season, there being no law to prevent and punish such destruction. In England, on the other hand, there is a close time for trout and char exrending from October 1 to February 1, and in Ireland there is a close time for trout from September 24 to the last day of February. Further legislation is needed to correct this omission, as also a number of defects and omissions in the Scotch salmon fishery acts of 1862 and 1868. By the act of 1882 it is provided that the new board shall make an annual report to the Secretary of State for Home Department containing a statistical account of the fisheries, and suggestions for their regulation and improvement, which report shall be presented to Parliament. It is also provided that the inspector of salmon fisheries "shall, under the direction of the Fishery Board, inspect all the salmon fisheries of Scotland, and inquire into the operation of the salmon fishery acts, and report thereon from time to time to the board."

THE SALMON DISEASE.

This disease, referable to the parasitic fungus known as *Saprolegina ferax*, which has of recent years broken out in an epidemic form in a good many important salmon rivers in the south of Scotland and the north of England, shows but few signs of abating. In the Tweed, it has attained its greatest development—no fewer than 16,930 salmon, 2,454 grilse and 3,410 sea trout affected with the fungoid disease having been taken out of that river and buried during the season of 1880, 1881, and 1882, a total of 23,854 diseased fish. The number was greatest in 1882. But a fact worth noting in connection with this is that, in that very year, when the salmon disease was so prevalent, the fishing on the Tweed was the best that had occurred for twelve years; thus showing that a successful fishing season and a virulent outbreak of the salmon disease may be coincident on the same river. At present, the salmon disease in Scotland seems travelling northward as it has been, and still is, on the rivers the North Esk, which falls into the sea near Montrose, and it has quite recently appeared in the Deveron which runs into the south shore of the Moray Firth. Various inquiries have been held into the causes and cure of this mysterious disease; but the mystery still remains unsolved. Many causes have been assigned, but none of them will stand the test of investigation.

It seems to be a disease originating in fresh water, and salt has been proved to have a curative effect upon it. It has also been shown to be contagious, and therefore boards of conservators in England and district boards in Scotland are in the habit of directing the river watchers to take out and bury all diseased fish. Overstocking, pollutions, dry seasons, the use of artificial manures, the preservation of kelts, impassable weirs, and other causes have been assigned to account for the origin of the disease. But then all these causes are to be found existing in rivers where it has never been heard of, and no one has yet succeeded in detecting and pointing out in the rivers where the disease is prevalent, certain conditions which are never exempt from its ravages. We are still in the dark. Even the admirable and elaborate paper by Prof. Huxley in the twenty-first annual report of the Inspectors of Salmon Fisheries for England and Wales, which gives a clear and detailed description of the disease and of the nature and affinities of the fungus which is its constant concomitant, does not discover its cause or suggest its cure. It is to be hoped, however, that increased observation by naturalists, microscopists, and other scientific persons, may at length enable us to arrive at a more complete knowledge of the causes of the fungoid disease and the remedies applicable to it.

GUNN'S SAFETY RAIL FOR FISHING BOATS AND OTHER VESSELS.

Mr. John Gunn, of Golspie, Sutherlandshire, has lately invented a new guard-rail for fishing boats, which promises to be of great use in saving life in stormy weather. The rail consists of a row of standards about two feet in height, and about two feet apart. These standards are surmounted at the top by a continuous rail made from a round iron rod about three-quarters of an inch in thickness. This top rail is jointed at the top of each standard, and is fixed by small screw bolts on which it swings when it is necessary to fold it in. At intervals, according to arrangement, there are hinged top rails, which allow the rail to be folded down in sections. The lower end of the standards are fixed inside the present rail or bulwark by a bolt passing through an eye or hole in the iron. The inner end of this bolt is supported by passing through a plank of about four inches in breadth and about two inches in thickness which is fixed parallel to the gunwale, and runs along the whole length of the boat. This longitudinal plank is fixed about two inches away from the bulwark or present rail, and rather lower than the level of the top. In this recess, or groove of two inches, the rail stands and folds down. This is all the space which it takes up. When down, it is so completely out of the way and out of sight that the boat appears as if there was no rail. When raised, it is all round the boat, and is so strong, substantial and rigid, that those walking the deck must feel a sense of safety and security which is impossible without it. The lowering down arrangement in the specimen exhibited at Wick was from the stern. It was quite simple, and so easy in working that a child could lower or raise the rail in a few seconds. By withdrawing a pin ten or twelve feet came down at once, by the same process a second section was lost to sight in the groove, and so on till the whole rail was lowered. If wished, the midship section can be lowered and the fore and aft sections of the rail left standing. The cost of the safety rail, made of wrought iron, is from 2s. 3d. to 2s. 4d. per running foot. Mr. R. Sinclair, of Wick, has made arrangements to have his new first class fishing-boat of fifty feet keel and seventeen feet beam fitted with the new safety rail. The rail is to be exhibited at the Great International Fisheries Exhibition which is to be held in London in 1883.

SALMON ANGLING ON THE HELMSDALE.

This comparatively small river, on the eastern borders of Sutherlandshire, with a drainage area of 214 square miles and a length of about twenty-five miles, has afforded about the best salmon angling in Scotland during the fishing season of 1882. The six rods who rented the river killed about eight hundred salmon among them, one gentleman taking two hundred fish to his own rod between the 10th of February (the commencement of the season) and the 1st of May, and nearly one hundred more after the latter date. It was the best year's rod fishing ever known on the Helmsdale. The Helmsdale is an early river and the best of the fishing is over by the 1st of May.

NATURAL OBSTRUCTIONS TO THE ASCENT OF SALMON.

About five hundred miles of rivers and lochs are barred against the ascent of salmon in Scotland by impassable waterfalls, most of which might be rendered passable at an outlay which would be amply repaid by the value of the waters which would be opened up to salmon. The chief of these are the Falls of Tummel, a tributary of the Tay. They are about sixteen feet in height and at present prevent salmon from having access to Loch Tummel, Loch Rannoch, Loch Erich, and Loch Lydoch, and tributary streams that extend as far as Lord Breadalbane's Deer Forests of the Black Mount—in all from about one hundred miles of water. Perhaps the next most important obstacle is that caused by the Falls of Mornessie, on the River Spean. These falls are twenty-two feet in height and prevent salmon from having access to Lochs Laggan, Gulbin, Ossian, and Treag and their tributary spawning streams, which cannot amount altogether to much less than fifty miles of water. It deserves notice, in connection with this subject, that Herr Landmark, Royal Inspector of Fisheries in Norway, has lately succeeded in passing salmon over waterfalls to which those mentioned above are but trifling, the Norwegian falls overcome by him being twenty-eight feet and eighty-nine feet high respectively. As Herr Landmark states, in his report upon the ladders over these falls, that he borrowed the plan of the ladder over the higher fall, with certain modifications, from the system of Mr. E. A. Brackett, which is described in the United States Report for Fish and Fisheries for 1872-73, it may be interesting to give some details.

Herr Landmark's operations were carried out on the River Sire, which falls into the North Sea about half way between Christiansand and Stavanger. It is ninety miles in length, and drains upward of seven hundred miles of country, passing through several considerable lakes, one of which is nineteen miles and another seventeen miles long. Originally, the Sire were not accessible for salmon for more than a few hundred yards above the estuary, owing to two waterfalls, one called the Logfos, twenty-eight feet in height, and the other (almost three-quarters of a mile further up) termed the Rukanfos, no less than eighty-nine feet high, or nine feet higher than Corra Linn, the highest of the well-known falls of the Clyde in Scotland. Now, however, thanks to the salmon passes designed and executed by Herr Landmark and Herr Satren, civil engineer, these apparently insuperable obstacles have been overcome, and fifty miles of lake and river have been rendered easily accessible to salmon. The pass over the first and lowest fall is comparatively simple. Its total length is 1,050 feet, and it has a very easy gradient, varying from 1 in 200 to 1 in 15. Far more complex and imposing, however, is the pass over the second fall of eighty-nine feet in height, and encompassed on all sides by ragged and precipitous rocks. As already mentioned, its plan has been borrowed from a pass described in one of the United States reports on fisheries. It is principally constructed of wood (two and one-half inch planks) and has a much steeper gradient than the pass on the lower fall, varying from 1 in 8 to 1 in 7. Only about a fourth of the length of the pass has had to be blasted in the solid rock. The entire distance which salmon have to traverse from the bottom to the top of the pass is nearly half a mile. There is a hatching apparatus in connection with the pass which affords space for about half a million of salmon fry, and by a peculiar arrangement a stream of water can be conducted from the pass to the hatching apparatus.

About one hundred and sixty feet and five hundred and twenty feet, respectively, from the foot of the pass there are two spacious resting places for ascending salmon, each about thirteen feet square and five feet deep. The efficiency of both passes has already been thoroughly tested. Thus, on filling for the first time, during the spring of 1880, the pass at the Logfos, a considerable number of salmon were found to have made their way up after the lapse of a few hours; and since then it has been ascertained by repeated observation that almost all the fish that find their way to the foot of the Falls shortly afterward ascend the pass. "A more successful result," says Herr Landmark, "could scarcely be imagined." Of course, the fish that ascended the Logfos fall were stopped by the great fall of Rukanfos, the pass over which was not finished until the beginning of 1881, after the period when the migratory instinct of salmon leads them to attempt the ascent of rivers. But in the summer of that year it was proved that the pass over the Rukanfos had also been a success; salmon having frequently been observed in the uppermost resting basin of the pass. Ascent from this was for a time barred by an iron grating; but on removing this, it was no longer possible to compute, even approximately, the number of fish that ascended the pass. Scarcely any of those that had previously been seen at the foot of the Rukanfos remained, and salmon were for the first time seen and taken with the rod and line by persons fishing for trout in the reaches of the river above the Rukanfos. The entire cost of these great works, which have enabled salmon to pass over two falls whose united height is one hundred and seventeen feet, has been about £1,300, which has been defrayed by a body of shareholders called "The River Sire Salmon Fishery Company (limited)," who have bought up the fishing rights on the whole of the river, and also the coast salmon fishings for a distance of four or five miles on either side of the river mouth.

BURSTING OF BIG GUNS.—Within the last few months there has been an epidemic of gunbursting. First of all we had the Krupp naval gun, which burst on board ship; then on the 18th of October a 38-centimetre German breech-loading gun at Wilhelmshaven, when, the men being all under cover, no damage appears to have been done to life. Pieces of it, weighing 2,000 pounds, were, according to the *Magdeburg Gazette*, thrown more than 100 yards. A little later in October a 6-inch English breech-loader burst at Shoeburyness, again luckily without damage to life. The reason for its failure was found to be a flaw in the inner steel tube, which could not be seen till the burst took place. Austria, not to be left long behindhand, followed with the burst of a breech-loading mortar at Felixdorf on the 7th of November. This time unhappily, if the *Cologne Gazette* is accurate in its account, a captain was killed by a fragment of the gun, and a lieutenant severely wounded. The French manage to keep their accidents very quiet from the public ear, but there is pretty good evidence that there has been at least one failure with their ordnance. With the exception of the two German guns, each burst represents a different method of manufacture. What an apple of discord for the artillerist.—*Pall Mall Gazette.*

The Kennel.

FIXTURES.

BENCH SHOWS.

February 20, 21, 22 and 23, 1883.—Grand International Bench Show, Washington, D. C. Entries close Feb. 12. Chas. Lincoln, Superintendent, Office, Skating Rink, Washington, D. C.

March 26, 27 and 28, 1883.—Dominion of Canada Kennel Club Bench Show, at Ottawa, Canada. Charles Lincoln, Superintendent.

April 3, 4, and 5 1883. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters wheiped on or after January 1, 1883, close February, 1, 1883. Chas. Lincoln Superintendent. C. B. Elbin, Secretary.

May 8, 9, 10 and 11, 1883.—Westminster Kennel Club, Seventh Annual Bench Show, New York City. Chas. Lincoln, Sup't.

To insure prompt attention communications should be addressed to the Forest and Stream Publishing Co., and not to individuals, in whose absence from the office matters of importance are liable to delay.

Owing to the illness of the Kennel Editor, many communications are deferred.

WASHINGTON SHOW PRIZES.

THE following is the classification for the above show which takes place at the capital February 20, 21, 22 and 23:

Mastiffs (champions, dogs and bitches), champion medal.

Mastiffs, dogs $10 and $5; bitches, same. Mastiff puppies, silver medal for best.

Champion St. Bernards, champion medal.

Rough-coated St. Bernard dogs, $10 and $5; bitches, same.

Smooth-coated St. Bernard dogs, $10 and $5.

St. Bernard puppies, $10.

Newfoundlands, $10 and $5.

Greyhounds, $10 and $5.

Champion English setter dogs, $15; bitches, same.

English setter dogs (except pure Laveracks), $15 and $5.

English setter bitches (except pure Laveracks), $15 and $5.

English setter dogs (of pure Laverack pedigree), $15 and $5.

English setter bitches (of pure Laverack pedigree), $15 and $5.

English setter puppies, under 12mos., $10 and $5.

Champion Gordon setters, best dog or bitch, $15.

Gordon setter dogs, $15 and $5; bitches, same; puppies, first, $10.

Champion Irish setter dogs, $15; bitches, same.

Irish setter dogs, $15 and $5; bitches same; puppies, under 12mos., $10.

Champion pointer dogs, $15; bitches same.

Pointer dogs, $15 and $5; bitches same; puppies, $10.

Irish water spaniels, $10 and $5.

Champion field spaniels, any color, over 28lbs., $10.

Field spaniels, any color, over 28lbs., $10 and $5.

Champion cocker spaniels, any color, under 28lbs., $10.

Cocker spaniels, other than black, under 28lbs., $10 and $5.

Black cocker spaniels, under 28lbs., $10 and $5.

Best sporting spaniel puppy, any color, under 12mos., silver medal.

Foxhounds, $10 and $5.

English beagles, $10 and $5.

American bench-legged beagles or Basset hounds, $10 and $5.

Champion fox-terrier dogs, champion medal; bitches same.

OPEN CLASSES.

Fox-terrier dogs, $10 and $5; bitches, same.

Fox-terrier puppies under 12mos., dog or bitch, silver medal.

Champion collie dogs, champion medal; bitches, same.

Collie dogs, $10 and $5; bitches, same; puppies, silver medal.

Bulldogs, $10 and $5.

Bull-terriers, $10 and $5.

Black and tan terriers, $10 and $5.

Irish terriers, $10 and $5.

Skye terriers, $10 and $5.

Any other hard-coated terrier, $10 and $5.

Champion pugs, dogs, champion medal; bitches, same.

Pugs, dogs, $10 and $5; bitches, same.

Yorkshire terriers, $10 and $5.

King Charles, Blenheim or Japanese spaniels, $10 and $5.

Miscellaneous or foreign class, over 25lbs. weight, $7 and $3; under 25lbs., the same.

Entries close February 12.

CHAS. LINCOLN, Supt.

WASHINGTON, D. C., Office Skating Rink.

OTTAWA SHOW—SPECIAL PRIZES.

A.—The Dominion of Canada Kennel Club offers a handsome silver cup, value $75.00, suitably engraved, for the best six dogs of any breed or sex, whelped and owned in the Dominion, having been the property of the exhibitor for six months previous to the show; entry fee $5.00. Conditions.—This cup will be known as the D. C. K. C. Trophy Cup, and must be won twice before becoming the property of the winner, though not necessarily with the same dogs. Winner to offer it under the same conditions at the next show held under the auspices of the Club.

B. Mr. Lindsay Russel, the president, offers $25.00 for the best English setter, dog or bitch, that has never previously won a first prize, open only to dogs owned in Great Britain or the United States; entry fee $3.00.

C. Mr. Lindsay Russel, the president, offers $25.00 for the best Irish setter, dog or bitch, that has never previously won a first prize, open only to dogs owned in Great Britain or the United States; entry fee $3.00

D. Mr. F. P. Austin, first vice-president, offers $20.00 for the best pointer, dog or bitch, owned in the Dominion, that has never previously won a first prize; entry fee $3.00.

E. Mr. Sheriff Sweetland, second vice-president, offers $20.00 for the best Gordon setter, dog or bitch, owned in the Dominion, that has never previously won a first prize; entry fee $2.00.

F. For the best matched pair of English setters (regardless of sex) color and quality to be considered, and to be the bona fide property of one individual or club, silver cup, value $15.00; entry fee $2.00.

G. For the best matched pair of Irish setters, same conditions as special F, silver cup, value $15.00; entry fee $2.00.

H. For the best matched pair of Gordon setters, same conditions as specials F, and G., except that they must be owned in the Dominion, silver cup, value $15.00; entry fee $2.00.

I. For the best matched pair of pointers, same conditions as specials F. and G., silver cup, value $15.00; entry fee $2.00.

J. For the best English setter, dog or bitch, having the best field trial record, color and quality to be considered, sportsman's tent and fittings, value $17.00; entry fee $2.00.

K. For the best Irish setter brood bitch shown, with two of her whelps, one year's subscription to the Boston *Herald;* Entry free.

L. For the best English or Irish setter, owned in and entered by an exhibitor from Manitoba or the N. W. T., silver cup, value $15.00; entry free.

M. The American Cocker Spaniel Club offers a prize of $10.00 for the best cocker spaniel, dog or bitch, any age or color, to be judged according to the standard of and open only to members of the A. C. S. Club; entry free.

N. For the best collection of cocker spaniels, any color, to consist of not less than three, one year's subscription to FOREST AND STREAM; entry free.

O. For the best fox terrier dog or bitch, (small size); dogs under 18 lbs., bitches under 16 lbs., $20.00 cash; entry fee $2.00.

P. For the best fox terrier bitch, shown with two of her whelps, one year's subscription to the *Canadian Sportsman;* entry free.

Q. For the best Yorkshire terrier, dog or bitch, silver cup; entry fee $1.00.

R. For the best bull-terrier, meerschaum pipe, value $6.00; entry free.

S. For the best Skye terrier, owned and entered by a lady in Montreal, oil plaque, value $12.00; entry free.

T. For the best Scotch terrier, owned and entered by a lady resident in Ottawa, fancy drawing room chair, value $10.00; entry free.

U. For the best terrier, any breed, owned and entered by a lady, ostrich feather, value $10.00; entry free.

V. For the best dog or bitch of any kind, owned and entered by a lady resident in Ottawa, china tea service, value $15.00; entry free.

W. For the best collie dog or bitch owned in the city of Ottawa, one year's subscription to *Spirit of the Times;* entry free.

X. For the best collection of collies (regardless of sex) not less than three, to be the bona fide property of the exhibitor, rattan rocking chair, value $10.; entry free.

Y. For the best Newfoundland dog, one year's subscription to the daily *Mail;* entry free.

Z. For the best St. Bernard dog or bitch, silver mounted revolver, value $8.00; entry free.

A.A. For the best mastiff, fur cap, value $12.00; entry fee $1.00.

B.B. For the best Irish water spaniel, dog or bitch owned in the Dominion of Canada, Dr. Rowe offers one year's subscription; entry free.

C.C. For the best bulldog, Mr. J. R. Esmonde, fishing rod, value $6.00; entry free.

D.D. For the best greyhound, dog or bitch, a silk umbrella; entry free.

E.E. For the best foxhound, dog or bitch "Stonehenge on the Dog," value $5.00; entry free.

F.F. For the sporting dog exhibited in the best bench show condition, Dr. Rose offers one year's subscription; entry free.

G.G. For the largest and best display of dogs owned and entered by one exhibitor or club, half dozen gentlemen's shirts value $15.00; entry $3.00.

H.H. For the best black cocker spaniel, dog or bitch, silver mounted revolver, value $12.00; entry fee $1.00.

I.I. For the best collection of fox-terriers, not less than six (regardless of sex) entered and owned by one exhibitor or club, shooting coat, value $20.00; entry fee $2.00.

J.J. For the best spaniel puppy, under twelve months, dog or bitch, silver cup, value $15.00; entry fee $2.00.

K.K. The civil service of the Dominion of Canada will offer a handsome prize, value and class not fixed.

L.L. The sportsmen of the city of London will offer a prize, value and class not fixed.

Many other specials will be donated; they will be advertised in Canadian and American sporting papers.

MERIDEN DOG SHOW.

A DOG show in connection with the annual exhibition of the Meriden Poultry and Pet Stock Association, was held at Meriden, Conn., on January 9 and following days. The dogs were exhibited in the gallery of the Town Hall, the poultry having the floor on this occasion. There was not a very extensive entry, and competition was mainly local; the only exhibitors from New York being Mr. W. E. Smith, who won easily in the Irish setter class with Triumph, and Mr. A. C. Wilmerding who took a first and two specials with his black spaniel Black Prince, a son of the well known champion Benedict. Mr. Elmore was to the front with a good exhibit of beagles, a breed which may be considered his specialty; and he cleared the prizes in all classes of beagles and foxhounds. The principal awards were as follows:

English Setters.—Dogs—1st and specials, Mr. Jas. McAlpine, Jr.'s, Ranger; 2d, G. R. Nichol's Asteroid; 3d, F. H. Ferguson's Dash. Bitches—1st, B. B. Penn's Mollie. Puppies—1st, G. R. Nichol's Asteroid.

Irish Setters.—Dogs—1st and specials, W. E. Smith's Triumph; 2d, E. P. Tillotson. Bitches—1st, John Rankin. Puppies—1st, J. F. Ives.

Pointers.—Dogs—1st and special, J. F. Ives's Shot; 2d, W. E. Miller's Jim; 3d, A. B. Paddock's Sanco. Puppies—1st, J. F. Ives's Dash.

Foxhounds.—1st and 2d, N. Elmore. Puppies.—1st and 2d, N. Elmore.

Beagles.—Dogs—1st and 2d, N. Elmore. Bitches—1st and 2d, N. Elmore. Puppies—1st and 2d, N. Elmore.

Spaniels.—1st and two specials, A. C. Wilmerding's Black Prince.

St. Bernards.—1st, A. H. Whiting.

LONG ISLAND FOX HUNTING.

THE first fox hunt took place to-day, the 8th of January. The meet was at "Cow Neck," the estate of A. H. Barney, Esq., near North Sea, Southampton. The morning was cold and frosty, the scent anything but good—otherwise the was a beautiful day, with a bright sun. After drawing cover for about two hours, the hounds scented a 'coon, which being run to burrow on the bank of the Peconic Bay, and men sent for spades, etc., to dig it out, the hunters continued to beat the Neck, and were soon rewarded for their trouble. On the south part of the Neck the hounds commenced to give tongue quite lively, and in the course of ten minutes a brace of foxes were seen going from their lair. The hounds, unfortunately, divided, and one fox, after running for about half an hour, was killed in the Neck.

A bridge going on to Cow Neck crosses the channel, running into Scollop Pond. On this bridge some of the hunters bring an old coat, horse blanket, etc., to frighten the fox and prevent his crossing, so as to keep him on the Neck.

The other fox, after a pretty burst of fifteen minutes or so, was lost for a time. At last it was supposed that the fox ran to the bridge and was in a hole there. It proved he had been there but, instead of remaining in his burrow, he took to the water and swam the creek. Passing over the bridge with one portion of the hounds, they at once hit off the scent, and now as pretty a run as can be had in this country took place. The hounds, running over the salt meadow, took a road leading to Jere Rives's, and when near North Sea Harbor doubled back and recrossed the road and ran into some sprouts, the property of Chas. Harlon, Esq., where the fox had lain down. The hounds got up with him there, and part of the time here, in two or three instances ran him in sight on the salt meadow, and were at one time within two yards of his brush. As pretty a sight as man can wish to see and hear, and the music of the hounds just then was splendid to a fox hunter.

At last the fox dodged the hounds and broke away, heading for Millstone Brook. The hounds (the scent having become good) ran with head breast-high and stern down, at a killing pace. The fox turned and ran to Big Fresh Pond, and from thence to Millstone Brook, when near the brook turning and running due west on to "West Neck." Then he doubled back and made for Fresh Pond, skirting the pond and re-crossing the North Sea and Southampton road south of the stream, bearing towards Toud; instead of going to Toud, he left the saw mill to the north, then running nearly east for Caulp Pond, and when near there the hounds were whipped off, it being too late in the afternoon to go further. Six gentlemen succeeded in being in at the finish, viz., Brown, J. R. Rose, H. C. Rose, W. Wines, Geo. W. Whitaker and Elias White.

The 'coon that was seen to burrow was dug out, secured and expressed to C. A. Sears, Esq., a lover of sport. No doubt by this time a few of his sporting friends have discussed its quality.

SOUTHAMPTON, L. I., January 8, 1883.

LLEWELLINS vs. POINTERS.

Editor Forest and Stream:

"Pious Jeemes's" letter published in your edition of the 11th inst., has been perused by your readers with much interest. The only thing "Jeemes" is wrong in, is the blast he gives the Llewellins. Although correct in his statement about their having been the victors in nearly all our late trials, he overlooks one fact, namely, that the breeding of this king of all setters has been made a specialty with us for years. Large amounts of money and labor have been spent to make this strain perfection, and it is now on its zenith. How much do we care for the interest of the pointer? How very few men really work for him. Pointer breeding is only in its infancy here, while in Europe innumerable field trials have been won by the same strain of pointers as we have in the United States. The Llewellins have not only really many first-class dogs, but also fully as good bitches, consequently produce better progeny. Now how many pointers have we in the United States of real first-class quality? Five: Bow, Faust, Croxteth, Don and Sensation. Now, how many bitches are there as good as the dogs? I know of none. How can pointer men produce rivals to Lewellins if the bitch stock is not in the country? My advice to pointer men is, buy or import as good bitches as we have dogs, and we will run the Llewellin a very sharp race. The pointer has only won one first so far, but how much more numerous is the Llewellin in every field trial! Wai, "Pious Jeemes," give us a show. *"Che si va piano va sano* ("he who goes slowly goes safely,") as the Italian says, and before many years the pointer will win as many firsts as the Llewellins; all I hope is "Jeemes" will be judge. CROXTETH.

NEVERSINE LODGE, Guymard, N. Y.

WEST PENNSYLVANIA POULTRY SOCIETY.

THE annual meeting of the West Pennsylvania Poultry Society took place at Pittsburgh, January 8, and the following was result of election: Edward Greeg, President; J. Palmer O'Neil, Vice-President; C. A. Stevens, Treasurer; C. B. Elben, Secretary. Messrs. B. F. Wilson, Thos. Booth, J. R. Henricks, I. R. Stayton and W. C. Myer, Directors.

The entries to January 1, in the English Setters Bench Show Derby, to be held in connection with the show April 3, 4, 5 and 6, 1883, are as follows:

COUNTESS GLADSTONE—Lemon belton bitch, April 23 (Gladstone-Stayton's Countess).

COUNT T.—Blue belton dog, March 7 (Thunder-Countess Ella).

FAULTLESS—Black and white dog, May 24 (Count Noser-Maple).

MAY QUEEN—Chestnut setter bitch, May 24 (Count Noser-Maple).

DICO—Blue belton dog, January 29 (Royal Blue-Ruby).

ROBERT H.—Black and white dog, May 28 (Royal Blue-Miss).

SALLIE H.—Black, white and tan bitch, May 28 (Royal Blue-Miss).

THOMAS H.—Black, white and tan dog, Sept. 16 (Royal Rock-Gaily).

BELLE H.—Black, white and tan bitch, Sept. 16 (Royal Rock-Gaily). OBSERVER.

A JUST VERDICT.

Editor Forest and Stream:

Perhaps it may be of the same interest to others as it was to myself to read the following communication from a friend in relation to proving and recovering damages in the shooting of a valuable setter dog:

"Friend P.—My suit was tried on Jan. 18, before a jury, and judgment was awarded me of $100, which I consider, of course, not one-half the value of my setter dog Dash. Four experts sworn, prized him variously from $100 to $300. They let him out for $100. You can safely bet he won't shoot any more dogs for a long time to come.—W. A. HOAGLAND."

Mr. Hoagland is well known to many as a noted pedestrian, living at Union Springs. His dog was killed by a man with the one idea fixed in his literal matter-of-fact mind that dogs were of no earthly use to man, and he made way with this one, and for no good reason.

Mr. H. has made an example in this case which we all have a right to follow when a similar outrage is perpetrated.

MIG.

CORTLAND, N. Y., Jan. 22, 1883.

RABBIT HUNTING IN MASSACHUSETTS.—Hunting was poor in this part of New England for several weeks, in consequence of a thick crust, which has rendered it almost impossible for a dog to follow a track. Yesterday, however, several inches of snow fell. This morning, in company with another gentleman, I started out on a rabbit hunt. The only dog we had in condition for running was a beagle hound only seven months old. But the little fellow proved himself equal to the task. It has been my fortune to hunt with many dogs, yet seldom have I seen a more persistent or energetic worker on the track than this one. We had hardly arrived on the ground usually frequented by rabbits, ere the pup "struck a track," following it so rapidly that in less than ten minutes he had started his game, and though he was several times bothered, he "picked up" the track without any assistance, and after somewhat over an hour's run the rabbit was shot. No sooner had the first rabbit been shot than the dog "circled" and took up another track, and in less than thirty minutes that was also bagged. So persistently did the dog work that several hours before sunset we had shot seven fine rabbits, and this too, in a country where game is not by any means admitted to be plenty.—A. D. BARBER (Townsend, Mass., January 8, 1883.)

OTTAWA AND PITTSBURGH SHOWS.—We clip the following from the *Kennel Review*, London: We have much pleasure in calling our readers' attention to the above shows, for what we hear, every convenience will be given to English exhibitors for sending their dogs, and the journey will be made as easy as possible. We have received some letters inquiring the best way to send dogs, and in our next issue we will announce the arrangements we propose adopting. We have already arranged with a gentleman well qualified for the duty, to take out and assume the entire charge of all dogs entrusted to him, and any of our readers who wish to exhibit at these shows—the chief ones in Canada and the United States—are invited to put themselves into communication with us, and we will help them in every way we can. The person who will take charge of the dogs cannot undertake to do so for more than fifty, of which over twenty are already booked, but if we find it necessary, owing to the number of dogs, that a second person is required, we will arrange for him at once.

BARBED WIRE FENCES.—Biddeford, Maine, January 11 —*Editor Forest and Stream:* I have just read your editorial on "Barbed Wire Fences," contained in your issue of Dec. 7, '82. Although I am neither landowner nor hunter, there are one or two points which I desire to make on this subject. First, I know from a varied and extensive experience in the West, that a plain wire fence, even though it has a rail or pole at the top, is not by any means as effectual a fence as is the ba bed wire fence. Cattle soon learn to crawl through a plain wi e fence, and the wires cannot be strained tight enough to prevent this. Second, the barbed wire fence is not, on the whole, much if any more dangerous than fences of other kinds. In the neighborhood where I resided in the West, the only cattle which were ever to my knowledge permanently injured by wire fences, were injured by plain wire fences, and I have known many more injuries resulting from board and rail fences and from stone walls, than from wire fences of any kind. Third, it is noticeable that the opposition to the barbed wire fences comes not from the owners of the fences, but from philanthropists who have more pity for breechy cattle than for hard-working farmers, and from gentlemen of the rod and gun, many of whom have a decided proclivity for scouring premises where they are not wanted.—ALBERT DONNELL.

"FOOLS" AND DOGS.—*Editor Forest and Stream:* In his "New Year's Screed," FOREST AND STREAM of Jan. 18, "Nessmuk" advances the opinion that it is only a fool who will be inveigled into paying $100 for a dog. Now, as the (in my own opinion, at least,) fortunate possessor of several dogs, for each one of which I paid considerably more than the sum named, I beg to ask why I should for that reason be writ down a fool, any more than the man who pays $500 for an oil painting, when he can buy a chromo for 5cts. According to "Nessmuk's" reasoning, there never was a painting worth $500.—MEAT-HAWK.

EASTERN FIELD TRIALS CLUB.—At the annual meeting of the Eastern Field Trials Club at Delmonico's, on Tuesday evening, Jan. 16, the following officers were elected: President, Elliot Smith; Vice-Presidents, Dr. Henry J. Aten and James H. Goodsell; Treasurer and Secretary, Washington A. Coster; Governors—Dr. S. Fleet Speir, Robert C. Cornell, J. Von Lengerke, J. Otto Donner, R. E. Hamilton, A. E. Godeffroy, George T. Leach, Charles H. Raymond, John G. Heckscher, J. E. I. Granger, G. de Forest Grant and Major George R. Watkins.

"A VALUABLE DOG KILLED."—In justice to the correspondent whose note appeared in our issue of Jan. 11, it should be stated that this caption was given to the communication in this office, and hence the writer of the letter was by inference made to say that his dog had been killed. This, as the event proved, was not the case, although the injuries sustained by the animal were serious and permanent. This affair appears to demonstrate that the shotgun is much too readily resorted to when milder methods would answer fully as well.

GLADSOME.—We regret to record the death of Gladsome, the blue belton English setter dog (Gladstone-Leila) owned by Mr. J. W. Foster, Leesburg, Va. Gladsome divided third prize with Lalla Rookh, in the last Eastern Field Trials All-Aged Stakes. We have seldom seen so promising a puppy, and had anticipated for him a future record of much credit. Gladsome was a stylish, magnificent appearing animal. An excellent portrait of him was published in our issue of Dec. 7, 1882.

WHITEFISH FOR NEW HAMPSHIRE.—Plymouth, N. H., Jan. 17.—Two hundred thousand whitefish eggs were received at the State hatching house last week. The eggs were sent from Northville, Mich., and were in good condition. They were donated by Prof. S. F. Baird to New Hampshire. It is to be hoped that the experiment will prove a success, and there is no reason why the larger bodies of water in our State are not adapted to this fish.—H.

PURE WHITE COCKER SPANIEL DOG.—I had a pure white cocker spaniel dog pup born on Jan. 13, 1883, out of Bess, all liver cocker spaniel bitch, sired by Mr. Robert Walker's Charlie III. I think this is very rare. If such has ever happened before I have never heard of it. He is of fine shape, good ears and wavy coat. He is going to be a beauty. He is not for sale.—G. N. (Savannah, Ga.). [It is not uncommon to see pure white puppies, but they generally show other colors when older.]

NATIONAL AMERICAN KENNEL CLUB DERBY.—Those intending to enter their puppies for this event should bear in mind that the entries close on the 1st of March, which is a month earlier than has been customary heretofore. All puppies whelped during the previous year are eligible. The secretary, Mr. D. Bryson, Memphis, Tenn., will furnish entry blanks upon application.

JUDGES FOR THE WASHINGTON SHOW.—Mr. Chas. H. Mason will judge the Irish setters, spaniels, hounds, fox-terriers, and miscellaneous; Mr. Jas. Watson will judge mastiffs, St. Bernards, Newfoundland, collies, and all small non-sporting dogs. The judges for pointers, English and Gordon setters we shall probably be able to announce next week.

TO MASTIFF EXHIBITORS.—A special prize of $50 will be given at the Pittsburgh show to the best mastiff exhibited. This should bring all the best of the breed together, and set the whether the old dogs can hold their own with the more recent importations, of which quite a number have gone to Pittsburgh.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed
3. Sex.
4. Age, or
5. Date of birth, if breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Earl. By Mr. F. W. Roach, Chatham, N. Y., for liver cocker spaniel dog, whelped June 20, 1882, by Mr. T. R. Burrow's Dan out of owner's Lou.

Prince. By Mr. Aug. C. Krueger, Wrightsville, Pa., for black and tan beagle bitch, whelped Sept. 13, 1882, by Flute out of Bunnie.

Lady Annie. By Mr. E. S. Fassett, Albany, N. Y., for white, with liver ears, pointer bitch, whelped July 1, 1882, by Dan (Best—imported Nellie) out of Lady Sensation (Sensation—Lady Francis).

Donna. By Mr. T. B. Dorsey, Ellicott City, Md., for liver and white pointer dog, whelped July 17, 1882, by imported Joe out of Clarissa (Sensation—Daisy).

Fred H. By Mr. Fred. H. Hoe, Tarrytown, N. Y., for English setter dog, whelped June 20, 1882 (Roll—Elaine).

Count Gladstone, Countess Gladstone. By the Superior Kennel, Pittsburgh, Pa., for black, white and tan dog puppy and lemon belton bitch puppy, whelped April 23, 1882 (Gladstone—Stayton's Countess.

Major. By Mr. T. H. Mumford, Jr., Philadelphia, Pa., for beagle dog pup, whelped Nov. 28, 1882, by Bush (Flute—Queen) out of Briar (Mose—Melody).

Dickie. By Mr. John Daly, Salmon Falls, N. H., for black cocker spaniel bitch, whelped May 15, 1882 (imported Beau—imported Blackie).

Chipper. By Mr. C. H. Hoadley, White River Junction, Vt., for liver and white cocker dog, whelped Oct. 1, 1882 (imported Beau—imported Feather).

General. By Mr. W. F. Duerr, Orange, N. J., for lemon and white ticked pointer dog pup, whelped July 3, 1882 (Sensation II.—Madge).

Colonel. By Mr. W. F. Duerr, Orange, N. J., for lemon and white ticked dog, whelped July 3, 1882 (Sensation II.—Madge).

Floss. By Mr. W. F. Duerr, Orange, N. J., for lemon and white ticked bitch, whelped July 3, 1882 (Sensation II.—Madge.

Joker. By Mr. W. S. Hopkins, Newark, N. J., for liver and white English setter dog, whelped Oct. 6, 1882 (Sport—Flora).

Sport II. By Mr. W. S. Hopkins, Newark, N. J., for orange and white English setter dog, whelped Oct. 6, 1882 (Sport—Flora).

Carrie P. By Mr. W. S. Hopkins, Newark, N. J., for black and white English setter bitch, whelped Oct. 6, 1882 (Sport—Flora).

Florence. By Mr. W. S. Hopkins, Newark, N. J., for black and white English setter bitch, whelped Oct. 6, 1882 (Sport—Flora).

Bingo. By Mr. W. S. Hopkins, Newark, N. J., for black and white English setter dog, whelped Oct. 6, 1882 (Sport—Flora).

Kenna. By Mr. W. S. Hopkins, Newark, N. J., for black and white English setter dog, whelped Oct. 6, 1882 (Sport—Flora).

Folly. By Mr. Robert Ives Crocker, New York, for white, black and tan marked fox-terrier bitch (Rutherford's Sadie—Rafe).

Nestor. By Mr. E. C. Franklin, Ann Arbor, Mich., for liver and white ticked setter dog, whelped May 26, 1881 (Shepherd's Duxon—Gordon's Fly).

Lady F. By Mr. E. C. Franklin, Ann Arbor, Mich., for black, white and tan English setter puppy, whelped Oct. 18, 1882, by Feronia (Coin—Daisy) out of Duxon (Purcell's Bess—Fisher's Jack).

Ponce de Leon. By Mr. E. H. Smart, Bainbridge, Ga., for black and white setter dog, whelped Oct. 15, 1882 (Rollo—Gretchen).

Lopez. By Mr. E. H. Smart, Bainbridge, Ga., for blue belton setter dog, whelped Oct. 13, 1882 (Rollo—Gretchen).

Fenad. By Mr. E. H. Smart, Bainbridge, Ga., for lemon and white setter dog, whelped Oct. 13, 1882 (Rollo—Gretchen).

Seaforth. By Mr. E. H. Smart, Bainbridge, Ga., for lemon and white setter bitch, whelped Oct. 13, 1882 (Rollo—Gretchen).

Benita, Sappho. By Mr. E. H. Smart, Bainbridge, Ga., for blue belton setter bitches, whelped Oct. 14, 1882 (Rollo—Gretchen).

Sensor. By Mr. C. Noble, Savannah, Ga., for pure white cocker spaniel dog pup, whelped Jan. 13, 1883, by Charlie III. (Racer—Daisy II.) out of Bess (Dan—Nellie).

Hazel. By Mr. H. M. Howes, Somerville, Mass., for red Irish setter bitch puppy by Ruby (Elcho—Rose) out of Madge (Bedford—Ruby).

Gloria. By Mr. E. O. Sharp, Bedford, Mass., for red Irish setter dog (champion Elcho—Flourish), whelped April 6, 1882; also

Vera. Red Irish setter bitch, same litter; also

Lydia Belle. Red Irish setter bitch, same litter; also

Nellie. Red Irish setter bitch, same litter.

St. Ives II. By Mr. J. H. Forshew, Brooklyn, N. Y., for liver and white setter dog pup, whelped July 13.

Sip. By Mr. C. W. Harper, Leitersburg, Md., for black, white and tan beagle bitch, whelped May 31, 1882 (imported Ringwood—Norah).

Fleet. By Mr. C. W. Harper, Leitersburg, Md., for black and tan foxhound dog, whelped June 29, 1881 (Music—Nellie).

Stranger. By Mr. C. W. Harper, Leitersburg, Md., for black, white and tan foxhound dog pup, whelped July 29, 1882 (imported Comus—Sunbeam).

Melody. By Mr. C. W. Harper, Leitersburg, Md., for black and blue Byron foxhound bitch, whelped Aug. 5, 1882 (Dimple—Tellie).

NAMES CHANGED.

☞ *See instructions at head of this column.*

Suit-a-Me from Tatters. Mr. Joseph Hayes, Boston, Mass., changes the name of his red Irish setter dog Tatters, whelped March 14, 1882 (Clarendon—Dido) to Suit-a-Me.

May Prince. The Superior Kennel, Pittsburgh, Pa., has altered the name of black, white and tan English setter dog puppy (Count Noble—May Laverack) from May Day to May Prince.

Weatherwax. Mr. Meeker, of New York, N. Y., has altered the name of his black and white ticked setter puppy Samuel of Posen (Young Laverack—Lady May), whelped May 27, 1882, to Strathmore; bred by Mr. Harry Towner, of Nyack, N. Y.

BRED.

☞ *See instructions at head of this column.*

Dorothée—Doubleshot. Mr. H. W. Huntington's (Brooklyn, N. Y.) imported black greyhound bitch Dorothée (Roi du Combat—Sciatica) to his imported black and white Doubleshot (Hot Act—Sunflower) Jan. 6.

Madge—Sensation II. Mr. W. F. Duerr's pointer bitch Madge to his Sensation II., Jan. 3

Lill—Emperor Fred. Mr. R. L. Cowell's (New Haven, Conn.) English setter bitch Lill (Ranger II.—Coin) to Mr. E. A. Herzberg's champion Emperor Fred, Jan. 12.

Diana—Dash III. Mr. E. E. Hardy's (Boston) setter bitch Diana to Mr. A. M. Tucker's Dash III.).

Nell—Dash III. Mr. John A. Poor's setter bitch Nell to Mr. A. M. Tucker's Dash III.

Trixket—Graxteth. Mr. Stoddard's pointer bitch Trinket to Mr. A. E. Godefroy's Croxteth (Bang—Jane), Dec. 15, 1882.

Lass—Croxteth. Mr. Leitner's pointer bitch Lass (Scalford—Dawn) to Mr. A. E. Godefroy's Croxteth (Bang—Jane), Jan. 12.

Fly—Bertram. Mr. A. P. Kitching's (Boston) red and white setter bitch Fly to Mr. Wm. A. Rea's (Boston) Bertram, Dec. 22, 1882.

Rhebe—Bertram. Mr. F. W. Rogers's (Boston) black white and tan setter bitch Rhebe (Belton—Dimple) to Mr. W. A. Rea's (Boston) Bertram, Jan. 16.

Devonshire Lass—Sensation. Mr. C. M. Munhall's (Cleveland, O.) pointer bitch Devonshire Lass (imported Don—imported Lady) to champion Sensation, Jan. 24.

Dinah II.—Cream. Mr. W. Wade's imported mastiff bitch Dinah II. (Trojan—Rannee Ek) to his imported Cæsar—late J. Walsop's—(Tumus II.—Boadicea).

Little Nell—White Silk. Mr. J. T. McKennon's bull-terrier bitch Little Nell to Mr. G. W. Moore's White Silk.

Bonfanti—Success. Mr. J. H. Winslow's (Baltimore) liver and white cocker bitch Bonfanti (Ned—Daisy), to his imported black spaniel Success (11,636) champion Bachelor—Salus), Jan. 7.

Rhea II.—Success. Mr. J. H. Winslow's (Baltimore) black spaniel bitch Rhea II. (Bub—Jenny) to his imported black spaniel Success (11,636) champion Bachelor—Salus), Jan. 9.

Girt—Glenmark. Mr. R. T. Green's (Jersey City Heights) pointer bitch Girt (Maryland—Vell) to Mr. Wm. F. Steel's pointer dog Glenmark (Rush—Romp).

Folka—Emperor Fred. Mr. E. A. Herzberg's (Brooklyn) black and white English setter bitch Folka (Pride of the Border—Kate II.) to his pure Laverack champion Emperor Fred, Jan. 12.

Young Flora—Major. Mr. R. Blackwood's (Montreal, Canada) imported black and tan Gordon setter bitch Young Flora to Mr. John N. Hickey's (Montreal, Canada) imported black and tan Gordon setter dog Major, Jan. 19, 1883.

Doodles—Wildfire. Mr. Frank Rackliff's (Rockland, Me.) liver and white ticked cocker spaniel bitch Doodles to A. McDonald's (Rockland, Me.) black spaniel dog Wildfire (Wildair—Josie), Jan. 4.

Pride—Brant. Mr. A. McDonald's (Rockland, Me.) lemon and white pointer bitch Pride (Dash—Pride of Kent) to Mr. James Wight's (Rockland, Me.) liver pointer dog Brant (champion Pete, Jr. —Kate), Jan. 17.

Lill—Emperor Fred. Mr. Henry L. Corell's (New Haven, Conn.) Lill (Ranger II. —Coin) to Mr. E. A. Herzberg's champion Emperor Fred.

St. Patti—Emperor Fred. Mr. E. A. Herzberg's St. Patti (sister to St. Elmo) to his champion Emperor Fred.

Lucil—Emperor Fred. Mr. E. A. Herzberg's blue belton pure Laverack bitch Lucil (Sim's Dash—Maid of Honor) to his champion Emperor Fred.

Mary—Dashing Lion. Mr. G. A. Ballantine's (Washingtonville, O.) Llewellin setter bitch Mary (Lancaster—Sanborn's Nellie) to his Llewellin setter dog Dashing Lion, Dec. 28.

WHELPS.

☞ *See instructions at head of this column.*

Nell—Conquest. Mr. Fred. H. Rose's (Tarrytown, N. Y.) cocker bitch Nell, Jan. 5, five (three dogs), by Conquest.

Stayton's Countess—Belton III. The Superior Kennel's (Pittsburgh, Pa.) English setter bitch Stayton's Coun ess, six, by Belton III.

Lady Gay—Royal. Mr. J. E. I. Granger's (New York) fox-terrier bitch Lady Gay, Jan. 19, eight, all now living (three dogs), by Mr. L. Rutherfurd's (New York) champion Royal.

Fanny. Mr. S. W. Ware's (West Point, Miss.) liver and white pointer bitch Fanny (Waddell's), Dec. 26, 1882, eight (six dogs) by champion Bow.

Belle. Mr. L. D. Rumsey's (Buffalo, N. Y.) blue belton English setter bitch Belle (Carlowitz—True), Jan. 1, eight (seven dogs), by Mr. A. M. Tucker's Dash III.

Nellie. Mr. Wm. B. Hill's (Albany, N. Y.) wire-haired fox-terrier bitch Nellie, Jan. 7, three (two dogs), by champion Tyke; both dogs since dead.

Pride. Mr. Charles E. Shaw's (Clinton, Mass.) English mastiff bitch Pride (Duke—Juno), Jan. 10, seven (five dogs), by his Duke (Buff—Belle).

Lynn II. Mr. A. S. Guild's (Lowell, Mass.) red Irish setter bitch Lynn II. (Elcho III.—Bennet's May), Jan. 13, nine, by Glencho (Elcho —Norena).

SALES.

☞ *See instructions at head of this column.*

Lassie Jane. English setter bitch, whelped Dec. 5, 1880 (Blue Dan Flake), by Mr. J. J. Scanlan, Fall River, Mass., to Mr. E. A. Wood, Pittsburgh, Pa.

Sancho. Blue mottled beagle dog (Chanter—Sprightly), by Mr. F. Evans, Independent Hill, Va., to Mr. W. Spellissy, Troy, N. Y.

Lady Clare. Black cocker spaniel bitch, whelped March 10, 1881, by Rubio (Dash—Mina) out of Dara (Count—Daisy), by Mr. C. E. Lord, Scopinonian Kennels, N. Y., to Mr. G. Noble, Savannah, Ga.

Bess. Liver cocker spaniel bitch, whelped Aug. 16, 1881, by Dan (Nea—Renn) out of Nellie (Shap—Nannie), by Mr. C. E. Scott, Schenectady, N. Y., to Mr. G. Noble, Savannah, Ga.

Bess—Feather whelp. Liver and white cocker spaniel dog, whelped Oct. 1, 1882, by Mr. F. F. Pitcher, Claremont, N. H., to Mr. G. W. Merrill, Portland, Me.

Beau—Gracie whelp. Liver and white cocker spaniel bitch, whelped Oct. 29, 1882, by Mr. F. F. Pitcher, Claremont, N. H., to Mr. G. W. Merrill, Portland, Me.

Briar whelps. Beagle bitch puppies, whelped Nov. 28, 1882, by Bush (Flute—Queen) out of Briar (Mose—Melody), by Mr. W. H. Ashburne, Philadelphia, Pa., to Mr. James P. Kent, Monticello, N. Y.

Blackie whelps. Black cocker spaniel bitch pup, whelped May 15, 1882 (Beau—Blackie), by Mr. F. F. Pitcher, Claremont, N. H., to Mr. John Daly, Salmon Falls, N. H.

Gracie whelps. Liver cocker spaniel dog pups, whelped Oct. 29, 1882 (Beau—Gracie), by Mr. F. F. Pitcher, Claremont, N. H., to Mr. W. S. Thomas, Birmingham, Conn.

Rake. Beagle dog (Ranter—Gipsey), by Mr. Thomas J. Goodwin, Portsmouth, N. H., to Mr. Charles Smart, Portsmouth, N. H.

Pilot. Beagle bitch (Ranter—Gipsey), by Mr. Thomas J. Goodwin to Mr. J. C. Ryan.

Bell. Beagle bitch (Ranter—Flirt II.), by Mr. Thomas J. Goodwin to Mr. M. J. Ryan.

Rambler II. Beagle dog (Ranter—Flirt II.), by Mr. Thomas J. Goodwin to Mr. R. Waldo, Portsmouth, N. H.

Bell. Beagle bitch (Ranter—Gipsey), by Mr. Thomas J. Goodwin to Mr. Wm. Jackson, Fernandina, Florida.

Rather II. Beagle dog (Ranter—Flirt II.), by Mr. Thomas J. Goodwin to Mr. Stover Hilge, Portsmouth, N. H.

Nancy Lee. Beagle bitch (Ranter—Flirt II.), by Mr. Thomas J. Goodwin to Mr. George H. Winchester, Boston, Mass.

Music. Beagle bitch (Ranter—Flirt II.), by Mr. Thomas J. Goodwin to Mr. Wm. Benton, New York city.

Sparkle—Dash whelps. Black, white and ticked English setter dog pup, whelped July 29, 1882, by Mr. George Laick to Mr. J. M. Godinez, Poughkeepsie, N. Y.; black bitch pup, whelped July 29, 1882, to Mr. Edward Beck, of Tarrytown, N. Y.

Cleo. Red Irish setter bitch (champion Elcho—Flourish), whelped April 6, 1882, by Mr. E. O. Ladd, Everett, Mass., to Mr. John Carver, Boston, Mass.

Mavra. Red Irish setter dog (champion Elcho—Flourish), by Mr. E. O. Ladd to Mr. G. L. Barney, Middleboro, Mass.

Royal Sutton—Reign whelps. Blue belton English setter dog puppy, whelped Nov. 19, 1882, by Royal Sultan (Racket—Kelp) out of Reign (Belton—Breeze), by the Detroit Kennel Club to Mr. G. H. Hausburg, Blue Island, Ill.; also a blue belton dog pup, same litter, to Mr. Will G. Lambert, Ripon, Wis.

Prince Royal and Forest May. Llewellin setter dog Prince Royal (Rob Roy—Juno), by the Forest Kennel Club, London, Canada, to Mr. A. D. Chaplin, London; also Forest May (Blue Drake—Dimple II.) and a bitch puppy (Prince Royal—Humpidge Nettie).

Viola. Lemon and white pointer bitch Viola (Sensation—Lilly) by the Baltimore Kennel Club to Mr. J. H. Winslow, Baltimore.

PRESENTATIONS.

☞ *See instructions at head of this column.*

Nellie G. Black and tan fox-terrier bitch, 3 years old (Colburn's Duke—Nellie F.), by Mr. H. D. Chauncey, Midland Park, N. J., to Mr. Frank Lanier, Hoboken, N. J.

Queen Bess. Orange and white setter bitch (Crack—Queen) by Dr. E. P. Kremer, Lebanon, Pa., to Mr. J. M. Hoyard, Lebanon, Pa.

DEATHS.

☞ *See instructions at head of this column.*

Bertie. Black and white ticked English setter bitch, whelped Sept. 3, 1882 (Druid—Poetess), owned by Mr. W. E. Rea, Hackettstown, N. J.

Belmont. Black spaniel dog puppy (Success—Rhea II.), owned by Mr. J. H. Winslow, Baltimore.

Lady Wellington. Red Irish setter bitch (champion Rory O'More —Norah O'Morey), owned by Mr. Charles R. Shorburn, New York.

Champion Elcho—Flourish whelps. Red Irish setter pups (champion Elcho—Flourish) whelped April 6, 1882 (three dogs and two bitches), owned by Mr. E. O. Ladd, Boston, Mass.

Flourish. Red Irish setter bitch (champion Berkley—Ruby), whelped April 8, 1880. Ive Boston, 1882.

Rifle and Trap Shooting.

PREPARING FOR THE RETURN MATCH.

WITH the progress of the year interest is rapidly awakening in relation to the match which is to came off at Wimbledon Common in July next. The extension of time granted by the council of the British Association for the practice of our National rifle, which by those desiring to compete for places on the American team, has been taken advantage of by several good civilian shots. J. H. Brower is a member of the Seventh Regiment, F. J. Rabbett is a member of a Massachusetts command, while Dr. Scott, who shot as a member of Col. Bodine's last Dollymount small-bore team, has also qualified as a representative of the citizen soldiery. Even with all these, and many other additions of strength to the Guard, it is doubtful whether the whole force in the United States could furnish such a dozen men as Col. Halford commanded in the match of last September. They could not then, and we think cannot now, be equalled in the United States for individual excellence. Each man was a team in himself; each was capable of acting as his own coach; each judged wind for himself, and each one, in fact, was self-reliant enough to carry out his fragment of the match, and to carry it through to a fine aggregate showing.

All this may be true, and yet does not stand as a barrier against the winning of the return match by an American team. There is nothing discouraging in this state of facts; rather an incentive for our American shooting. It is pretty certain that fully as good, if not a better body of English volunteers will meet our men before the butts at Wimbledon, but no one for an instant labors under the delusion that America is going to cut such a sorry figure as in 1882. Our aim will go into training for the coming contest with the rifles fitted for the work in hand. There is to be no trying to shoot a dirty small bore match under the name of a military match. The rifle for use by the coming American team must be as distinctly fitted for the special requirements of the contest as was the weapon used by the winning English team of 1882. Such an arm, it is thought, has been secured, and would-be contestants have two models to chose from. The Remington new arm has already been alluded to in these columns. It has been approved by very excellent judges of the arm as an admirable arm. Its preparation was set about at the Ilion Armory, while the sting of the defeat at Creedmoor was yet fresh.

The points of the English arms were carefully studied, and as accurately reproduced with such improvements as American small-arm ingenuity would naturally suggest when directed to this new problem of a rifle to shoot steadily at long range, without offective fouling. The weapon was tried at once, and with good results. It has been found sufficiently accurate to enable a number of the best militia sharp-shooters to try it at home and over familiar ranges, and with the first appearance of fair weather we may look for results to be reported. Its small charge ought to be in its favor, if other points of merit are not thereby sacrificed. How far it performs the office increase of the Remington rifle, which figured so wretchedly in the match of 1882, remains to be seen. Unless the utmost care has been taken to secure a proper working of the ammunition in its relation to the chamber and the rifle barrel as may look for segregation of shots. Without a complete system of accurate rifle shooting, to expect good work with a .45 cartridge jammed into a .44 caliber bore. The shooting may for a time be excellent, but at any shot there is likely to be stripping of the patch, and then with a naked bullet shot without lubricant, leading takes place and subsequent rounds become mere random ventures.

The other rifle in the field for the match of 1883 is the Brown Standard rifle, prepared by J. H. Brown, with special reference to the winning of the return match. It is a sightly weapon of .45-calibre, having a twist of 1 in 18, eight grooves of .008in. in depth. It is chambered for a long shell, firing from 100 to 105 grains of Laflin & Rand's best powder, and a 550-grain Winchester bullet. Shot with fine sights and in any position at each of the six ranges, a score of 200 in a possible 240 was made, a point each being dropped at 600, 800 and 1,000yds. under the troublesome wind prevailing. This shows what the rifle is capable of under those conditions, what it may be capable of when fired under a scorching sun, with everything tending toward caked deposits, is yet to be decided. Everything thus far has been very encouraging. In a test of the gun on December 9 at Guttenburg, N. J., over the 200yd. range, with fine sights and from "any position," W. M. Farrow succeeded in putting in ten consecutive shots, as shown in the following bull's-eye diagram:

The utmost care has been taken by Mr. Brown to insure an accurate seating of the bullet in the cartridge shell. The interior of the shell is carefully polished, so that with the first upset caused by the thrust of the powder gases, no irregular forces shall be given to the rear end of the bullet. Then in place of the usual comparatively abrupt shoulder which the starting bullet is compelled to serge in taking the rifling, the throat at this point is carefully cleared away and a long taper is used in such manner that the bullet gets on its way muzzleward without having its patch torn off and without getting in the least anglewise in the barrel. The special points urged by inventor Brown for the new arm are:

It embraces all the good points of the gun used here last year by the British team.

The ammunition manufactured in this country has not been adapted heretofore to the requirements of long range shooting with military rifles. This difficulty has been entirely overcome by the improved cartridge, when used in connection with the ammunition contrived and manufactured by the patentee

The breech action and lock are light, allowing more weight in the construction of the barrel, while the construction of both action and lock is such as to positively simplify the difficult timing being brought to full cock by the mere opening of the action, and is firmly locked and secured by an automatic locking device, which makes it positively safe against its accidental discharge. In this respect the gun is specially adapted, and the device is simple and perfect as to be astounding. This is one of its specially attractive features, and one which entitles it to a first place among rifles.

The trigger is so shaped and pivoted as (although fully within the 6-lb. rule) to have one of the softest pulls possible for a gun of its requirements.

In shape it is unequalled and its straight stock presents one of the finest models. Its outlines and general construction make it the most sightly military arm made on this side of the water.

Its strength enables it to withstand the very hardest tests.

The inventor being a practical shot, as well as mechanic, has taken special pride in its certainty, superior finish and general construction.

In providing it with a new back sight—arranged specially with a view to the wind gauge—one of the not least important requirements have been more than usually well met, thereby the points of the wind can be fully as easily calculated as with the very finest long range rifles. It is a combination of both aperture and open sight, *i. e.*, the hammer, although in sight, has no thumb piece, and no part protrudes.

NOTA BENE.

BEARING in mind the fact that the fools are not all dead yet, and that even a fool may take warning and use some degree of precaution after the fact, of an accident fresh from some one who has "thin hair," I shall give an account of my experience for the benefit of those whom it may concern, though I don't want my name exposed, for fear that, sometime (when I get rich) my relations may bring a lap as evidence of my insanity, don't you see?

I've always prided myself on the most careful use of firearms, and have been accustomed to handle guns, rifles and revolvers from a "wee small child" with about the same faculty that I manipulated my knife and fork, or my mother did her slipper, consequently it would make me feel a trifle cheap to have the affair leak out.

Some two years ago I loaded a number of .44-cal. 77-grain brass shells for Remington rifle, but too much "shop" gave me no opportunity to shoot them, but recently I have had more leisure, and a few weeks ago I placed a target on the hillside and thought that I would set the sights with a view to further practice, when, on pulling trigger on about a dozen cartridges, to my surprise, I was unable to explode a single one, and I look out my powderflask and made up a fresh ammunition. About ten days ago I tried five or six with no better success, and came to the conclusion, the hasty conclusion, that the primers were ruined by age, so I took them into the house where I was staying, and attempted to extract the primer from one only new cartridge, with a Remington extractor, which any of your readers who have used the Remington central fire rifles, will remember is applied to the butt of the shell from the outside, the shell, meantime, being firmly held in the left hand.

Well, I made no very long job of the operation, but it didn't take me long to find that something had happened, and on examination of my left hand, was disagreeably impressed with the idea that it didn't work right or feel at all; the fingers drooped in a suspicious manner, the palm was cold, and the veins, which like friends gave me (in generous doses), I have concluded to postpone the reprieving of the remainder of the cartridge till enough time has elapsed to spoil the powder as well as the primers. ONE OF THE FOOLS.

RANGE AND GALLERY.

MAMMOTH RIFLE GALLERY.—Boston, Jan. 15.—During the past week there has been some fine shooting. Mr. J. Merrill heads the list in the All-Comers' match, and he has also won the extra prize of $30 for making eight consecutive bullseyes. Following are the scores in the—

All Comers' Match

J Merrill	46	47	47	48	48	—236	C R Bartlett	43	43	44	44	44	—218

MASSACHUSETTS STATE CHAMPIONSHIP. The fourth challenge contest for the individual championship of the Massachusetts State Glass Ball Association took place on the grounds of the Fort Rosemary Shooting Club at Stoughton last week, before a large gathering of trap shooters from all parts of the State. Mr. W. T. Howard, of the Home Club, was the holder of the championship

badge, and was formally challenged by Mr. J. B. Valentine, of Fall River. Mr C. Wilbur, of the Stoughton Club, acted as judge for Mr. Howard, Mr. T. G. Fielding, of the Malden Club, in the same capacity for Mr. Valentine, and Secretary Noble, of the State Association acted as referee. After the championship match, the large concourse of shooters indulged in sweepstake shooting until dark, both bird and ball traps being kept running to their utmost. The following is the score in detail:

Championship Contest.

J B Valentine	3	1	1	1	5		
	4	5	5	5	3		42
W T Howard	5	1	1	1	2		
	4	1	5	4	3		41

First sweep, seven balls—T. S. Hall and Howard divided first prize, F. T Noble, H. Loring, J. C. Fielding and W. Harrison divided second, H. C. Brayley and C. Wilbur, third, and Tisdale fourth.

Second sweep, seven balls—L. G. White and Brayley first, H. H. Francis and Wilbur second, F. T. Noble third, W. T. Howard fourth.

Third sweep, seven birds, $1 entry—Howard and Field first, H. H Francis second, F. T. Noble third, and L. G. White fourth.

Fourth sweep, seven balls, $1 entry—Valentine and G. A. Sampson first, White and Francis second, Howard third, and Fielding fo. rth.

Fifth sweep, seven birds, $1 entry—Mann and Willis divided first, Fielding and White second, Noble and Drake third, A. D. Johnson fourth.

Sixth sweep, seven birds, $1 entry—Noble, Brayley and J. S. Sawyer first, Johnson and Fielding second, Howard third, Francis and Wilbur fourth.

Seventh sweep, seven birds—Hall took first, Francis second, Wilbur and Brayley third, H. S. Howard fourth.

Eighth sweep, five birds—Wilbur first, Fielding second, Francis and Brayley third.

WELLINGTON, Mass., Jan. 19.—In spite of the severe snowstorm, quite a sprinkling of shooters of the Raymond Sportsman's Club faced the traps, indulging in numerous five-bird clay pigeon sweeps, the following gentlemen coming out the prizes as per score, 19yds. rise; ties shot off at 20yds. rise:

First event—J. S. Sawyer, first; D. Chambers, second.
Second event—D. Kirkwood, first; Sawyer, second.
Third event—Chambers and Sawyer, first; E. L. Caskins, second.
Fourth event—O. Waterman, first; S. Blanchard, second.
Fifth event—Kirkwood, first; E. C. Gove, second.
Sixth event—Caskins, first; Chambers, second.
Seventh and last event—Sawyer, first; Waterman, second.

In the twenty-bird shoot the score stood: D. Kirkwood, 18; J. S. Sawyer, 16; E. L. Caskins, 14; E. C. Gove, 13; S. Blanchard, 13; N. Waterman, 12; D. Chambers, 12.

NEWARK RIFLE TOURNAMENT.—The annuary match of the Newark Rifle Associaton closed on Tuesday evening last, the Frelinghuysen at the butt, who made the following score: George Zimmer, 49, W. F. Lynn, 49, George Weigman, 46, Jay Walsh, 46, A. A. Neuman, 47, R. Westerman, 46, J. Rose, 46, S. Shackelford, 46, William Dennis, 44, William McLeod, 46, total, 404. On Monday evening the Essex made a score of 470, J. Coppersmith, 48, V. Hesse, 47, A. Wilters, 47, C. Meisel, 46 William Wa ts, 45, J. Dutcher, 45.

Plymouth Rifle Association—J. L. Sommers, 48, P. L. Sommers, 48, Ed Baldwin, 47, Jos. Buder, C. H. Townsend, 46, S. M. Brade, 46, G. M. Townsend, 45, J. O'Neil, 44, E. Pollard, 44, H. Leibe, 44 –460.

Celluloid Rifle Association—W. O. Lyons, 47, W. H. Vreeland, 47, F. Brade, 47, C. Whitman, 46, W. H. Ross, 46, M. Puder, 45, S. T. Simmons, 45, H. Babbett, 44, F. Parbery, 43, C. H. Umer, 42—449.

Nameless—Schoubel 47, Rittenoyer 45, Spearport 41, Kretsch mar 42, Meyer 42, Vanalt 42, A. Schmobl 43, Donelly 40, Rose 40 Wiveley 40—417.

Warren Rifle Association—Freche 44, Nunley 44, Wolf 43, Cuma 43, Shafer 42, Adams 43, McAlpine 41, J. H. Cox 40, Linnet 40, Shekel 36 –408.

Domestic Rifle Association—Eaton 44, Reynolds 44, Shobel 43, Jeffery 43, McGunis 42, Crocker 42, Wm. Long 41, Leitz 41, Millward 37, Wilson 38—415.

Thus far the clubs have made record in the monthly tournaments:

	P.	F.	P.	N.	D.
Nov. 25	446	453	442	444	377	377
Dec.	461	459	444	442	430	416	405
Jan.	450	464	460	449	417	418	415
	1377	1377	1346	1332	1291	1211	1197

WORCESTER, Mass., Jan. 18.—Members of the Worcester Rifle Association went out to the Pine Grove Range to-day for the third shoot of the winter series. The wind was strong from 9 o'clock by the dial. The following are the several scores:

Creedmoor Target.

C Arthur	5	5	4	5	4	4	4	4	5	5—43

THE NEW RIFLES.—Some of the English writers are drawing comfort from the fact that English rifles have been used as models in making up the new weapons for the contest of 1883. The London *World*, in a recent issue, draws some auite-match comfort as follows: "America relies on smarting under decisive victory obtained over them by the English in September last, and disdainful of the proverb in which reference is made to a bad workman and his tools, have been casting about for a new weapon which shall excel all others yet produced. The article is said to have been already found in the shape of a Remington made on English lines. As Curtis & Harvey powder has been found the best adapted to it, English riflemen, if they are beaten in 1883, will feel some of the pangs poetically supposed by Lord Byron to have been experienced by the eagle which was pierced by an arrow shafted by a feather from its own wing. Colonel Bodine, who 'bosses the show' in the States, is convinced that the new rifle is quite equal to the English one. With this admission recorded, the result of the next competition can only lie between the men themselves, all reference to inefficient tools being cut out."

JAMESTOWN vs. BRATTLEBORO.—On Christmas day the rifle clubs of Jamestown, N. Y., and Brattleboro, Vt., shot a match, each on its range, 200yds., Creedmoor targets, which resulted in a tie, and on Friday, the 6th inst. the tie was shot off with the following result in favor of the Brattleboro "boys:"

Brattleboro.		Jamestown.	
Cobb	46	Warner	44
Lamb	46	Dowler	41
Howe	45	Perry	43
Wood	45	Fenner	43
Putnam	42	Ayres	43
Nichols	41	De Lisle	43
French	41	Burns	43
Marlboro	40–346	Kelso	39–342

The two clubs have now exchanged 200 shots each, and stand but four points apart. Another match will be shot soon.—R. H. B.

SPRINGFIELD, Mass., Jan. 22, 1883.—The Rod and Gun Club made the following scores in practice to-day at 200yds. off-hand, on Mass. target:

Maynard	11	10	11	11	12	10	11	12	9	11	–108
Kirk	10	12	10	11	9	12	11	12	9	11	–107
Sargent	11	12	10	11	11	9	10	9	12	10	–105
St. John	12	10	10	11	10	9	11	11	9	11	–104
Marcot	10	9	11	10	11	11	8	9	8	9	8— 99
Grey	10	11	10	10	8	11	9	9	10	10	8— 98
Lowe	10	12	10	10	10	7	9	11	9	10	9— 98

NEWARK, N. J., Jan. 18.—The annual meeting of the Newark Rifle Association was held this evening at the Plymouth rooms. The following officers were elected: President, J. H. Huegel; Vice-President, Alfred Hunt; Secretary, C. H. Townsend; Treasurer, George M. Townsend; Shooting Committe, Felts, Weigman, McEvoy; Scorer, L. Meyer; Board of Directors, Messrs. Hammond and Meyers with the President, Secretary and Treasurer. The annual report of the secretary shows an increase in membership over 1881. The full membership in all clubs is about 400. The treasurer's report shows a balance on hand of $36. In future all communications to the N. R. A. should be addressed to C. H. Townsend, 35 William street, city.

MASSACHUSETTS RIFLE ASSOCIATION.—For the year 1882 the Massachusetts Association gives a total in team and individual entries of 6,577, or 1,175 more than the National Association, and a gain over 1881 of 913. The total gain in entries of the National has been 800 over last year. The cash receipts of Massachusetts fell off from those of last year, the amount being something over $200 less; but, with a balance on hand of nearly $1,000, the Massachusetts organization has a fair basis to start the year with.

NEWPORT, R. I., Jan. 15.—The keg of powder presented by Mr. William Farrow to the rifle club, is very nearly empty. The competition for the twenty-first pound was held on Saturday last. The winners were handicapped one pound per each pound won. The afternoon was fine, with a strong wind blowing directly across the range. The distance was 200 yards, ten shots off-hand. The following are the scores:

G Henry	5	4	5	4	4	4	5	5	5	5—46
W R Knight	5	4	4	5	4	4	4	4	4	5—43
W S Bryer	4	4	4	5	5	5	4	4	4	4—43
J E Smith	5	4	4	4	4	4	4	4	4	4—41

The club have in contemplation the erecting of targets at military distances to enable certain of the members to become eligible for places on the American team.—OCCASIONAL.

FIRST GERMAN GUN CLUB.—The annual official election of the above-named club took place at their club-room, 384 Pearl street, on Wednesday evening, Jan. 10, with the following result: Mr. Fred. Oppermann, President; Mr. Adam Goetz, Vice-President; Mr. Fred. Praender, Secretary; Mr. Fred. Jenner, Treasurer.

THE TRAP.

MIDWAY vs. JERSEY CITY HEIGHTS.

THE final match between these well-known clubs took place on the 16th inst., at the club grounds of the latter, at Marion, N. J., and was witnessed by a large number of spectators. The capacious club house being at times crowded, interfering not a little with the comfort of the shooters. It was an exceedingly disagreeable day, could hardly have been worse for the trappers, an almost continuous sleet mingled with rain falling with a sharp, cutting wind from the east across the traps. The shooters, of course, were not so much inconvenienced, as they only stepped on the platform a few feet from the clubhouse, fired their one barrel and returned to their cheerful quarters. Al. Heritage, that prince of caterers in camp and field, was in attendance. When will he have a better companion, whether in concocting the savory chowder, astonishing the boys with his savory dumplings or slapjacks, telling a good story, singing a rollicking song, or doing his full share on the bay, and doing it well? What would the A. C. H. do without Al, and vice versa? He is almost ubiquitous, now by the traps or pulling the strings, then in the club house assisting his boys (chips of the old block) in serving out the lager or hot coffee. The refreshments were ample, and full justice was done by the more than two hundred hungry sportsmen. A 24 boiler holds nine gallons, and it was refilled four times. Hot coffee on such a day was the thing. The birds were a very superior lot, and were picked by "South Paw" for the occasion.

The shooting of the J. C. H., as will be seen by the score, was very uniform, averaging 27 birds each killed out of 35, over 5 birds per man. At the end of the first squad, when the Midways led one bird, the betting was even and taken by the Jersey City's at once. After the second squad had finished there were no offers from Monmouth county. The third squad settled the matter, and a defeat to the Southerners was inevitable, for the captain had good men for the last. The J. C. H. led them 8 birds, (10 in all), which they increased to 13 at the finish.

There were the usual items of interest to shooters in a long race, this long or short as a driver, that good judgment on a left-hander, etc., etc. Hall lost his second, the bird just touching his toe to the ground as his gun cracked, Maurer another, challenged as to gun above the elbow before the bird was on the wing, and Cannon's fifth bird dropped dead to the fence on the Midway side, and before it could be gathered deliberately walked out through the open gate. Moral: "Shut the gate." But there was good feeling, as there always should be in these friendly matches between sportsmen. All went off well and it was thoroughly enjoyed.

The match was 25 men each club, 7 birds each, 21yds. rise, one barrel; Midway rules, the J. C. H. generously giving them the odds. The following is the score:

Midways.		J. C. Heights.	
F Hyer	1110 1–6	Outwater	1111110–6

JACOBSTAFF.

MARSHALLTOWN, Iowa, Jan. 12.—The Marshalltown Shooting Club held their annual meeting Jan. 2. Officers elected for the year are: H. L. Bruner, President; S. M. Brown, Vice-President; H. Bank Plant, Jr., Secretary; R. H. Barnhart, Treasurer; Brown, Sack and Frank Woodbury, Executive Committee. First monthly shoot was held Jan. 4, for club badges, clay birds, H. J. Bruner winning first; A. C. Anson second.

| | | | | | | | | | | |

breakfast. After the yacht was put in shape, we got underway and found the wind south, dead a-head. Put in at Allen's Corners and left message for nearest telegraph station, informing people of our whereabouts. Met and conversed with several pretty young ladies, reluctantly pulled out to the Katie Gray. As we dashed by South Bay Point, we put on our heavy weather coats, took in gaff topsail, and stood down the lake. Weather looked threatening with glass falling. After deliberation, we decided to put into South Bay Point Harbor, which snug little bight for light draft boats we christened "Yacht Haven." Waited, expecting that soon after dark the wind would settle from some point for the night which it did about 8 o'clock, blowing very hard from the N. W., with sharp lightning to the southward.

In the morning wind held heavy down the lake. Had a whitefish breakfast. Went fishing for frogs, bought some. Found the light-house keeper a pleasant accommodating sailor. Underway at 3:30 P. M. for Oswego, the wind having decreased, and blowing S. W. After a comfortable run, we arrived off the familiar club house of the Oswego Y. C., at 11 P. M. Our trip up the South Shore having taken twenty-six hours, our return down the North, one week.

K. G.

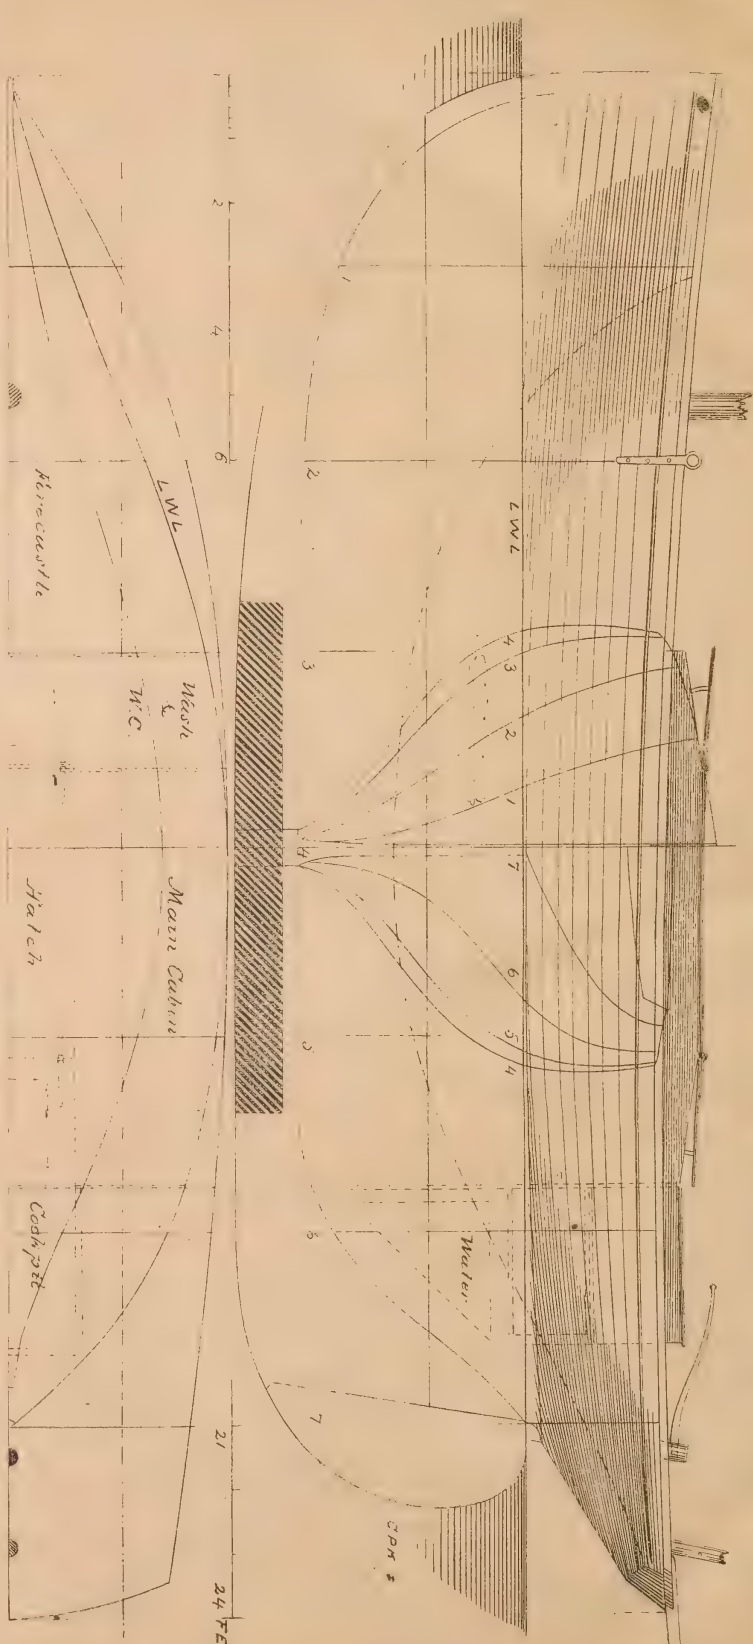
FOUR IN A ROW.

THE widespread popularity of yachts belonging to the cutter variety is best attested by the fact that no less than four are going up in a bunch in a single shop on Staten Island. These four are small boats, it is true, but their tonnage is not the criterion in the case, but numbers count. It may be added that others are to follow as soon as room can be found to stretch their backbones later in the spring. These yachts are exciting a great deal of interest, if we can judge by the crowd of pilgrims congregating in Stephens' shops at West New Brighton. The attendant audience on Sundays has grown to such proportions that a notice of "standing room only" will soon be in order, and if the suggestion to charge an "admission fee" were acted upon, the builder would reap as rich a harvest as in the actual building of the boats.

There is first of all a wee shaver of 14ft. in frame for a Providence gentleman. This bold-looking chip of the fleet is one of the seven wonders, and had the builder set up half a dozen of the same sort, they would have sold like hot cakes this spring. As with the damsel of deep, dreamy eyes in the novel, this tiny single-hander creates an irresistible longing at first sight not to be quenched except in actual possession. She will be a sturdy little craft, no longer than many a yacht's dingey, but with a body so plump and business-like in proportions that she will go a long way towards fulfilling the duties expected from much larger and more expensive constructions. She is but the opening of the chapter, and the offspring of this starter will no doubt be numerous enough at an early day to form an exclusive society of their own, devoted to the furtherance of thorough sport, built upon a genuine love for sailorizing on salt water, at a trivial outlay of a few hundred, within the reach of the great "million."

In model she will be very taking, able and roomy, and also uncapsizable. Load line length 14ft. and 17ft. on deck, with 5ft. for beam, and 4ft. deep amidships from underside of deck to top of keel. Least freeboard will be 2ft. 2in., and the draft 3ft. 4in. For ballast there is to be about 800 lbs. iron on the keel and as much more inside, the total displacement being one ton and a half. The rig will be that of a yawl for convenience in cruising and use in open waters. Owing to her depth and low floor, the usual encumberance of a house will be done away with, a narrow hatch taking its place, leaving good passage each side on deck. Cabin sill will be carried high to prevent swamping, though it will be all but impossible to knock her down to the coamings. There will be some 18in. floor, a liberal allowance in so small a boat and a berth each side so that two hands can be stowed when required. In point of fittings and supplies she will be a yacht suitable for extensive cruising, and will therefore appeal to the fancy of those who seek in the sport more than an aimless flitting about in open boats. The lines of this boat were illustrated in our issue for October 19, and her sail plan the week following. A vast lot of sport and solid enjoyment will fall to the share of the owner for less than the sum needed to acquire a comparatively useless, smooth water contrivance, wet and uncomfortable, and presenting next to nothing a sailor man can contemplate with satisfaction.

The second of the batch is a scale higher in tonnage, but in general of much the same order. She is building for a member of the Jersey City Y. C., and is intended for fishing and knocking about in the lower bay, with a look outside now and then when bent upon trolling for bluefish, and also to afford a large and roomy cabin for permanent quarters during the season. She is on the lines of the "Irish model yacht," Heatherbell Chinee, with a large counter added, and in spite of her extreme dimensions promises to be a stylish piece of furniture. Load line, 18ft.; on deck, 22ft.; beam, 7ft.; depth of hold amidships, 4ft. 6in.; draft, 4ft. 3in.; displacement, 3½ tons; iron on keel, 2,500lbs., and 1,200lbs. inside; mast, deck to hounds, 17ft. 6in., with 8ft. pole above; boom, 19ft., and gaff, 12ft.; hoist, 14ft.; bowsprit outboard, 9ft. Her midships is bold without being too full—high plumb side, a long, slow turn to the bilge and a hollow floor, well cut up forward, easy in the quarters and next to no flare, the frames forward being U shape, flattening away into a plumb cutter stem. With a tride off the beam this yacht comes very near to our beau ideal of a single-hander. As it is she is an illustration of the great things which can be accomplished on small tonnage with depth given the consideration it deserves. Like her little sister, she is to be "nobby" in finish, with bright decks and joiner work below. The cabin will show 4ft. 6in. head room, ample stowage for two and forecastle for cooking.



The third yacht Stephens has in hand is approaching completion, the decks being about laid and the interior already fitted up. Alongside the others she towers like a monster, though figuring but four tons on the register. She has been named "Aneto," and is from plans designed by her owner, Mr. H. W. Eaton, Seawanhaka Corinthian Y. C. As a vessel we thoroughly approve of in type, we produce her lines in this issue, and subjoin the following description.

Aneto has been built to combine those salient qualities we have often dwelt upon as essential to the realization of all that can be got out of the sport of sailing. We are pleased to find a gentleman of Mr. Eaton's experience coincide with our views to the extent of producing a vessel corresponding in her main features to what we should counsel where sailing for sailing sake is kept in view, and where the yacht is looked upon as a tool devised in answer to the sailor's quest for an efficient substitute in a small way of the regular ship on the largest scale.

Aneto was not built to go poling stern first up creeks and pick apples from overhanging bows, she was not got out to go clamming in six inches of water or to float in a back yard puddle, nor was she proposed as a naked racing machine in which every yacht-like strain is swamped in the greed for speed, nor yet is she intended to serve as a convenience for "pleasure parties" out for a "ride on the water." Her model has been determined from the standpoint of legitimate yachting. In her the ruling proposition has been to combine safety, ability, weatherliness, accommodations, and convenience with as much speed as can be engrafted upon a scheme intended to fulfil the foregoing to the utmost without any wasteful sacrifice. Individuals differ, of course, in their tastes and fancies and we do not wish to be understood as saying that variations here and there in the design herewith illustrated would necessarily imply high treason and draw with it flat failure.

There are a number of ways of arriving at the same result and the lines may be altered, proportions modified, different arrangements and contour adopted and other sail plans may be selected without vitiating the attainment of the qualities sought in a high degree. But as an excellent example of how yacht-like characteristics are to be embodied in a vessel of the size we find the Aneto commendable in the warmest terms. No one can doubt her safety, no one will question her handiness in rig and general convenience of detail, nor will any one after inspection speak slightingly of her accommodations below, and in a small boat much stress is very properly laid upon this particular. Those who climb into Mr. Eaton's boat come out exclaiming "simply immense," astonishing," "all you can ask," and the like. The critic is always "agreeably disappointed" and even those who expected much from their knowledge of such boats bestow recognition upon the success with which the designer has combined such liberal stowage with excellence in form of hull. Only recently a look aboard a sloop 25ft. load line and 32ft. beam in the Seawanhaka basin disclosed less accommodation below and less room on deck, barring cockpit, than Mr. Eaton's little yawl of 21ft. line, with but 7ft. beam. This apparent anomaly is brought about by the greater depth of the yawl, whose sides, being well carried down, give greater width across floor and berths than in the quickly shrinking pegtop bottom of the shoal sloop. After all it takes three dimensions to make up space, and an excess in one direction at the expense of some other, simply leads to large area in the way of wide decks, their width being however neutralized by excrescences necessary to give even a modicum of available volume down below, the length of which is also limited by the fore and aft dimensions of the house overhead. Thus it is that more cabin and a much larger forecastle are to be found aboard the Aneto than in the sloop, whose cabin floor was split up by the centerboard trunk to little more than half that of the yawl. Actual inspection will verify the truth of these remarks, and in this connection we should add, to avoid a useless journey, that the Staten Island shops are open on alternate Sundays only, next Sunday being one of the "off days," when bolt and lock announce the absence of the builder at his home.

A study of the Aneto's plans will save further explanation. It is enough to say that she has moderate beam, great depth, easy bilge

"ANETO."—SINGLE HAND YAWL.—MR. H. W. EATON.—Seawanhaka Corinthian Y. C.

and high side, with lead on the keel, and a very moderate rig of no racing pretensions. She will have a pole mast with one shroud a side. The mizzen will be a lug and the tops'l a jib header. The bulkheads are shown in the half breadth plan by dotted lines and the shape of the hatch as well. No house or slide is required, the hatch covering the floor with standing height beneath and the deck beams being clear overhead when sitting on the transoms. Only one of these is indicated in the body plan, but all the boats Stephens has under way will boast of two for berthing owner and friend. Aneto has good air circulation, and a similar arrangement at the helm when foreign bound or to devise ways and means for the inner man through the skilful manipulation of the "doctor's" department in the forepeak. The main cabin has been restricted to 18ft. in length to permit washboards, etc., between the sheer and the long quarters forward just mentioned. The cockpit is limited to a small well for one person, or for the reception of the nether shanks, waterproof cushions outside the coaming serving for seating purposes. Access to the cabin is had by a sash in the hatch, and a similar arrangement at the forward end leads to washroom and forecastle, all being connected by doorways below. The water tank is located in the run, the space alongside the cockpit being devoted to general stowage. The feeboards in the bow, and withdrawn pipe from the tank coiled among the inside for a constant supply of cool water. The wash and toilet-room has one of A. B. Sand's clever little pumping arrangements, and a tap to the tank at enables water to be drawn in all parts of the boat. Cooking gear and lockers of all sizes with cranny arrangements and fixed covers, especially adapted to yachting wants. The hull inside has been paid with tar, for preservation of the wood and for keeping the bottom sweet. The smell of the tar has almost entirely disappeared, and is not likely to prove perceptible when a little aged.

The rigging will have no paint, but the hemp side and a bleached and the long quarters forward just mentioned. The cockpit is limited to a small well for one person, or for the reception of the nether shanks, waterproof cushions outside the coaming serving for seating purposes. Access to the cabin is had by a sash in the hatch, and a similar arrangement at the forward end leads to washroom and forecastle, all being connected by doorways below. The water tank is located in the run, the space alongside the cockpit being devoted to general stowage. The feeboards in the bow, and withdrawn pipe from the tank coiled among the inside for a constant supply of cool water. The wash and toilet-room has one of A. B. Sand's clever little pumping arrangements, and a tap to the tank at enables water to be drawn in all parts of the boat. Cooking gear and lockers of all sizes with cranny arrangements and fixed covers, especially adapted to yachting wants. The hull inside has been paid with tar, for preservation of the wood and for keeping the bottom sweet. The smell of the tar has almost entirely disappeared, and is not likely to prove perceptible when a little aged.

The rigging will have no paint, but the hemp side and a bleached below water. The deck and interior are in bright wood; the ceiling being handsomely wrought in narrow strips of beaded Georgia pine. Hatch and gangboards of mahogany very neat in finish. Whatever may be thought of these boats, it is certain that for neatness of work, perfect fastening, attention to detail, finish and conscientious and intelligent workmanship throughout, these three yachts are conspicuous examples and it is but right the builder should receive this public acknowledgment, turning out the strongest and finest job yet seen in small yacht building in America. The fourth contract has in hand is a cutter 28ft. load line, 7ft. beam, 5ft. 9in. draft and 5ft. 10in. from cabin floor to underside of beams. Her keel will be laid as soon as one of those in frame can be turned out of the shop, unless other arrangements can be made at once. A fifth boat 20 ft. load line and 6ft. beam will be set up later in spring.

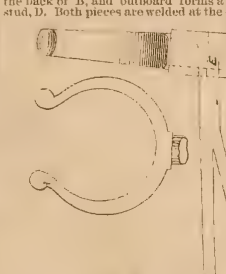
The details of construction of Aneto are as follows: Keel of clear oak 6x9 in. tapering at ends to 4½in. sided; lead on keel, 6x8in. and 8ft. long; weight 1850 lbs. An oak shoe will be worked on keel as a chafing guard. Lead bolted up with ⅞in. composition bolts, 12in. apart; stem and post and knees of oak, sided 8in.; frame double sawn, sided 2½ and moulded 2½ at heel and 1½ at head; spaced 2ft. between centers with steamed frames, sided 1½in.; floor knees of hackmatack 2½in. sided; plank of 1in. cypress for bottom and load line and Georgia pine above worked in single length fore and aft; bilge strakes of yellow pine; ceiling and bulkheads of same; cockpit lined with sheet lead, with outboard drains and stayed up with yellow pine, beaded with oak cap; planksheer 3½x12in., with the butts of deck plank jogging into it at ends; clamps 3x1½in. oak; rail 2x1in. oak; fastenings all copper riveted; deck stuff 1x2in., selected pine, blind nailed; anchors, 23 lbs. Trotman, and 50 lbs. long shank fisherman's anchor; chain ⅜-8in. link, about 25 fms. with manilla rode for long scope; mast 5in. diam. at partners; bowsprit 3½x3¾, egg shape at stem; mizzenmast at deck 8in. diam.

DETAILS OF ANETO.

Length over all	24 ft.
Length on load line	21 ft.
Beam extreme	7 ft.
Depth amidships, keel to deck	5 ft. 3 in.
Greatest draft	4 ft. 6 in.
Least freeboard	2 ft.
Displacement	4 tons.
Lead on keel	1850 lbs.
Lead inside	2550 lbs.
Mainmast, from stem	5 ft. 3 in.
Mainsail, hoist	27 ft.
Mainsail, foot	16 ft.
Mainsail, head	13 ft.
Bowsprit outboard	7 ft.
Jib on foot	12 ft.
Jib on stay	16 ft.
Mizzen mast abaft end load line	1 ft. 10 in.
Mizzen boomkin outboard	2 ft. 6 in.
Mizzen on luff	7 ft. 6 in
Mizzen, foot	8 ft.
Mizzen, head	5 ft.
Mizzen, leech	12 ft.
Topsail yard	13 ft.
Area lower sail	298 ft.

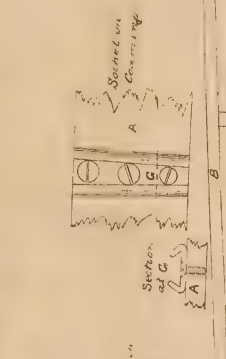
HEIGHT AND VELOCITY OF ATLANTIC WAVES.

I REMARK that one of your correspondents, in concluding his letter on the "heaving-to of screw-steamers" makes the following statement: "The velocity of the great waves of the Atlantic is acknowledged to average about nine knots, hence the most dangerous speed when running is that rate, which unalpowered sailing vessels can seldom exceed, even with the aid of canvas when practicable." Who are the authorities who have thus given us new data on one of the most interesting and, to seamen, one of the most important subjects of the day? Scoresby gives the wave velocity at 13 miles per hour, and other observers have come to somewhat similar conclusions. In Atlantic gales I have frequently measured the speed and found it 25 miles per hour, *plus* the rate at which the ship was steaming through the water when nearly or quite head to wind (say from 5 to 9 miles per hour). If the enormous speed of waves which causes them to be dangerous, and if it were possible to reduce it to nine miles per hour, the crushing momentum with which they now sweep over the stern or deck would be proportionately reduced, and many a ship pooped and missing might still be afloat. I recommend your correspondent, on the first favorable occasion, when his ship is running before the sea, to veer a cork fender or other suitable float astern, mark the line when it rises on the wave crest, and also when the crest passes the stern. With this measurement, and the rate of sailing, the problem is easily solved. The majority of seamen have doubtless noticed that the greatest mischief is generally accomplished when the wind commences to lull, when the sea falls with a dull, heavy thud in lieu of the sharp, crisp shock it previously conveyed to the ship. At night these thuds sound ominously as the white crests roll over and fill the hollows with flecks of foam. The explanation of this phenomenon is simple. The strength of the wind propels the mass of wave forward in a horizontal direction with a certain force and velocity until it breaks, and when this occurs it still maintains its onward course in broken water and spoondrift. Reduce the force of the wind, and gravity immediately seizes what under other circumstances would be above power a large mass. It is probable that an examination of the log books of ships on board of which damage has been sustained during extraordinary gales, would confirm the correctness of this assumption. The danger is not unfrequently aggravated by the attempts of zealous officers to keep their ships on her course before the subsiding of the sea warrants such a proceeding.



We have still much to learn about waves. At the present time the data of Dr. Scoresby is accepted by savants, notwithstanding the fact that a number of Atlantic steamers have reported the height of a length more than double the amount given by the learned doctor. Although his heights are believed by seamen to be equally erroneous it must be admitted that the problem presents many difficulties, for, if trigonometry be used, a single error or error in the direction of the base line will greatly interfere with the correctness of the results. Anyone who has attempted to solve this problem during high and dangerous storms will acknowledge that many difficulties will crop up to perplex his observations. In a former number of the *United Service Magazine* I stated that on one occasion the result of my calculations gave the height of the waves 70 feet from crest to trough. Of course, the figures excited an immense deal of criticism, especially from those who regulate such affairs from their closets, and who, with no means at hand for keeping in clear up such problems, it is certainly satisfactory to do it in good company; and quite recently, on turning over a series of letters from the late Admiral Fitzroy, I find the following remarks on the subject: "You informed me that during a recent gale off the Western Islands, you ascertained that the height of the waves was 40 feet. I can assure you that on one occasion I made them 70 feet." At the time of writing my article, the fact of my having this letter in my possession escaped my memory. It is singular that the observations of Dr. Scoresby in one locality, and those of Admiral Fitzroy in another, should not coincide. Future observers must decide who is right. On the question of height there cannot be a doubt, for a ship nearly 600 feet in length furnishes unimpeachable data for this part of the work. It is the boast of science that the dredge and plummet have enabled it to map the bed of the ocean as clearly as the surveyor can the face of the country. Interesting a this unquestionably is to the naturalist, it is of little practical use to seamen, beyond the regular line of soundings; but anything that bears on the condition of the surface is practically useful to all, who, like myself, have spent the best years of a life in traversing it.

Possibly, when the next scientific expedition sets forth from these shores, instructions will be given to pay particular attention to this much-neglected branch of practical usefulness. To many, the height of the waves is as much a subject of interest as the height of the land. If found, why should it not be recorded on the chart, for it would add another factor to those we are already familiar with.



If it be to be hoped that some of the able officers who command Atlantic steamships will make observations on the length and height of waves, for when their crests can be seen from the saloon deck above the fore (and according to the late lamented Captain Moodie, the tops'l yards of ships, nearly 500 feet in length, seamen, at any rate, will be under the impression that the maximum height given by the learned doctor is, during the heavy gales surpassed, on the great circle route to New York. Of one thing we are certain, that his length of wave, 600 feet, is notably in error. Isolate this fact, not only from personal observation, but from the testimony of other observer, amongst them is Mr. Douglas, the talented engineer of the Irish Lights, who states that when building the sentinel lighthouses off the coast of Cornwall he had occasionally measured waves of twelve or thirteen hundred feet in length. It may be argued that these waves were on soundings, a fact which I think would tend to shorten their range. What observer ever saw waves of such dimensions rolling over the bars of the most exposed parts? But let him, after a succession of western gales, stand on the bold headlands which spring abruptly from the sea on the west coast of Ireland, and mark, if a ship happens to be in the offing, how many waves there are between her and the shore. Their small number will astonish him, as it did myself some years since, when running for Galway in an equinoctial, it appeared to me that not more than three or four formed on the mile of water that lay between the ship and the shore. —*W. H. Riddle in Nautical Magazine.*

OUTRIGGER FOR CANOES.

A CORRESPONDENT located in the Far West, beyond the reach of manufacturing centers, sends the accompanying sketch of a home-made outrigger attached to his canoe for the use of oars in the pursuit of hunting. The spread of the two arms at the cockpit coaming is 60in. Each arm is made as shown in the sketch. A piece, B, is turned down at the end, another length of flat bar, C, is welded to the back of B, and outboard forms a truss in connection with the stud, D. Both pieces are welded at the outer end, where a deep collar,

E, with circular hole, is introduced between the two arms and welded to them, the rowlock being slipped into this collar. The edges of the inboard portion of C are beveled with a hammer and filed so as to slide into the clamp G, secured by screws inside the coaming. The section of G in the sketch will make the method plain. The outrigger can be quickly unshipped, and when in place gives a rigid support to the oar. The rowlock was made by splitting a square bar the required length, then shaping the halves into the arms and thickening up the ends by turning over. The lower portion is filed round, leaving a square jog for good bearings at the top. The collar, E, may be made of stout pipe.

THE CASE CORRECTLY STATED.

Editor Forest and Stream:

One would think, considering the great number of yachts owned by residents of New York and the vicinity, that matters relating to yachting would challenge more attention from the newspapers and periodicals; but FOREST AND STREAM appears to be the only publication that takes hold of the subject in anything like an appropriate manner, and presents its articles with excellent illustrations in a truly interesting style. When you declare the chief objects to attain in following up the manly art of sailing the best possible models in boats for safety, speed and comfort, and to improve the capabilities of our yachtsmen as sailors, I believe you have struck the right trail, and will surely find success in following it.

Yachtsmen have been too prone to make yachting an expensive luxury, the object appearing to be to possess boats whose costly cabin decorations would excite the envy of others; the owners have spent more money in the effort to make a yacht's cabin look like a gilded parlor in some fashionable hotel than they have to perfect models. In the description of new yachts we often read more about the fitting up and upholstering of saloons and staterooms than about the merits of the boat itself, as a yacht; the consequence is that the talk among visitors and guests on a yacht is generally about the magnificence of the cabins, not forgetting to mention whether or not there is an upright piano or parlor organ on board, which article, I think, is about as suitable an appurtenance on a stage-coach as on a yacht. The impressions thereby made on the minds of many men who would like to become good sailors is that yachting means maintaining a luxurious loating place, at enormous expense, instead of being a delightful means of improving one's mind and health by gaining skill as sailors while sailing their boats themselves. I venture the remark that eight out of ten owners of the fancy craft belonging to the clubs at Pleasure Bay would be completely "at sea," if by accident they were blown out of sight of some little harbor and were called upon to direct the handling of their boats.

Such a result doesn't obtain in true yachting. It may please those who follow such a course; let it remain so with them, and let us lead and instruct the class whose desire it is to become sailors in fact, not mere owners of "something" they have to depend entirely upon others to manage for them; and the way to create this desire is to have more public discussions of the subject, less confinement of opinions to club circles.

I trust the subject will so grow as a matter of interest to many men who hitherto have seldom given thought to sailing, that you often, Mr. Editor, will find yourself at your "wits' end" to make space for the many excellent ideas, suggestions and recitals of experiences that will naturally spring from increased interest in the most noble of sports. R. C. H.

LOG OF THE SEMINOLE.

COM. DOUGLASS'S Nonpareil sharpie yacht Seminole, Capt. J. Pacetti, which left New York on the 22d ult., arrived at St. Augustine on the morning of the 19th inst., after a long and boisterous passage. Heavy weather on the 23d compelled her to put into Absecon Inlet, and in the run from Delaware Breakwater to Fortress Monroe, on the afternoon and night of the 27th, she encountered a severe northeast gale with snow, and experienced the heaviest sea of the whole trip. She logged her 350 miles of this run, with wind W. N. W., she made 8½ knots under jib and jigger alone. The little vessel, rating 20 tons, was ably handled by Capt. Pacetti, and though very wet decks and much spray came over, she behaved like a sea. From Norfolk she followed the inside passage to Ockrakoke Inlet, and thence, outside to Beaufort, N. C., where she arrived the 6th inst. Leaving Beaufort, 9th inst., with brief runs in variable weather, she was off Cape Fear on the 11th, and at 3:30 the morning of the 12th, sailed from there direct for Georgetown entrance, S. C., a run of 75 miles, at midway being 26 miles off the coast. This run was made under double reef, in a strong N. E. breeze, and Georgetown light was sighted at 2:30 A. M.

Unfavorable winds and fog detained her at Georgetown, and she left there on the 14th, making only twelve miles to North Santee. She put out on the 16th, at three P. M., and at four P. M. on the 17th went into Tybee. On the 18th, becalmed off the lightship, she made no headway till three P. M., when a light breeze sprung up, in the night reached St. Augustine bar at 8 A. M., on the 19th, having made the run of 136 miles from Tybee light, in seventeen hours. The appearance of the little vessel as she entered the harbor under full sail, with wind abeam, a fine E. E. breeze, was greeted in the unusual peculiarity and beauty of her rig, which is known as the "Roslyn yawl rig," exciting universal admiration. A crowd of friends upon the wharf huzzaed vigorously as she sailed swiftly by them and rounded to off her dock. The captain and crew were all in fine health and spirits, and their appearance was a great credit to their many friends. "The Seminole sustained no injury of any kind except the boom traveler, and proved herself a thorough seaboat, notwithstanding her light draft of twenty inches. Her builder, Mr. Thomas Clapham, of Roslyn, N. Y., may well congratulate himself upon the achievements of this vessel. The Seminole is now in the Commodore's basin, fitting out for the exploration of the south coast of Florida.

She is a Nonpareil sharpie with a new rig, named by FOREST AND STREAM the "Roslyn yawl rig." Her length over all is 60ft. Extreme beam, 15ft. Depth of hull at main beam, 4ft. 6in. Draft of water in sailing trim, 18in. She has no keel, but inside, and running from stem to stern, a very heavy keelson. Her centerboard is 18ft. long, 6ft. deep and 3in. thick. She has a balance rudder, 6ft. of which is aft of rudder stock and 2ft. forward of same. She has two masts, viz: a mainmast 43ft. in length, and a driver-mast 37ft. She carries four standing sails, all triangular in shape, viz: jib, forestaysail, mainsail and driver. Her sails are so balanced with reference to her displacement that she can be readily steered and worked to windward without her rudder. Her main gaff is 25ft. in length, and projects about 15ft. above masthead when hoisted; main boom same length. Her driver-sail has a hoist of 35ft., and 18ft. foot. Her tonnage is 42¾ tons, carpenter's measurement, and 20.05 Custom House measurement. She was built by Thomas Clapham, of Roslyn, L. I., New York, of oak, chestnut and Florida pine, with fastenings throughout of galvanized iron. Her tonnage is greater than that of any sharpie yacht ever built. Her cabin and staterooms are finished in hard wood, with ample accommodations for four, and with quarters forward for six men; is furnished with galvanized iron tanks to hold 130 gallons water; is rigged in the most thorough and substantial manner throughout, and is fitted with Gardner's patent steering apparatus.—*St. Augustine (Fla.) Press.*

DEATH OF CAPT. ROBERT FISH.

ONE of our most famous lights in yacht modeling was called to rest Wednesday morning, January 17, after a short illness incidental to old age. Capt. Robert Fish died at his residence in Dunrapo, N. J., in his seventieth year, after a long life devoted to the profession of yacht modeling and building, in which he achieved a brilliant success, redounding to his credit and the fame of his country. In early life he started as a boat builder along the river front, after serving apprenticeship with friends of lifeboat fame. He quickly won a reputation for speedy boats among the fleet of small fry, of which he turned out a large number. One of these, the cat-boat Una, was taken to England by Mr. Grinnell many years ago and gave such wonders abroad that she gave birth to the present class of Cowes Unas. This historic little boat figures in all yachting annals and exercised great influence upon the construction of sailboats throughout Europe generally. In later years Captain Fish turned his attention to larger craft, and garnered his largest laurels in the fast light-weather sloop Eva, built for the Lorillards, and in the sloops Annie, White Cap, and Vixen, built for the Livingston family of Staten Island, and in the Vision, built for the Messrs. Alexander. His crowning achievement was in the lipping and rebuilding of the schooner Sappho, and the victories over the British schooner Cambria he scored as her skipper. Captain Fish's forte lay, however, in smooth-water flyers. With the exception of the Sappho he failed to strike good form in his schooners. They were long, sharp and light for their displacement. As a consequence Challenge, Meteor, Wanderer, and Enchantress, all handsome to look at, proved fast down wind, but inferior with the boom trimmed in. As a citizen he has justly been held in high esteem for unswerving integrity and unassuming modesty. As a friend and the head of a family all who knew him mourn the loss of a generous, open-hearted nature—one bright star less in the yachting firmament, and no new light rising to fill the void.

In external remedies the presence of oil, which soils the clothing, and poison is most objectionable. Yet all liniments, salves, lotions, etc., contain it. BENSON'S CAPCINE POROUS PLASTERS combine perfect cleanliness and unparalleled curative powers. Quick, thorough, safe, neat. Beware of imitations. All druggists. Price 25 cents.

Answers to Correspondents.

G. N. P., Middletown, Conn.—The address is Worcester, Mass.

T. B. AND MANY OTHERS.—We cannot undertake to answer queries about horses, actresses or cards, nor to decide wagers. All such are outside the scope of this journal.

RIFLE, Sault Ste. Marie.—The reports of Government rifle tests are contained in the Annual Ordnance Reports, published by the War Department. Write to the Secretary of War.

X. X. X., Osage City.—1. What is the best illustrated work on birds at a moderate price ($5 or $6)? 2. Where is Holden? Ans. 1. We know of none at that price. 2. 387 Sixth avenue, New York.

J. V. S., Front street, City.—The close season in sale of quail will begin Feb. 1, and then be in order for yourself or some other interested party to procure the arrest of the hotel keeper if he serves the birds after that date.

IRON RAMROD, West Somerville, Mass.—For waterproofing boots, take a quarter of a pound of beef and mutton suet, a teaspoonful of lard, half a pint of linseed oil, a pint of turpentine, and one ounce each of Burgundy pitch, and a half ounce of turpentine. Melt up the suet, the lard, the pitch and the beeswax in a pot, stir in the oil, and when off the fire and cooling a little, put in the turpentine. If you want to be elegant, add a half box of blacking to give it a color. Warm the compound and paint the boots, uppers and soles. It makes a boot quite water-tight, and salt water cannot faze it.

C. P. F., Philadelphia, Pa.—1. For live quail for propagation apply to Reiche & Bro., Chatham street, New York City. 2. The mode of liberating, published in our issue of Nov. 16 last, is this: The birds are put into cardboard boxes, a pair in each box, and taken at night to the designated place. Here the boxes are put down on the ground in the dark, being open at one end. Some food is spread about them and they are left. The birds remain quietly in the boxes all night. In the morning they come out, feed, and by nightfall they are scattered, and they begin to feed. At night they come back to the boxes for shelter. In this way they become accustomed to the locality and remain there.

Brown's Bronchial Troches for Coughs and Colds: "I cannot very well do without them. There is nothing to be compared with them." *Rev. O. D. Watkins, Walton, Ind.* Price 25 cents per box.

The New Orleans *Picayune* thinks that Frank Frayne should go to Niagara Falls, and shoot the rapids.

THE BOOK OF BOOKS!
CHEAPEST! LATEST!! BEST!!!

THE NEW AMERICAN DICTIONARY, Illustrated, is the chef-d'œuvre of Lexicography. An elegant book of over seven hundred pages. Defines and pronounces over thirty thousand words. It is "up to the times," and takes rank as the best American and English authorities. "Fourteen hundred columns" of definitions, with numerous fine engravings. A perfect Vade Mecum—a book for ALL. Besides a complete dictionary, it also contains all the usual tables, Abbreviations of Addresses, Phrases, &c., American Congressional Names with Politics and Significance, Popular Names of States and Cities, Abbreviations used in writing and printing, Tables of Foreign Languages, Grammar, and Alphabets of the World, how to record Names, Tables showing power of Man, Horses, &c., Statistics of Cities, Population of the World, Relations of all countries, Interesting Facts, Tables of the Metric System, Languages and Lexicography. Chapters on the Human Body, The Ocean, and much other valuable and interesting matter. REMEMBER this is not a trashy imported book, but it is a new, fresh, and perfect Dictionary, printed from new type on fine paper, with new engravings, containing over 700 pages superbly bound in fine cloth, embossed sides, with foil gilt back and side. (It is exactly like above cut.) Every student, teacher, every man, woman, and child needs this invaluable standard work.
BEAR IN MIND, The above DICTIONARY—the best, cheapest, most valuable and thoroughly up-to-date book ever printed—is sent prepaid as a Free Gift with our large, eight-page illustrated Ledger-size Family Paper for a whole year, and all for only 53 cents in postage-stamps, cash, or money-order. Now is the time!

ABSOLUTELY THE MOST LIBERAL OFFER EVER MADE.

The Famous Old, Original, and Reliable Favorite Family Paper,
THE STAR SPANGLED BANNER,
Established 1855, began its 31st year January 1883.
It is a large eight-page, forty-column Illustrated Paper, size of Ledger. Every number contains charming Stories, Tales, Sketches, Poems, Wit, Humor and Fun; Illustrated Rebus, Humorous Engravings, Sketches, Poems, etc., 200 jolly good laughs in the "Rogue's Corner," known the world over for its exposure of Frauds, Swindlers, and Humbugs. We desire to double our circulation, and to do so we have secured a special edition of the entirely new 700-page American Dictionary, complete and unabridged. It contains as much matter as any $1 Dictionary, and it is everything represented.
THINK AND ACT. Though worth double the price, and yet we offer our large, reliable, and popular national paper for only 50 cents a year; and to at once secure 20,000 new subscribers, we now offer this new and elegant 700-page dictionary in substantial cloth-gilt binding as a free gift to all who send 50 cents for the Banner one year (not even 2 cents to part pay actual cost of postage, etc., upon the Dictionary.
UNDERSTAND That we mean what we say; have 30,000 Dictionaries contracted for; that our paper is worth $1 a year, and Dictionary contains as much as any one sold at $1; that you can have both by return mail; and that we guarantee satisfaction in every case.
CUT OUT This offer, and enclose 21 green stamps. If not delighted, you can have your money back. Club of five, $2.75; ten, $5.
THINK of a 700-page, 1,400 column, cloth-gilt Dictionary, and a standard family paper all free for 4 paltry 3 cents. Now! now. Address, Banner Publishing Co., Hinsdale, N.H.

The Maynard Rifles and Shot Guns.
NEW OFF-HAND TARGET RIFLE, MODEL OF 1881.
PRICES REDUCED.

WITH PISTOL GRIP STOCK, TIP STOCK, AND SWISS BUTT PLATE.
For Hunting and Target Practice at all ranges, the "MAYNARD" more completely supplies the wants of Hunters and Sportsmen generally, than any other Rifle in the world, as many barrels can be used on one stock; and for accuracy, convenience, durability and safety, is not excelled. Send for Illustrated Catalogue describing the new attachment for using rim and centre-fire ammunition.

Kynoch's Patent "Perfect" Brass Shells
MANUFACTURED BY
Kynoch & Co., Birmingham, Eng.

These shells are made of extra fine thin pliable metal, with reinforced base. Use either Winchester or Wesson primers. Can be reloaded as often as any of the thicker makes. Cost only about half as much. Weigh less than paper shells, and in consideration of their reloading and other advantages, are really cheaper than the paper. They also shoot stronger and closer, and can be loaded heavier, as inside diameter is nearly two gauges larger. They possess a great advantage over all other brass shells, as owing to the thin metal they can be closed (as represented in cut) by simple use of the thumb or fingers, and straighten out to original shape when discharged. These goods have already gained a wide and favorable reputation in Europe, and in the opinion of many prominent sportsmen will soon supercede to a great extent the old style of both brass and paper. samples will, upon application, be mailed (without charge) to any sportmen's club or dealer, and prices quoted to the trade only. For sale in any quantity by gun dealers generally, or in case lots only (2,000 shells) by
HERMANN BOKER & CO.,
SOLE AMERICAN AGENTS 101 & 103 Duane Street, New York.
We also carry a large stock (at all seasons) of Kynoch's regular thickness brass shells, adapted to the Berdan Primer. Price materially lower than the American make of same quality.

FOREST AND STREAM BIRD NOTES.
An Index and Summary of all the matter relating to ornithology contained in the first twelve volumes of the FOREST AND STREAM. 195 pages, paper. Price, postpaid, $1.50.

SHOOTING.
Its Appliances, Practice and Purpose. By JAMES DALZIEL DOUGALL. Contains practical information on guns and gunning. Its chapters treat of the Barrel, the Stock, Locks, Triggers, Recoil, Breech-Loaders, Rifles, Care of Guns, Ammunition, Loading, Dogs, Grouse, Woodcock, Black Game and Partridge Shooting. The chapter on "The Purpose" of Shooting is the best defense of legitimate field sports ever published. Elegantly printed on fine paper, 380 pages, cloth. Price, postpaid, $3.

SHORE BIRDS.
I. Haunts and Habits. II. Range and Migrations. III. A Morning Without the Birds. IV. Nomenclature. V. Localities. VI. Blinds and Decoys. This is a reprint of papers from the FOREST AND STREAM. Pamphlet, 45 pages. Price, postpaid, 15 cents.

PRACTICAL DOG TRAINING.
Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of FOREST AND STREAM. Pronounced by those who have read the chapters, as published in this journal, to be the best work on the subject ever written. 100 pages, cloth. Price, postpaid, $1.

FOREST AND STREAM PUBLISHING CO.,
39 Park Row, New York.

"The *Decorator and Furnisher* is not only the most imposing, but is certainly the most artistic publication and the very highest in merit that has yet seen the light here."—[N. Y. Com. Adv.

The Decorator & Furnisher

AN ELEGANTLY PRINTED AND ARTISTICALLY

ILLUSTRATED MONTHLY JOURNAL,

TREATING OF THE

Decorating and Furnishing of the Interior of the House.

Giving twenty-four to thirty pages of original reading matter from the best known and most popular writers upon these subjects in this country and in Europe, also ORIGINAL DESIGNS FOR ALL KINDS OF HOME ADORNMENT AND ORNAMENTATION, Furniture, Carpets, Tapestry, Pottery, Fresco and Panel Painting.

A Richly-Colored Plate of Designs for Fresco and Panels.

"The *Decorator and Furnisher*, a New York monthly, the designs and sketches of pieces of furniture, ceilings, whole furnished rooms, ornamentations, etc., in which are among the finest we have seen of late, even in Paris. The publication is evidently one of great promise, and cannot fail to be justly appreciated by our countrymen at home and abroad, as well as by European experts in the line it is addressed to. The first number is a piece of high art, and a splendid specimen of typography."—[American Register, Paris, Dec. 9, '82

"It is a paper calculated to give ideas, suggestions and valuable designs to all those interested in the decoration and furnishing of the house."—[Washington (D. C.) Republican.

"It is well and abundantly illustrated, and the October number contains a large colored plate showing designs for ceilings."—[N. Y. Tribune.

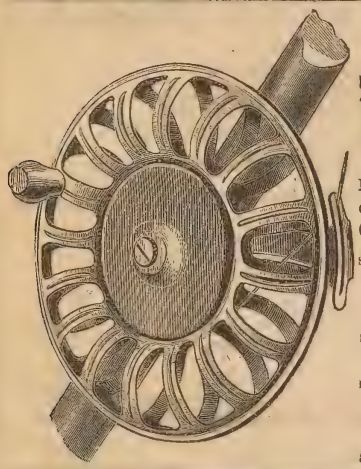
"Established as a well edited and useful periodical."—[N. Y. Times.

"America possesses nothing that lives in the same atmosphere. * * * It is already standard."—[Boston Times.

"Contains contributions by men of established reputations."—[Evening Post (N. Y.).

"It certainly deserves success, for this first number is altogether admirable in illustration and in matter."—[Christian Advocate.

"It promises to be one of our most valuable special journals."—[Independent.



"It is calculated to meet the wants of people engaged in the fascinating business of fitting up a house."—[Springfield Republican.

"The publications which minister to the decorative arts in this country are many, and, generally speaking, of a high order of merit; but there is scarcely one of them which can quite compare with the new trans-Atlantic periodical, the first number of which is now before us."—[The Building World (London).

Subscription $4.00 per year. Single Copies 35 Cents.

A patent binder to preserve the numbers accompanies each subscription.

FOR TOWN AND COUNTRY.-1883.

A JOURNAL OF THE ROD AND GUN.

The year now drawing to a close has been with the FOREST AND STREAM one of most gratifying progress. Early in the year by an important mechanical improvement, the typographical beauty of the paper was greatly enhanced; and in August, with the beginning of the tenth year of publication, it was

Permanently Enlarged to Twenty-eight Pages.

There has been an equal growth in other important respects. The patronage accorded to this journal by the intelligent reading public has never been more cordial than it is at the present time. Sustained thus heartily, the publishers are prepared to maintain in 1883 the FOREST AND STREAM prestige as the

Representative Field Journal

of this country, at once entertaining, useful and influential. As the exponent of the highest types of field-sportsmanship the paper will be adapted to the tastes of all men who use the rod and gun as means of pleasure and recreation. Broad in its sympathy with all that is legitimate in field sports, free from any entangling alliances with cliques, having no interests to serve save those of its constituents, and never hesitating in its criticisms of whatever may be inimical to these interests, the FOREST AND STREAM'S highest ambition will be to preserve in the future the approval won by its course in the past. It will persist in its efforts to awaken in the public mind a fuller appreciation of the importance of the proper protection of game in the breeding season, and of due moderation in the destruction of game at other times. This it considers a matter of prime importance, not so much to the man whose wealth and leisure enable him to make extended tours to favored game countries, as it is to that already very large and constantly increasing class of business and professional men, whose favorite relaxation from the routine of employment is found in brief vacation trips to the woods and fields and brooksides.

The enlarged form of the FOREST AND STREAM enables its editors to present each week in the several departments a large and varied supply of reading. In the columns of

The Sportsman Tourist

Will be found sketches of travel and sport. Coming from many different writers, and widely separate parts of the country, these sketches always have the charm of novelty, and they are sure to be read with interest by sportsmen, because their writers see things through sportsmen's eyes, and describe them from the sportsman's standpoint.

Natural History.

This department will not deal with fossils nor with the monsters of African jungles. Quite on the contrary, it will treat of the animal life of land and water in our own country, the habits and ways of American fur, fin and feather, in which American sportsmen are presumed to take an intelligent interest.

Game Bag and Gun.

In addition to the numerous accounts of hunting and shooting excursions, necessarily varied and interesting—as such accounts must need be—these columns will be found of special value to amateur and veteran alike, because of the frequent interchanges of experience in all matters pertaining to game and shooting.

Sea and River Fishing.

The angler will find in the pages of the FOREST AND STREAM the best angling literature of the day, in quantity more than is contained in all other publications put together. This journal has inaugurated a series of angling tournaments, the initial meeting having been held in the Central Park of this city; and it is believed that others of equal success will follow in other years. Meanwhile, the man who loves to go a-fishing may find in the FOREST AND STREAM all the year around a great deal that must be to his liking.

Fishculture.

The columns devoted to this important subject furnish a complete resumé of curren achievements and progress in this important work.

The Kennel.

This department has won the confidence of dog owners. Its reports of field trials, bench shows and other events are recognized as impartial, honest, and the most able published The recent series of papers by its editor, entitled "Training vs. Breaking," have been published in book form, and have had a very large sale. Other papers of equal importance will be published from time to time.

Yachting and Canoeing.

The editor of this department being a practical naval architect, and thoroughly familiar with every branch of the subject, will continue the same intelligent treatment of yachting and canoeing that have already won for the FOREST AND STREAM esteem and confidence.

Its editors aim to make the FOREST AND STREAM a medium for the interchange of information, entertainment and amusement among sportsmen. Sketches of field excursions, shooting and angling trips, original observations in natural history, and other like contributions are respectfully solicited. Secretaries of clubs and associations are urged to send us reports of their transactions. Expressions of opinion upon any subject within the scope of the paper are invited and will be given place in our columns.

We beg to suggest to the friends of the FOREST AND STREAM that they bring the paper and its merits to the attention of others whose tastes and sympathies are in accord with its spirit and aims. Free specimen copies will be cheerfully furnished upon application.

The weekly issues of the FOREST AND STREAM form two volumes each year, of twenty-six numbers, or 500 pages each, and the files constitute a library of permanent worth. Eighteen such volumes have already been published. We furnish handsome file binders (price $1.25) which hold twenty-six numbers.

Subscriptions may begin at any time. Per year, $4; $2 for six months. Remit by post office money order, draft or registered letter. Give name, town, county and State. Addres

SOLE AGENTS IN THE UNITED STATES

WESTLEY RICHARDS HAMMERLESS GUNS!

These Guns are made under the ANSON & DEELEY PATENT, and will be found superior to any other Hammerless Gun. They have

NO LOCK PLATES, PLUNGERS, BRIDLES, OR SWIVELS.

THE LOCK CONSISTS OF FOUR PARTS ONLY, and they have been subjected to the severest test by a wear and tear trial of

80,000 SHOTS.

The WESTLEY RICHARDS HAMMERLESS GUN has therefore passed the point of experiment, and its *Durability* ESTABLISHED.

It is **safer** *than any other hammerless or hammer gun,* and in shooting powers these guns are unexcelled! *Evenness* of pattern and *hard hitting* being the points gained, and as close a pattern as desired.

All gauges and grades furnished by us from stock, with Whitworth fluid compressed steel, Damascus or laminated barrels. Or we will have built to special order without extra charge. Time required to fill special orders, about four months.

We offer unprecedented bargains in

FINE GUNS WITH HAMMERS.

The demand for hammerless guns having lowered the prices of fine guns with hammers,

WE OFFER

W. C. Scott & Sons' 10 and 12 gauge, with hammers, $80 to $120; original price, $150 to $200. Also a few Scott **PREMIERS,** heavy 10 and 12 gauge, at $150.—**Bargains.** Fine Williams & Powell, with hammers, 10 and 12 gauge, $52 to $100. Greener, with hammers, 10 and 12 gauge, some of his finest, at from $40 to $150.

Above are net prices, and to any one who can be satisfied with a gun with hammers, are splendid bargains.

Kennedy Repeating Rifle

The Latest and Best.

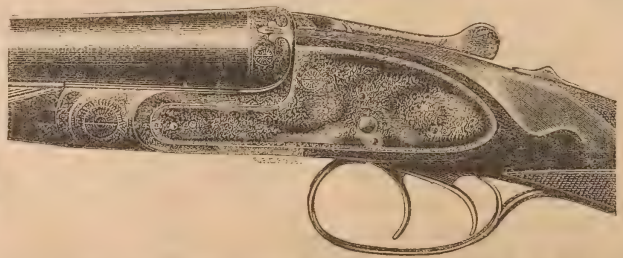
Greatly superior to any other Magazine Rifle yet made. The solid metal in line of fire at time of discharge renders the Kennedy **ABSOLUTELY SAFE.**

These rifles are made .44 cal. 40 gr., and .45 cal. 60 gr., using the same ammunition as other magazine rifles.

Can be obtained from any first-class gun dealer in the United States and Canada.

NOTICE.

JAMES PURDEY & SONS,



Late of 314½ Oxford Street, London, W.,

Gun manufacturers, by special appointments to Her Majesty the Queen, H. R. H., the Prince of Wales, and the most noted shots of Europe, give notice that they have removed to a new and large manufactory erected by them, and their address now is

AUDLEY HOUSE, SOUTH AUDLEY ST., LONDON, W.

They take this opportunity to inform American sportsmen that they have patented **A NEW REBOUNDING HAMMERLESS GUN,** which, after the most careful practical trials and severe tests, they confidently reccommend as by far

THE BEST AND

ONLY PERFECT

HAMMERLESS

GUN MADE.

Its advantages are STRENGTH, SIMPLICITY, SAFETY AND FREEDOM FROM MISFIRES. JAMES PURDEY & SONS will only make one quality of gun for the United States, viz.: THE BEST. Guns take about five months to make, and can be ordered direct from the makers, or through the agencies of SCHUYLER & DUANE, 189 Broadway, New York, and JOS. C. GRUBB & CO., 712 Market street, Philadelphia.

N. B.—Messrs. Purdey & Sons are prepared to sell the rights, or grant a license (subject to certain conditions) for the sole manufacture of this gun in the United States.

WHAT WILL THE WEATHER BE TO-MORROW

©POOL'S SIGNAL SERVICE BAROMETER

OR STORM GLASS AND THERMOMETER COMBINED,

WILL TELL YOU

It will detect and indicate correctly any change in the weather 12 to 48 hours in advance. It will tell what kind of storm is approaching, and from what direction—**invaluable to navigators, Farmers** can plan their work according to its predictions. **Saves 50 times its Cost in a single season.** Has an accurate thermometer attached, which alone is worth the price of the combination. This great **WEATHER INDICATOR** is endorsed by the most eminent Physicians, Professors and Scientific men of the day to be the **BEST IN THE WORLD!** The Thermometer and Barometer are put in a nicely finished walnut frame, with silver plated trimmings, etc., making it a beautiful as well as useful ornament. We will send you a sample one, *delivered free*, to your place, in good order, on receipt of **$1,** or six for **$5. Agents** are making from $5 to $20 daily selling them. *A trial will convince you.* Order at once. **It sells at SIGHT!** Just the thing to sell to farmers, merchants, etc. Invaluable to everybody. U. S. Postage Stamps taken if in good order, but money preferred. **Agents wanted everywhere.** Send for circular and terms. Address all orders to **OSWEGO THERMOMETER WORKS,** (*Largest establishment of the kind in the World*) **Oswego, Oswego Co., N.Y.**

We refer to the Mayor, Postmaster, County Clerk, First and Second National Banks, or any Business house in Oswego, N.Y.

Write your Post Office, County and State plainly, and remit by money order, draft on New York or registered letter, at our risk.

This will make a Beautiful and Very Useful Present.

READ WHAT THE PUBLIC SAY ABOUT IT.

[Illegible] Pool's Barometer works as well as it did when I got it. I can rely on it to forecast the weather. Yours truly, B. Ryder, Ship "Celestial," San Francisco.

Thermometer received in good order, and must say that it is correct, except a trifle too fine in every respect. It is a very useful instrument. Yours truly, [illegible] Dr. R. Parsons, 21 C. R. R. office, Detroit, Mich.

Pool's Barometer [illegible] of much use in keeping me informed of the weather. It is a wonderful accurate and work is perfection. F. J. Bergerson, Milwaukee, Wis.

BEWARE OF WORTHLESS IMITATIONS. None genuine without our Trade Mark, and Signature of J. A. Pool, on back of Instrument, as below:

J. A. Pool TRADE MARK.

Every Instrument **warranted** *Perfect* and *Reliable*. Size, 8½ inches long, 3½ wide. If not satisfied on receiving the instrument, return it at once and we will refund your money. Please state where you saw our advertisement.

NOTICE.—$2.00 each is the regular retail price for above instrument, but being desirous of introducing them and securing good agents, we offer for a short time to deliver "a sample one" free to any address on receipt of only one dollar, or 6 for $4.00. Order at once. It's just the thing for a Christmas present.

500 Sold in Advance of Publication.

SECOND EDITION NOW READY.

Training vs. Breaking

By S. T. Hammond ("Shadow"), Kennel Editor of FOREST AND STREAM.

Plain, practical, tested by thirty years' experience, humane, rational, efficient. Endorsed by those who have read it as the best book on the subject ever written.

To the ten chapters of "Training vs. Breaking," the author has added two sketches:

The One-Eyed Grouse of Maple Run,
My Old Dog Trim.

The whole forming a book of 100 pages. Printed on fine paper; handsomely bound in cloth. Sent postpaid on receipt of price. $1.00.

Forest and Stream Publishing Co.
39 PARK ROW NEW YORK.

How I Became "A Crack Shot,"

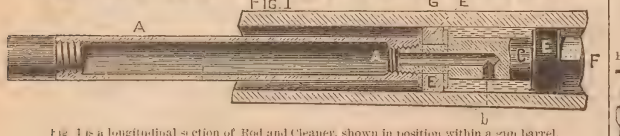
With Hints for Beginners.

By W. MILTON FARROW, Champion Military Marksman, U. S. A.

The only American ever winning the Albert prize of £100, and the Wimbledon Cup, value $800, England. Winner of innumerable matches at Creedmoor. Turf, Field and Farm Champion '78. Military Champion '82. All gold medals. Wimbledon Cup, 30 shots at 1000 yards. Highest on record.

Orders will be filled in rotation as received. Handsomely bound in cloth and gilt; 9 illustrations; price $1. Send orders at once. Many already booked. A limited edition to be printed. Sent by mail, postage paid, on receipt of price. **W. MILTON FARROW, Newport, R. I.**

Climax Gun Cleaner.



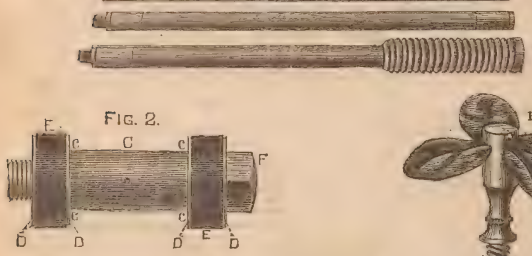


Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

NOTE.—In those made under the improved patent since July, 1882, the nut "E" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

In offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

is made in three joints, like a common cleaning rod, and therefore is portable.
2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.
3d. The ease with which it can be adjusted to fit the barrels, loose or tight.
4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

DESCRIPTIVE CIRCULARS AND DISCOUNTS TO DEALERS GIVEN ON APPLICATION.

For sale by Gun Dealers, or address

N. M. MUZZY
45 South Canal Street, Chicago, Ill.
Of the old firm of HITCHCOCK & MUZZY and MUZZY & CO. in 1852.—Having increased my facilities for the business of reaming out gun barrels, I beg to offer my services to those owning guns of unsatisfactory shooting qualities. My system is peculiarly my own. I leave no shoulders, and will guarantee my cylinder boring to shoot more even than by the old choking system, in every instance. I invite special attention to my method, and the most satisfactory testimonials will be furnished when desired. Guns can be sent, and will be delivered by express.

CONSUMPTION.
I have a positive remedy for the above disease; by its use thousands of cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy, that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer. Give Express & P. O. address. DR. T. A. SLOCUM, 181 Pearl St., N. Y.
